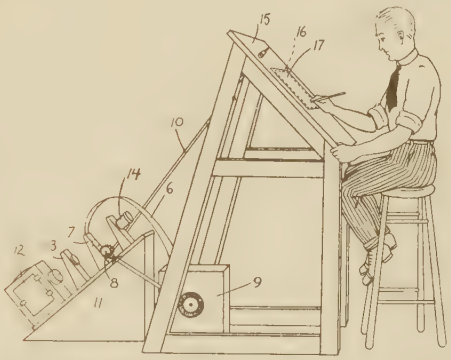
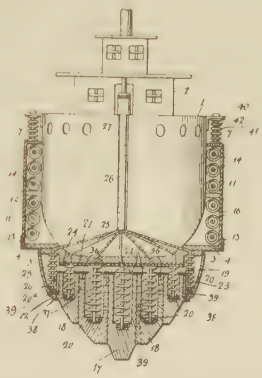
1,416,154. METHOD AND APPARATUS FOR PRODUCING MOVING-PICTURE CARTOONS. WILLIAM F. AHBE. Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,078. 10 Claims. (Cl. 88—16.)



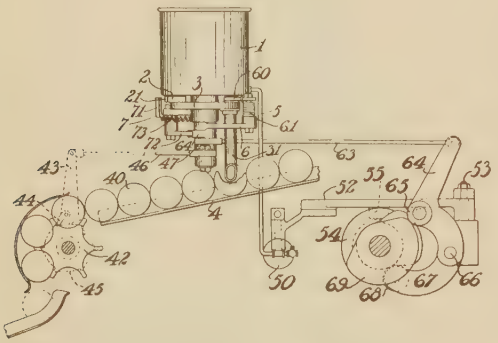
10. The method of producing pictures consisting in producing two negatives of the desired features to be combined, then producing a secondary negative comprising opaque features corresponding with the features upon one of the first-mentioned negatives, then printing a positive from the other of the first-mentioned negatives combined with the said secondary negative, and then reprinting said positive with the detail feature negative corresponding with said secondary negative.

1,416,155. SHIP CONSTRUCTION. CHARLES AHOLA, Detroit, Mich. Filed Dec. 27, 1920. Serial No. 433,508. 6 Claims. (Cl. 114—140.)



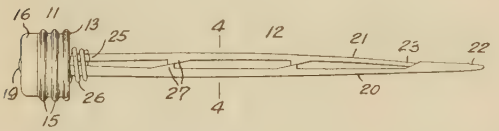
1. In a ship, a hull, a keel, and means adjustably connecting said keel and hull whereby said keel is yieldingly spaced from the hull.

1,416,156. CAN SALTER. NELS B. ANDERSON and JOSEPH A BERG, Astoria, Oreg., assignors of one-half to Seattle-Astoria Iron Works, Seattle, Wash., a Corporation of Washington. Filed Oct. 21, 1919. Serial No. 332,338. 8 Claims. (Cl. 226—94.)



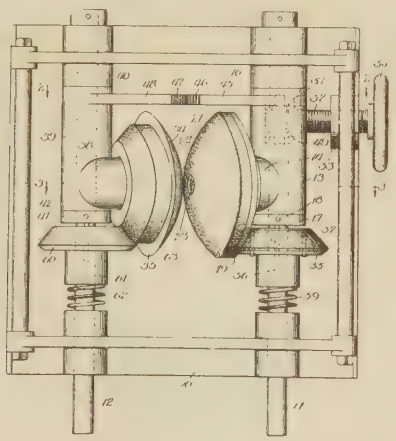
1. A can salting device comprising means for segregating a measured charge of salt, a salt conveying pipe for receiving the charge and having a horizontally facing discharge opening, and means for supplying a blast of air behind each charge of salt to project it horizontally from said discharge opening into the can.

1,416,157. COP-HOLDING SKEWER FOR LOOMS. WILLIAM H. BAKER, Montreal, Quebec, Canada, assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 2, 1919. Serial No. 287,093. 19 Claims. (Cl. 139—89.)



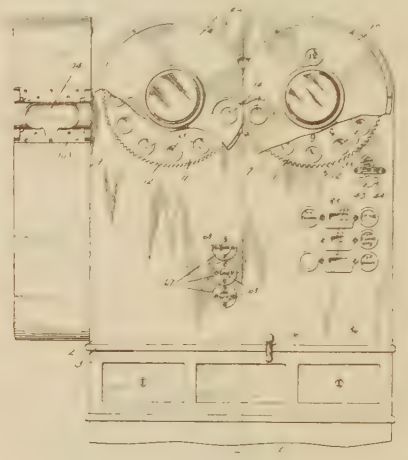
1. A cop spike divided along its longitudinal axis into two parts relatively movable in their longitudinal direction, and a spring urging said spike parts to movement in opposite directions.

1,416,158. VARIABLE-SPEED FRICTION DRIVE. MARTIN BALCKER, Chicago, Ill., assignor to John Nelson, Chicago, Ill. Filed Jan. 26, 1921. Serial No. 440,048. 15 Claims. (Cl. 74—26.)



1. A variable speed friction drive mechanism embodying a driving and a driven shaft, two co-operating rotatable friction drive elements pivotally mounted upon the respective shafts and adapted to be shifted with a rolling contact of the active faces of the elements with each other as distinguished from a sliding movement of the friction surfaces against each other, said elements being simultaneously movable about their pivots whereby the position of the said elements with respect to each other and the respective shafts may be varied while the position of the shafts with relation to each other remains constant.

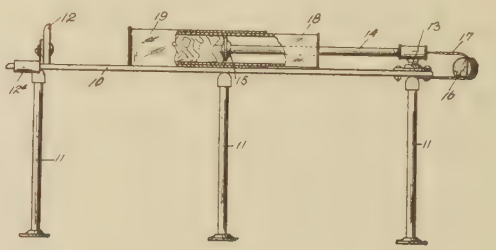
1,416,159. VENDING MACHINE. SAMUEL C. BARR, Chillicothe, Ohio. Filed May 2, 1921. Serial No. 466,283. 8 Claims. (Cl. 211—8.)



1. In a vending machine for optical appliances, a cabinet, eye testing and vending mechanisms sustained by said cabinet, and a common actuating device for simultaneously effecting the operation of said mechanisms.

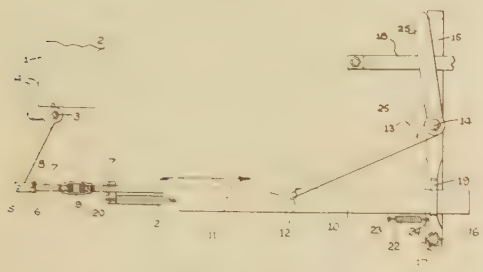
3. In a vending machine for optical appliances, a cabinet, an eye testing mechanism including a pair of rotatably mounted disks, lenses positioned within said disks and capable of being selectively moved to assume positions in registration with sight openings, a vending mechanism capable of containing articles conforming in quality to said lenses, and means for simultaneously operating said eye testing and vending mechanisms whereby materials discharged from said vending mechanism will conform with the lenses positioned in registration with said sight openings.

1,416,160. LAUNDRY BUNDLING, PACKING, AND WRAPPING DEVICE. RALPH W. BARRIER, Indianapolis, Ind. Filed Sept. 13, 1920. Serial No. 410,075. 1 Claim. (Cl. 226—18.)



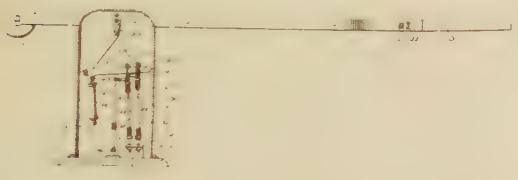
In a device of the class described, the combination of a flat table top, an open-ended bag holder, and a packer bar fixed to one end of the table top and extended over the table, and having a packing head thereon supported in position spaced slightly above the table and of such size as to be readily received within the bag holder.

1,416,161. TRIPPING DEVICE. CLARENCE B. BEYER, Albuquerque, N. Mex., assignor of three-eighths to Paul G. Redington and one-fourth to Frank L. McNama, Albuquerque, N. Mex. Filed July 24, 1919. Serial No. 313,055. 7 Claims. (Cl. 298—19.)



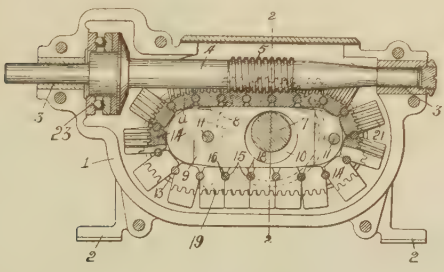
1. In an end gate tripping device, the combination of a gate-engaging member, a tripping lever, a rod between said member and said lever, and means interposed between said rod and said tripping lever to permit adjustable operating engagement of said tripping lever with the actuating rod without varying the effective length of said rod.

1,416,162. BARRIER GATE. LESTER S. BLACK, White Pigeon, Mich. Filed Oct. 3, 1921. Serial No. 505,111. 7 Claims. (Cl. 39—60.)



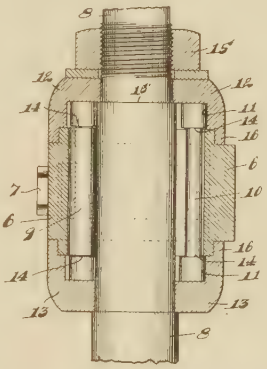
1. A barrier gate structure comprising in combination, a gate pedestal; a horizontal rock-shaft mounted therein; a counterbalanced gate mounted on and adapted to oscillate with said rock-shaft; a lever pivoted intermediate its ends within said pedestal; connections between one end of said lever and said rock-shaft to rock the latter upon movement of said lever about its pivot; a spring-power device for causing rotation of said lever about its pivot in one direction; a second spring-power device for causing rotation of said lever about its pivot in the opposite direction; means for moving one of said spring-power devices into operative position to rotate said lever; and means for simultaneously rendering the other of said spring-power devices inoperative to rotate said lever.

1,416,163. POWER-TRANSMISSION MECHANISM. WILLIAM EMIL BOCK, Eagle Point Colony, Ohio, assignor to Bertha M. Bock, Eagle Point Colony, Ohio. Filed June 5, 1920. Serial No. 386,678. 16 Claims. (Cl. 74—36.)



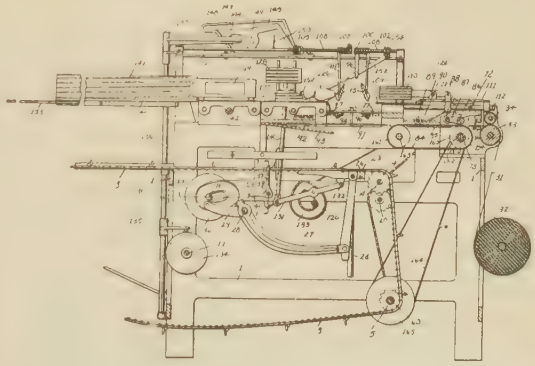
1. In a power transmission mechanism, a drive worm, a plurality of members arranged in endless chain form and each being engaged and driven during a predetermined portion of its movement by the worm, means guiding the movements of the members, and means engaged by the members intermediate the ends of a flight thereof and driven thereby.

1,416,164. ROLLER BEARING. ROBERT G. BODLUND, Chicago, Ill. Filed Jan. 2, 1919. Serial No. 269,208. 1 Claim. (Cl. 64—61.)



The combination with a tubular housing, of a shaft journalled through said housing, bearing members rigidly mounted on said shaft and loosely engaging the opposite ends of said housing; a plurality of rollers mounted in said housing and surrounding and contacting with the periphery of said shaft; raceways formed in each of said bearing members; rollers having reduced central portions mounted in said raceways between said first-mentioned rollers, said reduced portion of each of said rollers contacting with the periphery of said first-mentioned rollers and adapted upon rotation of said first-mentioned rollers to rotate in the opposite direction of the said shaft, the ends of said reduced rollers serving as shoulders preventing the longitudinal movement of said first-mentioned rollers, substantially as described.

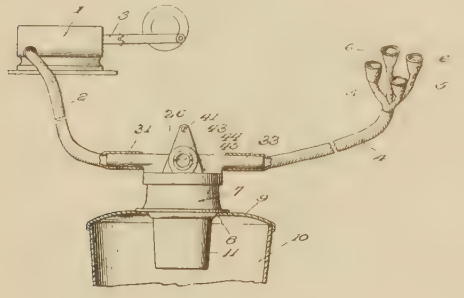
1,416,165. WRAPPING MACHINE. CHARLES O. BROWNELL, Battle Creek, Mich. Filed Aug. 2, 1918. Serial No. 247,931. 11 Claims. (Cl. 93—2.)



11. In a wrapping machine, the combination of ways, a carriage reciprocating on said ways and comprising front and rear members, the front member being pivoted on the rear, arms mounted on said carriage members and having grippers pivotally mounted thereon, a control cam for the pivoted carriage member comprising a fixed cam member and a rocking member disposed therein to provide a cam way having an upwardly inclined portion at its rear end and a downwardly inclined portion at its front end, the front carriage member being provided with a roller traveling in said cam way so that on the forward stroke of the

carriage the front carriage member is elevated at the rear end of the feed stroke and held in elevated position to pass over the article delivered on the rear stroke of the carriage, and means for reciprocating said carriage.

1,416,166. VALVE FOR MILKING MACHINES. JOHN T. BUCKWALTER, Lancaster, and FREDERICK T. FLINCHBAUGH, York, Pa.; said Flinchbaugh assignor to said Buckwalter. Filed Jan. 7, 1920. Serial No. 349,853. 4 Claims. (Cl. 31—98.)

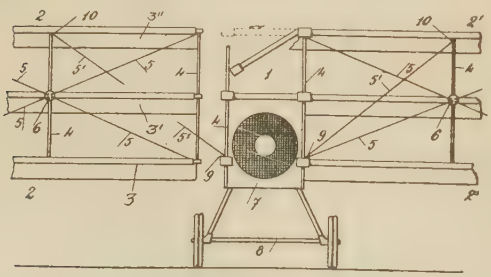


1. The combination with a valve casing having oppositely disposed ports, of a swinging valve flap having two opposite marginal edges turned in the same direction and towards one of the ports whereby swinging movement of said valve flap in one direction to its extreme position closes one of the ports and swinging movement in the other direction to its extreme position engages the said marginal edges with the valve casing for holding the flap spaced from the port to baffle the latter.

3. In a device of the class described, a valve casing having oppositely disposed ports, a valve suspended for swinging movement within the casing between said ports and arranged when swung toward one port to completely close the same, and means limiting the swinging movement of the valve toward the other port whereby, when so swung, it will serve as a baffle for said port without closing the same.

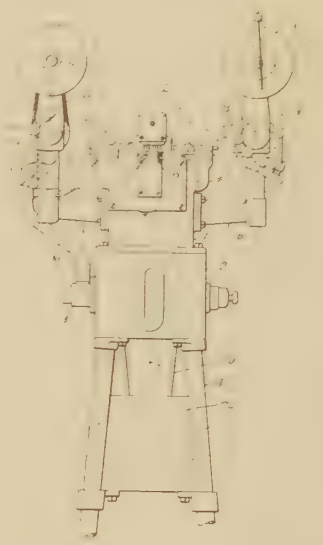
4. In a device of the class described, a valve casing having oppositely downwardly sloped walls and provided with ports opening through said walls at substantially opposite points, a valve suspended for swinging movement within the casing toward either of said ports and having a base arranged, when the valve is swung toward one port, to close the same, and means upon the valve limiting its swinging movement in the direction of the other port whereby in the latter position of swinging movement it will constitute a baffle for the last mentioned port without closing the same.

1,416,167. FLYING-MACHINE CONSTRUCTION. GIANNI CAPRONI, Milan, Italy. Filed Apr. 22, 1919. Serial No. 292,001. 3 Claims. (Cl. 244—31.)



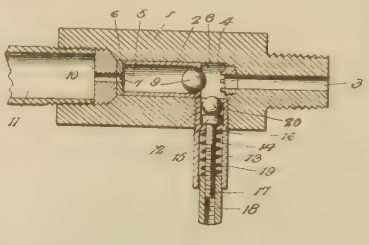
1. An aeroplane structure comprising a plurality of superposed planes including a plurality of longitudinals, a plurality of uprights extending vertically from one longitudinal to the other, a plurality of staywires extending between the ends of said uprights and crossing each other in groups on points of the medial longitudinal, a hemispherical casing having its base connected to said medial longitudinal, and means for connecting the staywire to the casing.

1,416,168. PERFORATING MACHINE. CHARLES R. CARLETON, Brooklyn, N. Y. Filed July 20, 1920. Serial No. 397,593. 15 Claims. (Cl. 164—88.)



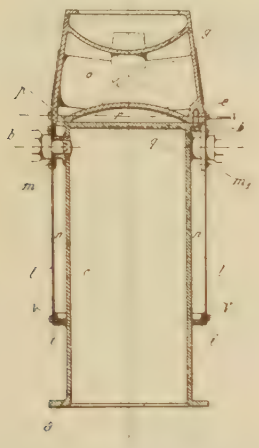
1. In a film perforator, a casing, a pair of vertically slidable elements located respectively at the rear and front of the casing, the rear element having a forwardly projecting punch head formed on its upper end and the front element having a stripper member projecting rearwardly from the top thereof under the said punch head, film advancing means carried by the casing between the said slidable elements, and a shaft extending through said casing from front to rear and operatively engaged with said slidable elements and said film advancing means.

1,416,169. AUTOMATIC SAFETY GAS CUT-OFF. PETER PANEPINTO CATALANO, North Collins, N. Y. Filed Mar. 30, 1921. Serial No. 456,926. 3 Claims. (Cl. 67—115.)



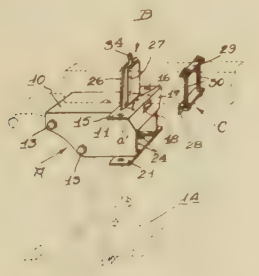
1. In a gas cut-off, the combination of a casing having an inlet passage and an outlet passage and provided with a valve seat in the inlet passage, a valve disposed within the inlet passage and held to its seat by the direct pressure of gas in the inlet passage, and an unseating device within the casing normally lying between the valve and the outlet passage and holding the valve unseated, said device being maintained in normal operative position by frictional engagement with the valve and with an interior wall of the casing under pressure of the gas upon the valve.

1,416,170. CYLINDER OF INTERNAL-COMBUSTION ENGINES. GIUSTINO CATTANEO, Milan, Italy. Filed Apr. 27, 1918. Serial No. 231,284. 3 Claims. (Cl. 123—173.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an internal combustion engine, the combination of a cylinder, valve seats in the end wall of said cylinder, a cylinder head detachably secured to the end wall of said cylinder, said cylinder head comprising gas and air conduits, valve supporting and guiding means and a water jacket, a plate encircling the cylinder and welded thereto, and a jacket of sheet metal detachably secured to said cylinder head and plate and forming with the cylinder walls and said plate a watertight receptacle.

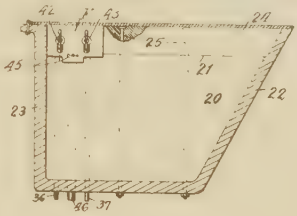
1,416,171. COMBINATION TONGUE AND SEAT SUPPORT FOR TRACTORS. ARTHUR DENNIS COLE, Minneapolis, Minn. Filed Mar. 24, 1921. Serial No. 455,229. 8 Claims. (Cl. 280—33.2.)



5. In a device of the class described, the combination of a body adapted to be rigidly secured to the frame of a tractor, a bolt, a head on said bolt designed to slidably receive the tongue of an implement drawn by the tractor, bolt receiving members on said body in which said bolt may be swivelled in various upright positions laterally of said body to alter the draft of the implement, seat support receiving means and a locking device for seat supports on said body.

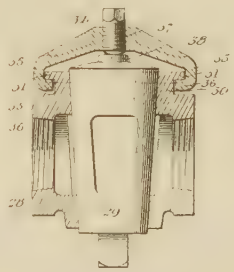
1,416,172. FITTING FOR TUBS AND SINKS. PATRICK CONNOLLY, Brooklyn, N. Y. Filed Apr. 18, 1919. Serial No. 291,057. 10 Claims. (Cl. 4—24.)

1. A fitting for tubs, sinks and the like, formed of a casting shaped to fit in a recess in the body of a wall of a tub or sink and having a flange to extend over the face of the tub or sink wall, said fitting comprising a supply chamber and an overflow chamber, the supply chamber being formed with an inlet opening in the bottom thereof



and with an outlet opening for receiving a faucet, and the overflow chamber being formed with an outlet opening in the bottom thereof and with an inlet opening in the side thereof to communicate with the tub or sink on which the fitting is placed.

1,416,173. STOPCOCK. GEORGE T. CONRATH, Bowling Green, Ohio. Filed Mar. 20, 1918. Serial No. 223,624. 1 Claim. (Cl. 251—91.)

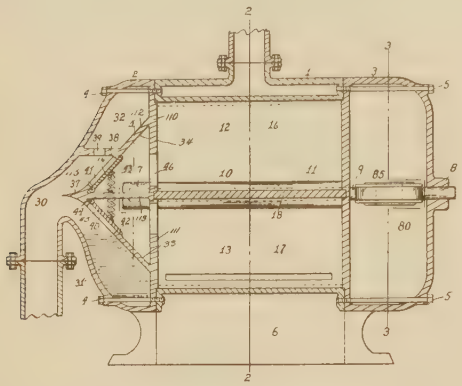


A valve casing having a tapered opening extending therethrough and providing a valve seat, a tapered plug valve, the ground surface of which directly contacts with the seat, permitting of locking engagement, said valve having its reduced end centrally provided with an outstanding lug, said casing at the widened end of the opening therein being formed with an extension having spaced flanges on the ends thereof, said flanges, upon their inner faces being formed with recesses intermediate of the openings between the flanges, a bridge member including downwardly and inwardly extending lugs proportioned for reception between the flanges and for reception within the depressions, upon turning the bridge about the longitudinal axis of the plug, and an element threaded through the bridge and acting to produce an inward thrust on the larger end of the plug for seating the latter, and an outward thrust between the lugs and the recessed portions of the flanges.

1,416,174. OSCILLATING PUMP. ALFRED B. COOK, Stockton, Calif., assignor to Taylor-Mayhew Pump Co., San Francisco, Calif., a Corporation of California. Filed Nov. 11, 1919. Serial No. 337,126. 5 Claims. (Cl. 103—73.)

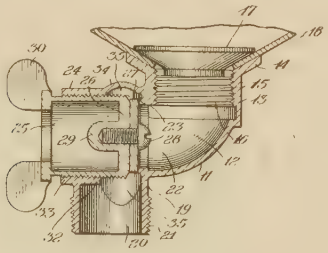
1. In a pump, a cylinder provided with an inlet and an outlet, an oscillative piston mounted in said cylinder,

means for admitting water through said inlet into said cylinder, one of the cylinder heads being hollow, a drive



shaft extending into said head, and an oscillative movement within said head connecting said shaft and the piston shaft.

1,416,175. VALVE. FORREST J. COUCH, Rochester, N. Y., assignor to Clark, Cadle, Harmon Corp., Rochester, N. Y., a Corporation of New York. Filed July 25, 1919. Serial No. 313,204. 1 Claim. (Cl. 251—155.)

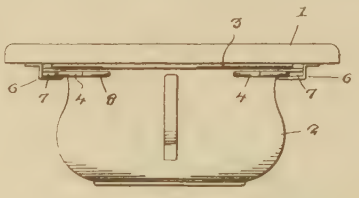


A compact quick-acting valve comprising a casing formed with communicating inlet and outlet passages, a valve seat on the casing about one of said passages, said casing having a bore formed therein with a screw threaded wall a portion of which projects partially across the other of said passages, and a screw threaded valve body in said bore cooperating with said seat, said casing having a portion of its wall expanded adjacent said seat to provide a substantially annular space about the path of movement of the valve body and communicating with said other of said passages exteriorly of said projecting portion of the bore wall to compensate for the obstruction of the fluid by the latter.

1,416,176. HAND AND INDICATOR FOR WATCHES AND LIKE ARTICLES. HERMANN F. CUNTZ, Hartford, Conn., assignor to American Radium Company, New York, N. Y., a Corporation of New York. Original application filed July 2, 1921, Serial No. 482,095. Divided and this application filed Oct. 14, 1921. Serial No. 507,743. 6 Claims. (Cl. 58—50.)

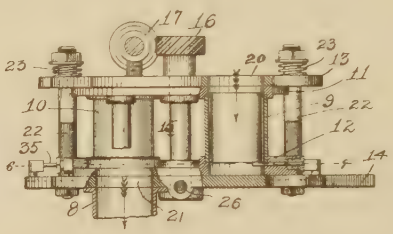
1. An article of the character described comprising a base flanged from the hub for a portion of its length and having a ridge extending the remaining portion through the axis to form lateral recesses on either side and radio-luminous material embedded in said lateral recesses below the plane of the top of the ridge.

1,416,177. CHAMBER SPRING ATTACHMENT. LEVI R. H. DICK, Chicago, Ill., assignor to Clasp-Tight Spring Company, Wilmington, Del., a Corporation of Delaware. Filed June 24, 1920. Serial No. 391,538. 1 Claim. (Cl. 4—32.)



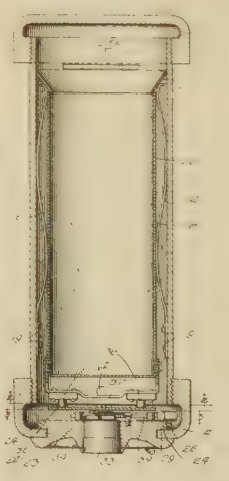
The combination with a seat, of a ring shaped clamping member having its ends spaced apart, a Z-shaped bracket having an eye for engaging the ring member and another bracket having an elongated eye for movably engaging the ring.

1,416,178. MEANS FOR FEEDING CANS. FRANK B. DONNELLAN, San Francisco, Calif. Filed Oct. 21, 1920. Serial No. 418,544. 4 Claims. (Cl. 126—272.)



1. In a cooking retort, a can feeding device comprising an opening in the retort, a plurality of cylinders revolvably mounted over the retort so as to sucessively register with the opening, a plate supported above the cylinders, means for holding the same in yielding contact mith the cylinders, and a can inlet in said plate not registering with the opening in the retort but adapted to successively register with the cylinders.

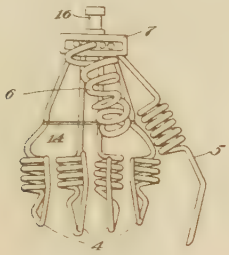
1,416,179. VEHICLE SAFE. WILLIAM EHRLICH, Chicago, Ill. Filed Aug. 23, 1919. Serial No. 319,405. 9 Claims. (Cl. 109—4.)



1. A vehicle safe comprising a casing having a circular door opening in one end with spaced projections around said door opening; a door in said door opening and having rigid projections thereon disposed behind the projections around said door opening and adapted to pass between

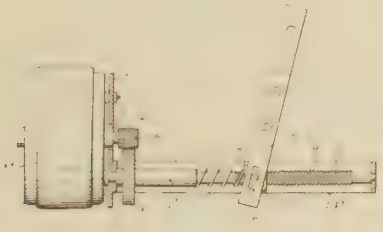
the latter projections upon limited rotary movement of the door; a pin on the door adapted to cooperate with a part of the casing for guiding the door into the door opening in a predetermined relation with the latter, a pin in the casing, and a spring-pressed arm pivoted on the door and adapted to engage the last mentioned pin to lock the door against being opened.

1,416,180. ARTIFICIAL HAND. JOHN J. EVERSON, Newton, Mass. Filed June 10, 1919. Serial No. 303,045. 3 Claims. (Cl. 3—12.)



2. An artificial hand having fingers and a thumb each consisting of a frame member, a base piece in the wrist portion of said hand, said finger frame members being anchored in said base piece and projecting from one side thereof, the said thumb wire also being anchored in said base piece and projecting from one end thereof, and a resilient palm for said hand comprising a coiled spring anchored in said base piece and projecting from the side thereof opposite to that from which the finger frame members project and extending substantially longitudinally of said hand.

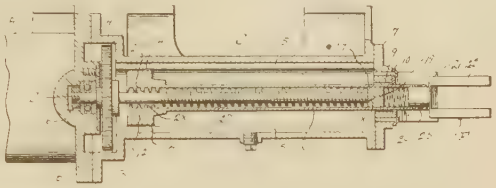
1,416,181. CAR BRAKE. ROBERT Z. FARMER and GEORGE S. MARSH, Roseburg, Oreg., assignor to Automatic Electric Brake Company, a Corporation of Oregon. Filed Nov. 8, 1919. Serial No. 336,764. 5 Claims. (Cl. 188—162.)



1. In combination with a brake lever of a brake rigging, a shaft, a member threaded on said shaft and in pivotal connection with the brake lever, means for rotating the shaft in either direction for imposing push or pull upon the brake lever, and expansible means for limiting the movement of the member in one direction, said shaft rotating independently of the member when the member is at the limit of its movement as controlled by the expansible means.

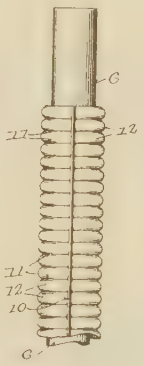
1,416,182. POWER-TRANSMITTING DEVICE. ROBERT Z. FARMER, Roseburg, Oreg., assignor to Automatic Electric Brake Company, a Corporation of Oregon. Filed June 7, 1920. Serial No. 387,100. 7 Claims. (Cl. 74—40.)

1. A device of the class described comprising a tubular piston supported for endwise movement, a shaft extending within the piston, a bearing block within the outer end portion of the piston for coaction with the inserted end



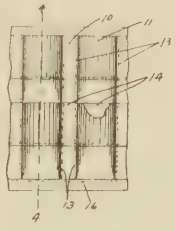
of the shaft, said block being movable lengthwise of the piston, and yieldable means for urging the block inwardly of the piston.

1,416,183. ELECTRODE. JOSEPH W. FAY, Milwaukee, Wis., assignor to Seamweld Equipment Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 24, 1921. Serial No. 480,168. 5 Claims. (Cl. 219—12.)



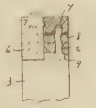
1. An electrode for welding purposes, comprising a bar of metal, a coat of cement on said bar, and an insulating paper covering over the cement, said paper having transversely extending depressions therein and longitudinally extending ribs.

1,416,184. SHELL BELT. EDWARD FLURIE, Big Sioux Township, Union County, S. Dak. Filed Dec. 14, 1920. Serial No. 430,689. 2 Claims. (Cl. 224—23.)



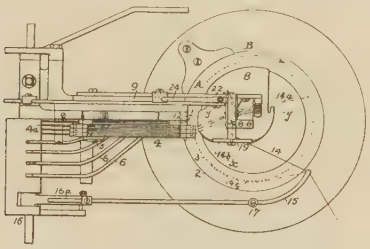
1. An ammunition shell belt, including a flexible waist band, having its upper and lower edge portions so folded over that the lower edge portion overlaps the upper edge portion, and two strips of flexible material on the band, formed with vertical loops to receive shells, the lower edges and the portions of the strips intermediate the loops and the over-folded and intermediate portions of the band being stitched together.

1,416,185. KNIFE-BLADE SWITCH. RUDOLF FREUND, Irvington, N. J., assignor to Freund Electric Manufacturing Company. Filed Jan. 13, 1920, Serial No. 351,149. Renewed Mar. 6, 1922. Serial No. 541,590. 8 Claims. (Cl. 200—172.)



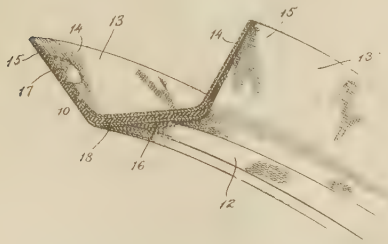
2. In a knife blade switch, the combination of a blade having a tang upon its free end, and a cross-bar having a blind cavity therein to receive said tang, the latter being upset within said cavity, whereby said blade is firmly secured to said bar.

1,416,186. KNITTING MACHINE. PAUL H. FRYER, Philadelphia, Pa. Filed June 29, 1920. Serial No. 392,660. 5 Claims. (Cl. 66—12.)



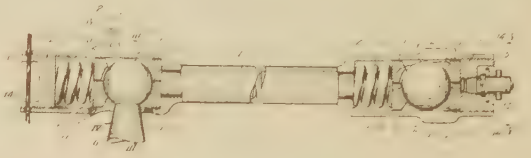
1. A knitting machine having a needle cylinder and needles therefor, a thread guide for feeding a body thread to the needles, a thread guide for feeding a splicing thread to the needles, means for putting the thread guides into and out of feeding action, a main thread clamp and cutter and supporting plate therefor arranged within the needle cylinder for respectively holding the thread ends and severing the threads between the clamp and fabric on the needles, combined with an auxiliary clamp arranged within the needle cylinder to provide additional clamping action upon the splicing thread, said auxiliary clamp arranged out of alinement with the body thread and its guide, whereby an additional clamping of the splicing thread may be had to prevent it from becoming released from the main clamp at the time the splicing thread is fed to the needles and before it is knitted into the fabric.

1,416,187. TIRE FLAP. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 27, 1922. Serial No. 547,029. 2 Claims. (Cl. 152—20.)



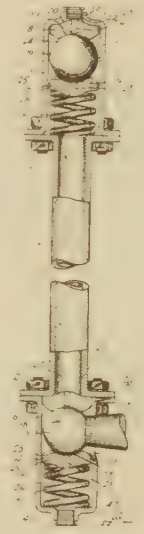
2. A pneumatic-tire flap comprising an annular, substantially flat-bottomed, trough-shaped structure having overlapped ends and composed of surface plies of fabric and an interposed filler of vulcanized rubber and fiber compound.

1,416,188. DRAG LINK. HARRY B. GARMAN, Detroit, Mich., assignor to The Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 2, 1921. Serial No. 489,362. 5 Claims. (Cl. 74—17.)



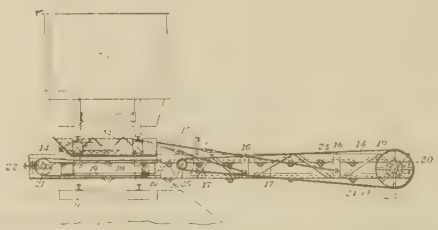
1. A drag link consisting of a piece of tubing having a socket portion of enlarged diameter, said socket portion having a ball lever receiving slot therein, the wall of said socket portion being thickened at the slotted portion thereof.

1,416,189. DRAG LINK. HARRY B. GARMAN, Detroit, Mich., assignor to The Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 2, 1921. Serial No. 489,364. 9 Claims. (Cl. 74—17.)



1. In a weldless type drag link, the combination of an intermediate member; an end socket removably secured thereto; a member secured to the other end of said intermediate member; a connecting member secured to said last-mentioned end member; and a second connecting member journaled in and secured to said socket, the latter being formed with an extending slot open at its inner end and providing for the lateral shifting of its connecting member.

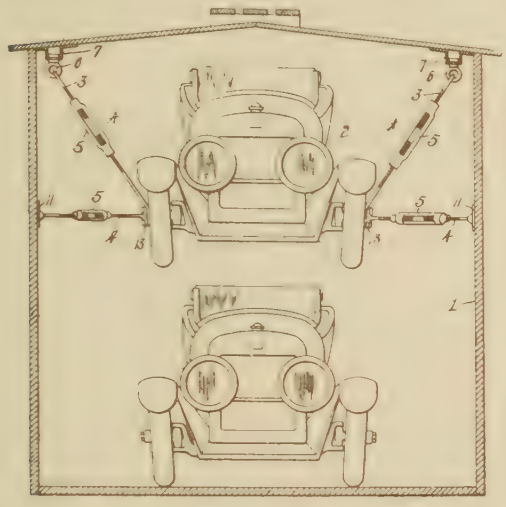
1,416,190. UNLOADING DEVICE. ELMER J. GASS and DAVID W. THURSTON, Pittsburgh, Pa. Filed May 31, 1919. Serial No. 300,933. 6 Claims. (Cl. 214—46.)



1. An unloading device, comprising a truck having a plurality of independent longitudinally extending sills,

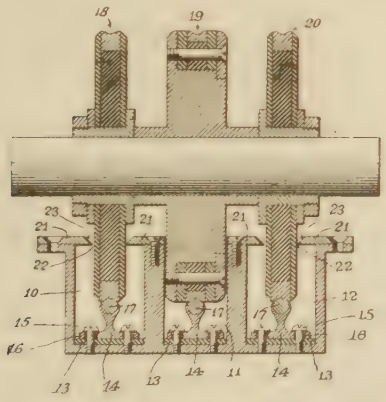
means connecting said sills and permitting relative movement therebetween, a hopper mounted on certain of said sills, and a conveyor below said hopper, substantially as described.

1,416,191. ADJUSTABLE SUSPENDING RIG FOR AUTOMOBILES. ARTHUR G. GIRARD, Toledo, Ohio. Filed Mar. 13, 1922. Serial No. 543,318. 9 Claims. (Cl. 105—368.)



3. In a suspending rig of the class described, a unit having suspending and lateral bracing members terminating at their free ends in axially aligned sleeve embracing eyes, and an article engaging sleeve for entering the eyes of the members.

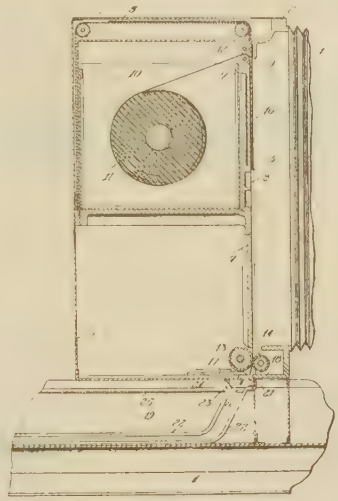
1,416,192. CONDUCTOR RAIL. EDWIN B. GRACE and WILLIAM J. LAFFEY, Memphis, Tenn. Filed Mar. 18, 1921. Serial No. 453,454. 4 Claims. (Cl. 191—24.)



1. A conductor rail comprising a casting formed to provide a series of channels, the vertical walls of the intermediate of the said channels being of a greater thickness than that of the other walls of the casting, supports equi-distantly spaced along each of said channels and insulated therefrom, and conductors extending through each of the said channels and secured in said supports.

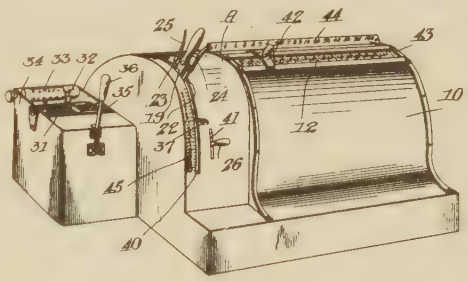
1,416,193. PRINT-STORAGE EQUIPMENT FOR CAMERAS. JOHN S. GREENE, Rochester, N. Y., assignor to Photostat Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 8, 1920. Serial No. 415,503. 4 Claims. (Cl. 95—34.)

1. In a camera, the combination with a body and means for supporting sensitive material in the focal plane thereof, of a receptacle for exposed material arranged below the body and provided with an opening for the introduction of such material, the film support and receptacle



being relatively movable, and sealing elements on the film support and adjacent to the opening in the receptacle respectively, adapted to cooperate in a light tight manner when these members are in normal relative positions.

1,416,194. COMPUTING MACHINE. ALEXANDRE GUINDON, Rockland, Ontario, Canada. Filed July 15, 1920. Serial No. 396,415. 3 Claims. (Cl. 235—87.)

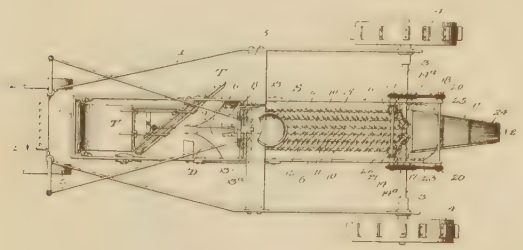


1. A computing machine comprising a casing, a drum rotatably mounted in the casing and having symbols on its periphery, a spindle, gears connecting the spindle with the drum, a pair of ratchet wheels on the spindle having oppositely disposed teeth, a hand lever, detents carried by the lever to coact with the teeth, means for simultaneously actuating the detents, a lever pivoted within the casing and having an offset end designed to engage one of the gears, a gear on the said spindle, a second spindle movable in a direction transversely to its length and having a gear to coact with the last said gear, a pointed threaded on the last said spindle and a roller having graduations thereon underlying the pointer.

1,416,195. ELECTRIC STORAGE BATTERY. EDWARD HACKING, Central Falls, R. I., assignor, by mesne assignments, to Electrol Manufacturing Company, a Corporation of Rhode Island. Filed Apr. 30, 1918. Serial No. 231,620. 8 Claims. (Cl. 204—29.)

1. A mixture for use in electric storage batteries having lead plates, which mixture comprises silicate of soda, a sulphuric acid solution and a minor proportion of a liquid hydrocarbon miscible with all the other named constituents and non-oxidizible by the acid.

1,416,196. BEET ELEVATOR. OLE HANSEN, Menan, Idaho. Filed Nov. 24, 1919. Serial No. 340,257. 2 Claims. (Cl. 55—108.)

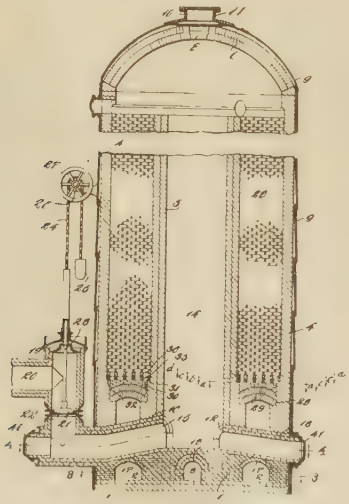


1. In a beet harvesting machine, the combination with the digging elements, of a conveyer frame having its lower end carried by the digging elements and its upper end supported in the frame of the machine, said conveyer frame consisting of a pair of sprocket shafts arranged in vertically converging relation and journaled in the digging elements, a second pair of vertically converging sprocket shafts journaled at one end in a frame part of the machine, longitudinal braces connecting corresponding shafts of the opposite pairs of sprocket shafts, sprocket wheels carried by the sprocket shafts, conveyer belts carried by the sprocket wheels to provide a vertically converging conveyer trough, and members for guiding the lower edge portions of the inner flights of the opposite conveyer belts.

1,416,197. MANUFACTURE OF INCANDESCENT ELECTRIC LAMPS. FRANCIS HARRISON, London, England, assignor to The Aladdin Renew Electric Lamp Corporation Limited, London, England. Filed July 8, 1919. Serial No. 309,385. 3 Claims. (Cl. 176—7.)

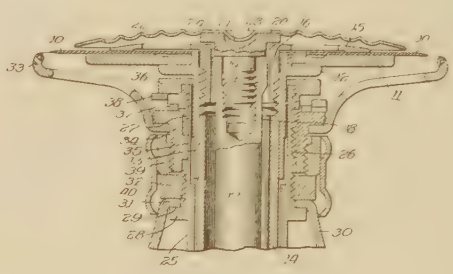
1. The method of renewing metal filament lamps having permanent supporting hooks arranged therein in independent series located in different planes, comprising making an opening in the lamp bulb, removing the old filament therethrough and forming a new filament of a series of coils, and applying said new filament to any desired number of said hooks by stretching same to the desired length, substantially as described.

1,416,198. HOT-BLAST STOVE. LOUIS M. HARTWICK and PATRICK J. BROWN, Cleveland, Ohio; said Hartwick assignor of his entire right to The Frazier-Sheal Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 20, 1919. Serial No. 272,003. 8 Claims. (Cl. 263—19.)



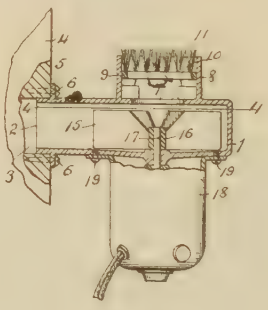
1. In a hot blast stove, the combination of an inner wall enclosing a central chamber and an outer wall forming with the inner wall an annular chamber surrounding the central chamber, arches extending radially between the inner and the outer wall, each arch having a flat top, transverse parallel bars supported on said arches, and checker work supported by said bars.

1,416,199. RAZOR-BLADE GUARD AND FACE PLATE. HUGO S. HASSELQUIST, Oak Park, Ill., assignor, by mesne assignments, to Cap B. Collins, Oak Park, Ill. Filed Mar. 15, 1920. Serial No. 365,725. 3 Claims. (Cl. 30—12.)



1. In a razor construction of the character described, the combination of a round disc razor-blade, a corrugated convex face-plate over said blade, a stationary mounting for said face-plate, and a round smooth-edge guard of a larger diameter than and concentric with said blade, substantially as described.

1,416,200. ERASER-CLEANING MACHINE. WILLIAM J. HAYNES, Jr., Kansas City, Mo. Filed July 5, 1919. Serial No. 308,850. 1 Claim. (Cl. 15—7.)

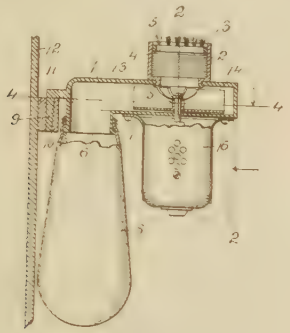


In an eraser cleaner, a casing having an inlet and an outlet for air and provided with a flange encircling said inlet, a brush comprising a perforate frame and bristles mounted in the frame, the frame being removably seated in said flange across said inlet and the bristles projecting outwardly beyond the outer edge of said flange, and means for drawing air through said brush and inlet and discharging the air through said outlet, substantially as set forth.

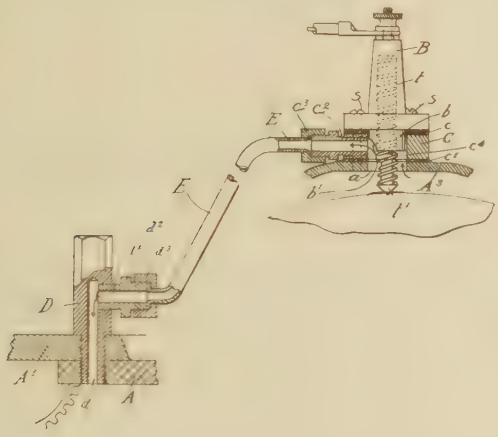
1,416,201. ERASER CLEANER. WILLIAM J. HAYNES, Jr., Kansas City, Mo., assignor to National Wood Renovating Company, Kansas City, Mo., a Corporation of Missouri. Filed July 30, 1920. Serial No. 400,140. 2 Claims. (Cl. 15—7.)

1. In an eraser cleaner, a casing having a discharge nozzle having a hook, the casing having an air inlet, a brush across said inlet, means for drawing air through

said inlet and for discharging the air through the nozzle, and a bracket adapted to be attached to a wall and having a hole for receiving said hook to support said casing, substantially as set forth.

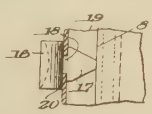


1,416,202. OILING DEVICE. WILLIAM Y. HEADLEY, Cincinnati, Ohio. Filed Apr. 29, 1921. Serial No. 465,612. 2 Claims. (Cl. 184—11.)



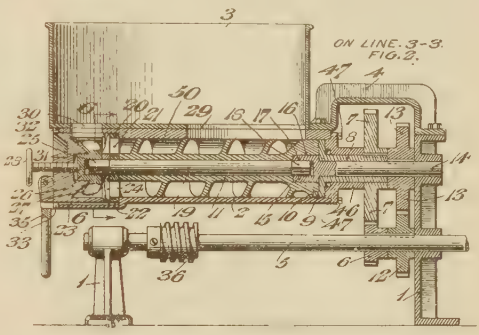
2. In combination with the splash-oiled engine of the Ford type, a thick washer confined between the magneto plug and the transmission case, an oil outlet passage through the wall of said washer, the contiguous base of said magneto plug being cut away to form an inlet passage to direct the oil splashed from the transmission case into said oil outlet, a hollow stud forming an inlet for oil and adapted to replace one of the standard bolts securing the gear cover to the crank case, and an oil conduit connecting said washer outlet to said stud inlet.

1,416,203. APPAREL LACING. ORLEN HOBSON, Fresno, Calif. Filed May 21, 1921. Serial No. 471,301. 2 Claims. (Cl. 24—145.)



2. In a fastening for shoes and the like the combination of a strip of flexible material adapted to be folded upon itself longitudinally and to have its free ends secured upon opposite sides of each of the parts to be drawn together and being provided in its folded portion with a plurality of narrow slits extending longitudinally thereof; and a plurality of tubular eyelets each provided with an arrow-head shaped projection extending from the side thereof, said projection being provided at its connection to said eyelet with a narrowed neck adapted to be mounted within said slits, said enlarged portion serving to prevent withdrawal thereof, there being one of said eyelets for each of said slits; and a single lacing within said eyelets, said lacing having its central portion extending between the lowermost eyelets and having its free ends extending through alternate eyelets on the opposed portions to be drawn together.

1,416,204. CUTTING MACHINE. CHARLES W. HOTTMANN, Philadelphia, Pa. Filed Feb. 13, 1922. Serial No. 536,057. 10 Claims. (Cl. 17—20.)



1. In a cutting machine, a casing having in its bottom an inlet port and a discharge port, a feed casing beneath said bottom communicating with said port, a conveyor in said feed casing, actuating means for said conveyor, and cutting mechanism at the end of said conveyor and in proximity to said inlet port.

1,416,205. DEHYDRATION. WILBERT J. HUFF, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 27, 1921. Serial No. 440,497. 8 Claims. (Cl. 260—42.)

7. The process of dehydrating water-containing pyridine, comprising distilling off a fraction from the pyridine, which fraction of the pyridine serves as a vehicle to carry off water, removing water from the distillate, returning the dehydrated pyridine distillate to the pyridine being distilled, and continuing the operation until the desired degree of dehydration is attained, substantially as described.

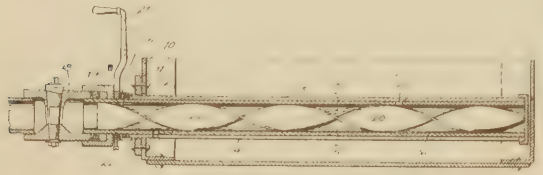
1,416,206. DEHYDRATION OF PYRIDINE. WILBERT J. HUFF, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 27, 1921. Serial No. 440,498. 8 Claims. (Cl. 260—42.)

1. The process of dehydrating water-containing pyridine, comprising adding to the pyridine a low boiling point liquid which upon distillation serves as a vehicle to carry off water and in an amount less than that required to form a binary constant boiling point mixture with all of the water, distilling, and renewing the low boiling point liquid as it is distilled off, and continuing the distillation until the desired degree of dehydration is obtained, substantially as described.

1,416,207. STEAM-BOILER CLEAN-OUT DEVICE. MIKE HUFFMAN, Des Moines, Iowa. Filed Sept. 23, 1919. Serial No. 325,793. 5 Claims. (Cl. 22—388.)

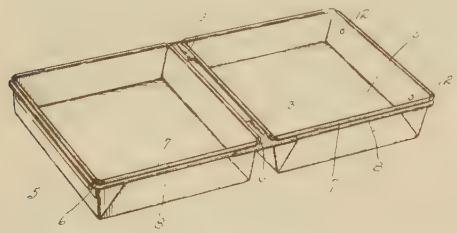
1. In a device of the class described, the combination of an outer stationary tube and an inner rotatable tube, said tubes being provided with openings that are capable

of registering or coinciding at different parts of the tubes during the time that the inner tube is rotated, and means



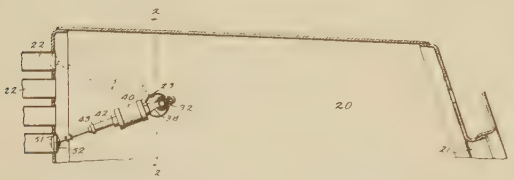
connected to the said inner tube, to be acted on by the water escaping through the said inner tube, for causing said inner tube to rotate.

1,416,208. BAKING PAN. JOSEPH GEORGE JACKSON, Chicago, Ill., assignor to Edward Katzinger Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 5, 1920. Serial No. 371,224. 18 Claims. (Cl. 53—6.)



1. A bake pan set comprising a plurality of individual pans, a wire frame cylindrical in cross-section disposed around the set of pans, and fastening members separate from and secured to the pans and located at adjacent pan corners for connecting the pans to said wire frame.

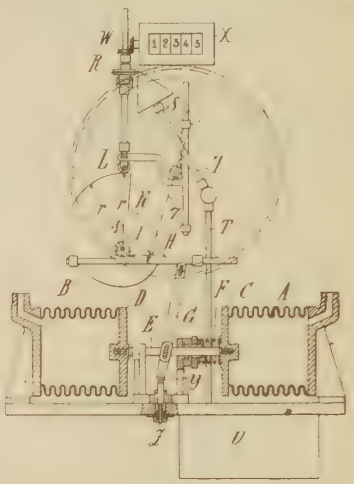
1,416,209. FLUE-CLEANING APPARATUS. EDWIN M. JENKINS and ROBERT E. JACKSON, Princeton, W. Va. Filed Mar. 24, 1919. Serial No. 284,771. 11 Claims. (Cl. 122—391.)



1. In apparatus of the character described, the combination with a boiler having flues and a fire box, said fire box having openings formed in its sides, of a rotatable support extending through said openings and arranged in the fire box, and a longitudinally extensible flue cleaning device adapted to be passed through one of said openings, said cleaning device being movable longitudinally of said support.

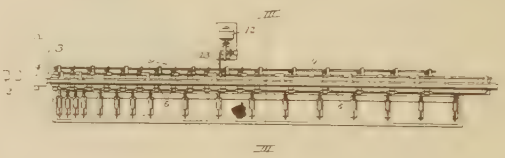
1,416,210. SPEED-INTEGRATING MECHANISM AND THE LIKE. KARL TORSTEN FREDRIK JUNG, Kalmar, and GUSTAF HENRIK PETERSSON, Stockholm, Sweden. Filed Dec. 1, 1913, Serial No. 804,078. Renewed Apr. 29, 1919. Serial No. 293,440½. 2 Claims. (Cl. 73—110.)

1. The combination in pressure responsive devices for ships, of a pair of bellows, a rod common to both bellows, a rack parallel to said rod, a driving member intermediate said rod and rack, resilient means secured to one of said bellows adapted to compensate pressure differences, indi-



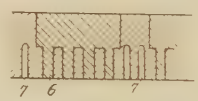
cating means and operative connections between said rack and indicating means, substantially as described.

1,416,211. AUTOMATIC CONTROL FOR MILLS. ALFRED E. JUPP and ROXIE CROOKS, Youngstown, Ohio. Filed Oct. 11, 1920. Serial No. 416,069. 10 Claims. (Cl. 164—49.)



1. The combination with a roller table, of shears, of a contact device operated by the shears, a gauge, a kick-off, and electrically operated means controlled by said contact device for operating said gauge and kick-off, substantially as described.

1,416,212. PROCESS OF PRODUCING INLAID WORK AND THE LIKE. JACOB KAUFMANN, Wilmersdorf, Germany. Filed Jan. 8, 1913. Serial No. 740,771. Renewed Mar. 27, 1917. Serial No. 157,855. 4 Claims. (Cl. 41—35.)



1. A process for the production of inlaid work comprising the following steps: forming depressions or recesses in one face of a metal plate; pressing together the plate and a sheet of wood veneer, and grinding away the wood until level with the face of the metal plate.

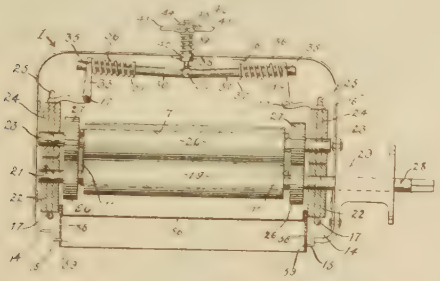
2. A process for the production of inlaid work comprising the following steps: forming depressions or recesses in one face of a metal plate forming further depressions in the base of the recesses; pressing together the plate and a sheet of wood veneer and grinding away the wood until level with the face of the metal plate.

3. A process for the production of inlaid work and the like comprising the following steps: etching depressions or recesses in one face of a metal plate; pressing the plate and a sheet of wood veneer together and grinding away the wood until level with the face of the metal plate.

4. A process for the production of inlaid work and the like comprising the following steps: etching depressions

or recesses in one face of a metal plate; etching further depressions in the base of the said recesses; pressing the plate into a sheet of wood veneer and grinding away the wood until level with the face of the metal plate.

1,416,213. CLOTHES WRINGER. ROBERT LELAND KINCAID, Syracuse, N. Y. Filed Mar. 3, 1920. Serial No. 362,910. 6 Claims. (Cl. 68—32.)

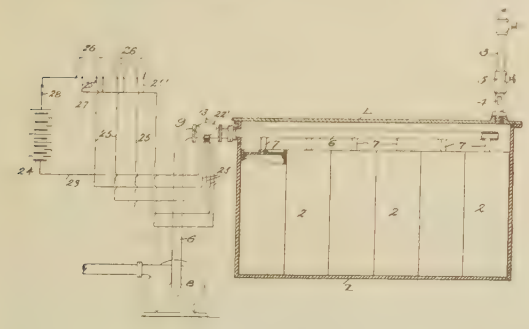


1. A wringer construction comprising opposing front and rear, substantially rectangular duplicate box-like sections fitted together and forming a casing, rolls, roll mechanism arranged within the said sections for applying pressure to the rolls, bearings for the rolls, and transverse fastening devices passing through and securing the sections together and supporting the bearings and the roll mechanism.

5. A water board for wringers formed of a sheet having oppositely inclined walls which meet at an apex substantially centrally of the water board and depending end flanges formed with lengthwise slots in combination with a wringer including a frame having inturned lips for entering the slots, substantially as and for the purpose specified.

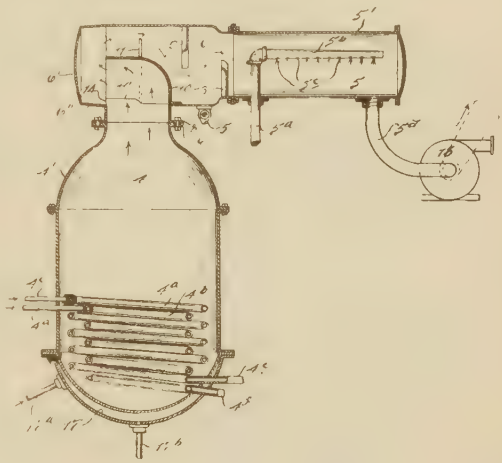
6. In a wringer, the combination of a casing, a pair of rolls, bearings for the rolls, one roll being movable toward and from the other, means for compressing said roll toward and from the other comprising a pair of horizontally extending links pivoted together at their opposing ends, a rod pivoted to the joint of said links, a screw threading in the casing of the wringer and encircling the rod, the rod being slidable endwise in the screw, and means for turning the screw and locking the rod from endwise movement relatively to the screw, said means being operable to unlock the rod from the screw, substantially as and for the purpose set forth.

1,416,214. STORAGE-BATTERY-VENTILATING SYSTEM. CHARLES CLIFTAIN KING, Bridgeport, Conn., assignor to The Lake Torpedo Boat Company, Bridgeport, Conn., a Corporation of Maine. Filed Sept. 5, 1919. Serial No. 321,863. Renewed Jan. 16, 1922. Serial No. 529,745. 3 Claims. (Cl. 204—29.)



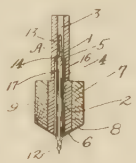
3. In a storage-battery ventilating system, comprising a battery-compartment, and storage-battery-cells mounted therein, a vent tube communicating with said battery-compartment and with said cells, means for causing a current of air through said vent tube, a damper arranged in said vent tube, an arm carrying electric contacts operated by said damper, conductors associated with said contacts, a battery in circuit with said contacts and said conductors, and electric lamps in said circuit.

1,416,215. METHOD OF RECOVERING SOLIDS FROM VAPORS AND MEANS FOR UTILIZING THE SAME. JOSEPH P. KIRKUP, Elmhurst, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed July 31, 1920. Serial No. 400,559. 7 Claims. (Cl. 183—93.)



1. In apparatus for recovering solids from vapor a separator device comprising a chamber having through one side thereof an outlet and through the bottom thereof an inlet for the vapor; a conduit for vapor upwardly extending into said inlet; and, within the chamber, a unitary passageway for the vapor leading from said inlet upwardly curvingly towards an end of the chamber opposite to said outlet, and from adjacent said end leading still upwardly curvingly in reverse direction and thence continuing doubled and superimposed over itself towards said outlet, the interior surfaces of said passage way and chamber being conformed to return thereon dropped or precipitated solids to said inlet.

1,416,216. PHONOGRAPH NEEDLE. HOWARD LEGGE, Los Angeles, Calif. Filed Aug. 24, 1920. Serial No. 405,681. 6 Claims. (Cl. 274—38.)

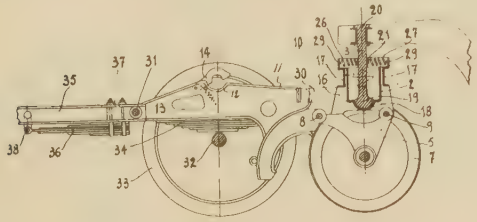


1. Improvements in phonograph needles, including, in combination, an inelastic member provided with a head and shank, there being a bore in said member, of a non-metallic member surrounding the head of said first named member, and a needle confined within said bore.

1,416,217. MEANS FOR COUPLING TRACTORS AND TRAILERS. MARCEL LEYTENS, Antwerp, Belgium. Filed Aug. 17, 1921. Serial No. 493,076. 5 Claims. (Cl. 280—33.1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

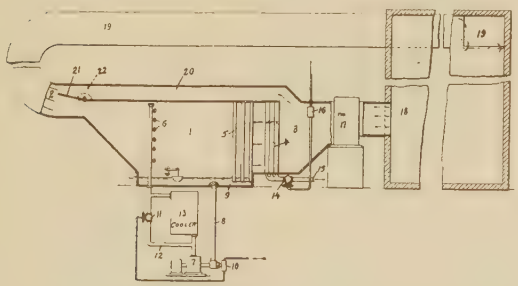
5. Improved means for coupling a motor tractor and a trailer, as claimed in claim 4, further characterized by the fact that the guide through which the pivot passes freely has a shape elongated transversely, in relation to the longitudinal axis of the trailer, so as to allow a limited transverse movement of the said guide in relation to the pivot and consequently a limited oscillation of the

fore-part of the trailer about the centre of the semi-spherical or like end of the pivot transversely in relation



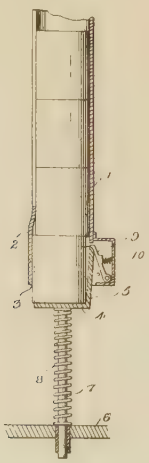
to the longitudinal axis of the vehicles, substantially described.

1,416,218. APPARATUS FOR DEHUMIDIFYING AIR. ADOLPH W. LISSAUER and ROBERT E. KEYES, New York, N. Y., assignors to W. L. Fleisher & Co., Inc., New York, N. Y., a Corporation of New York. Filed May 3, 1920. Serial No. 378,372. 2 Claims. (Cl. 34—19.)



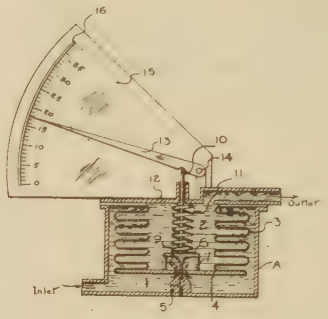
1. In combination with a drying chamber, an apparatus for dehumidifying air comprising a dehumidifier having an inlet and an outlet, a conduit connecting the drying chamber to the inlet of the dehumidifier, a mixing chamber at the outlet of the dehumidifier, means for delivering the air from the mixing chamber to the drying chamber, means establishing communication directly between the drying chamber and the mixing chamber, and means for varying in inverse ratios the cross-sectional areas of the conduit connecting the drying chamber to the dehumidifier and means establishing direct communication between the mixing chamber and the drying chamber.

1,416,219. DISPENSING APPARATUS. HERMAN C. LITCHFIELD, Waukegan, Ill. Filed May 28, 1920. Serial No. 385,016. 6 Claims. (Cl. 211—8.)



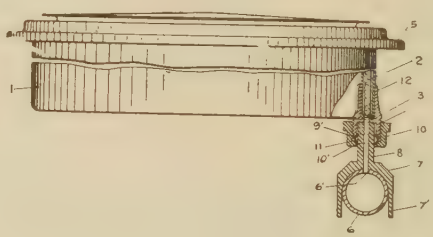
1. A dispensing apparatus comprising a tube supporting the articles to be dispensed, a receiver arranged at the lower end of the tube and having inclined wall for slightly displacing an article with relation to the tube when received by the receiver, a spring arranged to force the receiver into its proper relation with the tube, and a catch arranged to support the articles in the tube, when an article is being removed by the receiver.

1,416,220. FLOW METER. ALBERT R. LONG, Ballston, Va., and HAROLD H. TURNER, Hempstead, N. Y. Filed Mar. 6, 1920. Serial No. 363,767. 8 Claims. (Cl. 73—167.)



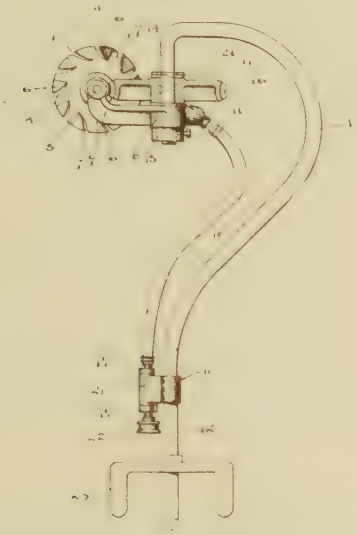
1. A device for indicating the flow of a fluid, comprising a main casing having inlet and outlet passages therein, an auxiliary chamber in the main casing and expansible under pressure, a thin plate having an orifice therein forming the base of said chamber, a diaphragm suspended from said casing and connected to said thin plate and forming the side walls of said chamber, a centrally located metering pin closing the orifice of the thin plate when the flow is zero to control the flow of the liquid, and indicating means for measuring the rate of flow of said fluid.

1,416,221. CONNECTION FOR LIQUID-FUEL BURNERS. GUSTAVE C. LORENZ, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 22, 1921. Serial No. 486,713. 8 Claims. (Cl. 158—86.)



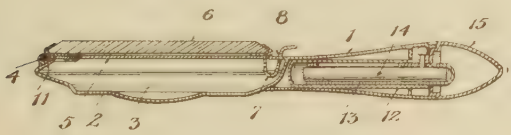
1. A connection between the liquid fuel supply pipe and the burner of a liquid hydrocarbon stove, comprising a member secured to the supply pipe and having an upwardly extending tubular portion, a tubular member connected with and extending downwardly from the burner, and telescoping with the said upwardly extending portion, an annulus of relatively soft material on one of said members, said annulus having beveled surfaces and adapted to act as a seal for the joint of the said telescoping members, one of the said members also having a beveled portion in contact with the said annulus, the respective angles of the two beveled portions being different in degree.

1,416,222. SPRINKLER. DANIEL F. MCGILL, Portland, Oreg. Filed Mar. 11, 1920. Serial No. 365,060. 6 Claims. (Cl. 299—68.)



6. A standard adapted to be inserted into the ground and having a vertical member supported from said standard and depending therefrom; and hydraulically operated sprinkler means mounted upon said member and having a planetary movement thereabout.

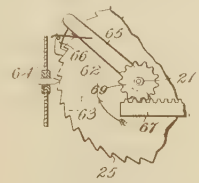
1,416,223. COMBINED MIRROR AND VANITY CASE. ROYAL MARCHER, New York, N. Y., assignor to Cohn & Rosenberger, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 30, 1921. Serial No. 518,828. 1 Claim. (Cl. 132—85.)



An article of the class described comprising an article made in substantial similarity to a hand mirror, said article having a substantially flat, hollow [illegible] adapted to form a storage chamber, a hinged face on said head forming a lid therefor and having a mirror on its outer face and adapted to be swung away from the body of the article to uncover the entrance to the storage chamber, a laterally extending tubular portion on said head forming a handle therefor and adapted to act as a storage chamber, a removable end on said handle forming a continuation thereof, a tubular container of less thickness than the removable end, tubular means within the handle for receiving the tubular portion on the end and means for retaining the end portion of the handle on the handle.

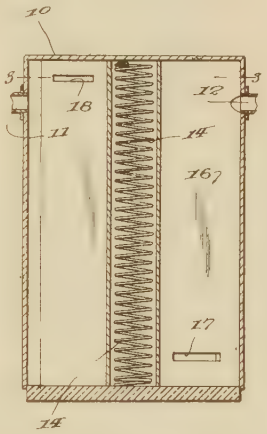
1,416,224. SIGNAL. GERARD R. MARSICO, Brooklyn, N. Y., assignor to Puriton Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 9, 1919, Serial No. 302,743. Renewed Aug. 27, 1921. Serial No. 496,165. 2 Claims. (Cl. 116—144.)

1. A device of the class described comprising a diaphragm, a rotor co-acting with the diaphragm to vibrate the same and provided with radial teeth at its periphery constituting the striking surface, a rotary driven device co-acting with said toothed surface between fixed points



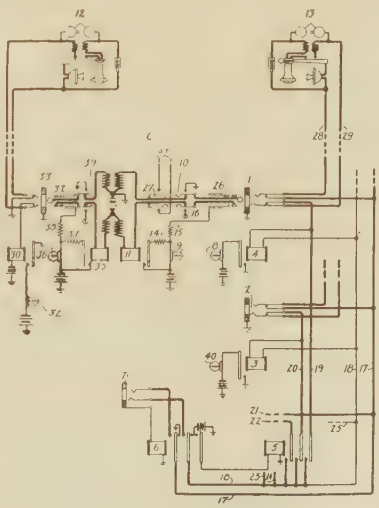
in the circumference of the rotor, and means for driving said device.

1,416,225. ELECTRIC HEATER. FRANCIS M. MAY, Louisville, Ky. Filed June 13, 1921. Serial No. 477,242. 2 Claims. (Cl. 219—39.)



1. An electrical heater comprising a casing closed at both ends, baffle walls in the casing having openings alternately at the upper and lower ends, an electric heating element disposed vertically and centrally within the casing, an electric heating element in the bottom of the casing, means for delivering a current of air into the casing to pass upwardly and downwardly of the baffle walls and through the openings thereof, and means for conducting the heated air from the casing to a point of use.

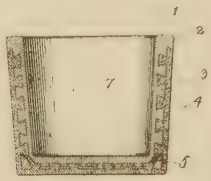
1,416,226. TELEPHONE-EXCHANGE SYSTEM. HENRY L. MEADE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1920. Serial No 396,133. 8 Claims. (Cl. 179—72.)



1. In a telephone exchange system, a group of associated subscribers' lines, a terminal jack for each sub-

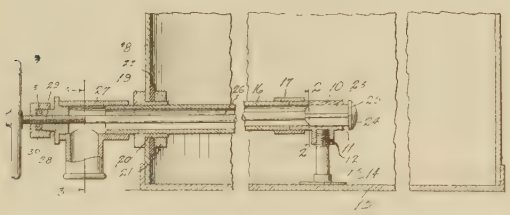
scriber's line, a grouping jack, associated with all of the lines of the associated subscribers, a cord circuit for connecting any two jacks, and means for establishing through the grouping jack a common conversational connection between any one of the associated subscriber's lines and the remaining subscribers' lines in said group.

1,416,227. BOTTLE STOPPER. CORTEZ MERRILL, Oelwein, Iowa. Filed Jan. 27, 1921. Serial No. 440,443. 2 Claims. (Cl. 215—47.)



1. A bottle stopper including a hollow body member having an annular flange at its open end, a plurality of ribs arranged circumferentially of the body upon its side walls and bottom portion, the outer face of said ribs terminating short of the flange or the body, and composition matter pressed into the body to a thickness of the space between the outer edge of the flange and the faces of the ribs to provide a smooth uniform surface.

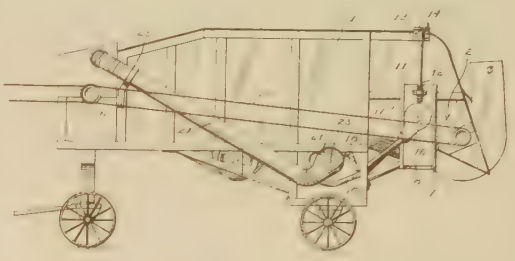
1,416,228. CISTERN OUTLET. HENRY M. MINNIS, Wylie, Tex. Filed Sept. 29, 1920. Serial No. 413,593. 1 Claim. (Cl. 137—21.)



The combination with a tank, of an upstanding pedestal arranged in the central portion of the tank, a substantially horizontal valve casing provided with a boss secured to the pedestal, an approximately horizontal pipe extending generally radially within the tank and projecting through the side thereof to the exterior of the same, a coupling for detachably connecting the end of the pipe and the end of the valve casing, means for effecting a water-tight joint between the pipe and the wall of the tank, a T coupling mounted upon the outer end of said pipe exteriorly of the tank, a valve body slidably mounted within the valve casing and having an enlarged head at one end thereof to engage the end of the valve casing, said valve body having longitudinal grooves, a stem connected with the inner end of the valve and extending through the pipe and having screw threaded engagement with a portion of the T-coupling, and means to turn the stem.

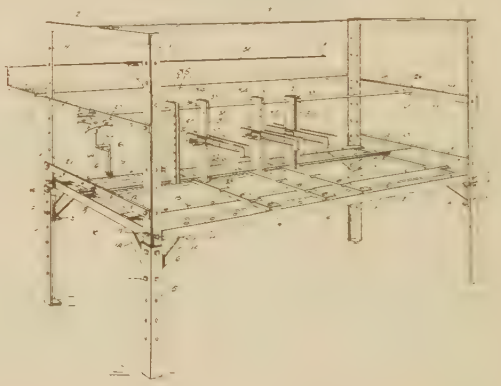
1,416,229. BLOWER. JOHN H. MORGAN, Eldorado, Okla. Filed Sept. 11, 1920. Serial No. 409,618. 2 Claims. (Cl. 302—17.)

1. The combination with a threshing machine, of a guiding frame mounted thereon, a carrier vertically movable in said frame, a blower mounted on said carrier, an elbow fitted about the discharge end of the tailings



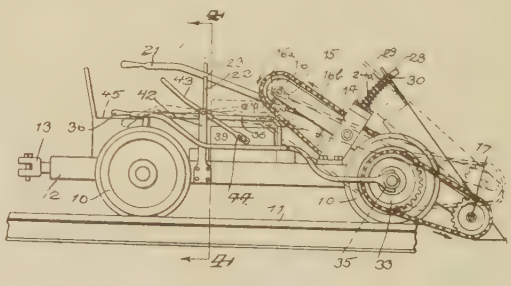
trough of the threshing machine, and means connecting the blower with the interior of the said elbow at the sides of the tailings trough.

1,416,230. BOX-NAILING FORM. ERNON V. OLIVER, Portland, Oreg., assignor of five-twelfths to Hans Peterson, Portland, Oreg. Filed Jan. 4, 1921. Serial No. 434,880. 15 Claims. (Cl. 144—295.)



1. In an apparatus for the purpose set forth, the combination of end frames, a bench supported by and between said end frames, supporting members extending between the end frames, posts mounted on said supporting members above the bench, and box-end-engaging clamp carried by said posts.

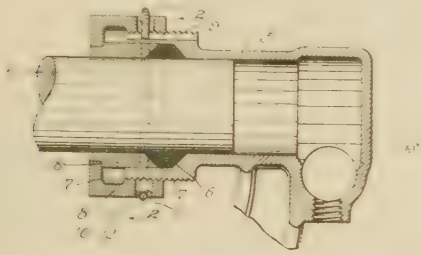
1,416,231. TRACK-CLEANING DEVICE. OLE J. OLSON, Nashua, Mont., assignor of one-half to Peter R. Rost, Glasgow, Mont. Filed Mar. 2, 1921. Serial No. 448,990. 2 Claims. (Cl. 37—59.)



1. In a track cleaning device, a wheel supported frame, an inclined conveyor frame, side members pivotally connected therewith intermediate their ends, shafts rotatably engaging the ends of said side members, a conveyor mounted thereon, a scraper embodying angular side portions pivotally engaging the side members of the frames

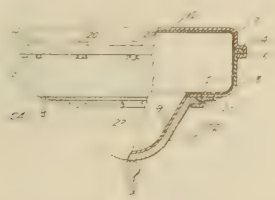
adjacent the lower ends thereof, a blade carrying shaft rotatably engaging the side portions of the members, means for adjusting the angular position of the conveyor, a connection between a wheel of the frame and one of the conveyor shafts, a connection between a wheel of the frame and the blade carrying shaft, and a yieldable connection between the frame and the upper end of the scraper forcing the lower end of the scraper downwardly.

1,416,232. PACKING GLAND. ALDEN E. OSBORN, New York, N. Y. Filed June 19, 1920. Serial No. 390,179. 1 Claim. (Cl. 286—1.)



In a packing gland, the combination with a pump barrel, or the like, having an exteriorly screw threaded end portion, provided with an intersecting keyway, and an interiorly threaded gland nut, engaged over the screw threaded end portion of the pump barrel, or the like, said gland nut having an annular positioning shoulder and a plurality of peripheral openings adjacent said shoulder, and a spring locking ring engaged about the gland nut, over said openings and positioned thereon by engagement with the annular shoulder, said spring ring having an angularly inturned lug to project through a selected one of the peripheral openings into engagement with the keyway aforesaid.

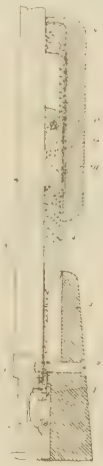
1,416,233. AIR-CUSHION CONSTRUCTION. MAGNUS PETTERSON, Long Beach, Calif. Filed Jan. 20, 1920. Serial No. 352,824. Renewed Mar. 2, 1922. Serial No. 540,571. 2 Claims. (Cl. 267—65.)



2. In an absorber, the combination of a rigid container comprising a bottom and a cover having a slip locking means, said bottom having an opening with the walls thereof formed with a double offset, a ring filling the first offset to lie flush with the inner wall of said bottom and permanently secured thereto, said ring forming with the second offset a clincher pocket; a closed resilient lining in said container and protruding through said opening; and a flexible casing to cover the protruding part of said lining, said casing having a lateral bead to engage said pockets.

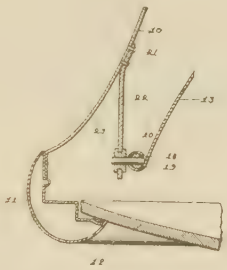
1,416,234. RIFLE. NICOLAS PIEPER, Liege, Belgium. Filed June 22, 1920. Serial No. 390,969. 3 Claims. (Cl. 42—16.)

1. In a rifle, in combination, a barrel, a bolt, a grip member slidably mounted on the barrel and connected to the bolt and means for locking the sliding grip when the bolt is in firing position comprising a laterally movable plunger adapted to extend into aligned apertures in the



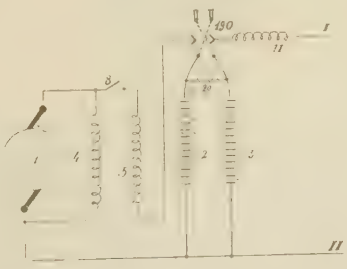
grip member and barrel and to be manually disengaged from one of said apertures, and a spring normally tending to move said plunger into locking position.

1,416,235. HEADLIGHT. TRUMAN W. POST, Providence, R. I., assignor to Willys Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Sept. 12, 1917. Serial No. 190,974. 10 Claims. (Cl. 240—41.)



1. A device of the class described, comprising the combination of a casing; a reflector; a wire bent to the form of a circle and disposed at the forward periphery of said reflector, the forward edge of said reflector being bent around and embracing said wire to form a stiffening bead; reflector trunnions set into and secured to said wire and stiffening bead; and bearings for said trunnions carried by the casing.

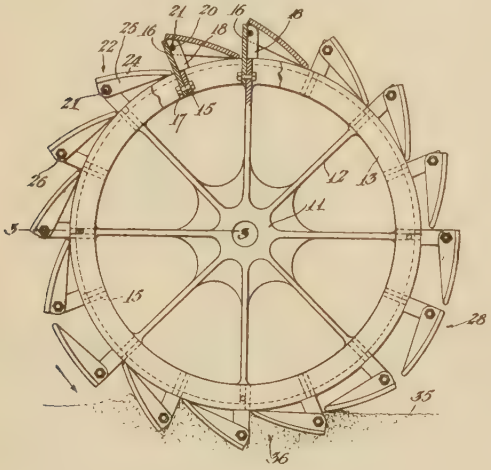
1,416,236. ELECTRICAL SYSTEM. FRANKLIN PUNGA, Liege, Belgium. Filed Sept. 25, 1911, Serial No. 651,074. Renewed Mar. 2, 1922. Serial No. 540,667. 5 Claims. (Cl. 171—313.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In combination, a dynamo and two accumulators, a field winding for said dynamo and a demagnetizing field

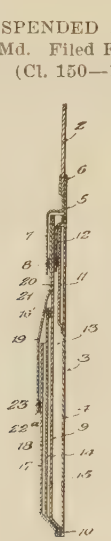
winding for the same, a reversing switch connected with like poles of the accumulators and an additional winding in which load current flows, said demagnetizing and additional windings being connected to the said reversing switch.

1,416,237. TRACTION DEVICE. ALFREDO SCOTTI, Whittier, Calif. Filed Apr. 6, 1921. Serial No. 458,897. 13 Claims. (Cl. 301—45.)



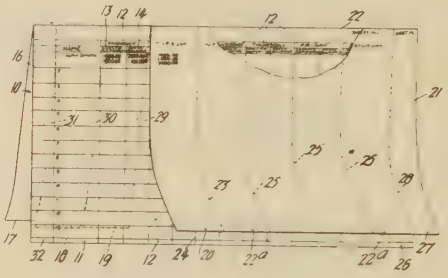
6. A traction device comprising a wheel consisting of a hub, spokes extending radially from said hub, a circular rib on each side of said spokes connecting the outer ends of said spokes, a flight mounted on the outer end of each spoke, flanges on said flights engaging said ribs, and a presser foot for each flight, each presser foot consisting of a curved plate, flanges on said plate and a bolt extending through the flanges on the flight and presser foot.

1,416,238. BODY-SUSPENDED BAG OR CASE. LOUIS SEILER, Baltimore, Md. Filed Feb. 25, 1921. Serial No. 447,814. 1 Claim. (Cl. 150—1.)



A compartment bag comprising an elongated flexible base 4, of flexible flaps 9, 14 and 17, respectively stitched to the base one upon the other, said flaps being of progressively decreasing length and unstitched along the upper ends thereof to form in the bag a plurality of independent differently sized pockets 13, 15 and 18, a strip 11 secured to the base 4 at the upper end thereof and forming in the large pocket of the bag a small pocket at the upper end thereof, a flap 12 stitched to the base for enclosing the open end of said small pocket, a flap 7 stitched to the base and forming a closure for the large pocket of the bag, and a closure 19 adapted to be stitched to the base for closing the pockets formed by the flaps 14 and 17.

1,416,239. LEDGER SHEET. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 16, 1919. Serial No. 297,469. 12 Claims. (Cl. 283—57.)

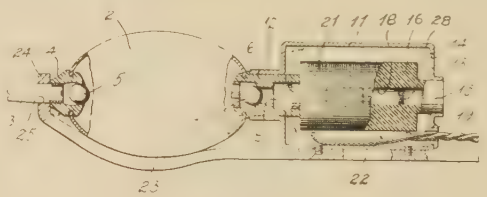


1. A ledger-sheet adapted for use in a printing and computing machine, divided into designated day columns on each face of the sheet and having a writing strip attached to the top of the sheet overlying a day column and adapted to be folded down on either face of the sheet, and when so folded down adapted to serve as a "pick-up" column for an adjacent day column.

1,416,240. CLEANING POWDER. JOHN W. SMITH, Minneapolis, Minn., assignor to United Stores Supply Company, Minneapolis, Minn., a Corporation. Filed Jan. 31, 1921. Serial No. 441,512. 2 Claims. (Cl. 87—5.)

1. A cleaning powder including a mixture of acid sodium sulphate and powdered wood.

1,416,241. CHIP BLOWER FOR DENTISTS. LEO SOBOL and GEORGE M. MARR, Brooklyn, N. Y. Filed May 6, 1919. Serial No. 295,250. 5 Claims. (Cl. 34—26.)

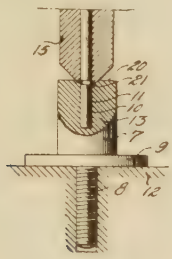


4. A dental chip blower comprising a bulb, a nozzle at the outlet end of the bulb, a fitting at the intake end of the bulb, a shell surrounding the fitting, the said fitting being provided with a longitudinal bore communicating with the bulb, a core fitted into the bore in the fitting and into the rear end of the shell, said core having a passage extending longitudinally therethrough and communicating with the bore in the fitting, the shell having an annular series of apertures in its rear end, the fitting having a plurality of radial apertures arranged near its rear end, a heating coil wound upon the core whereby air passing through and around the core will be heated prior to its entrance into the bulb.

1,416,242. CHEWING GUM. WILLIAM A. STEINEMANN, Los Angeles, Calif. Filed Feb. 7, 1920. Serial No. 357,035. 2 Claims. (Cl. 99—11.)

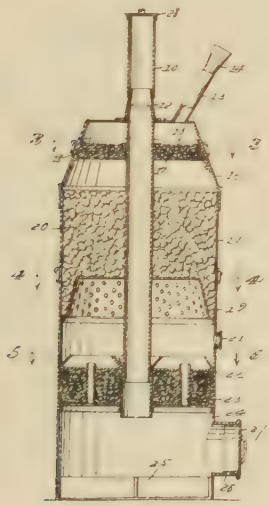
1. A chewing gum having as ingredients a binder, and commercial bran of which the flexible character of the fiber has not been destroyed.

1,416,243. METHOD OF SECURING SPARK-PLUG ELECTRODES TO CONDUCTING HEADS. WILLIAM S. THOMAS, Roselle Park, N. J., assignor to Thomas Spark Plug Co., Roselle Park, N. J. Filed Nov. 16, 1920. Serial No. 424,434. 2 Claims. (Cl. 29—148.)



1. The herein described process of securing an electrode rod to a head which consists in providing said head with a cavity, then inserting a portion of the electrode rod in said cavity and finally forcing a portion of the material of said head laterally so as to indent the material of said electrode rod.

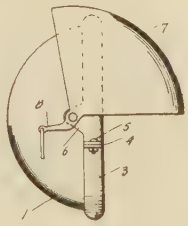
1,416,244. VAPOR MEDICATING APPARATUS. HENRY B. THOMPSON, San Antonio, Tex., assignor of one-third to Kenna D. Thompson and one-third to John Fitzsimmons, San Antonio, Tex. Filed Feb. 16, 1921. Serial No. 445,515. 4 Claims. (Cl. 128—192.)



1. In a vapor medicating apparatus, a casing having a combustion chamber with pipes extending therefrom, pans through the bottom of which the pipes project and discharge, a perforated partition above the pans, said partition having a converging wall, a chemicalized substance above the partition, wire mesh disks in spaced relation to each other above the chemicalized substance, a vapor filtering agent between the said disks, an inhalant tube in communication with the top of the casing, and a flue pipe extending through the top of the casing, the chemicalized substance, the partition and the pan supports, the said flue pipe being in communication with the combustion chamber.

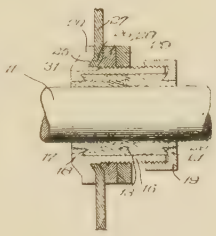
1,416,245. ADJUSTABLE LIGHT VISOR. CHARLES H. TUMEY, Sr., San Antonio, Tex. Filed Apr. 13, 1920. Serial No. 373,514. 1 Claim. (Cl. 240—45.6.)

A headlight visor comprising a flexible annular attaching band transversely curved to receive the convex outer face of a lens supporting ring of a headlight and including a pair of detachably connected sections, one of said sections being of a greater length than the other sections and having its ends extending below the horizontal axis of the headlight, rearwardly extending ears formed on the



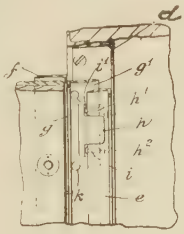
longest section and arranged in alinement with said axis of the headlight, and a visor pivoted to said ears rearwardly of the band to permit said visor to cover the upper portion of the head light when in a full light deflecting position and thereby prevent the escape of light rays over the top of the visor.

1,416,246. BEARING. JOSEPH A. V. TURCK, Wilmette, Ill., assignor to Felt & Tarrant Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1919. Serial No. 278,539. 7 Claims. (Cl. 64—24.)



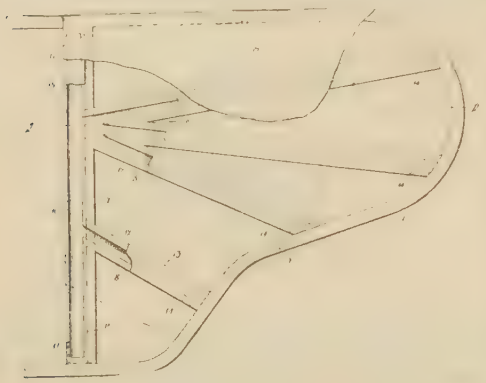
1. A bearing comprising an impregnated fiber body slit longitudinally and a housing within which the fiber body is bodily inserted, said housing having a dovetail connection with said body, whereby said body is kept from deformation tending to cause the bearing to bind.

1,416,247. EXPANSION SHOE FOR ELEVATOR DOORS. BENJAMIN WEXLER, Brooklyn, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 1, 1921. Serial No. 497,470. 8 Claims. (Cl. 189—46.)



1. An expansion shoe for elevator doors, embodying therein a forked member adapted to straddle the guide rail for a door, a flame angle carried by the door, means whereby said forked member slidably is mounted upon said flame angle, and a collapsible support for said member bearing against the side of the door, whereby in the event of the expansion of the door from heat, the stresses developed will collapse said support and permit said shoe to have movement on the flame angle towards the door.

1,416,248. GRAND PIANO. JAMES H. WILLIAMS, Baltimore, Md. Filed Mar. 5, 1920. Serial No. 363,428. 7 Claims. (Cl. 84—189.)

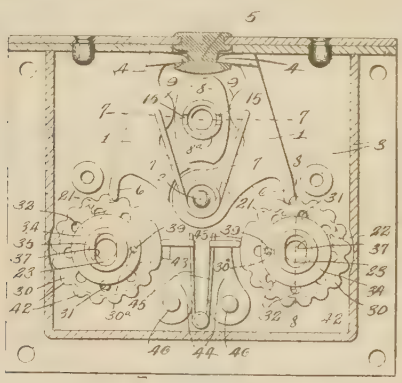


1. In a grand piano, the combination of a transverse frame member having a groove formed therein, a strip covering said groove and forming a wall for closing the same, said groove having outlets and constituting an air chamber responsive to exterior sound waves, and a sound board mounted at its front edge on said strip.

1,416,249. CATALYZER. KARL HEINRICH WIMMER, Holzhafen, Bremen, Germany, assignor to Hydrogenated Oil Company, St. Louis, Mo., a Corporation of New York. Filed Feb. 13, 1913. Serial No. 748,212. 10 Claims. (Cl. 23—28.)

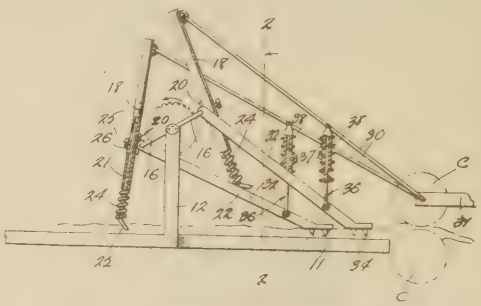
1. The process of manufacturing catalysts, which consists in enveloping with a protective substance, a formate of a metal which in the free state can serve as a catalyst for the hydrogenation of fatty oils, which formate is not in itself capable of serving as the catalyst for such operation, and thereafter reducing the same by heat, under reducing conditions substantially as described.

1,416,250. COMBINATION LOCK. WALTER WISMIEWSKI, Syracuse, N. Y., assignor of one-half to Joseph Baramski, Syracuse, N. Y. Filed June 30, 1921. Serial No. 481,493. 1 Claim. (Cl. 70—55.)



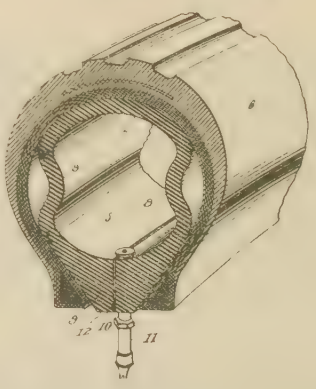
In a combination lock, the combination of a pair of tumblers mounted upon a common axis and having shoulders on opposite sides of said axis, a spring mounted on said axis and tending to move them into operative position, an operating member mounted between the tumblers and acting to force the same on their pivots out of operative position, sets of rotary disks, each set arranged with their peripheries engaged with one of the shoulders to prevent movement of the tumblers, the disks having peripheral notches arranged to be brought into alinement with each other and with the shoulder of one of the tumblers for permitting movement with the tumbler with which the shoulder is associated, a handle for each set of disks, the handle having a shank, the disks being mounted concentric with the shank, a third disk associated with each set, and mounted concentric with the shank of the handle and connected thereto to rotate therewith, means for permanently connecting the third disk to one of the notched disks, means for connecting the notched disks together by a lost motion connection whereby movement in one direction of the notched disk connected to the third disk takes up the lost motion and rotates the other notched disk therewith and permits movement of the notched disk connected to the third disk in the opposite direction relatively to the other notched disk, each third disk having a series of rounding notches and a dwell portion, a pair of spring pressed followers arranged between the third disk and below the axis of the tumblers and coacting with the notches and the dwell portion of the third disks respectively, and being normally engaged with said dwell portion, and the disk connected to each third disk being connected to the third disk to permit that disk connected to the third disk to be adjustably shifted relatively to the third disk without changing the position of the third disk whereby the follower normally engages the dwell portion of the third disk in all changes of the combination.

1,416,251. SELF-FEEDING ATTACHMENT FOR ENSILAGE CUTTERS. HENRY A. BILLINGSLEY, Covington, Ohio. Filed Nov. 12, 1920. Serial No. 423,592. 3 Claims. (Cl. 130—29.)



1. A feeder comprising a shaft having a crank, a feeding member connected intermediate its ends to said crank and comprising a tubular section and a rod slidable within the tubular section, material engaging teeth carried by said rod, a second feeding member connected to said crank and having its forward portion provided with material engaging teeth, and means to yieldably press said teeth into engagement with the material.

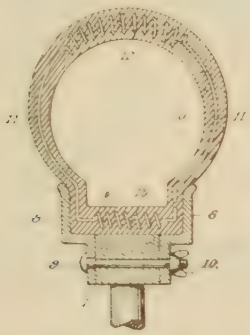
1,416,252. PNEUMATIC VEHICLE TIRE. HERBERT S. BLYNT, Yale, Okla. Filed May 23, 1921. Serial No. 471,681. 6 Claims. (Cl. 152—13.)



1. As an article of manufacture, an endless inner tube for pneumatic tires having an external diameter greater than the internal diameter of the casing with which it is

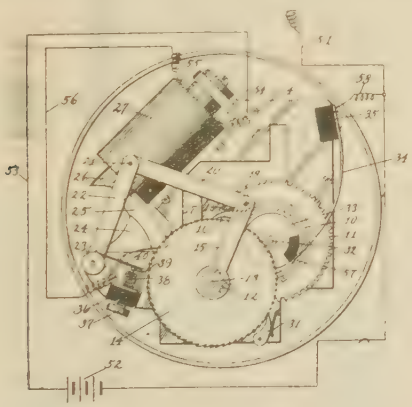
to be used and having an inwardly extending annular fold or depression whereby, when the tube is inflated within said casing, said tube is caused to be placed under compression transversely, said tube being circumferentially split at its inner portion.

1,416,253. PNEUMATIC VEHICLE TIRE. JOHN BOBEK, Trevorton, Pa. Filed Nov. 21, 1921. Serial No. 516,662. 4 Claims. (Cl. 152—8.)



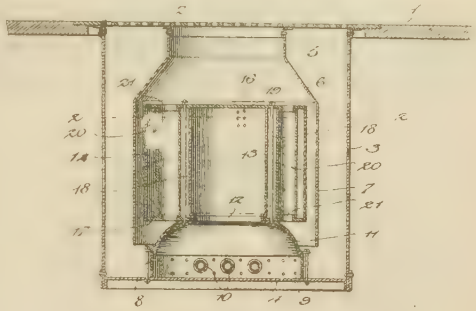
4. In combination, a fluid-tight hollow elastic tire casing having laterally elastic and radially non-elastic spring elements embedded therein, said spring elements being of substantially ring-shape in elevation and arranged radially and transversely in adjacent side by side relation and being constructed of resilient wire having non-elastic portions embedded in the side portions of the casing and elastic portions embedded in the tread and inner portions of the casing.

1,416,254. SELF-WINDING CLOCK MECHANISM. CHARLES E. BOILLOT, Brooklyn, N. Y. Filed July 12, 1919. Serial No. 310,389. 1 Claim. (Cl. 58—41.)



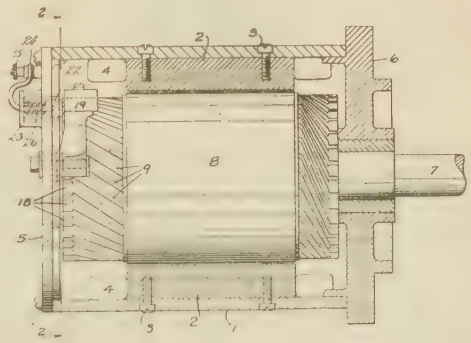
In a clock, the combination of a train of gearing, a spring mounted on a shaft to operate said train, an electromagnet, a pair of circuits through a source of electrical energy connected to said electromagnet, an armature for said electro-magnet, a ratchet wheel to rotate said shaft to wind said spring, a pawl actuated by said armature through linkage to rotate said ratchet wheel, a circuit breaker for said circuits actuated by the movement of said armature to the attracted position, a spring held arm operable by a gear of said train to connect said source of energy to said electromagnet, and to break said connection by the rotation of said gear upon partial winding of said spring, and a disc mounted upon said shaft, means to contact with said disc to maintain the connection of said electromagnet with said source of power through the other of said circuits to complete said winding, and means to cause said first named means to be made ineffective upon completion of said winding.

1,416,255. HEATER. ROBERT G. BOONE, Asbury Park, N. J., assignor to Richard Stockton and George G. Bourne, New York, N. Y., and James Kerney, Trenton, N. J. Filed July 2, 1920. Serial No. 393,531. 1 Claim. (Cl. 126—116.)



The combination with a register, of an outer shell secured to said register, a base plate carried by said shell, a cylindrical member extending from said register within said shell having a frusto-conical portion and provided with a depending cylindrical apron terminating short of said base plate, a circular member secured to said base plate and provided with a plurality of openings, a burner located upon said circular member, a dome like member seated upon said circular member and provided with an aperture in the top thereof, an inner drum engaging said dome like member and provided with a plurality of openings, an outer drum, a plate engaging the top of said drums having a series of openings formed therein and provided with depending circular flanges, a plate surrounding the upper end of said dome like member and engaging said drums, the last mentioned plate having a plurality of openings formed therein and provided with upstanding flanges, a plurality of tubes located between said drums and surrounding the flanges aforesaid, one of said tubes having a plurality of openings formed therein, a frusto-conical shaped member located in the last mentioned tube and a partition disposed between said drums and adjacent to the last mentioned tube.

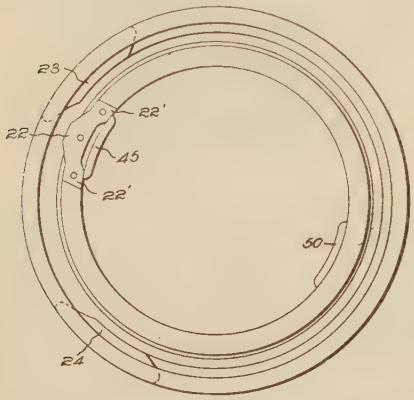
1,416,256. DYNAMO-ELECTRIC-MACHINE ARMATURE. HENRY E. BORGER, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Dec. 30, 1916. Serial No. 139,719. 14 Claims. (Cl. 171—206.)



1. In an armature for an electric motor or dynamo, the combination of, a magnetic element having a continuous winding consisting of a plurality of layers of conductors arranged about the periphery of said magnetic element and projecting exteriorly beyond both ends thereof; said exteriorly projecting ends having no insulation between conductors and having the ends of the different layers disposed diagonally to the axis of said armature and further having the conductor ends of the outer layer

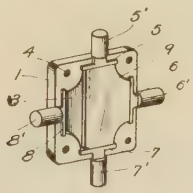
connected to an inner layer in such a way that said connected ends are spaced concentrically about the armature axis whereby brushes may be operated on the uninsulated ends or sides of said conductors, or on both.

1,416,257. SPRING-NEEDLE KNITTING MACHINE. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Oct. 30, 1919. Serial No. 334,477. 30 Claims. (Cl. 66—26.)



1. In combination, a series of spring beard needles, pressers and presser cam means therefor knitting cams for said needles, web holders, yarn feeding means, web holder advancing cams on opposite sides of said yarn feeding means for reciprocating knitting an outthrow web holder cam movable circumferentially with respect to said advancing web holder cams so as to cooperate respectively with said advancing cams to withdraw said web holders, said presser cam means being relatively movable circumferentially with respect to at least one of said web holder cams.

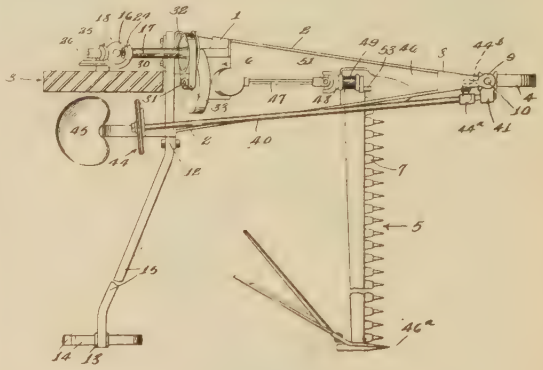
1,416,258. SELF-RENEWING FUSE. STEPHEN H. BROOKS, Cleveland, Ohio. Filed Aug. 11, 1919. Serial No. 316,652. 1 Claim. (Cl. 200—124.)



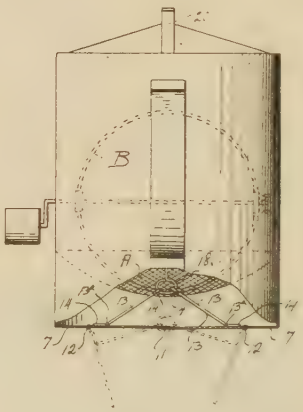
A renewable fuse comprising a casing having a chamber, contacts equi-distantly spaced about the perimeter of the chamber, and a gravitating fusible contact connector within the chamber disposed to flow upon fusing so as to connect contacts crosswise of the chamber.

1,416,259. AGRICULTURAL MACHINE. ALEXANDER T. BROWN, Syracuse, N. Y. Filed July 23, 1919. Serial No. 312,720. 1 Claim. (Cl. 56—25.)

In an agricultural machine, a frame, a steering wheel at the front end of the frame, a tractor wheel at the rear end of the frame in line with the front wheel whereby said wheels travel in substantially the same path, a cutting implement extending laterally from the frame, near the front end thereof and having a shoe in the rear of the steering wheel and a swath board arranged at the outer end of the cutting implement in the rear thereof to sweep a path for the tractor and steering wheels on the next run around the field, and a laterally extending frame member in the rear of the cutting implement and having a supporting wheel arranged in the rear of the swath board in the path swept thereby, substantially as and for the purpose described.



1,416,260. SIFTER. MILTON D. BROWN, San Francisco, Calif., assignor of one-half to Charles V. Barfield, San Francisco, Calif. Filed Aug. 17, 1920. Serial No. 404,266. 1 Claim. (Cl. 220—36.)

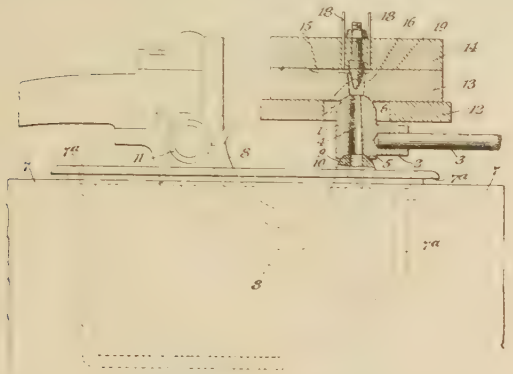


A floor sifter of the character described comprising a receptacle, sifting means disposed within said receptacle adjacent the bottom of the receptacle, a pair of plates hinged to said bottom, a link pivoted at one end to each of the plates adjacent the hinged connection of the plates, each of said links being extended upwardly within the receptacle and toward the inner edges of the plates, a socket disposed inwardly of the receptacle adjacent the top thereof, a rod slidable in said socket and beyond the bottom of the socket, the opposite end of the rod being formed into a relatively large loop, the opposite end of each of said links having an eye adapted to receive a portion of said loop, said eyes being arranged for movement toward and away from each other, and longitudinally of the loop whereby the links may move upon the loop from the lower intermediate portion thereof to the junction of the loop with the rod.

1,416,261. FEEDING DEVICE FOR DIE-CASTING MACHINES. GEORGE WALDEMAR BUNGAY, Brooklyn, N. Y., assignor to Acme Die Casting Corporation, a Corporation of New York. Filed Feb. 21, 1920. Serial No. 360,480. 4 Claims. (Cl. 22—57.)

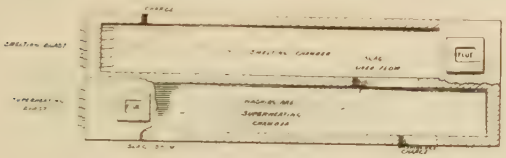
1. A die casting machine having in combination a discharge nozzle provided with an outlet, a die member hav-

ing an inlet port, a connecting member adapted to be clamped between the die member and the discharge noz-



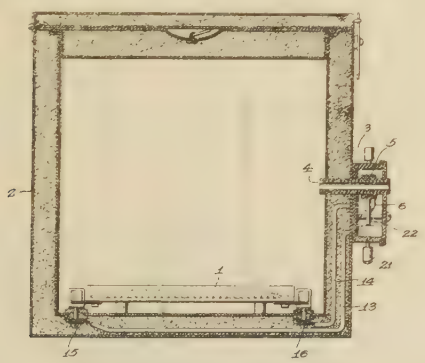
zle, said connecting member being provided with a tapered passage communicating with the inlet port of the die member and the outlet of said nozzle.

1,416,262. PROCESS AND APPARATUS FOR EXTRACTING COPPER FROM SLAG IN REVERBERATORY FURNACES. PERCIVAL PAGE BUTLER and HARRY HOWARD STOUT, Douglas, Ariz., assignors of fifty-five one-hundredths to Phelps Dodge Corporation, a Corporation of New York. Filed July 7, 1919. Serial No. 309,129. 29 Claims. (Cl. 75—62.)



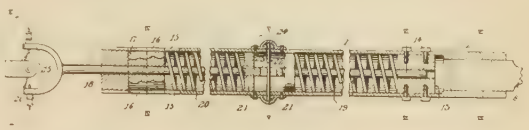
1. In the smelting of copper ores, the process which consists in fusing copper bearing slag with a washing ore at a superheating degree of temperature.

1,416,263. ELECTRIC FIRELESS COOKER. WILLIAM CAMPBELL, Detroit, Mich. Filed Dec. 5, 1921. Serial No. 519,976. 9 Claims. (Cl. 219—36.)



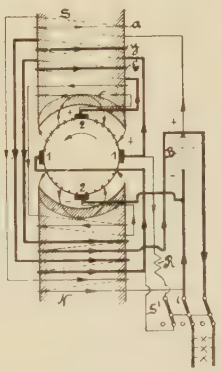
1. The combination with a closed chamber and heating means for said chamber, of a conduit leading from said chamber and open at its outer end to the atmosphere, and temperature responsive means out of the path of the heated fluid passing through said conduit for regulating said heating means.

1,416,264. YIELDABLE DRIVE SHAFT. ROBERT EARL CARTER, Sykesville, Md. Filed Dec. 27, 1920. Serial No. 433,171. 5 Claims. (Cl. 64—96.)



5. A yieldable drive shaft, including a driving element, a driven element, and means connecting said elements for permitting limited rotation of the driving element relative to the driven element under gradually increasing resistance, said connecting means including a tube in which said driving element is slidably and rotatably mounted, means to impart longitudinal movement to and to permit limited rotation of the diving element relative to said tube upon rotation of said driving element, and means to resist the longitudinal movement of said driving element, said last named means including a pair of compression springs mounted in said tube and resisting longitudinal movement of the driving element in either direction, guide plugs for the driving element secured in the tube and each forming an abutment for the outer end of one spring, and abutment disks for the inner ends of the springs keyed on the driving element and freely movable in the tube, slots being provided in one end of the tube, one of said guide plugs having fins slidable into said slots, and another of said plugs being threaded into the tube behind the fin carrying plug to secure the latter in place, said tube having an angular bore at its other end, and the driven element having an angular end fitting in the angular bore.

1,416,265. INHERENTLY-REGULATED DIRECT-CURRENT DYNAMO. HANS CHARLET, Krefeld, Germany. Filed July 8, 1920, Serial No. 394,849. Renewed Mar. 29, 1922. Serial No. 547,906. 7 Claims. (Cl. 171—223.)



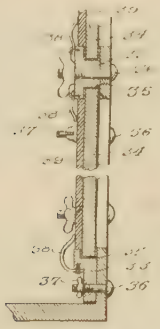
1. An inherently regulated direct current dynamo, adapted to be used at will as either a generator or as a motor, embodying a constantly excited field with main current winding and additional exciting windings, brushes, one set being located in the neutral zone of the primary field, the other set of said brushes being in the neutral zone of the secondary field, the primary field required for producing the working current being produced by the main current winding.

1,416,266. SMOKE-FILTERING MEDIUM. ALBERT L. CLAPP, Danvers, Mass. Filed July 5, 1918, Serial No. 243,390. Renewed Oct. 12, 1921. Serial No. 507,356. 8 Claims. (Cl. 183—44.)

6. A smoke-filtering medium consisting of a porous loosely matted sheet consisting of manila rope pulp, kiesel-

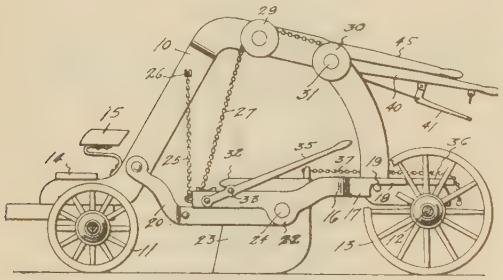
guhr and comminuted wood in intimate admixture and in the following proportions, to wit, about 50 parts pulp, 25 parts kieselguhr and 25 parts comminuted wood.

1,416,267. ADVERTISING CABINET. CLARENCE E. CLOSSON, Potlatch, Idaho. Filed Sept. 20, 1920. Serial No. 411,520. 1 Claim. (Cl. 40—63.)



An advertising cabinet including a cabinet body provided in a wall thereof with a panel, cleats secured to said wall in the rear of the panel, a closure pane for the panel held by said cleats, an advertising sign visible through the pane, and resilient clips secured to said cleats and bearing against the sign clamping the sign against the pane.

1,416,268. EXCAVATOR AND SCRAPER. MICHAEL COLLINS, Fort Worth, Tex. Filed June 6, 1921. Serial No. 475,509. 6 Claims. (Cl. 214—72.)

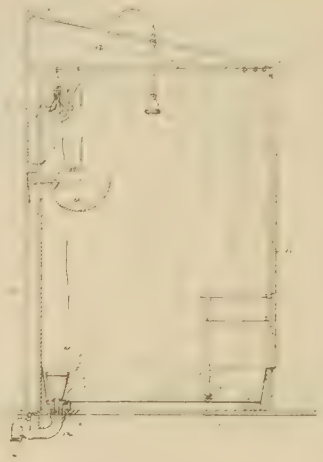


1. In an excavating and scraping machine, an arch shaped frame supported on ground wheels, a swinging frame mounted on the arch frame, a supporting frame pivoted to the arch frame, an excavating and scraping pan pivoted to the swinging and supporting frames, means for elevating the swinging and supporting frames and the pan, whereby the pan is tilted to a transporting position, and means for tripping the pan for permitting the same to swing downwardly to discharge its load.

1,416,269. PROCESS FOR SEASONING WOOD. ATLAS O. CRAIL, Warren, Ohio. Filed Nov. 26, 1920. Serial No. 426,498. 1 Claim. (Cl. 99—12.)

The process of seasoning and shrinking wood consisting in boiling it six hours in an enclosed vat containing a solution of water and five per cent salt; immediate removal therefrom to a kiln heated to 250° F. and its removal from said kiln at the end of forty-two hours.

1,416,270. BATHING APPARATUS. WILLIAM L. DEMING, Salem, Ohio. Filed Aug. 25, 1919. Serial No. 319,718. 17 Claims. (Cl. 4—26.)

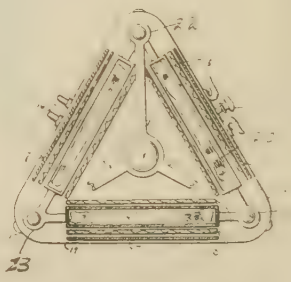


1. In a bathing apparatus the combination with a conduit for discharging water, of a base receptacle, a curtain support above the same, a curtain carried by the support and a slidable member connecting the cover with the support.

1,416,271. WRENCH. CONSTANT L. DEVOS, New York, N. Y. Filed Jan. 7, 1922. Serial No. 527,540. 3 Claims. (Cl. 81—56.)

1. A socket wrench comprising a ring-like housing having a tubular handle projecting laterally therefrom, a flange at one end of said housing forming a socket seat, a socket having a flange one side of which is supported on said seat, the opposite side of said flange being toothed to form a gear, a removable keeper ring at the other end of said housing to hold said socket on said seat, a shaft having a gear at one end to coact with the gear of said socket, said shaft and gear being insertible and removable through said tubular handle, means for holding said shaft in position to hold said gears in mesh, and means for turning said shaft within said handle to rotate said socket in said housing.

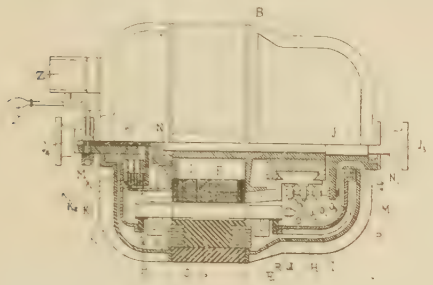
1,416,272. ELECTRIC TOASTER. EDMOND C. FLORIOT, New York, N. Y. Filed Nov. 5, 1921. Serial No. 512,978. 6 Claims. (Cl. 219—19.)



1. In a toaster, the combination of a base, with a plurality of upright posts mounted thereon, electric heat-

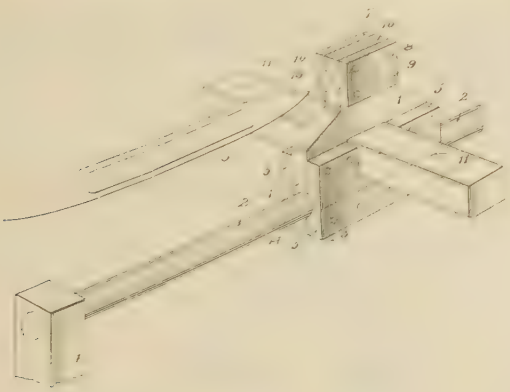
ing elements arranged in pairs, a toast basket, lugs on said basket through which said uprights pass, a coil spring on each of said uprights which holds said basket normally in an elevated position, a downwardly depending lug on the bottom of said toast basket, a detent which engages said lug and holds said basket in a depressed position whereby the toast-carrying portions are located intermediate the heating elements.

1,416,273. POWER TRANSMISSION AND CONTROL. ETHELBERT M. FRASER, Yonkers, N. Y. Filed Mar. 16, 1916. Serial No. 84,509. 35 Claims. (Cl. 290—10.)



2. An electric machine comprising a rotatable armature provided with a winding and a core, a stationary field structure, and an independently rotatable second winding interposed between said armature and said field structure and provided with a commutator, the core of said armature being magnetically common to said armature and said second winding and carrying substantially all of the flux supplied by the field.

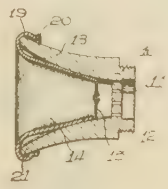
1,416,274. PICKER FOR LOOMS. MAURICE B. FREDERICKS, Waltham, Mass., assignor, by mesne assignments, to Joseph L. Levy, New York, N. Y. Filed Apr. 13, 1921, Serial No. 461,039. Renewed Apr. 11, 1922. Serial No. 551,471. 2 Claims. (Cl. 139—21.)



2. A device of the class described comprising a picker having a central body portion of a single thickness, reinforcing strips secured at the ends of said body portion and forming thickened portions, a guide receiving aperture extending through one of said thickened portions, a pair of plugs of fibrous material inserted in the other thickened portion and a reinforcing binder embracing the thickened portion in which the plugs are inserted.

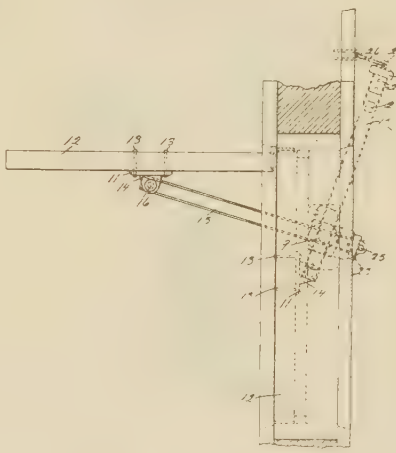
1,416,275. SANITARY TELEPHONE MOUTHPIECE. ABRAHAM ALBERT FREEDMAN, Chicago, Ill., assignor of one-half to Saul S. Soloway, Chicago, Ill. Filed May 11, 1921. Serial No. 468,553. 3 Claims. (Cl. 179—185.)

1. The combination with a telephone mouthpiece, of a sanitary cap therefor comprising a tapering body composed of relatively thick paper provided with an end wall



of thin paper perforated, and a flange on one end of said body for engagement with the mouthpiece.

1,416,276. DOOR STOP AND HOLDER. CHARLES ALBERT FRENCH, Madison, Wis. Filed July 12, 1920. Serial No. 395,755. 3 Claims. (Cl. 292—278.)

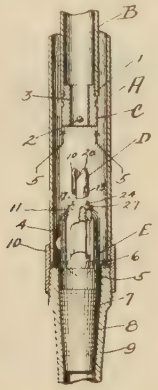


1. In a door holder, a door plate provided with two outwardly extending ears, means for attaching said plate to a door, a jamb plate adapted to be secured to the head jamb of a door frame and provided with a circular recess in the top portion thereof and a similar recess in the bottom portion, a race or sleeve provided with a circular plate on the upper side approximate the front end thereof, said circular plate revolubly disposed within the lower recess in said jamb plate, an aperture located in the lower side of said sleeve, two depending lugs integral with said sleeve and disposed on either side of said aperture, a latch pivotally secured between the lugs aforesaid, the front end of said latch adapted to pass through the aperture in said sleeve, a rod secured between the outwardly extending ears of the aforementioned door plate and slidably disposed in the race or sleeve, an aperture formed in said rod adapted to register with the aperture in said race when the door is in open position, a stop plate secured to the rear end of said rod adapted to stop the travel of said rod through said sleeve and to allow the catch to seat in the aperture in the rod.

1,416,277. DEEP-WELL PUMP. GEORGE L. FULLER, Sisquoc, Calif. Filed Apr. 2, 1921. Serial No. 458,141. 8 Claims. (Cl. 103—80.)

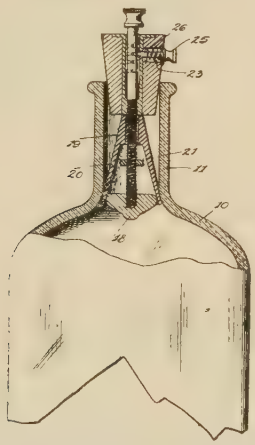
1. In improvements of the character disclosed, a standing valve and a plunger, and means for connecting the plunger with the standing valve to withdraw the latter upon withdrawal of the plunger; the standing valve plunger being disconnected during pumping operation of the plunger; said means comprising members adapted to be interengaged upon the lowering of the plunger, the member of the standing valve being provided with an

angular slot and the member of the plunger being adapted to be entered into said slot upon the lowering of the



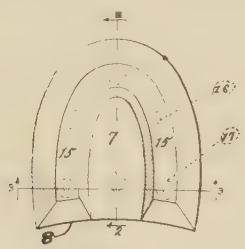
plunger and a partial rotation thereof; said member of the standing valve including a wall having inclined portions converging to said slot.

1,416,278. SAFETY BOTTLE STOPPER. JACK FURMAN, Fort Bliss, Tex. Filed Nov. 10, 1921. Serial No. 514,308. 5 Claims. (Cl. 215—54.)



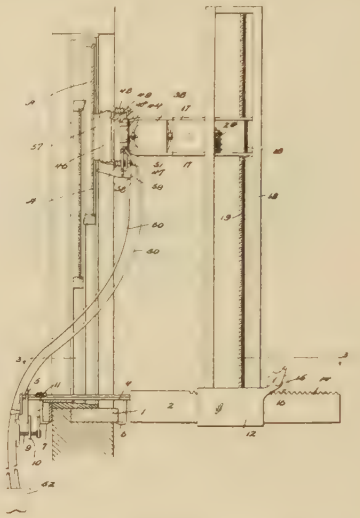
1. A stopper comprising a central post, a pair of cone-shaped members mounted on said post with their bases away from each other and axially movable thereon, one of said members having thin side walls of flexible material, a head on said post engaging internally with said walls, and an element for locking the parts in axial direction.

1,416,279. RESILIENT HEEL. ELMER FUZESSERY, Akron, Ohio. Filed Apr. 22, 1920. Serial No. 375,690. 5 Claims. (Cl. 36—35.)



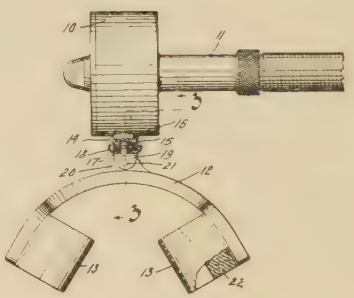
1. An elastic heel lift provided on its wearing face with a rib of rectangular cross section which projects therefrom in parallel spaced relation to the edge thereof and provided on its attaching face with a groove having diverging side walls and a bottom wall which is of substantially the same area as the wearing face of said rib, the outer wall of said groove terminating coincident with the edge of the lift.

1,416,280. WINDOW-CLEANING APPARATUS. JOSEPH GAZDZICKI, Cleveland, Ohio, assignor of one-half to Michael Zajac, Milno, Poland. Filed Aug. 16, 1921. Serial No. 492,713. 12 Claims. (Cl. 15—103.)



1. Window cleaning apparatus comprising a horizontal frame adapted to be mounted upon a window sill, a perpendicular frame supported on the horizontal frame, rack and pinion connections between the two frames, a cross head vertically adjustable on the perpendicular frame, and scrubbing brushes laterally adjustable of the cross head.

1,416,281. VIBRATOR. BENEDETTO GILIBERTI, New York, N. Y. Filed May 12, 1921. Serial No. 468,938. 1 Claim. (Cl. 128—35.)

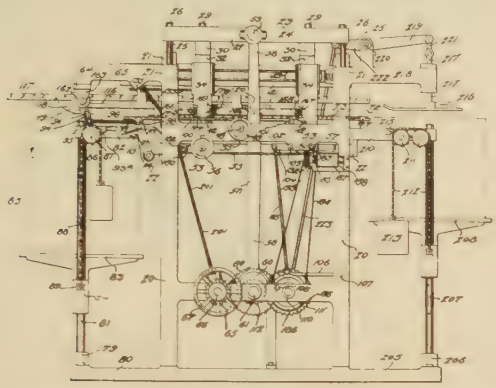


A vibrator including a head having a boss provided with a bore, a spindle rotatably mounted in said bore having a lug, a holder for said head having an ear, and a pin extending through said lug and ear in a direction at right angles to the longitudinal axis of said spindle.

1,416,282. CORNER-CUTTING MACHINE FOR BOX BLANKS. SOLOMON S. GIPE, Hershey, Pa. Filed Apr. 5, 1921. Serial No. 458,819. 30 Claims. (Cl. 93—36.)

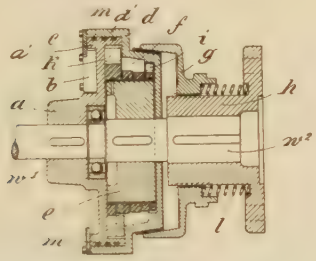
1. A machine of the character described including a cutter casing having an opening providing a mouth extending laterally therein; a cutter slidably mounted in said casing and having a cutting portion movable across said mouth; guiding means positioned with its top sur-

face approximately flush with the bottom portion of said mouth; and means for feeding sheet material along said



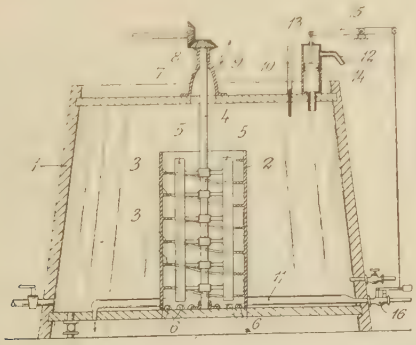
guiding means and into said mouth whereby the cutter is operative to cut pieces out of said sheet material.

1,416,283. HELICAL-SPRING FRICTION CLUTCH WITH AUXILIARY CLUTCH. ANTON GMEINDER, Mosbach, Baden, Germany, assignor to Dortmunder Vulkan Aktiengesellschaft, Dortmund, Germany, a Company of Germany. Filed Mar. 25, 1922. Serial No. 546,765. 8 Claims. (Cl. 192—35.)



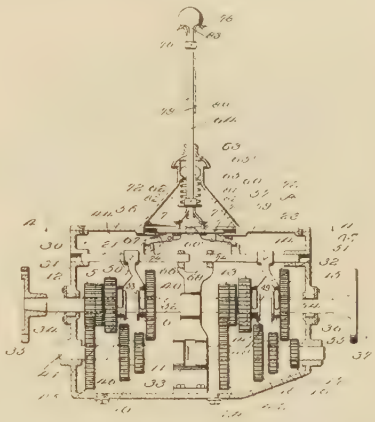
1. In a helical spring friction clutch with auxiliary clutch the combination of two shafts, a disk secured on the one shaft and having a cylindrical flange, a drum secured on the other shaft, a helical spring, a slidable cone, a member for contracting the said helical spring and having a cylindrical flange rotatably fitting the disk flange, and oil retaining means between the said cylindrical flanges.

1,416,284. PROCESS OF PRODUCING SULPHOAROMATIC SUBSTANCES FOR USE IN THE DECOMPOSITION OF FATS. ARNE GODAL, Vestre Aker, near Christiania, Norway. Filed Apr. 15, 1919. Serial No. 290,349. 1 Claim. (Cl. 23—24.)



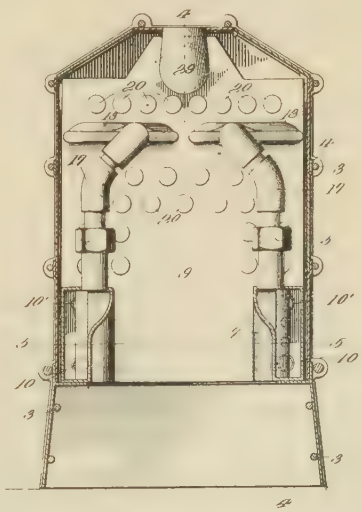
Process of producing sulphoaromatic substances for use in the decomposition of fats which consists in subjecting a mixture of fatty acid and aromatic substance to sulphonation at a temperature below the melting point of the said mixture, the sulphonation taking place in the presence of a quantity of a solvent for the said mixture sufficient to produce a solution which is fluid at the said low sulphonation temperature.

1,416,285. DUAL TRANSMISSION. MARION A. GRIFFIN, Penelope, Tex., assignor of one-half to James D. Fonville, Jr., Seymour, Tex. Filed Oct. 13, 1919. Serial No. 330,188. 1 Claim. (Cl. 74—58.)



A change speed gearing including a set of three axially aligned shafts, a second set of two axially aligned shafts parallel with the shafts of the first set, a gear rigid with one of the end shafts of the first set, a gear rigid with one of the shafts of the second set and meshing with the said first gear, a gear rigid with the intermediate shaft of the first set, a gear rigid with the other shaft of the second set, and meshing with said gear of the intermediate shaft, means for positively connecting the shafts of the first set to effect direct drive therethrough, means for effecting different gear connections between the intermediate shaft and one of the shafts of the second set and means for effecting different gear connections between the other shaft of the second set and the remaining end shaft of the first set.

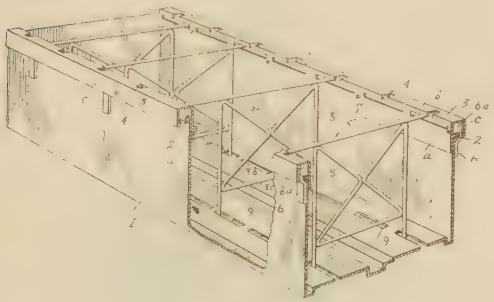
1,416,286. BOILER. WILLIAM F. GROSCUP, Baltimore, Md. Filed Nov. 4, 1920. Serial No. 421,797. 6 Claims. (Cl. 122—316.)



1. In a heater, the combination of a water fire-box, a water-back, a series of tubes receiving water from the

water-back and discharging into the water-back, a pipe leading from the side of the water-fire-box opposite to the water-back, and a supplemental flattened heating tube at the top receiving water from the pipe and discharging into the water-back.

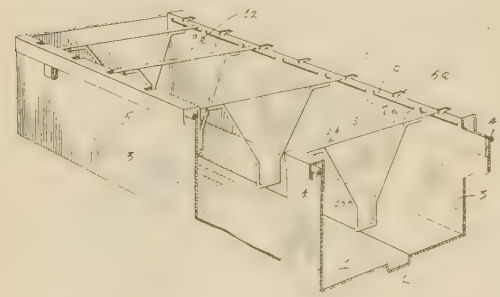
1,416,287. FILING DEVICE. GEORGE D. HARRAH, Buffalo, N. Y., assignor to Multoplex Filing Device Company, Buffalo, N. Y., a Corporation of New York. Filed May 10, 1919. Serial No. 296,231. 6 Claims. (Cl. 129—16.)



5. A filing device of the character described having, in combination, control-strips provided with longitudinal slots and with other slots extending at an angle to and connecting with the longitudinal slots, and spacers having projections for insertion through the angular slots and loose engagement in the longitudinal slots.

6. A filing device of the character described having, in combination, control-strips for the support of spacers, clamping clips co-operating with portions of said control-strips, and screws connecting said clips and said strips.

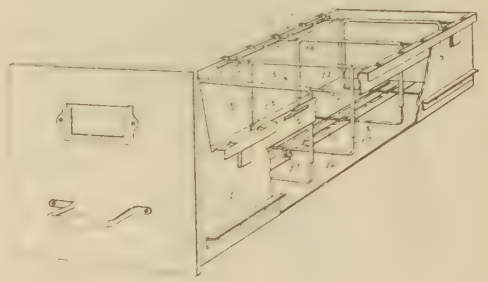
1,416,288. FILING DEVICE. GEORGE D. HARRAH, Buffalo, N. Y., assignor to Multoplex Filing Device Company, Buffalo, N. Y., a Corporation of New York. Filed June 6, 1919. Serial No. 302,281. 6 Claims. (Cl. 129—16.)



4. In a filing device of the type described, the combination of control-strips each having an upper wall and longitudinal slots, and spacers having projections for supporting engagement in said slots, one of said projections being extended angularly to provide a stop for co-operating with said upper wall to limit the swinging movement of the spacer.

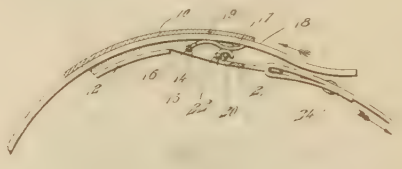
5. In a filing device of the type described, the combination of control-strips and spring clips secured to and projecting below said strips, said clips being fashioned to take over the edge portion of a drawer and to hold said strips above said edge portion.

1,416,289. FILING DEVICE. GEORGE D. HARRAH, Buffalo, N. Y., assignor to Multoplex Filing Device Company, Buffalo, N. Y., a Corporation of New York. Filed Dec. 10, 1919. Serial No. 343,735. 9 Claims. (Cl. 129—16.)



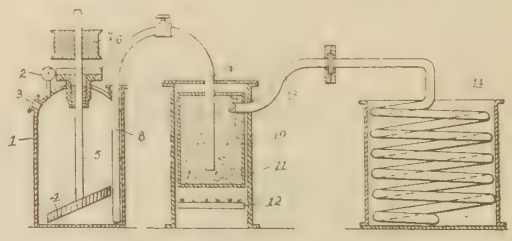
9. In a filing device of the type described, a skeleton spacer having vertically adjustable elements and having laterally directed and extensible supporting projections.

1,416,290. BUCKLE. DAVID A. HART, Providence, R. I., assignor to Reliance Manufacturing Co., Providence, R. I., a Copartnership comprising David A. Hart and Dexter E. Partelow. Filed Jan. 12, 1921. Serial No. 436,639. 4 Claims. (Cl. 24—191.)



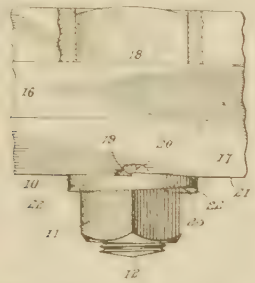
1. A belt buckle comprising a body portion, a resilient clamping tongue mounted on the body and extending in an irregular curved line, one end of said tongue forming a gripping edge, and an operable cam engageable with said tongue to force the tongue and gripping edge into engagement with said belt, the irregular portions of said tongue causing the gripping edge to be released from said belt when said cam is operated to release its pressure on the tongue.

1,416,291. APPARATUS FOR FORMING A LIQUID FUEL. ALBERT HAYES, New York, N. Y., assignor, by mesne assignments, to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 5, 1919. Serial No. 302,065. 4 Claims. (Cl. 44—2.)



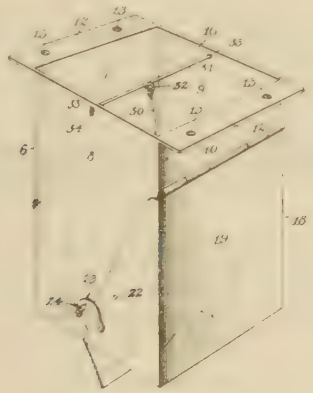
1. An apparatus for forming a liquid fuel comprising the combination of a tank having an inlet and an agitator within the tank, a catalytic chamber containing catalytic material, means for heating the latter, a conduit extending from the bottom of the tank to the catalytic chamber, a condenser and a conduit connecting it to the catalytic chamber.

1,416,292. NUT LOCK. RAYMOND M. HATCH, Trumansburg, N. Y. Filed Aug. 23, 1920. Serial No. 405,269. 1 Claim. (Cl. 151—45.)



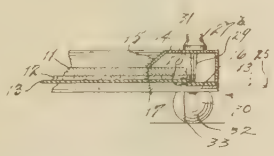
The combination with a nut having a pair of diametrically disposed teeth on its under side facing in the direction of rotation in screwing the nut on a bolt, of a locking washer therefor having a pair of teeth on each side diametrically disposed, the teeth on each side facing in the opposite direction of rotation of the nut in screwing the same upon a bolt, the pitch of the teeth on opposite sides of the washer being of the same degree.

1,416,293. CLOTH-FINDINGS DISPENSER. ISRAEL E. HELLER, Buffalo, N. Y. Filed Jan. 12, 1921. Serial No. 436,728. 6 Claims. (Cl. 211—29.)



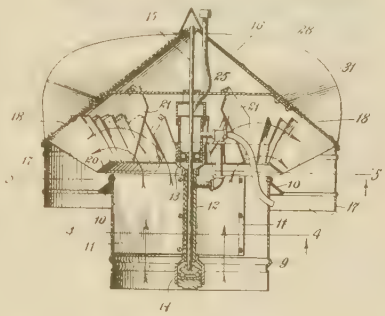
2. A device of the kind described, comprising a body portion having three full length side walls, a short side wall, a bottom terminating in a plane between said short side wall and the side wall directly opposite and an opening extending from the edge of said bottom to the lower edge of said short side wall, a closure hinged to the lower edge of said short side wall and having a front wall in line with said short side wall, a bottom wall in line with the bottom of said body portion and downwardly widened side walls, the whole being arranged to form a box-like structure in which the bottom of said body portion and the bottom of said closure serve to support a stack of cloth findings placed therein, and means to press downwardly against said stack of cloth findings.

1,416,294. SERVING TRAY. MAX HIMMELFARB, Brooklyn, N. Y. Filed June 7, 1921. Serial No. 475,686. 3 Claims. (Cl. 65—53.)



1. A frame member consisting of a plurality of channeled side and end members, a slab, the bottom flange of one end member being unsecured to the adjacent bottom flanges of the side members when said side and end members are assembled, and a bottom plate beneath the slab insertable between the unsecured bottom flange of the end member and bottom flanges of the side members, said unsecured bottom flange being secured to the adjacent flanges of the side members after the bottom plate has been inserted whereby said bottom plate will be permanently secured in position.

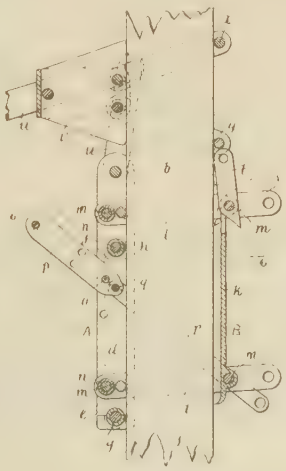
1,416,295. ROTARY VENTILATOR. WILLIAM F. HIRSCHMAN, Buffalo, N. Y. Filed Sept. 13, 1920. Serial No. 410,045. 14 Claims. (Cl. 98—2.)



3. A rotary ventilator comprising a conical rotatable dome, and a propeller blade whose leading edge is flush with the outer surface of said conical dome and extends forwardly at a point intermediate of the axis and the periphery of said dome, the main portion of said propeller blade extending rearwardly and outwardly away from said leading edge and terminating in a trailing edge which overhangs rearwardly a line extending from the outer to the inner end of the blade at a point intermediate of the axis and the periphery of the dome, substantially as described.

8. A rotary ventilator comprising a vent pipe, a rotatable dome arranged above the upper end of said vent pipe, a circumferential row of suction blades secured to the lower face of said dome and disposed outwardly of said vent pipe, and centrifugal blades extending inwardly over the rim of said vent pipe, said centrifugal blades being comparatively few in number while said suction blades are very numerous.

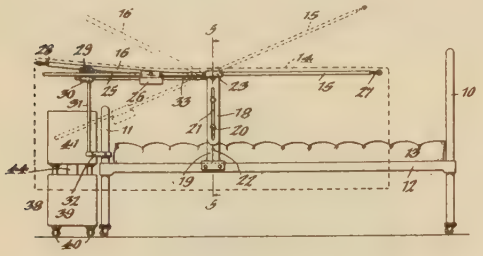
1,416,296. SCAFFOLD MACHINE. PETER HOITSMA, Paterson, N. J. Filed Feb. 14, 1921. Serial No. 444,650. 11 Claims. (Cl. 304—18.)



7. A scaffold machine adapted to be shifted vertically on a suitable upright and including a load-carrying member adapted to bear against one face of the upright, a gripping member adapted to grip the opposite face of the upright, linking means extending from one member across the upright to the other member and pivotally connecting

said members, and a lifting means operatively connected with the load-carrying member and having vertically shiftable means to grip the upright.

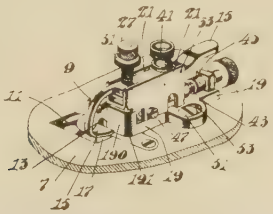
1,416,297. BEDSTEAD. LUCIEN HOWE, Buffalo, N. Y. Filed Mar. 8, 1921. Serial No. 450,571. 5 Claims. (Cl. 5—41.)



1. An attachment for supporting the covers of a bed, comprising standards carried by the side rails of the bed, a cross bar supported at its ends in said standards, and a vertically swinging frame fulcrumed on said cross bar

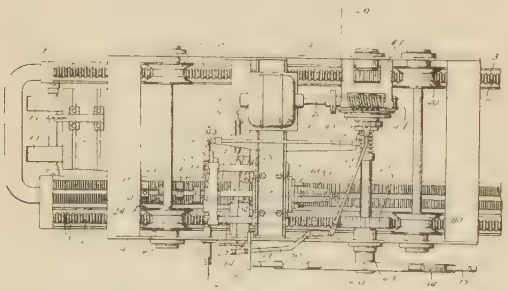
---

1,416,298. FOLDING MACHINE. CHARLES H. JONES, Moorestown, N. J., assignor, by mesne assignments, to P. R. Glass Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 16, 1918. Serial No. 262,857. 14 Claims. (Cl. 12—55.)



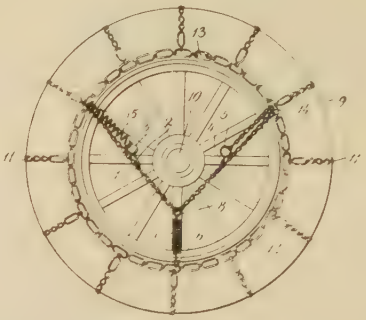
1. A machine for operating upon a piece of work which comprises pieces of material of different degrees of flexibility the margin of the more flexible material projecting beyond the edge of the less flexible material, having in combination, a support over which the work is fed, means for folding the margin of the more flexible material over upon the body portion thereof, means for determining the line of the fold, said means being adjustable to vary the distance of the fold line from the edge of the less flexible material, and means for pressing the fold.

1,416,299. SPACING MACHINE. GEORGE P. KLINE, Moline, Ill., assignor to Williams, White & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 23, 1921. Serial No. 454,895. 38 Claims. (Cl. 164—117.)



1. In a spacing machine, inverted V-shaped rails, rack teeth formed thereon, spool shaped wheels which travel on said rails, a stock holding carriage mounted on said wheels, and pinions mounted on said carriage and engaging said rack teeth.

1,416,300. CHAIN TIRE GRIP AND TIGHTENER THEREFOR. HOWARD W. LODER, Towaco, N. J., assignor to American Chain Company, Incorporated, Bridgeport, Conn., a Corporation of New York. Filed Nov. 27, 1917. Serial No. 204,177. 7 Claims. (Cl. 152—14.)

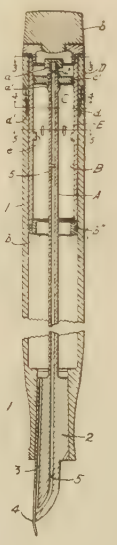


6. The tightener adapted for use in chain tire grips and comprising an adjustable length flexible tightener, a hook securing member adjustably connected to the intermediate portion of said tightener, a spiral spring interposed between said hook securing member and tightener and a securing member secured to each end of said tightener.

1,416,301. HAIR CURLER. MILTON D. MESEROLE, Milford, Conn., assignor to Hayes & Meserole Mfg. Co., Milford, Conn., a Firm. Filed Oct. 22, 1921. Serial No. 509,666. 2 Claims. (Cl. 132—41.)

1. A hair curler, comprising a frame formed from a single piece of wire bent to provide a rear bar and two sides, the ends of the wire turned inward, a tongue hinged to the said rear bar, and a slide mounted on the side bars of the frame and adapted to extend over the tip of the tongue.

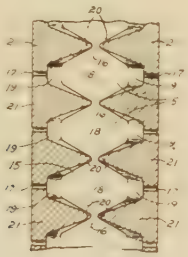
1,416,302. FOUNTAIN PEN. OLIVER MITCHELL, Brookline, Mass. Filed Sept. 23, 1921. Serial No. 502,616. 3 Claims. (Cl. 120—47.)



3. In a fountain pen, the combination of a fountain, a cup slidably mounted in the rear end of the fountain

and having suitable grooves upon its inner surface; a pipe longitudinally mounted within the fountain, open at its front end to the air and at its rear end closed by a cap-stop and vented to the interior of the cup by a side aperture; a disk mounted for limited longitudinal movement upon the pipe at its rear end, within the cup and in frictional, air-tight engagement at its edges with the inner walls of the cup, the disk moving to close the pipe vent upon rearward movement of the cup and moving to open the pipe vent upon forward movement of the cup.

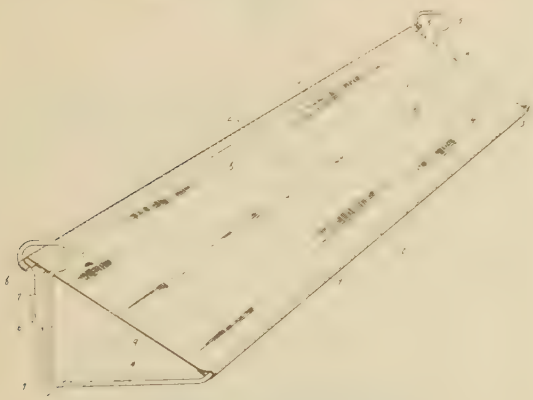
1,416,303. VEHICLE TIRE. WALDEMAR C. PECK, Naugatuck, Conn. Filed Jan. 24, 1921. Serial No. 439,401. 10 Claims. (Cl. 152—1.)



10. A semi-solid vehicle tire having a plurality of cushion chambers extending transversely of the tire, said chambers being oblong in shape with their sides converging toward their extremes to provide inwardly tapered dividing walls between the chambers, the extremes of said chambers being provided with vents extending through the sides of the tire, and the inner extremities of opposed dividing walls being spaced from each other to provide relatively narrow passages connecting adjacent chambers

---

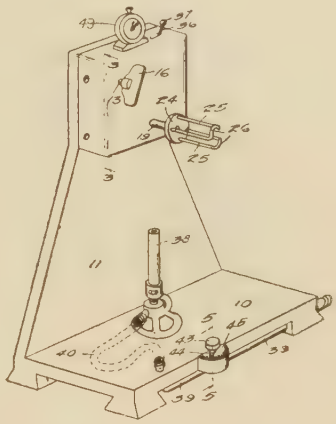
1,416,304. CANOPY FOR WINDSHIELDS. CHARLES M. ROBINSON, New Haven, Conn. Filed June 20, 1921. Serial No. 478,823. 1 Claim. (Cl. 296—95.)



A canopy for wind-shields, comprising a frame formed from a single piece of wire bent to form a front bar, bottom bars and upwardly to form loops with downwardly turned ends, said loops connected by a strap, and a strip of flexible material connected with the said strap and front bar.

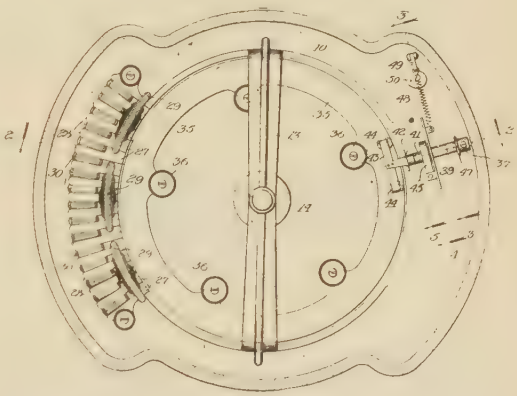
1,416,305. MECHANISM FOR PREPARING MOLDS FOR DENTAL CASTINGS. ELLING I. ROSHEIM, Roland, Iowa. Filed Apr. 11, 1921. Serial No. 460,402. 5 Claims. (Cl. 263—9.)

5. In a device of the class described, a base, a supporting element thereon, a dental mold form holder, mounted thereon for rotation on a horizontal axis, a burner, and means on said holder for holding a form with one end



plainly visible and for freely exposing the form held thereby to the heat of the burner during the rotation of said holder.

1,416,306. DRIVING MEANS FOR PHONOGRAPHS. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Original application filed Apr. 5, 1918, Serial No. 226,804. Divided and this application filed Apr. 17, 1919. Serial No. 290,705. 5 Claims. (Cl. 172—278.)

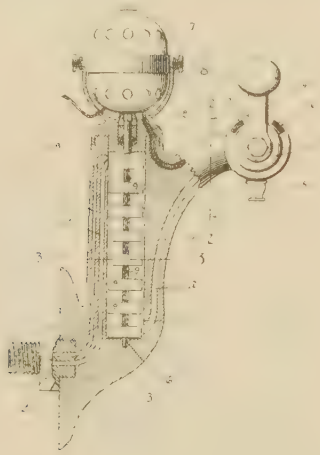


5. A stator for a monophase induction motor comprising a field magnet having an annular core and internally extending radial projections, alternately-reversed series-connected exciting windings about successive groups of said projections, and alternately reversed series-connected reactance windings about said core and in parallel with said exciting windings.

1,416,307. CARBONATING DEVICE. CARL J. SEVERSON, Minneapolis, Minn. Filed May 20, 1920. Serial No. 382,729. 8 Claims. (Cl. 225—26.)

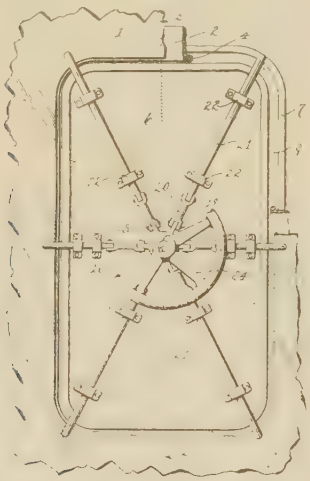
1. In combination, with a fountain, a hollow draft arm mounted thereon having a carbonating chamber therein, and inlet and discharge ducts for said chamber, an agi-

tating device mounted in said chamber, on an axis extending into the chamber, a motor attached to said axis



on the exterior of the arm for operating said agitating device, and a fluid regulating means for said discharge duct.

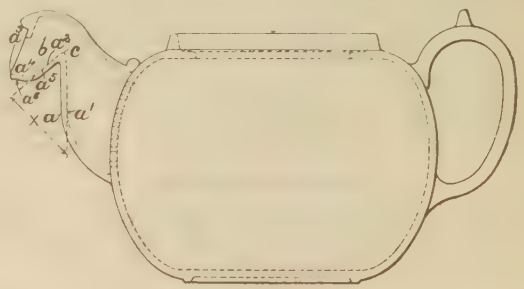
1,416,308. LOCKING DEVICE FOR WATER-TIGHT DOORS. JOSEPH L. SILVERMAN, Brooklyn, and JOHN W. SHIELDS, West Brighton, N. Y. Filed Oct. 18, 1920. Serial No. 417,610. 1 Claim. (Cl. 114—117.)



In a locking device of the character set forth, the combination with a wall having a flanged opening, of a plate provided with a compressible packing ring arranged to engage the flange of said opening, the said plate having an opening, a shaft passing through the said opening in the plate and having a collar located in said opening, bearing blocks attached to the plate on either side of the said opening to retain said collar in the opening, said shaft passing movably through the said bearing blocks, means on either side of the plate for revolving the shaft, one end portion of said shaft being threaded, a member engaging the threaded portion of the said shaft, bolts having wedge-shaped ends engaging the edge of the opening in the wall, and links pivotally connecting the said member and bolts.

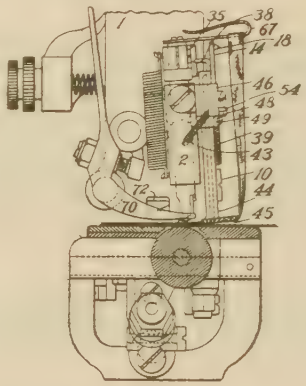
1,416,309. POURING SPOUT. FRANK TUNNICLIFF, Burslem, Stoke-on-Trent, England. Filed Nov. 15, 1921. Serial No. 515,278. 3 Claims. (Cl. 53—3.)

1. In spouts for teapots, coffee pots and other pouring vessels, the combination with a sharp cut off formed by the apex or junction of the inner face of the breast of the spout and the inclined back face of the lip, of a shallow



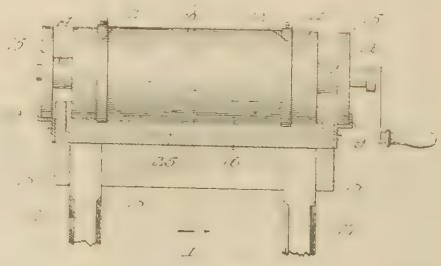
recess inside the lip of the spout and a slight depression or dimple on the underside thereof substantially as and for the purpose described.

1,416,310. FOLDING AND STRIP-ATTACHING MECHANISM. ALFRED B. WALES, Whitman, Mass., assignor to Lorenz Muther, Newton, Mass. Filed Dec. 20, 1913, Serial No. 807,841. Renewed Sept. 13, 1921. Serial No. 500,320½. 11 Claims. (Cl. 12—55.)



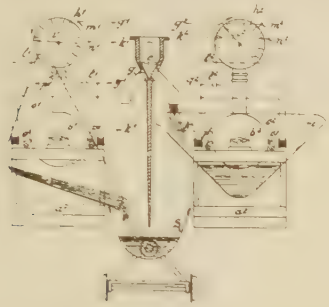
1. The combination in a folding machine, of means for feeding and folding the edge of a flexible material, with means for attaching a strip of flexible material of any desired length to said first-mentioned material, contiguous to, but independent of the folded edge.

1,416,311. ART OF LITHOGRAPHING. GUSTAV B. WEDOW, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 443,038. 1 Claim. (Cl. 41—415.)



In the art of lithographing, the process of producing a mottled or marbled effect on a lithographic plate which includes the floating of a small quantity of printing material on the surface of a liquid and the bringing of the surface of the plate into contact with such printing material.

1,416,312. AUTOMATIC WEIGHING MACHINE. HENRI VINCENT ADAM, Djocja, Java. Filed Mar. 3, 1921. Serial No. 449,535. 8 Claims. (Cl. 249—28.)

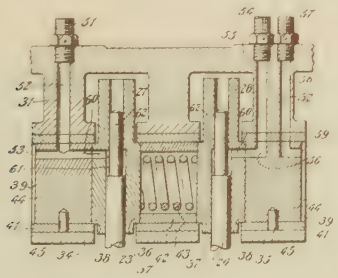


1. An automatic weighing apparatus including two tiltably mounted weighing troughs adapted to be alternately filled and discharged, weighing means operatively associated with each trough, two locking members for each trough, one locking member functioning to hold a trough in upright position and the other locking member functioning to hold the trough in tilted position, electromagnetic means for actuating said locking members, electric circuits in which the electro-magnetic means are arranged, and contacts for the electric circuits actuated by the weighing means for causing the unlocking of one of said locking members when a predetermined quantity of material has been placed in a trough and for unlocking the other locking member after a predetermined quantity of the material has been discharged from a trough.

1,416,313. CONDENSER-APRON LUBRICATOR. THOMAS ASTBURY, New Bedford, Mass., assignor to John Dexter, New Bedford, Mass. Filed June 3, 1921. Serial No. 474,828. 12 Claims. (Cl. 184—102.)

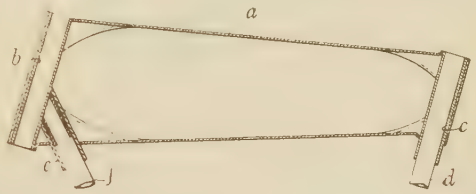
10. A lubricant device for supplying oil to a traveling web, comprising, in combination, a roller mounted to rest upon said web for rotation thereby, a lubricant trough supported adjacent said roller and having a wick extending from the trough into contact with the periphery of the roller to deliver oil thereto, and means for pinching the wick to thereby regulate the amount of oil delivered to the roller by the wick.

1,416,314. PRESSURE PUMP. CHARLES H. ATKINS, Palmer, Mass. Filed May 13, 1920. Serial No. 381,105. 10 Claims. (Cl. 103.7.)



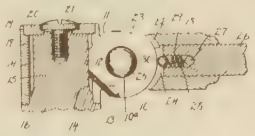
1. In a pressure pump of the class described, in combination, an oscillating cylinder having a compression chamber and a plunger chamber of different diameters and a port located midway of its length and in the compression chamber only, of a plunger of different diameters operating in said chambers, a stationary port member having a supply orifice and a discharge orifice, the port in said cylinder in one of its positions having communication with said compression chamber and with said supply orifice and in another one of its positions said chamber is in communication with said discharge orifice, and means for operating said cylinder and plunger.

1,416,315. MOTOR CYCLE. FRANK EDWARD BAKER and THEODORE JAMES BIGGS, Birmingham, England. Filed Feb. 10, 1920. Serial No. 357,609. 2 Claims. (Cl. 208—93.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In motor cycle frames, the combination with head, down and seat tubes, of a pair of sheet metal parts shaped to form a tank and the upper member of the cycle frame and adapted to embrace the head tube and seat and down tubes of the said frame, the said parts being united along their abutting edges, substantially as described.

1,416,316. RATCHET MECHANISM. EDWIN W. BULLARD, Whitneyville, Conn., assignor to The Peck, Stow & Wilcox Company, Southington, Conn., a Corporation. Filed Jan. 25, 1922. Serial No. 531,537. 1 Claim. (Cl. 74—54.)

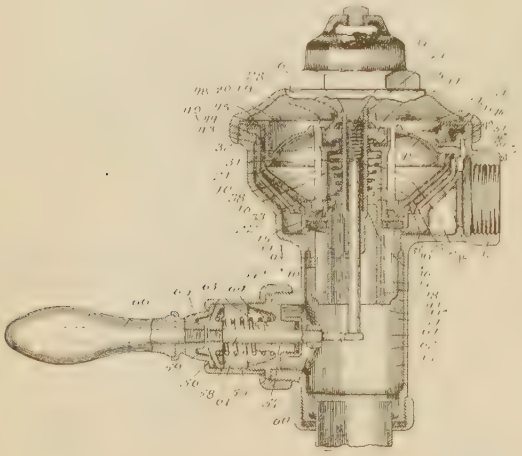


In a ratchet mechanism, the combination with a chambered socket provided with an arm having an axial bore extending throughout its length, and a radial slot intersecting the said bore at a right angle thereto; of a ratchet located within the chamber of the said socket, a rotatable three-point pawl positioned in the said slot for co-action with the said ratchet and having a centrally-located, circular bearing-opening substantially corresponding in diameter to the diameter of the said axial bore, and a ball fitting the said bearing-opening and the said bore, and having rotary and reciprocatable movement in the latter, whereby the pawl is free to adjust itself upon the said ball, with which it reciprocates in the said bore.

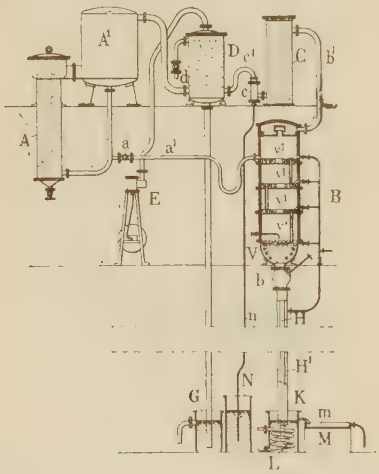
1,416,317. FLUSH VALVE. ROBERT R. BANTA, Chicago, Ill. Filed July 29, 1918. Serial No. 247,325. 21 Claims. (Cl. 137—93.)

1. In combination, a valve, a valve stem connected therewith and provided with a telescopic extension, a

tripping member cooperating with said extension, a handle for moving said tripping member to trip said extension, and automatic means for causing the tripping member to cooperate with the extension to open the valve.



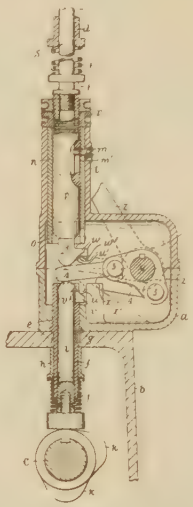
1,416,318. PROCESS FOR THE CONTINUOUS DISTILLATION OF GLYCERIN FROM THE WEAK GLYCERINOUS LIQUORS OBTAINED IN FERMENTATION PROCESSES. EMILE AUGUSTIN BARBET, Paris, France. Filed June 25, 1919. Serial No. 306,620. 2 Claims. (Cl. 87—4.)



2. Process for extracting glycerin from dilute glycerinous liquors, which consists in subjecting the previously concentrated weak glycerinous liquors to a further concentration in an evaporator having a rapid circulation and energetic heating, bringing the resulting syrup into a column apparatus provided with bubbling plates wherein the liquid is maintained at a high temperature and under reduced pressure, subjecting the descending syrup to the action of ascending current of superheated steam, condensing the resulting vapours, separating the glycerinous liquid from the gases and water vapour, and effecting the discharge of the exhausted material in a liquid state.

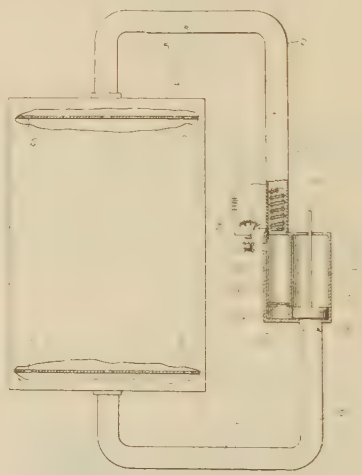
1,416,319. REVERSING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ROBERT BARBOUR, Paterson, N. J. Filed Aug. 11, 1920. Serial No. 402,929. 1 Claim. (Cl. 123—41.)

The combination, with a pair of upward thrust-imparting members moving in alternation upward to substantially the same plane, a rocker arranged on a horizontal axis approximating said plane and equidistant from said members, and impulse-transmitters pivoted to said rocker one above and the other below said axis and having free ends projecting toward the respective members and each one rocking the rocker back and forth being movable over and into position to rest on the corresponding member



and then clear the latter, of a supporting structure for said members and rocker having means to guide approximately in said plane the free end of the upper transmitter when clear of the member corresponding thereto and a rest for guiding the free end of the lower transmitter when clear of the member corresponding thereto, said rest being upwardly inclined to approximately said plane.

1,416,320. HEAT EXCHANGER. HJALMAR V. BARCLAY, New York, N. Y. Filed Feb. 14, 1919. Serial No. 276,959. 3 Claims. (Cl. 219—39.)

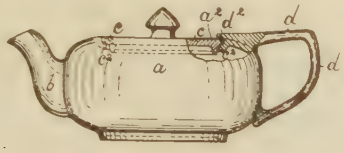


1. In a hot appliance, in combination, a hollow pad, having an inlet and an outlet, a pump, an electric heater, means for conveying air continuously from said pump and heater to said inlet, through said hollow pad, and to said outlet, and means for admitting regulated quantities of cool air to said inlet.

1,416,321. TEAPOT AND COFFEEPOT. WILLIAM GEORGE BARRATT, Stoke-on-Trent, England. Filed Nov. 28, 1921. Serial No. 518,210. 1 Claim. (Cl. 53—3.)

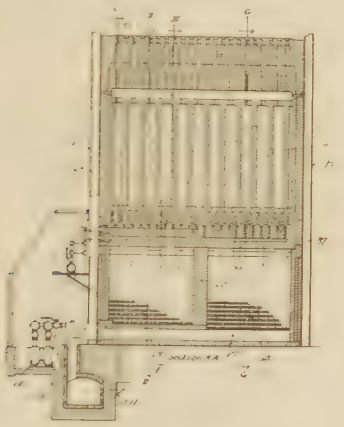
A pot provided with a pouring spout, and a handle, said pot having an opening at its top and a flange extending

around its opening below the level of its top, said pot having also a lug arranged adjacent to its handle and projecting crosswise over the said flange towards the



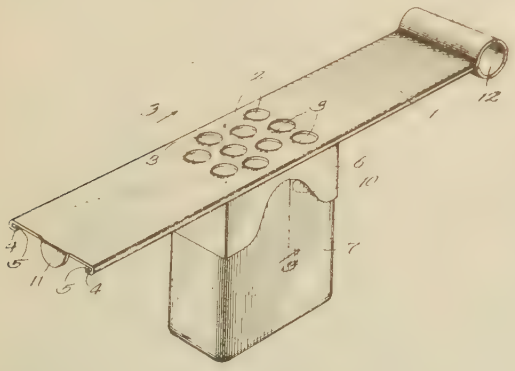
spout, and a lid which rests on the said flange and engages with the said lug and is thereby prevented from falling off when the pot is tilted to pour out its contents.

1,416,322. COKING RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 23, 1920. Serial No. 376,126. 25 Claims. (Cl. 202—9.)



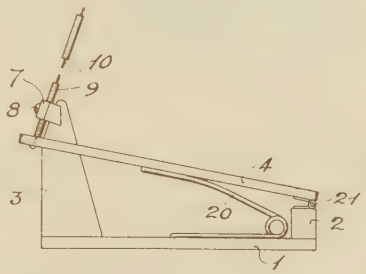
25. A coking retort oven having coking chambers, heating walls contiguous to such coking chambers, and regenerators disposed in in-flow and out-flow groups and communicably connected with said heating walls, combined with a return waste gas main receiving waste gas from the out-flow regenerators, and flow-controlling devices directly connecting said return waste gas main with the in-flow regenerators whereby return waste gas may be optionally directed into some of the in-flow regenerators; substantially as specified.

1,416,323. SUBDIVIDING TOOL. JOHN F. BERGANDER, Chicago, Ill. Filed Sept. 15, 1921. Serial No. 500,874. 3 Claims. (Cl. 146—7.)



2. A device of the class described including a knife that is generally rectangular and that is formed with cutting edges between its longitudinal sides; and a jacket with which the knife is in sliding engagement, opposite sides of said jacket being formed with thumb and finger recesses through which the remnant of the material surrounded thereby may be grasped.

1,416,324. PEDAL APPARATUS FOR SEWING MACHINES AND THE LIKE. HANS BERGGRAF, Stavanger, Norway, assignor to Martin Berg, Sandefjord, Norway. Filed Aug. 24, 1921. Serial No. 494,989. 3 Claims. (Cl. 74—81.)



1. A pedal apparatus for sewing machines and the like comprising a spring controlled pedal, a stationary standard in proximity to the outer end of the pedal, a machine engaging element, an elongated flexible casing having one end secured to the machine engaging element and the other end associated with the standard, a flexible element operating through the casing and having one end adapted to be connected with the crank mechanism of the machine and the other end connected to the pedal whereby when the pedal is operated rotary movement will be imparted to the machine.

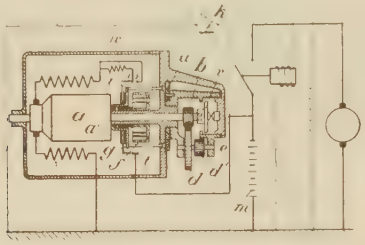
1,416,325. OBTAINING OF GRAIN AND LIKE EFFECT IN PAINTING. WILLIAM BERRY, Cleveleys, near Blackpool, England. Filed Dec. 16, 1919. Serial No. 345,423. 1 Claim. (Cl. 45—5.5.)

Process for producing grain and like effects on wood or other material, characterized in this, that the wood or material, to be grained is first provided with a ground color which is allowed to set, secondly has grooves formed therein by disc or like cutters to correspond with the pattern of the desired grain markings, thirdly has a surface coat of paint applied to the grooved wood, and fourthly has the surface paint removed by wiping, except from the grooves in which it remains as set forth.

1,416,326. ELECTRIC STARTER FOR INTERNAL-COMBUSTION ENGINES. FREDERIC BILLON, Solothurn, Switzerland, assignor to the Firm Scintilla, Solothurn, Switzerland. Filed Jan. 18, 1922. Serial No. 530,156. 4 Claims. (Cl. 290—38.)

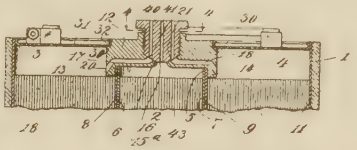
1. In an electric starter for internal combustion engines, the combination with an electric starting motor, a

pinion connected with said motor, a toothed wheel adapted for connection with the internal combustion engine, an intermediate toothed gear actuated by said pinion, an oscillatable support for said intermediate gear, of an electro-magnetically actuated clutch device operable to clutch



the oscillatable support with the starting motor whereby the first mentioned toothed gear is brought into mesh with the engine wheel, a motor circuit, and a main switch interposed in the motor circuit, controlling said electric motor and actuated by said clutch device.

1,416,327. STORAGE-BATTERY CONSTRUCTION. ROBERT S. BLAIR, Sound Beach, Conn. Filed May 9, 1919. Serial No. 295,876. 8 Claims. (Cl. 204—29.)



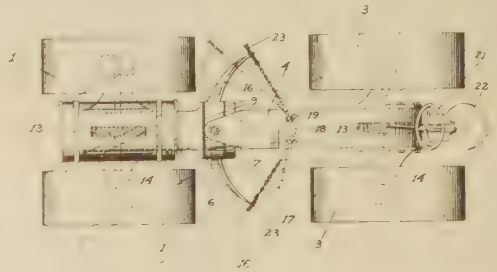
1. In combination, a storage battery comprising a plurality of cells in a liquid-tight casing enclosing the same, and a single filling opening for filling a plurality of said cells communicating directly with each of said cells.

1,416,328. HYDROCARBON GENERATOR. GEORGE N. BLANCHARD, San Francisco, Calif., assignor to Edwin B. Kimball, trustee, San Francisco, Calif. Filed May 16, 1921. Serial No. 470,050. 10 Claims. (Cl. 158—120.)

10. A hydrocarbon generator comprising a tubular casing open at its rear end and provided with a fuel inlet leading thereinto and at its opposite end formed with a vapor outlet, a generator cleaning member removably positioned within said casing and affording a generating chamber between its wall and the wall of said casing, a scraping element carried by the cleaning member in frictional engagement with the inner wall of said casing, said cleaning member and element capable of withdrawal longitudinally from said casing through its open rear end and whereby carbon or other foreign substances adhering to the inner wall of said casing is released therefrom and removed from within the casing through its open end on the outward movement of said cleaning member, a vapor outlet cleaning needle associated with the casing and capable of operation to project into the said vapor outlet to free the same of foreign substances, and a removable means for engaging the casing to normally close the open end of the casing and retain said cleaning member therein.

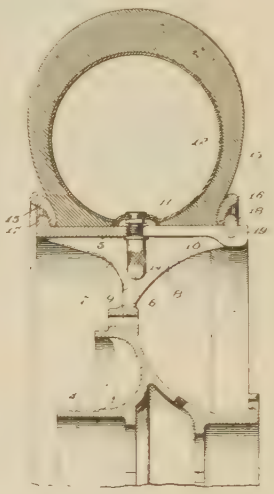
1,416,329. FOUR-WHEEL DRIVE TRACTOR. SAMUEL BLODGETT, Clements, Calif. Filed Mar. 16, 1921. Serial No. 452,862. 5 Claims. (Cl. 180—50.)

1. In a tractor, independent front and rear frames, a universal joint connecting the frames, and additional connecting means between the frames in vertical and axial alinement with said universal joint, whereby the frames



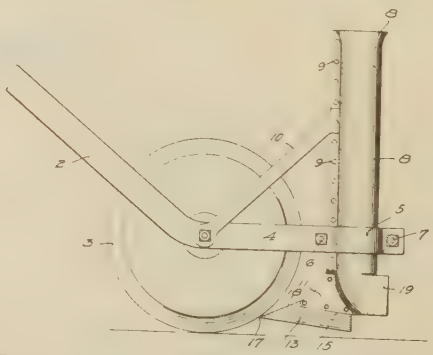
may have relative horizontal and transverse angular movement.

1,416,330. METAL WHEEL. ROBERT J. BURROWS, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed July 12, 1919. Serial No. 310,428. 4 Claims. (Cl. 301—63.)



1. A wheel comprising a hub, a felly band having a transverse slot to receive the valve stem of a pneumatic tire, means connecting the felly band with the hub, and reinforcing means extending transversely between said connecting means and the felly band adjacent to said slot.

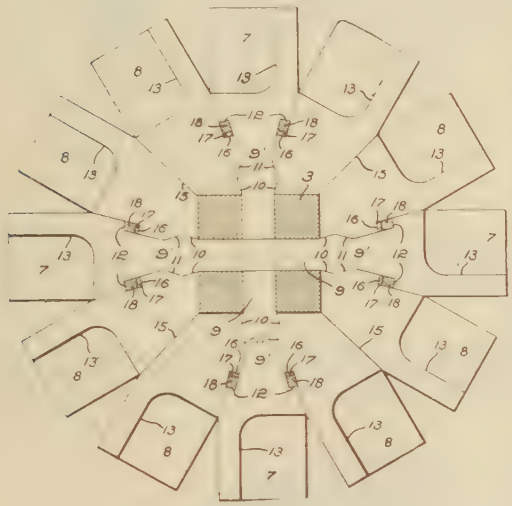
1,416,331. GRAIN SHOE. HARDY WEBSTER CAMPBELL, Lincoln, Nebr. Filed Feb. 28, 1918. Serial No. 219,658. 4 Claims. (Cl. 111—86.)



2. In combination, with a grain boot having forwardly and downwardly extending wings, a grain shoe comprising a blade having a shank fitting between said wings and

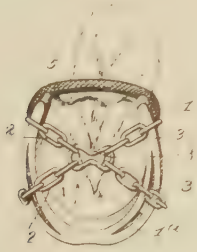
secured thereto and shoulders against which the edges of said wings are seated, with the surfaces of the wings flush substantially with the side surfaces of the shoe and said shoe having a flat lower surface for packing the bottom of the seed crevice, and side walls for packing the walls of the crevice.

1,416,332. STIRRER. WARREN O. CHACE, Everett, Mass. Filed Aug. 18, 1920. Serial No. 404,290. 11 Claims. (Cl. 259—108.)



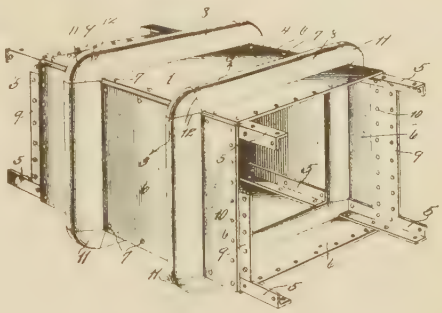
1. In a rotor, a shaft, a plurality of paddles of varying length locked thereto in substantially the same horizontal plane, the long paddles having shanks extended through the shaft, while the short paddles are wedged between the long paddles and against the shaft.

1,416,333. CENTRAL CONNECTING MEMBER FOR HORSE OVERSHOES. EDWARD A. CONNER, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Dec. 9, 1919. Serial No. 343,671. 4 Claims. (Cl. 168—1.)



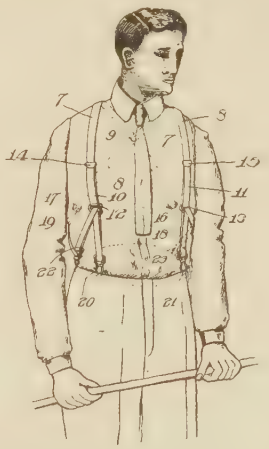
1. In an anti-slipping overshoe for horses, a tread portion including a plurality of tread members adapted to be arranged to converge from the perimeter of the bottom of the hoof toward the frog, and a common link for joining the ends of said tread members, said link consisting of a loop adapted to span said frog, the terminal links of said tread members being slidably linked with said loop, and a portion of said loop being constricted to confine each of said terminal links to a limited movement on said loop.

1,416,334. FLUE AND FLUE SECTION. WILLIAM M. CONNERY, Philadelphia, Pa. Filed Mar. 16, 1921. Serial No. 452,755. 12 Claims. (Cl. 137—75.)



1. As an article of manufacture a flue section comprising sheet metal plates connected to form the four sides of the section, each plate being provided with relatively deep corrugations, located at requisite infrequent intervals, inset sections or pieces between the straight portions of the corrugations, and means for connecting the inset sections or pieces to the corrugations.

1,416,335. SUSPENDERS. OLNEY CROASDALE, Berwyn, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed June 26, 1919. Serial No. 306,785. 1 Claim. (Cl. 241—29.)

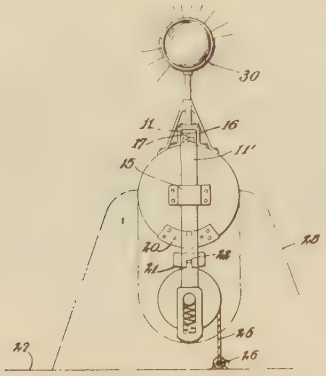


In a pair of suspenders, the combination of two shoulder-straps crossing at the back, two button-loop-supporting strands, each strand having one end fixedly secured to the rear end of a shoulder strap, and a portion slidably connected with the front end of a shoulder strap, a button-loop fixedly connected with the free end of each strand and a button loop slidably connected on each strand between its points of engagement with the shoulder straps.

1,416,336. SUNKEN-SHIP-INDICATING DEVICE. GEORGE CZEPERKO, Unity Station, Pa. Filed Mar. 26, 1920, Serial No. 368,911; Renewed Apr. 6, 1922. Serial No. 550,168. 3 Claims. (Cl. 9—9.)

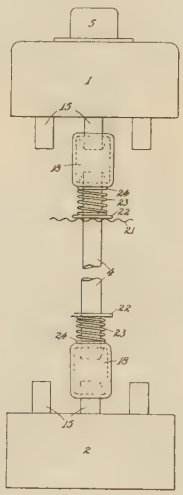
1. In combination with a ship, a float freely supported on said ship, a drum suspended from said float to have both a rotatable movement on its own axis and a bodily up and down movement, a cable wound upon said drum and attached to said drum at one end and to the ship at

its opposite end, resilient means pressing said drum upwardly, and an interlocking device on said drum and float



adapted to hold said drum against rotation when in its raised position.

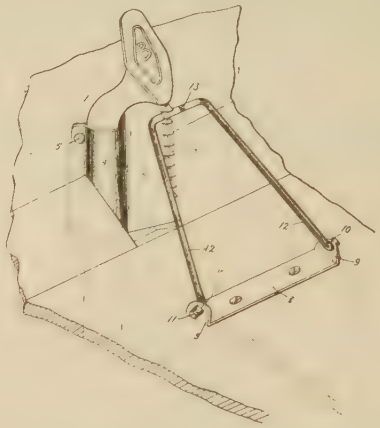
1,416,337. RADIATOR FOR MOTOR VEHICLES AND THE LIKE. BERNARD P. F. DEANE, Kensington, England. Filed Nov. 1, 1920. Serial No. 421,108. 3 Claims. (Cl. 257—129.)



1. A radiator comprising an upper water chamber, a lower water chamber, means for securing said chambers in spaced relationship, nipples on said chambers, water tubes extending between each nipple on one of said water chambers and a corresponding nipple on the other chamber, flexible tubular connectors, internal flexible flanges extending from each end of said connectors to embrace and grip the end of each nipple and the adjacent end of the associated water tube so as to connect them together and a chamber surrounding said flanges substantially as and for the purpose set forth.

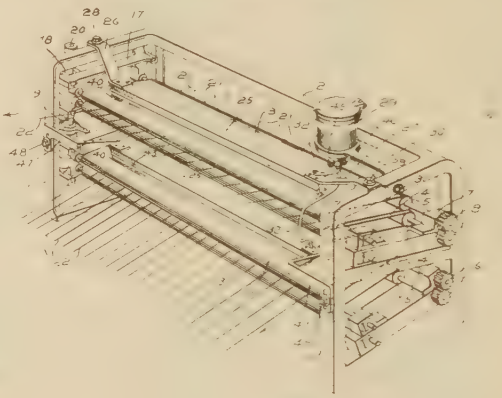
1,416,338. BRAKE LEVER. FREDERICK CHARLES DENHAM, Wellington, England, assignor of one-half to Alan Francis Davey, Taunton, England. Filed Aug. 22, 1921. Serial No. 494,404. 8 Claims. (Cl. 74—81.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In brake levers for motor vehicles, a toothed rack upon the brake lever, a bracket mounted on the footboard of the car, a pawl pivoted in this bracket, a transverse bar at the operative end of the pawl adapted



to engage with the teeth of the rack to hold the brake lever in the "on" position, the pawl being adapted to be turned out of engagement when not required.

1,416,339. CONDENSER FOR TEXTILE FIBERS. JOHN DEXTER, New Bedford, Mass. Filed Mar. 30, 1920. Serial No. 369,833. 10 Claims. (Cl. 184—102.)



7. A condenser apron oiler, comprising, in combination, a lubricant trough having a longitudinally-extending slot leading from the lower portion of the trough, means for supporting the trough in spaced relation to the apron and adjustable to vary the position of the trough relative to the apron, a lubricant wick within said slot and extending therefrom toward the traveling apron, and means for adjustably pinching the wick to vary the amount of lubricant delivered by the wick to the apron.

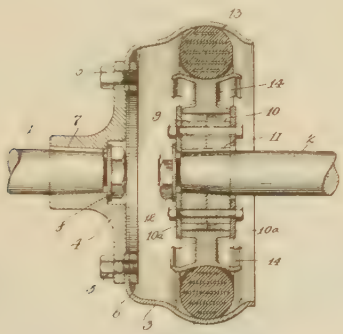
1,416,340. ANNUNCIATOR. WILLIAM T. DIPPEL, New York, N. Y. Filed May 27, 1919. Serial No. 300,049. 10 Claims. (Cl. 177—338.)

1. An annunciator system comprising in combination a signal displaying member movable step by step from a normal position to any one of a plurality of signal positions, a manually operable signal selecting member movable step by step from any one of a plurality of selected positions to which it has been manually moved to a normal position, electro-magnetic devices responsive to intermittent current for effecting the simultaneous movement of said members, a circuit controller for causing an intermittent current and operable independently of the movement of the selecting and display members, a source of current, a circuit including the said devices, circuit

controller and source of current, a circuit controlling device included in said circuit and effective to close the circuit automatically by the movement of the selecting member away from normal position and open the circuit

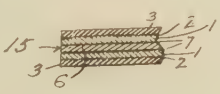
when the selecting member is in its normal position, and a manually operated switch also in said circuit for directly connecting the circuit controller to said electromagnetic devices.

1,416,341. SHAFT COUPLING. TIMOTHY C. DOBBINS, Denver, Colo. Filed Nov. 6, 1920. Serial No. 422,148. 20 Claims. (Cl. 64—96.)



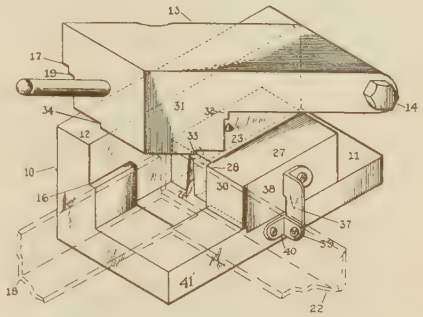
10. The combination with a shaft and a ring fixed to the shaft and concentric therewith, of a resilient cushioning body seated in said ring, a second shaft, a fish-bone gear composed of a plurality of complementary sections carried by said second shaft, a plurality of rocker shoes meshing with said gear and engaging said cushioning element and adapted to compress the resilient element progressively as they rock from normal position.

1,416,342. SOUND RECORD AND METHOD OF PRODUCING THE SAME. VICTOR H. EMERSON, New York, N. Y., assignor to Emerson Phonograph Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 20, 1920. Serial No. 375,243. 21 Claims. (Cl. 18—48.4.)



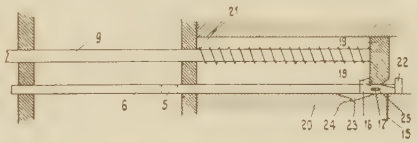
1. A method for forming sound records which comprises the following steps; preparing a thin metal disk, roughening the surfaces of the disk and applying record material directly to one surface and a disk of cardboard to the other surface thereof.

1,416,343. PROCESS OF CASTING CORNERS FOR METAL BEDS. IRVING A. FEATHERMAN, Brooklyn, N. Y. Filed Dec. 16, 1921. Serial No. 522,796. 4 Claims. (Cl. 22—116.)



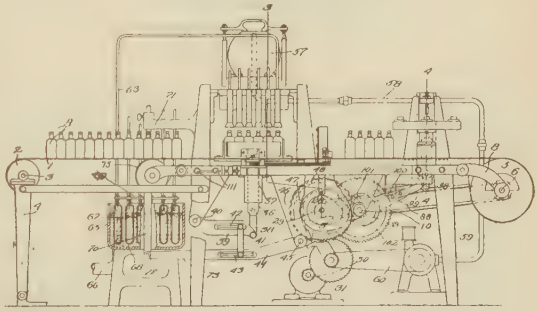
4. A chill comprising a base plate, a vertical wall thereon, a top plate pivoted to said vertical wall, a matrix located on said base, a downwardly depending portion on said top plate recessed to form a chamber, a swinging block which holds said matrix from lateral movement and means to hold adjacent ends of angle iron bars within said chamber.

1,416,344. CIRCULAR WEAVING MACHINE. CORNELIS JACOBUS FEUERSTEIN, Zwolle, Netherlands. Filed May 26, 1920. Serial No. 384,488. 4 Claims. (Cl. 139—7.)



1. In a circular weaving machine, a number of periodically reciprocated drawing bars, heddles reciprocated by said drawing bars and adapted to guide the warp threads, clutches arranged between the heddles and the drawing rods for connecting said drawing rods and heddles, and electromagnetic operating means for said clutches, each clutch including a lever arranged to fall by gravity to inoperative position upon deenergization of the electromagnetic means.

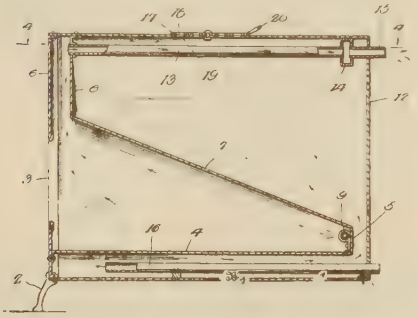
1,416,345. VACUUM FILLING MACHINE. ALPHONSE J. GOSSELIN, Rochester, N. Y., assignor to Standard Automatic Machine Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 11, 1917. Serial No. 141,805. 60 Claims. (Cl. 226—76.)



2. Apparatus of the kind described, comprising a filling station equipped with means for filling bottles, means for pushing a quota of bottles from a position at one side of said station to a filling position underneath said filling means, a conveyer arranged in position to receive the bottles as pushed from said filling position by an oncom-

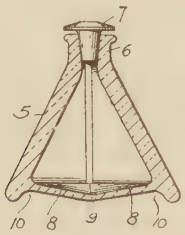
ing quota, stoppering mechanism mounted to receive the bottles as delivered by said conveyor, and means for operating said stoppering mechanism and said filling means in timed relation.

1,416,346. HEATER AND VENTILATOR. JOHN A. GREENE, Long Beach, Calif. Filed Oct. 8, 1920. Serial No. 415,660. 2 Claims. (Cl. 126—90.)



1. A heater comprising a casing having an opening in its front wall, a combustion chamber supported within the casing by the front wall thereof, the top, bottom and back of the combustion chamber being spaced from the walls of the casing, the top and bottom of the combustion chamber being respectively above and below the opening in the front wall of the casing and the interior of the casing constituting a heating chamber surrounding and closed to the combustion chamber, a burner supported within the combustion chamber at the back of the same, a fresh air pipe discharging into the space below the combustion chamber, and a heat-conveying instrumentality extending from the upper end of the combustion chamber to the top of the casing at the back of the same, said heat-conveying instrumentality, traversing the upper portion of the heating chamber and being closed thereto.

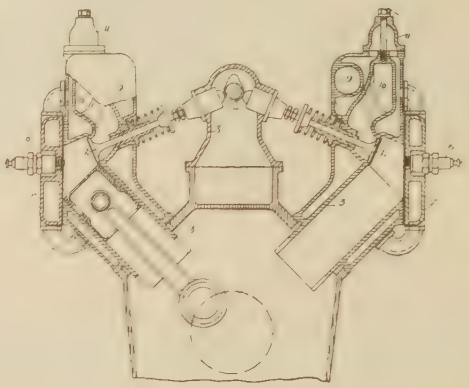
1,416,347. BOTTLE. GEORGE G. GREGORY, Denver, Colo. Filed July 21, 1920. Serial No. 397,867. 2 Claims. (Cl. 215—1.)



1. A bottle having a bottom surface directly beneath its mouth, the surface sloping gradually from the circumference of the bottle to a point in vertical alinement with the mouth, whereby to collect at said point a remainder of a liquid contents of the bottle when the bottle is mostly empty.

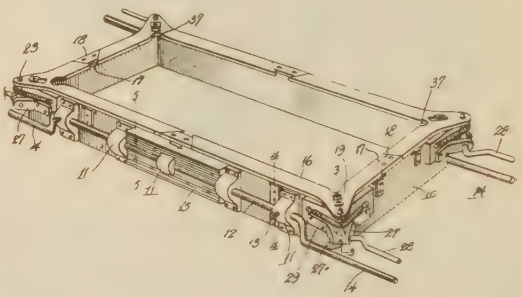
1,416,348. V-TYPE INTERNAL-COMBUSTION ENGINE. SYDNEY SLATER GUY, Finchfield, Wolverhampton, England. Filed Nov. 20, 1918. Serial No. 263,331. 1 Claim. (Cl. 123—55.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In an internal combustion engine, a crank shaft, a crank case having upwardly convergent sides and a central support running along the top, a series of water-jacketed cylinders mounted at right angles in the opposite convergent sides of said crank case, a water pipe running along the top of each series of cylinders and communicating with the water jackets thereof, inlet and exhaust manifolds cast integrally with said cylinders, said exhaust manifolds being arranged below said water pipes, detachable water cooled cylinder covers on the outside of said cylinders, outside water connections between said covers and their respective cylinder water jackets, a self-contained detachable casing mounted on said central



support of said crank-case, a cam-shaft rotatably mounted within said detachable casing, inlet and exhaust valves on the insides of said cylinders the axes of opposing valve stems intersecting on the axis of said cam shaft, and valve tappets in said detachable casing in operative relationship with said cam shaft and abutting against the outer ends of said valve stems.

1,416,349. MOLDING FLASK. EDWARD C. HAFER, Chambersburg, Pa., assignor to James A. Hafer, Chambersburg, Pa. Filed May 19, 1919. Serial No. 297,989. 4 Claims. (Cl. 22—111.)

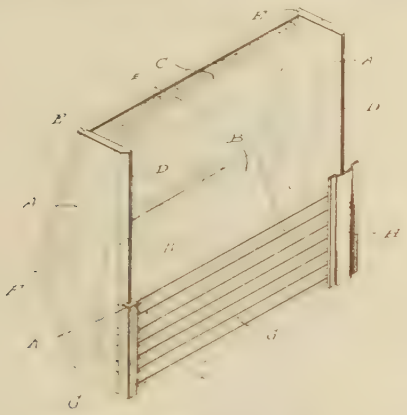


1. In a molding flask, a cope comprising an elongated frame adapted to contain a sand mold, brackets arranged exteriorly along opposite sides of the frame, a rod arranged at each side of the frame and engaging through the respective brackets, each rod having its end offset toward one edge of the frame to form handles, and means for securing the rods in the brackets for maintaining the handles in desired position.

1,416,350. LINING FOR CHIMNEYS AND OPEN FIREPLACES. HENRY HARVEY, Chicago, Ill. Filed Aug. 20, 1919. Serial No. 318,675. 1 Claim. (Cl. 126—130.)

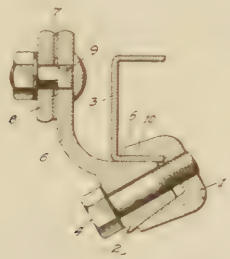
In a lining for fire places the combination of a front grate, a back plate composed of two sections, placed one upon the other, on a horizontal edge line, the lower plate inclined rearwardly and upwardly to meet the horizontal lower edge of the upper plate and the latter inclined upwardly and forwardly from the line connecting it with said lower plate, two side plates each connected by a rabbet joint to the back plate at its opposite ends, each of said side plates being formed with a vertical bevel edge from top to bottom, upright bars provided on their rear face with a groove fitting over the bevel edge of

said plate at the lower end of said plate, and having secured thereto the opposite ends of the front grate bars,



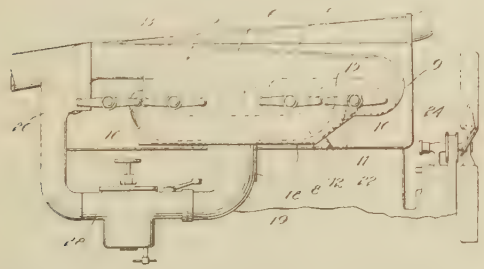
vertical front plates covering the upright bars at each side of the grate, and all secured firmly together substantially as shown and described.

1,416,351. CLAMP. CHARLES H. HATHAWAY, West Allis, Wis., assignor to Badger Manufacturing Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 20, 1921. Serial No. 438,686. 9 Claims. (Cl. 293—55.)



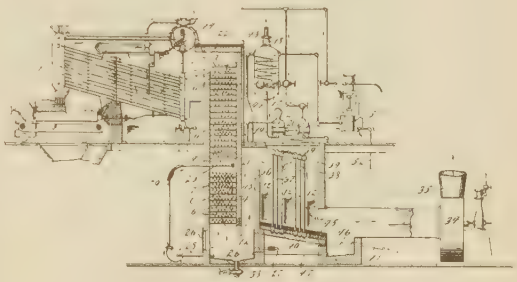
2. A clamp for gripping the flange of an automobile side bar and for fastening thereto an automobile bumper bracket, having, in combination, a pair of clamping members one of which is adapted to rest upon the upper face of the side bar flange and the other to engage the lower face thereof, and a member for holding the clamping members in wedging engagement with the flange and extending through both clamping members, the axis of said member being oblique to the plane of the flange so that said member produces a direct binding action on the flange.

1,416,352. MANIFOLD SHIELD. PHILIP C. HUNTLY, Chicago, Ill. Filed Aug. 22, 1921. Serial No. 494,077. 5 Claims. (Cl. 123—198.)



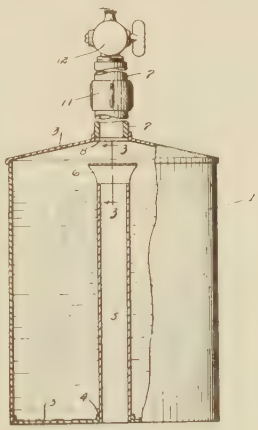
1. A shield adapted to partially enclose the intake and exhaust manifolds of an internal combustion engine, and a thermostatically controlled valve therein for automatically admitting or excluding outside air to maintain uniform temperature within said shield.

1,416,353. METHOD OF AND APPARATUS FOR OPERATING STEAM-BOILER ECONOMIZERS. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed Dec. 8, 1914, Serial No. 876,012. Divided and this application filed Nov. 4, 1919. Serial No. 335,727. 9 Claims. (Cl. 122—421.)



1. The herein-described method of operating a steam boiler, consisting in passing the gases over one part of an economizer, then passing them over another part of the economizer, and spraying water over the latter part of the economizer as the gases pass thereover.

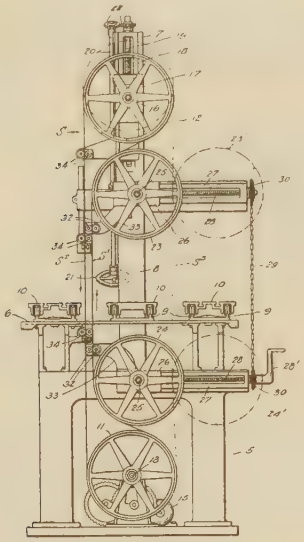
1,416,354. VACUUM SAMPLER FOR TANKS OF REFINED OIL AND GASOLINE. CHARLES E. JOHNSON, Gillespie, Ill. Filed Apr. 8, 1921. Serial No. 459,931. 1 Claim. (Cl. 137—18.)



A sampler for refined oils and gasoline, composed of a sample-receiver in the form of a chamber whose upper end is normally closed, and whose lower end is provided with an entrance-opening; a combined handle and vent-tube attached to the upper part of said receiver, and having its interior in communication with the upper interior of the latter, and having such a length that the receiver may be lowered into and raised from the bottom of the tank containing the liquid to be sampled through an opening in the top of said tank; a vertical filling-tube, the lower end of which is fixed in said entrance-opening in the lower end of said sample-receiver, and which filling-tube extends upwardly to a point near the top of said receiver upon the interior of the latter; a spreader-cap fixed over the open upper end of said filling-tube, and arranged to prevent the entering liquid from being forced upwardly directly into the open lower end of said com-

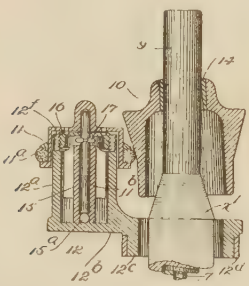
bined handle and vent-tube; and a vent-device to control the exit of air from said receiver after same has been lowered into the liquid to be sampled.

1,416,355. BAND-SAW MACHINE. ERIC JOHNSON, Seattle, Wash. Filed Nov. 29, 1920. Serial No. 427,010. 7 Claims. (Cl. 29—68.)



1. In a band-saw machine, the combination of a work table, a band-saw, wheels therefor, means for adjusting one of said wheels relative to the other horizontally movable means cooperating with said wheels whereby both leads of said saw are directed to travel in vertical parallel planes through the work table at various selected distances apart.

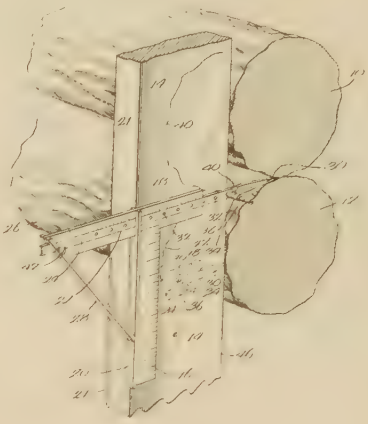
1,416,356. CAP-SPINNING FRAME. JOSEPH H. JONES, Winthrop, Mass., assignor of one-half to Robert Burgess, Newton Center, Mass. Filed June 7, 1921. Serial No. 475,632. 5 Claims. (Cl. 118—62.)



1. In cap-spinning devices, in combination, a revolving spinning element, a cap-controlling wheel or pivot, and a live cap fitted by means of a central hole to the blade or barrel of the spinning element and controlled by peripheral contact with the wheel or pivot, with the said central bore or opening made downwardly flaring so as to permit definite canting or tipping of the cap relative to the said blade or barrel, thereby securing better driving engagement of the cap with the spinning element.

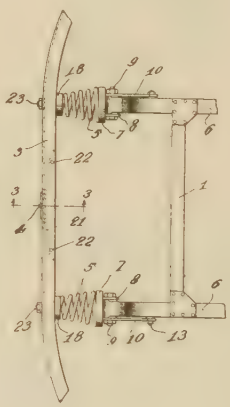
1,416,357. PROTRACTOR. FRANK OSCAR KNUUSI, Huron Mountain, Mich. Filed May 20, 1920. Serial No. 382,774. 4 Claims. (Cl. 33—41.)

1. In mechanism of the class described, a member adapted for movement along the edge of an article to be marked, a rod slidably mounted on the member for movement at an angle to the direction of operative movement



of the member, and a pencil device carried by and movable with the rod to effective marking positions within the marginal limits of the member.

1,416,358. AUTOMOBILE BUMPER. VICTOR KREFL, Eagle River, Wis. Filed Jan. 11, 1922. Serial No. 528,449. 5 Claims. (Cl. 293—55.)

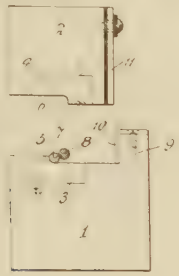


5. A device of the class described including a sectional bar having its sections pivotally connected and yielding means bearing against said pivotal point, means for connecting said bar to a vehicle including coil springs disposed between the bar and the vehicle, said means including additional means having connection with parts of the vehicle whereby to permit movement on the part of the vehicle without interfering with the relative positions of the coil springs.

1,416,359. METHOD OF SIDE WELDING WIRES. LAURENCE S. LACHMAN, New York, N. Y., assignor to Universal Electric Welding Company, New York, N. Y., a Corporation of New York. Filed July 12, 1920. Serial No. 395,590. 5 Claims. (Cl. 219—5.)

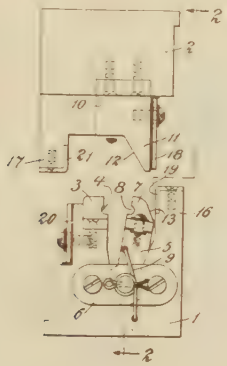
1. The method of side welding wires consisting in partially overlapping the wires longitudinally so that they will occupy a plane including the line of contact between

them, that is inclined to the plane of the finished work and to the line of welding pressure, passing an electric



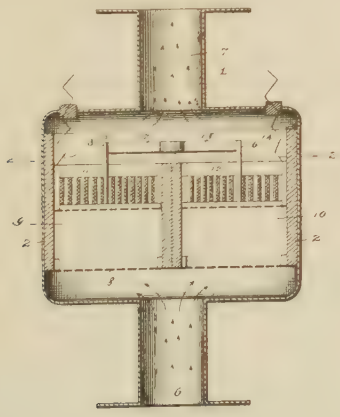
current transversely across the overlapped joint and applying pressure to force the wires into the same plane.

1,416,360. ELECTRIC WELDING DEVICE. LAURENCE S. LACHMAN, New York, N. Y., assignor to Universal Electric Welding Company, New York, N. Y., a Corporation of New York. Filed July 12, 1920. Serial No. 395,591. 9 Claims. (Cl. 219—4.)



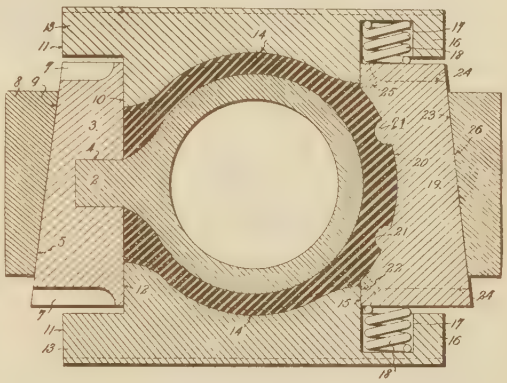
1. In an electric welding apparatus, a welding die comprising a pair of jaws adapted to grip the work in side contact and prevent displacement thereof transversely to the line of applied pressure and means adapted to engage one of said jaws and apply welding pressure thereto.

1,416,361. GAS DETECTOR. ARTHUR B. LAMB and ALFRED T. LARSON, Washington, D. C. Filed Mar. 4, 1919. Serial No. 280,577. 10 Claims. (Cl. 70—51.)



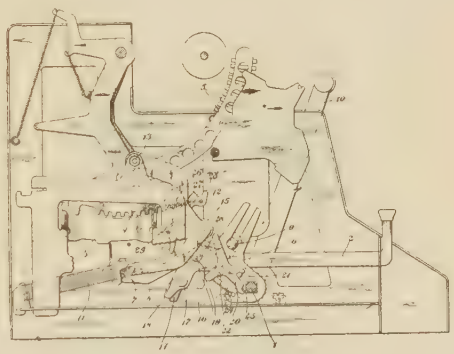
1. A gas detector comprising oppositely arranged expansible members, HC catalyzer placed in proximity to one of said members and means for detecting difference in expansion of said members.

1,416,362. MOLD FOR PNEUMATIC TIRES. HENRY M. LAMBERT, Portland, Oreg., assignor to Lambert Tire & Rubber Company, Akron, Ohio, a Corporation of Arizona. Filed Feb. 11, 1922. Serial No. 535,930. 11 Claims. (Cl. 18—38.)



1. In tire molds, a sectional core on which the tire is built, a sectional base annulus, means for centralizing the core with respect to said annulus, means for holding the sections of said annulus in place, a tread annulus, and side mold plates cooperating with said annuli to mold the exterior of the tire.

1,416,363. ADDING MACHINE. HARRY LANDSIEDEL, Norwood, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 20, 1919. Serial No. 325,096. 33 Claims. (Cl. 235—60.)

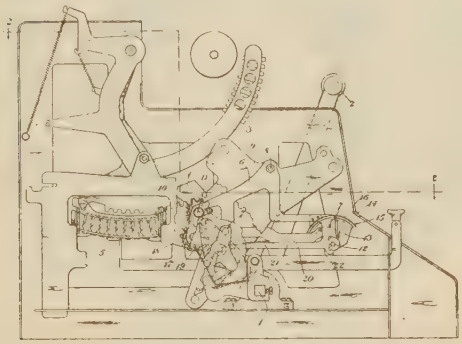


1. Mechanism of the character described, comprising a shaft rockable from and to a starting position, means for turning said shaft from its starting position, an actuator for turning the shaft toward its starting position, an additional actuator arranged to co-operate with the first-named actuator during a portion of the turning movement of the shaft, leaving the first-named actuator to turn the shaft independently of the second-named actuator for a portion of the turning movement of the shaft, and means for constantly increasing the energy of said additional actuator during the entire movement of said shaft from its starting position.

12. In an adding machine, a rock shaft arranged to be turned from and to a starting position, a spring, a lever connected with said spring, a cam operated by the shaft for actuating said lever to energize said spring as an incident to the turning of said shaft from starting posi-

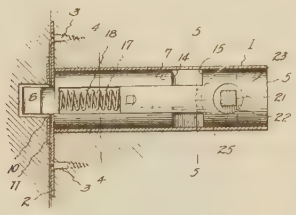
tion, a latch device supported by said shaft, and means for positioning said latch device for engagement by said lever to enable said spring to turn said shaft.

1,416,364. ADDING MACHINE. HARRY LANDSIEDEL, Norwood, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 2, 1920. Serial No. 355,751. 16 Claims. (Cl. 235—60.)



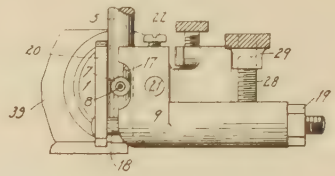
1. In an adding machine, adding racks, a pivoted frame, adding pinions supported in said frame and being movable into and out of mesh with said racks, cam pinions supported in said frame in mesh with said adding pinions, indicating devices in said frame for indicating the sum represented by the adding pinions, and elements operated by said cam pinions for moving said indicating devices.

1,416,365. DOOR LOCK. LARS J. LARSON, Seattle, Wash. Filed Apr. 29, 1920. Serial No. 377,495. 1 Claim. (Cl. 70—29.)



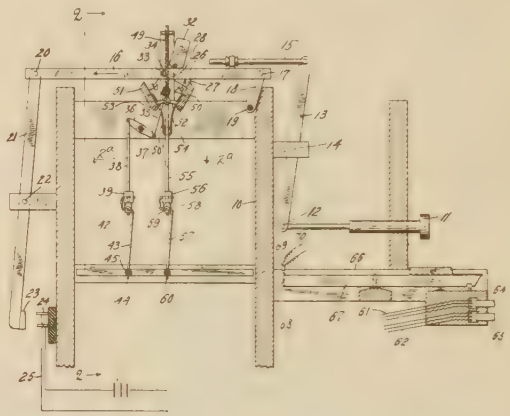
A door latch and lock comprising in combination a tubular casing, guide bars fixed in spaced relation within the casing at opposite sides thereof; said casing and bars having transverse bores therethrough adjacent their inner and outer ends, a bolt slidable longitudinally between the guide bars, having a latch head at its outer end and having laterally turned wings at its inner end, disposed at upper and lower sides of the inner end bore, also having slots longitudinally therein adapted to move in registration with said bores and having an abutment therein, a sleeve revoluble in the inner end bore having a semi-annular flange thereon providing abutments for engaging the said wings to move the bolt inwardly, an actuating rod for the sleeve, a spring engaging the bolt and normally retaining it in extended position, an arm pivotally mounted at one end between the guide bars and adapted to be moved at its opposite end into engagement with said shoulder to hold the bolt in extended position, a rod extended through the inner end bore of the casing, a cam fixed on said rod and adapted to be moved thereby to retain the locking arm from holding relation with the bolt.

1,416,366. GRINDER FIXTURE. ARTHUR C. LINDHOLM, Springfield, Mass. Filed Feb. 17, 1921. Serial No. 445,841. 15 Claims. (Cl. 51—217.)



1. As an improved article of manufacture, a grinder fixture comprising a body provided with means for holding a contact while being ground, and having a chuck-engaging shank extending therefrom.

1,416,367. COMBINATION ORGAN-STOP ACTION. ELEK LOUIS, New York, N. Y.; Fanny Louis being administratrix of said Elek Louis, deceased. Filed June 11, 1919. Serial No. 303,347. 2 Claims. (Cl. 84—345.)

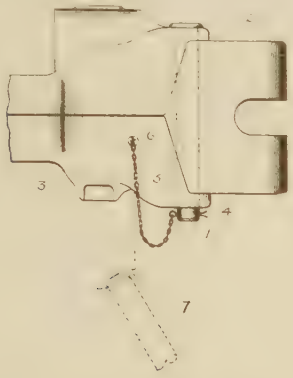


1. In a combination organ stop-action, the combination with a horizontally disposed shiftable stop-bar, of a rocker pivotally mounted on said bar having two distinct portions extending at an angle to each other, either one of said portions being adapted to project below the underface of said bar when the other is above said underface, a shiftable bar for setting said rocker, two fans connected to move in opposite direction to engage either portion of said rocker for shifting said stop-bar endwise, two horizontally extending levers, one of said levers being connected with said setting-bar and the other one with said fans, electro-magnets, one carried by the free end of each of said levers, said magnet being in branch circuits, a downwardly extending bar upon each of said levers provided with an armature in operative relation to the respective electro-magnet, said downwardly extending bars being each provided with a lug, a bar having one of its ends in operative relation to said lugs, an armature carried by the other end of said last-mentioned bar, and an electro-magnet actuating said last-mentioned armature, said last-mentioned electro-magnet being in a circuit adapted to be closed simultaneously with either one of said branch circuits.

1,416,368. CAR COUPLING. THOMAS E. MCCARTHY, Two Harbors, Minn. Filed Nov. 14, 1921. Serial No. 514,850. 2 Claims. (Cl. 213—13.)

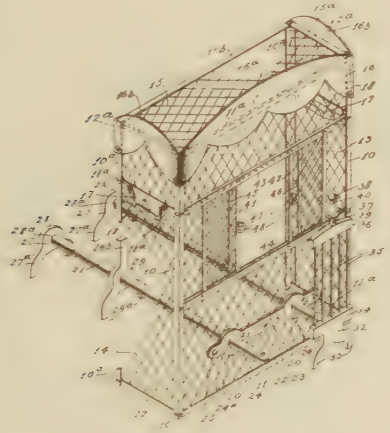
1. The combination with a draw bar head having a vertically disposed knuckle pin therein and a cotter key through the lower end of the pin for retaining it in posi-

tion, of flexible suspending means attached at one end to the key and at the other end to the draw bar head



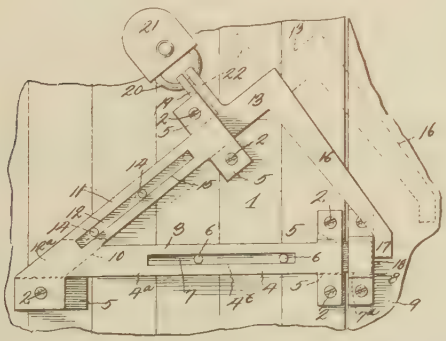
whereby the lower portion of a broken pin will drop from the head and be suspended therefrom for the purpose described.

1,416,369. FIREPLACE ANDIRONS AND SCREEN. JOHN W. MAHONEY, Waterbury, Conn. Filed Feb. 3, 1922. Serial No. 533,990. 12 Claims. (Cl. 126—202.)



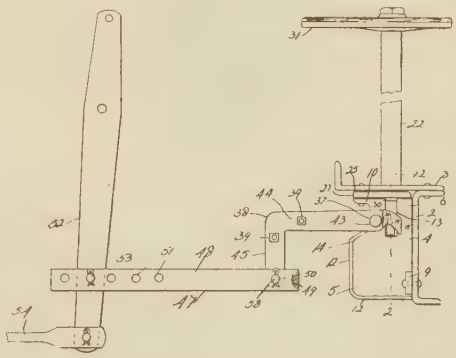
1. In a combination fire-place fixture, a pair of andirons, and a screen, the forward ends of said andirons extending through and supported by said screen.

1,416,370. LATCH. MARTIN J. C. A. MAURER, Springfield, Ill. Filed Oct. 31, 1921. Serial No. 511,847. 6 Claims. (Cl. 292—150.)



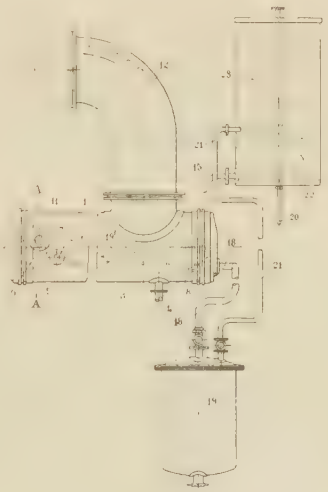
1. The combination with a slidable latch bar, one end of which cooperates with a keeper, of means for preventing longitudinal movement of said latch bar in either direction, said means comprising an angular sliding latching member having arms simultaneously movable into and out of registration with the ends of the latch bar.

1,416,371. CAR BRAKE. RUSSELL H. MINICH, Philadelphia, Pa., assignor to Minich Railway Appliance Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 10, 1920. Serial No. 422,988. 8 Claims. (Cl. 74—120.)



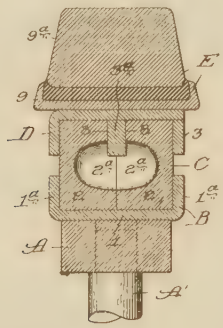
2. A car brake comprising a cage, a staff journalled therein, a lever journalled on the outside of the cage, means threaded on said staff for coaction with the lever to actuate the latter the distance between the coacting points of the lever and said means and the fulcrum point of said lever changing during the movements of said means.

1,416,372. PROCESS OF PREPARING STABLE, PREDIGESTED FOODS. EUDO MONTI, Turin, Italy. Filed Oct. 3, 1916. Serial No. 123,563. 5 Claims. (Cl. 99—1.)



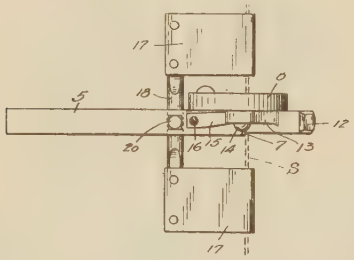
5. The method of preparing stable, predigested foods, which comprises crushing and straining off the juice from grapes, treating the remaining pomace, including the peels with SO_2 in water, extracting the mass thus treated in water at about 40° C., concentrating the extract in vacuum, and treating the food with the concentrated extract.

1,416,373. CUSHION-WHEEL CONSTRUCTION. JOSEPH J. MORAND, Chicago, Ill., assignor to Morand Cushion Wheel Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1922. Serial No. 527,089. 3 Claims. (Cl. 152—36.)



1. A cushion wheel construction comprising an inner annular channel-form rim and an outer annular channel-form rim, said rims being separated by an annular space and having their flanges extending towards each other; an interposed two-part cushion-element comprising two annular elastic rubber cushion members provided at their inner surfaces with recesses of circular contour, each cushion-element being provided with an outer series of bushings and an inner series of bushings which are staggered with relation to each other and with relation to said recesses; an outer series of bolts extending through the outer bushings and through the flanges of the outer cushion-rim; and an inner series of bolts extending through the inner series of bushings and through the flanges of the inner cushion-rim.

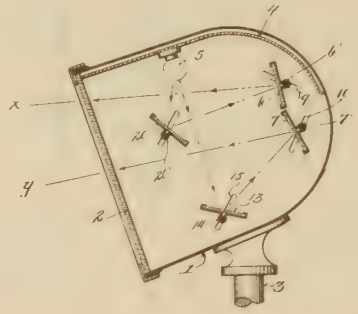
1,416,374. SAW SET. PHILIACE MORIN, Seattle, Wash., assignor to Morin Saw Guage Mfg. Co., Seattle, Wash., a Corporation of Washington. Filed Mar. 29, 1920. Serial No. 369,521. 2 Claims. (Cl. 76—65.)



1. In an implement of the character described, the combination with the implement body comprising stock and bracket members rigid with each other, one end of said stock being provided with two plane surfaces in angular relations with each other, and a swage pivotally connected to said bracket member, of adjustable means connected to said body member and arranged to be supported by the points of a saw being operated upon for positioning said stock to have the angle of said surfaces located at a predetermined distance from a line projected through the points of the saw teeth.

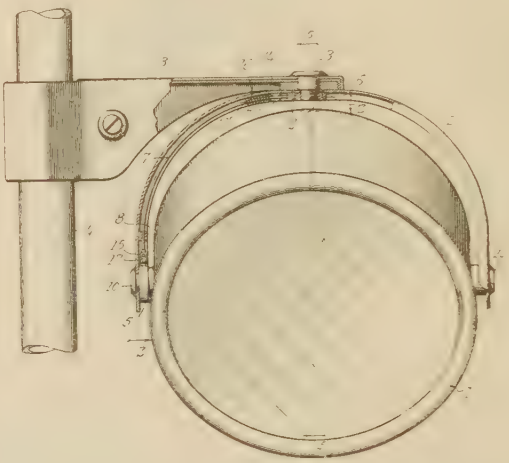
1,416,375. AUTOMOBILE HEADLIGHT. EDWARD H. MUELLER, Hartford, Conn. Filed Apr. 12, 1920. Serial No. 373,299. 1 Claim. (Cl. 240—41.)

A head light comprising a casing having its front inclined downwardly, a lamp mounted within the casing above the horizontal line of vision with respect to the inclined edge thereof, a pair of spaced mirrors mounted in the casing below the lamp at predetermined angles to reflect the rays of light from said lamp rearwardly,



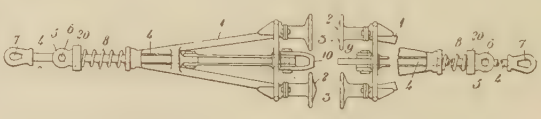
and a pair of mirrors mounted in the rearward portion of the casing at predetermined angles to reflect the rays of light from the first mentioned pair of mirrors forwardly.

1,416,376. LAMP-POSITION CONTROLLER. WALTER S. NATHAN, Milwaukee, Wis. Filed June 28, 1920. Serial No. 392,170. 8 Claims. (Cl. 240—7.)



8. A lamp position controller comprising relatively movable members mounted at spaced points to rotate about different axes, and means cooperating with the two members and dependent upon the relative position thereof for limiting the movement of one of the members.

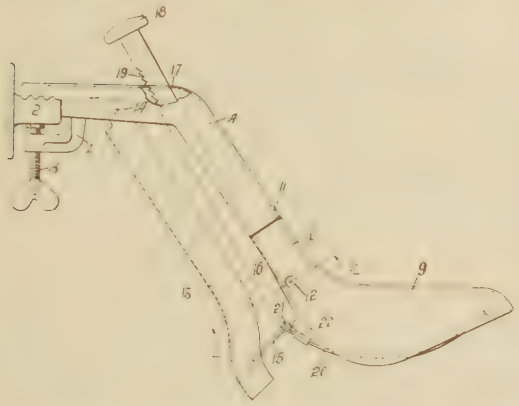
1,416,377. BUFFER DEVICE FOR CARS. SVANTE GUSTAF HERMAN ORELL, Stockholm, Sweden. Filed Oct. 16, 1919. Serial No. 331,216. 3 Claims. (Cl. 213—42.)



1. A buffer device for cars, comprising a fork member journalled on the car and capable of being swung in a horizontal direction and carrying a pair of impact members, one of said impact members having a surface adapted to project into a cooperating member, the surfaces of the cooperating members being congruous, whereby when the members are in intergripping relation the surfaces of the impact members will be in close contact at all points

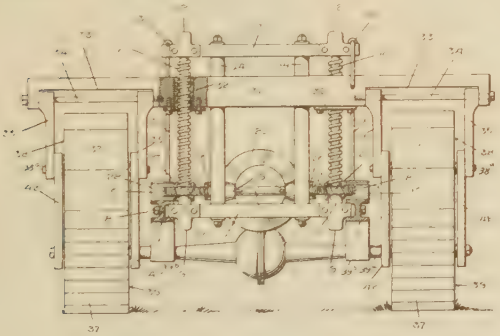
and be self-maintained against lateral displacement and against swinging movement relatively to each other, both intergripping forks thus forming at said surfaces a rigid system in the horizontal direction, and means for holding the impact surfaces in engagement with each other.

1,416,378. SHOE HOLDER. SOREN C. PEDERSEN and ALBERT J. NOWAKOWSKI, Toledo, Ohio. Filed Apr. 8, 1921. Serial No. 459,655. 4 Claims. (Cl. 12—128.1.)



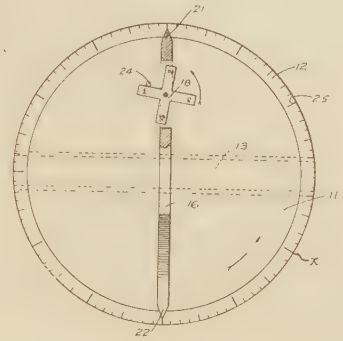
1. In a shoe holder, a rigid shank bar, a foot member detachably carried thereby, a heel member pivotally projecting downward from the shank, and means including a bowed spring yieldingly connecting the heel and foot members and operable to impart inward or outward relative movements thereto.

1,416,379. TRACTION ENGINE. VALLEY VIRGIL PEONE, Chewelah, Wash. Filed Sept. 8, 1920. Serial No. 408,993. 3 Claims. (Cl. 180—9.1.)



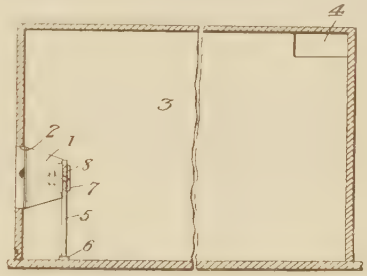
1. In an engine equipped tractor of the character described, the combination with the tractor frame, the said frame including a bottom cross beam, uprights rigidly mounted on the said bottom cross beam and a cross head rigidly sustained on the upper ends of the said uprights; of a pair of oppositely disposed vertical jack screws one for each side of the machine whose lower ends travel in the bottom cross beam and whose upper ends travel in the cross head, an endless track mechanism located at each side of the tractor frame, means for mounting the rear end of the tractor frame and the endless treads so that the rear ends of the treads constitute the rear support for the tractor frame, a rotary support for the front end of each endless tread, mechanism on the tractor for raising and lowering the front ends of the endless treads, the said mechanism including a cross beam located above the tractor frame, the said beam having internally threaded bearings for engaging the jack screws, and guide apertures for engaging the fixed uprights and power transmission operable from the engine and including drive gears engaging the jack screws for applying rotation to the said screws for raising and lowering the cross beam and hanger devices on the opposite ends of the said cross beam that sustain the front ends of the endless treads at their respective ends.

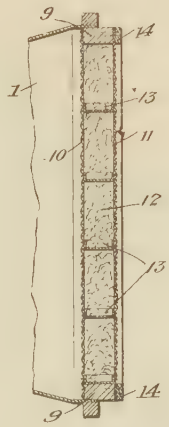
1,416,380. CHARTOMETER. WALTER EJLERT CHRISTIAN PETERSEN, Chicago, Ill. Filed May 21, 1920. Serial No. 383,042. 2 Claims. (Cl. 33—141.)



2. A measuring device comprising a disk having a scale delineated around its outer edge, an indicator diametrically disposed with respect to said disk and pivotally connected therewith, whereby the distance traversed by the peripheral edge of said disk may be determined, a pin projecting from said disk and means for indicating the number of revolutions completed by said disk, said last named means comprising a rotatable member having a plurality of radially extending arms positioned to be engaged successively during successive revolutions of the disk by said pin.

1,416,381. AIR-CLEANSING DEVICE AND VENTILATOR. WILLIAM MAXWELL REED, Louisville, Ky., assignor to Louisville Auto Painting and Trimming Company, Louisville, Ky., a Corporation of Kentucky. Filed Jan. 14, 1921. Serial No. 437,182. 7 Claims. (Cl. 98—33.)

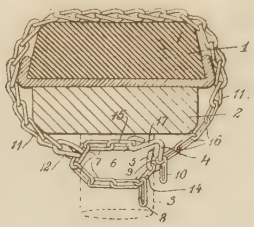




4. In an air filtering or circulating device, the combination with a drying room, chamber or the like, of a funnel

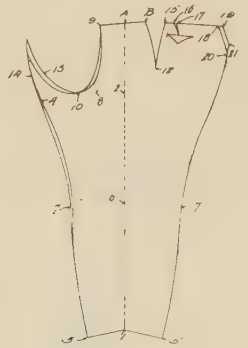
shaped tubular casing adapted to have its large end positioned in an opening in the wall of said room or chamber, means for supporting its opposite end, a frame positioned in said large end of the funnel shaped casing, a screen secured to each side face of said frame, a series of pans and a filling of oil saturated filtering material confined within the frame and between said screens, and a fan mounted in the small end of the funnel shaped casing for drawing the air therethrough and through the filtering material and forcing the same through and out of the drying room or chamber.

1,416,382. CHAIN NONSKID UNIT. JOHN R. REYBURN, Fairfield, Conn., assignor to American Chain Company, Incorporated, Bridgeport, Conn., a Corporation of New York. Filed May 8, 1917. Serial No. 167,166. Renewed Mar. 24, 1922. Serial No. 546,517. 11 Claims. (Cl. 152—2.)



9. In an anti-skid device, a chain to surround a spoke, a separate tread member, and means, common to the spoke chain and tread member, to secure the ends of the spoke chain and the ends of the tread member together.

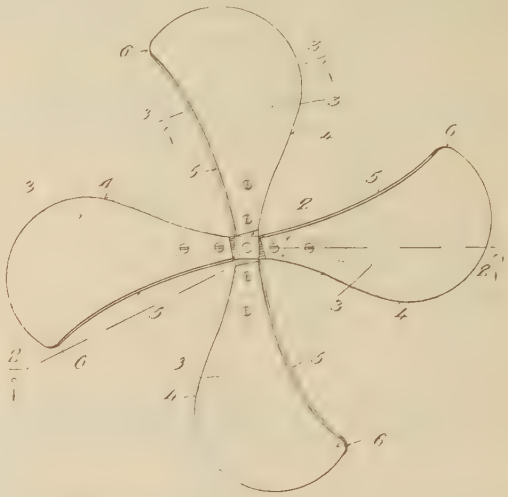
1,416,383. PATTERN FOR TROUSERS. ARTHUR J. ROSE, New York, N. Y. Filed Mar. 19, 1920. Serial No. 367,247. 2 Claims. (Cl. 33—12.)



1. A pattern for trousers having a single rear seam, formed with its side edges curved downwardly and outwardly, one curve being the line of the fly while the other is one of the lines of the seat, the top edge of the pattern being formed with a substantially U-shaped cut-out portion constituting the crotch line, one side of this latter cut-out portion intersecting the seat line, the pattern being shaped along its side edges to form a leg portion below the said single fly and seat line.

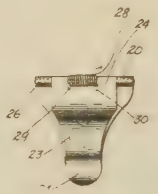
1,416,384. ELECTRIC FAN. BRUNO SCHMELZER, Jersey City, N. J. Filed Mar. 8, 1921. Serial No. 450,669. 9 Claims. (Cl. 170—159.)

1. In a device of the class described, a blade having a curved cutting edge constructed and arranged to cut the air in a plane at an angle to the axis of rotation and a curved rear edge, the body or working face of the blade



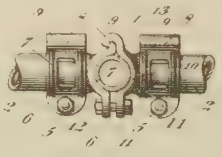
being dished, all of the edges of the blade lying in the same plane, the rear edge having a rearward extension serving to give greater spread to the blast of air.

1,416,385. HAT HOLDER. PAUL SCHMIDT, Passaic, N. J. Filed Dec. 5, 1921. Serial No. 519,809. 1 Claim. (Cl. 24—253.)



A clothing support clip comprising a flat sheet metal plate substantially triangular in outline, means for securing said plate to a support, a plurality of transverse serrations on said plate, hollow beadings integrally formed on the edge of said plate opposite said serrations, a second sheet metal plate having a centrally outwardly bowed portion, transverse serrations on said plate registerable with the first named serrations, extensions on the edge of said second plate opposite the serrations and fitting between said beadings, pintles projecting laterally from said extensions suited to enter said beadings, a coiled torsional spring between said extensions, the ends of said spring being operative to close the second plate upon the first, and means formed with said second plate for confining said spring in operative position.

1,416,386. CLAMP SUPPORT. HOWARD A. SELAH, Johnstown, Pa., assignor, by mesne assignments, to Jacob F. Kress, Johnstown, Pa. Filed Dec. 13, 1919. Serial No. 344,535. 10 Claims. (Cl. 285—108.)



1. A clamp support comprising a female portion adapted to partially surround a structural member provided with

an integral hook at one end, a perforated ear at the other end, a male portion co-operating therewith provided with an integral outwardly extending lug adapted to be seated within the hook and an ear at the other end having a perforation adapted to register with that in the ear of the female portion, the hook and lug ends being tapered and rounding whereby said members can be located in position by rotation or by sliding endwise at least one of said members being provided with an integral extension carrying one of a similar pair of clamping members arranged at an angle thereto.

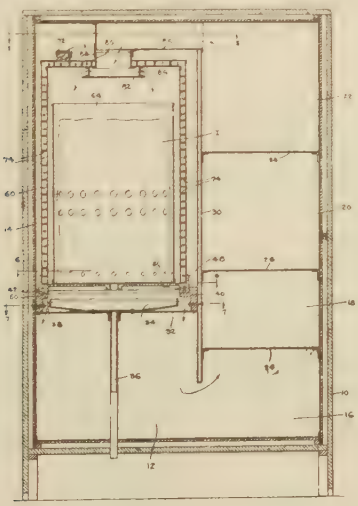
1,416,387. FOOD PRODUCT AND PROCESS OF MAKING THE SAME. DANIEL G. SELL, Kansas City, Mo. Filed May 19, 1919. Serial No. 298,133. 1 Claim. (Cl. 99—11.)

A food product comprising a mixture of sugar and peanut butter which have been mixed together by boiling and allowed to crystallize, said crystallized sugar and peanut butter being of a consistency which will readily liquefy in substantially one part of water two parts of the product.

1,416,388. PROCESS OF REPRODUCING OIL PAINTINGS. HENRY P. G. STEEDMAN, London, England, assignor, by mesne assignments, to William Boyd, New York, N. Y. Filed July 2, 1920. Serial No. 393,715. 2 Claims. (Cl. 41—25.)

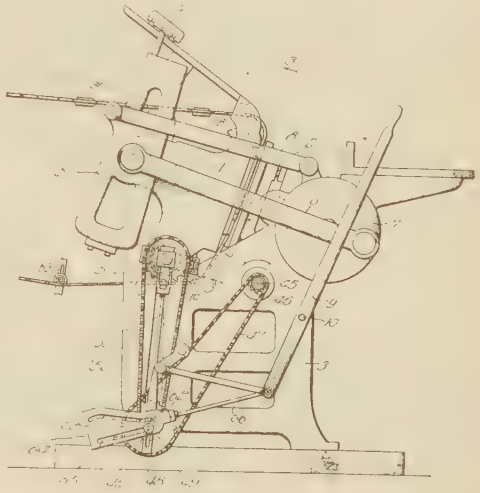
1. The herein described process for the reproduction of oil paintings, which consists in preparing a cliché having upon its surface irregularities corresponding to the canvass grain, brush marks and variations of surface levels of the original painting, applying an unvulcanized, vulcanizable rubber composition in the form of a soft dough to said cliché, without the application of heat, and pressing the said rubber dough upon and into the surface of the cliché so as to produce a perfect impression in the soft rubber dough of the surface variations of the cliché, and then vulcanizing the rubber dough to harden it and preserve said variations of surface, and forming an embossing die, and then embossing registering colored prints of the painting with the die so formed.

1,416,389. REFRIGERATOR. FRANK STOLTMAN and WALTER SUMNER, Minneapolis, Minn. Filed Sept. 21, 1921. Serial No. 502,136. 2 Claims. (Cl. 62—69.)



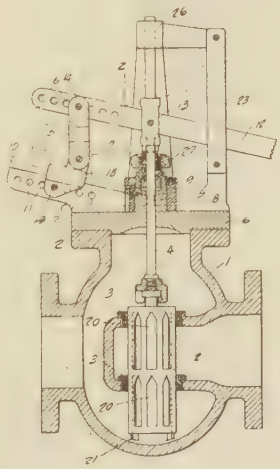
1. A refrigerator comprising top, bottom and side walls for enclosing an ice chamber and food compartments, a removable ice compartment for said ice chamber, a removable vacuum casing surrounding said ice receptacle, a pipe for connecting the upper food compartment with the top of said casing when the latter is in place, said ice receptacle having perforations for the passage of chilled air, and an open work support for said ice receptacle which permits the chilled air to pass downwardly therethrough.

1,416,390. PRINTING MACHINE. JOHN S. THOMPSON, Chicago, Ill. Filed Aug. 12, 1918. Serial No. 249,373. 18 Claims. (Cl. 101—61.)



1. In a printing press of the type wherein printing units are successively presented in printing position, the combination of a continuous conveyor having openings therethrough, type-high printing units received in said openings, and means comprising a binding member for said type units for removably securing the same in the openings on said conveyor.

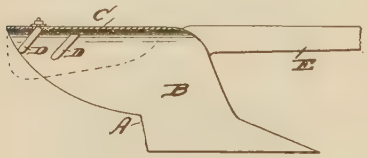
1,416,391. VALVE. JOHN VAN BRUNT, Flushing, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed July 23, 1920. Serial No. 398,400. 7 Claims. (Cl. 251—41.)



6. The combination of a valve-casing, a valve reciprocating therein and a valve-stem projecting therefrom, with

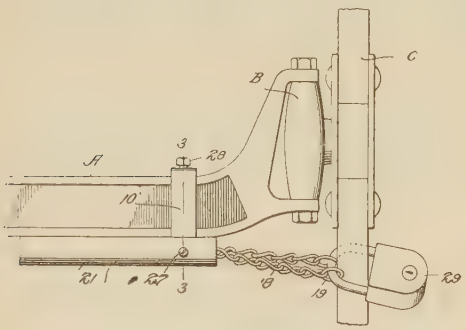
a lever connected to said valve-stem, an adjustable fulcrum link for said lever, an abutment for supporting the lower end of said link, means for adjusting both ends of said link along lines substantially parallel to the axis of said lever when said valve is in closed position without changing the position of said lever, said valve-casing having a projection surrounding said valve-stem and said abutment having an extension surrounding said projection, and a nut upon said projection securing said abutment to said valve-casing.

1,416,392. PLOW. RALPH WHIPPLE, Detroit, Mich., assignor of one-half to Carl H. Michell, Detroit, Mich. Filed Nov. 19, 1920. Serial No. 425,224. 2 Claims. (Cl. 97—18.)



2. In a plow, a mold-board, an overhanging portion adapted to direct the soil received from the mold-board back into the furrow, and a plurality of cutters extending downwardly and rearwardly from the rearward end inner face of the overhanging portion to pulverize the soil deflected into the furrow.

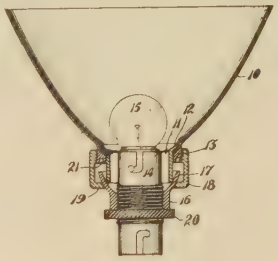
1,416,393. AUTOMOBILE AND VEHICLE LOCKING DEVICE. TOMASO J. WILLETT, Louisville, Ky. Filed Nov. 6, 1919. Serial No. 336,175. 6 Claims. (Cl. 188—31.)



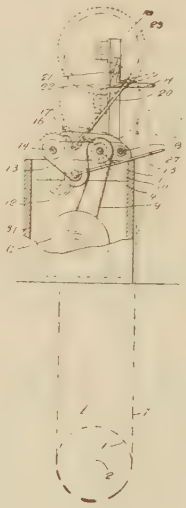
1. A vehicle lock comprising a member adapted to be secured to the axle of a vehicle in proximity to a supporting wheel, said member having a pair of parallel passages therein, an anchoring element having its end portions slidable in said passages respectively and held against disengagement from the member, spring means constantly tending to hold said element at the limit of its movement in one direction, and a lock engageable with the ends of the element to connect the same with an adjacent wheel.

1,416,394. FOCUSING DEVICE. WILLIAM G. WOOD, San Francisco, Calif., assignor to Berkeley Light Corporation, San Francisco, Calif., a Corporation of Nevada. Filed Sept. 23, 1920. Serial No. 412,264. 3 Claims. (Cl. 240—44.)

1. In a headlight or projector, a reflector having a boss arranged in its base, a lamp socket carried loosely within the boss, an adjusting member on the socket having a bell-shaped portion to fit over the end of the boss and clamping means carried by the reflector to fix the adjusting member in any desired position with reference to the boss whereby to retain the socket member in adjusted position.



1,416,395. HOD ELEVATOR. CHARLES W. ANDERSON, Brooklyn, N. Y. Filed Apr. 11, 1917. Serial No. 161,343. 1 Claim. (Cl. 192—116.)

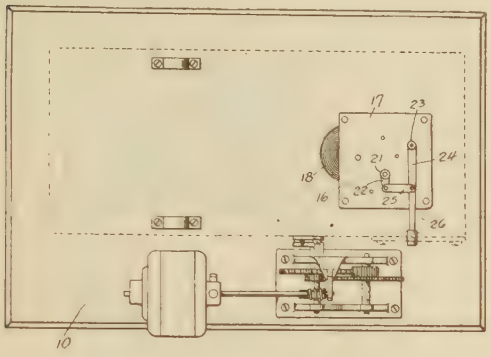


As an article of manufacture, a power control mechanism for hod elevators or the like, comprising a power pulley, a drive pulley, means including a movable member operable to connect and disconnect said pulleys at will, a shaft upon which said movable member is pivotally mounted and adapted to swing normally to disconnecting position, means to manually swing said movable member to connecting position, a ratchet fixed to move positively with said movable member, a supporting frame for supporting all of said parts as a single entity which may be moved into and out of cooperative relation with an elevator at will, and a device also comprised in said entity and operable normally to engage the ratchet for preventing swinging of the movable member to disconnecting position, said device including means by which it may be readily connected to be operated by the elevator mechanism.

1,416,396. PHOTOGRAPHIC-TRAY ROCKER. MIKE E. ANDERSON, Clarksville, Ark. Filed July 2, 1920. Serial No. 393,614. 2 Claims. (Cl. 74—14.)

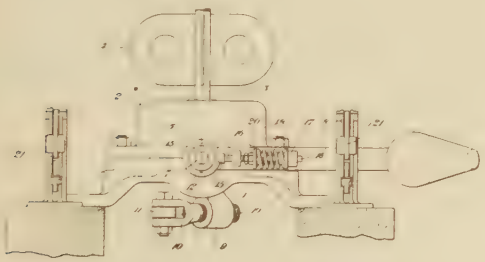
1. Means for operating a rockable element, comprising a depending plate carried by the rockable element and

provided with an inclined slot, a horizontally swingable arm disposed within said slot, and means for swinging



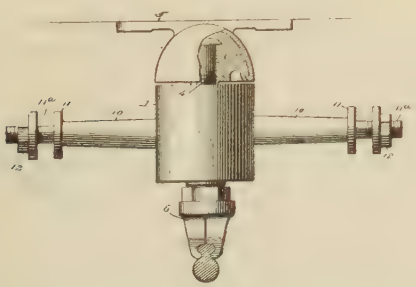
said arm back and forth whereby its engagement and movement within said slot will impart movement to said rockable element.

1,416,397. SWITCH STAND. WILLIAM MILTON BROWN, Johnstown, Pa. Filed Sept. 29, 1921. Serial No. 504,183. 5 Claims. (Cl. 246—286.)



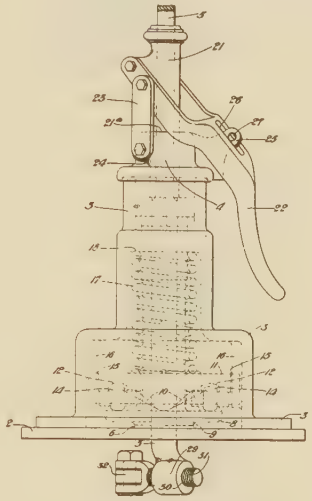
2. In a switch stand having a vertical target shaft, an operating shaft operatively connected to said target shaft, and an operating lever mounted to freely rotate on said operating shaft, a collar secured to said operating shaft, and resilient means connecting said lever and said collar, said means being adapted to remain in operative position during the normal operation of said stand and to automatically release said shaft when the switch is trailed.

1,416,398. TROLLEY GUARD. GEORGE GLENN COOPER, Hillsboro, Ill. Filed Oct. 7, 1921. Serial No. 506,000. 2 Claims. (Cl. 191—35.)



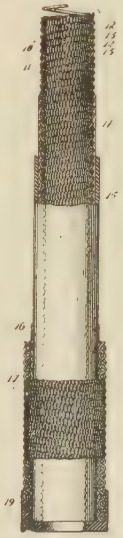
1. A device of the type described, including a casing, a trolley wire clamp, an insulated means of connection between said casing and said trolley wire clamp, said casing having laterally extending arms provided with integral washer-forming members, means threaded upon said arms adapted to function with said washer-forming members for the attachment of guards to said arms, and an overhead suspending member for said casing.

1,416,399. SWITCH STAND. ISRAEL K. DIXON, Johnstown, Pa. Filed Mar. 9, 1922. Serial No. 542,376. 4 Claims. (Cl. 246—287.)



1. A switch stand comprising a casing, a tubular spindle mounted for rotation within said casing, said spindle being provided with an outwardly extending flange at its lower end having upwardly projecting cam faces thereon, a target shaft mounted within said spindle and extending through said casing at its upper and lower ends, a roller bearing plate mounted for vertical movement within said casing, rollers journaled in said plate, resilient means for holding said plate under tension against said cam faces, and means for locking said spindle to said target shaft.

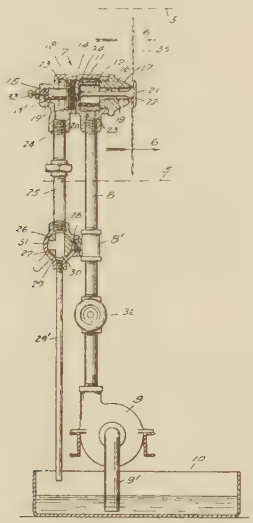
1,416,400. HOSE AND METHOD OF MAKING SAME. NATHANIEL S. DODGE, Emeryville, Calif. Filed Sept. 10, 1919. Serial No. 322,917. 4 Claims. (Cl. 137—90.)



1. A hose formed of fiber and wire interwoven, the wire being introduced circumferentially and arranged in alter-

nate or semi-alternate spirals and held and covered by longitudinal fiber strands, an oil resisting plastic cover enclosing the woven structure, a fabric outer jacket for reenforcing the plastic covering and protecting it from external injury, and means mounted upon the ends of the hose thus formed for preventing the seepage of liquid into the wall structure thereof.

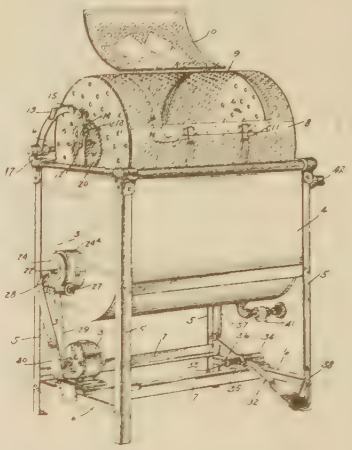
1,416,401. AIR-WASHING DEVICE. WILLIAM L. DUDLEY, Seattle, Wash., assignor to Western Blower Company, Seattle, Wash., a Corporation of Washington. Filed May 14, 1920. Serial No. 381,282. 1 Claim. (Cl. 299—59.)



In apparatus of the character described, the combination of a spray-head consisting of a body provided interiorly with a bore and two chambers located at opposite sides thereof, a nozzle secured to one end of said body and affording an outlet for one of said chambers, a deflector for the discharge end of said nozzle, a rod rigid with said deflector and extending through said bore and both of said chambers into a guideway provided in the end of the body remote from said nozzle, a piston rigid with said rod within the body bore, said piston being arranged to cooperate with the portion of the rod within said guideway to maintain the deflector in axial alignment with the nozzle orifice, a pipe for supplying water into the body between said opening and the piston, a second pipe connected with the first named pipe and also with a chamber provided in the body at the opposite side of the piston from said opening, and a three-way valve provided in the second named pipe whereby water may be successively admitted into and withdrawn from said chamber for regulating the piston to cause said deflector to be respectively moved from and toward the discharge opening of the body.

1,416,402. PHOTOGRAPHIC-PRINT-WASHING MACHINE. GLEN M. DYE, Minneapolis, Minn., assignor to Pako Corporation, Minneapolis, Minn., a Corporation of Delaware. Filed Mar. 6, 1920. Serial No. 363,854. 11 Claims. (Cl. 95—93.)

11. In a machine for washing photographic prints and the like, the combination with a tank, of a rotary perforated drum working therein, and means for lifting the

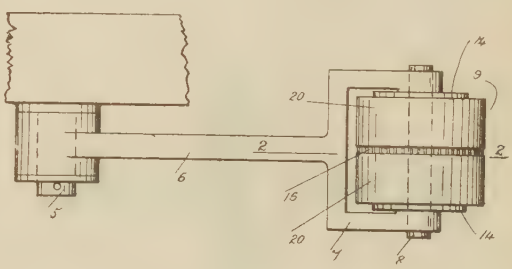


drum out of working position and for returning the same to working position.

1,416,403. METHOD AND MEANS FOR CLEANING SILVER, GOLD, PLATINUM, AND OTHER ARTICLES. WILBER W. EVERTS, Rochester, N. Y. Filed July 6, 1918. Serial No. 243,732. 4 Claims. (Cl. 204—7.)

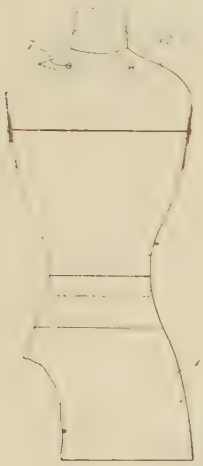
1. The method of cleaning the surface of an article which consists in immersing the article in a salt solution containing a bimetal plate.

1,416,404. FEED ROLLER. JAMES T. FAY and LAWRENCE B. GRASBERGER, Richmond, Va. Filed Apr. 27, 1921. Serial No. 465,038. 3 Claims. (Cl. 271—42.)



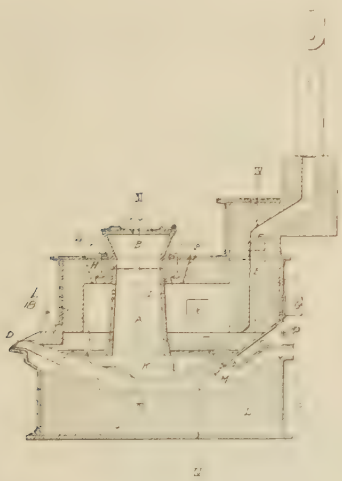
1. A feed roller for a paper feeding device, comprising a revoluble pin, two spools secured on the pin, a serrated disk secured between the two spools, and bands of elastic material encircling the said spools and formed of substantially the same diameter as the said disk.

1,416,405. DRESS FORM. EDMUND GURNEY, Portland, Oreg. Filed Dec. 4, 1919. Serial No. 342,426. 9 Claims. (Cl. 223—18.)



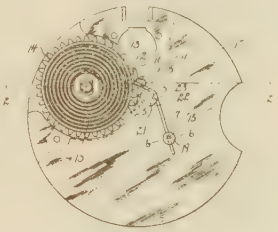
1. A dress form divided horizontally across the bust to form a shoulder portion and a main body portion, and pivot means connecting the shoulder portion to the body portion at the opposite sides thereof holding said shoulder portion against movement laterally but permitting it to swing forwardly and backwardly.

1,416,406. FURNACE. LEONARD CHARLES HARVEY, county of Surrey, England. Filed Aug. 23, 1918. Serial No. 251,086. 21 Claims. (Cl. 263—33.)



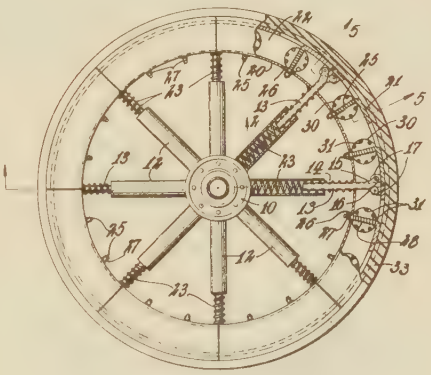
1. A furnace, means whereby the furnace may be bodily moved to cause a back and forth motion of liquid within the furnace having a relatively flat surface portion, a floor within the furnace over which the liquid is adapted to flow, and said floor being shaped to provide an abruptly inclined surface portion against which the liquid is adapted to flow to thereby agitate and mix the liquid as the body of liquid moves in one direction, and said floor being shaped to provide a further relatively flat surface portion extending from the level of the upper edge of said inclined surface portion adapted to assist in the agitation of the liquid.

1,416,407. SPRING CLICK FOR TIMEPIECES. ERNEST H. HORN, Waterbury, Conn., assignor to Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed Sept. 29, 1921. Serial No. 504,069. 6 Claims. (Cl. 58—86.)



1. As a new article of manufacture, a combined, one-piece click and click-spring for time pieces, bent between its ends to form a click-arm and spring-arm which stand at an angle with respect to each other; in combination with means for rigidly mounting the said part by the outer end of its spring-arm.

1,416,408. RESILIENT WHEEL. LOUIS HORSCHETZKY, New York, N. Y. Filed Oct. 3, 1921. Serial No. 504,969. 6 Claims. (Cl. 152—48.)

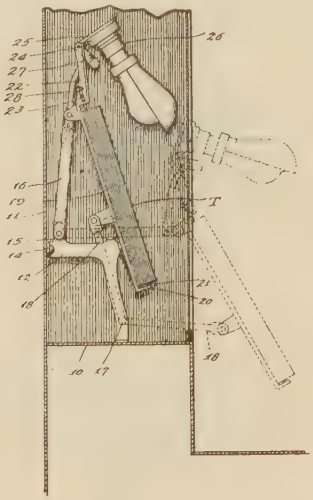


6. In a wheel, outer and inner rim members, the inner rim being continuous and the outer rim being divided circumferentially into the series of sections, a pair of bolts fixed to each of said sections and projecting radially inwardly through the inner rim, and spring devices grouped around said bolts and bearing between the inner and outer rims, said spring devices comprising a number of circular springs grouped in spherical formation, each of said springs having a number of loops formed therein, the number of loops in each spring corresponding to the number of sections in the outer rim.

1,416,409. STORAGE CABINET. JOSEPH A. MINER, Indianapolis, Ind., assignor to American Metal Furniture Company, Indianapolis, Ind., a Corporation of Indiana. Filed July 5, 1921. Serial No. 482,314. 2 Claims. (Cl. 211—16.)

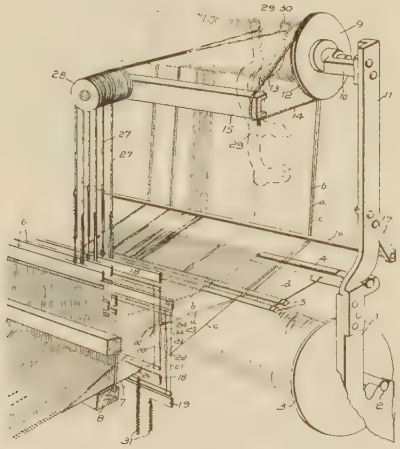
2. As an article of manufacture, a tray support comprising L-shaped main brackets providing partition engaging ends at right angles to each other, pair of swinging distance frames pivoted to said brackets, one pivoted to the vertical legs of the brackets and the other pivoted

to the horizontal legs of the brackets, and a tray frame pivoted to the ends of said distance brackets, a lamp



socket pivoted to the tray frame, and a link connecting said lamp socket and one of the distance frames.

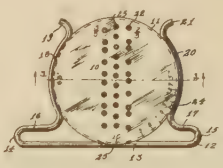
1,416,410. LENO OR CROSS-WEAVING LOOMS. FREDERICK J. NORRIS, Fall River, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 3, 1921. Serial No. 512,605. 8 Claims. (Cl. 139—84.)



1. In a cross-weaving loom, the combination of two doup heddles each having an eye for a doup thread, two ground heedles each controlling a single ground thread, a floating eye through which both doup threads pass, and means for operating one of the doup heddles and one of the ground heddles as a pair and the other doup heddle and other ground heddle as another pair to form the shed with the ground thread successively placed in the same shed plane and for crossing the floating eye and both doup threads first to one and then the other side of the ground thread.

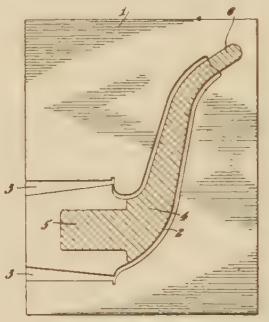
1,416,411. LETTERING INSTRUMENT. OSCAR A. OLSON, Ames, Iowa. Filed Sept. 7, 1921. Serial No. 499,935. 3 Claims. (Cl. 33—41.)

1. A lettering instrument comprising a frame having a straight side and spaced oppositely arranged resilient members, and a disc rotatably mounted between said re-



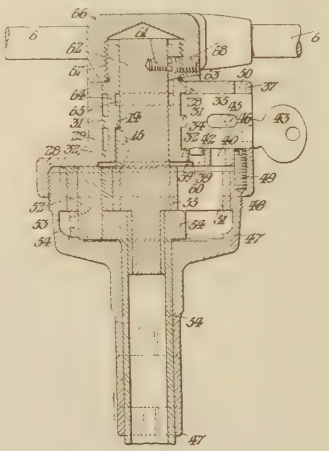
silient members, said disc being provided with a series of symmetrically arranged openings.

1,416,412. DIE-CASTING PROCESS. CHARLES PACK, New York, N. Y., assignor to Doehler Die Casting Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 25, 1921. Serial No. 447,656. 6 Claims. (Cl. 22—200.)



2. A process for making die-castings, comprising, forming the casting about a mold unit of material having a lower fusing point than the material from which the casting is made and a surface coating of material having a higher fusing point than the material from which the casting is made, and melting the mold unit to separate it, together with its coating, from the casting.

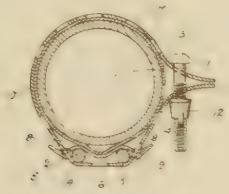
1,416,413. STEERING WHEEL. ARTHUR E. PAIGE, Philadelphia, Pa. Filed Aug. 23, 1921. Serial No. 494,606. 15 Claims. (Cl. 70—129.)



13. The combination with a rotary steering shaft of an automotive vehicle, having steering wheel engaging

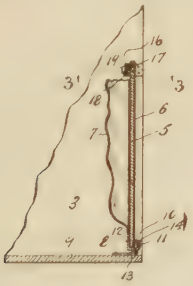
means; of means arranged to prevent axial movement of said shaft, including a stationary bearing, in which it is journaled; a steering wheel hub member arranged to reciprocate axially on said shaft, to and from operative and inoperative relation with said wheel engaging means of said shaft; and means arranged to lock said hub member in both operative and inoperative relation with said shaft, including a lock body, arranged to reciprocate bodily in said bearing, toward and away from said shaft, to engage and disengage said hub member.

1,416,414. CANOPY-FRAME BRACKET. CLINTON B. PIKE, Birmingham, Ala., assignor, by mesne assignments, to James Thompson & Co., New York, N. Y., a Copartnership composed of Julius Buchman and Edwin Buchman. Filed Aug. 8, 1921. Serial No. 490,476. 5 Claims. (Cl. 5—14.)



1. A canopy frame support, comprising a rigid metal plate grooved to receive a canopy frame loop and having lateral slots, and a flexible strip woven through the slots and adapted to pass over the loop and about a support element to clamp both the canopy frame loop and the plate to the support element, substantially as described.

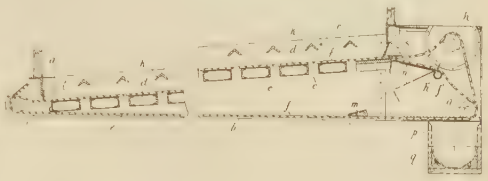
1,416,415. WARDROBE TRUNK. JOSEPH RAUCHBACH, Newark, N. J. Filed July 13, 1921. Serial No. 484,300. 2 Claims. (Cl. 190—13.)



1. In a wardrobe trunk, the combination with an open body section thereof, of a detachable shoe-carrier element, retaining members fixed to the outer marginal portions of the bottom end wall of said body sections within the open front portion of the latter, said retaining members having upwardly projecting lugs provided with openings, hook-portions fixed to the lower end of said shoe-carrier element detachably engageable in the openings of said lugs, and means cooperating with the upper end of said shoe-carrier element for holding the same substantially upright within the open front portion of said body section.

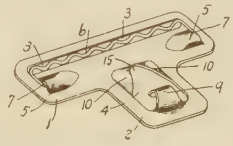
1,416,416. MEANS FOR ABSTRACTING PULVERULENT MATERIAL FROM BULK. ARNOLD REDLER, Flour Mills, Sharpness, England. Filed July 8, 1920. Serial No. 394,716. 3 Claims. (Cl. 214—17.)

1. In means for abstracting pulverulent material from bulk in a bin a chain disposed over the bottom of the bin adapted to be moved, said bottom being provided with a plurality of apertures, a receptacle below the bin having



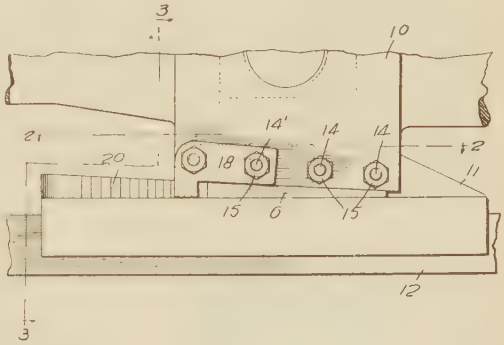
increasing dimensions towards one end and a discharge orifice at said end.

1,416,417. BUCKLE AND BAND HOOK. JAMES B. ROBINSON, Chattanooga, Tenn. Filed July 21, 1920. Serial No. 398,027. 1 Claim. (Cl. 24—192.)



In a buckle and band hook of the class described, a body part, a slot at one end thereof, movable means and arched bearings for journaling the same, operating in connection with said slot, a second slot in said body part, the edge of said slot partly surrounded by holding means for engaging the link of a trace, arched wings at the opposite end of said slot and at each side thereof, for retaining the trace link in alignment, all the corners of said body part and the corners of the slots and of all the parts connected therewith, having rounded ends and corners.

1,416,418. CROSSHEAD ADJUSTER. THEODORE ROGATCHOFF, Baltimore, Md. Filed May 28, 1921. Serial No. 473,465. 3 Claims. (Cl. 74—84.)

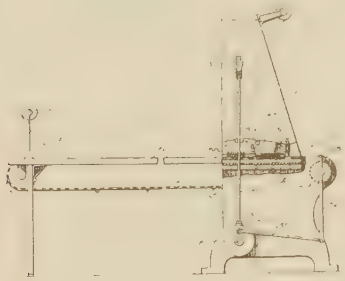


1. A cross head adjuster comprising in combination with a shoe and a cross head, a wedge member having substantially parallel legs with sides inclined to the same plane, a rack formed along the edge of one of said legs, and a keeper having a face complementary to and engaging said rack.

1,416,419. BINDING-WIRE-CUTTING MECHANISM FOR WIRE-BOUND-BOX-BLANK MACHINES AND THE LIKE. JOHN SHELLENBERGER, Rome, Ga., assignor to Sealed Case Company, a Corporation of New York. Filed Feb. 20, 1919, Serial No. 278,187. Renewed Aug. 13, 1921. Serial No. 403,298. 24 Claims. (Cl. 1—8.2.)

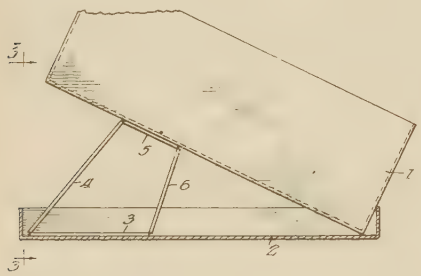
1. In a wire bound box blank machine, a periodically operating stapler having a reciprocating part moving

therewith provided with a rack, feed mechanism for advancing sheets of lumber and binding wires through the stapler for the production of wire bound blanks, normally-inactive cutters for severing the binding wires behind each stapled blank, normally inactive means for actuating said cutters to perform a wire severing operation and



then returning the same to inactive position, said means including a toothed sector adapted to mesh with and be operated by said rack but normally out of operative position with respect thereto, and automatic means for temporarily establishing operative relation between said sector and rack.

1,416,420. COVER FOR BOXES. HANS SCHWENNEKE, Chicago, Ill., assignor to Globe Paper Box Company, Chicago, Ill. Filed Feb. 8, 1921. Serial No. 443,449. 14 Claims. (Cl. 206—44.)

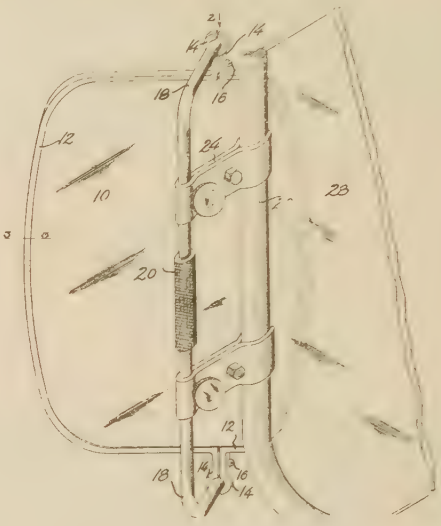


1. In a cover for boxes, a dually hinged collapsible member thereof adapted to be adjusted to form a support for one end of the box.

1,416,421. SPAT OR LEGGING. CHARLES F. O. SEIBERT, St. Louis, Mo. Filed Jan. 23, 1922. Serial No. 531,230. 1 Claim. (Cl. 36—2.)

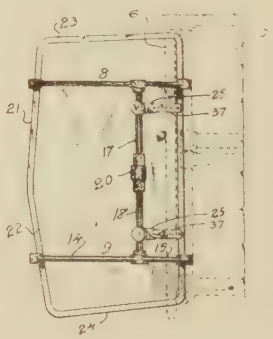
A combined spat and legging, consisting of integral over-gaiter and leg-sections having overlapping closing-flaps, and a long continuation of one of the said closing-flaps; one end of said long continuation being fixed to the outer closing-flap of the over-gaiter section, and constructed and arranged to be passed therefrom downwardly and under the arch of the foot, and thence upwardly and across the instep, and then spirally wound around overlapping flaps and body of said leg-section, in separated convolutions; and fastening-means at the free (or upper) end of said long continuation.

1,416,422. WING FOR WINDSHIELDS. WILLIAM B. SEWELL, Denver, Colo., assignor, by mesne assignments, to The Sewell-Hunt Manufacturing Company, Incorporated, Denver, Colo., a Corporation of Colorado. Filed Nov. 3, 1919. Serial No. 335,245. 2 Claims. (Cl. 296—84.)



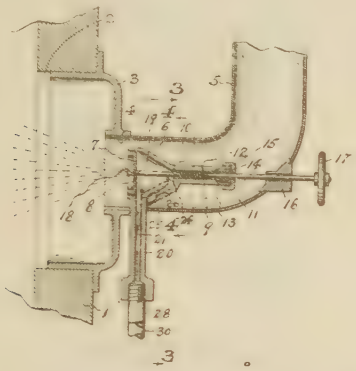
2. A windshield comprising a transparent plate, a pair of rim members bound about the edges of said plate to retain the same, offset cooperating clamps carried by the opposite ends of said rim members, means to bind said clamps together, a two part supporting rod device having its ends held in said clamps, and a turnbuckle joining the two parts of said rod.

1,416,423. WING FOR WINDSHIELDS. WILLIAM B. SEWELL, Denver, Colo., assignor, by mesne assignments, to The Sewell-Hunt Manufacturing Company, Incorporated, Denver, Colo., a Corporation of Colorado. Filed Sept. 20, 1920. Serial No. 411,611. 8 Claims. (Cl. 296—84.)



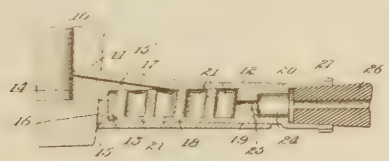
1. A windshield wing comprising a shield member having two opposite upright sides converging towards their ends, two brackets engaging the opposite upright side edges of the member, and movable vertically thereon for tightening and releasing purposes, a rod connecting the two brackets and adjustable to effect the aforesaid movement of the brackets, and means for supporting the rod.

1,416,424. OIL BURNER. JAMES M. SEYMOUR, Jr., Newark, N. J. Filed Dec. 24, 1919. Serial No. 347,075. 6 Claims. (Cl. 158—73.)



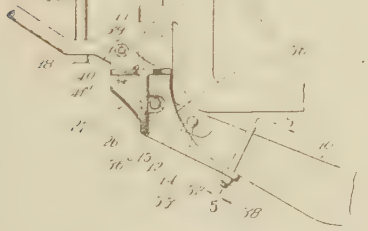
1. An oil burner provided with a valve controlled spray discharge orifice, a rearwardly diminished conical chamber in back of said discharge orifice, an oil intake means entering said chamber tangent to its largest circumference to cause the oil to gyrate therein in the rear of and about said discharge orifice, said chamber having an outlet at its rear small end, and an oil outlet means communicating with said chamber outlet.

1,416,425. TOBACCO PIPE. LOUIS SUELMEYER, St. Louis, Mo., assignor to Elsie Keller, St. Louis, Mo. Filed July 7, 1920. Serial No. 394,500. 8 Claims. (Cl. 131—12.)



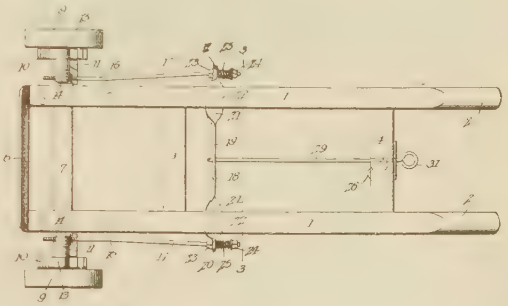
5. A stem member for pipes comprising a chambered casing having a rib projecting upwardly and forwardly from its body and terminating in an offset nipple, said nipple and rib having a smoke passage communicating with the chamber of said casing; and a bowl-engaging shoulder on said casing adjacent said nipple, said shoulder having its face hollowed out to give a relative sharp bowl engaging edge.

1,416,426. AUTOMOBILE BUMPER. FRANK TOMASEK, Chicago, Ill. Filed Nov. 14, 1921. Serial No. 514,896. 6 Claims. (Cl. 293—55.)



4. In an automobile bumper, the combination with a transverse frame member and the fender brackets of an automobile, of an impact member, supporting brackets for said impact member adapted to be clamped to and bear against the lower and vertical surfaces of said frame member, and means for clamping said supporting brackets to said frame member comprising L-bolts adapted to engage with said fender brackets and exert vertical and lateral force when tightened, to clamp said supporting brackets in their operative position.

1,416,427. HAND TRUCK. HENRY VOLKMAN, Manchester, N. H. Filed Apr. 30, 1921. Serial No. 465,807. 4 Claims. (Cl. 280—56.)



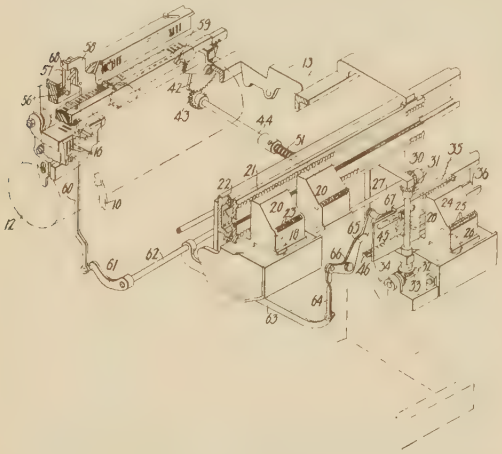
1. A truck comprising side bars, a cross bar interposed between and fixed with respect to the rear portions of said side bars, a keeper plate carried at the underside of said cross bar and disposed at an angle to the longitudinal center of the truck and having an upright slot and also having a slot communicating with and extending from the first-named slot in the direction of the length of the plate, an axle carried by said side bars and having spindles, ground wheels mounted on the said spindles and having ratchet wheels at their inner sides, standards carried by the axle at the inner sides of the ratchet wheels, rock shafts journaled in said standards and having pawls on their outer portions and pendent cranks on their inner portions, longitudinal rods connected to and extending rearwardly from said cranks and having abutments spaced from their rear end, a resilient cross bar having a vertically disposed intermediate portion, horizontally disposed portions at the ends of said intermediate portion and arranged under and pivotally connected to the side bars and vertically disposed end portions with apertures receiving the longitudinal rods in rear of the abutments thereon, coiled springs mounted on the longitudinal rods in rear of the resilient bar and interposed between the bar and rear abutments on the rods, and a longitudinal handle rod connected to and extending rearwardly from the intermediate portion of the resilient bar and through the slotted keeper plate and having enlargement disposed in rear of said plate.

1,416,428. COMBINED TYPEWRITING AND COMPUTING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed May 27, 1919. Serial No. 300,067. 26 Claims. (Cl. 235—59.)

1. In a combined typewriting and computing machine, the combination of a letter-feeding carriage, a computer carriage adapted to be connected to travel with said letter-feeding carriage through a computing zone, means to release said computer carriage when the letter-feeding carriage passes out of the computing zone, and means actuable by said letter-feeding carriage to effect a reconnection of said computer carriage with the letter-feeding carriage when the latter is moved back into the computing zone.

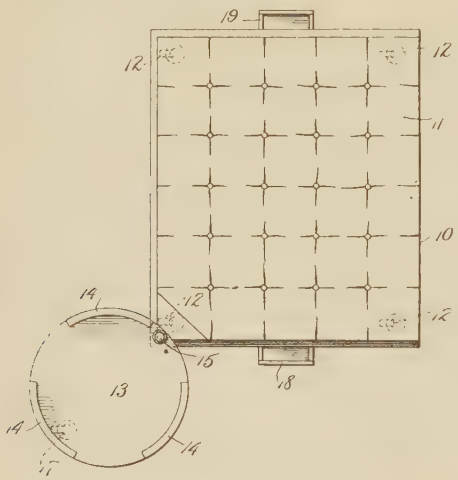
21. In a combined typewriting and computing machine, in combination, a letter-feeding carriage, a cross-computer unit having an element to be connected to travel with said carriage through a computing zone and a co-operative element, means to release the traveling cross-computing

element when the carriage passes out of the computing zone, and means actuable by the letter-feeding carriage



whereby movement of the latter back into the computing zone will cause the traveling cross-computing element to be reconnected with the carriage.

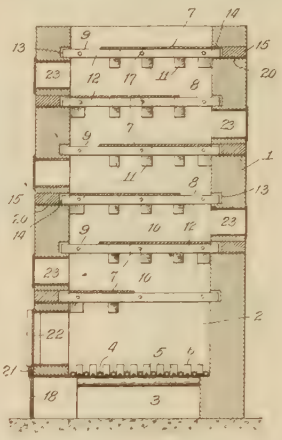
1,416,429. FLOOR-SCRUBBING BOARD. CHARLES P. WILLIAMS, Cleveland, Ohio. Filed Jan. 8, 1921. Serial No. 435,904. 1 Claim. (Cl. 155—167.)



As an improved article of manufacture, a floor scrubbing device comprising a single low-lying platform mounted on trucks having a soap box on the side below the top surface of the platform, and an extension pail holder pivoted at one corner of the platform and adapted to swing around said corner, said pail holder having a flat bottom, flanged sides, and a roller on the under side thereof.

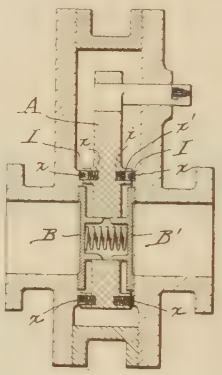
1,416,430. MULTIPLE-SHELF INCINERATOR. CHARLES HENRY SPENCER WILLIAMSON, Chicago, Ill. Filed Aug. 17, 1918. Serial No. 250,294. 3 Claims. (Cl. 110—17.)

1. A refuse incinerator comprising a vertical stack of substantially uniform horizontal cross section throughout, a fire box at the lower end of said stack, and a series of overlapping horizontal shelves disposed alternately at opposite sides of the stack, each shelf being close to one side of the stack and terminating short of the opposite side thereof so as to provide a tortuous passage for the heated gases from the fire box over and about the refuse on the several shelves, said stack having a relative large opening directly above the topmost shelf to permit the placing of the refuse thereon, said stack having openings



adjacent each shelf whereby access may be had to the stack for raking the refuse from one shelf onto the next lower shelf.

1,416,431. VALVE. WYLIE GEMMEL WILSON, New York, N. Y., assignor to Sliding Valves, Incorporated, a Corporation of Delaware. Filed June 25, 1917. Serial No. 176,755. 3 Claims. (Cl. 251—18.)



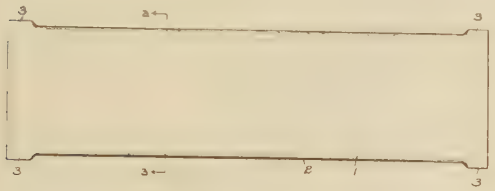
1. A valve of the character described for controlling the flow of liquid and fluid corrosive substances, embodying two cooperating surfaces, at least one of which surfaces carries a solid body of graphite adapted to be swept over, or swept by, the other surface, when relative movement is imparted to said surfaces, for the purpose of compensating for irregularities between said surfaces and to lubricate said surfaces and render them non-corrosive and anti-sticking, and resilient means for maintaining the graphite body in engagement with the surface to be treated.

2. In a valve of the class described, a valve chamber, an inlet and outlet to said chamber, cooperating sealing surfaces for controlling the flow of material through the outlet, a substantially sealed body of lubricant so positioned within the chamber that during the operation of the valve there is a relative movement between said body and one of said surfaces whereby said surface is coated with said lubricant, said body of lubricant being held so that it is out of engagement with the actual sealing portions of said surfaces when the valve is in open or closed position, separate pockets for holding the lubricating material, and resilient means for cooperating with the pockets for maintaining the lubricant in proper position to be engaged by one of the sealing surfaces.

3. In combination with a slide valve having opposed sealing faces, a body of graphite carried by the operative element which also supports one of said valve faces and

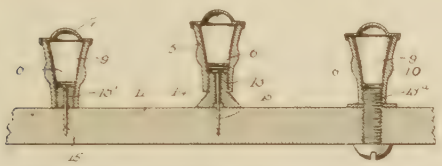
adapted, when said element is moved, to sweep over the face of the opposed valve face for the purpose of depositing a film of graphite thereon, and a resilient means carried by said element for maintaining said body of graphite in positive engagement with the face it sweeps over.

1,416,432. BRICK PALLET. LEONARD G. WOODS, Pittsburgh, Pa. Filed Apr. 22, 1920. Serial No. 375,734. 1 Claim. (Cl. 34—17.)



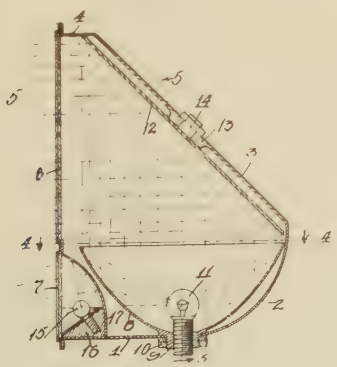
A pallet for supporting bricks before and during the burning thereof, consisting of a sheet metal plate adapted to receive and support the green bricks, the plate being thinly covered with a closely adherent enamel, whereby to prevent sticking of the brick to the plate and reaction of the metal with the constituents of the brick.

1,416,433. SCREW HOLDING ANCHOR. CHARLES N. ACKERMAN, Chicago, Ill., assignor to Ackerman-Johnson Co., a Corporation of Illinois. Filed Jan. 15, 1921. Serial No. 437,493. 2 Claims. (Cl. 72—105.)



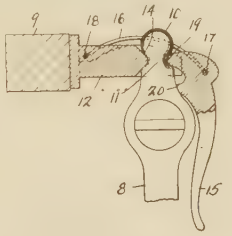
1. A screw holding anchor adapted to be embedded in moldable material, comprising a wall insert having a substantially cylindrical shaped internally threaded lower portion and an inverted bell shaped hollow upper portion, an externally projecting lug on the insert, a cap completely closing off the said upper portion of the insert, a conoidal headed supporting member having a body portion threading into the said cylindrical internally threaded lower portion of the insert, and means for holding the device in position while moldable material is being poured and permitted to harden.

1,416,434. HEADLIGHT. CHARLES H. ALLEN, Chicago, Ill. Filed Oct. 18, 1920. Serial No. 417,648. 1 Claim. (Cl. 240—41.)



In a headlight, a casing having a lower base portion, a parabolic reflector secured in said base portion, an incandescent light secured centrally of said reflector and extending upwardly, a reflector secured to the back of said casing at an angle to the axis of the parabolic reflector, a supporting member secured on said base in front of the parabolic reflector, a pilot light secured to said supporting member and inclined forwardly with respect to the base, a lens holder in the front of said casing, an upper main lens secured in said holder, a lower pilot light lens secured in said holder, and a curved reflector extending from the top of said pilot lens to the said base and secured to the rear portion of said pilot light supporting member.

1,416,435. FASTENING DEVICE FOR VEHICLE TOPS. CHARLES R. ALLEN, Ashtabula, Ohio. Filed Mar. 15, 1920. Serial No. 365,796. 4 Claims. (Cl. 287—23.)

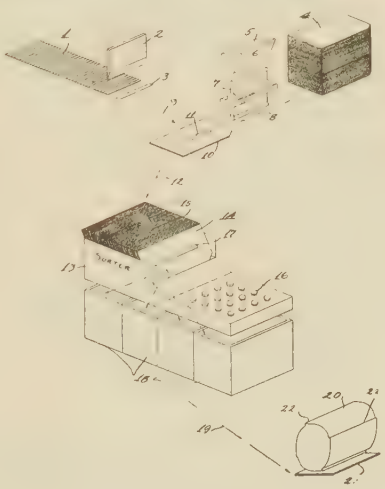


1. In a device for securing the forward portion of a vehicle top to the body of such vehicle, the combination of a post on said body terminating in a stud; a bracket carried by said top portion and formed to engage said stud on one side; a lever adapted to engage said stud on the opposite side; and a link connecting said lever with said bracket, substantially as described.

1,416,436. ELECTRICAL HEATING ELEMENT. PERCY A. E. ARMSTRONG, Loudonville, N. Y. Filed May 1, 1919, Serial No. 293,927. Renewed Oct. 1, 1921. Serial No. 504,676. 3 Claims. (Cl. 219—76.)

1. An electrical heating element containing over 4% of chromium, carbon over .1%, and the principal part of the remainder iron.

1,416,437. METHOD OF HANDLING ACCOUNTS. CLIFTON F. BALCH, Evanston, Ill. Filed June 23, 1921. Serial No. 479,859. 6 Claims. (Cl. 281—1.)



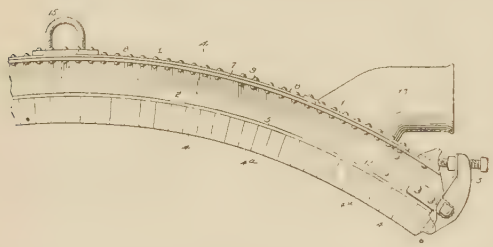
1. A process of arranging information which consists in listing the information upon a sheet, separating the

items of information by cutting the sheet into slips, pasting the slips on cards of a shape and size suitable for co-operating with a sorting machine, running the cards through a sorting machine, operating the sorting machine by keyboard, so that items of the particular sort of information desired are brought together, and entering in books the collated information.

1,416,438. FURNACE. DONALD S. BARROWS, Rochester, N. Y. Filed July 29, 1919. Serial No. 313,986. 9 Claims. (Cl. 263—46.)

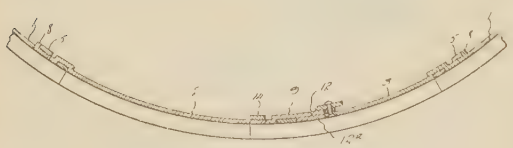
1. A furnace bung comprising a metallic member and a lining of refractory material, and means interposed between said lining and the said member for protecting the latter.

1,416,439. WIND BUNG FOR MELTING FURNACES. DONALD S. BARROWS, Rochester, N. Y. Filed Mar. 17, 1920. Serial No. 366,568. 3 Claims. (Cl. 263—46.)



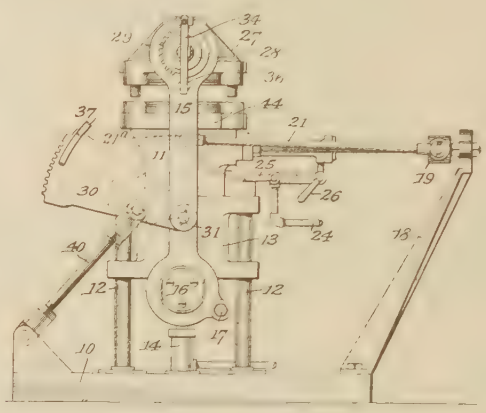
1. In a furnace bung, the combination with a plurality of flanged members, of means for connecting said members to form a chamber therebetween, a lining of fire-resisting material engaging said flanged members, means for holding said lining in position, means for admitting air to said chamber, and a plurality of staggered slots in said lining member to permit the escape of air from said chamber.

1,416,440. DEMOUNTABLE RIM. MARYAN B. BARSZCZEWSKI, Cleveland, Ohio. Filed Mar. 19, 1921. Serial No. 453,765. 2 Claims. (Cl. 301—32.)



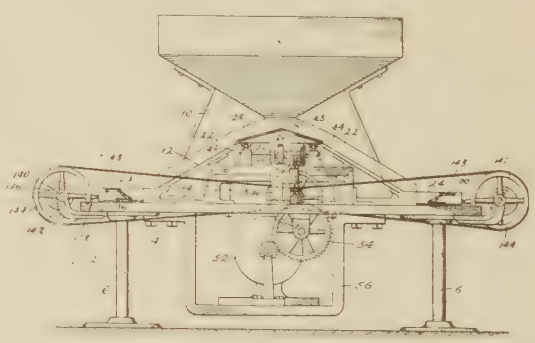
1. A demountable rim comprising a main section having its ends separated, two intermediate sections interchangeable with either one of said ends of the main section, each end of said main section being provided with a cross bar secured to the rim at its ends only, one end of each intermediate section being provided with two recesses, one of said recesses arranged for engaging said bar, while the other recess engages the end of the rim of the main section.

1,416,441. PRESS. GEORGE W. BEADLE, Stamford, Conn., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Dec. 10, 1919. Serial No. 343,739. 16 Claims. (Cl. 18—5.3.)



1. A moulding press having a pair of upper and lower heads relatively movable laterally and vertically, in combination with means for rotating the upper head after the lateral movement has begun and adapted to be rendered operative by said lateral movement.

1,416,442. STAMPING MACHINE. WILLIAM E. BISHOP Kansas City, Kans. Filed Oct. 27, 1919. Serial No. 333,608. 8 Claims. (Cl. 101—44.)

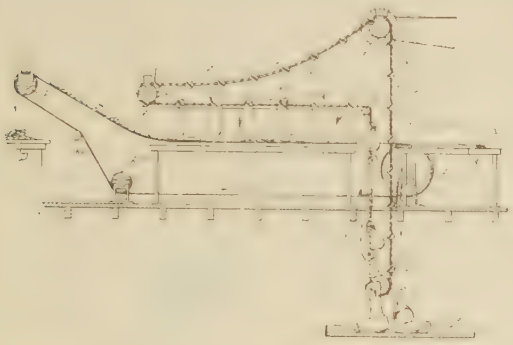


1. In a machine of the character described, a receptacle for articles to be stamped, mechanism for stamping the articles, inclined means for conducting the articles from the receptacle to said stamping mechanism and having openings in their bottom portions, a reciprocatory agitator underlying the open portions of the bottom to prevent the articles from clogging, and means for presenting the articles to the stamping mechanism.

1,416,443. MEAT-HANDLING APPARATUS. HARRY W. BROWN, Buffalo, N. Y. Filed Mar. 3, 1922. Serial No. 540,825. 12 Claims. (Cl. 17—30.)

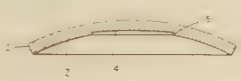
1. An apparatus for use in the cutting up of carcasses, including a preliminary cutting table, a traveling conveyor having a substantially horizontal run which extends into proximity to said table and which is adapted

to receive parts of carcass from said table, final cutting tables placed at opposite sides of the horizontal run of



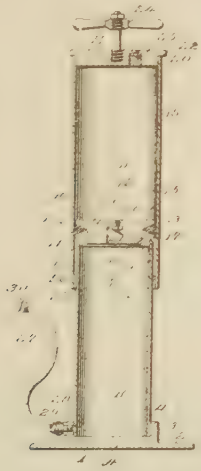
said conveyor, and conveyors having runs arranged adjacent to said final cutting tables and adapted to receive the finished parts and convey the same to their destinations.

1,416,444. PROCESS OF MAKING BIFOCAL LENSES. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor, by mesne assignments, to Twinsight Optical Company, Indianapolis, Ind. Filed June 16, 1919. Serial No. 304,690. 6 Claims. (Cl. 51—278.)



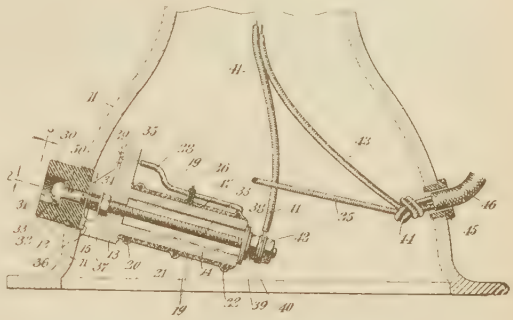
1. The process of making onepiece bifocal lenses, which process includes the formation upon one face of glass of two surfaces substantially merging, and corresponding substantially with the distance and reading surfaces of a bifocal lens, and thereafter abrading the reading surface so as to make it a depression surrounded by a shoulder dividing the two surfaces.

1,416,445. PUMP. GEORGE BURD and CHARLES BURD, Detroit, Mich. Filed Oct. 25, 1920. Serial No. 419,461. 4 Claims. (Cl. 230—27.)



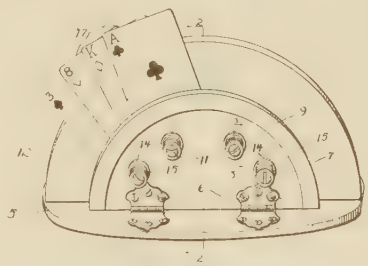
1. In a pump of the character described, a cylinder, a cylinder head therefor, comprising a ring and a head member, the head member adjustably carried by the ring, the adjacent edges of the ring and head member separated to form a V-shaped opening, a packing ring carried by the opening, and the packing ring adapted to be forced outwardly by the adjustment of the cylinder ring and head member.

1,416,446. ELECTRICAL CONTROLLING DEVICE. DAWSON JABEZ BURNS, Bronxville, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed June 14, 1919. Serial No. 304,259. 19 Claims. (Cl. 219—55.)



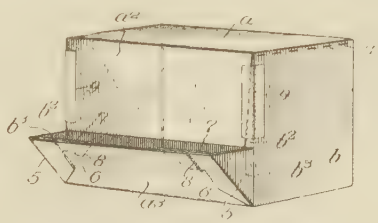
1. In combination, a tubular resistance unit with end leads and an intermediate tap, an insulating support at one end thereof, with said end leads and tap snubbed around portions thereof to form contact terminals and a pivoted switch arm to engage said terminals.

1,416,447. HOLDER FOR PLAYING CARDS. RICHARD C. CASTLES, Chicago, Ill. Filed Apr. 11, 1921. Serial No. 460,453. 4 Claims. (Cl. 46—55.)



1. In a device of the class described, the combination with a base adapted to rest on a horizontal support, of a clamping member longitudinally disposed thereon and hinged thereto, another clamping member similarly disposed to said base and parallel to the rear face of the first named member, and means carried by the hinged member and engaging the other member for automatically actuating the latter bodily towards the other member.

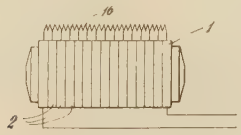
1,416,448. SHIPPING AND DISPENSING BOX. MARVIN E. CHAPIN, Chicago, Ill., assignor to Chicago Carton Company, Chicago, Ill., a Corporation. Filed Mar. 17, 1919. Serial No. 283,099. 6 Claims. (Cl. 229—17.)



3. A folding paper box comprising connected side and end walls, and a side flap and a pair of separate end flaps permanently hinged respectively to said walls and adapted to fold inwardly, when the box is closed, substantially at right angles to said walls, said flaps having means whereby

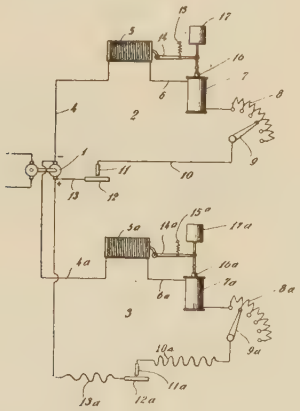
their edges may be connected to hold the end flaps extended and the side flap in inclined position and thereby form a projecting dispensing hopper, substantially as described.

1,416,449. ELECTRIC-ARC WELDING. ALEXANDER CHURCHWARD, New York, N. Y., assignor to Wilson Welder & Metals Company, Inc., a Corporation of New York. Filed Feb. 18, 1920. Serial No. 359,495. 8 Claims. (Cl. 219—15.)



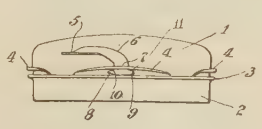
1. An electric arc welding apparatus comprising, a pressure variable compensating resistance comprising a plurality of carbon resistor elements, a bridging resistance electrically connecting two of said resistor elements, the resistance between the two carbon resistor elements being normally less than said bridging resistance.

1,416,450. ELECTRIC-WELDING METHOD AND APPARATUS. ALEXANDER CHURCHWARD, New York, N. Y., assignor to Wilson Welder & Metals Company, Inc., a Corporation of New York. Filed June 26, 1920. Serial No. 391,900. 6 Claims. (Cl. 219—15.)



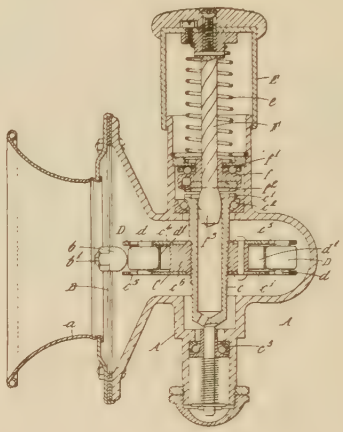
1. In a welding system, in combination, welding circuits in multiple, electro responsive means in each of said circuits to automatically vary the resistance therein to compensate for variations in the current flowing through the arc, and other means in each of said circuits to maintain a constant operating normal resistance irrespective of the resistance of the electrode leads.

1,416,451. BOX. BENNO COHN, New York, N. Y., assignor to Ferdinand Gutmann & Co., New York, N. Y., a Corporation of New York. Filed Dec. 8, 1921. Serial No. 520,927. 1 Claim. (Cl. 220—43.)



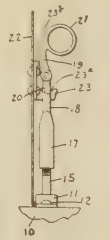
A box comprising a body having an annular flange thereon near the top, a cover provided with a slotted flange near its lower end, said cover being a friction fit for the body, a lever in the slot comprising a finger piece adapted to lie above the slot, a head in angular relation to the finger piece, cams oppositely extending from the head and adapted to lie between the flanges on the cover and body the notches formed by the junctions of the cams and head adapted to fulcrum with the slot end and the cams adapted to roll along the opposed flanges.

1,416,452. DIAPHRAGM WARNING HORN. LEONARD EUGENE COWEY, Kew Gardens, England. Filed Dec. 6, 1920. Serial No. 428,669. 2 Claims. (Cl. 116—143.)



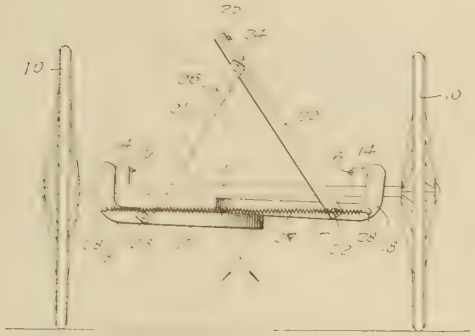
1. In a sound warning device of the diaphragm and rotating striker type, a rotary striker wheel comprising a pair of spaced plates having formed therein concentric rings of short radial slots facing each other and a series of relatively thick discs each having a short projecting axle extending into opposite radial slots in the said plates, and means for rotating said wheel and causing the aforesaid discs to act upon the diaphragm successively.

1,416,453. HOOD LATCH FOR AUTOMOBILES. EMANUEL L. CRUM, Indianapolis, Ind. Filed Oct. 29, 1920. Serial No. 420,510. 4 Claims. (Cl. 292—63.)



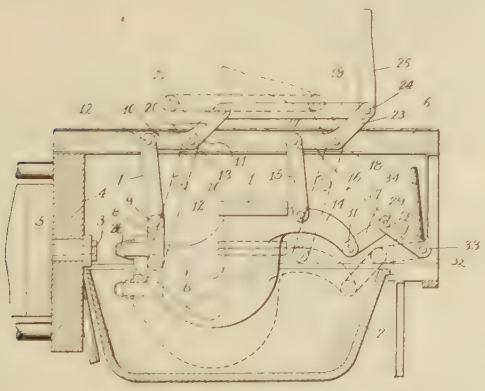
1. In a hood latch for vehicles, the combination with a hood having a hook thereon, of a latching means anchored to said vehicle, including a threaded bolt secured at one end thereof, a member arranged to be rotatably adjustable vertically thereof, a lever pivoted at the end of said member, a head on one end of said lever for engaging said hook, and a handle on the other end of said lever at a relatively greater distance from the fulcrum point than said head, whereby upon the proper vertical adjustment thereof said head may engage said hook and cause it to be forced downwardly and locked by the movement of said lever about said fulcrum point.

1,416,454. RUNNER FOR BABY CARRIAGES. JOHN E. DOUGLAS, Ellensburg, Wash. Filed Apr. 25, 1921. Serial No. 464,117. 2 Claims. (Cl. 280—10.)



1. The combination with a wheeled vehicle of bars extending longitudinally of the vehicle between the wheels, runners pivoted to the extremities of the bars and appropriately formed to swing outwardly and downwardly to occupy positions beneath the wheels, arms pivoted to the runners and pivoted together adapted, when extended, to swing the runners into operative position and to limit the movement, and a spring connected with the runners adapted, when the arms are released, to draw the runners toward each other into inoperative position between the wheels.

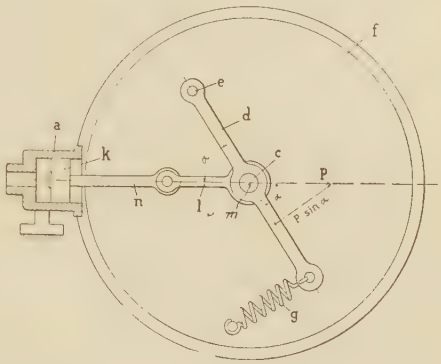
1,416,455. DIE-CASTING APPARATUS. CLARENCE H. DUCKWORTH, Brooklyn, N. Y., assignor to Doehler Die Casting Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 19, 1921. Serial No. 453,565. 5 Claims. (Cl. 22—69.)



1. In a device of the character described, in combination, a ladle, means for moving said ladle vertically, and means for moving said ladle horizontally, said first-mentioned means constantly maintaining said ladle in substantially horizontal position.

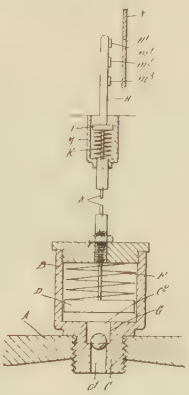
1,416,456. APPARATUS FOR MEASURING AND INDICATING THE TANGENTIAL PRESSURE OR THE OUTPUT OF PISTON ENGINES. DAVID FISCHMANN, Berlin, Germany. Filed July 7, 1921. Serial No. 483,078. 8 Claims. (Cl. 73—187.)

1. An apparatus for measuring and indicating the tangential pressure of piston engines comprising in combination a casing, an organ subjected to the cylinder pressure of the engine, a rotary disk and means for revolving it synchronously with the engine, a lever mounted upon said disk in the direction of a diameter of the same, the direction of the axis of said lever forming with the direction of the axis of said organ an angle which is always approximately equal to the phase angle of the engine crank, a shaft mounted in said casing and a transmission gear for translating the relative displacement



of said lever which takes up the proportional moment of torsion of the engine, with regard to said revolving disk, into a proportional relative displacement of said shaft with regard to the casing.

1,416,457. APPARATUS FOR INDICATING IGNITION FAILURES IN INTERNAL-COMBUSTION ENGINES. STANLEY FISHER, Northfields, Ealing, England. Filed Dec. 19, 1921. Serial No. 523,556. 5 Claims. (Cl. 116—114.)

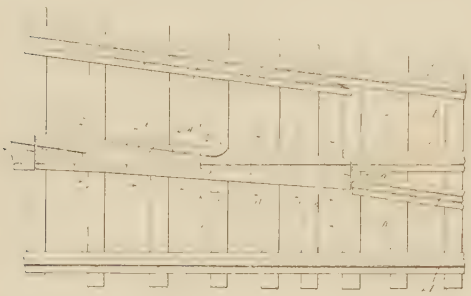


4. An indicating device of the class described comprising a cylindrical housing provided with a normally spring operated piston, regulating means for admitting pressure into said housing to oppose the action of the spring against the said piston, means in said housing for equalizing the pressure on opposite sides of said piston, and a movable indicator connected to said piston.

1,416,458. SWITCH FROG. BENJAMIN P. GILMOUR, West Terre Haute, Ind. Filed Mar. 4, 1922. Serial No. 541,144. 2 Claims. (Cl. 246—458.)

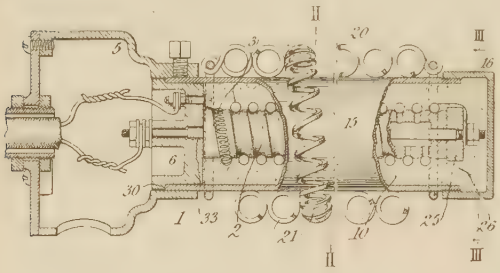
1. A switch frog proportioned to be interposed between spaced ends of interlying main line and siding rails comprising a continuous uninterrupted tread surface corresponding identically with the tread surface of the main line rail sections, a rib coinciding with a siding rail elevated above the main line rail to correspond to the width of a wheel flange, said rib tending to carry the wheel until the flange of the wheel shall engage upon the

top of the section carrying the main line, and a guide rail serving to insure the passage of the wheel from said



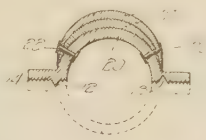
rib across the intervening space represented by the interior line of the main line tread.

1,416,459. ELECTRIC HEATER. EDWARD E. GOLD, New York, N. Y. Filed Jan. 8, 1920. Serial No. 350,118. 2 Claims. (Cl. 219—67.)



1. An electrical heater, comprising an insulating support, a resistance wire thereon, a tubular casing, a filler of electrical insulating heat-conducting material, parts at the end of said casing for supporting said insulating support, and a rod passing through said insulating support and end parts and having means thereon for drawing said parts together.

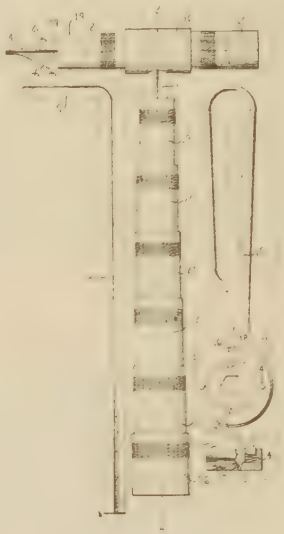
1,416,460. METHOD OF MAKING CAST-IRON PIPE SECTIONS. LORNE A. GRIFFIN, Evanston, Ill., assignor to American Steam Conveyor Corporation, Chicago, Ill., a Corporation of New York. Filed Aug. 9, 1919. Serial No. 316,414. 7 Claims. (Cl. 22—200.)



1. The method which consists in casting a conduit member having a substantially cylindrical outer surface, chilling the same, casting a wear sleeve having a concave surface arranged to fit the outer surface of said conduit member, applying the concave surface of said wear sleeve to the outer cylindrical surface of said conduit member and securing said sleeve to said conduit member.

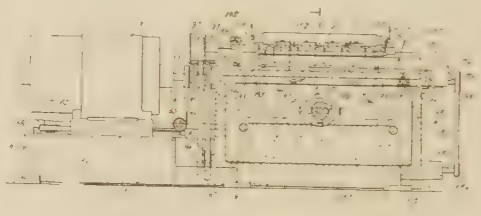
1,416,461. COMBINATION TOOL. ANSELM B. HANCE, New York, N. Y. Filed Oct. 8, 1920. Serial No. 415,669. 12 Claims. (Cl. 7—1.)

1. A combination tool comprising a straight supporting member; a plurality of socket elements adapted to be carried thereby; frictional means at opposite ends of said member for retaining the socket elements thereon, in-



cluding a removable device applied to the supporting member at one end, having means to which other elements may be applied for functional purposes.

1,416,462. GRINDING MACHINE. BENGT M. W. HANSON, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 31, 1918. Serial No. 247,632. 46 Claims. (Cl. 51—95.)

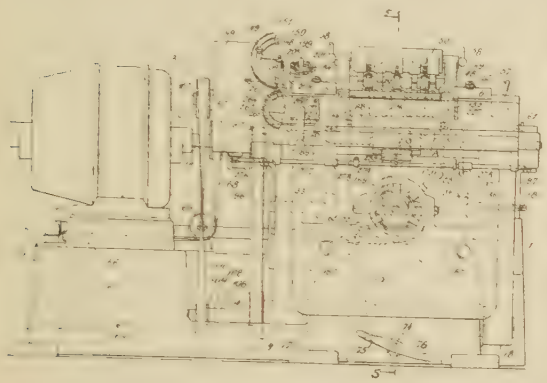


1. In a grinding machine, the combination of a main frame, a grinding wheel mounted on the frame for rotation about a fixed axis, flanges at the edges of the main frame for preventing the escape of water, an auxiliary frame pivoted to the main frame for movement about an axis parallel with the wheel axis and below the level thereof, a work support on the auxiliary frame adapted to hold a work blank in operative relation to the wheel at approximately the level of the wheel axis, and an apron carried by the auxiliary frame and extending downward and rearward over the adjacent flange on the main frame.

1,416,463. GRINDING MACHINE. BENGT M. W. HANSON, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 31, 1918. Serial No. 247,634. 12 Claims. (Cl. 51—95.)

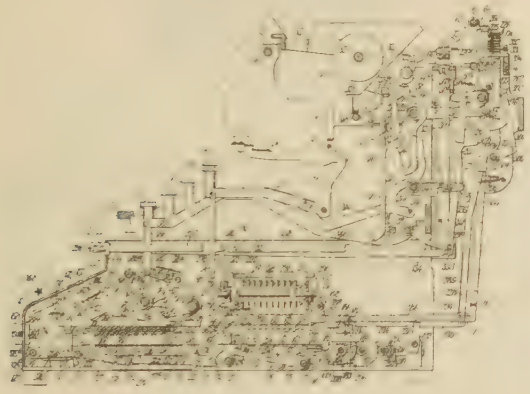
1. In combination, a grinding wheel rotatable about a fixed axis, a table movable toward and from the wheel and provided with longitudinal ways, a headstock and a tailstock longitudinally adjustable along the ways on the table, mechanism carried by the headstock for rotating

a work blank, a longitudinal shaft having splined engagement with the said mechanism, and driving mechanism



for the shaft mounted on the end of the table and fixed against longitudinal movement, the said driving mechanism including change speed gearing.

1,416,464. COMBINED TYPEWRITING AND COMPUTING MACHINE. HANS HANSON, Ivoryton, Conn., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1919. Serial No. 317,178. 138 Claims. (Cl. 235—60.)

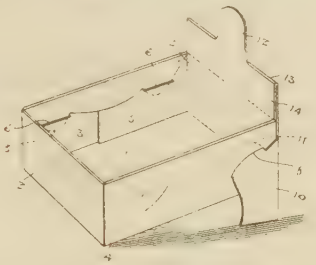


12. In a combined typewriting and computing machine, the combination of a carriage to traverse a computing zone, computing mechanism comprising subtraction-setting mechanism under the control of a pivoted lever, a device on said carriage to actuate said lever, said device being shiftable to and from effective position and a guide to hold said device in effective relation with said pivoted lever while the carriage is traversing the computing zone.

60. In a computing machine, the combination of a plurality of totalizers, each totalizer having a set of computing wheels rotatable about a fixed axis, a single set of controlling elements, said controlling elements being settable additively and subtractively, a set of master drivers, said totalizers being selectively connectable with said master drivers, and means to actuate said controlling elements to actuate said drivers.

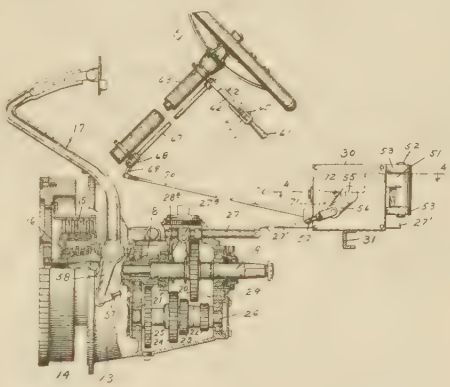
97. In a computing machine, the combination of a totalizer comprising computing elements, a normally effective shutter, means to actuate the computing elements, and means to actuate said shutter to expose the computing elements each time the computing elements are actuated.

1,416,465. DISPLAY BOX. WILLIAM FRANK HARVEY, Toronto, Ontario, Canada. Filed June 7, 1920. Serial No. 387,026. 2 Claims. (Cl. 206—44.)



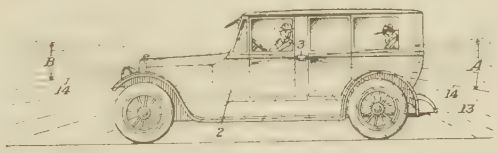
1. A display box, comprising, a body portion having slits in sides, a cover hinged to one of the ends of the body portion and having side flaps bent downwardly and each formed with lugs adapted to enter said slits to hold the cover locked in its closed position, said cover having a transverse crease intermediate of its length and adapted to be turned back to lie against the end of the box and to project above the top of the edge, the creased portion projecting above the edge and the under projecting below the bottom and adapted to be secured in such position.

1,416,466. GEAR-SHIFT-CONTROLLING MECHANISM. FRANK C. HIGGINS, Minneapolis, Minn. Filed May 7, 1921. Serial No. 467,530. 17 Claims. (Cl. 74—58.)



1. The combination with the shift gears of a transmission mechanism, of a controlling mechanism therefor comprising primary and secondary selecting cams, means for setting said primary cam in different selecting positions in advance of the gear shifting action, and means for subsequently causing said secondary cam to follow the position of said primary cam and cause the gear shifting action pre-determined by the setting of said primary cam.

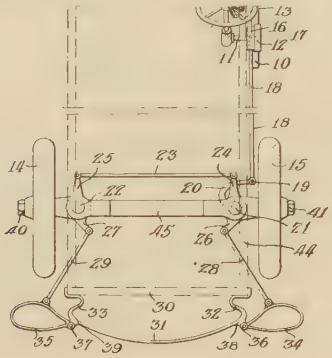
1,416,467. COMBINED LIGHT AND STRUCTURE. JAMES C. HOBBS, Pittsburgh, Pa. Filed Nov. 15, 1920. Serial No. 424,053. 12 Claims. (Cl. 240—7.)



11. An illuminating means for use on the outside of vehicles, comprising a light source projecting high intensity rays directly against a portion of the outside of

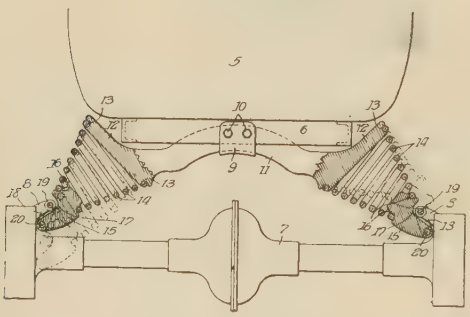
the body of the vehicle to illuminate the same and low intensity rays to indicate the position of the light source, and means for preventing the projection of any high intensity rays above the horizontal plane occupied by the light source, substantially as described.

1,416,468. AUTOMOBILE BUMPER WINGS. Joseph Hoffman, Camden, N. J. Filed June 21, 1921. Serial No. 479,269. 5 Claims. (Cl. 293—55.)



5. The combination with a steering controlling mechanism of the class stated operably connected to a knuckle joint of the front axle of an automobile, of a bumper connected to the front of said automobile, wings pivoted to said bumper, rods connecting said wings with the knuckle joints of the front axle of said automobile, and a rod connecting said knuckle joints, whereby as an obstacle is encountered by said wings they will move rearwardly causing the front wheels of said automobile to move inwardly and away from the obstacle; said steering controlling mechanism will cause said wheels to resume their former direction after the obstacle has been passed, substantially as described.

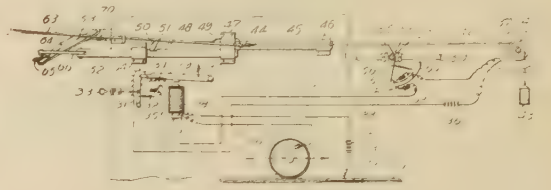
1,416,469. SPRING SUPPORT FOR VEHICLES. Albert Hupp, Oak Park, Ill. Filed Apr. 21, 1921. Serial No. 463,262. 7 Claims. (Cl. 267—60.)



1. In a spring support for vehicles, the combination with a body-supporting frame member, and an axle, of a yoke rigidly secured to said frame member between its ends and formed at its ends with spring engaging heads, a pair of conical coil springs connected at their wide ends to said heads, respectively, and coupling means connecting the narrow ends of said springs to said axle.

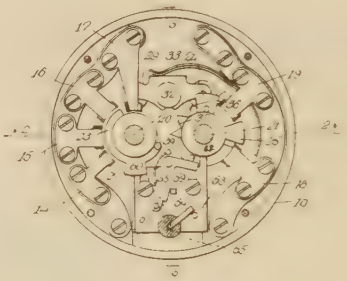
1,416,470. TRAIN-CONTROL MECHANISM. Hermon E. Jamison, Wilmore, Ky., assignor of one-fourth to C. W. Mitchell, Wilmore, Ky. Filed Sept. 24, 1921. Serial No. 502,901. 4 Claims. (Cl. 246—187.)

4. The combination with a locomotive embodying a throttle-valve and an air valve, of a sliding bar composed of separable parts, one of which is connected to the throttle-valve, the other positioned to engage and open the air valve, a motor, means connecting the motor to one of the components of said bar to move the bar to perform said function, means whereby the movement of the bar



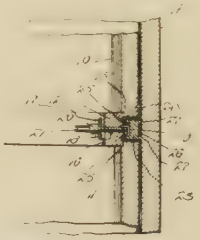
separates the component elements, a circuit for the motor, a switch interposed in the circuit and opened by the bar at its extreme movement, a second switch in said circuit, electrical means for closing said second switch, and means contiguous to the line of travel of said locomotive for energizing said electrical means.

1,416,471. ELECTRIC SWITCH AND MEANS FOR LOCKING IT. James Kavana, Chicago, Ill. Filed Nov. 18, 1920. Serial No. 424,814. 4 Claims. (Cl. 200—44.)



1. An electric switch having a handle for moving one element thereof to closed and to open position in combination with a spring pressed switch-locking bolt; a latch; means carried by the bolt cooperating with the latch to restrain the bolt and means controlled by said handle for moving said latch to release the bolt and lock the switch in open position.

1,416,472. PISTON AND PISTON RING. John W. Kerns, Lincoln, Nebr. Filed Mar. 26, 1921. Serial No. 455,707. 3 Claims. (Cl. 74—109.)

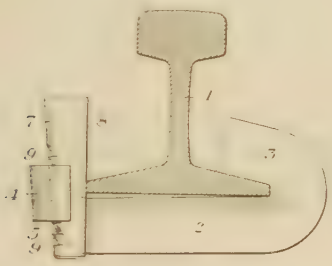


1. A piston having a piston ring groove, a piston ring therein, means for adjustably urging the piston ring outward at a plurality of points comprising pins passing loosely through the piston to the interior thereof and bearing at their outer ends against the piston ring, springs upon the inner face of the piston bearing against said pins, and adjustable means for controlling the tension of said springs.

1,416,473. UNIVERSAL MEASURING IMPLEMENT. EDWARD F. KIRGAN, Cincinnati, Ohio. Filed Nov. 15, 1920. Serial No. 424,092. 2 Claims. (Cl. 33—94.)

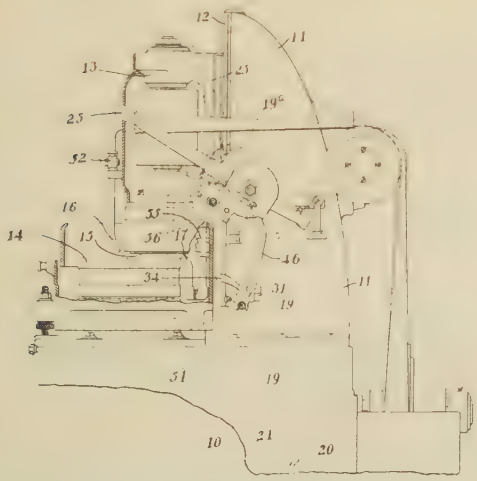
1. A measuring implement comprising a rule proper formed with a longitudinal channel, a protractor-carrying section slidably cooperating with said channel, means for fixing said section in adjusted position on the rule, a protractor-disc carried by the section and having a guide edge, a strip slidably and transversely adjustable with respect to the rule and adapted to cooperate with said guide edge, and means for securing the strip in adjusted position.

1,416,474. ANTICREEPING DEVICE FOR RAILWAY RAILS. CHARLES H. KNELL, Verona, Pa., assignor to Verona Tool Works, Verona, Pa., a Corporation of Pennsylvania. Filed Aug. 13, 1921. Serial No. 491,887. 11 Claims. (Cl. 238—324.)



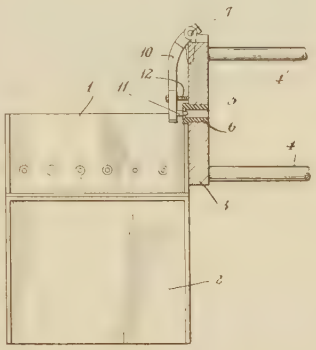
1. An anti-creeper for rails, comprising a member adapted to extend underneath the rail base and having loops at its opposite ends, one of said loops extending at an angle to the other loop and having a vertically extending opening and a key adapted to be driven down within the opening and engage the edge of the rail flange.

1,416,475. WATER-CONTROL SYSTEM FOR SURFACE GRINDERS. CARROLL KNOWLES, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 9, 1920. Serial No. 422,901. 15 Claims. (Cl. 51—267.)



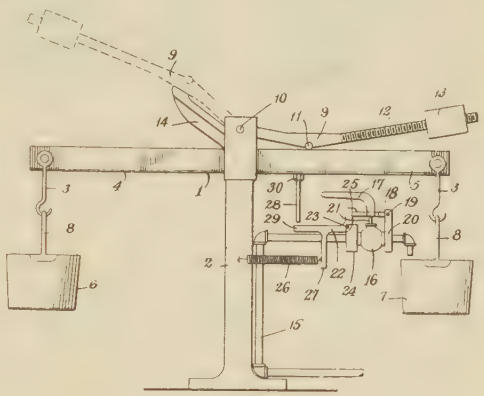
1. In a surface grinding machine, the combination of an annular abrasive wheel, a work table mounted in overlapped relation thereto and out of alignment therewith, and a stationary water supply conduit extending to a point adjacent the periphery of said work table and within the periphery of the abrasive wheel.

1,416,476. DIE-CASTING APPARATUS. JOHN KRALUND, Brooklyn, N. Y., assignor to Doehler Die Casting Company, Brooklyn, N. Y., a Corporation of New York. Filed May 8, 1920. Serial No. 379,712. 3 Claims. (Cl. 22—150.)



2. In casting apparatus, the combination of a die-carrying frame having an end plate with an opening therethrough, adapted to serve as a gate for the die, a shaft on said plate, a handle for oscillating said shaft, an arm secured to said shaft, and a pin on said arm, positioned to knock against a sprue in said opening, when said handle is operated.

1,416,477. WEIGHING APPARATUS. JOHN KRALUND, Brooklyn, N. Y., assignor to Doehler Die Casting Company, Brooklyn, N. Y., a Corporation of New York. Filed May 8, 1920. Serial No. 379,713. 2 Claims. (Cl. 249—6.)

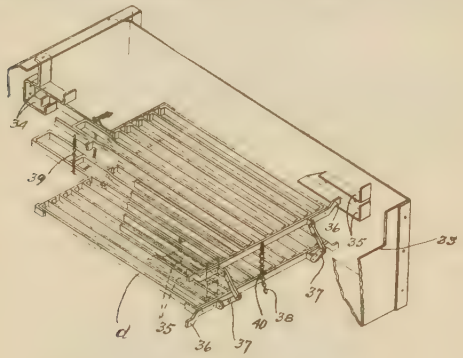


1. In weighing apparatus, the combination of a support, a beam pivoted thereon, containers secured to the opposite arms of said beam, a graduated arm pivotally secured to said support and adapted to bear on one of the arms of said beam, and to be swung out of engagement therewith, a weight adjustably mounted on said graduated arm, a pipe for carrying fluid to the container carried by the beam arm on which said graduated arm is adapted to bear, a valve in said pipe, and means automatically closing said valve when said container with its contained fluid balances the other container with its load.

1,416,478. RANGE. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 10, 1919. Serial No. 322,797. 10 Claims. (Cl. 126—41.)

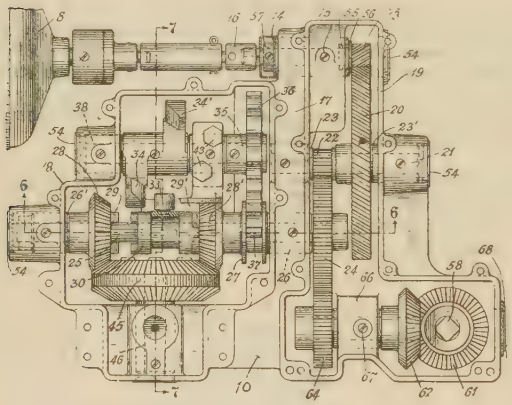
1. In a range, a chamber, means for heating the same,

and a broiler drawer removably located in said chamber beneath said heating means and having an imperforate



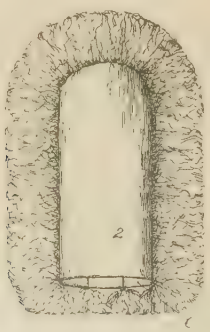
bottom and also a front wall closing the front of said chamber.

1,416,479. DRIVING MECHANISM FOR WASHING MACHINES. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 20, 1920. Serial No. 418,240. 14 Claims. (Cl. 74—50.)



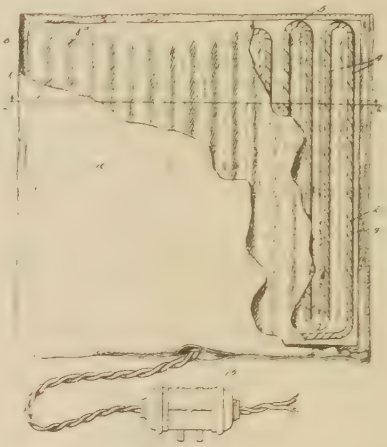
1. In a washing machine, the combination of a power-driven shaft, a countershaft driven thereby, a Geneva movement driven by said counter-shaft, reversing mechanism comprising a shiftable clutch member, and cams intermittently driven by said Geneva movement for shifting said clutch member.

1,416,480. DUSTER. CHARLES H. LEATHERMAN, Cleveland, Ohio, assignor to The Pioneer Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 18, 1918. Serial No. 212,519. 2 Claims. (Cl. 15—227.)



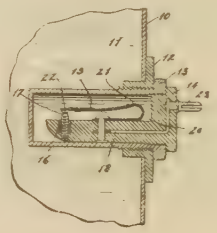
2. An article of manufacture comprising an envelope adapted to receive the hand of the user, said envelope being provided on the palm side between the edges thereof with folds and a row of thickly hung strands of yarn secured to each of said folds.

1,416,481. ELECTRIC HEATING PAD. ANTONIO LONGORIA, Cleveland, Ohio. Filed Feb. 18, 1920. Serial No. 359,728. 4 Claims. (Cl. 219—46.)



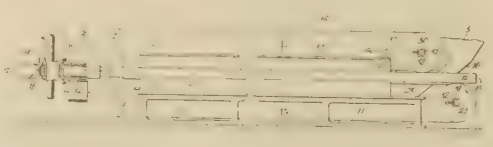
1. An electric heating pad comprising a flexible body portion, a flexible cord-like element distributed uniformly across said body portion, and a plurality of resistance wires of different resistances coiled around said cord-like element, convolutions of one wire being spaced from those of another wire along said cord-like element.

1,416,482. CONTROLLING DEVICE FOR ELECTRIC HEATERS. ANTONIO LONGORIA, Cleveland, Ohio. Filed June 30, 1920. Serial No. 393,062. 6 Claims. (Cl. 219—20.)



1. A heating device, including a heating unit, a thermostatically controlled switch controlling the flow of current thereto, and means for absorbing the rush of current when said circuit is opened.

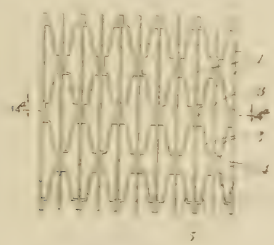
1,416,483. PROCESS AND APPARATUS FOR MANUFACTURING SOAP. ERNEST MERRILL LOVELAND, Hackensack, N. J. Filed Feb. 11, 1921. Serial No. 444,091. 10 Claims. (Cl. 18—26.)



1. The process of forming soap into cakes comprising supplying soap in hot flowable condition, forming the same into a continuous advancing line of soap, and while conveying it molding the cake surfaces so that the top and bottom faces of the ultimate cake are parallel to the

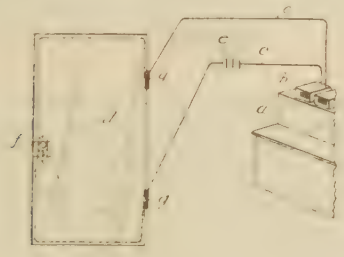
line of movement, cooling the soap to solidify it, and then progressively stripping the molding surfaces away from the soap without movement of the molding surfaces along said cake faces so that said soap is delivered with its surfaces molded into a continuous series of the corresponding surfaces of the final cakes.

1,416,484. GRATING OR VENTILATOR. WALTER H. LOWN, Jersey City, N. J., assignor to Kerlow Steel Flooring Co., Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 30, 1921. Serial No. 496,803. 11 Claims. (Cl. 189—82.)



1. In a grating a pair of longitudinal strips and a spacing member therebetween, the spacing member having staggered portions thereof parallel and in contact with said strips, other portions substantially normal to the first mentioned portions, and still other portions disposed at an obtuse angle to said second mentioned portions of the spacing member.

1,416,485. ELECTRICAL INDICATING SYSTEM. WILLIAM A. LURIE, New Orleans, La. Filed Nov. 17, 1919. Serial No. 338,660. 1 Claim. (Cl. 177—338.)



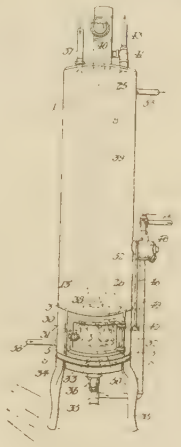
In combination with a door and means for locking and unlocking the same, of a revolving member having a plurality of indicia thereon representing the locking of the door from the outside and a plurality of other indicia thereon representing the unlocking of the door from the outside, alternate indicia being the same, electromagnetic means for moving said member step by step in the same direction a distance corresponding to a single indication and means actuated by either the locking or the unlocking of the door from the outside for causing said electromagnetic means to move said member one step.

1,416,486. GARMENT AND THE LIKE. LOUIS MACHEROUX, Chicago, Ill., assignor of one-half to Karl Matheus, Chicago, Ill. Filed Apr. 30, 1920. Serial No. 377,872. 3 Claims. (Cl. 267—69.)

1. As a new article of manufacture, a contractile element of the class described comprising two box-like members open at their facing sides, a spring-retracted reel within each of said members, a cord secured to and working on each of said reels and having its free end connected to the interior of the other box-like member, said reels being spring pressed to turn in the same direction of rotation and the free ends of the cords connecting to the interior portions of the two box-like members on opposite sides of the line joining the centers of the reels, whereby the pulls of the two cords balance on the two sides of the contractile element, and a telescoping plate projection on

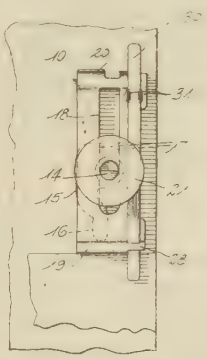
the upper part of one of the box-like members reaching into the other box-like member and spanning the space between the members, substantially as described.

1,416,487. GAS WATER HEATER. VICTOR MAUCK, Norristown, Pa. Filed July 9, 1921. Serial No. 483,449. 7 Claims. (Cl. 126—350.)



7. In a gas water heater, the combination with a closed tubular casing shell, having a door opening in its circumference, near one end thereof; of a circumferential bead formed in said shell adjacent to said opening, whereby said shell is reinforced at said opening; said bead extending in toric form in said shell; a tubular flue in coaxial position in said shell; a water compartment formed between said shell and flue; said water compartment being closed intermediate of the length of said shell, by a partition, adjacent to said door opening; and a burner compartment in said shell, formed by the skirt portion of said shell extending below said partition, and including said door opening.

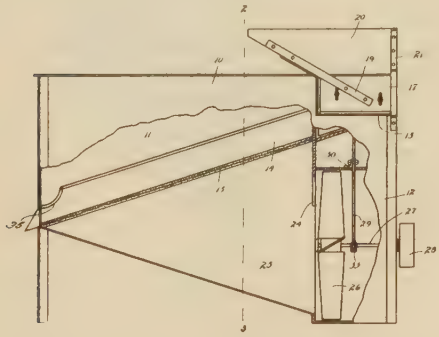
1,416,488. FEED GAUGE FOR PRINTING PRESSES. EDWARD L. MEGILL, New York, N. Y. Filed Mar. 19, 1918. Serial No. 223,342. 5 Claims. (Cl. 101—415.)



1. The combination of a tympan sheet having an elongated slit therein, of a gauge comprising a head and a base

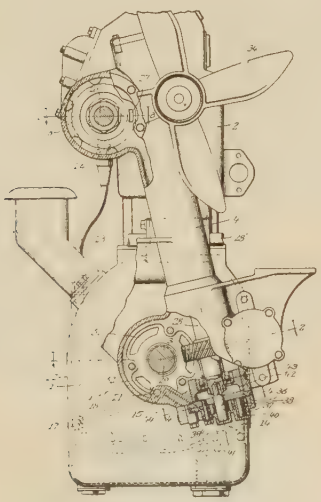
member secured together, a portion of said base member adapted to be inserted within the slit in the tympan sheet at a right angle thereto then turned therein to position said inserted portion across the slit.

1,416,489. GRAIN SEPARATOR. WILLIAM T. MERZENICH, Minneapolis, Minn. Filed Apr. 30, 1920. Serial No. 377,859. 10 Claims. (Cl. 130—17.)



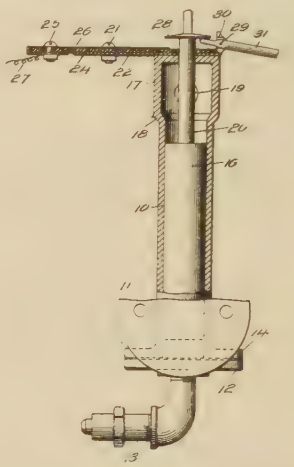
1. A pneumatic grain cleaner having in combination a casing, an inclined trough-like runway extended through said casing and provided with a perforate bottom, said casing forming an air chamber above said trough, and air chambers having imperforate walls extending downwardly at each side of said trough continuous with said air chamber, a fan having a casing with an air intake port in communication with said latter air chambers, the outlet of said fan casing being directed outside of said casing into the atmosphere, whereby the lighter material fed into said runway is carried upwardly out of the same and downwardly at each side thereof into said fan casing.

1,416,490. OILING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. ADOLPH MONSEN, Logansport, Ind. Filed Dec. 20, 1918. Serial No. 267,622. 9 Claims. (Cl. 184—6.)



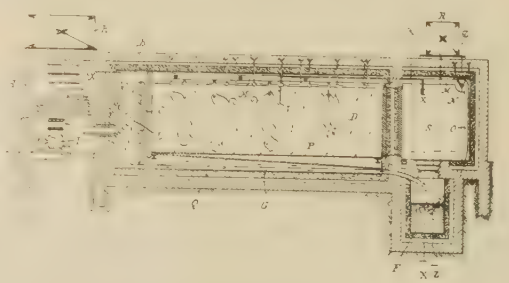
7. A mechanism of the character described including in combination, a crank casing, an engine casing having a valve casing, a crank shaft mounted in said crank casing, a cam shaft mounted in said valve casing, said valve casing having a projection to afford a bearing for said cam shaft, said crank casing having a projection to afford a bearing for said crank shaft, a hollow post having enlargements to provide casings to fit said projections on the cam shaft and crank shaft, respectively, a vertical shaft in said hollow post having gears for driving said cam shaft and other operating parts of the mechanism and also having a gear adapted to be driven from said crank shaft, a passage in said projection of the valve casing for providing communication between the valve casing and the hollow stud and a passage through the projection of the crank casing for providing communication between the crank casing and the hollow port, an oil pump mounted on the lower end of said vertical shaft, inlet and discharge passages provided in the projection from the crank casing, pipes communicating with said passages and extending through said crank casing, the inlet pipe having an opening near the bottom thereof and the discharge pipe having a plurality of openings corresponding to the cranks on the crank shaft, said discharge pipe also having communication with said valve casing.

1,416,491. PRESSURE-OPERATED SWITCH. TRACY D. MONTEE, Iloilo, Philippine Islands. Filed Oct. 18, 1920. Serial No. 417,671. 2 Claims. (Cl. 200—84.)



1. A device of the class described comprising a cylinder having a plunger and an inlet at one end to provide for the entrance of liquid under pressure to maintain the plunger normally at one end of the cylinder, a stationary contact device attached to the cylinder and adapted for connection with electric governing devices, a contact associated with the plunger and movable therewith and held normally from contact with the stationary contact by the plunger and adapted to close a circuit when the pressure against the plunger is reduced, a stop lever pivoted near one end and having its shorter end extending into the path of the movable contact whereby closing of the circuit is prevented.

1,416,492. REFRIGERATING PLANT. JAN MORAWSKI, Buenos Aires, Argentina. Filed June 19, 1919. Serial No. 305,267. 2 Claims. (Cl. 62—6.)



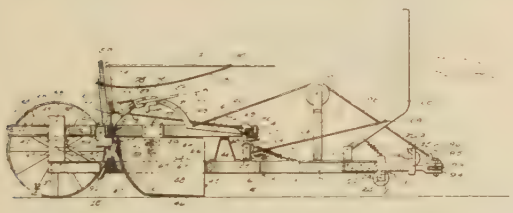
1. In a refrigerating plant, the combination of a cold-storage chamber having a perforated bottom, an inclined perforated plate beneath the same, a separate chamber containing a refrigerating medium, a communicating pas-

sage between said two chambers terminating beneath said inclined plate, a separate chamber containing an air-purifying medium, a communicating passage between said cold-storage chamber and said purifying chamber, and thermostatically-controlled means for circulating air from said refrigerating chamber through said perforated plate and perforated bottom into said cold-storage chamber, through the latter and into said purifying chamber, and thence back to said refrigerating chamber.

1,416,493. PROCESS OF MAKING COMBUSTIBLE MATERIAL. HARRY S. MORK, Brookline, and GUSTAVUS J. ESSELEN, Jr., Swampscott, Mass., assignors to Arthur D. Little, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed Sept. 10, 1919. Serial No. 322,954. 10 Claims. (Cl. 44—7.)

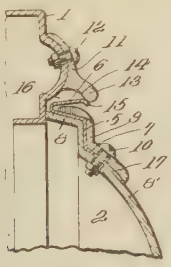
2. The process of making an infusible solidified liquid combustible material, which comprises dissolving pyroxylin in a volatile combustible solvent the formula of which contains a carbonyl group, coagulating the solution in a volatile combustible non-solvent; preparing a second solution of pyroxylin in a suitable solvent, said second solution being close to the point of coagulation; and mixing the coagulated solution with the non-coagulated solution to solidify the mixture.

1,416,494. SCRAPING OR LEVELING MACHINE. FREDERICK R. MORTON, Fresno, Calif. Filed Apr. 11, 1921. Serial No. 460,274. 10 Claims. (Cl. 37—33.)



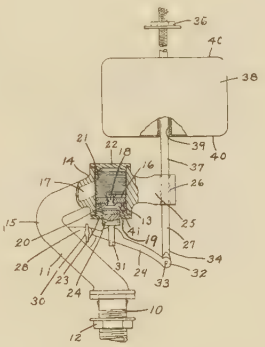
1. In a machine of the character described, a main frame, wheels supporting the same, a supplemental frame, means whereby the supplemental frame is supported by the main frame and is adapted to move upwardly with relation to the main frame, a scraping element supported by the supplemental frame, a draft device movable longitudinally with relation to the main frame, means for connecting the draft device with the supplemental frame so that the pull upon the draft device is transmitted to the supplemental frame and the supplemental frame raised with relation to the main frame when the supplemental frame is free to partake of upward movement, and means to prevent the upward movement of the supplemental frame with relation to the main frame and adapted when actuated to release the supplemental frame.

1,416,495. DOOR LATCH. CHARLES MUNZNER, Chicago, Ill., assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 17, 1920. Serial No. 431,358. 9 Claims. (Cl. 292—76.)



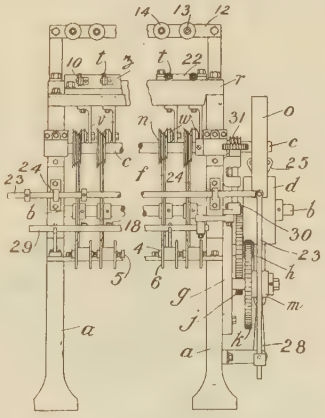
1. The combination of a door and frame, the door carrying a flat spring having a U-shaped end, the frame provided with an outwardly extending catch having an inner concaved face and a downwardly extending end, and the U-shaped end of the spring adapted to compress beneath and lie within the catch, for the purpose described.

1,416,496. BALL COCK. LOUIS NAIR, New Britain, Conn. Filed Apr. 8, 1921. Serial No. 459,669. 2 Claims. (Cl. 137—104.)



1. A ball cock comprising a body having an inlet and having an outlet provided with a valve-seat, a valve for closing against the said seat, a lever for operating the said valve, a vertically directed float rod connected to the said lever and extending upwardly above the cock structure, guide means for the said rod, a stop device at the upper end of the said rod, and a float slidably mounted on the portion of the said rod adjacent to and below the said stop device.

1,416,497. MACHINE FOR COVERING WIRE WITH SILK, COTTON, OR THE LIKE. JOHN NARIZZANO, Hampton Wick, England. Filed Dec. 30, 1919. Serial No. 348,420. 3 Claims. (Cl. 117—43.)

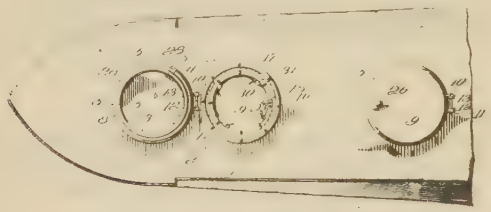


1. In a machine for covering wire, the combination of a series of spinner heads arranged one in advance of the other and disposed on a substantially horizontal axis, flyers on said spinner heads, a separate drive for each spinner head for rotating the same in opposite directions, a winding bobbin for each pair of spinner heads, a series of tubular bobbin holders each arranged in axial alignment with one of said spinner heads for supporting spare bobbins, and mechanical means for varying the relative speed of the flyers and the winding bobbins.

1,416,498. RELEASING MECHANISM FOR LIFE-BOATS. ALCANZO D. NEWCOMB, Norfolk, Va., assignor, by mesne assignments, of one-half to Richard D. L. Fletcher, Cape Charles, Va., and one-half to Robert T. Marsh, Richmond, Va. Filed Feb. 27, 1917. Serial No. 151,249. 13 Claims. (Cl. 9—22.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

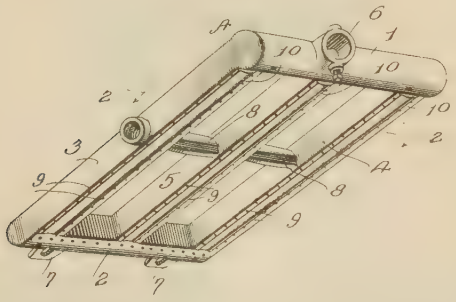
6. A releasing mechanism for life boats comprising lashing engaging members carried by the deck of the boat at the forward and rear ends, members carried by the forward and rear end of the deck for engaging the davit hooks, means for simultaneously releasing the forward and rear lashing engaging members from within the boat, and means for simultaneously releasing the davit engaging members from above the deck.

1,416,499. HATCH FOR BOATS. ALCANZO D. NEWCOMB, Norfolk, Va., assignor, by mesne assignments, of one-half to Richard D. L. Fletcher, Cape Charles, Va., and one-half to Robert T. Marsh, Richmond, Va. Filed Mar. 12, 1917. Serial No. 154,201. 7 Claims. (Cl. 114—201.)



1. The combination with a boat having a hatch opening, a pivoted hatch covering said opening, and a horizontally pivoted latch carried by the lower face of the hatch on the inside of the opening.

1,416,500. OVEN BURNER. FREDERIC G. NICOLAUS, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Feb. 14, 1921. Serial No. 444,825. 7 Claims. (Cl. 158—116.)

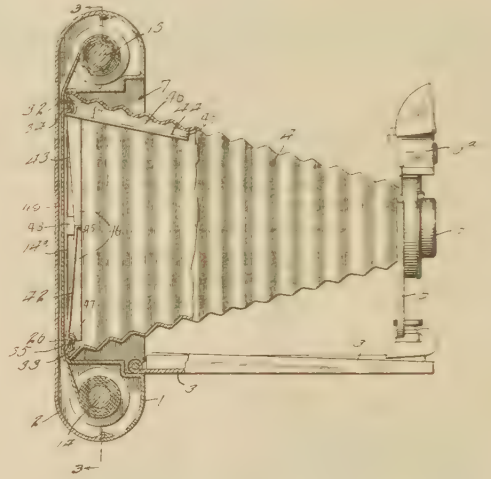


3. A single burner conduit having two channels formed in the outer face of the bottom wall of the conduit, the respective channels located in the edges of the bottom wall of the conduit, the bottom wall of the conduit having divergently and outwardly extending gas exits communicating with the channels and with the conduit, whereby the flames from the exits are projected beyond the side walls of the conduit, for the purpose described.

1,416,501. CARBURIZING MATERIAL. NIELS D. NIELSEN, Elyria, Ohio. Filed May 6, 1920. Serial No. 379,259. 1 Claim. (Cl. 148—30.)

The process of hardening metals, consisting in drying whole fish bodies, pulverizing the same and in heating said metals in the pulverized material resulting until the desired amount of carbon is absorbed and then quenching to suddenly lower the temperature.

1,416,502. MULTIPLE-EXPOSURE ATTACHMENT FOR CAMERAS. ARLIE PAYNE, Paragould, Ark. Filed Nov. 10, 1920. Serial No. 423,059. 3 Claims. (Cl. 95—36.)



1. A multiple exposure attachment for cameras, comprising a frame having alined apertures in the sides thereof, bearing plates secured to the top and bottom and intermediately of the sides of said frame, shafts of angular cross section and having end spindles mounted between the bearing plates, shutters attached to said shafts of angular cross section, and having flanged, light excluding meeting edges, and means for successively operating said shafts and shutters and locking the same to the sides of the camera.

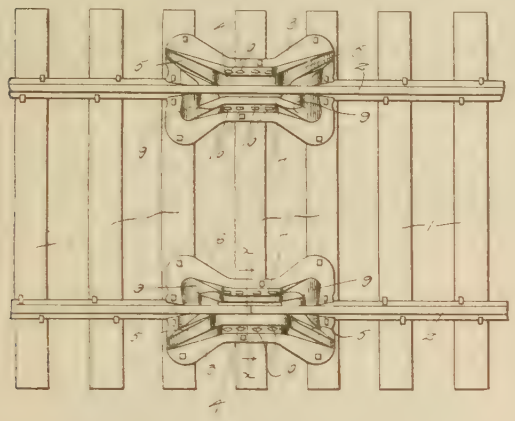
1,416,503. VANITY CASE OR POWDER BOX. ARTHUR MASTERS PEACOCK, Wigan, England. Filed July 18, 1921. Serial No. 485,737. 7 Claims. (Cl. 132—82.)

1. A powder box having a circular opening with two diametrically opposite projections, a lid foldable across its centre adapted to fit in said opening, and a puff attached to the underside of the lid.

1,416,504. RAIL JOINT AND CAR REPLACER. CHARLES L. PETTY, Haskell, Okla. Filed Feb. 10, 1921. Serial No. 443,927. 3 Claims. (Cl. 104—267.)

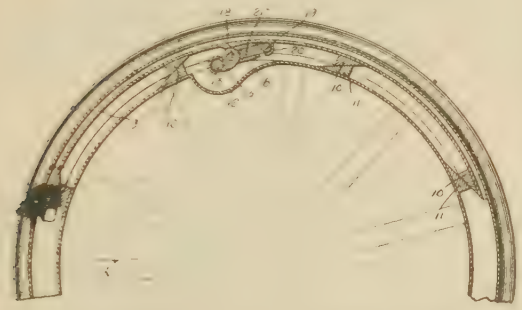
1. A plate made from a blank having an upstanding portion, a depending portion to abut track rails, the

latter portion having a free terminal edge in contact with the other portion, securing means to extend from the



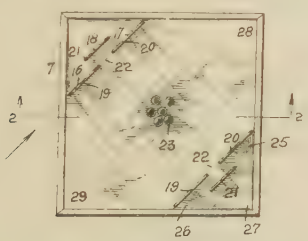
track rails through said portion, and said portion being spaced apart about said securing means.

1,416,505. DEMOUNTABLE RIM. RALPH H. PIERCE and GEORGE A. ANDERSON, Eugene, Oreg. Filed June 9, 1921. Serial No. 476,261. 3 Claims. (Cl. 301—17.)



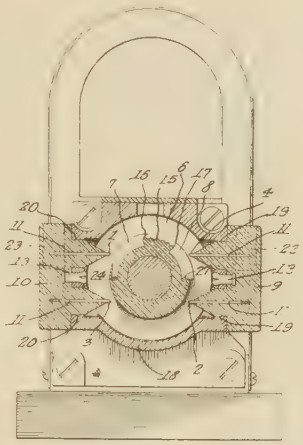
1. The combination with a channelled wheel felly and a rim mounted on the felly, of an arc-shaped member located in the felly, means whereby circumferential movement of said member locks the rim on the felly, means for moving said member circumferentially, said last mentioned means including a shaft journalled in the felly, a crank arm carried by the shaft, an adjustable link connecting the crank arm and the arc-shaped member, and means for turning said shaft.

1,416,506. AMUSEMENT GAME. THOMAS HARVEY POPE, Brooklyn, N. Y. Filed Mar. 11, 1920. Serial No. 365,126. 15 Claims. (Cl. 46—41.)



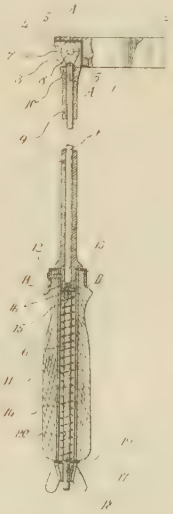
14. In a puzzle, a floor having inclined portions at all corners thereof, partitions in two of said corners to form compartments, and a plurality of balls adapted to be corralled and held in said compartments.

1,416,507. COLLECTOR AND DISTRIBUTOR SYSTEM FOR HIGH-TENSION MAGNETOS. HARLIE O. PUTT, Elkhart, Ind., assignor to Ace Magneto Company, Goshen, Ind., a Corporation of Indiana. Filed June 16, 1920. Serial No. 389,487. 9 Claims. (Cl. 123—149.)



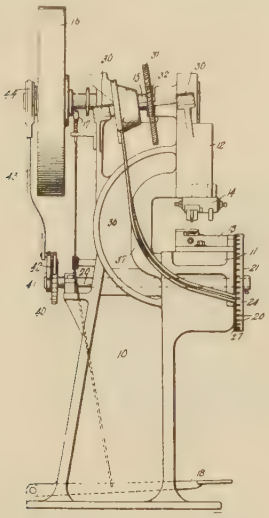
1. In a device of the class described, as a new article of manufacture, a spool-shaped distributing ring of insulating material having a portion of its surface corrugated, and oppositely disposed metallic inserts mounted on the distributor ring at opposite portions thereof and angularly disposed a definite degree in relation to each other and having their extreme ends spaced apart to form a safety gap, these ends being positioned on opposite sides of the corrugated portion of the distributor ring.

1,416,508. SOLDERING IRON. ALFRED GABRIEL QUIRY, Neuilly-sur-Seine, France, assignor to Pierre Jean Robert Amiard, Paris, France. Filed Mar. 26, 1921. Serial No. 455,821. 4 Claims. (Cl. 113—105.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



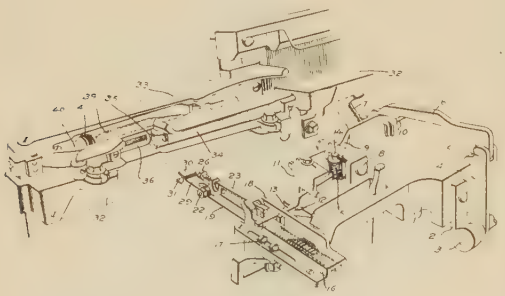
1. A soldering iron of the class specified, comprising a stem, a tubular socket in which the stem is reciprocatingly mounted, a handle attached to the socket, and a bit pivotally connected to the one end of the stem and having varying angular surfaces at the heel portion adjacent to the point of pivotal connection thereof to the stem to effect angular adjustment of the bit with relation to the end of the socket and means for sustaining the bit in its adjusted position.

1,416,509. RIVET-FEEDING MECHANISM. ARISTIDE F. RENAUD, New Orleans, La., assignor to The Renaud Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 29, 1920. Serial No. 399,805. 7 Claims. (Cl. 78—49.)



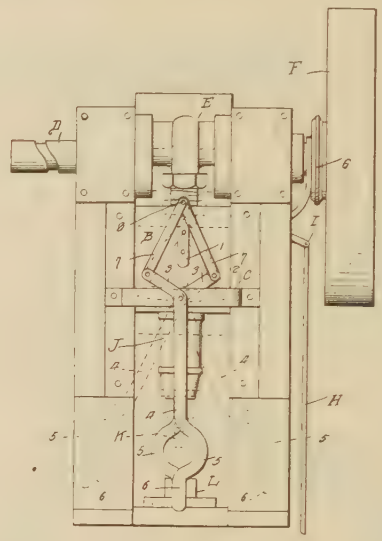
1. The combination with a punch press having a drive shaft, a drive pulley loosely mounted thereon, and a clutch means operable to couple the latter to the former, of a rivet feeding mechanism comprising a hopper, a receiving agitator drum communicating with the hopper, means for rotating the drum from the drive shaft, a magazine snaft, a magazine keyed thereto, a chute serving to establish communication between the drum and the magazine, the outlet end of said chute being arranged to feed the rivets to the magazine with their shanks horizontal and their heads vertical, whereby to roll the rivets into the magazine.

1,416,510. FEELER MECHANISM FOR LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 11, 1919. Serial No. 303,360. 3 Claims. (Cl. 139—85.)



1. A feeler mechanism for filling replenishing looms, comprising, in combination, a feeler mounted upon a fixed portion of the loom to enter the shuttle on a detecting beat through an opening in the side of the shuttle and provided with an integrally formed yoke-like rear end adapted to pass into the shuttle through said opening and having the legs of the yoke relatively unyielding to caliper the diameter of the filling in the shuttle by entrance of the filling carrier between the spaced legs of the yoke-like end of the feeler when the filling is substantially exhausted, a feeler slide for supporting the feeler for movement towards and from the front of the loom, a spring acting to normally maintain the yoke-like end of the feeler in its rearward feeling position, an actuator pivotally mounted upon the slide, a bunter carried by the actuator to engage the side wall of the shuttle when the filling carrier passes into the yoke-like end of the feeler on a detecting beat, a controller adapted to be engaged by the actuator when the actuator is moved by the bunter, and means positioned by the controller to effect replenishment of filling.

1,416,511. PUNCH-PRESS GUARD. BENJAMIN D. RHODES, Milwaukee, Wis. Filed Nov. 29, 1921. Serial No. 518,590. 5 Claims. (Cl. 74—105.)

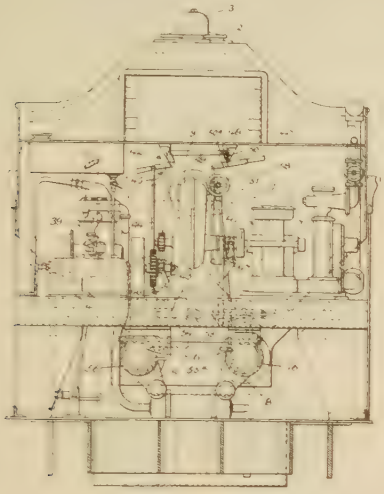


1. The combination with a punch press including an operating block and a punch head positioned beneath the same, of a pair of guard members rockably supported by the frame of the press and extending downwardly in front of the punch head, each of said members being provided adjacent its lower end with an outwardly directed frame element, said frame elements cooperating when the guard members are in inoperative position to provide a frame through which an operator standing in front of the press may view work placed on the punch head, the lower portion of each of said frame elements being extended to provide a wiping element, and means for rocking said guard members about their common axis when the block is reciprocated so as to swing said members transversely of the press in opposite directions when the block is lowered, the guard members being moved into substantial vertical position when the block is raised.

1,416,512. MEANS FOR USING PULVERIZED FUEL IN THE FURNACES OF STEAM GENERATORS. JOHN GEORGE ROBINSON, Manchester, England. Filed May 26, 1917. Serial No. 171,160. 6 Claims. (Cl. 110—28.)

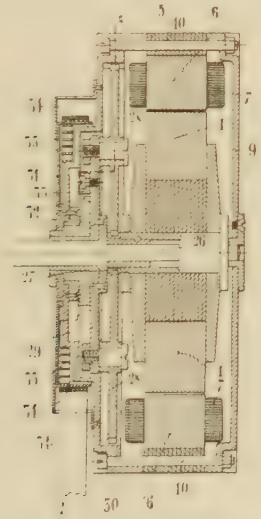
1. Means for enabling pulverized fuel to be consumed in furnaces comprising a receptacle for the powdered fuel, conveyors associated with the receptacle for conveying the powdered fuel, nozzles adjacent the furnace firebox to which said fuel is conveyed, means for supplying an air blast to the nozzles whereby the fuel conveyed to said nozzles is blown into the furnace firebox, a prime mover driven by steam generated in the boiler heated by said furnace for normally driving said conveyors and said air blast supplying means, a second prime mover for driving said conveyors and said air blast supplying means, and means for connecting up either of said prime movers to drive said conveyors and air blast supplying means and simultaneously disconnecting the other of said prime

movers at will, means for varying the speed of the fuel conveyors, air valve controlling means, and a connection



between said speed varying means and said air controlling means whereby the supplies of fuel and air are simultaneously varied.

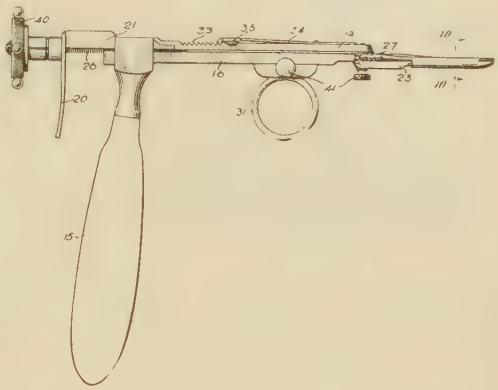
1,416,513. GENERATOR FOR ELECTRIC LAMPS. SYLVAIN ROSENGART, Paris, France, assignor to La Société dite: Etablissements L. Rosengart Siège Social, Paris, France. Filed Oct. 23, 1918. Serial No. 259,415. 3 Claims. (Cl. 171—76.)



3. In a device of the character described the combination of a casing; a generator within the casing including a rotatable magnet; and mechanism for rotating said magnet comprising a pinion on the axle of the magnet, a rotatable disk, a pair of gears revolubly mounted on said disk in mesh with said pinion, a ring gear fixed in said casing in mesh with both gears and encircling the same, a pinion disposed co-axially with said disk, a pawl-and-ratchet connection between the second-named pinion and said disk to drive the latter from the former, and means for rotating the second-named pinion.

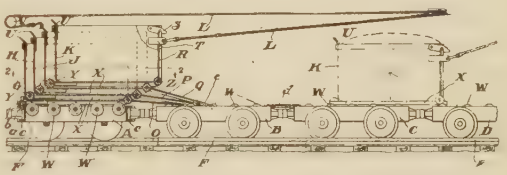
1,416,514. SURGICAL INSTRUMENT. AARON SAPERSTEIN, Brooklyn, N. Y. Filed Jan. 19, 1921. Serial No. 438,423. 5 Claims. (Cl. 128—320.)

1. A surgical instrument, including a track member, a snare carrier arranged upon said track member, a traveler positioned upon the body portion of said snare carrier, a table forming the outer end of said track member and presenting an opening, a crushing blade attached to said traveler and adapted to be slidably projected adja-



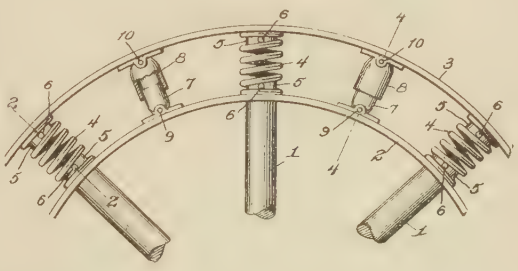
cent the opening of the table, a snare attached to the body portion of said snare carrier and adapted to lie adjacent said blade, and normally encircle the opening of said table, and means for moving said snare carrier and traveler.

1,416,515. METHOD OF AND APPARATUS FOR LOADING. WILLIAM L. SAUNDERS, Plainfield, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 25, 1921. Serial No. 472,483. 9 Claims. (Cl. 214—38.)



6. In apparatus for removing broken material from the heading end of an entry or tunnel, the combination of a train of empty cars, hoppers or buckets nested on the car nearest the heading in position to be loaded by a mechanically operated loading machine, and means for drawing said hoppers or buckets from the heading end to the rear of the train.

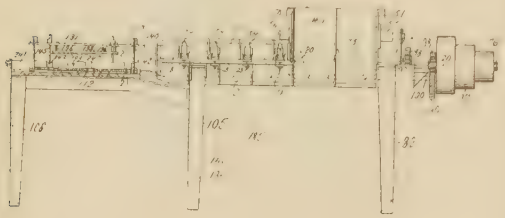
1,416,516. SPRING WHEEL. LEO L. SAVOIE, New Orleans, La. Filed Mar. 10, 1921. Serial No. 451,158. 1 Claim. (Cl. 152—32.)



A spring wheel having spokes, an inner fixed rim, an outer movable rim, coiled cushioning springs between said

rims, and jointed stays connecting the rims and arranged in alternation with the springs, each stay comprising a pair of members telescopically engaged with each other, said members being hinged to the rims.

1,416,517. BUTTER CUTTING AND PRINTING MACHINE. ALBERT SHARP, Bayonne, N. J., assignor of one-half to George Sharp, Bayonne, N. J. Filed June 30, 1919. Serial No. 307,819. 12 Claims. (Cl. 31—65.)



1. In a machine of the character described, the combination of a charging chamber and a conveying chamber, pusher blades in the charging chamber, means to actuate said blades, a spiral conveyer in the conveying chamber and means to actuate the conveyer simultaneously with the movements of the pusher blades.

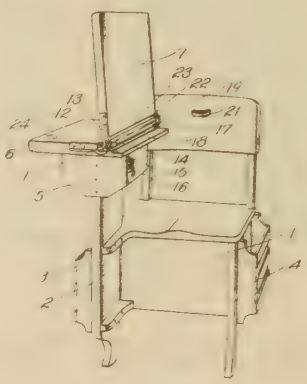
5. In a machine of the character described the combination of cutting means for a material operated upon, means to swing down said cutting means, means to simultaneously move forward said cutting means, means to print on said material just after the cutting means have swung down, means to translate the cutting means to its first position while in its swung down position, means to next swing up said cutting means, means to print on said material just before the cutting means is completely swung up and means to continuously move forward the material operated upon.

7. In a machine of the character described the combination of a cutting arm, a cutting wire carried by said arm, a shaft enabled to oscillate and longitudinally reciprocate said arm, a journal bracket in said machine, a rotating shaft journaled in said bracket, a sleeve with an arm fastened to the latter shaft, a roller journaled in the latter arm, a lever with one end pivoted to the said bracket and having a heel at one end in the path of the roller of the rotating shaft, the said lever having an elongated slot at the other end, a sleeve with an arm secured to the oscillating shaft and a bolt carried by the latter arm extending through said elongated slot, the rotations of the rotating shaft causing the roller on the arm thereof to contact with said heel, said lever having the heel thereby pulling down the other bolt causing the oscillating shaft to oscillate and thus swing up the cutting arm with its cutting wire.

10. In a machine of the character described the combination of a pair of cutting arms, a pair of screws connecting said arms, an adjusting sleeve in threaded engagement with each screw, a lock nut on each screw for each adjusting sleeve, a wire carrying sleeve supported on each adjusting sleeve and a wire connecting the wire carrying sleeves.

12. In a machine of the character described the combination of a charging chamber and a conveying chamber connected to the charging chamber, a pair of pusher blades in the charging chamber, a pair of conveyers in the conveying chamber and extending into the charging chamber below said pusher blades, a shaft connected to each conveyer, a shaft supporting each pusher blade, means to rotate one of the conveyer shafts, means to transmit rotation from the latter shaft to the other conveyer shaft, means to transmit rotation from the conveyer shafts to the pusher blade shafts, a side shaft for the machine, means to transmit rotation from one of the conveyer shafts to the side shaft, an oscillating and reciprocating shaft in the machine, means to operate the latter shaft from the side shaft, cutting arms carried by the oscillating shaft, cutting wires carried by the cutting arms and printing arms carried by said oscillating shaft.

1,416,518. DESK TOP. WILLIAM A. SMILEY, Kansas City, Mo., assignor to The Inner Braced Seating Company, Kansas City, Mo., a Corporation of Missouri. Filed Feb. 17, 1921. Serial No. 445,848. 2 Claims. (Cl. 45—91.)



1. A desk top comprising a fixed member having an edge portion of less thickness than the body part provided with an undercut recess and an adjacent, upstanding rib, an extension hinged to the body of the fixed member, having a tongue projectable into said undercut recess and a groove for receiving said rib, the face of said tongue and the face of said recess being concentric with the hinge axis.

1,416,519. INTEGRATING APPARATUS FOR GRAPHIC INTEGRATION CALCULATIONS. LARS SPARR, Stockholm, Sweden. Filed Mar. 26, 1921. Serial No. 455,956. 3 Claims. (Cl. 235—61.)

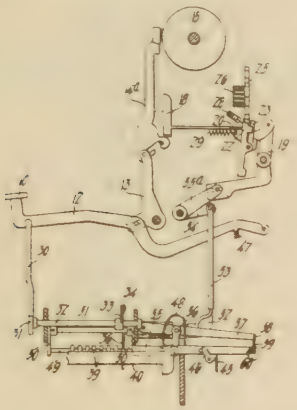
1. Integrating apparatus for graphic integration calculations, comprising a plate and a series of parallel strips on said plate, the individual widths of which are chosen in such way that the integral sum to be calculated is a direct function of the lengths of said strips falling within the area to be calculated and may be found by adding up said lengths.

1,416,520. COMBINED TYPEWRITING AND COMPUTING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Nov. 8, 1918. Serial No. 261,589. 26 Claims. (Cl. 235—60.)

3. In a combined typewriting and computing machine, the combination of numeral keys, a carriage, rows of index pins or devices, bars upon which said rows of pins are carried, springs for returning said bars, projections upon said bars, key-operated index pin setters, and key-controlled means to locate said bars in normal positions.

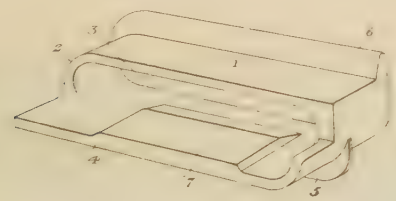
11. In a combined typewriting and computing machine comprising a typewriter carriage, a feeding mechanism therefor, a universal bar mechanism to control said feeding mechanism, alphabet type-actions having means connected to operate said universal bar mechanism, numeral

type actions unprovided with means to operate said universal bar mechanism, a computing mechanism comprising rows of index pins or devices, denomination-selecting mechanism controlled by said carriage for displacing the index pins or devices row after row, devices individual to said numeral type-actions for setting the index pins or



devices on the displaced rows, a special bar universally operable by said setting devices, a connection from said special universal bar to the typewriter universal bar mechanism to operate the latter, and means also controlled by said special universal bar for returning the rows of index pins to normal positions.

1,416,521. TROWEL. WILLIAM M. STOUT, Halstead, Kans. Filed Mar. 23, 1920. Serial No. 368,180. 1 Claim. (Cl. 94—45.)

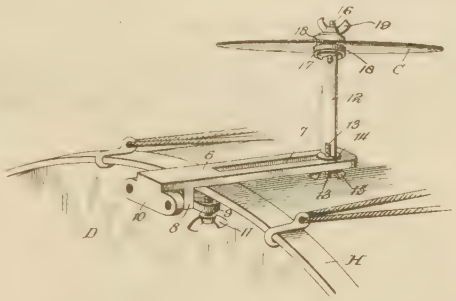


A trowel of the class described comprising a body of rectangular shape and having one of its diagonal corners rounded off, said body having an opening therein to provide a hand hold, an extension provided on one side of said body and the outer face of said extension forming a continuation of one face of the body so that said face will be of greater width than the opposite face, the inner face of said extension forms a continuation of one of the walls of the opening, a longitudinally extending flange being provided on the wide face of said body and midway its side edges thereof, said flange curved upwardly over the curved end of this face, a flange provided on the narrow face of said body and the outer face of said flange being flush with the side edge of said body and its inner face being slightly inclined, said flange having one end curving upwardly over the curved end of said narrow face, thickened portions being provided on the inner face of said extension for engaging the knuckles of the hand.

1,416,522. CYMBAL HOLDER. FRED M. STRAIGHT, Bristol, R. I., assignor of one-half to Frank Harvey Straight, Bristol, R. I. Filed Dec. 18, 1920. Serial No. 431,594. 6 Claims. (Cl. 248—20.)

4. A cymbal holder comprising a rigid bar, means at one end of said bar for connecting a cymbal thereto, and separate means at the other end of said bar for fastening the latter to a drum in a plurality of different positions with the bar in either a horizontal or vertical position.

6. A cymbal holder comprising a bar, means for mounting the same in position, a flat spring mounted at one end

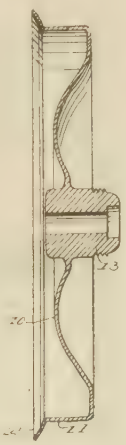


on the bar and projecting therefrom, and means at the other end of the spring for connecting a cymbal thereto, whereby the spring is free to vibrate.

1,416,523. LIFE PRESERVER. JACOB STROBEL, New York, N. Y. Filed June 23, 1921. Serial No. 479,805. 4 Claims. (Cl. 9—19.)

1. A flexible tubular life belt, including rigid end walls, one of said end walls having an air port therein, a spring held plate pivoted on the outer face of said wall, a valve carried by the plate, and means having rolling engagement with the plate to close the valve against the action of the spring.

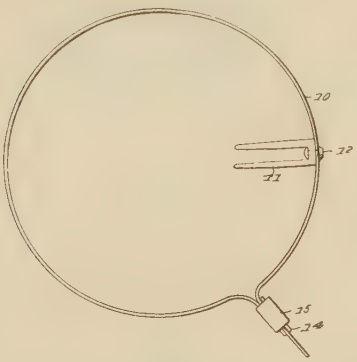
1,416,524. PRESSED STEEL WHEEL AND METHOD OF PRODUCING THE SAME. JOSEPH F. SURRIDGE, Chicago, Ill. Filed Nov. 30, 1921. Serial No. 518,880. 5 Claims. (Cl. 301—163.)



5. A pressed metal wheel consisting of a disk formed with a central opening having the surrounding edge later-

ally deflected from the plane thereof, and a hub of transversely expanded material in which the said deflected edge is embedded and welded.

1,416,525. RETAINER FOR LIGHTNING RODS OR GROUND WIRES. HERBERT A. TAYLOR, Sheffield, Ala. Filed June 15, 1921. Serial No. 477,756. 3 Claims. (Cl. 85—49.)



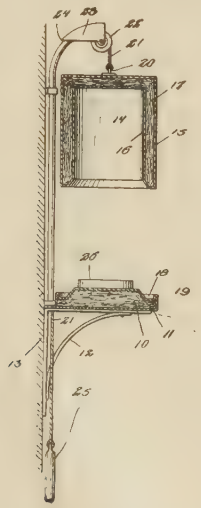
1. A retainer for the purpose described having a strap of which one extremity is perforated for the reception of the other end thereof, the second-named end being folded to form a loop, and a folded keeper engaged with the folded end and interposed extremities of the strap.

1,416,526. INSECTICIDE. MAX LEONARD TOWER, Middleport, N. Y., assignor to Niagara Sprayer Co., Middleport, N. Y., a Corporation of New York. Filed Sept. 15, 1919. Serial No. 323,772. 7 Claims. (Cl. 167—6.)

1. An insecticide comprising a nicotine salt solution, a dehydrating agent, fine sulphur acting as a base in which the nicotine salts and the dehydrating agent are suspended and an arsenate.

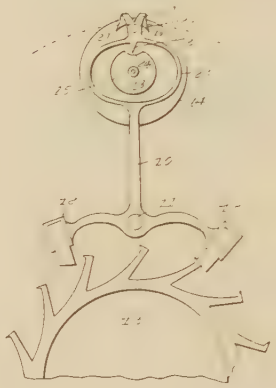
7. An insecticide in the form of dust comprising a substantially forty per cent nicotine sulphate solution, a dehydrating agent sufficient to dehydrate said solution, a metallic arsenate, tobacco dust and finely divided sulphur.

1,416,527. ELECTRIC FIRELESS COOKER. PERCIVAL J. TOWNSEND, Redwood City, Calif. Filed May 25, 1920. Serial No. 384,132. 2 Claims. (Cl. 219—35.)



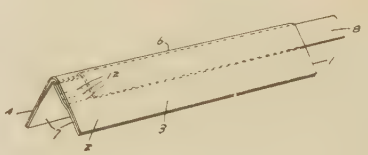
1. A device of the character described comprising a base, heating means upon said base, and a removable hood seating upon the base and formed as a heat retaining member, the outer portion of said base being circumferentially recessed to provide a seat for the lower end of the hood, and the extreme periphery of the base having an upwardly extending flange of less height than the central portion of the base and disposed outwardly of the hood.

1,416,528. ESCAPEMENT MECHANISM. EDWARD TROST, Jacksonville, Fla. Filed Feb. 10, 1920. Serial No. 357,496. 2 Claims. (Cl. 58—122.)



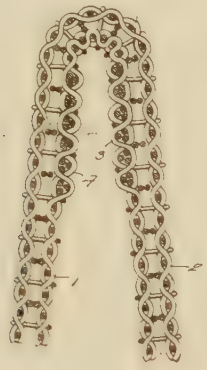
1. An escapement mechanism having in combination with the balance staff and escapement wheel, an escapement lever provided at its free end with a fork and having an intermediate yoke, a roller table carried by the balance staff and having an impulse pin for engagement by said fork, a safety roller carried by the balance staff in the plane of the yoke of the escapement lever, and a safety pin carried by the escapement lever for traversing a safety notch in the said roller.

1,416,529. INDEX TAB. ROY J. TURNER, San Francisco, Calif., assignor to Efficiency File Co., Chicago, Ill., a Copartnership. Filed Nov. 7, 1921. Serial No. 513,483. 3 Claims. (Cl. 40—23.)



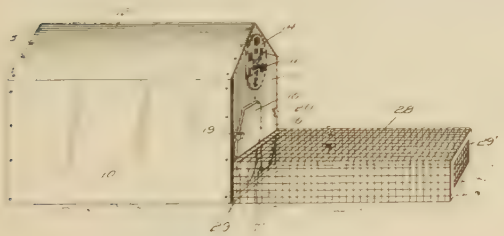
1. An index tab of the character described, comprising a strip of flexible transparent material bent upon itself so as to form a channel and a strip of backing secured to each loose edge of the channel and extending to within close proximity of the back of the channel so as to form a saddle adapted to cooperate with the back of the channel in supporting an insert.

1,416,530. SOFT TURNDOWN COLLAR. FRANK B. TWINING, Troy, N. Y., assignor to Geo. P. Ide & Company, Inc., Troy, N. Y., a Corporation of New York. Filed Aug. 19, 1921. Serial No. 493,561. 4 Claims. (Cl. 139—9.)



1. A folding collar or cuff, woven in one piece, made up of a neck band and a top portion and a thickened portion on each side of the folding line of the collar defining the folding line.

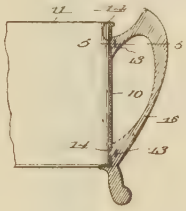
1,416,531. COOP AND FEEDING PARK THEREFOR. RALPH B. ULLOM, Urbana, Ind., assignor to The Cyclone Manufacturing Company, Urbana, Ind. Filed Apr. 1, 1921. Serial No. 457,739. 8 Claims. (Cl. 119—19.)



1. A coop comprising a body portion of sheet metal open at its lower side, inturned flanges formed at the opposite lower edges of the side walls of the body portion, channeled beads formed at the opposite lower edges of the front and rear walls of the body portion, a bottom portion of sheet metal having a centrally and upwardly depressed portion adapted for insertion into the lower open side of the body portion, flanges formed at the opposite sides and ends of the depressed portion of the bottom portion and adapted for interlocking engagement with the flanges and beads of the body portion, and a feeding park engaging the channeled bead of the front wall of the coop and enclosing the exit opening leading therefrom.

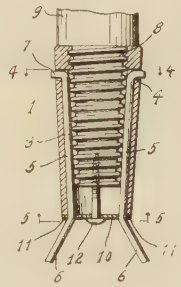
1,416,532. METHOD OF ATTACHING HANDLES AND THE LIKE. UMBERTO A. VALENTE, Brooklyn, N. Y. Filed May 21, 1920. Serial No. 383,186. 2 Claims. (Cl. 22—203.)

1. A method of casting by means of which one metallic object is to be connected to a second object characterized by employing upstruck means on the last named object, and subsequently attaching a mold to said object, which mold will engage the same at points adjacent the points



of disposition of the upstruck means, and in pouring fluid metal into said mold to cause said metal to engage said upstruck means.

1,416,533. BROOM AND BRUSH HANDLE. GEORGE M. WATTERS and WINFRED A. BROWN, Minneapolis, Minn. Filed Feb. 5, 1920. Serial No. 356,489. 1 Claim. (Cl. 306—30.)

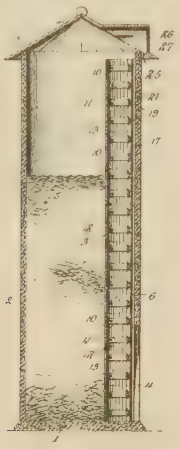


In a structure of the character described, a handle having a reduced end portion provided with relatively coarse threads, a sleeve fitting upon the reduced end of said handle and having threads engaging the threads of the handle, the sleeve having longitudinally extending grooves cut from its inner face to a greater depth than its threads and terminating at their upper ends in passages extending through the sleeve, a pair of arms adapted to carry a cleaner having their end portions extending through the grooves and terminating in outstanding finger extensions positioned in the passages of the sleeve, a plate fitting against the end of said sleeve and provided with side notches receiving said arms and serving to close the end of the sleeve and hold said arms against movement towards each other out of the grooves of the sleeve, and a securing screw passing through an opening in said plate and screwed into the end of said handle, the screw having relatively fine threads whereby the handle may not be unscrewed from the socket until the screw is removed and will not of itself come unscrewed.

1,416,534. SILO. GEORGE WILBUR WETZEL, Macombe, Ill. Filed Apr. 28, 1921. Serial No. 465,295. 14 Claims. (Cl. 20—1.42.)

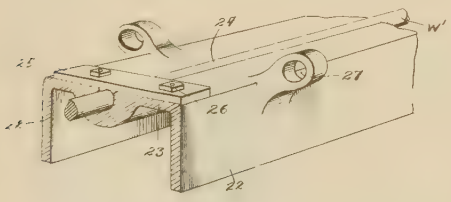
1. A silo, comprising an outer wall, an opening in said

wall, and an inwardly swinging door for said opening comprising a series of sections hingedly mounted on and



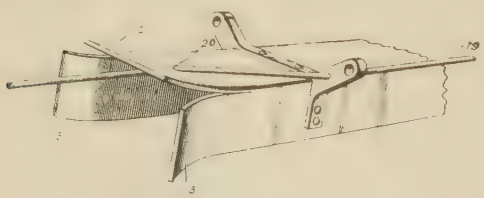
cooperating with the wall of the silo to form an auxiliary chamber within the silo.

1,416,535. TROLLEY GUARD FOR TUNNELS. CYRUS T. WHALEY, Norfolk, Va. Filed Oct. 17, 1921. Serial No. 508,052. 3 Claims. (Cl. 191—35.)



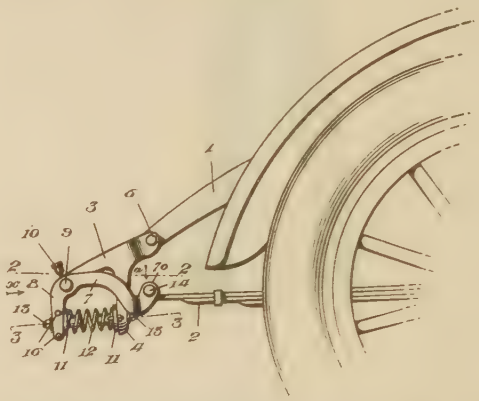
2. In a device of the kind described, a guard member consisting of an inverted channel having its sides spaced to receive a trolley wheel between them, the web of the channel being downwardly concave between said sides to provide contact means for the flanges of the trolley wheel, the upper face of said web being provided with a longitudinal trough to receive a trolley wire, and means to hold the wire within the trough and to provide supporting wire attaching elements.

1,416,536. TROLLEY GUARD FOR TUNNELS. CYRUS T. WHALEY, Norfolk, Va. Filed Oct. 17, 1921. Serial No. 508,055. 3 Claims. (Cl. 191—35.)



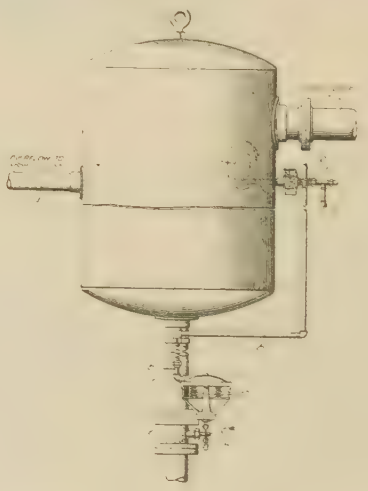
3. A trolley guide of the class described comprising an inverted U-shaped trough, bracket supporting said trough of inverted U-shaped and engaging the sides and top of the trough, and lugs projecting from said bracket and provided with terminal eyes for the reception of suspension wires, one of said lugs on each bracket being further provided with an opening for the reception of a feeder wire, the inlet end of said trough having its top flaring upwardly and provided with an opening for the reception of the wire and having its sides flaring outwardly, the outlet end of said trough having its top projecting beyond the sides and having the corners of the top turned downwardly to guide the trolley on said wire.

1,416,537. SHOCK ABSORBER. CHARLES A. WIBERG, Duluth, Minn. Filed Nov. 27, 1920. Serial No. 426,742. 3 Claims. (Cl. 267—17.)



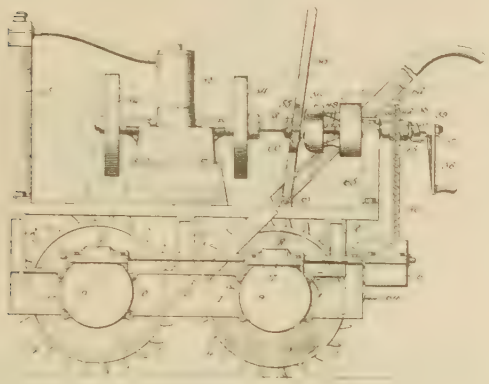
1. In a spring suspension for vehicles, the combination with opposing shock absorbing members of the vehicle; of a pair of opposing bell crank levers pivotally connected to each other, one of the said levers being pivotally joined at the inner end of one of the shock absorbing members of the vehicle and the other lever pivotally joined at the corresponding end of the other shock absorbing member of the vehicle, the two bell crank levers having oppositely horizontally disposed seats and a horizontally disposed shock absorbing spring sustained at its opposite ends on the aforesaid oppositely disposed seats, the said spring tending to move the opposing levers on their end pivots.

1,416,538. SEPARATOR FOR BOILER-WASHING SYSTEMS. FRANK S. WICHMAN, Chicago, Ill. Filed Sept. 12, 1919. Serial No. 323,446. 10 Claims. (Cl. 210—54.)



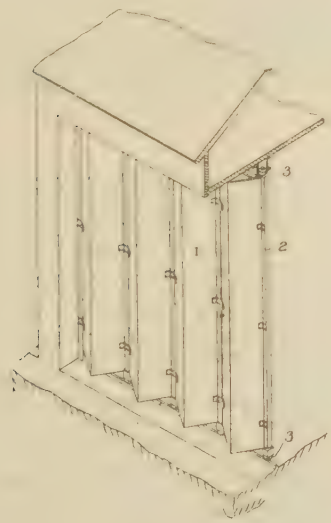
1. In a separator for boiler washing systems, adapted to separate sludge from water, a discard pipe, a normally open closure for said discard pipe, means delivering water to be separated, and means actuated by the presence of such water, adapted to actuate said closure to arrest delivery to such discard pipe.

1,416,539. TRACTOR. WILLIAM GEORGE WILMS, San Pedro, Calif. Filed July 26, 1921. Serial No. 487,578. 8 Claims. (Cl. 180—19.)



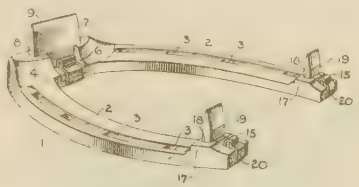
1. In a tractor, a frame, axles rotatably mounted transversely of the frame, traction wheels secured to the axles within the frame, a gear rigidly mounted on each axle beyond the collars of the longitudinal side of the frame, a shaft rotatably mounted on the frame and provided with spaced worm gears, said gears and shaft being located beyond the side of the frame, each worm gear being adapted to mesh with a gear on the axle, an engine mounted on the frame, a shaft driven by the engine, and a chain connection between the drive shaft of the engine and the worm shaft.

1,416,540. FOLDING DOOR, PARTITION, AND WALL. HERBERT WOOLARD, Stevenage, and JOHN HENRY FREDERICK LODGE, New Barnet, England; Clara Annie Lodge, being administratrix of said John Henry Frederick Lodge, deceased. Filed Oct. 21, 1918. Serial No. 259,131. 3 Claims. (Cl. 20—20.)



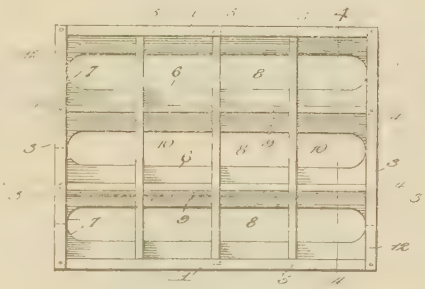
1. A sliding and folding door, screen or partition comprising a frame, a plurality of movable uprights carried by said frame, hinged pairs of leaves adapted to fold upon each other and hinged to and supported by said uprights, stays comprising bar members hinged together and arranged between and attached to each pair of uprights and adapted, when extended into alinement, to hold the pairs of leaves between each pair of uprights inclined in opposite directions to the general plane of the door, the line of stays extending throughout the door section.

1,416,541. HORSESHOE. FREDERICK D. YOUNG, Hollidaysburg, Pa. Filed June 30, 1921. Serial No. 481,623. 6 Claims. (Cl. 168—33.)



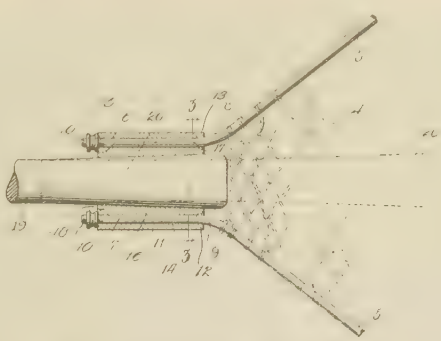
1. A horseshoe having on its underside an enlargement or boss provided with a cavity therein, and a cut-away portion communicating with the cavity, a calk seated in said cavity and having an extension to fit said cut away portion, and a clip adapted to engage respectively the shoe and said extension to hold the calk in place.

1,416,542. MILK BOX. WALTER C. YOUNG, Brooklyn, N. Y. Filed Dec. 4, 1920. Serial No. 428,337. 3 Claims. (Cl. 217—22.)



1. In a device of the class described, the combination of end boards provided with mortices extended part way up the inner sides thereof, dowel bars seated therein, side-boards having mortices formed therein, punch boards in the mortices in said side boards and bottom slats extended completely across the bottom of each of said end boards and cut away therebetween so as to provide washing apertures.

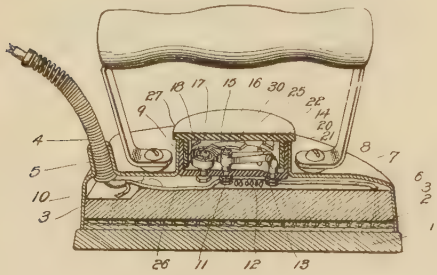
1,416,543. LANDING NET. FRANK BARTOS, Helena, Mont., assignor of one-half to Shirley C. Ashby, Jr., Helena, Mont. Filed Oct. 7, 1920. Serial No. 415,436. 2 Claims. (Cl. 43—12.)



2. In a net in combination with a net hoop, a casting having a tapered bore, a pair of cars formed on said

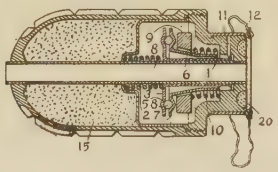
casting, said ears having engaging means for the terminal ends of said hoop, means for removably securing said hoop ends to said ears, and a handle correspondingly tapered to the casting bore to removably engage the same.

1,416,544. HEAT-CONTROLLING DEVICE. RICHARD G. BARZEN, Kansas City, Mo. Filed Mar. 30, 1921. Serial No. 456,950. 4 Claims. (Cl. 219—25.)



1. An electric iron having an electric heating circuit, a thermostatically operated circuit breaker in the circuit and movable in response to heat generated in the iron, and means for variably exposing the thermostat to atmosphere whereby the thermostat may operate at different degrees of heat within the iron.

1,416,545. COMBINED RIFLE GRENADE AND HAND GRENADE. FRIDTJOF NIELSEN BRONDBY, Christiania, Norway, assignor to A/S Perkussion, Christiania, Norway. Filed Mar. 2, 1920. Serial No. 362,668. 12 Claims. (Cl. 102—29.)



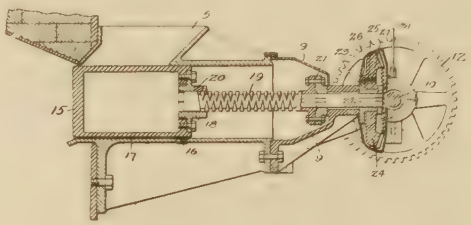
1. In a grenade, the combination of a sliding firing member provided at one end with a flange, and an actuating member therefor comprising a body portion loosely surrounding and capable of transverse movement in respect to the firing member and having a flange co-acting with the flange on the firing member on firing, whereby a transverse movement of the flange on the actuating member effects a longitudinal movement of the firing member.

1,416,546. UTILIZING COAL SLIMES. HEINRICH BRUNE and HEINZ HORST, Frankfort-on-the-Main, Germany, assignors to The Corporation of Gesellschaft für Maschinelle Druckentwässerung mit beschrankter Haftung, at Uerdingen, Niederrhein, Germany. Filed June 30, 1920. Serial No. 393,212. 1 Claim. (Cl. 44—10.)

The process of preparing fuel which consists in mixing fluid coal slimes with coke breeze before the slimes have settled and then expressing the water from the mixture.

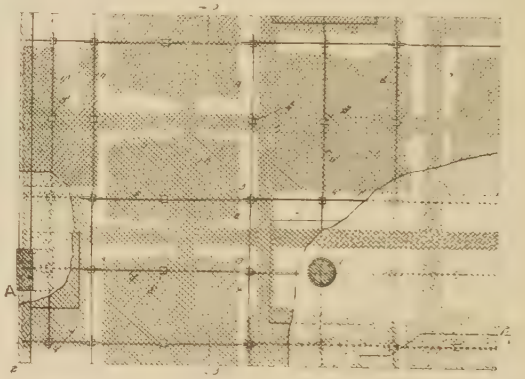
1,416,547. OPERATING MECHANISM FOR AUTOMATIC STOKERS. EVERETT B. BRYANT, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 11, 1919. Serial No. 310,237. 2 Claims. (Cl. 110—44.)

2. The combination in an underfeed stoker of a retort; a ram chamber connected thereto and communicating therewith; a ram in said chamber; a bearing on said ram; a diamond screw operative in the bearing; a swivel nut mounted in said bearing with a portion projecting into and in engagement with the diamond screw and free



to oscillate in the bearing to permit it to follow the threads of said screw; means at the ends of the screw to cause reversal of the direction of movement of the bearing and ram; and means for rotating the screw to cause it to reciprocate the ram through the agency of the nut.

1,416,548. REENFORCING CONCRETE STRUCTURES. JOSEPH DI STASIO, New York, N. Y. Filed June 14, 1920. Serial No. 388,939. 4 Claims. (Cl. 72—71.)

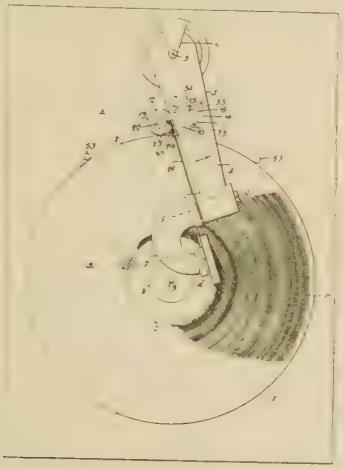


1. A flat slab floor construction, comprising a series of columns arranged in rows, adjacent columns forming bays therebetween and a bay central of each set of four columns, bands of metallic reenforcing mesh of a width substantially equal to said bays laid at right angles to each other and extending over the column heads and the bays between and in line with said column heads, said bands being depressed in such bays, and superposed bands of metallic mesh of a width substantially equal to the bays laid at right angles to each other and the first laid bands and extending over the bays which are central of each set of four columns.

1,416,549. TALKING MACHINE. VICTOR FEGLEY, Jersey City, N. J., assignor to Phonograph Control Corporation, Wilmington, Del., a Corporation of Delaware. Filed Nov. 22, 1919. Serial No. 339,842. 17 Claims. (Cl. 192—116.)

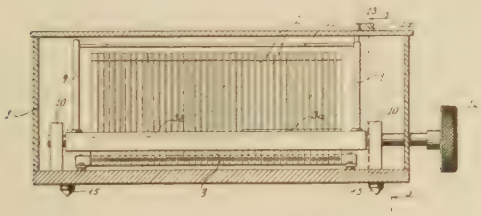
2. The combination in a talking machine, of a rotatable table; a record carried thereby having an abrupt curved groove beyond the end of the record groove; a tone arm carrying a stylus adapted to the grooves of the record; a pivoted brake lever; a rotatable brake member carried thereby, which is rotated by the table and also stops the

rotation of the table; and means, actuated by the rotatable brake member, for elevating the stylus clear of the



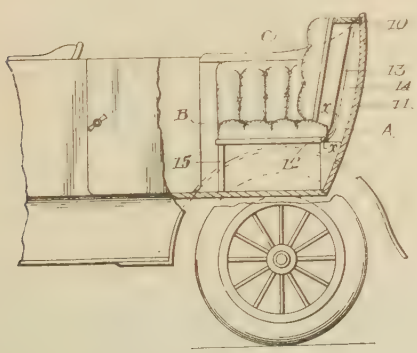
record when the stylus is traveling in the curved groove of the record.

1,416,550. VIBRATING REED INSTRUMENT. KARL GEORG FRANK, Wyoming, N. J. Filed Sept. 4, 1919. Serial No. 321,713. 2 Claims. (Cl. 73—51.)



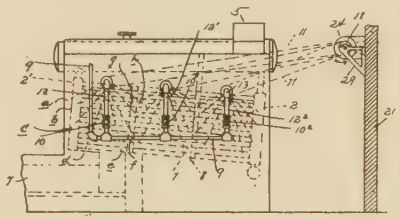
1. In a vibrating reed instrument of the character described, the combination with a group of reeds, arranged side by side and in alignment with each other, and a bail pivoted substantially in line with the foot of the reeds and adapted to swing over their free ends, means for adjusting the angular position of said bail to ascertain the amplitude of an oscillating reed, and a scale divided into suitable units, and located adjacent to one end of the bail for reading the value of said amplitude.

1,416,551. CONVERTIBLE AUTOMOBILE TONNEAU. LESLIE LOCKHART FULLER, Edmonton, Alberta, Canada. Filed May 19, 1921. Serial No. 470,828. 4 Claims. (Cl. 296—63.)



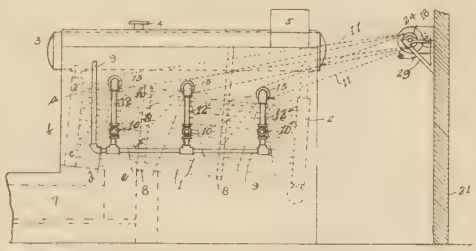
1. An automobile tonneau comprising a body portion, a back cushion supported from the body portion provided with a space behind it and between the body portion in which a bottom cushion may be stored, a bottom cushion and means for supporting the bottom cushion in such a way that it may be moved without detachment into position behind the back cushion.

1,416,552. BOILER CLEANER. CLAUDE M. GARLAND, Chicago, Ill. Original application filed Feb. 7, 1916, Serial No. 76,611. Divided and this application filed May 8, 1919, Serial No. 295,659. Renewed July 14, 1920. Serial No. 396,330. 2 Claims. (Cl. 122—392.)



2. The method of cleaning boiler parts of the accumulation of soot and like products of combustion, while preventing substantial decrease in the efficiency of the boiler between the periods of cleaning, which consists in determining the period in which the accumulation of soot deposits on the boiler parts will become materially deleterious to the efficiency of the boiler by incrustation on such parts, and then causing the delivery of a blast of steam over the boiler parts to be cleaned to forcibly remove the soot therefrom, and insuring that the delivery of the blast shall be at fixed and regular intervals less than that required for such deleterious accumulation to take place.

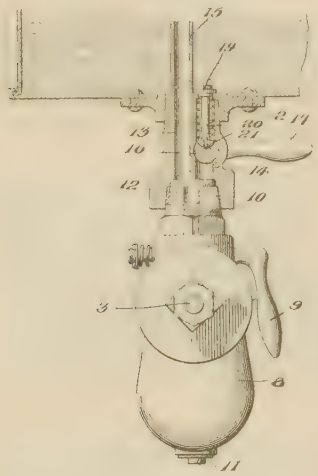
1,416,553. APPARATUS FOR BLOWING SOOT FROM THE TUBES OF BOILERS. CLAUDE M. GARLAND, Chicago, Ill. Filed Feb. 7, 1916, Serial No. 76,611. Renewed July 14, 1920. Serial No. 396,330. 16 Claims. (Cl. 122—392.)



1. In a soot blowing system comprising a main with a plurality of branches, means for producing the continuous discharge of the blowing medium in the form of puffs from the said branches at regular intervals, a plurality of lateral nozzles at the end of each branch and means for moving the said nozzles in synchronism with the said puffs.

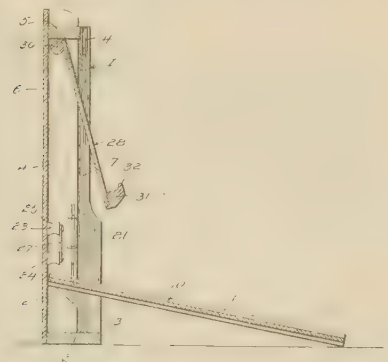
10. In a soot blowing system comprising a main with a plurality of branches, a solenoid operated valve in each of the said branches, a rotatable electrical contact means for each of the said solenoid operated valves, a rotatable nozzle pipe forming the terminus of each of the said branches and common means for rotating the said electrical contact means and the said nozzle pipes whereby steam is continuously discharged at regular intervals in the form of puffs from the said branches and the said nozzle pipes direct the said puffs to different portions of the heating surface to be cleaned.

1,416,554. RESERVE-SUPPLY TANK. FREDRICK E. GUBIN, Racine, Wis. Filed July 2, 1921. Serial No. 482,188. 12 Claims. (Cl. 158—46.5.)



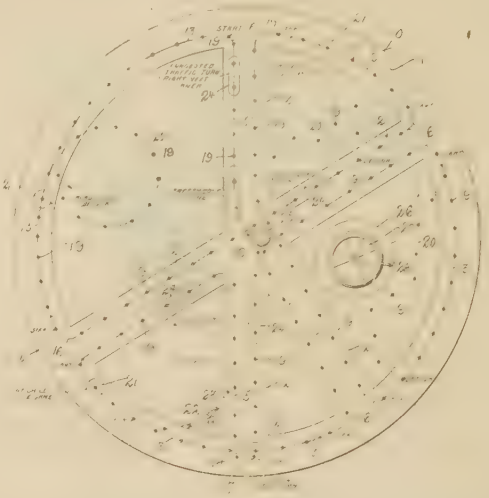
1. An outlet casing for a liquid fuel tank providing a reserve fuel duct having a fuel inlet opening vertically into the tank at the bottom thereof to draw reserve fuel therefrom, movable means normally covering said vertical inlet against entrance of sediment from the tank, said means being constructed to raise sediment on the tank bottom over said inlet when said means is moved to uncover the inlet for entrance of reserve fuel, and manually actuated means controlling the operative position of said movable means to cover and uncover said vertical inlet.

1,416,555. COMBINED BLACKBOARD AND DESK. CHARLES WM. HALL, Valparaiso, Ind. Filed Apr. 19, 1921. Serial No. 462,499. 4 Claims. (Cl. 45—51.)



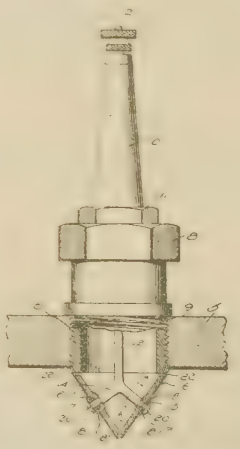
1. In an appliance of the class described, a cabinet closed except at its front, the side members of said cabinet being cutaway on their inner faces near their front edges throughout their entire length with abutments formed at the rear portions of said cutouts, said side members being also provided near their lower ends with recesses extending transversely and having the walls thereof inclined to provide guides and seats, a closure for said cabinet slidable in the cutout portions of the side members thereof, and means for locking said closure in closed position, said closure being adapted to swing laterally into the recesses at the lower ends of the side members when in open position and to be held by the walls of said recesses to adapt the closure for use as a desk.

1,416,556. GAME APPARATUS. HORATIO PAUL HARSHA, Detroit, Mich. Filed Nov. 15, 1920. Serial No. 424,095. 1 Claim. (Cl. 46—63.)



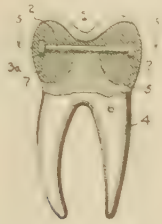
A game comprising a board having depicted thereon a circular outline and intersecting and communicating radial outlines, denoting streets, a street crossing and a roadway, a continuous main line upon said outlines crossing centrally of the board, and divided by marks uniformly spaced, one or more branch lines deflected from the main lines and connected at the ends thereto, figures at intervals on the main lines adapted to denote various traffic conditions, and a plurality of figures denoting counters to be moved over said lines.

1,416,557. SPARK PLUG. MARK B. HILL, Ticonderoga, N. Y. Filed May 4, 1921. Serial No. 466,656. 3 Claims. (Cl. 123—169.)



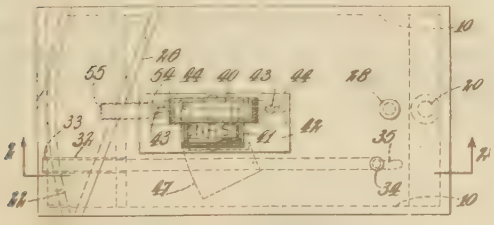
1. A spark plug comprising a shell, an electrode extending through the shell and having its forward portion formed with diverging branches having reduced spindles forming shoulders, and disks freely rotatable on said spindles and contacting with said shoulders, the edges of said disks being beveled and arranged in spaced relation to the end of the shell and in spaced relation to each other.

1,416,558. FILLING ANCHOR FOR TEETH AND PROCESS OF APPLYING SAME. Gustav Holtz, Gouldsboro, Pa. Filed Aug. 22, 1921. Serial No. 494,119. 2 Claims. (Cl. 32—22.)



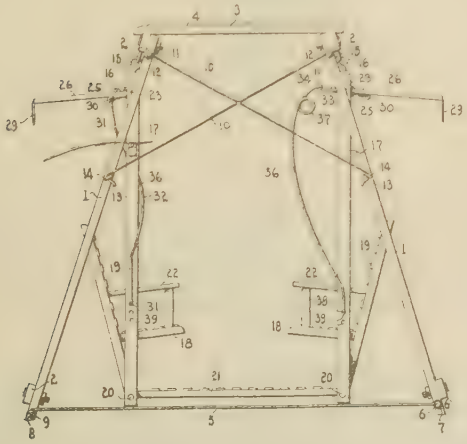
1. The process of filling extensive cavities in human teeth where the cavities reach through the body of the tooth, which consists in cleaning the cavity and enlarging it on opposite sides of the tooth and providing a connecting channel therebetween, and then lodging a double-headed anchor bar with the heads in the cavities and the intermediate part of the bar extending through the channel joining the cavities, and lodging filling in both the cavities and the connecting channels, and wholly embedding the anchor.

1,416,559. SAFETY AND MATCH BOX. Imre Horvath, Kenmore, Ohio. Filed May 5, 1921. Serial No. 466,958. 4 Claims. (Cl. 64—41.)



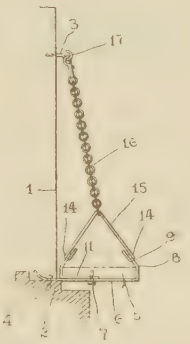
1. A safety box having a hinged cover, a plate hinged to said cover, a bolt operated by said plate and holding said cover locked, a second bolt holding said plate locked to said cover, and a rotatable and slidable disk for controlling said last bolt.

1,416,560. LAWN SWING. Leonidas R. Houchens, Washington, D. C. Filed Oct. 13, 1921. Serial No. 507,427. 6 Claims. (Cl. 155—64.)



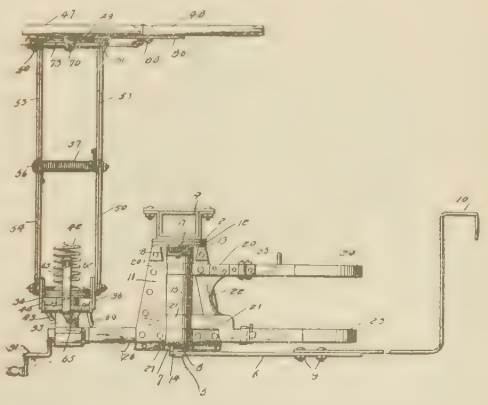
1. In a lawn swing, swing structures capable of simultaneous oscillation, a fan structure for each swing structure pendently mounted thereon at the upper portion of said swing structure, connecting rods individual to the fan structures for connecting the fan structures in operative relation with the swing structures, and means whereby the rods may connect each fan to the swing structure on which it is mounted to cause the fan structure to serve as a stationary sunshade.

1,416,561. AUXILIARY WINDOW SILL. Harold Johnson, Brooklyn, N. Y. Filed Oct. 1, 1921. Serial No. 504,555. 4 Claims. (Cl. 304—15.)



2. The combination, with a window casing and sill provided respectively with fixed engaging means, the sill engaging means being beaded bolts, of an auxiliary sill device comprising a board, straps secured thereto, angled rods each having its respective ends secured to the ends of one of said straps, suspension means whereby the device may be removably connected with the fixed casing engaging means and curved, extended strap portions having holes, with slot extensions to enter into removable, positive locking engagement with the bolts.

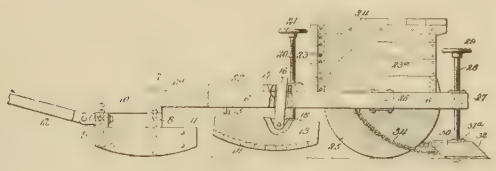
1,416,562. TABLE ATTACHMENT FOR BEDS. Stanislaw Kuczynski, Cleveland, Ohio, assignor of one-half to Wladyslawa Gruchacz, Cleveland, Ohio. Filed June 20, 1921. Serial No. 479,017. 14 Claims. (Cl. 45—82.)



8. A table attachment for beds comprising a mounting frame secured to the opposite rails of beds and including a vertical post, a plate journaled on said posts, cooperative means carried by said plate and post for holding the plate in rotatably adjusted positions, a sliding bar

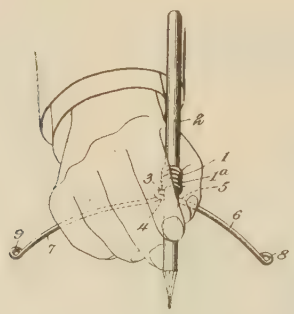
associated with said plate, a screw rod enclosed by said bar and having threaded connection with said plate, a table supported at the outer end of said rod, a post carried by the outer end of said rod, a table top supporting frame comprising a base section and an upper section with the base section rotatably adjustable upon said post, cooperating means carried by the base section and base for holding the frame in rotatably adjusted positions, said table supporting frame embodying a lazy tong construction connecting the upper and base sections, a pair of oppositely rotatable disks journaled on the upper section and associated with the lazy tong construction to effect rotation thereof during movement of the upper section, cooperative devices carried by the upper section and disks for holding the disks against rotation when the upper section is at its limit of upward movement, said cooperative devices including the peripheral notching of said disks and a tensioned latch supported on the upper section adapted to enter said notches when the upper section is at its limit of upward movement with the notches in alinement to prevent rotation of the disks and hold the upper section against movement.

1,416,563. SNOW LEVELER AND PACKER. JOHN MARTIN LE VALLEY, Ionia, Mich. Filed Oct. 6, 1920. Serial No. 415,184. 11 Claims. (Cl. 37—7.)



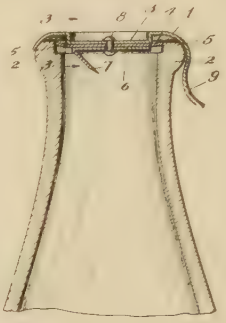
1. In combination, a frame, a sled pivotally mounted at the forward end of the frame for guiding the same, a packing roller supporting the frame, and a nonrotatable leveler or packer intermediate the roller and sled.

1,416,564. DEVICE FOR TEACHING PENMANSHIP. WILLIAM C. LOWE, Atlanta, Ga. Filed Mar. 7, 1921. Serial No. 450,223. 4 Claims. (Cl. 35—8.)



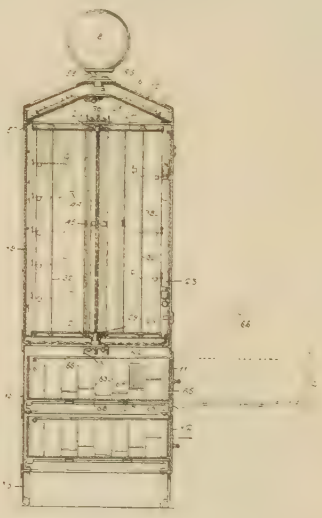
1. A device for teaching penmanship to be used with a pen or pencil, comprising an element to fit upon the pen or pencil and be retained thereon, and a pair of arms extending out from each side of said element adapted to support the hand of the writer and shaped at their ends to slide over the writing surface while writing, and forming with the pen or pencil a three-point bearing or contact with said surface.

1,416,565. SANITARY BOTTLE TOP. CHARLES LUSTGARTEN, Chicago, Ill. Filed Aug. 22, 1919, Serial No. 319,155. Renewed Sept. 22, 1921. Serial No. 502,512. 2 Claims. (Cl. 215—38.)



2. A bottle top or cap comprising a circular metal disk having its edges bent to conform with the curvature of the upper edge of the bottle, said disk having a centrally depressed portion, a resilient closure secured to the centrally depressed portion, said resilient closure being greater in diameter than the mouth of the bottle and being arranged to engage the narrow walls of the mouth of the bottle to hermetically seal the same, and an extension carried by said first named disk at one edge thereof, said extension serving as a lever for prying loose the resilient closure.

1,416,566. ADVERTISING AND DISPLAY CASE. HENRY R. MCCLEARY, New York, N. Y., assignor to Boorum & Pease Company, New York, N. Y., a Corporation of New York. Filed Oct. 28, 1921. Serial No. 511,052. 7 Claims. (Cl. 211—21.)

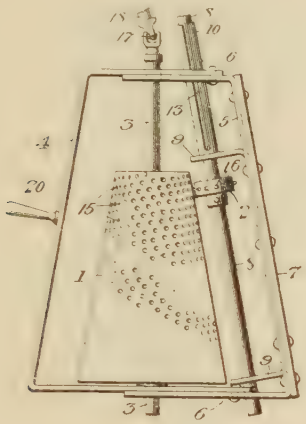


2. In a sales display case, a rotary display carrier comprising vertically arranged V-shaped sectional units of different radial depth, units of greater radial depth alternating with those of less radial depth, together with vertically spaced shelves in each unit sub-dividing the same into a series of shelf compartments.

1,416,567. SPEED-REGULATING DEVICE. WILLIAM PINKNEY MCNEEL, San Antonio, Tex. Filed Nov. 27, 1920. Serial No. 426,845. 3 Claims. (Cl. 74—58.)

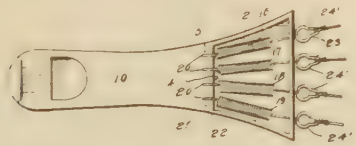
1. In a device of the character described, the combination with a driven shaft and a driving shaft, of a cone carried by the driven shaft, a disc or wheel secured to the driving shaft, holes or recesses spirally arranged

around the periphery of said cone in a uniform manner from end to end thereof, uniformly spaced spurs or pins mounted upon the periphery of said wheel adapted to engage with the holes or recesses in the cone for rotating said cone, and also providing means for automatically



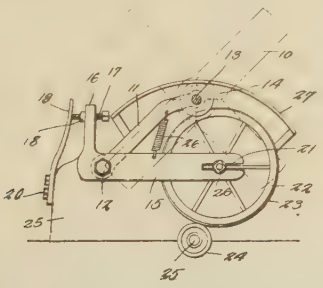
feeding the wheel along the cone, to cause a gradual increase or decrease in the speeds of the driven shaft, a sliding, telescoping connection between the spur wheel driving shaft and a main driving or power shaft, and means for swinging the cone into and out of engagement with the cooperating spur wheel.

1,416,568. MEANS FOR SECURING THE STRINGS OF MUSICAL INSTRUMENTS. LEANDRO MAZZOCCO, Lynn, Mass. Filed Aug. 24, 1920. Serial No. 405,777. 3 Claims. (Cl. 84—297.)



1. In combination with a tail piece of a musical instrument, a plurality of coil springs each having an eyelet, a securing pin common to said eyelets to connect the springs to the tail piece, and strings to which said springs are secured to function during action and when at rest.

1,416,569. AUTO ATTACHMENT. DELBERT W. MINNICH, Wadsworth, Ohio. Filed Jan. 28, 1920. Serial No. 354,712. 4 Claims. (Cl. 74—26.)

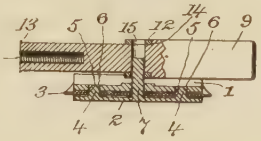


1. In an automobile attachment, a frame; a rotatable drive member journaled on the frame; supports pivoted to the frame for movement with respect to each other and with respect to the frame; a rotatable member journaled on each support; a spring connection between the supports and holding the rotatable members in engagement; a fan operatively connected with the rotatable member of one support; and means cooperating with the other support to hold the rotatable member of said other support in engagement with the rotatable drive member.

1,416,570. RADIATOR CORE. ARTHUR B. MODINE, Chicago, Ill. Filed Jan. 22, 1918. Serial No. 213,265. 1 Claim. (Cl. 257—129.)

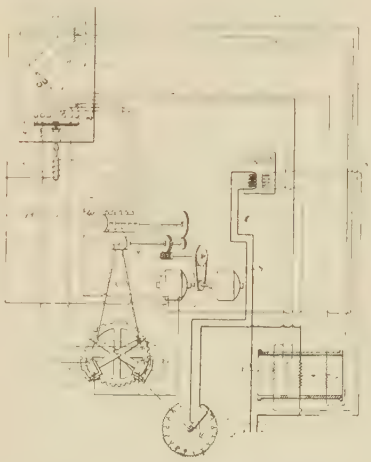
A radiator, comprising suitable headers and a plurality of substantially vertical water conducting tubes, a plurality of transversely corrugated plates interposed between the headers and surrounding the tubes, each plate having a plurality of alternately upwardly and downwardly struckup air deflecting projections positioned adjacent the tubes and arranged at an angle lateral to the normal direction of the air passing through the plates.

1,416,571. SAFETY RAZOR. THOMAS FRANCIS MURPHY, New York, N. Y. Filed Jan. 8, 1921. Serial No. 435,986. 5 Claims. (Cl. 30—12.)



1. An adjustable handle connection for a safety razor blade holder comprising a trunnioned guide on the holder loosely encircling the handle, which latter is free to rotate and slide therein.

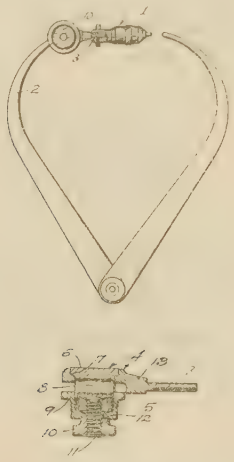
1,416,572. FLUID METER. HORACE N. PACKARD, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 27, 1918. Serial No. 225,020. 15 Claims. (Cl. 219—63.)



1. In apparatus for proportioning the flow of fluids, the combination with electrothermic flow controlling

means, of a mechanically variable temperature difference resistance to act upon said controlling means for varying the control effected thereby.

1,416,573. MICROMETER ATTACHMENT. JAMES A. OBOLE, Torrance, Calif. Filed June 2, 1920. Serial No. 385,989. 4 Claims. (Cl. 33—149.)



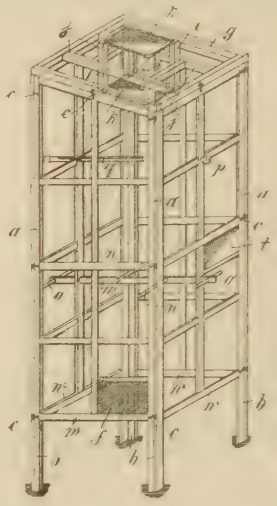
1. A micrometer attachment comprising a clamping annulus having a shank projecting therefrom and arranged to have a micrometer mounted thereon, a clamping rod having said clamping annulus journaled thereon and adapted to engage an instrument arm, and a second clamping member adjustable along said clamping rod for clamping the micrometer attachment in pivotally adjusted positions with relation to the instrument arm.

1,416,574. OIL AND GAS BURNER. WILLIAM M. ONEY, Houston, Tex. Filed May 20, 1920. Serial No. 382,843. 15 Claims. (Cl. 158—75.)

9. In a burner, a stationary shell having a fuel inlet, a burner casing, within the shell having a fuel inlet port, means for rotating said casing, so as to bring said port alternatively into and out of registration with said inlet, a fuel pipe extending through the casing and provided with a port and means for moving said fuel pipe lengthwise so as to bring said ports into and out of registration.

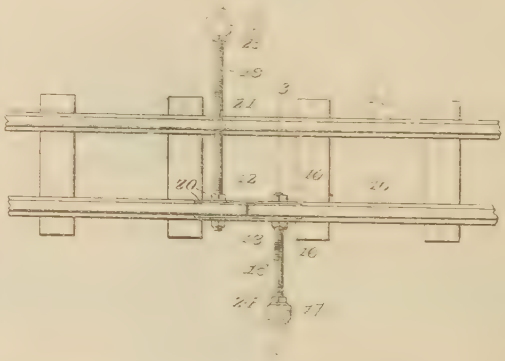
1,416,575. INSULATING CASE FOR SEED-BREEDING AND INFECTION PURPOSES. MENKO PLAUT, Halberstadt, Germany, assignor to Firm of: August Knoche-Wallwitz, G. m. b. H., Halberstadt, Germany. Filed Sept. 18, 1920. Serial No. 411,302. 2 Claims. (Cl. 47—39.)

1. In an insulating-case for seed-breeding and infection purposes, in combination, detachably connected pergamin-covered side-walls formed of wooden frames, an oblique roof covered with oil-paper and detachably connected with said side-walls, a mull-covered ventilation-shaft in the middle of said roof extending with one half below and with the other half above said roof, a glass-sash at the top and at the bottom of said shaft, a multiply mull-



covered opening at the bottom end of one of said side-walls, and an inspection-window in one of said side-walls, substantially as and for the purpose set forth.

1,416,576. RAILWAY RAIL ANCHOR. GRILLS A. PRATHER, Milliken, Colo. Filed Sept. 29, 1921. Serial No. 504,114. 1 Claim. (Cl. 238—315.)



The combination with the rails of a railway, and the splice bar of the joint thereof, of a pair of bars threaded at their opposite ends, each of said bars being disposed through certain of the bolt openings of the splice bar and rail, one of the said bars extending through the opposite rail of the railway and having its other threaded end secured in an anchor member, the other bar extending toward the other side of the railway and having its other threaded end secured in an anchor member, the said splice bar ends of the said bolts being arranged to serve as the bolts of the rail joint.

1,416,577. CAN OPENER AND SEALER. JOSEPH E. RELLER and WILLIAM KRECKER, Long Beach, Calif.; said Krecker assignor to said Reller. Filed Feb. 25, 1920. Serial No. 361,337. 1 Claim. (Cl. 220—51.)

A can puncturing and puncture closing device, comprising a plate, a pair of puncturing members projecting from the under side of said plate, a pair of spaced ears formed integral with and depending from one end of said

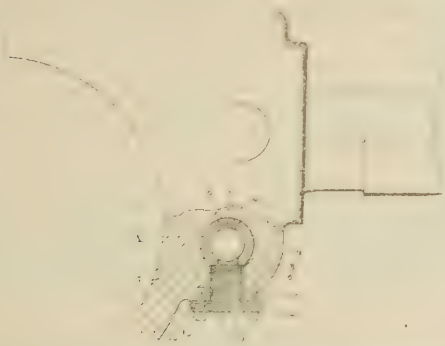
plate to facilitate the positioning of the device on a can, and a perforated member projecting from the end of the

plate between said ears, which perforated member provides means whereby the device may be suspended from a suitable support while not in use.

1,416,578. WHEEL PULLER. MYRL M. SAUERS, Santa Cruz, Calif. Filed Feb. 19, 1921. Serial No. 446,329. 1 Claim. (Cl. 29—85.)

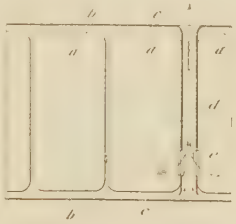
A wheel puller including, a bushing provided with external and internal threads thereon and adapted to be positioned on the hub of a vehicle wheel, a casing having threaded engagement with said bushing, and an axle forcing screw entering said casing and adapted to receive blows and impart the force thereof to the end of the axle of the wheel to be pulled.

1,416,579. INDICATOR OF STRIPPED THREADS. LAWRENCE LEE SCHAUER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 9, 1921. Serial No. 483,629. 9 Claims. (Cl. 116—114.)



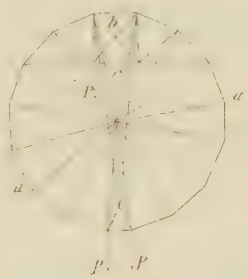
3. A wear-exhibiting instrumentality comprising a member; a screw and a complete nut arranged to be relatively rotated to elevate said member; and an auxiliary element mounted in rigid relation with said nut to be movable in fixed relation therewith, said element providing an arcuate face in threaded engagement with said screw and adapted readily to be detached from said screw to afford an inspection of its arcuate face to enable the extent of wear of the threads of said nut to be ascertained.

1,416,580. AIRSHIP. JOHANN SCHUETTE, Zeesen-Koenigs-Wusterhausen, near Berlin, Germany. Filed Apr. 25, 1919. Serial No. 292,765. 6 Claims. (Cl. 244—3.)



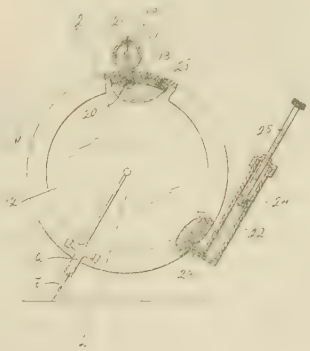
1. In an airship of the rigid type, the combination of gas cells, valves for the gas cells; and a flue into which an air space adjacent the lower end of said flue said valves open, said flue extending upwardly through the ship and communicating freely with the atmosphere at its upper end and having its lower end open to said air space.

1,416,581. AIRSHIP. JOHANN SCHUETTE, Zeesen-Koenigs-Wusterhausen, near Berlin, Germany. Filed Apr. 25, 1919. Serial No. 292,768. 7 Claims. (Cl. 244—3.)



1. A frame work for airships of the rigid type comprising longitudinal beams; rings connected to said longitudinal beams to maintain the same in proper position; and load carrying means comprising trellis work having beams connected to a ring at a plurality of points for distributing a load over a pre-determined section of said ring.

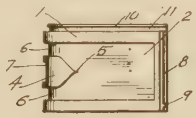
1,416,582. PHONOGRAPHIC SOUND BOX. DAVID A. SEALEY, East Orange, N. J. Filed Jan. 21, 1920. Serial No. 352,989. 9 Claims. (Cl. 274—35.)



1. A phonographic sound box having a body, two diaphragms spaced from and disconnected from each other,

the space between said diaphragms containing a liquid adapted to transmit the vibrations of one diaphragm to the other, and manually adjustable means permanently connected to the sound box for exerting more or less pressure on said material.

1,416,583. ROOFING TILE. JOSEPH SEILER and EMIL REIFF, Los Angeles, Calif. Filed Aug. 17, 1920. Serial No. 404,121. 1 Claim. (Cl. 108—10.)

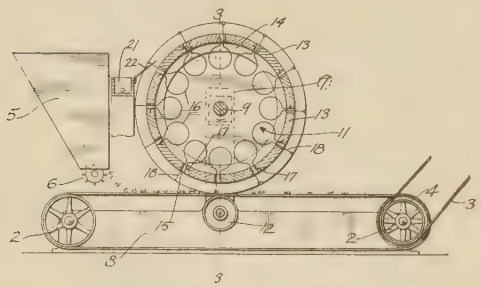


A roofing tile comprising a substantially rectangular-shaped body, one end of which is formed with a downwardly curved lip, a U-shaped rib formed on the upper side of the body, a projection on the upper side of the body between the free ends of the rib, said projection having one end recessed and its opposite end tapered, ribs up standing from the upper side of the body and disposed in spaced relation to the U-shaped rib to provide grooves at one side and one end of the body, transverse ribs on the under side of the body adjacent the opposite ends thereof, longitudinally extending ribs on the under side of the body connecting the transverse ribs and having portions thereof tapered, lugs on the under side of the body at that end remote from the projection end, a groove along one longitudinal edge of the body at the under side thereof, and a second groove extending transversely of the under side of the body between said lugs.

1,416,584. METHOD OF PRESERVING ELECTRIC-FURNACE LININGS. HUGH C. SICARD, Buffalo, N. Y., assignor to United States Ferro Alloys Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1920. Serial No. 358,211. 8 Claims. (Cl. 204—63.)

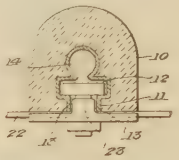
1. A method of preserving electric furnace linings comprising the formation of a titanic oxide furnace lining and then smelting in the furnace a mixture composed of a titaniferous ore and metallic ore.

1,416,585. SEPARATOR FOR NUT MEATS FROM BROKEN NUTS. ARTHUR STABLES, Los Angeles, Calif. Filed Mar. 31, 1921. Serial No. 457,179. 5 Claims. (Cl. 130—32.)



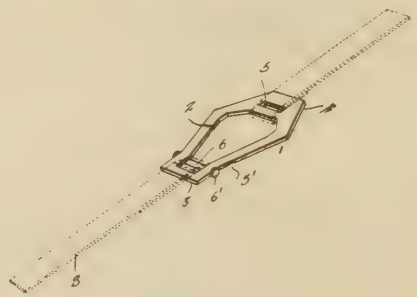
1. In a nut meat separator, the combination with an endless carrier, of a hollow cylindrical member arranged for rotation above said endless carrier, the wall of which cylindrical member is perforated, and a series of nut meat engaging members arranged within said hollow cylinder, each of which members comprises a spring loop, one end of which is secured to the wall of the cylinder and the opposite end portion extending through one of the perforations in the rotatable member, and the outer end of said outwardly extending end portion being pointed so as to engage nut meats on the endless carrier.

1,416,586. POST. JOHN WILLIAM STALDER, Lincoln, Nebr. Filed May 16, 1921. Serial No. 469,906. 3 Claims. (Cl. 72—82.)



1. A post formed of cementitious material and provided with a groove extending longitudinally along one face thereof, an entrance passage extending therefrom, the walls of said passage lying within and forming the walls of the longitudinally extending groove and a cable passage upon the side of the rectangular portion opposite the groove, inwardly extending longitudinally disposed staced ribs located at the intersection of the rectangular portion and cable passage and providing restricted communication therebetween and headed fastening devices engageable in said groove.

1,416,587. BALE TIE. JOHN F. STAUFFER and JAMES F. ROWLAND, Tutwiler, Miss. Filed Aug. 1, 1921. Serial No. 488,957. 2 Claims. (Cl. 24—21.)



1. A cotton tie buckle comprising a flat plate having a Y-shaped opening therethrough, and a slot inward of the opening adjacent to one of the ends of the plate and the said slot being disposed opposite the wider end of the opening, a tie strap designed to be passed through the Y-shaped opening beneath the plate and through the slot therein and to be arranged around a bale, a headed pin normally received in the Y-shaped opening and designed to be engaged by the opposite end of the strap or band, when the latter is inserted through the Y-shaped opening whereby the pressure of the bale against said band will force the pin toward the restricted passage of the Y-shaped opening and arrange the pin under the plate and the heads thereon in contacting engagement with the edges of the plate.

1,416,588. FOOD. BENJAMIN F. SWEZEY, Buffalo, Minn. Filed Sept. 30, 1920. Serial No. 413,767. 5 Claims. (Cl. 99—10.)

1. The process of preparing a cereal food consisting in roasting grain kernels and thereafter agitating said grain kernels to render the same brittle.

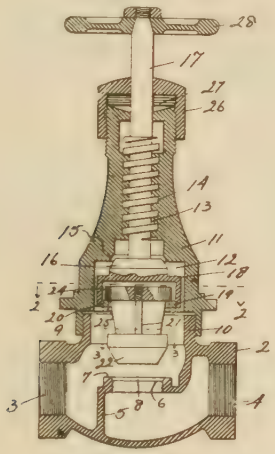
1,416,589. TRANSFER CAR. WILLIAM W. WALLACE, Chicago, Ill., assignor to Raymond C. Penfield, Chicago, Ill. Filed Nov. 6, 1918. Serial No. 261,351. 1 Claim. (Cl. 105—177.)

A brick carrying car of the kind described, having a plurality of sets of wheels arranged angularly with re-

lation to each other, means to bring a predetermined set of said wheels into operative position to support the car,

and a plurality of spaced supports on the car deck to cooperate with mechanical setting devices for loading and unloading a unit stack of brick on the car.

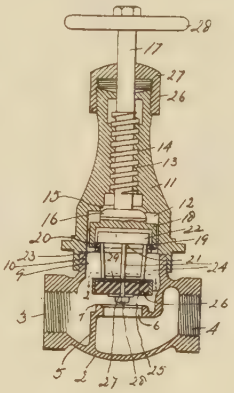
1,416,590. VALVE. HARRY WILHELMS, Philadelphia, Pa. Filed Feb. 2, 1921. Serial No. 441,753. 2 Claims. (Cl. 251—46.)



1. A valve comprising a valve body, a partition within said body, a valve seat formed with said partition having a flat surface and a beveled inner surface, a valve stem casing detachably connected with said body, said casing having a chamber at its inner end and a longitudinal threaded valve stem opening therethrough communicating with said chamber, a seat formed in said casing between said chamber and the valve stem opening, a threaded valve stem mounted in the valve stem opening, a hand wheel on the outer end thereof, a sealing member formed with the inner end of said stem for coaction with said seat, an integral housing formed with said sealing member, a valve member, comprising a valve cone, a body formed of radiating ribs and a head, said head registering with the aforementioned housing, a retaining ring mounted in said housing for loosely maintaining the head of the valve member in said housing, and a cap on the outer end of the valve stem housing.

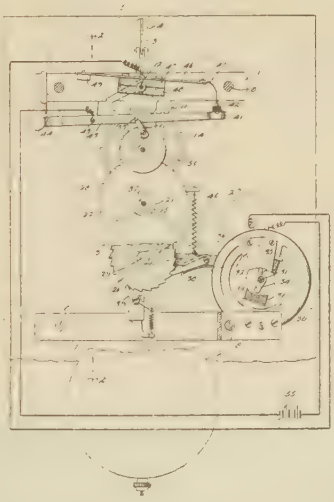
1,416,591. VALVE. HARRY WILHELMS, Philadelphia, Pa. Original application filed Feb. 2, 1921, Serial No. 441,753. Divided and this application filed Feb. 16, 1922. Serial No. 536,906. 1 Claim. (Cl. 251—46.)

A valve consisting of a valve body, a partition in said body, a valve seat formed with said partition and having an arcuate upper edge, a valve stem casing detachably connected with said body, said casing having a chamber at its inner end and a longitudinal valve stem opening communicating with said chamber, a seat formed in the casing between the chamber and valve stem opening, a valve stem passing through said opening, a sealing member formed with said stem and adapted to engage said seat when the valve stem is moved outward, an integral housing formed with the inner end of the valve stem, the open end of said housing being internally threaded, a head located in said housing, a retaining ring having



external threads for screwing the same into the housing to loosely hold said head within said housing, lugs on said ring whereby the same may be rotated, spaced ribs formed with said head converging toward their lower ends, a disc enclosure formed with the lower ends of said ribs, a pin projecting from the center of said disc enclosure, a compressible disc mounted on said pin within the enclosure, means engaging said pin for holding the compressible disc in place, said disc adapted to engage the valve seat when the valve stem is moved inward, and a cap on the outer end of the valve stem casing.

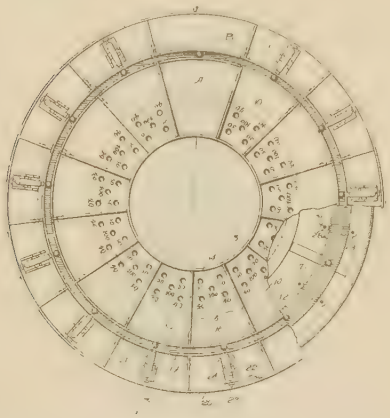
1,416,592. CLOCK-CIRCUIT-CONTROL DEVICE. GEORGE A. ALBRIGHT, Atlanta, Ga. Filed Feb. 4, 1920. Serial No. 356,314. 7 Claims. (Cl. 58—41.)



7. An electric circuit control for a time indicating device including means to operate said time indicating device, a pair of electric contacts, one continuously oscillating, and the other periodically actuated and brought into contact with the oscillating contact thereby pro-

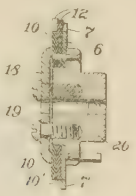
viding energy for said time device operating means, said periodically actuated contact comprising a mercury cup into which the oscillating contact immerses.

1,416,593. GAME APPARATUS. Arthur Alexander, Brooklyn, N. Y. Filed Nov. 22, 1920. Serial No. 425,849. 1 Claim. (Cl. 46—57.)



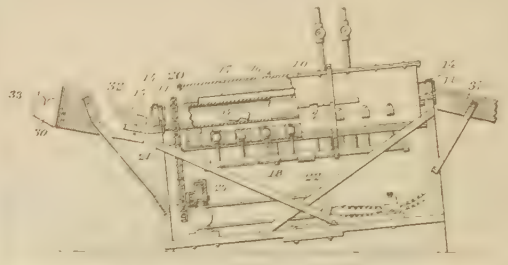
An apparatus of the class described including a table, a structure adjacent to said table at which players may station themselves, said structure and table being spaced to present a slot therebetween, shooters mounted on said structure and disposed toward the table, a traveling target carrier in the form of a flat ring beneath and forming a closure of said slot, said ring extending beneath both the said structure and said table, and rollers on the table and on said structure at the under side, on which rollers the said ring is supported at each side laterally of said slot, and target supports on said carrier between the table and said structure adapted to receive targets for carrying the targets past the shooters between said shooters and the table, said shooters adapted to be projected into the path of movement of the targets for dislodging the latter.

1,416,594. CALL-BOX TRANSMITTER. Albert Atherton, New Brunswick, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed July 2, 1920. Serial No. 393,588. 2 Claims. (Cl. 177—378.)



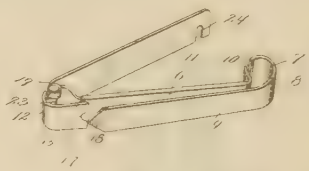
1. In a signal transmitter having a toothed break wheel and contact pens adapted to engage the periphery of the exposed teeth of said wheel as it is rotated, an insulating element comprising a plurality of like disks of greater diameter than said wheel, each provided with a series of frangible peripheral teeth alternating with like spaces or notches, the disks being positioned so that the teeth of one are opposite the notches of the other, whereby any desired code grouping of break wheel teeth may be exposed by removing the corresponding teeth of the insulating element.

1,416,595. ROTATING LEER AND METHOD OF OPERATING THE SAME. James Bailey, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Mar. 17, 1919. Serial No. 283,062. 10 Claims. (Cl. 49—47.)



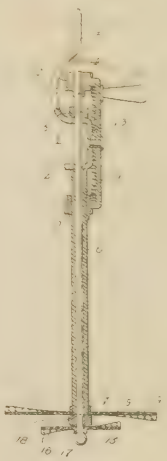
1. The herein described method of feeding an article through a heat treating zone, which consists in rotating the article about an axis inclined at an oblique angle to the direction of feed.

1,416,596. HAIR CURLER. Emma D. Baker, Nashville, Tenn. Filed Nov. 18, 1921. Serial No. 516,117. 4 Claims. (Cl. 132—41.)



1. In a hair curler, a main intermediate member having a suitable covering, and a closing tongue and clamping member respectively disposed on opposite sides of the intermediate member and respectively continued from one extremity of the latter and hinged to the opposite extremity through the medium of terminal bends in the form of loops and hinged connecting devices.

1,416,597. WHIPPER. Einar H. Berg, Chicago, Ill. Filed Aug. 13, 1920. Serial No. 403,366. 1 Claim. (Cl. 259—132.)



A whipper comprising a shaft having a spherical end, a sleeve mounted upon the major portion of said shaft, a handle formed of flat metal bent to provide parallel horizontal portions and a connecting vertical portion, said shaft extending through said horizontal portions and the lowermost of said horizontal portions resting upon the upper end of said sleeve, a collar pinned upon said shaft

and engaging the uppermost of said horizontal portions, beating paddles mounted one upon the lower end of said sleeve and one upon said shaft and in engagement with said spherical head, a bevel gear rotatably carried by said vertical portion and means connecting said gear and shaft.

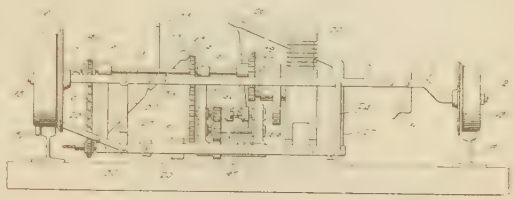
1,416,598. DISPLAY BOX. JESSE A. BLOCH, Wheeling, W. Va. Filed Apr. 26, 1921. Serial No. 464,630. 2 Claims. (Cl. 206—44.)

1. A merchandise container comprising a receptacle, a cover having side and end flaps adapted to be received by the receptacle between the walls thereof and the contained merchandise, display matter on the inner face of the top of said cover and on the inner faces of said flaps, said cover adapted to be turned into open position on the line between its top and one side flap, and the other side and end flaps adapted to be turned into the plane of the top of the cover and complete the display matter thereon.

1,416,599. BATH FITTING. LEON BLOCH, New York, N. Y. Filed July 20, 1918. Serial No. 245,929. 3 Claims. (Cl. 4—24.)

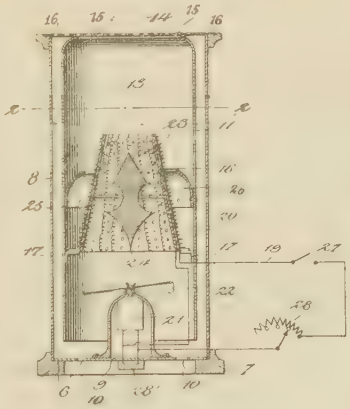
1. A bath fitting comprising a substantially globular member having a valved intake passage, the said member being open at one side, the intake passage having threaded walls, the said member having an overflow passage surrounding the walls of said inlet passage, an annular flange at the open side of said member, the member having an integral branch adapted for connection with a standard waste pipe, an overflow plate arranged in horizontal alignment with the open side of the member, and a threaded discharge nozzle operatively connected with the threaded walls of said intake passage and also operatively connected with said overflow plate, whereby an adjustment of the nozzle to effect its attachment to the structure will draw the flanged open side of the member and the inner face of the overflow plate respectively against the opposite sides of the wall of a tub or like fixture.

1,416,600. RAIL-DRILLING DEVICE. PAUL G. BODWELL, Griffin, Ga. Filed Oct. 25, 1920. Serial No. 419,384. 1 Claim. (Cl. 77—8.)



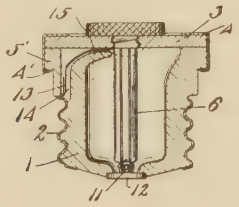
A device of the character described comprising an elongated substantially rectangular supporting frame mounted upon wheels adapted to travel upon rail-road tracks, a plurality of depending hangers pivotally connected with the sides of said frame and all of the same length, an auxiliary frame of less dimensions than said main frame pivotally connected with the lower ends of the hangers and disposed in parallel relation below the main frame when in lowered position, a lever connected with said auxiliary frame whereby the same may be swung upwardly, a depending catch member secured upon the main frame and engageable by the auxiliary frame whereby to hold the latter elevated, a pair of arms pivoted upon the sides of the auxiliary frame and having their free ends formed as hooks engageable over a rail, a lever pivotally connected with said arms and extending upwardly in an inclined direction and formed with a retaining notch, and a transverse catch carried by the main frame engageable by said notch whereby to hold said arms out of engagement with the rail and a drilling mechanism carried by the auxiliary frame.

1,416,601. COMBINED HEATER AND VENTILATOR. ROBERT G. BOONE, Asbury Park, N. J. Filed Sept. 7, 1920. Serial No. 408,710. 2 Claims. (Cl. 219—39.)



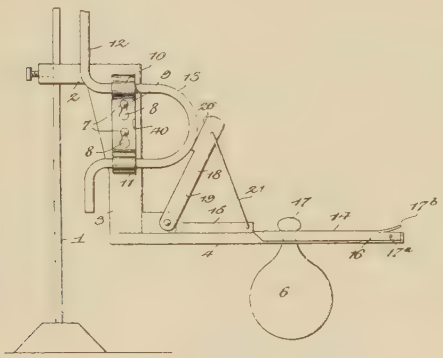
1. A structure of the class described comprising, a hollow open ended column, a concentric shell associated with the column and having its walls spaced from the walls of the column so as to provide a heat insulating chamber between the respective walls, a heating element in said shell, and means for drawing cold air into the shell and for subjecting said air to the action of the heating element and for subsequently discharging the heated air from the shell, said means serving to produce a down draft in the space between the walls of the shell and the walls of the column, as and for the purpose specified.

1,416,602. FUSE PLUG. FRANK W. BOYD, Spokane, Wash., assignor of one-third to Joseph A. O'Connell, Spokane, Wash. Filed Aug. 18, 1919. Serial No. 318,303. 3 Claims. (Cl. 200—128.)



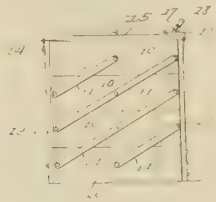
1. The combination in a fuse plug with a hollow base member and its open center cover and retaining means for said cover, of a fuse stem having an exterior head and fitted in said cover, a contact member seated in the base member for attachment with the stem, a fuse ribbon within the stem, an exterior contact shell on the base member, a metallic conductor strip extended from the cover to the shell, and means for shielding said strip for the purpose described.

1,416,603. SIPHON CONTROL DEVICE. AUGUST WILLIAM BRATER, New York, N. Y. Filed Aug. 20, 1920. Serial No. 404,930. 7 Claims. (Cl. 137—104.)



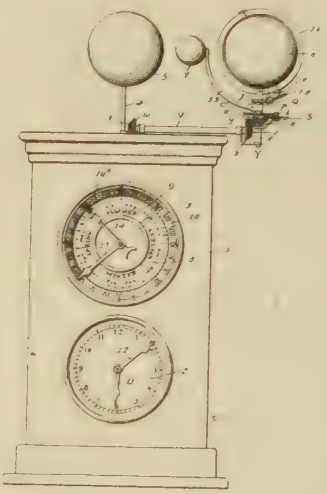
6. In a device of the class described, the combination of a flexible tube, means for supporting said flexible tube in curved formation, a pivoted member operable to effect kinking of said tube, a float, and a pivoted member operable by said float and adapted to operate the first said pivoted member for effecting kinking of said tube.

1,416,604. EGG CASE. JAMES S. BROWN and ROY R. JOHNSON, Warba, Minn. Filed June 8, 1921. Serial No. 475,902. 3 Claims. (Cl. 217—8.)



1. A folding crate or case having a plurality of trays adapted for arrangement in co-extensive superposed relation and connected by pivotal links mounted upon the side walls thereof, the uppermost and lowermost trays being provided respectively at their rear and front sides with downwardly and upwardly extending uprights, and a cover hingedly mounted upon the rear uprights in covering relation with the uppermost tray and adapted for attachment at its front edge with the upper ends of the front uprights.

1,416,605. ASTRONOMICAL CLOCK. MICHAEL BULKA, Gardner, Mass., assignor, by direct and mesne assignments, to Astronomical Clock Manufacturing Company, Chicago, Ill., a Corporation. Filed Dec. 1, 1919. Serial No. 341,585. 1 Claim. (Cl. 58—3.)

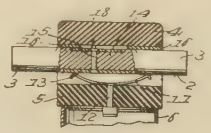


In an astronomical clock, a year hand, a twenty-four hour hand, clock mechanism for rotating said hands, a dial, and a revoluble annulus associated with the dial and having means engaged by the year hand for the movement of the annulus by said hand, said annulus bearing on its face figures representative of the hours in a day and arranged in two series of one to twelve each in regular sequence.

1,416,606. CHLORINE DERIVATIVES OF HEXAMETHYLENTETRAMINE. ROMOLO BURATTI, Croce Mosso, Italy. Filed June 18, 1918. Serial No. 240,700. 3 Claims. (Cl. 266—141.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A process for the production of stable chlorine derivatives of hexamethylentetramine consisting in neutralizing by an acid, a solution of a hypochlorite of one of those metals classified in the two first metal groups, and in adding to said neutralized solution a solution of hexamethylentetramine.

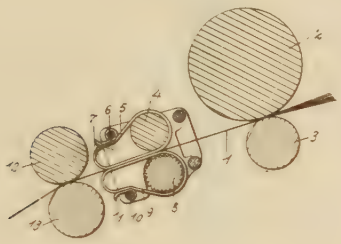
1,416,607. LAMP SOCKET. WALTER M. CARTER, Portsmouth, Va. Filed Feb. 11, 1919. Serial No. 276,272. 2 Claims. (Cl. 173—355.)



1. A device of the kind described comprising a body having means for engagement with the respective terminals of a lamp base, a circuit closing element slidably mounted in the body, contact plates carried by the circuit closing element on opposite sides thereof but electrically connected, a bowed spring having electrical connection with one of the means of said body and mounted in the body for contact with one of the plates of the circuit

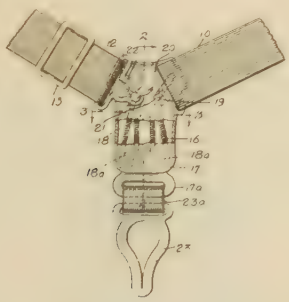
closing element, and a pair of contact plates carried by the body above the circuit closing element for engagement with one of the plates carried by the circuit closing element, the spring tending to raise the circuit closing element toward the said pair of contact plates carried by the body in the manner and for the purpose specified.

1,416,608. DRAWING MECHANISM FOR TEXTILE ROVINGS, WITH FEEDING BELTS. FERNANDO CASABLANCAS, Sabadell, Spain. Filed Feb. 17, 1921. Serial No. 445,782. 2 Claims. (Cl. 19—131.)



1. A drawing mechanism comprising a pair of feeding rollers, a pair of drawing rollers situated apart from the feeding rollers, a pair of slack belts between the drawing and feeding rollers and adapted to bear yieldingly upon the roving at opposite sides, an idle roller in the upper of said belts bearing upon the lower belt, and a driven roller engaged through the lower belt beneath said upper roller, said drive roller having inclined teeth thereon with points projecting at an angle, such angle being in the direction of rotation of the teeth, such teeth adapted to engage in the belt to drive the lower belt without slipping.

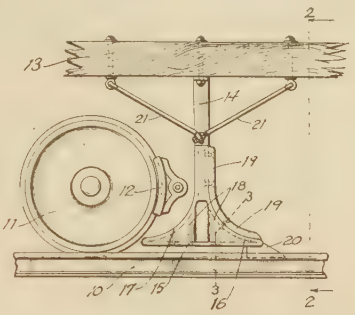
1,416,609. GARMENT SUPPORTER. HOLGER V. CLAUSEN, New York, N. Y. Filed Mar. 30, 1921. Serial No. 456,927. 8 Claims. (Cl. 241—6.)



1. A garment supporter of the class described, including a shield having slots at opposite sides of the medial line of the shield and oblique thereto, a spring within the shield, a band, and connecting means between the band ends and said spring, said means extending through said slots and movable therein to subject the band to the tension of the spring.

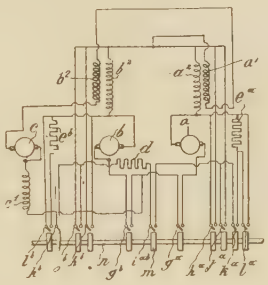
1,416,610. SAFETY FENDER FOR CAR WHEELS. FREDERICK K. COCHRAN, Los Angeles, Calif. Filed June 20, 1921. Serial No. 479,011. 5 Claims. (Cl. 293—58.)

1. A safety fender for car wheels comprising a vertically disposed arm adapted to be attached to a part of a car, a substantially hollow fender carried by the lower portion of said arm and adapted to be disposed immediately in front of a car wheel and above the track rail upon which said wheel operates, the front portion of said fender being curved, and a flange depending from the inner edge of the front end of said fender which flange



extends downwardly below the plane occupied by the tread portion of the rail above which the fender is positioned.

1,416,611. ELECTRICAL DRIVING MEANS. EMMANUEL LOUIS PAUL COLARDEAU, Paris, France, assignor to Henry Crochat, Paris, France. Filed Oct. 27, 1917. Serial No. 198,836. 3 Claims. (Cl. 172—239.)

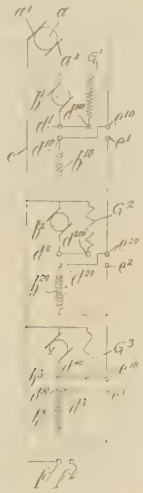


2. An electric driving gear for vehicles of the type comprising two motors in conjunction with an engine-driven generator, said motors being adapted to drive shafts individual thereto, differences in the speeds of the two motors operating to turn the vehicle, said driving gear embodying two motors, the field winding of each of which is divided into a first and a second cumulative element, the first element of the field winding of one motor being connected in series with the first field winding element of the other motor, such series connection beginning with one pole of the engine-driven generator and ending with a branching point, the second field winding element of each of the two motors being connected between said branching point and one of the brushes of the respective motors, in combination with means for shunting the second field winding element of either one of the motors, means for inserting a variable resistance into the armature supply circuit of either of the motors, means for interrupting the armature supply circuit of either of the motors, means for interrupting the armature supply circuit of either of the motors and simultaneously shunting a circuit part comprising the armature and the second field winding element of the corresponding motor, and means for interrupting the armature circuit of one of the motors and shunting such armature circuit.

1,416,612. ELECTRIC MOTOR. EMMANUEL LOUIS PAUL COLARDEAU, Paris, France, assignor to The Society Etablissements Henry Crochat, Paris, France. Filed Nov. 13, 1919. Serial No. 337,747. 1 Claim. (Cl. 172—179.)

An electric system adapted to be applied to a train of vehicles comprising a generator, a plurality of electric

motors for driving some of said vehicles, each of said motors including armature and field windings connected in series and shunted across the terminals of the generator, a resistance for each motor adapted to be shunted across the armature thereof, said resistance being arranged so

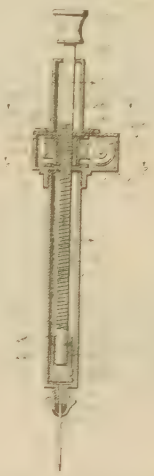


that their braking actions on the armatures increase gradually from the first to the last motor driven vehicle of the train, and shiftable contacts for rendering said resistances operative and connecting the field windings of said motors in series in a circuit with the terminals of said generator.

1,416,613. TRAIN OF VEHICLES. EMMANUEL LOUIS PAUL COLARDEAU, Paris, France, assignor to The Society Etablissements Henry Crochat, Paris, France. Filed Nov. 13, 1919. Serial No. 337,748. 1 Claim. (Cl. 280—33.5.)

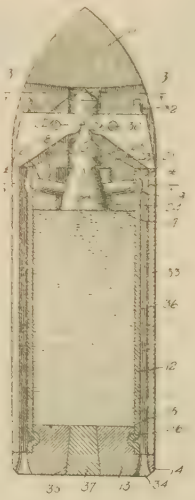
In a train of vehicles in which the distance between the wheels of one vehicle, and the distance between the front wheels of a trailing vehicle and the rear wheels of the towing vehicle are normally equal to each other, the combination of a coupling bar, pins inserted through respective ends of said bar and the corresponding truck of the vehicles for pivotally connecting said bar to the rear truck of the towing vehicle and the front truck of the trailing vehicle, a gear on each of said pivot pins secured to each of said trucks, a toothed wheel mounted loosely on each of said pivot pins, the rear end of the coupling bar being secured to one of said toothed wheels, a pin mounted in the frame of the vehicle parallel to said pivot pin, two pinions secured together and loosely mounted on said second pin, the said pinions engaging with the toothed wheel and gear respectively, said toothed wheel, gear and pinions having such relative diameters that to each angular movement of the coupling bar corresponds half as great an angular movement of the trucks.

1,416,614. SYRINGE WITH PROGRESSIVELY-GRADUATED AUTOMATIC ACTION. JULES COURNAND, Paris, France. Filed Nov. 28, 1913. Serial No. 803,556. 4 Claims. (Cl. 128—218.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



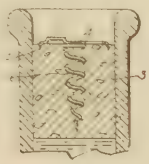
1. In a hypodermic syringe, the combination of a barrel, a screw threaded rod slidably but non-rotatably mounted in said barrel and carrying a piston at one end operable in said barrel, a nut rotatably mounted at one end of said barrel and meshing with said rod for moving the latter and said piston longitudinally in said barrel, a flexible member having a swiveled connection with said barrel, a flexible power driven rotary shaft mounted within said member, and gearing interposed between said shaft and said nut for rotating the latter, said gearing permitting said member to swing upon its swiveled connection with said barrel to permit said member to be maintained in parallel relation with said barrel.

1,416,615. OIL PROJECTILE. EDWIN R. CRAMER, Newark, and OSCAR H. CRAMER, Edgewater, N. J. Filed Mar. 23, 1921. Serial No. 454,666. 5 Claims. (Cl. 102—35.)



1. A projectile of the character described including a container shell having a closed weighted end and an open end, a nose constituting a closure for said open end, interengageable means provided respectively on the shell and closure for normally retaining said closure in closed relation with respect to the open end, said means being disengageable when the force of the projectile is spent by the vertical descent of the projectile with its weighted end foremost, whereby to effect separation of the container from the closure.

1,416,616. NONREMOVABLE CORK. LOUIS CRANE, New York, N. Y. Filed Apr. 16, 1921. Serial No. 461,867. 3 Claims. (Cl. 215—55.)

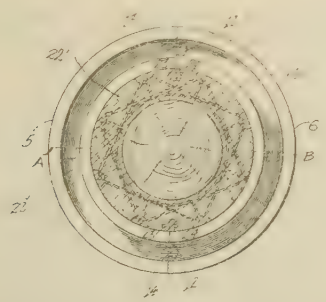


1. An attachment for corks of bottles or other containers, which comprises a metallic plate attached to and substantially covering the upper surface of the cork, a key having projecting lugs on its lower end, and struck-up portions on the plate adapted to engage with the lugs on the key whereby the plate and the cork may be removed from the bottle.

1,416,617. CUE HOLDER. DOMENICK M. CUA, Sandusky, Ohio. Filed June 6, 1921. Serial No. 475,413. 2 Claims. (Cl. 46—6.)

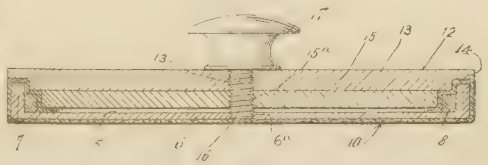
1. A cue holder comprising a pair of supporting strips, cross members connecting said strips, a substantially semi-cylindrical sleeve section supported on said cross members, a substantially semi-cylindrical sleeve section hinged thereto and adapted to cooperate with said first section to form a sleeve for the reception of the cue, said sleeve being provided with a closed end and an open end, and a supporting member spaced from said open end and arranged in alinement with said sleeve.

1,416,618. PILE PROTECTOR. WALTER E. DASHWOOD, San Francisco, Calif. Filed Apr. 23, 1921. Serial No. 464,023. 1 Claim. (Cl. 20—100.)



In a device for protecting piles, a plurality of segmental sections assembled to form superposed cylinders, the adjacent segments being connected by interlocking means, and additional means for securing the sections one to another, said means comprising lugs placed on the inner peripheries of the segments and cross ties connecting said lugs.

1,416,619. FINGER-NAIL BUFFER. HENRY E. DAVIS, Boston, Mass., assignor to C. J. Bates & Son, Chester, Conn., a firm composed of Carlton J. Bates and Hamilton C. Bates. Filed Apr. 10, 1920. Serial No. 372,979. 4 Claims. (Cl. 132—78.)



1. In a device of the character described, a metal frame comprising a base and an upstanding marginal flange, a band arranged within said frame against said marginal flange and co-extensive therewith whereby said flange and said band present steps, buffing fabric surrounding the frame and overlying the steps thereof, a combined cover and clamp including a body portion receivable in said frame and having its marginal edge adapted to engage the buffer cloth overlying the band and having a laterally extending flange engageable with the buffer cloth overlying the top of the upstanding flange, a filler block arranged between the base and the body portion, said base, said body portion and said filler block having alined openings, a machine screw having threaded engagement with the walls of said openings and a handle for operating said machine screw and manipulating said device.

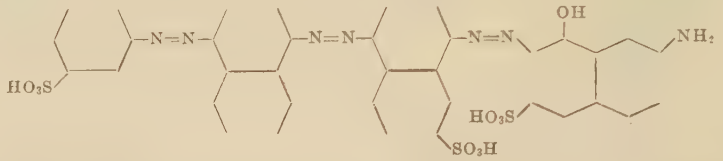
1,416,620. WELL-ROD SOCKET. JAMES A. DAY, Oilfields, Calif. Filed Mar. 16, 1921. Serial No. 452,743. 4 Claims. (Cl. 294—90.)

1. In means for gripping a rod having an enlarged end, a tube adapted to loosely fit on said enlarged end, two

oppositely arranged spades, capable of vertical movements, pivotally suspended in the wall of said tube, a ring between the spades adapted to hold the same in spaced relation, the blades of the spades extending inside the tube and being adapted to recede into the wall when raised, the enlarged end of the rod being adapted to raise said blades in passing the same and the latter being adapted to drop and lock said enlarged end after the same has passed them.

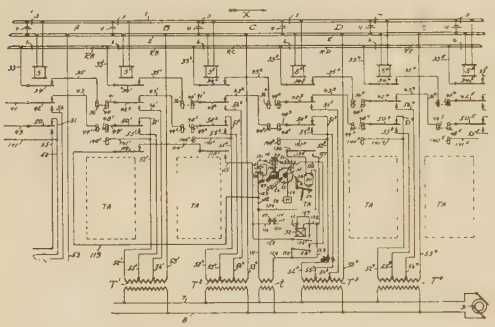
1,416,621. MANUFACTURE OF DIAZOTIZABLE TRISAZO DYES. JENS DEDICHEN, Berlin-Halensee, Germany, assignor to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Aug. 15, 1921. Serial No. 492,482. 2 Claims. (Cl. 260—72.)

2. The new trisazo dyes which are derived from metanilic acid, 1-naphthylamine, 1-naphthylamine-6-(7)-sulfonic acid and 2-amino-8-naphthol-6-sulfonic acid and probably corresponds to the formula:



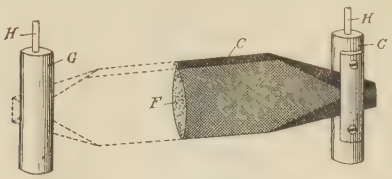
in the shape of pulverized dry sodium salt being a blackish powder soluble in water to a bluish black solution not being altered by soda lye but by hydrochloric acid the dye being separated; soluble in concentrated sulfuric acid to a blackish green solution from which the violet black dye settles out on addition of ice; being destroyed by strong reducing agents; dying cotton reddish blue tints, after diazotation and combination with 2-naphthol or meta-toluylene-diamine turning to bluish gray.

1,416,622. AUTOMATIC TRAIN-CONTROL SYSTEM. FRANK L. DODGSON, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Feb. 23, 1917. Serial No. 150,499. 26 Claims. (Cl. 246—182.)



23. A train control system comprising means including track devices for imposing predetermined speed restrictions on passing vehicles at a plurality of control points in the braking distance thereof, and trackway means responding to the speed of trains for modifying the action of said track devices braking distance in the rear of such train and thereby permit higher speeds for a following vehicle.

1,416,623. ELECTRIC DISCHARGING TUBE. BRUNO DONATH, Friedenau, near Berlin, Germany. Filed Oct. 1, 1914. Serial No. 864,536. 2 Claims. (Cl. 250—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



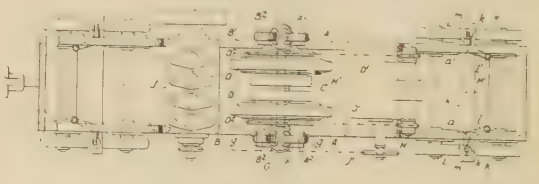
1. An electric discharge tube having a cathode adapted to become incandescent, comprising a container of refractory material and good electrical conductivity, said container having thin metallic perforated walls and a metallic combination therein there being also a coating of metallic combination on the outside of said container

1,416,624. FIGURE TOY. MICHAEL JOHN DUFF, Bridgeport, Conn. Filed Nov. 29, 1920. Serial No. 427,124. 7 Claims. (Cl. 46—40.)

1. An article of manufacture, comprising intersecting members set an angular positions with respect to each other to provide faces, each of said faces having thereon a part of a whole picture, and said article adapted to be

rotated, whereby said part pictures will appear to blend with each other and produce an illusion of movement.

1,416,625. LOCOMOTIVE FOR LIGHT RAILWAYS. FRANK HENRY DUTTON, Johannesburg, Transvaal, South Africa, assignor to Roadrails, Limited, London, England. Filed Aug. 22, 1921. Serial No. 494,181. 12 Claims. (Cl. 105—26.)

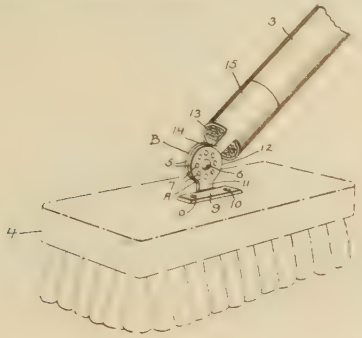


1. In a light railway vehicle in combination, a bogie, a frame supported on said bogie and self steering connections between the said frame and said bogie substantially as set forth.

1,416,626. STAFF OR HANDLE CONNECTION. THOMAS A. ENGLISH, North Albany, N. Y. Filed June 22, 1920. Serial No. 390,822. 1 Claim. (Cl. 306—17.)

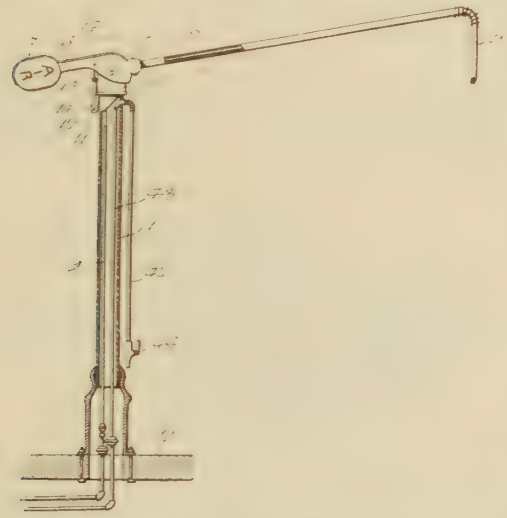
A staff or handle connection, in combination with a brush, a sleeve secured to the handle having an extension, a disk formed integral with the extension and offset therefrom, an annular series of recesses formed in said disk, a plate secured to the brush head having a vertical extension, a disk formed integral therewith of the same diameter as the first mentioned disk, depressions arranged in the second mentioned disk forming projections fitting

in the recesses of the first mentioned disk, and a pivot pin connecting the said disks, the latter having sufficient



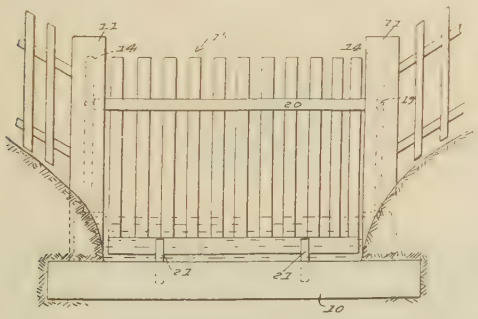
resiliency to permit adjustment of the handle upon application of force.

1,416,627. AIR SERVICE STATION. ARNO ARTHUR EWALD, Oakfield, Wis. Filed Oct. 21, 1920. Serial No. 418,497. 6 Claims. (Cl. 299—77.)



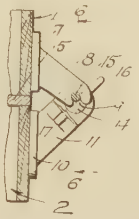
1. A tire inflating device comprising a standard, a head swiveled on the upper end of said standard, a vertically swinging arm pivotally mounted on said head and carrying a tire inflating hose, counterbalancing means for returning said arm to a normally raised position after use, and means movable bodily with said head for checking and cushioning the return movement of said arm.

1,416,628. WATER GATE. THOMAS F. FERGUSON, Hollywood, Ala. Filed June 8, 1920. Serial No. 387,397. 3 Claims. (Cl. 39—4.)



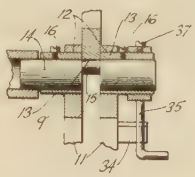
1. A water gate having posts or uprights, buoyant foot blocks guided by the posts or uprights, means for swingingly supporting the gate at its upper end from the buoyant blocks, and means for limiting the swinging movement of the gate proper when the foot blocks are in their normal positions.

1,416,629. ECCENTRIC HINGE FOR MOLDING FLASKS. JOHN FISHER, Los Angeles, Calif. Filed Feb. 21, 1921. Serial No. 446,792. 3 Claims. (Cl. 22—105.)



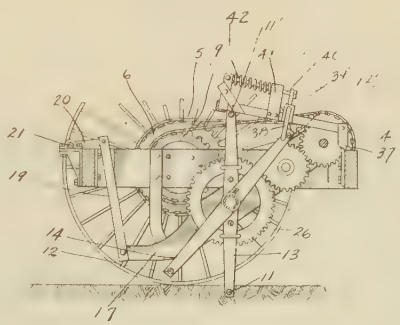
1. A molding flask comprising a cope and drag having a separable hinge connection for adjustment of the axis thereof relative to the flask, said adjusting means including a pivot rod having locking pins, and means arranged to be engaged by the respective pins in order to lock the hinge connection in adjusted positions.

1,416,630. HINGE FOR MOLDING FLASKS. JOHN FISHER, Los Angeles, Calif. Filed Apr. 23, 1921. Serial No. 463,929. 2 Claims. (Cl. 22—105.)



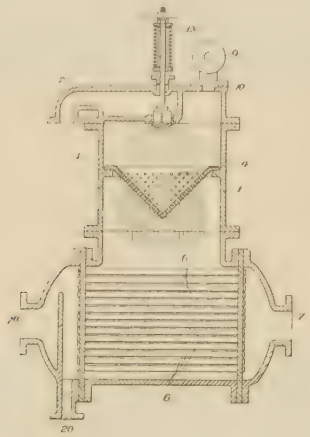
1. A molding flask comprising a cope and drag having a hinge connection including bearings at opposite ends of said flask and a bearing rod journaled in said bearings, and means for adjusting the length of said bearing rod to accommodate the hinge connection to flasks of varying length.

1,416,631. WEEDING IMPLEMENT. JOHN L. FLORIN, Davenport, Wash. Filed Oct. 18, 1921. Serial No. 508,564. 7 Claims. (Cl. 97—25.)



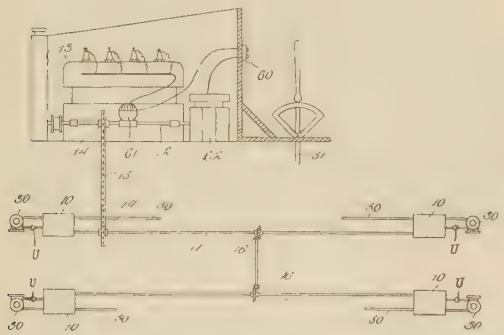
1. In a weeding implement the combination with a rotary reel comprising a plurality of relatively movable weeding devices, of means for intermittently rotating said devices, and means for alternately holding said devices stationary in operative position.

1,416,632. APPARATUS FOR REMOVING GASES FROM LIQUIDS. HARRY FOTHERGILL, London, England. Filed Dec. 27, 1921. Serial No. 524,934. 10 Claims. (Cl. 183—3.)



1. Apparatus for removing gases from liquids comprising a vessel having an upper part constituting a direct contact condenser and a lower part constituting a surface heater, means for introducing the liquid to be treated into the upper part, means for causing said liquid to fall in a shower from the upper part on to the heated surface, said means extending from one side of the vessel to the other, an outlet for air in the upper part, said outlet being located above the liquid inlet whereby the incoming liquid operates by direct contact to condense liquid vapour rising with the air from the heated surface and permits the air to pass off to the air outlet.

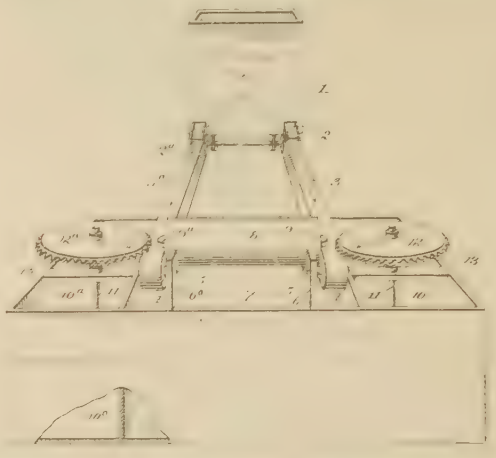
1,416,633. JACKING APPARATUS. JOHN GUTMANN, Jr., Ridgewood, N. Y. Filed Apr. 12, 1921. Serial No. 460,845. 7 Claims. (Cl. 254—103.)



1. The combination of a mechanically operable jack, motor driven mechanism for operating said jack, and manually and automatically operable mechanism for controlling the operation of said first mentioned mechanism.

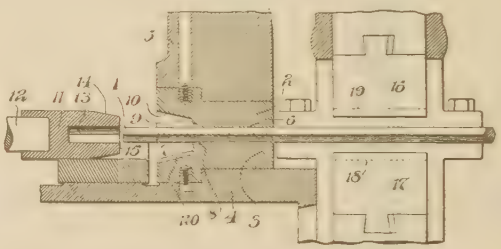
1,416,634. PROCESS AND APPARATUS FOR CONCENTRATION AND SEPARATION OF DIAMAGNETIC MINERALS. WILLARD C. HALL, Butte, Mont. Filed Aug. 4, 1921. Serial No. 489,771. 8 Claims. (Cl. 83—71.)

1. The herein described process of separating diamagnetic minerals from ores containing the same, which consists in passing such ore in a comminuted condition through an intensified magnetic flux established between the pole of an electro-magnet and a movable magnetic conductive member placed adjacent the pole and spaced therefrom, whereby there are produced in the mineral



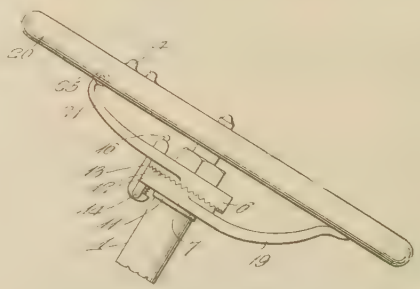
particles molecular currents flowing in one direction only, thereby causing the particles to pass to and become adherent to said moving member.

1,416,635. FORGING MACHINE. FRANK A. HALLECK, Oak Park, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 6, 1917. Serial No. 152,871. 9 Claims. (Cl. 76—95.)



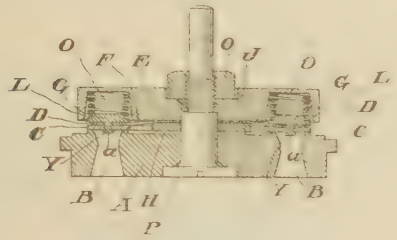
1. In a forging machine for drill steels, relatively movable clamping members provided with a plurality of recesses, and a dolly movable into one of said recesses to define with said clamping members the limits of another of said recesses into which material to be forged may be upset.

1,416,636. FOLDABLE STEERING WHEEL. DORRIS A. HANES, San Antonio, Tex. Filed Sept. 15, 1921. Serial No. 500,942. 5 Claims. (Cl. 74—33.)



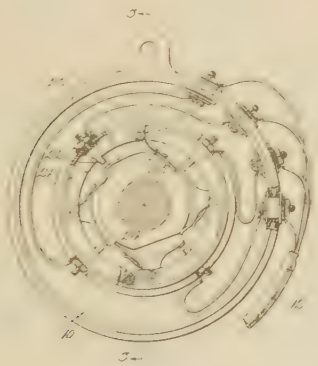
3. A steering wheel comprising a hub member, a pair of rigid spokes extending therefrom and having knuckles on their outer ends, a continuous unbroken wheel rim having a pair of socket members at its lower side and pivotally receiving said knuckles to permit swinging of the wheel rim out of its operative plane, and releasable means for holding said wheel rim normally in said plane.

1,416,637. PLATE VALVE. THOMAS J. HART, Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 29, 1921. Serial No. 456,597. 4 Claims. (Cl. 251—119.)



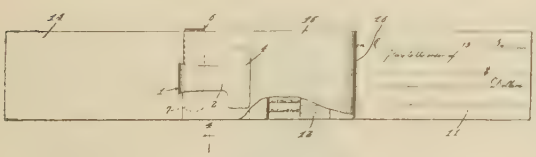
1. A valve comprising a seat, a valve plate, a valve guide, a spacing washer adapted to be assembled between the seat and guide, means connected to the seat and passing through the washer and guide for aligning the parts of the valve, safety devices cooperating between the washer and seat for insuring the assembling of the washer between the seat and guide and means for holding the parts of the valve together.

1,416,638. TIMER. DAVIDSON S. HAYNES, Evansville, Ind. Filed Apr. 2, 1920. Serial No. 370,700. 3 Claims. (Cl. 200—27.)



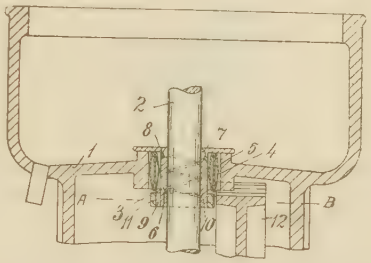
1. A timer including a cap, a ring within said cap, inwardly extending flanges forming a part of said ring, yokes rockingly mounted between said flanges, contact surfaces upon one of the arms of said yokes, lead terminals forming contact points in line with the contact surfaces of said yoke arms and means for rocking such yoke arms.

1,416,639. CHECK-PROTECTOR. ARLOW B. HIMES, Van Wert, Ohio. Filed Apr. 1, 1921. Serial No. 457,592. 3 Claims. (Cl. 101—3.)



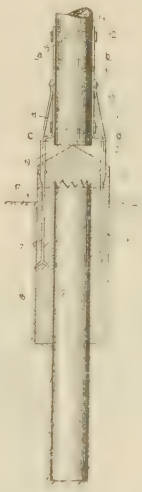
1. A check protector comprising a U-shaped member embodying arms provided with impression surfaces, and a U-shaped clip disposed substantially at right angles to the U-shaped member, the clip embodying a free ended arm, and an arm joined to one edge of one arm of the U-shaped member.

1,416,640. LUBRICATING DEVICE FOR MILK CENTRIFUGES AND THE LIKE. HALVOR HOLTE, Skien, Norway, assignor of one-half to A/S Separator, Skien, Norway. Filed Sept. 10, 1920. Serial No. 409,338. 5 Claims. (Cl. 64—56.)



1. In lubricating device for the spindles of milk centrifuges and the like of the kind in which the oil to be transmitted to the bolster is lifted from an oil well by a slowly moving member the combination of a substantially vertical bolster sleeve and a lubricating groove in said sleeve adjacent to the spindle, with an oil collecting channel in the lower part in said bolster sleeve, the mouth of which channel is situated so near to and at such an angle to the face of said slowly moving oil lifting member as to collect oil from the same and transmit it to said spindle lubricating groove.

1,416,641. MANUFACTURE OF REENFORCEMENTS FOR WOODEN POLES, MASTS, ETC., WHICH ARE SET IN THE GROUND AND HAVE BEEN DAMAGED BY WEATHER INFLUENCES. FRIEDRICH JAECKLE and PAUL MEHLHORN, Freiburg, Germany. Filed June 11, 1920. Serial No. 388,381. 5 Claims. (Cl. 72—84.)

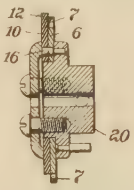


1. The method herein described of repairing poles, masts and the like which have been damaged by weather influences, consisting in anchoring a metal armor in a concrete base about the poles, securing the armor to the pole or mast above the damaged portion, severing the pole above and below the damaged portion and removing the damaged portion, and placing cement in the space occupied by the removed damaged portion.

1,416,642. CALL-BOX CONTACT MECHANISM. GEORGE W. JANSON, Brooklyn, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed July 2, 1920. Serial No. 393,654. 2 Claims. (Cl. 177—378.)

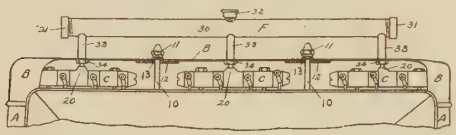
1. In a signal transmitter having a toothed break wheel and contact pens adapted to engage the periphery of the exposed teeth of said wheel as the latter is rotated, an in-

sulating disk having a greater diameter than said wheel whereby the pens are lifted from the latter when the disk and wheel are juxtaposed, the peripheral portion of the



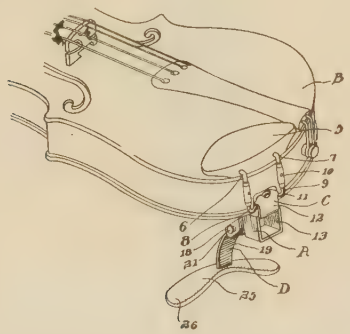
disk being composed of a series of scored frangible sections, and which may be readily removed as desired to expose any predetermined combination of said teeth.

1,416,643. OILING SYSTEM FOR EXPLOSIVE ENGINES. FRED L. JOHNSON, Concord, N. H. Filed Apr. 28, 1921. Serial No. 465,168. 3 Claims. (Cl. 184—18.)



1. The combination with an automobile engine having a valve oiling system comprising a plurality of oil reservoirs each of which has an adjustable head with a tapered oil inlet mouth, of a cover having neck holes, a master reservoir having a plurality of nipples leading therefrom each of which has a shoulder, a threaded neck which passes through a cover neck hole and a tapered end adapted to fit an oil inlet mouth, nuts screwed on said necks to hold the cover against the shoulders and together with the master reservoir, and means to detachably attach the cover to the engine, together with wicks each of which passes through a nipple.

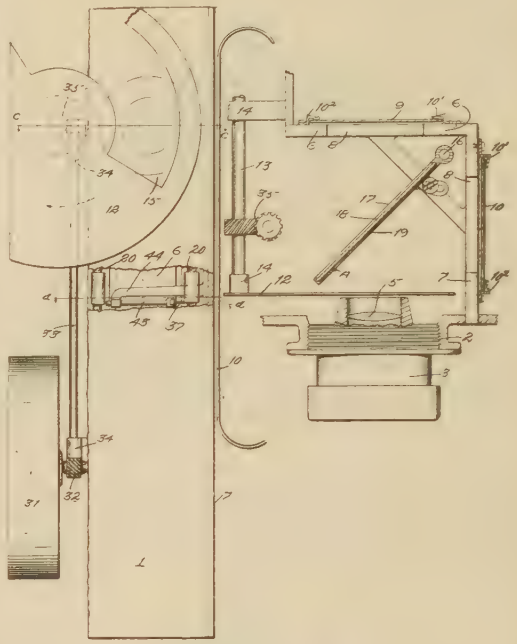
1,416,644. SHOULDER REST FOR VIOLINS. GEORGE W. JORDAN, Riverside, Calif. Filed Mar. 21, 1921. Serial No. 453,917. 3 Claims. (Cl. 84—278.)



3. A support for string instruments comprising a clip for adjustably engaging the instrument, a depending rest formed on the clip in position to engage the collar bone of the user, a forwardly extending downwardly inclined lip formed on the collar bone rest, a forwardly and downwardly extending arm detachably secured to said lip, and a transversely extending curved arm carried by the first mentioned arm for engaging the shoulder of the user.

1,416,645. DUPLEX CAMERA. CHARLES F. JONES, Los Angeles, Calif., assignor to Colorco, San Francisco, Calif., a Corporation of California. Filed Mar. 13, 1916, Serial No. 83,791. Renewed Dec. 15, 1919. Serial No. 345,125. 11 Claims. (Cl. 88—16.6.)

1. In a camera provided with a lens and shutter, a plurality of apertured walls therein one arranged transversely to said lens opening and the other parallel therewith in advance of said first wall and at substantially right angles thereto, said camera adapted for receiving a plurality of films one for movement over each of said walls for the simultaneous exposure of successive portions thereof to the light rays passing through said lens, a ver-

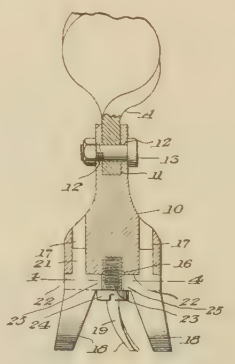


tically reciprocating carriage, a pair of horizontally reciprocating claw carrying frames carried thereby and arranged at approximately right angles to each other for cooperating with the respective films, and means for operating said shutter and for reciprocating said carriage and said frames.

1,416,646. PROCESS FOR DYEING SKINS, HAIRS, AND THE LIKE. OSKAR KALTWASSER, Berlin, and HANS OEHRN, Berlin-Charlottenburg, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Dec. 7, 1921. Serial No. 520,696. 2 Claims. (Cl. 8—5.)

1. The herein-described process for dyeing skins, hairs and like materials which comprises treating the material in the presence of a suitable oxidizing agent in a bath containing a 5-nitro-2-amino-1-oxy derivative of the benzene series.

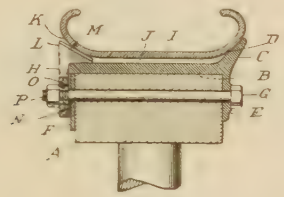
1,416,647. DRILL. NORMAN C. KING, Dubois, Pa. Filed June 13, 1921. Serial No. 477,294. 2 Claims. (Cl. 255—69.)



1. A device of the character described comprising a body provided at one end with means for connection with

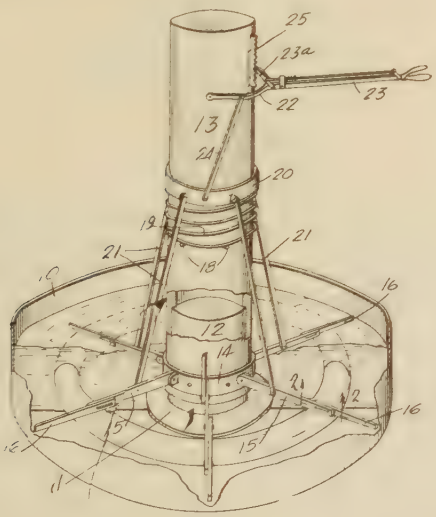
a drill rod and provided at its other end with a plurality of radial slots and passages communicating with said slots, the body being provided in its end with a threaded hole communicating with said slots, a plurality of blades engaged within said slots, and formed with extensions fitting within said passages, and a screw threaded into said hole and having a head engaging said blades.

1,416,648. RIM LUG FOR VEHICLE WHEELS. Ray Charles Kleffman, Hibbing, Minn. Filed Apr. 16, 1918. Serial No. 228,958. 6 Claims. (Cl. 301—20.)



1. In a wheel equipped with a demountable rim, the combination with means on the wheel for engaging a side portion of the rim for preventing relative movement of said parts axially of the wheel in one direction, of means for simultaneously preventing such movement in the opposite direction and relative rotation of said parts, comprising lugs adapted to be secured to the wheel felloe and each equipped with a wedge tongue adapted to pass between the wheel felloe and the opposed surface of the rim, said tongues having surface formations adapted to bite into the opposed surface of the rim.

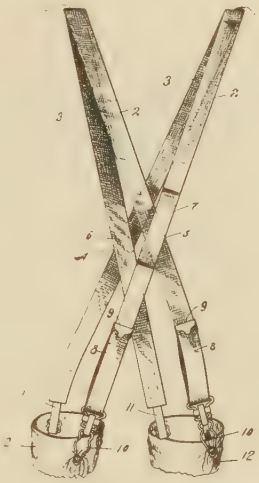
1,416,649. INNER-TUBE TESTER. Edward Knott, Los Angeles, Calif. Filed July 21, 1921. Serial No. 486,391. 6 Claims. (Cl. 73—51.)



1. In a testing device for pneumatic tire inner tubes and the like, a tank, a standard projecting upwardly therefrom, means for submerging an inner tube and forcing the same beneath the surface of the body of water contained within the tank including arms arranged for vertical swinging movement on said standard for engaging said tube.

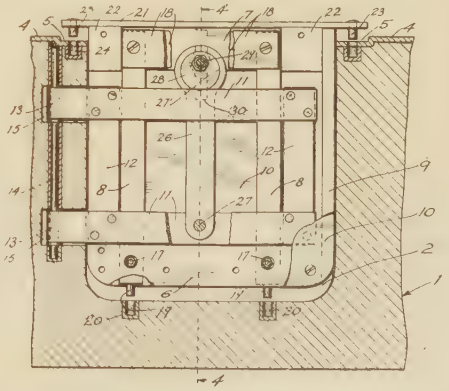
1,416,650. HOSE SUPPORTER. Nelly M. Lancaster, Palatka, Fla. Filed Feb. 5, 1921. Serial No. 442,816. 1 Claim. (Cl. 241—4.)

A hose supporter comprising two strips formed into shoulder-engaging bends each embodying forward and rear portions having free ends, the rear portions being crossed, and the forward portions being crossed, means for connecting the rear portions fixedly and permanently at their point of crossing; means on one forward portion for



receiving the other forward portion slidably at the point where the forward portions cross; and separate hose-engaging elements on the free lower ends of each of said portions.

1,416,651. AUTOMOBILE DOOR. Ernest L. Lanfair, Lanfair, Calif. Filed Sept. 3, 1920. Serial No. 407,938. 4 Claims. (Cl. 296—44.)

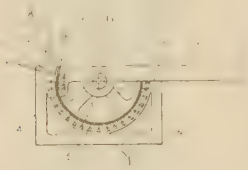


2. The combination, with a door frame, of a frame hinged to the side of the said door frame, a door structure carried by said hinged frame and movable vertically thereupon, a link pivotally connected at its lower end to the hinged frame, the upper end of said link being provided with an opening, an eccentric positioned within the opening in said link, and a handle carried by the vertically movable door structure and passing through said eccentric.

1,416,652. DRAFTING DEVICE. Walter J. Laubenheimer, Chicago, Ill. Filed Jan. 30, 1920. Serial No. 355,022. 3 Claims. (Cl. 33—93.)

1. A drafting device comprising a base formed with an arcuate undercut groove and scale marks along the groove, and an arm pivoted to the base member and having a bev-

eled edge portion moving in the groove and with a vernier co operating with the said scale, a pivot for said arm, and

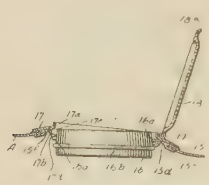


clamping means associated with said pivot for flatwise clamping action against the base and arm to hold the arm in adjusted positions.

1,416,653. GLOVE ATTACHMENT. ADOLF LENNEBERG, Yonkers, N. Y. Filed Mar. 11, 1921. Serial No. 451,478. 14 Claims. (Cl. 2—9.)

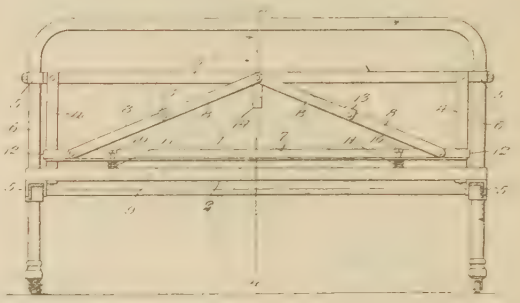
1. A device of the class described including a frame element adapted to be secured to the material of a glove at an opening thereof, said frame element being dished to accommodate itself to a wrist watch when imposed on the latter and thus be protuberant to the minimum extent, and a structure comprising a body fitting within said frame element, and a cover on said body.

1,416,654. VANITY-CASE ASSEMBLAGE. ADOLF LENNEBERG, Yonkers, N. Y. Filed Apr. 2, 1921. Serial No. 457,868. 6 Claims. (Cl. 224—28.)



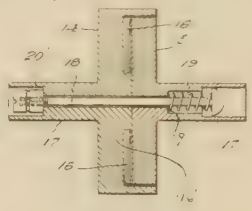
5. In an assemblage of the class described, a receptacle, and a separate frame thereon, said frame having a cover, and said receptacle presenting lateral ears at diametrically opposite sides at the exterior of the receptacle, said frame having an internal flange beneath which said ears may engage, said flange having a notch through which one of the ears may be passed.

1,416,655. BEDCLOTHES CLAMP. JOHN LUNDEEN, Portland, Oreg. Filed May 17, 1921. Serial No. 470,294. 3 Claims. (Cl. 5—22.)



1. A device of the class described comprising a frame having a bottom bar, a clamping bar for cooperating with the bottom bar of the frame, a slidable bar, means for yieldingly connecting the same with the clamping bar and toggle levers connecting the sliding bar with the top of the frame.

1,416,656. HINGE. STANLEY W. LYMAN, Billings, Mont. Filed Feb. 26, 1921. Serial No. 448,234. 1 Claim. (Cl. 16—142.)

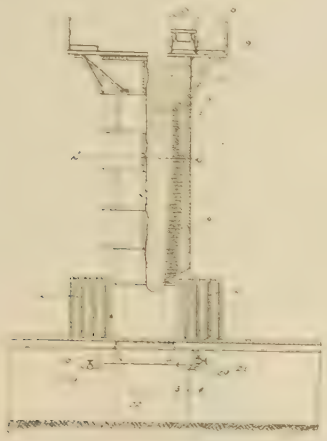


A device of the class described comprising a disc like member having a central opening and provided with a central enlargement, a plurality of teeth projecting from said member around said enlargement a second disc like member engaging said central enlargement and provided with a central opening in alignment with the opening in the first mentioned member, a plurality of teeth projecting from the second member and engaging the teeth of the first mentioned member, an annular flange projecting from the first mentioned member and surrounding the second member, squared extensions projecting from opposite sides of said members, provided with longitudinal openings in axial alignment with the openings in said members and having shoulders formed therein, a bolt extending through the openings aforesaid, a nut mounted on one end of said bolt and engaging one of said shoulders and a coil spring surrounding the opposite end of the bolt and exerting a pressure between the head thereof and one of said shoulders.

1,416,657. KILN. RICHARD K. MEADE, Baltimore, Md. Filed June 23, 1921. Serial No. 479,732. 2 Claims. (Cl. 222—3.)

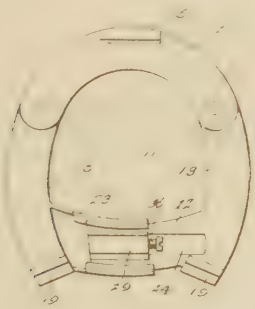
1. In a kiln for burning lime or the like the combination of an upright ore chamber, a coal burning furnace at the bottom of the chamber connected to the ore chamber so the latter acts as a stack, a stoking grate in the furnace composed of rocking sections and a drop bar means

for operating the stoking grate from outside the furnace, hopper feeding means for supplying the fuel to the grate



the bottom of the kiln and the furnace being closed normally and during stoking to prevent the admission of excess air to the kiln.

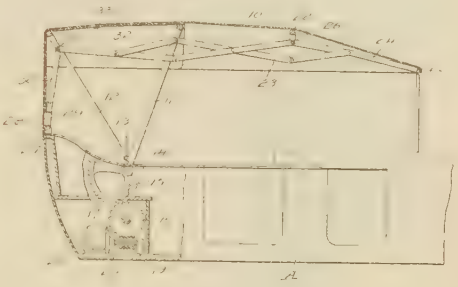
1,416,658. HORSESHOE. MICHAEL MICHELSEN, Newport News, Va. Filed Nov. 15, 1920. Serial No. 424,273. 2 Claims. (Cl. 168—19.)



1. In an expansible horseshoe, a toe portion which is arched in plan, and side portions pivoted to the ends of the toe portion, upwardly directed inwardly-curved fingers on the edges of the toe and side portions, inwardly directed flanges at the outer ends of the side portions, one of said flanges having its edges inturned to receive therein the flange of the second side portion, a lug between the inturned portions of the first-mentioned flange, the second-mentioned flange having a channeled portion to receive the lug, and means between said channeled portion and said lug for adjustably locking the flanges connected.

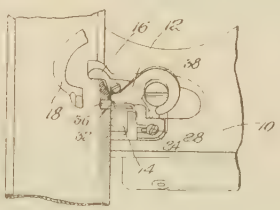
1,416,659. AUTOMOBILE TOP. DELTON C. WATT and FREDERICK A. GREARSON, Barre, Vt. Filed Oct. 5, 1915, Serial No. 54,226. Renewed Jan. 6, 1922. Serial No. 527,519. 7 Claims. (Cl. 296—117.)

1. In a foldable top, a top or cover, mechanims for operating said top to raise or lower it to its open or to its closed position, supporting bows for the top and forming a part of said top operating mechanism, a supporting body on which said bows are pivotally mounted, expansible devices pivotally connected to said bows and to said top, a protecting cover of co-operating sections located on said top and forming a part thereof and adapted upon the folding of the top to its closed position to fold with said top to form a housing for the supporting bows and a major portion of the top when in folded relation to each other, and motor mechanism continuously co-operating with said top operating mechanism at its pivotal point on said supporting body for continuously actuating the said top operating mechanism to move the top to its open position over the supporting body and in its move-



ment to lift a portion of said protecting cover to allow the forward end of the cover to move towards its open position and upon the folding of said top into its closed position, by the operation of said top operating mechanism for lowering the top, to lower the said portion of the top to form a housing for the supporting bows and a major portion of the top.

1,416,660. COMBINED GUIDE AND WORK-HOLDING DEVICE FOR FOLDING MACHINES. CHARLES F. ALTHOUSE, Reading, Pa., assignor to Lorenz Muther, Newton, Mass. Filed May 8, 1918. Serial No. 233,224. 2 Claims. (Cl. 270—93.)

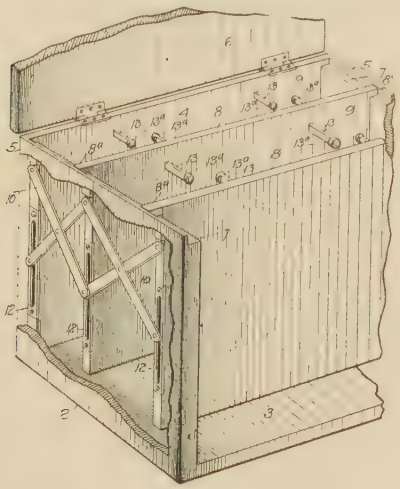


1. A combined guide and work holding device for folding machines having, in combination, a plate provided with a slot whereby it may be adjustably mounted on a folding machine adjacent the folding instrumentalities, a narrow forwardly projecting arm carried by said plate, said arm having its free end turned upwardly to serve as a guide for the edge of the material as it is fed through the machine, said upwardly turned end being provided with an open vertical slot, a spring wire mounted at one end on said plate and having its free end projecting through said slot and a roll loosely mounted on the free end of said spring wire and adapted to engage the edge of the work for holding it down.

1,416,661. MAP FILE. GEORGE H. BARNHART, Ouray, Colo. Filed May 12, 1920. Serial No. 380,818. 7 Claims. (Cl. 129—16.)

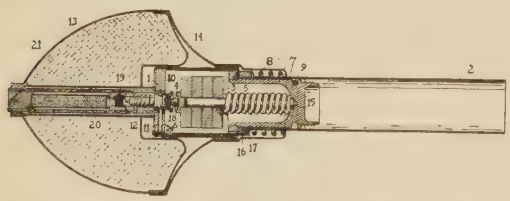
1. A filing device having two opposed surfaces one of which is movable relative to the other, sets of suspension-members projecting oppositely from the surfaces to con-

jointly support an article placed between them, and means cooperating with said members to automatically retain a



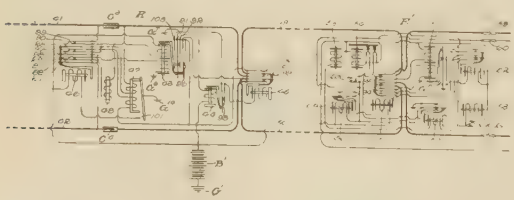
selected number of suspended articles on either set when the surfaces are moved apart.

1,416,662. IGNITION MECHANISM FOR HAND GRENADES, PROJECTILES, AND MINES. FRIDTJOF NIELSEN BRÖNDBY, Christiania, Norway, assignor to A/S Perkussion, a business entity of Christiania, Norway. Filed Dec. 31, 1918. Serial No. 269,164. 7 Claims. (Cl. 102—39.)



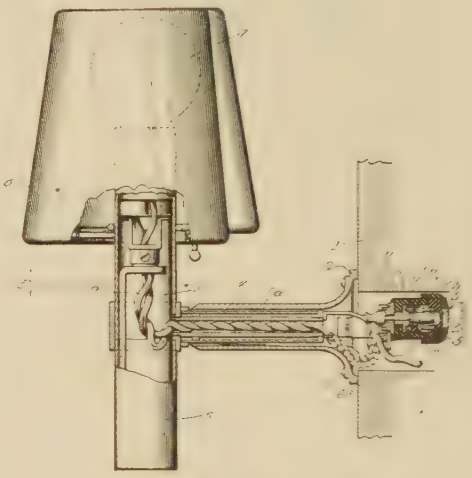
2. In an ignition mechanism for a fuse, the combination of a firing member movable to effect explosion of the fuse, an actuating member for effecting said movement pivotally connected with the fuse at one end, a link intermediate the firing member and actuating member, and a weight mounted in operative connection with but movable in relation to the actuating member and effective to cause a pendulum movement of the last named member whereby the firing member is caused to function.

1,416,663. TELEPHONE REPEATER. BERNARD C. GROH, St. Paul, Minn., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 13, 1916. Serial No. 83,838. 23 Claims. (Cl. 179—18.)



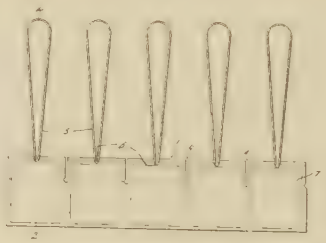
1. In a telephone system, a calling and a called line, means including a plurality of automatic switching mechanisms for connecting said lines, a relay for controlling the progressive motion of one of said mechanisms to extend a connection to another one of said mechanisms and for then controlling said other mechanism over said extension, said relay normally connected in bridge of the line conductors at one of said mechanisms, said bridge including a battery and said relay in series, and a relay actuated upon the closure of the called line circuit for causing the disconnection of said controlling relay from in bridge of the line, said bridge so connected normally that there is no flow of current through any part thereof.

1,416,664. LIGHTING FIXTURE. MARQUETTE A. HEALY and WALTER I. KIRK, Chicago, Ill., assignors to Lyon & Healy, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1919. Serial No. 297,265. 8 Claims. (Cl. 240—4.)



1. A lighting fixture comprising in combination, an adjustable light support, a switch for opening and closing the circuit for said light, said switch having a movable member controlling the mechanism thereof and push and pull mechanical connections between said movable support and said switch for actuating the latter by the movement of the former.

1,416,665. PRICE TAG. FREDERICK KOHNLE, Dayton, Ohio, assignor to The Monarch Tag Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 5, 1918. Serial No. 248,270. 2 Claims. (Cl. 40—20.)



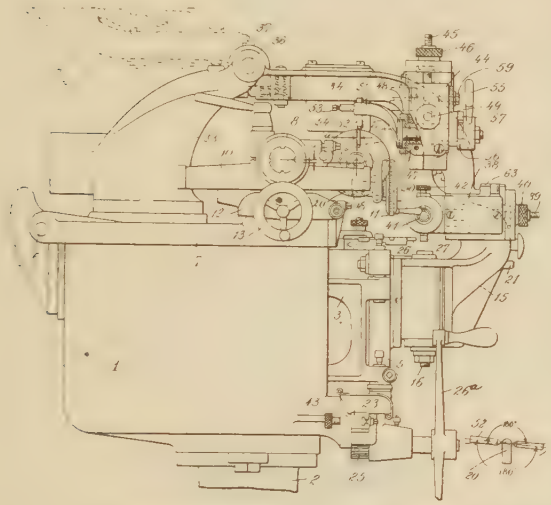
1. An article of manufacture comprising a tape of paper having an adhesive coating on one side thereof, the tape longitudinally folded upon itself forming a plural layer strip, the strip at its fold edge provided with parallel transverse notches dividing the strip into a plurality of tags, the notches adapted for cooperation with feeding devices, and the layers adhesively secured together along the longitudinal edges of the strip, the layers at the fold edge of the strip secured together a distance inwardly approximately corresponding to the depth of the notches, whereby each tag consists of a tag section having a plural-ply head portion and a one side gum coated ticket section severable from the tag section along a line at the end of the plural-ply head portion.

1,416,666. MOUTH WASH. EMANUEL LONDON, New York, N. Y. Filed Nov. 3, 1921. Serial No. 512,507. 2 Claims. (Cl. 167—9.)

1. A mouth wash containing chlorate of potash in quantities sufficient to act as a germicide, fluid extract of *Hamamelis virginiana* in quantities sufficient to act as an astringent, and alcohol in quantities sufficient to act as a cleanser.

2. A liquid mouth wash composed of ten parts of chlorate of potash, from sixty-five to one-hundred parts fluid extract of *Hamamelis virginiana* and twenty-five parts alcohol.

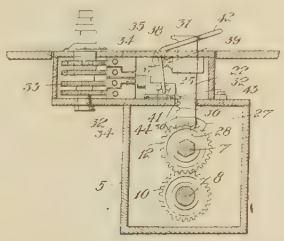
1,416,667. WHEEL-DRESSING MECHANISM. BENGT M. W. HANSON, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 31, 1918. Serial No. 247,636. 10 Claims. (Cl. 125—11.)



1. The combination with a grinding wheel rotatable about a longitudinal horizontal axis and a supporting means for the wheel, of an arm pivoted to the supporting means at the rear of the wheel, and a wheel dressing tool on the arm bodily movable therewith forward and downward into operative relation with the wheel or upward and backward out of operative relation with the wheel, the said tool being pivotally mounted on the arm for movement about an axis coincident with the central plane of the wheel and intersecting the wheel near the periphery when the tool is in operative relation thereto.

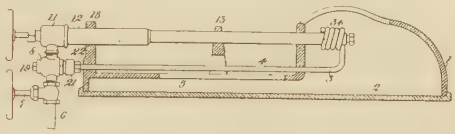
REISSUES.

15,353. LOCKING DEVICE FOR MOTOR VEHICLES. RICHARD BAER and HUGO KOPP, New York, N. Y. Filed Mar. 24, 1922. Serial No. 546,499. Original No. 1,391,358, dated Sept. 20, 1921, Serial No. 393,348, filed July 1, 1920. 14 Claims. (Cl. 70—90.)



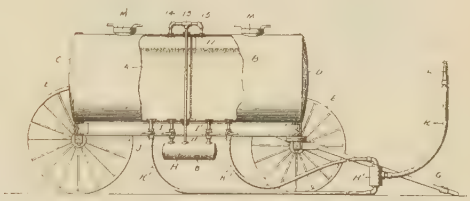
1. In combination with change speed mechanism, including rotatable power transmission elements, one of said elements being axially shiftable for connection and disconnection with respect to the other element; means for locking said elements against rotation when in disconnected relation.

15,354. AUTOMATIC FUEL CONTROL. GEORGE N. BLANCHARD, San Francisco, Calif., assignor to Colmar Burner Co., Inc., San Francisco, Calif., a Corporation of California. Filed Nov. 21, 1921. Serial No. 516,859. Original No. 1,387,583, dated Aug. 16, 1921, Serial No. 355,361, filed Jan. 31, 1920. 13 Claims. (Cl. 158—53.)



1. In combination with a generator tube adapted for operative connection at one end with a liquid fuel supply and having at its other end a gas outlet, of a valve for controlling the supply of fuel thereto, a thermostat extending parallel with and in close proximity to said generating tube and surrounding the same at the gas outlet end thereof for controlling the operation of said valve on said tube attaining a predetermined temperature, and means for adjusting said valve to operate at different predetermined temperatures of said tube.

15,355. APPARATUS FOR EXTINGUISHING FIRES. ORLANDO R. ERWIN and CURTIS B. FLORY, Forest Hills, N. Y., assignors to Foamite Firefoam Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 11, 1922. Serial No. 535,668. Original No. 1,331,466, dated Feb. 17, 1920, Serial No. 150,301, filed Feb. 23, 1917. 10 Claims. (Cl. 169—14.)

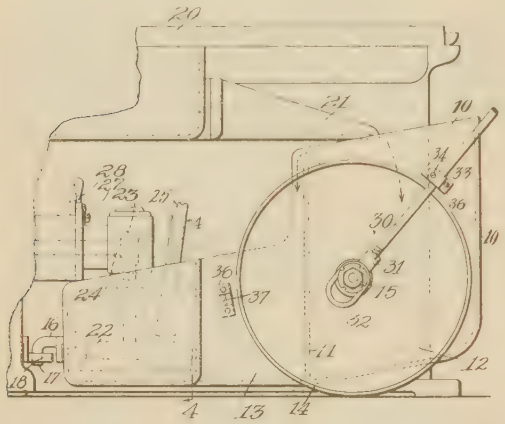


1. The method of extinguishing fires, consisting in mixing a portion of chemically reacting solutions in a closed receptacle to develop an ejecting pressure and utilizing said pressure to deliver the remainder of the chemically reacting solutions separately and in continuously flowing streams into mixing relation with each other, under pressure developed by the first mentioned mixture.

15,356. TRUCK FOR WASTE MATERIAL. CHARLES H. NORTON, Worcester, Mass., assignor to Norton Grinding Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 22, 1919. Serial No. 312,578. Original No. 1,234,376, dated July 24, 1917, Serial No. 118,144, filed Sept. 1, 1916. 13 Claims. (Cl. 51—262.)

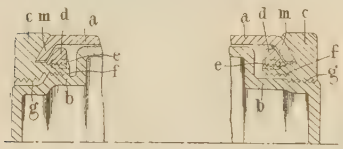
1. In a grinding machine, the combination of a movable tank, means including wheels for supporting the tank and permitting ready removal and cleaning thereof, a pump for circulating liquid from the tank to the machine, said pump having a conduit opening into said tank at a point adjacent to the bottom thereof and driv-

ing and supporting means for the pump permitting the latter to be moved from an operative position without



breaking the driving connections, whereby the tank may be removed for dumping the sediment therefrom.

15,357. DETACHABLE WHEEL. JOHN VERNON PUGH, Coventry, England, assignor, by mesne assignments, to Wire Wheel Corporation of America, a Corporation of New York. Filed Feb. 28, 1921. Serial No. 448,590. Original No. 1,296,316, dated Mar. 4, 1919, Serial No. 681,760, filed Mar. 5, 1912. 21 Claims. (Cl. 301—9.)



1. In combination in a detachable wheel two hub parts sleeved and connected to revolve together but subject to slight eccentric displacement, a circular nut subjected during said displacement to opposed radial forces imposed by said hub parts upon diametrically opposite sides of the axis, whereby said nut rotates relative to said parts during joint revolution, and screw threads so handed that the relative rotation tightens up the nut during forward movement.

15,358. VEHICLE WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 26, 1920. Serial No. 369,120. Original No. 1,249,826, dated Dec. 11, 1917, Serial No. 108,801, filed July 12, 1916. 14 Claims. (Cl. 301—63.)

8. A vehicle wheel comprising a hub, a rim, and a dished disk extending therebetween and secured thereto, said disk being of a cross section tapering from the hub towards the rim and crossing the central plane of rotation or plane of impact, the ratio of the thickness to the radial length of said disk imparting thereto relative flexibility.

9. A vehicle wheel comprising a hub, a rim and a dished disk of outwardly tapering section extending therebetween and secured thereto, said disk having a portion of its dished surface approaching the central plane of rotation or plane of impact as it extends radially inward,

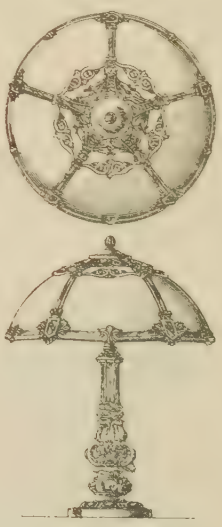
the ratio of the thickness to the radial length of said disk imparting thereto relative flexibility.

DESIGNS.

60,949. FINGER RING. GEORGE A. ALSOPP, Newark, N. J. Filed Aug. 11, 1921. Serial No. 491,591. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

60,950. LAMP. HARRY A. BEST, Chicago, Ill., assignor of one-half to H. A. Best Lamp Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 19, 1921. Serial No. 493,759. Term of patent 3½ years.



The ornamental design for a lamp as shown.

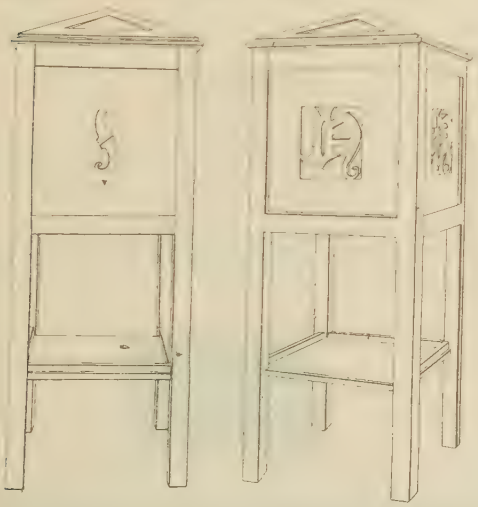
60,951. PHONOGRAPH CABINET. FRANK CUMMINGS, Chicago, Ill. Filed Apr. 14, 1921. Serial No. 461,418. Term of patent 7 years.

The ornamental design for a phonograph cabinet, as shown.

60,952. STATUETTE. LUCENE L. GOODENOW, Battle Creek, Mich. Filed Apr. 22, 1921. Serial No. 463,635. Term of patent 3½ years.

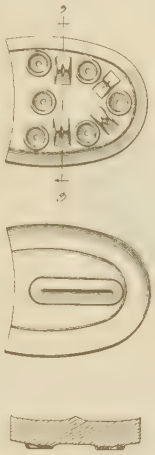
The ornamental design for a statuette, as shown.

60,953. PHONOGRAPH CABINET. WILLIAM B. HOLLINGSHEAD, Mount Vernon, N. Y. Filed Jan. 23, 1920. Serial No. 353,576. Term of patent 14 years.



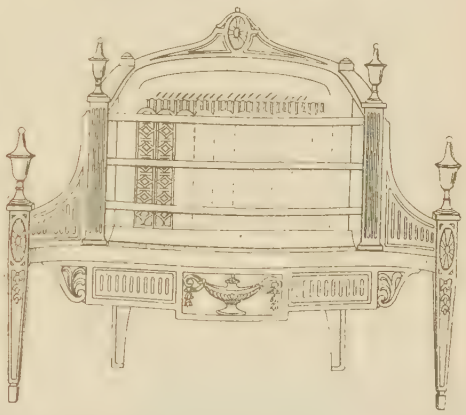
The ornamental design for a phonograph cabinet illustrated in the drawings.

60,954. RUBBER HEEL. FRANK HORNQUIST, Mount Jewett, Pa. Filed Jan. 16, 1922. Serial No. 218. Term of patent 14 years.



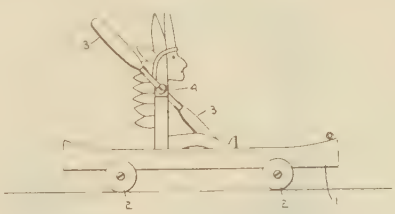
The ornamental design for a rubber heel, as shown.

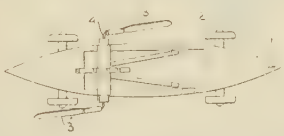
60,955. GAS HEATER. HUBERT R. HUMPHREY, Kalamazoo, Mich. Filed Sept. 27, 1921. Serial No. 503,621. Term of patent 14 years.



The ornamental design for a gas heater, as shown.

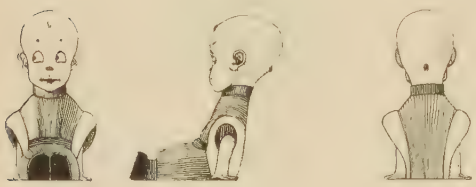
60,956. WHEELED TOY. JOHN C. JUTHE, Allston, Mass. Filed May 15, 1919. Serial No. 297,404. Term of patent 3½ years.





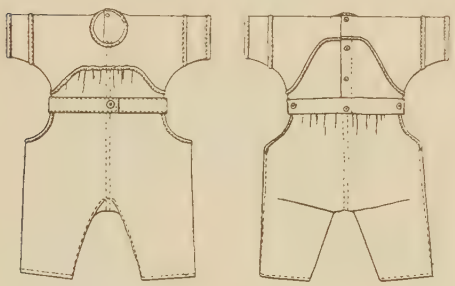
The ornamental design for a wheeled toy, as shown and described.

60,957. DOLL. SEIZO KODAMA, San Francisco, Calif., assignor of one-half to Hisano Kodama, San Francisco, Calif. Filed Oct. 10, 1921. Serial No. 506,885. Term of patent 3½ years.



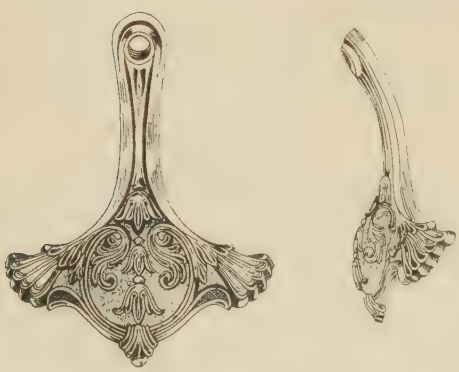
The ornamental design for a doll, as shown.

60,958. CHILD'S GARMENT. LOUIS KUH, San Francisco, Calif. Filed Mar. 14, 1921. Serial No. 452,323. Term of patent 14 years.



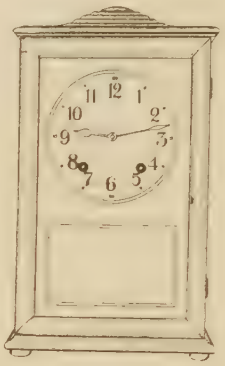
The ornamental design for a child's garment, as shown.

60,959. LIGHTING-FIXTURE ARM. LOUIS LEVINE, Brooklyn, N. Y. Filed Aug. 25, 1921. Serial No. 495,429. Term of patent 7 years.



The ornamental design for a lighting fixture-arm, as shown.

60,960. CLOCK CASE. LEWIS E. MACOMBER, New York, N. Y., assignor to Seth Thomas Clock Co., Thomaston, Conn., a Corporation. Filed Feb. 13, 1922. Serial No. 673. Term of patent 7 years.



The ornamental design for a clock case as shown.

60,961. CLOCK CASE. LEWIS E. MACOMBER, New York, N. Y., assignor to Seth Thomas Clock Co., Thomaston, Conn., a Corporation. Filed Feb. 13, 1922. Serial No. 674. Term of patent 7 years.

155,179. (CLASS 32. FURNITURE AND UPHOLSTERY.) THE SHAW-WALKER CO., Muskegon, Mich. Filed Sept. 8, 1921. Serial No. 152,728.

SHAW-WALKER

Particular description of goods.—Metal Filing Cabinets, Wood Filing Cabinets, Metal Storage Cabinets, Wood Storage Cabinets, Steel Fire-Resisting Filing Cabinets, Metal and Wood Card Cabinets, Metal Wardrobes, Steel Wardrobes, and Interior Sections for the Foregoing, Steel and Wood Office Desks and Card-Filing Desks, and Steel Shelving.
Claims use since Mar. 8, 1899.

155,180. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ST. LOUIS PUMP & EQUIPMENT COMPANY, St. Louis, Mo. Filed Dec. 30, 1920. Serial No. 141,693.

Particular description of goods.—Pumps for Oil and Other Fluids.
Claims use since Oct. 1, 1920.

155,181. (CLASS 39. CLOTHING.) SUPERIOR HAT COMPANY, St. Louis, Mo. Filed Aug. 29, 1921. Serial No. 152,351.

SUPERIOR

Particular description of goods.—Harvest Hats.
Claims use since Nov. 1, 1917.

155,182. (CLASS 39. CLOTHING.) U. S. GLOVE CO., Marion, Ind. Filed June 9, 1921. Serial No. 148,905.

TWIN SEAM

Particular description of goods.—Leather-Palm Work Gloves, a Combination of Leather and Cotton Flannel.
Claims use since Jan. 1, 1920.

155,183. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE UNITED STATES PLAYING CARD COMPANY, East Norwood, Cincinnati, Ohio. Filed July 29, 1921. Serial No. 151,107.

Particular description of goods.—Playing Cards.
Claims use since about 1909.

155,184. (CLASS 5. ADHESIVES.) THE COMMERCIAL PASTE COMPANY, Columbus, Ohio. Filed Feb. 10, 1921. Serial No. 143,382.

QUICK STICK

Particular description of goods.—Certain Named Boiler and Furnace Pastes.
Claims use since Jan. 1, 1912.

TRADE-MARK REGISTRATIONS CANCELED.

53,928. PEPPER SAUCE. E. MCILHENNY'S SON, Avery Island and New Iberia, La. Registered June 12, 1906 Canceled Mar. 14, 1922.

53,929. PEPPER SAUCE. E. MCILHENNY'S SON, Avery Island and New Iberia, La. Registered June 12, 1906. Canceled Mar. 14, 1922.

140,193. NEWSPRINT PAPER, CARDBOARD MADE OF SULFITE AND GROUND WOOD, AND WOOD BOARD. PRICE BROTHERS & COMPANY LIMITED, Quebec, Quebec, Canada. Registered Mar. 8, 1921. Canceled Apr. 15, 1922.

146,892. BLOWPIPES. TORCHWELD EQUIPMENT COMPANY, Chicago, Ill. Registered Sept. 20, 1921. Canceled Apr. 15, 1922.

147,061. DRY-CLEANING PREPARATION IN THE FORM OF STICK OR PENCIL FOR LEATHER AND FABRIC. U. S. SPECIALTY MFG. CO., Somerville, Mass. Registered Sept. 27, 1921. Canceled Apr. 3, 1922.

148,599. SILVER-PLATED FLAT AND HOLLOW WARE. SIMEON L. & GEORGE H. ROGERS COMPANY, Hartford, Conn. Registered Nov. 15, 1921. Canceled Mar. 21, 1922.

LABELS

REGISTERED MAY 16, 1922.

24,375.—*Title:* "DOODEWARD'S LIGHTNING WONDER GLOSS." (For Automobiles, Pianos, Furniture, Woodwork, and All Varnished, Painted, and Enameled Surfaces.) JOSEPH DOODEWARD, Covington, Ky. Filed August 26, 1921.

24,376.—*Title:* "YEAST O BEAUTY SOAP." (For a Toilet Soap.) WILLIAM TYLER GREEN, Summit, N. J. Filed August 23, 1921.

24,377.—*Title:* "WONDERFUL IMPROVEMENT FOR SERVICE AND CLEANING." (For Window Shades, Being Applied to the Shade Rollers Thereof.) THE PARIS MANUFACTURING COMPANY, Cleveland, Ohio. Filed July 18, 1921.

24,378.—*Title:* "ROUTLEDGE." (For Bird Remedies.) ROUTLEDGE BIRD, PET AND ANIMAL CO., Portland, Oreg. Filed March 23, 1922.

24,379.—*Title:* "ROUTLEDGE." (For Birdseed.) ROUTLEDGE BIRD, PET AND ANIMAL CO., Portland, Oreg. Filed March 23, 1922.

24,380.—*Title:* "ESKIMO PIE." (For Confections.) RUSSELL STOVER COMPANY, Chicago, Ill. Filed April 3, 1922.

24,381.—*Title:* "THE GOOD KIND." (For Canned Corn.) STEELE-WEDELES COMPANY, Chicago, Ill. Filed March 23, 1922.

24,382.—*Title:* "S AND W." (For Canned Peaches.) SUSSMAN, WORMSER & CO., San Francisco, Calif. Filed March 18, 1922.

24,383.—*Title:* "S AND W." (For Canned Corn.) SUSSMAN, WORMSER & CO., San Francisco, Calif. Filed March 18, 1922.

24,384.—*Title:* "S AND W." (For Canned Peas.) SUSSMAN, WORMSER & CO., San Francisco, Calif. Filed March 18, 1922.

24,385.—*Title:* "S AND W." (For Canned Asparagus.) SUSSMAN, WORMSER & CO., San Francisco, Calif. Filed March 18, 1922.

24,386.—*Title:* "S AND W." (For Canned Apricots.) SUSSMAN, WORMSER & CO., San Francisco, Calif. Filed March 18, 1922.

24,387.—*Title:* "S AND W." (For Canned Tomatoes.) SUSSMAN, WORMSER & CO., San Francisco, Calif. Filed March 18, 1922.

24,388.—*Title:* "S AND W." (For Fruit Salad.) SUSSMAN, WORMSER & CO., San Francisco, Calif. Filed March 18, 1922.

24,389.—*Title:* "S AND W." (For Canned Pineapple.) SUSSMAN, WORMSER & CO., San Francisco, Calif. Filed March 18, 1922.

24,390.—*Title:* "S AND W." (For Canned Cherries.) SUSSMAN, WORMSER & CO., San Francisco, Calif. Filed March 18, 1922.

24,391.—*Title:* "BLUE BONNET BRAND EAST TEXAS TOMATOES." (For Tomatoes.) TEXAS TOMATO GROWERS EXCHANGE, Tyler, Tex. Filed May 28, 1921.

24,392.—*Title:* "WHITING'S LINIMENT." (For Bottles Containing Liniment.) F. T. WHITING and J. A. MARTIN, Charleston, W. Va. Filed May 16, 1921.

PRINTS

REGISTERED MAY 16, 1922.

6,126.—*Title:* "GLADYS." (For Advertising Purposes For Glover's Mange Medicine.) H. CLAY GLOVER CO., New York, N. Y. Filed December 13, 1921.

6,130.—*Title:* "THIS IS THE VEHICLE THAT HAS STANDARDIZED THE TAXICAB INDUSTRY IN AMERICA." (For Advertising Purposes for Taxicabs.) YELLOW CAB MANUFACTURING CO., Chicago, Ill. Filed August 19, 1921.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

EX PARTE KUSTERER.

No. 1400. Decided February 6, 1922.

PATENTS—INVENTION—ASSEMBLING ELEMENTS FROM TWO OLD DEVICES TO OPERATE IN THE SAME MANNER IS NOT INVENTION.

The assembling of available parts of two prior devices to produce a device which operates in substantially the same manner as one of the prior devices *Held* not to be invention.

Mr. F. L. Chappell and *Mr. O. A. Earl* for Kusterer.

Mr. T. A. Hostetler for the Commissioner of Patents.

VAN ORSDEL, *J.:*

This appeal is from the decision of the Commissioner of Patents, refusing to allow claim 3 in appellant's application, which reads as follows:

3. A table slide structure comprising a center slide adapted to be secured to the bridge of the table, an outer slide member secured to one portion of the table top and an inner slide member secured to the opposite portion of the table top, said slides having co-engaging parts, a pulley with a vertical axle on the central slide, a cable looped over said pulley and connecting the inner slide member to the outer slide member, clearance way being formed in said slides for the cable, whereby the movements of the slides are equalized.

This claim was denied on reference to a British patent issued to one Pocock in 1805; a patent issued to one Curry, September 21, 1869, and a patent issued to one McMahon, June 25, 1912.

The invention relates to an extension table in which the extension slides, moving in opposite directions, are connected by cables in such manner as to equalize the movement of the slides.

The patent of Pocock discloses a rectangular frame so mounted that it slides between fixed rails, and a similar frame with one end open and mounted to slide on the outer sides of the fixed rails. Pulleys are mounted near the center of the fixed rails and the cords placed over the pulleys with one end attached to the inner frame and the other end to the outer frame, in such manner that the movement of one frame simultaneously moves the other. The patent to McMahon discloses two fixed rails carrying a table top with the rails tongued and grooved and a clearance space for the rack and pinion shifting mechanism. The patent to Curry discloses slides tongued and grooved with clearing spaces for the cords.

It, therefore, appears that the claim in issue shows a combination of elements, old in the art; in other words, it covers the construction of McMahon modified by the cord and pulley slide shifting mechanism shown in the Pocock patent. It is well settled that elements which are old in the art when assembled in such a manner as to produce a new result, may be held to constitute invention. We think, however, that the rule is not applicable in this case. Appellant's device, while showing a high degree of mechanical skill in the selection and putting together of available parts of the different devices above referred to, operates in substantially the same manner as did the old British patent.

In cases where the dividing line between patentability and the exercise of mechanical skill is difficult to define, we resolve the doubt in favor of invention, but the present case does not, in our opinion, belong to that class. While appellant produced a valuable improvement, we are unable to reach the conclusion that what he accomplished amounted to invention.

The decision of the Commissioner of Patents is affirmed.

In the absence of Mr. Chief Justice Smyth, Mr. Justice Hoehling, of the Supreme Court of the District of Columbia, participated in the hearing and disposition of this case.

ADJUDICATED PATENTS.

(U. S. C. C. A. Ill.) The Brewer patent, No. 780,086, for vending device, *Held* void for lack of lawful utility and invention. *Brewer* v. *Lichtenstein*, 278 Fed. Rep., 512.

(U. S. C. C. A. N. Y.) The Janin patent, No. 1,312,910, for hydroaeroplane, claim 8 awarded to Glenn H. Curtiss. *Curtiss Aeroplane & Motor Corporation* v. *Janin*, 278 Fed. Rep., 454.

(U. S. C. C. A. Mich.) The Johnson patent, No. 814,786, for talking machine, claim 42, *Held* not infringed. *Cheney Talking Mach. Co.* v. *Victor Talking Mach. Co.*, 278 Fed. Rep., 445.

(U. S. C. C. A. Mich.) The Johnson patent, No. 814,848, for talking-machine horn, claims 7 and 11 *Held* not infringed. *Cheney Talking Mach Co.* v. *Victor Talking Mach. Co.*, 278 Fed. Rep., 445.

(U. S. D. C. N. Y.) The Palmer patent, No. 578,995, for fabric-turning machine, *Held* valid and infringed. *Palmer* v. *E. Z. Waist Co.*, 278 Fed. Rep., 530.

(U. S. C. C. A. N. J.) The Pearse patent, No. 873,680, for railroad-track-spraying apparatus claims 5, 8 *Held* anticipated. *Chipman Chemical Engineering Co.* v. *Reade Mfg. Co.*, 278 Fed. Rep., 520.

(U. S. C. C. A. N. Y.) The Vreeland patents, Nos. 1,239,852 and 1,245,166, relating to the art of radiotelegraphy, *Held* not void, as interfering with prior Fessenden patents. *International Signal Co.* v. *Vreeland Apparatus Co.*, 278 Fed. Rep., 468.

Amendment to the Rules of Practice.

(ORDER NO. 2,743.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 3, 1922.

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Secretary of the Interior, the following rules of the Rules of Practice of the United States Patent Office have been amended as follows:

Rule 17, paragraph (*a*):

(*a*) Any attorney at law who is in good standing in any court of record in the United States or any of the States or Territories thereof and who shall furnish a certificate of the clerk of such United States, State, or Territorial court, duly authenticated under the seal of the court, that he is an attorney in good standing, *and who shall file proof that he is possessed of the legal and technical qualifications enumerated in paragraph (b.)*

Rule 22, paragraphs (*c*) and (*d*):

(*c*) *The Commissioner of Patents may, after notice and opportunity for a hearing, suspend or exclude, either generally or in any particular case, from further practice*

before his office any person, agent, or attorney shown to be incompetent or disreputable, or guilty of gross misconduct, or who refuses to comply with the rules and regulations, or who shall, with intent to defraud in any manner, deceive, mislead, or threaten any applicant or prospective applicant, or other person having immediate or prospective business before the office, by word, circular, letter, or by advertising, or who shall guarantee the successful prosecution of any application for patent or the procurement of any patent, or by word, circular, letter, or advertisement shall make any false promise or misleading representation, or who uses the name of any member of either House of Congress or of any officer of the Government in advertising his business. (Act approved April 27, 1916.) The reasons for any such suspension or exclusion shall be duly recorded. And the action of the Commissioner may be reviewed upon the petition of the person so refused recognition or so suspended or excluded by the Supreme Court of the District of Columbia under such conditions and upon such proceedings as the said court may by its rules determine.

Rule 30, line 5, by changing $15 to *$20.*

Rule 185:

185. An assignment, grant, or conveyance of a patent will be void as against any subsequent purchaser or mortgagee for a valuable consideration without notice unless recorded in the Patent Office within three months from the date thereof *or prior to such subsequent purchase or mortgage.*

If any assignment, grant, or conveyance of any patent shall be acknowledged before any notary public of the several States or Territories or the District of Columbia, or any commissioner of *any court of the United States for any District or Territory,* or before any secretary of legation or consular officer authorized to administer oaths or perform notarial acts under section 1750 of the Revised Statutes, the certificate of such acknowledgment, under the hand and official seal of such notary or other officer, shall be prima facie evidence of the execution of such assignment, *grant* or conveyance.

Rule 188:

188. In every case where it is desired that the patent issue to an assignee, the assignment must be recorded in the Patent Office at a date not later than the day on which the final fee is paid. *In the case of an application for a design patent the assignment must be recorded before the case is allowed.* (See Rule 26.) The date of the record is the date of the receipt of the assignment at the office *in proper form and accompanied by the full legal fee for recording.*

Rule 191, page 57:

191. The following is the schedule of fees and of prices of publications of the Patent Office:

On filing each original application for a patent, except in design cases	*$20.00*
On filing each renewal application for a patent except in design cases	*20.00*
On issuing each original patent, except in design cases	20.00
In design cases:	
For 3 years and 6 months	10.00
For 7 years	15.00
For 14 years	30.00
On every application for the reissue of a patent	30.00
On filing each disclaimer	10.00
On an appeal for the first time from the primary examiner to the examiners in chief	10.00
On every appeal from the examiners in chief to the Commissioner	20.00
For certified copies of patents if in print:	
For specification and drawing, per copy	.10
For the certificate	.25
For the grant	.50
For certifying to a duplicate of a model	.50
For manuscript copies of records, for every 100 words or fraction thereof	.10
If certified, for the certificate additional	.25
For photostat copies of records,	
Size 10 by 15 inches, per copy	*.25*
Size 8 by 12½ inches, per copy	*.15*
If certified, for the certificate additional	*.25*
For uncertified copies of the specifications and accompanying drawings of patents, if in print, each	.10
For the drawings, if in print	.10
For copies of drawings not in print, the reasonable cost of making them.	
For photo prints of drawings, for each sheet of drawings:	
Size 10 by 15 inches, per copy	.25
Size 8 by 12½ inches, per copy	.15
For 20-coupon orders, each coupon good for one copy of a printed specification and drawing, and receivable in payment for photographic prints	2.00
For 100 coupons in stub book	10.00
For recording every assignment, agreement, power of attorney, or other paper, of 300 words or under	1.00
Of over 300 and under 1,000 words	2.00
For each additional 1,000 words or fraction thereof	1.00
For each additional patent or application included or involved in one writing, where more than one is so included or involved, additional	*.25*
For abstracts of title to each patent or invention:	
For the search, one hour or less, and certificate	*2.00*
Each additional hour or fraction thereof	*1.00*
For each brief from the digest of assignments, of 200 words or less	.20
Each additional 100 words or fraction thereof	.10
For searching titles or records, one hour or less	*1.00*
Each additional hour or fraction thereof	*1.00*
For assistance to attorneys in the examination of publications in the Scientific Library, one hour or less	*1.50*
Each additional hour or fraction thereof	*1.50*
For copies of matter in any foreign language, for every 100 words or a fraction thereof	.10
For translation, for every 100 words or fraction thereof	*.60*

Rule 191, pages 58 and 59 remain unchanged.

THOMAS E. ROBERTSON,
Commissioner.

Changes in Classification.

(ORDER No. 2,733.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., March 31, 1922.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 8, Bleaching and Dyeing, (Division VI,) abolish subclass—

1. **Carbon dyes.**

The patents formerly contained in this subclass have been placed for the most part in class 260, Chemistry—Carbon Compounds, hereinafter established.

In class 23, Chemicals, (Division VI,) abolish subclasses—

24. **Carbon compounds.**
27. **Vinegar.**

The patents formerly contained in subclass 24 have been placed for the most part in class 260, Chemistry—Carbon Compounds, hereinafter established, and those formerly contained in subclass 27 have been placed for the most part in class 99, Preserving, subclass 17, Food compounds, Vinegar, hereinafter established.

In class 99, Preserving, (Division II,) establish subclass—

Food compounds—
17. Vinegar.

The patents contained in this subclass have been taken for the most part from class 23, Chemicals, subclass 27, Vinegar, hereinbefore abolished.

In class 134, Liquid Coating Compositions, (Division VI,) establish the following subclass and definition, the patents contained in this subclass having been taken for the most part from class 8, Bleaching and Dyeing, subclass 1, Carbon dyes, hereinbefore abolished:

Paint.
Pigments—
58.5. Lake-containing.

58.5. PAINT, PIGMENTS, LAKE-CONTAINING. Pigments which consist of or contain carbon-compound dyes absorbed in or adsorbed on particles of inorganic salts, inorganic hydroxides, or other inorganic compounds (e. g., aluminum hydroxide, barium sulfate).

Note.—Compositions which contain only definite chemical compounds of dye radicals with metals are excluded. Search class 260, CHEMISTRY—CARBON COMPOUNDS, subclasses 11, Metallo compounds, 12, Metallo compounds, Copper or chromium, and 13, Metallo compounds, Mercury, for such compounds, excepting compounds of the alkali metals and of the alkaline-earth metals, for which search under the corresponding dyes in class 260.

In class 134, Liquid Coating Compositions, (Division VI,) add to the definitions of subclasses 59, Paint, Pigments, Iron Salts; 67, Paint, Pigments, Lead Salts, and 78, Paint, Pigments, Zinc Salts, the following note:

Search this class, subclass 58.5, for lakes containing zinc, lead, or iron salts.

Establish, in Division VI, class 260, Chemistry—Carbon Compounds, with the following subclasses and definitions, the patents contained in this class having been taken for the most part from classes 8, Bleaching and Dyeing, subclass 1, Carbon dyes, and 23, Chemicals, subclass 24, Carbon compounds, hereinbefore abolished:

260.—CHEMISTRY — CARBON COMPOUNDS.
1. **Miscellaneous.**
2. **Condensation (unknown constitution)—**
3. Methylene—
4. Phenol—
5. Anhydrous,
6. Rubber,
7. Coumarone and indene.
8. Organic-acid-polyhydric alcohol.
9. **Protein derivatives.**
10. **Carbohydrate derivatives.**
11. **Metallo compounds—**
12. Copper or chromium,
13. Mercury,
14. Arsenic—
15. Arseno.
16. **Ozonides or peroxides.**
17. **Sulphurized products—**
18. With heavy metals and their compounds,
19. From indophenols and indamines,
20. Phenols—
21. Nitro,
22. Amido,
23. Amines—
24. Mixed amines.
25. **Alkaloids (except purines)—**
26. Cinchona.
27. **Azines—**
28. Oxazines,
29. Diazines—
30. Piperazine,
31. Indanthrene,
32. Pyrimidine—
33. Barbituric acid,
34. Purines—
35. Removing chlorine.
36. **Acridine—**
37. Acridones.
38. **Quinoline—**
39. Carboxylic acids,
40. Condensed quinoline,
41. Salts.
42. **Pyridine—**
43. Piperidine.
44. **Azoles—**
45. Pyrazoles.
46. **Pyrrols (including carbazoles)—**
47. Indoles—
48. Indogoid—
49. Halogen,
50. Indigo—
51. From arylglycines,
52. Halogen.
53. **Oxygen and sulphur rings—**
54. Oxygen rings only.
55. **Indophenols and indamines.**
56. **Quinones—**
57. Anthraquinone—
58. Phenols—
59. Amines,
60. Amines,

260.—CHEMISTRY—CARBON COMPOUNDS—Continued.
Quinones—
Anthraquinone—
61. Polynuclear derivatives.
62. **Pyronines—**
63. Rhodamines.
64. **Polyarylmethyl—**
65. Triarylmethyl—
66. Trioxytriaryl,
67. Triaminotriaryl,
68. Diaminotriaryl.
69. **Diazo, azoxy, nitroso, azo, hydrazo—**
70. Polyazo—
71. Diaminodiphenyl,
72. Trisazo—
73. Diaminodiphenyl—
74. Benzidine—
75. Carboxylic,
76. Disazo—
77. Diaminodiphenyl—
78. Benzidine—
79. Dinaphthyl—
80. Unsymmetrical,
81. Secondary—
82. Naphthyl-naphthyl-naphthyl,
83. Phenyl-naphthyl-naphthyl,
84. Phenyl-phenyl-naphthyl,
85. Urea type,
86. Monazo—
87. Pyrazolone,
88. Naphthyl-naphthyl—
89. β-naphthol,
90. Naphthyl-phenyl—
91. Naphthol—
92. Amino—
93. β-naphthol,
94. Sulphonic,
95. Carboxylic,
96. Phenyl-phenyl—
97. Phenol.
98. **Esters—**
99. Terpene,
100. Carbohydrate—
101. Carboxylic acid—
102. Subsequent treatment,
103. Aromatic carboxylic acid—
104. Phenol,
105. Nucleo amino,
106. Aliphatic carboxylic acid—
107. Phenol.
108. **Carboxylic acids—**
109. Aromatic amino,
110. Phenol—
111. Salicyl,
112. Aliphatic—
113. Halogen,
114. Formates from CO,
115. Oxalic from formates,
116. From hydrocarbons, alcohols, and aldehydes,

260. CHEMISTRY—CARBON COMPOUNDS—Continued.
Carboxylic acids—
Aliphatic—
117. From unsaturated compounds,
118. From salts,
119. Destructive decomposition,
120. Fermentation,
121. Tartaric,
122. Purification,
123. Anhydrides and chlorides,
124. Amides—
125. Ureas,
126. Saccharin.
127. **Amines—**
128. Aromatic—
129. Sulphonic acids,
130. Condensation with aldehydes and ketones.
131. **Ketones—**
132. Terpene—
133. Camphor,
134. Aliphatic—
135. Fermentation.
136. **Aldehydes—**
137. Phenol aldehydes (vanillin),
138. Aliphatic—
139. From acetylene,
140. Polymerization,
141. Addition and condensation products.
142. **Nitro compounds—**
143. Phenol,
144. Aliphatic—
145. Carbohydrates—
146. Preliminary treatment,
147. Fortifying acids,
148. Purification and drying.
149. **Ethers—**
150. Phenol,
151. Aliphatic—
152. Carbohydrates.
153. **Hydroxy derivatives—**
154. Phenol—
155. Sulphonic acids,
156. Aliphatic—
157. Hydrins.
158. **Sulphoxy compounds—**
159. Sulphonic acids.
160. **Halogen derivatives—**
161. Nucleo aromatic,
162. Aliphatic—
163. Carbon tetrachloride (from CS_2),
164. Chloroform (by oxidation),
165. By reduction,
166. From gases only.
167. **Hydrocarbons—**
168. Aromatic,
169. Aliphatic—
170. Unsaturated—
171. Diolefines.
172. **Processes.**
173. **Apparatus.**

THOMAS E. ROBERTSON, *Commissioner.*

Changes in Classification.

(ORDER NO. 2,736.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 6, 1922.

It is hereby directed that class 167, Medicines, be transferred from Division II to Division VI, to take effect immediately.

WM. A. KINNAN,
First Assistant Commissioner.

Changes in Classification.

(ORDER NO. 2,740.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 25, 1922.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 183, Gas Separation, (Division XXV,) establish the following subclasses and definitions:

2.5. **Deaerating liquids—**
2.6. Foam breakers.

2.5. DEAERATING LIQUIDS. Processes and apparatus for removing air or other gases from a fluid not essentially gaseous in form, such as water containing absorbed air, foam, or the like.

2.6. DEAERATING LIQUIDS, FOAM BREAKERS. Processes and apparatus for breaking foam to release the gas contained in the bubbles.

The patents contained in these subclasses have been taken for the most part from class 183, Gas Separation, subclass 3, With liquid separation.

THOMAS E. ROBERTSON,
Commissioner.

Date of Patent.

RULE 167. * * * The issue closes weekly on Thursday, and the patents of that issue bear date as of the *fourth* Tuesday thereafter.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 298—No. 4. TUESDAY, MAY 23, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Interference Notice.

Department of the Interior,
United States Patent Office.
Washington, D. C., May 10, 1922.

Christian E. Gudebrod, his heirs, assigns, or legal representatives, take notice:

An interference having been declared by this Office between the application of Smith & Dove Mfg. Co., Andover, Mass., for registration of a trade-mark and trade-mark registered February 19, 1895, No. 26,104, to Christian E. Gudebrod, 644 Broadway, New York, N. Y., and a notice of such declaration sent by registered mail to Christian E. Gudebrod at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Gudebrod, his heirs, assigns, or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Notice of Opposition.

Department of the Interior,
United States Patent Office.
Washington, D. C., May 10, 1922.

Estasi Perfumery Co., Inc., its heirs, assigns, or legal representatives, take notice:

On December 15, 1921, upon the petition of the A. P. Babcock Company, of 501 Fifth Avenue, New York, N. Y., an opposition proceeding against the registration of a trade-mark to Estasi Perfumery Co., Inc., of 235 Fifth Avenue, New York, N. Y., was instituted by this Office. The attorney of record for Estasi Perfumery Co., Inc., has since withdrawn from the case, and a notice of such opposition sent to Estasi Perfumery Co., Inc., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Estasi Perfumery Co., Inc., its heirs, assigns, or legal representative, shall enter an appearance therein within thirty days from the first publication of this order, the opposition will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

Patent No. 1,397,304.

On March 22, 1922, a decision was rendered that D'Orsay McCall White was not the first inventor of the subject-matter covered by claims 1, 2, and 3 of his Patent No. 1,397,304, subject, "Detachable transmission construction," and no appeal having been taken within the time allowed such decision has become final.

Patent No. 1,257,988.

On April 22, 1922, a decision was rendered that Arthur J. Evers was not the first inventor of the subject-matter covered by claim 12 of his Patent No. 1,257,988, subject, "Pasteboard-box-making machines," and no appeal having been taken within the time allowed such decision has become final.

Design Patent No. 59,196.

On April 21, 1922, a decision was rendered that Victor H. Cohn was not the first inventor of the subject-matter covered by the claim of his Patent No. 59,196, subject, "Design for a ring," and no appeal having been taken within the time allowed such decision has become final.

Changes in Classification.

(Order No. 2,744.)

Department of the Interior,
United States Patent Office,
Washington, D. C., May 16, 1922.

It is hereby directed that subclass 41, Condensers, in class 250, Radiant Energy, be transferred from Division XVI to Division XLVIII, to take effect immediately.

WM. A. KINNAN,
Acting Commissioner.

PATENT DRAWING CO.
NEW YORK

Amendments.

Rule 73. In every amendment the exact word or words to be stricken out or inserted in the application must be specified and the precise point indicated where the erasure or insertion is to be made. All such amendments must be on sheets of paper separate from the papers previously filed, and written on but one side of the paper. Erasures, additions, insertions, or mutilations of the papers and records must not be made by the applicant.

Amendments and papers requiring the signature of the applicant must, also, in case of assignment of an undivided part of the invention, be signed by the assignee. (Rules 6, 107.)

Condition of Applications Under Examination at Close of Business May 13, 1922.

(Total number of applications waiting action, excluding Trade-Mark division, 66,191; Trade-Mark division, 8,740. Oldest new case, Mar. 3; oldest amended, Mar. 26, 1921. The dates given are 1921 except where * indicates 1922.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	Nov. 7	Nov. 17	895

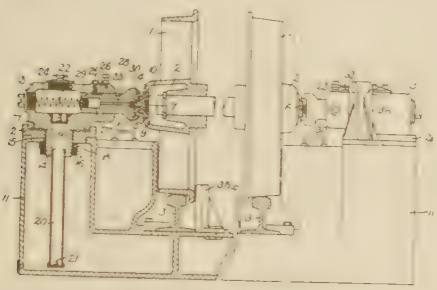
PATENTS

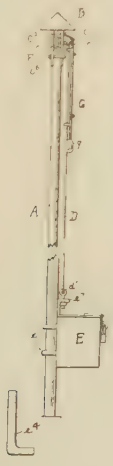
GRANTED MAY 23, 1922.

1,416,668. MEANS FOR MECHANICALLY OILING THE WHEELS OF TRAMWAY AND LIKE VEHICLES. Tom Abbott, Pontyclun, Llantrisant, Wales. Filed Oct. 2, 1920. Serial No. 414,331. 2 Claims. (Cl. 184—2.)



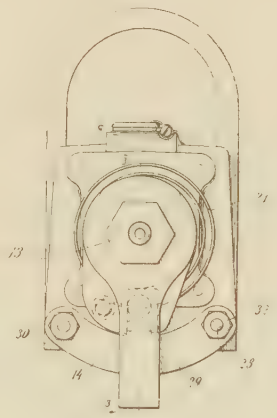
2. Means for mechanically oiling the wheels of tramway and like vehicles consisting of fixed oil wells located on at each side of a track for the vehicles, plates closing the upper ends of said oil wells, pump cylinders mounted on said plates, formed with bosses having passages communicating with said cylinders, and secured in position by means of nuts engaging with said bosses, plungers fitting the front ends of said cylinders, formed with cavities and with passages leading from said cavities to the front ends of the plungers, and provided at their rear ends with non-return valves, nipples at the front ends of said plungers communicating with the passages leading from said cavities, dip tubes secured to the lower ends of the bosses formed on said cylinders, automatic valves fitted to the lower ends of said dip tubes and to the upper ends of the passages formed in the bosses of said cylinders, means for returning said cylinders to their normal positions when displaced therefrom, and stops for determining the normal positions of said cylinders, substantially as described.

1,416,669. FLAGSTAFF. Charles W. Allman, Ottumwa, Iowa. Filed Aug. 4, 1921. Serial No. 489,696. 4 Claims. (Cl. 116—173.)



4. A tubular flag-staff having a bracket adapted to adjustably clamp the upper end of said staff said bracket having a hood, a sheave and guy support; a guy off set from and parallel to said staff; a flag holder slidably mounted on said guy; a halyard and flag housing opening into said tubular flag-staff; a sheave mounted in said opening, a shaft contained in said housing for winding said halyard as the flag is raised, a yoke for clamping said housing to said staff, and means for locking said shaft and housing.

1,416,670. OSCILLATING MAGNETO. Frederick W. Andrew, Brooklyn, N. Y., assignor to Eisemann Magneto Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 18, 1919, Serial No. 324,543. Renewed Apr. 30, 1920. Serial No. 377,970. 10 Claims. (Cl. 123—149.)

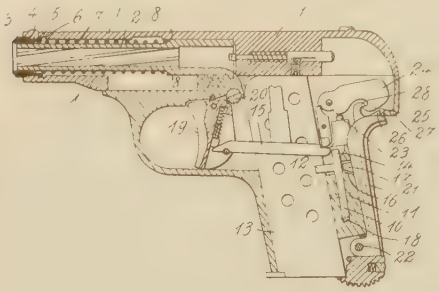


3. An oscillating mechanism for a magneto or other electric current generator, the mechanism comprising a coiled spring, two arms rotatably mounted on the magneto shaft, each of said arms being connected to one end of said spring, a fixed stop for limiting the movement of each arm in one direction, an arm rigidly secured to the magneto shaft and adapted to be intermittently actuated, and means on said last-mentioned arm adapted to engage either of the two arms connected to the ends of said spring.

1,416,671. AUTOMATIC PISTOL. Dionisio Artamendi, Barcelona, Spain, assignor to Beristain & Cia, Barcelona, Spain. Filed Mar. 30, 1921. Serial No. 457,018. 2 Claims. (Cl. 42—7.)

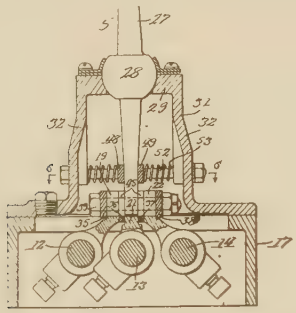
1. In an automatic pistol of the class described, a grip lever pivoted in the rear portion of the grip of the pistol and actuated by the same spring that actuates the hammer, in such manner that it projects normally from the grip, a hook at the rear part of the head of the hammer, another hook at the upper end of said grip lever adapted to normally engage the hook of the hammer and thus prevent firing while the grip lever is not grasped by the operator, a pivoted oscillating lever provided with an arm which bears upon the cartridge-magazine and is actuated by a spring which causes it to oscillate when the cartridge-magazine is drawn aside, a trigger connector, the oscillating lever having its head arranged in close prox-

imity to the end of the connector in such manner that on drawing away the cartridge-magazine, the last mentioned



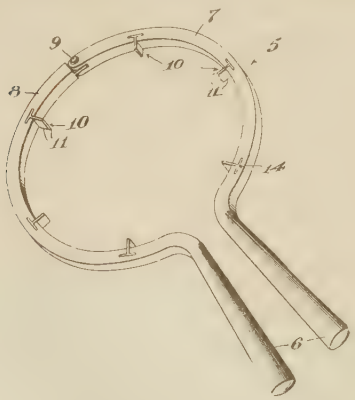
lever oscillates and its head is interposeod in the path of the connector, thus preventing the firing of the pistol.

1,416,672. CONTROL SET FOR CHANGE-SPEED TRANSMISSION. AXEL HJ. ASPROOTH, Rockford, Ill., assignor to Cotta Transmission Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 4, 1919. Serial No. 315,098. 19 Claims. (Cl. 74—39.)



1. In a lever control of the character described, the combination of shiftable devices, a control lever whose operated end is movable in transverse planes, in one for operative connection with certain of said devices and in the other for shifting the devices, and a tension plate mounted independently of said shiftable devices and normally urging the operated end of the lever toward neutral position and yieldingly opposing movement of the lever to any shifted position.

1,416,673. RING-SLOT-CLEANING TOOL. BERNARD BALDWIN, Los Angeles, Calif. Filed Mar. 22, 1921. Serial No. 454,596. 2 Claims. (Cl. 15—104.14.)



1. In a tool of the character described, a pair of pivotally connected segments having T-slots formed therein and opening to their inner surfaces, and T-shaped blades inserted in said slots having rectangular portions projecting from the inner faces of the segments.

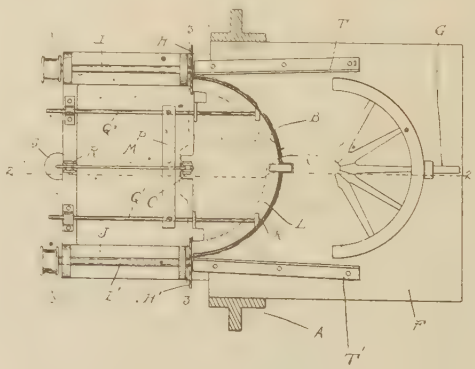
1,416,674. TRUCK. ARTHUR M. BARRETT, Winnetka, Ill. Filed Sept. 11, 1917. Serial No. 190,762. 11 Claims. (Cl. 254—10.)

1. A lifting truck comprising a wheeled frame, an elevating frame mounted thereon to move longitudinally and vertically, a vertically swinging steering lever, a rocking member mounted on said wheeled frame and adapted to be directly engaged and actuated by said steering lever, and means actuated by said rocking member for raising said elevating frame, said steering lever being arranged to swing laterally independently of said rocking member meanwhile maintaining its operative relation thereto.

1,416,675. TRUCK. ARTHUR M. BARRETT, Winnetka, Ill. Filed Feb. 5, 1918. Serial No. 215,488. 28 Claims. (Cl. 254—2.)

1. A lifting truck, comprising a main frame having supporting and steering wheels, an endwise movable lifting frame mounted on said main frame, a cable connected with said main and lifting frames, and reciprocating means in alinement with the turning axis of the steering wheels for deflecting said cable intermediately to move said lifting frame endwise.

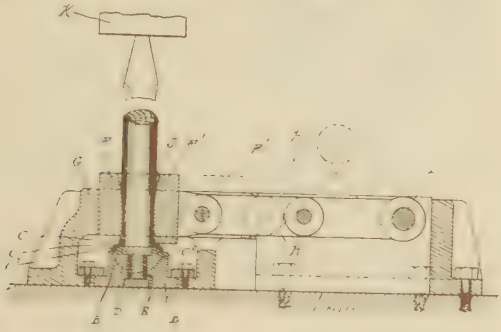
1,416,676. FELLY-FORMING MACHINE. JOSEPH E. BATIE, Detroit, Mich., assignor to Kelsey Wheel Company, Detroit, Mich., a Corporation of Michigan. Filed July 11, 1918. Serial No. 244,377. 7 Claims. (Cl. 143—48.)



1. The combination with a guide for conforming a felly to a true arc, of a table upon which the felly is placed

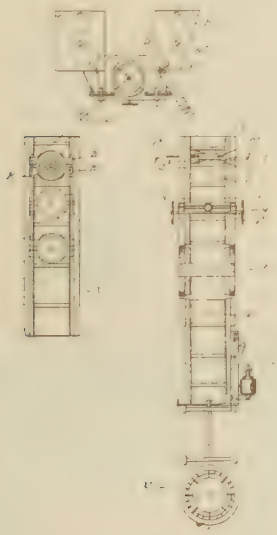
and from which it may be fed to said guide, a reciprocating plunger for engaging the felly and forcing the same into conformity to said guide, a saw for cutting off the felly when depressed by said plunger, and an ejector for disengaging the felly.

1,416,677. MACHINE FOR ENGAGING FERRULES WITH WHEEL SPOKES. JOSEPH E. BATIE, Detroit, Mich., assignor to Kelsey Wheel Company, Detroit, Mich., a Corporation of Michigan. Filed July 11, 1918. Serial No. 244,378. 3 Claims. (Cl. 144—2.)



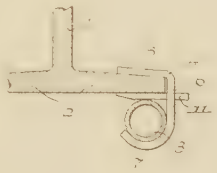
1. A machine for engaging spokes with fasteners comprising a seat for the fastener, a guide for engaging the ferrule of the fastener depressible into a recess in said seat, yieldable means for holding said guide in engagement with the ferrule, and a sizing die mounted in proximity to said seat and in exact registration with said guide permitting the displacement of the latter by the sized end of the spoke.

1,416,678. APPARATUS FOR MANUFACTURING VEHICLE WHEELS. JOSEPH E. BATIE, Detroit, Mich., assignor to Kelsey Wheel Company, Inc., Detroit, Mich., a Corporation of New York. Filed Oct. 28, 1918. Serial No. 259,906. 3 Claims. (Cl. 157—1.)



1. In an apparatus for assembling wheels, the combination with a support for complementary spoked felly sections, means for yieldably clamping the inner ends of the spokes to hold them in the same plane, a peripheral clamping band for surrounding the complementary sections, a floating jack for drawing the ends of said band toward each other to circumferentially and radially compress the work, means for guiding the work and holding the periphery thereof in substantially circular form, and boring means for the hub concentric with said guiding means.

1,416,679. PIPE OR CONDUIT HANGER. JAMES T. BARRY, Chicago, Ill. Original application filed Jan. 20, 1921, Serial No. 438,682. Divided and this application filed June 16, 1921. Serial No. 478,039. 8 Claims. (Cl. 248—32.)

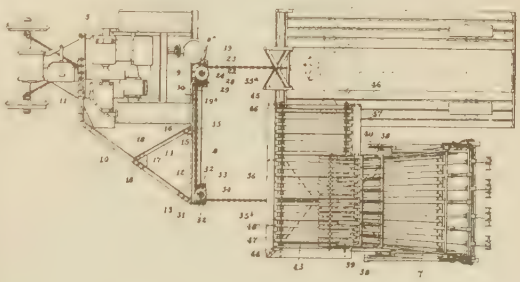


1. In a conduit hanger, the combination with a flanged beam, of a shank having a seat on one side of the flange and a tongue on the other side of said flange, and a retaining member disposed beneath the flange above said seat.

1,416,680. ROLLER BEARING. JEREMIAH BINGHAM, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 3, 1919. Serial No. 274,600. 1 Claim. (Cl. 64—62.)

A one-piece cage for tapered-roller bearings comprising end flanges, spacing members between the rollers, connecting said flanges, but inclined relatively to the conical path of the roller axes and crossing the latter substantially at the middle of the rolling surface of the rollers, a pair of inwardly turned wings on the opposite edges of one end of each of said spacing members and a pair of outwardly turned wings on the opposite edges of the other end of each of said members.

1,416,681. DRAFT ATTACHMENT. ROBERT R. BOWERS, Ottumwa, Iowa, assignor to Dain Manufacturing Co. of Iowa, Ottumwa, Iowa, a Corporation of Iowa. Filed Sept. 27, 1920. Serial No. 413,088. 16 Claims. (Cl. 213—67.)

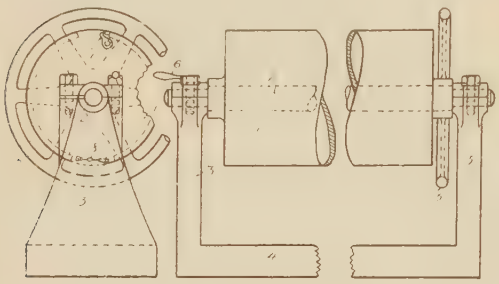


2. In a draft attachment for tractors, the combination of flexible means for connecting a plurality of devices to the tractor and means supported by the tractor, under control of the operator, to vary the fore and aft position of the devices.

1,416,682. METHOD OF PREPARING CUTTING AND SCORING MATRICES FOR PRINTING PRESSES. CHARLES W. BRITCHER, Springfield, Mass., assignor to The Babcock Printing Press Manufacturing Company, New London, Conn., a Corporation of Connecticut. Filed June 30, 1919. Serial No. 307,810. 2 Claims. (Cl. 101—1.)

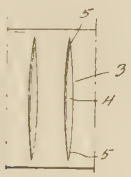
1. The method of preparing a cutting and scoring matrix for presses, which consists of first taking an im-

pression on the press from a form containing cutting and scoring rules, upon a matrix sheet attached to a removable cylinder jacket, removing the jacket and matrix sheet to a separate or dummy support, preparing or



routing the matrix sheet while said jacket is removed from the press, and afterwards returning said jacket and the matrix to the press whereby the latter may be operated for cutting and scoring.

1,416,683. SEALING MEANS. WINFRED MUDGE BROOKS, South Orange, N. J. Filed Sept. 24, 1921. Serial No. 502,963. 2 Claims. (Cl. 292—317.)



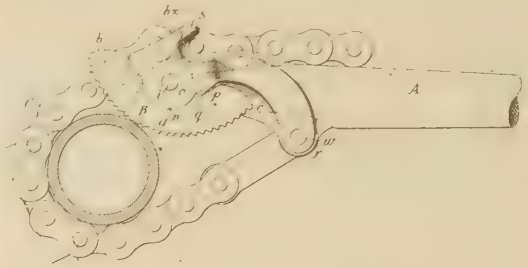
1. In a sealing device, a tell-tale member having a weakened zone, the weakening consisting of a groove of varying depth longitudinally with its deepest part at the center portion and shallow parts at its ends.

1,416,684. PLASTIC COMPOSITION FOR USE AS A COATING FOR WALLS OF BUILDINGS. LEWIS N. BROWER and PETER WERLE, Sellersburg, Ind. Filed May 9, 1921. Serial No. 468,083. 1 Claim. (Cl. 106—34.)

A composition for the production of plaster consisting of Brixment cement, Portland cement, lime, sand, hair fiber, and pulverized alum substantially in the proportions as follows: 1090 parts Brixment cement, 535 parts Portland cement, 185 parts lime, 185 parts sand, 5 parts hair fiber, and ½ part pulverized alum.

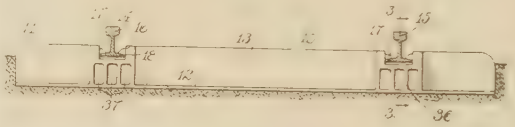
1,416,685. CHAIN PIPE WRENCH. GEORGE W. BUFFORD, Buffalo, N. Y., assignor to J. H. Williams & Company, Brooklyn, N. Y., a Corporation of New York. Continuation of application Serial No. 64,266, filed Nov. 30, 1915. This application filed June 30, 1921. Serial No. 481,723. 14 Claims. (Cl. 81—66.)

1. In a chain pipe wrench, the combination of a handle, a reversible jaw having working faces at the forward and rear parts of the same side of the jaw, a chain attached to the handle at the rear of both working faces and consequently arranged to grip a pipe and turn it by engagement with a forward working face only of said jaw, said jaw having its forward and rear ends bifurcated to permit the passage of the chain and having a central portion of the full width of the jaw, said jaw being adapt-



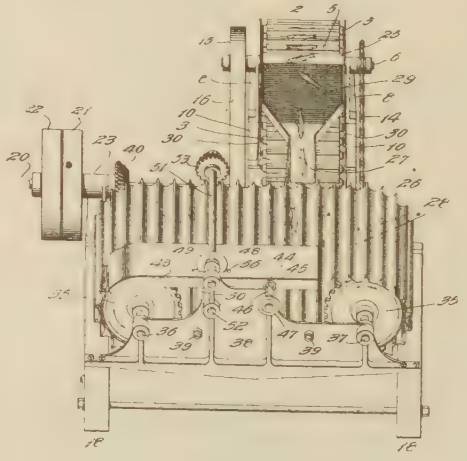
ed to be turned end for end so as to bring into forward operative position one or another of said working faces.

1,416,686. METAL RAILROAD TIE. ROBERT T. BURDETTE, Chicago, Ill. Filed Dec. 9, 1921. Serial No. 521,199. 7 Claims. (Cl. 238—69.)



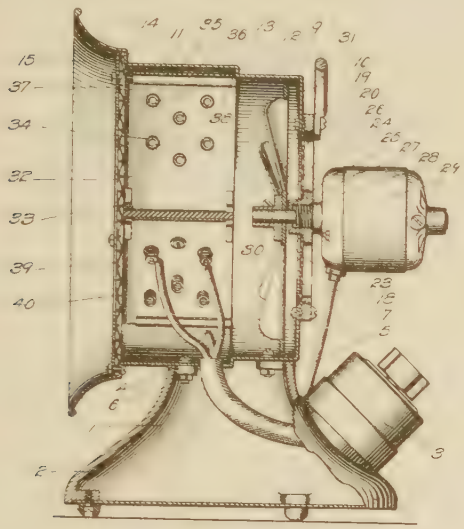
1. Railway track construction comprising, in combination, a metal tie having at each end an upwardly facing transverse socket with overhanging side walls, rails having foot flanges seated in the sockets, removable blocks entered between the overhanging side walls of the sockets and the foot flanges of the rails, and wedge means acting between the floor of each socket and the bottom of the corresponding rail.

1,416,687. FISH-POSITIONING MACHINE. WILLIAM F. BUTLER, Fairport, N. Y., assignor to American Can Company, a Corporation of New Jersey. Filed Oct. 28, 1916. Serial No. 128,317. 7 Claims. (Cl. 17—10.)



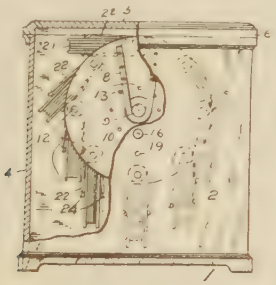
7. The combination of an inclined fish-positioning slide constructed to position and deliver fish head first from its lower end, a conveyer having its operating surface arranged in substantially the same plane as said slide, and means for operating the conveyer in said plane and transversely to the slide.

1,416,688. ELECTRIC HEATER. SAMUEL M. CARMEAN and JAMES H. CARMEAN, Kansas City, Mo. Filed Sept. 12, 1921. Serial No. 499,976. 7 Claims. (Cl. 219—42.)



1. An electric heater comprising a casing having an open end, a shoulder near the rear end of the casing, an impeller between the shoulder and the rear end of the casing, an electric heating member bearing against the shoulder, a shoulder at the front end of the casing, and a coil-retaining means connected to the second mentioned shoulder.

1,416,689. CABINET FOR PHONOGRAPHIC DISKS. LE ROY P. CLUTTER, West Finley, Pa. Filed Aug. 6, 1919. Serial No. 315,605. 2 Claims. (Cl. 211—16.)

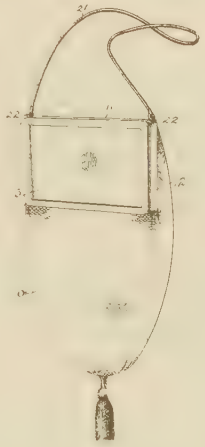


2. A cabinet for the purpose set forth comprising a revolvable carrier, and a plurality of book-like filing elements suspended from the carrier and each comprising a plurality of pocket forming members and a pair of covers therefor, each of said elements further including a pair of re-inforcing and protecting members extending from the back towards the front of the element on each side thereof, said re-inforcing members overlapping each other at the rear and having their forward portions inset.

1,416,690. HAND BAG. PHILIP COHEN, Elizabeth, N. J. Filed Feb. 16, 1921. Serial No. 445,300. 6 Claims. (Cl. 150—28.)

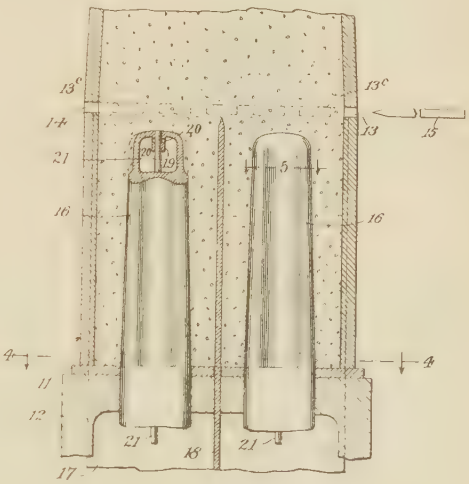
1. A hand bag with a short side and a long side and having a frame with a hinged lid therein, said frame being disposed so as to be suspended at the top part of the short side of the bag when the bag is carried.

5. A hand bag having a rigid frame, a lid swinging between its ends in the frame so that one end is moved inward when the lid is tilted, flexible material forming the body of the bag and secured to the frame, and a handle for suspending the frame edgewise so that it forms a panel at the top of one side of the bag, the



material at the top of the other side acting to prevent inward swinging of one end of the lid to hold the lid shut when the bag is so suspended.

1,416,691. MANUFACTURE OF HOLLOW CEMENTITIOUS PRODUCTS. ALFRED OWEN CROZIER, New York, N. Y. Filed June 12, 1920. Serial No. 388,525. 16 Claims. (Cl. 25—155.)

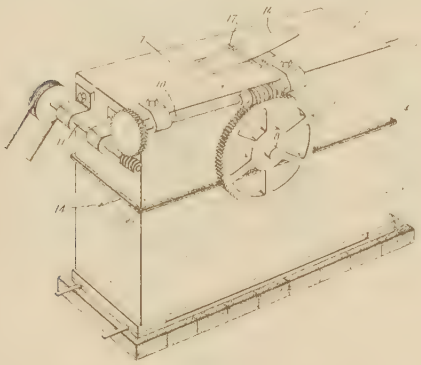


1. In the art of making hollow cementitious products, the improvement comprising establishing in a suitable upright container a mass of unset cementitious material, forcing one or more cores into the lower portion of the mass to produce cavities therein, severing the cored lower portion of the mass from the upper portion, retracting the cores and removing the severed portion, and allowing the upper portion of said mass of cementitious material to descend in the container for the formation of another product.

1,416,692. ELECTROLYTIC APPARATUS AND METHOD. CHRISTIAN DANTSIZEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 21, 1920. Serial No. 383,076. 3 Claims. (Cl. 204—6.)

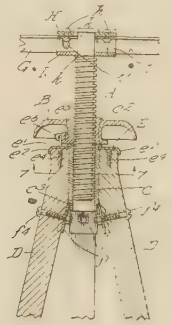
1. The method of producing laminæ of electrolytic iron which consists in electro-depositing iron upon a tungsten

cathode from an electrolyte, removing a part of said cathode from said electrolyte while submerging another



part of said cathode and stripping said deposit continuously from said cathode as a deposit bearing part of said cathode emerges from said electrolyte.

1,416,693. FITTING FOR STOOLS OR THE LIKE. ROBERT K. DAWSON, Guelph, Ontario, Canada. Filed May 26, 1921. Serial No. 472,627. 9 Claims. (Cl. 155—138.)

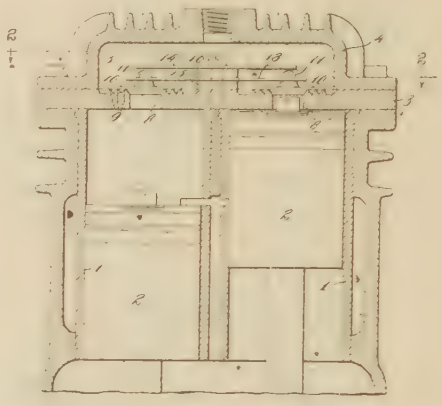


1. Means for connecting the legs of stools and the like, including a central upright part, a sheet metal member having its middle portion secured to said upright part and having a plurality of radially extending arms provided with downwardly extending flanges at the edges of said arms, said flanges being adapted to embrace the upper ends of the legs, a lower leg engaging member having a hole through which said upright member extends, and means for securing said legs to said lower member.

1,416,694. GAUGE. ADOLPH L. DE LEEUW, Plainfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Oct. 26, 1918. Serial No. 259,813. 7 Claims. (Cl. 33—178.)

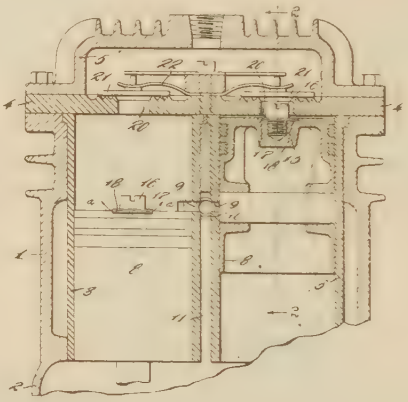
1. In a gauge, movable contact means, positive means for advancing and yielding means for retracting said movable means, said positive means including an operating lever, a separate indicating means, and means controlled by the movement of said lever for actuating said indicating means.

1,416,695. COMPRESSOR. JAMES H. DENNEDY, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 28, 1920. Serial No. 406,594. 5 Claims. (Cl. 230—34.)



1. In a compressor, an outlet valve comprising a seat, a valve member operatively engaging the same and comprising a circular sheet metal disc having a central hollow upstanding projection, and a leaf spring overlying said seat and having an aperture snugly receiving said projection.

1,416,696. COMPRESSOR. JAMES H. DENNEDY, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 28, 1920. Serial No. 406,595. 2 Claims. (Cl. 230—34.)

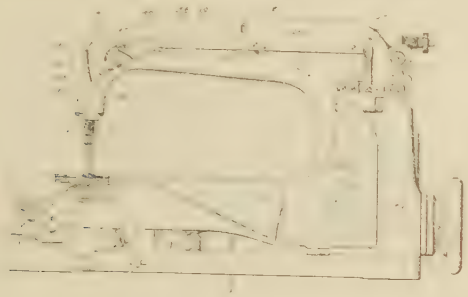


1. In a compressor, a piston having on its head a wide, shallow, flat bottomed slot, the bottom of said slot having a port and a flap valve of flat elastic, sheet metal located in said slot.

1,416,697. THREAD-CONTROLLING MECHANISM. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed May 31, 1919. Serial No. 301,052. 10 Claims. (Cl. 112—241.)

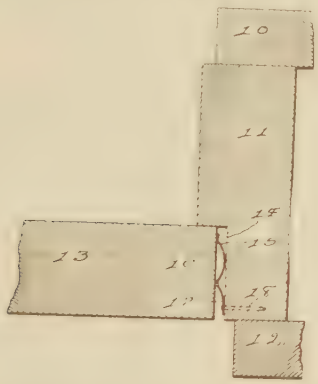
1. In a sewing machine, in combination, stitch-forming mechanism including a needle, a looper, and thread-controlling mechanism including a stationary thread-guide and a movable thread-guide spaced from the first thread-guide, a thread-governing member having spaced thread-engaging portions both of which are located intermediate said guides, and means for moving said member relative to said guides to draw thread back through the eye of the needle during the first part of its descent and before its point reaches the work, and for moving said member rela-

tive to said thread-guides to assist the needle in drawing up the previous needle-loop after it has been shed by the



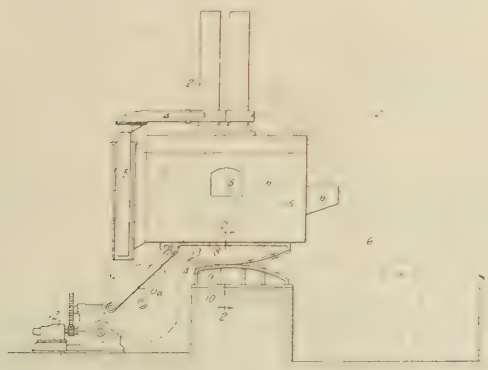
looper and during the last part of the downward movement of the needle.

1,416,698. WEATHER STRIP. JOSEPH C. DUNHAM, Oklahoma, Okla. Filed July 12, 1920. Serial No. 395,537. 1 Claim. (Cl. 20—69.)



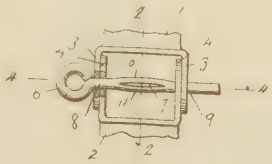
A compound-curved sheet metal weather strip formed in cross section into two arc-shaped portions the edges of one of which are adapted to bear against the edge of a door with the curved back of said portion bearing against the jamb in the rabbet thereof, the other portion being provided with an end portion for fastening to the jamb, the centers of curvatures of both arc-shaped portions being on the same side of the strip and the peaks of both curves engageable with the edge of a door to be placed under tension at separated points.

1,416,699. TILTING FURNACE. WALDEMAR DYRSSEN, New York, N. Y. Filed Dec. 2, 1920. Serial No. 427,778. 3 Claims. (Cl. 263—33.)



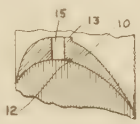
1. A tilting furnace provided with rockers rolling on curved tracks, the bearing faces being shaped to produce an approximately horizontal movement of the center of gravity of the furnace.

1,416,700. SPLIT PIN. FRANK J. FENICLE, Easton, Pa. Filed June 3, 1920. Serial No. 386,283. 4 Claims. (Cl. 85—5.)



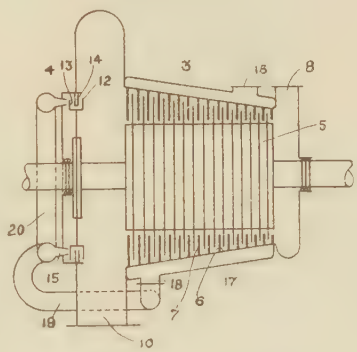
1. A pin including a shank having non-expansible ends, and a resilient portion between said ends capable of expansion and contraction.

1,416,701. TURBINE BLADE. WARREN B. FLANDERS, Essington, Pa., assignor to Westinghouse Electrical and Manufacturing Company, a Corporation of Pennsylvania. Filed June 22, 1920. Serial No. 390,905. 4 Claims. (Cl. 253—77.)



1. A turbine blade having a lashing opening and a lashing member having a deformable tail or tongue portion passing therethrough, a portion of the blade surrounding the opening being of constant thickness to constitute abutments for the deformed tail or tongue portions of the lashing.

1,416,702. REVERSING TURBINE. WARREN B. FLANDERS, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 22, 1920. Serial No. 390,907. 5 Claims. (Cl. 253—70.)

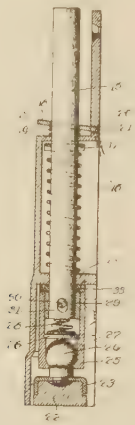


1. In an axial flow turbine, the combination of an ahead blading section, a reverse blading section, and a jacket surrounding one section and adapted to receive steam and discharge it into the other section.

1,416,703. DOOR STOP AND HOLDER. MERTON H. FORCE, Danville, Ill. Filed July 12, 1919. Serial No. 310,460. 2 Claims. (Cl. 292—178.)

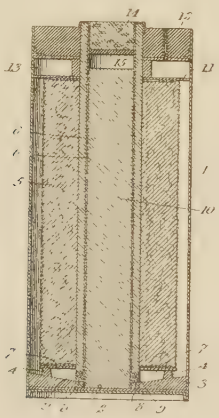
1. In a door stop the combination of a casing, a plunger therein, a spring acting to resist downward movement of the plunger, a catch for the plunger, a tubular member in the lower end of the casing and separate from said

plunger said member providing a socket, a foot having a ball to engage said socket, a spring between the lower



end of the plunger and said foot, and a pin and slot connection between the plunger and the tubular member.

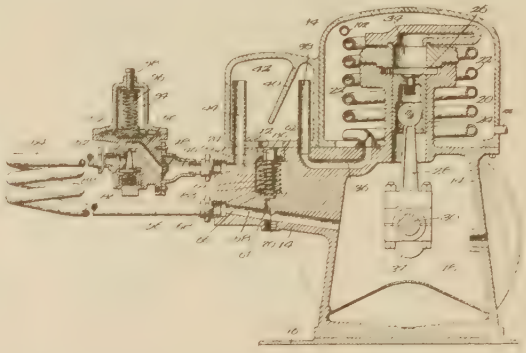
1,416,704. ELECTRIC BATTERY. HARRY F. FRENCH, Fremont, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Apr. 26, 1920. Serial No. 376,725. 11 Claims. (Cl. 204—38.)



1. In an electric cell of the kind described, the combination of a metallic electrode and a depolarizing mix incapable of relative adjustment and having a space therebetween, and a receptacle within the cell containing a supply of activating material adapted to be ejected from the receptacle by application of sufficient pressure and forced into the space between the electrode and mix.

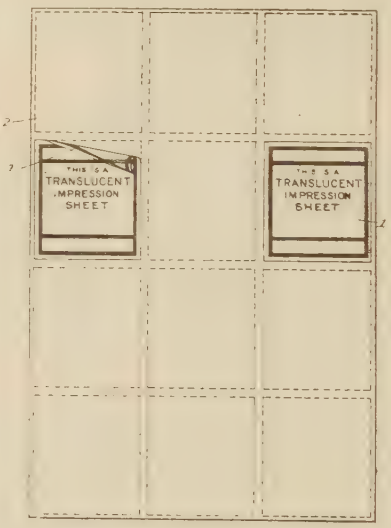
1,416,705. COMPRESSING MACHINE WITH AUTOMATIC OIL RETURN. ALFRED O. GIRARD, Decatur, Ill., assignor to Glacier Refrigerating Machine Co., a Common Law Trust, Alfred O. Girard, trustee, Chicago, Ill. Filed Apr. 25, 1919. Serial No. 292,572. 4 Claims. (Cl. 230—32.)

1. In the machine of the class described having high and low pressure chambers, automatic means for equalizing the pressures of said chambers, there being an oil passage between said chambers, valve mechanism in the oil passage, operative when there is working pressure in the high pressure chamber to pass oil from the high pressure chamber into said oil passage and automatically movable when the pressures in the two chambers are more nearly equalized to a position to pass oil from the oil passage to



the low pressure chamber, there being at no time an open path through said passage for the purposes set forth.

1,416,706. MASTER SHEET FOR USE IN MAKING LITHOGRAPHIC PRINTING SURFACES AND METHOD OF MAKING THE SAME. ALFRED GRASS, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 8, 1918. Serial No. 238,970. 5 Claims. (Cl. 41—46.)

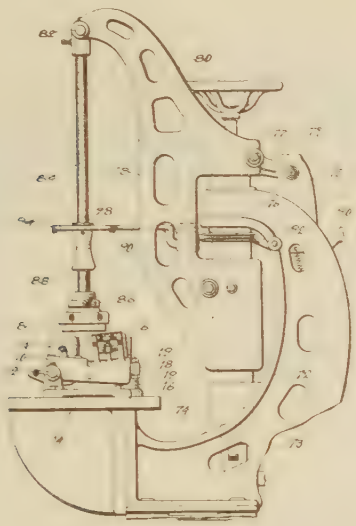


1. A translucent master sheet for the production of lithographic printing surfaces, comprising a fibrous sheet treated to render it translucent and moisture resistant, and having thereon a design in light-obstructing color, said sheet being attached to a translucent backing sheet treated with neat's-foot oil and turpentine, said fibrous sheet and backing sheet being adhered together to inclose said design.

1,416,707. CUTTING MACHINE. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 8, 1919. Serial No. 322,446. 13 Claims. (Cl. 164—19.)

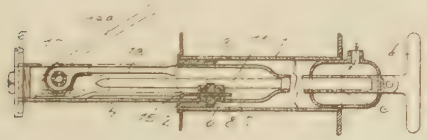
1. In a machine of the class described, a cutter, a cooperating presser member, power means for causing relative movement of the presser member and cutter, starting

mechanism for controlling said power means, a support for the presser member pivoted to swing freely about a



horizontal axis and under direct manual control of the operator, and means for yieldingly retaining the presser member in operative position over the cutter.

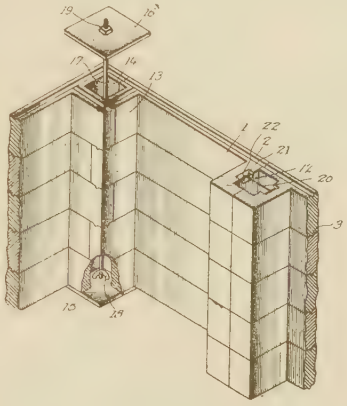
1,416,708. APPARATUS FOR BLOWING OUT SOOT IN BOILER TUBES. ERNST FREDERIK CARL HAGEDORN and HANS PETER HANSEN, Helsinger, Denmark. Filed July 8, 1918. Serial No. 243,936. 2 Claims. (Cl. 122—391.)



1. In an apparatus for blowing out soot in boiler tubes, the combination of a tube-shaped casing closed at the rear end and adapted to be placed in a boiler tube, a steam-spout and a steam-tube placed in the said casing and communicating with the steam supply, a cock-case having teeth and connecting the said steam-spout with the said steam-tube, a handle for turning the said casing, a rack acting upon the teeth of the said cock-case, a screw-rod connected with the said rack, and a gearing for moving the said screw-rod lengthwise, when said handle is turned, substantially as set forth.

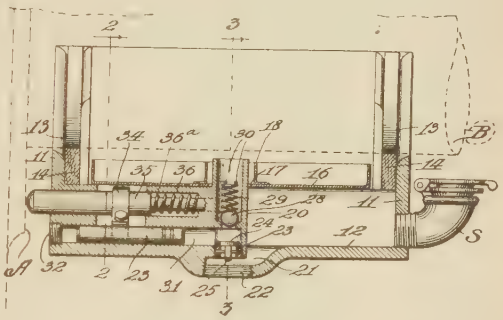
1,416,709. BUILDING CONSTRUCTION. FRANK R. HAHN, Decatur, Ill., assignor, by direct and mesne assignments, of fifty-one and two-thirds per cent to W. P. Landon, Rochelle, Ill., and fifteen per cent to A. G. Clark, St. Paul, Minn. Original application filed Mar. 2, 1917, Serial No. 151,906. Divided and this application filed Feb. 7, 1919. Serial No. 275,566. 7 Claims. (Cl. 72—38.)

1. A construction of the character described for forming a single wall construction, including in combination a plurality of units, each unit being composed of a single body web for forming the inside and outside of the wall, each unit having a flange extending laterally and inwardly near each end thereof, each flange having a right angle extension projecting therefrom, the flanges and ex-



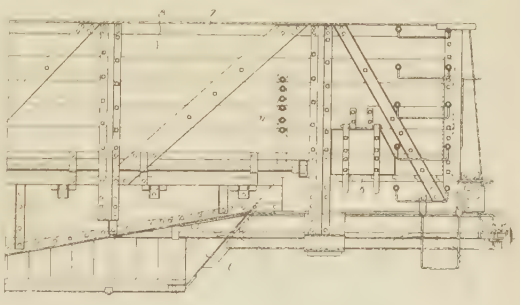
tensions at adjacent ends of adjacent slabs cooperating to provide a hollow post or column.

1,416,710. LOCOMOTIVE JOURNAL LUBRICATOR. JAMES J. HENNESSY, New York, N. Y. Filed Apr. 23, 1921. Serial No. 463,842. 3 Claims. (Cl. 64—24.)



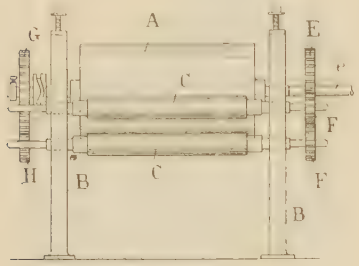
1. In a journal lubricator, a one-piece casting comprising a lubricant reservoir and a pump cylinder and intake and discharge tubes leading to said cylinder from said reservoir and from said cylinder to a point adapted to be near a journal to be lubricated when the lubricator is assembled, with a railway journal box.

1,416,711. CONVERTIBLE DUMP CAR. DAVID HINDAHL, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Mar. 29, 1922. Serial No. 547,634. 8 Claims. (Cl. 105—243.)



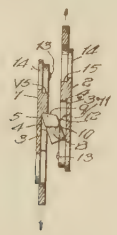
1. In a railway car, a sectional end, certain of said sections being removable, and means located at points intermediate the car ends adapted to retain said sections in place at such points.

1,416,712. CALICO-PRINTING MACHINE. THOMAS HINDLE, Glossop, England. Filed Dec. 16, 1920. Serial No. 431,164. 1 Claim. (Cl. 101—178.)



In a calico printing machine the combination with the main cylinder and a set of printing rollers in contact therewith driven by box wheels from a pinion or crown wheel on the driving shaft and driving the cylinder by friction, of another set of printing rollers of a different diameter in contact with the main cylinder and driven frictionally thereby, box wheels at the opposite side of the machine on the mandrels of this set of printing rollers, and a free wheel on the cylinder shaft gearing therewith to maintain the pattern on the second set of printing rollers in register substantially as described.

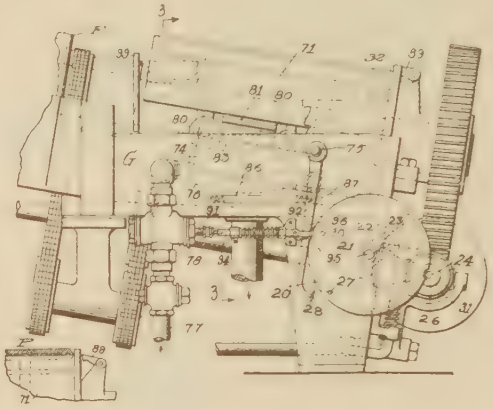
1,416,713. FUSIBLE LINK. MORTON K. HOPKINS, Chicago, Ill., assignor to John L. Kennedy, Chicago, Ill. Filed Feb. 24, 1919. Serial No. 278,779. 7 Claims. (Cl. 169—42.)



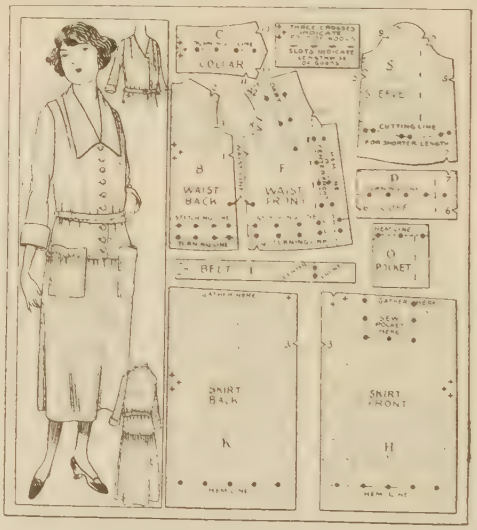
1. A fusible link comprising mating plates each provided with a recess which when the plates are placed face to face one upon the other provide a key cell between them, in combination with a cooperating key adapted to loosely seat in the cell formed by the recesses, the walls of the key and recesses having cooperating surfaces including a surface on the wall of one of the plates extending at right angles to the faces of the plates, and an adjacent inclined face whereby as the plates are moved longitudinally one upon the other the key will disengage from the key cell.

1,416,714. METHOD OF COOLING FINISHED STEREOTYPE PRINTING PLATES. CHARLES E. HOPKINS, Plainfield, N. J. Original application filed Feb. 25, 1911, Serial No. 610,834. Divided and application filed Apr. 2, 1917, Serial No. 159,117. Divided and this application filed July 12, 1920. Serial No. 395,560. 6 Claims. (Cl. 22—4.)

1. A method of cooling curved cast plates to control the diameter thereof, which consists in applying a cooling fluid to one curved surface of a plate and preventing its contact with the other curved surface thereof, and positively controlling the contraction and expansion of the plate by limiting the motion of the straight edges of the plate toward or from each other.

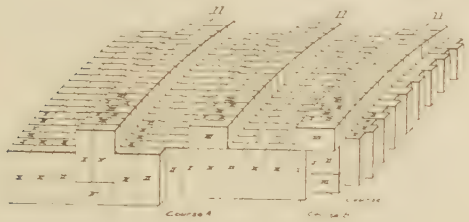


1,416,715. PATTERN CHART OR ENVELOPE. FRANCIS HUTTER, New York, N. Y., assignor to The McCall Company, a Corporation of New York. Filed Oct. 15, 1921. Serial No. 508,003. 3 Claims. (Cl. 283—1.)



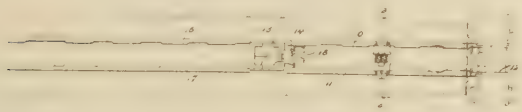
1. A pattern chart containing an illustration of the complete garment and separate illustrations of the different pattern pieces substantially in line with the locations of the corresponding parts in the complete illustration, said separate illustrations showing lines of perforations used on the pattern pieces and having the different groups of such perforations connected by lines so as to segregate the groups from one another.

1,416,716. ROOF CONSTRUCTION FOR REVERBERATORY FURNACES. ARCHIE NOEL JETTE, Anaconda, Mont. Filed Aug. 31, 1920. Serial No. 407,141. 8 Claims. (Cl. 263—46.)



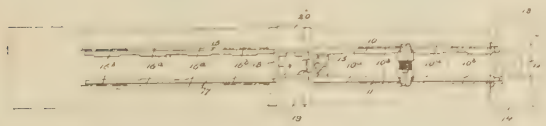
1. An arched roof for a metallurgical furnace having ribs projecting from its upper surface, in which the bricks of alternate courses are similarly disposed and in which the joints of all bricks in one course are overlapped by bricks in the adjacent courses.

1,416,717. LOCOMOTIVE. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed Feb. 2, 1920. Serial No. 355,708. 6 Claims. (Cl. 105—175.)



3. In an articulated locomotive having a frame adapted to swing transversely relative to the boiler, a transverse horizontal compression spring, a pair of members each disposed between one end of said spring and the frame, and means connecting either of said members to the boiler while the opposite member is abutting the frame.

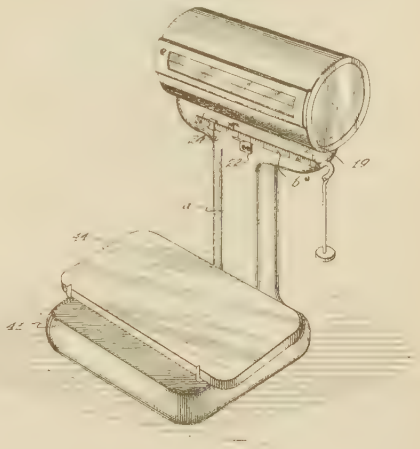
1,416,718. LOCOMOTIVE. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed Feb. 5, 1920. Serial No. 356,387. 13 Claims. (Cl. 105—175.)



1. In a locomotive, a front frame, a rear frame, one of said frames being rigid with the boiler and the other adapted to swing laterally thereof and means pivotally connecting said frames end to end, said pivot being in front of the rear frame and at a distance from the axis of the adjacent drivers approximately equal to the radius of said drivers.

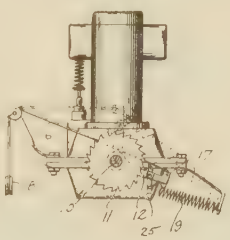
1,416,719. SCALE. BERT W. KING, Detroit, Mich. Filed Nov. 26, 1919. Serial No. 340,707. 21 Claims. (Cl. 265—69.)

1. In a scale, the combination of a load-carrying lever, a platform stem pivotally connected thereto, a check link connected with the platform stem, an actuating lever, a link connecting the two levers having a plurality of simultaneously shiftable connections with one of the levers



to change the travel of the actuating lever, and means for shifting said connection.

1,416,720. STARTER FOR INTERNAL-COMBUSTION ENGINES. EARL L. KLISE, Le Mars, Iowa. Filed May 23, 1921. Serial No. 471,610. 2 Claims. (Cl. 74—55.)

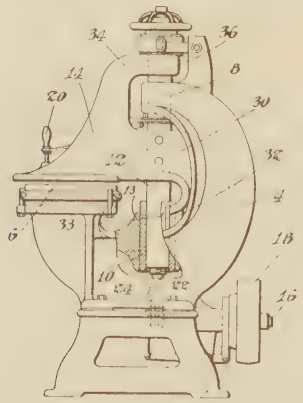


1. In an engine starter, the combination with a crank shaft having a ratchet gear secured thereto, of an arm rotatably mounted upon the shaft and normally disposed in one position, a counterweighted lever pivoted intermediate its ends to said arm provided upon one end thereof with a ratchet tooth engagement dog, a flexible element for rotating said arm upon said shaft and connected with the other end of said lever to shift the same about the pivot thereof upon initial movement of the flexible member and bring said dog into engagement with the teeth of said ratchet gear, and a retractile element for returning said arm to normal position.

1,416,721. PRESS. CLYDE L. KNOTT, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 21, 1920. Serial No. 383,267. 21 Claims. (Cl. 164—23.)

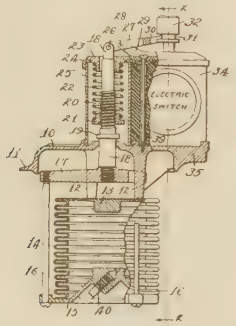
1. In a machine of the class described, a work supporting bed, a presser member movable laterally over the bed and also toward and from the bed in pressure applying operations, a post for supporting the presser member, said presser member having a portion arranged to provide a supporting connection between the presser member

and the post, a plurality of bearings for the post and a plurality of supporting bearings for the presser member



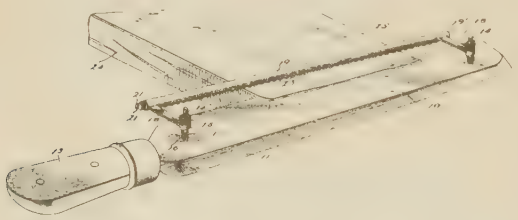
so arranged as to relieve most of the strain on the post during pressure applying operations.

1,416,722. THERMOSTAT. FREDERICK H. KOLBE and EDWARD R. DE LUIZ, Detroit, Mich., assignors to Kelvinator Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 21, 1919. Serial No. 284,039. 9 Claims. (Cl. 200—140.)



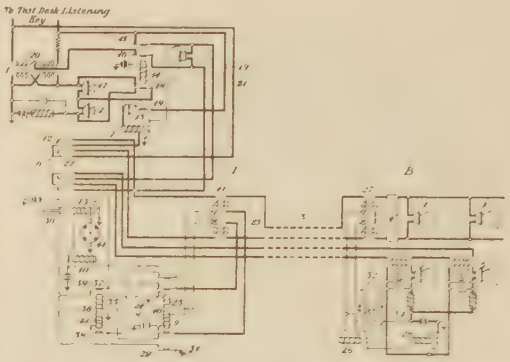
1. The combination of a supporting plate having on one side a plurality of spaced abutments, a longitudinally expansible vessel having one end presented against said abutments, a head located between said plate and vessel and having cavities for said abutments, connecting means between said head and the further end of the said vessel, a controlling device mounted upon the opposite side of said plate, and operative connections between said head and controlling-device.

1,416,723. KNIFE. EMIL KRAFFT, Baltimore, Md. Filed Apr. 29, 1921. Serial No. 465,563. 12 Claims. (Cl. 30—20.)



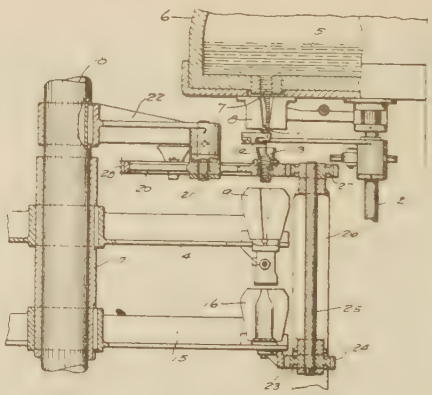
1. A knife of the character described, comprising in combination, a slicing blade, a slicing guide carried thereby, and means associated with the guide adapted to facilitate the sliding movement thereof over the surface with which the same may contact during reciprocation of the slicing blade.

1,416,724. TELEPHONE CIRCUITS. GEORGE W. KUHN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 16, 1918. Serial No. 222,865. 10 Claims. (Cl. 179—175.)



1. In a telephone system, a talking circuit extending between two stations, a telephone set and a signal located at one of the stations, a telephone set at the other station including a normally open circuit for the transmitter and a switch at said first mentioned station controlling at that station the connecion beween the telephone set and the talking circuit, and the operation of said signal and at the other station the continuity of the normally open transmitter circuit.

1,416,725. MEANS FOR GUIDING MOLTEN GLASS. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 10, 1918. Serial No. 244,135. 16 Claims. (Cl. 49—5.)

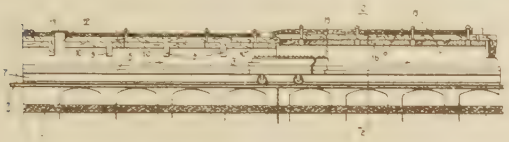


16. The combination of a series of molds, means to move the molds in an annular path, a series of funnel shaped guides, means to move the guides at the same linear speed in a smaller annular path about an axis within the mold path, the guide path passing over the mold path at one point, and a glass supply means above said point.

1,416,726. BURNING CERAMIC WARES AND APPARATUS THEREFOR. TAINE G. MCDOUGAL, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Continuation of application Serial No. 329,705, filed Oct. 10, 1919. This application filed July 18, 1921. Serial No. 485,784. 12 Claims. (Cl. 25—142.)

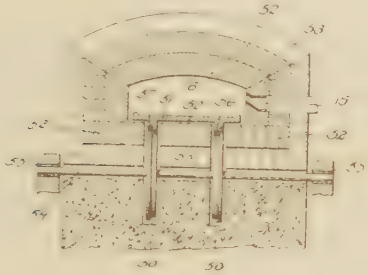
1. That improvement in the art of burning ceramic wares which consists in continuously passing said wares through a kiln having a pre-heating zone, a high-temper-

ature zone and a cooling zone, and maintaining said wares openly exposed to radiation from the under surface of the ceiling of the kiln in the high-temperature zone for a



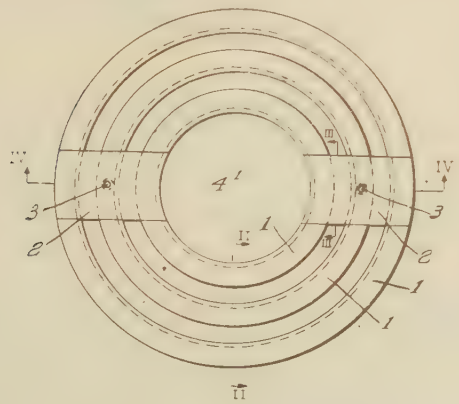
period sufficient to insure thorough burning throughout the whole mass of said wares, said under surface being intensely heated by combustion in the space between it and the wares.

1,416,727. BURNING CERAMIC WARES. TAINE G. MCDOUGAL, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Original application filed Oct. 10, 1919, Serial No. 329,705. Divided and this application filed July 28, 1921. Serial No. 488,135. 5 Claims. (Cl. 25—142.)



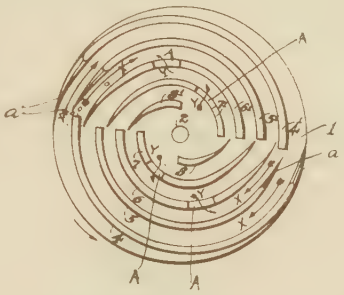
1. In a continuous kiln for burning ceramic wares, a thin highly refractory carrier forming the support for the wares, supporting means on which the carrier travels through the kiln, the space about said supporting means being filled in with heat insulating material to a level close up to the lower side of the carrier, said supporting means including a highly refractory element projecing through the floor of the kiln on which the carrier directly rests and with reference to which said carrier is movable.

1,416,728. EMERY RING. DANIEL FREDERICK MCGOVERN, Montpelier, Vt. Filed Feb. 26, 1920. Serial No. 361,491. 2 Claims. (Cl. 51—209.)



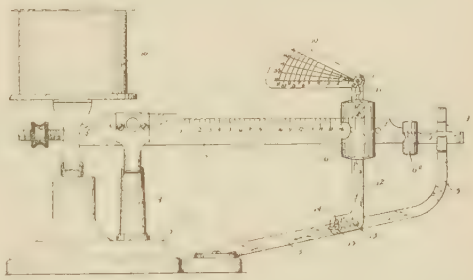
1. In an emery ring, a plurality of spaced open top concentric ring sections, each ring section having its inner face continuously undercut to assist the abrasive to work peripherally outwardly under the ring sections, and the overhang of each undercut face tending to check the peripheral throwing tendency of the outer face of the ring section next within.

1,416,729. POLISHING WHEEL. DANIEL F. MCGOVERN, Montpelier, Vt. Filed May 13, 1921. Serial No. 469,094. 3 Claims. (Cl. 51—209.)



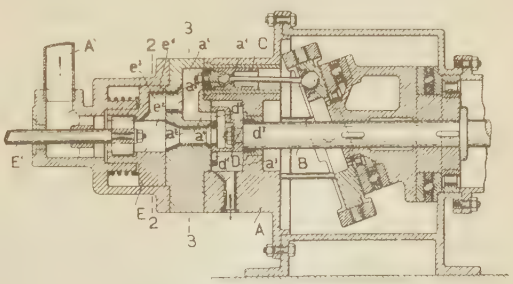
1. A polishing wheel comprising a plate having on its working face a plurality of spaced flanges, the space between the outer pair of flanges defining an uninterrupted abrasive feed channel and an inner pair of flanges included by said outer pair having openings between their ends for the radial return of the abrasive to said feed channel, the opening in one of said flanges being staggered with relation to the opening of the other flange.

1,416,730. ICE-CREAM OVERRUN TESTER. WILLIAM J. MCLAUGHLIN, Owatonna, Minn. Filed May 19, 1920. Serial No. 382,489. 5 Claims. (Cl. 265—30.)



1. The combination with a weighing scale comprising a single scale beam and a poise movable thereon, of a bulk percentage indicator associated with said scale and co-operating with said poise, said percentage indicator comprising a graduated plate having a plurality of lines of different lengths representing a certain percentage of different original weights, and a pointer on said poise co-operating with said scale to indicate when the bulk of frozen substance has been increased to a proper percentage.

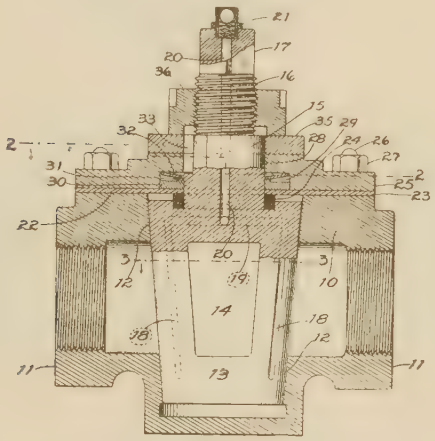
1,416,731. BY-PASS SYSTEM FOR PISTON PUMPS. FRIEDRICH MARTIN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 25, 1920. Serial No. 412,895. 3 Claims. (Cl. 103—77.)



1. A device of the class described comprising a driving shaft, a multiplicity of cylinders, a starting slide common

to all cylinders and partaking in the rotary movement of the driving shaft, a suction chamber, a control member provided with ports for providing independent communication between the cylinders and the suction chamber and, said control member being rotatable for closing said independent communications.

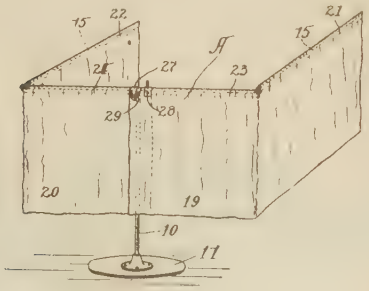
1,416,732. PLUG COCK. JESSE C. MARTIN, Jr., San Francisco, Calif. Filed Feb. 5, 1921. Serial No. 442,862. 5 Claims. (Cl. 251—93.)



1. In a plug cock, a plug, a plug seat, means for confining lubricant under pressure between the plug and plug seat surfaces, a filling inlet communicating with said lubricant confining means, means for closing said filling inlet, and fluid tight means for the attachment of a lubricant compressor to said cock in communication with said inlet.

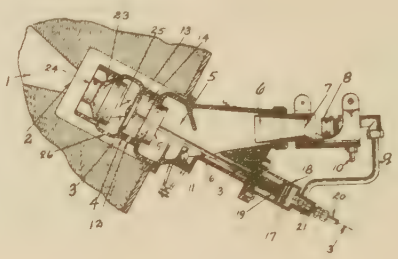
2. In a plug cock, a casing having a plug seat, a plate affixed to the casing, a diaphragm between the plate and the casing, a plug seated in the casing and rotatably and adjustably held by the plate against vertical movement and resilient means for seating the diaphragm against the plug, lubricant passages between the plug and plug seat surfaces, a lubricant filling inlet communicating with said passages and a check valve in the filling inlet.

1,416,733. HOSPITAL SCREEN. DAVID E. MATSON, St. Paul, Minn., assignor to William A. Carlson, Minneapolis, Minn. Filed Feb. 7, 1920. Serial No. 356,844. 6 Claims. (Cl. 45—106.)



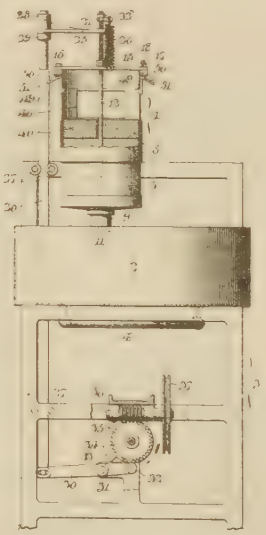
1. A screen, comprising a single supporting standard, a main curtain supporting rod pivoted centrally to the upper end of said standard and adapted to extend horizontally thereto, extension curtain supporting rods pivoted to the ends of said main supporting rod and a curtain adapted to be supported by said main and extension rods with its body and lower portion freely depending therefrom to give access from one side to the other of said screen at any point throughout the length thereof on either side of the main supporting standard.

1,416,734. BURNER. ROBERT F. METCALFE, Erie, Pa. Filed July 25, 1919. Serial No. 313,422. 12 Claims. (Cl. 158—28.)



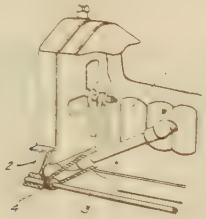
1. In a burner, the combination of a burner chamber having a main flame opening and a pilot flame opening, the flame from said pilot flame opening being positioned to maintain the walls of the chamber at an operative temperature; and means for injecting a combustible mixture to the chamber.

1,416,735. DEVICE FOR FORMING PASTRIES AND THE LIKE. FRANK E. MORRIS, Philadelphia, Pa. Filed Apr. 2, 1920. Serial No. 370,638. 6 Claims. (Cl. 107—14.)



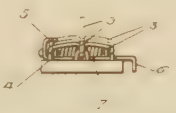
2. In a machine for producing annular pastry formations, the combination of a storage receptacle for dough having at its bottom a die outlet; a cutter disk movable downward and upward out of and into said die outlet, so as, on the one hand, to afford an annular opening for extrusion of the material, and, on the other hand, to shear off the extruded material by entry within said die outlet; and actuating rod for said disk extending upward therefrom through said receptacle; and a weight in said receptacle about said rod actuated by gravity to exert upon the dough pressure sufficient to extrude a formation from the die outlet at each opening thereof by said disk.

1,416,736. POWER JACK FOR AUTOMOBILES. EMILE MOSES, Minneapolis, Minn. Filed Feb. 10, 1921. Serial No. 443,855. 10 Claims. (Cl. 254—86.)



1. A power jack for an automobile comprising a shaft permanently connected to the frame of the machine and extending along the front side thereof, means for driving said shaft from the front end of the engine and a detachable shaft to be attached to the frame of the machine and be connected with said first mentioned shaft at one end, and a geared jack to which the last mentioned shaft is adapted to be connected at its other end.

1,416,737. TRAP CATCH. THOMAS LAURENCE, MUNROE, Fall River, Mass. Filed Oct. 14, 1919. Serial No. 330,635. 4 Claims. (Cl. 43—97.)

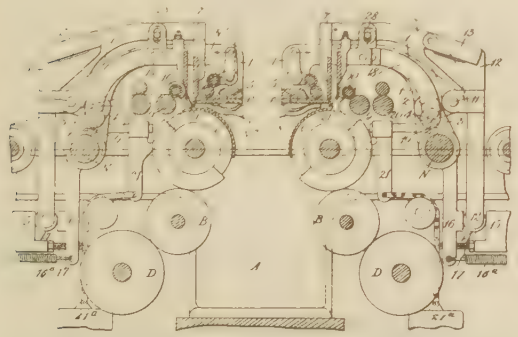


1. A trap catch comprising a support, a member movably mounted thereon and adapted to extend above and engage a trap jaw, and means for limiting the movement of said catch, said member being normally out of contact with said trap jaw when in operative position.

1,416,738. BATTERY CONSTRUCTION. ALBERT L. MUREN, Burlington, Iowa. Filed Jan. 11, 1919. Serial No. 270,729. 3 Claims. (Cl. 204—29.)

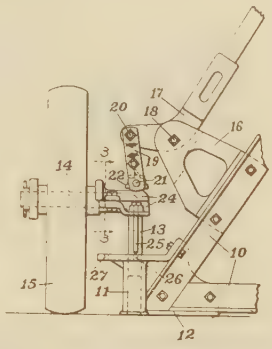
1. An alkaline battery electrolyte containing an alkaline tungstate.

1,416,739. COMBING MACHINE. JOHN WILLIAM NASMITH, Stockport, England. Filed Aug. 7, 1911. Serial No. 642,726. 7 Claims. (Cl. 19—118.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



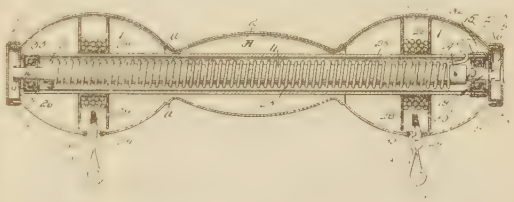
1. In a combing machine, the combination of a combing cylinder, a nipper for holding the material during the combing operation, means for combing the material including a top comb having arms pivoted in front of the combing cylinder, means for feeding the material to the combing means, and means for detaching and piecing the combed material.

1,416,740. WHEEL MOUNTING. LEONARD B. NEIGHBOUR, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Apr. 12, 1920. Serial No. 373,158. 10 Claims. (Cl. 280—44.)



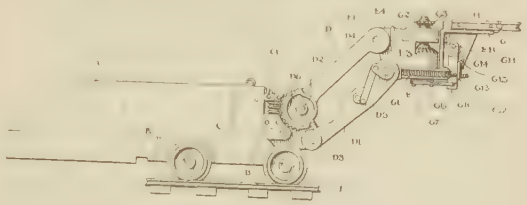
1. The combination of a frame, a supporting wheel mounted thereon, said wheel being movable horizontally into different positions with respect to the frame, means for vertically moving said frame to cause it to rest upon the ground or be raised therefrom, and means for locking the wheel in its said different adjusted positions.

1,416,741. EXERCISING APPARATUS. JOHN S. C. NICHOLLS, Boston, and MARTIN W. SMITH, Somerville, Mass. Filed Aug. 17, 1920. Serial No. 404,281. 6 Claims. (Cl. 46—69.)



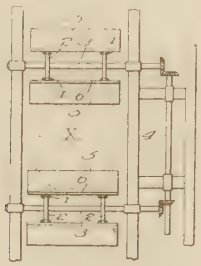
1. An exercising apparatus of the character described comprising a handle-piece consisting of two concavo-convex metal sections each made at opposite ends thereof with nipple segments; means fitted onto said nipple segments to hold said sections together; a drum rotatably mounted within said handle-piece; a cable having one end thereof fastened to said drum, said cable extending from said drum through a hole in said handle-piece to the exterior of the latter, and a spring within said handle-piece and connected with said drum for winding said cable onto the latter.

1,416,742. MINING AND QUARRYING MACHINE. FRED OLDROYD, Cincinnati, Ohio. Filed June 16, 1921. Serial No. 478,090. 13 Claims. (Cl. 262—30.)



5. In a machine of the nature described, the combination with a head and a tool support hinged to each other on an axial line which is transverse to the length of the machine, operator-controlled gearing for slowly turning said tool support on said axial line, and detachable means including a spring for securing the tool support to a member of said gearing, substantially as described.

1,416,743. TRAY ELEVATOR. SAMUEL OLSON, Chicago, Ill., assignor to Samuel Olson & Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1920. Serial No. 429,074. 7 Claims. (Cl. 198—163.)

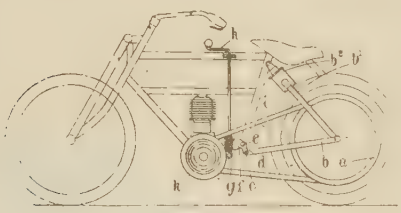


1. In an elevator comprising a pair of opposed vertically traveling belts, each consisting of a pair of chains with flights connecting them transversely at intervals, each flight having a horizontally extending part for supporting a load and a vertically extending part rigid therewith; a fixed member extending vertically between the two chains of each belt and presenting a flat surface for contact with the vertically extending parts of said flights.

1,416,744. DISHWASHER. FLOYD R. PERKINS, Chicago, Ill., assignor to Charles H. Fuller Co., Chicago, Ill., a Corporation of Illinois. Filed June 7, 1920. Serial No. 387,134. 2 Claims. (Cl. 294—28.)

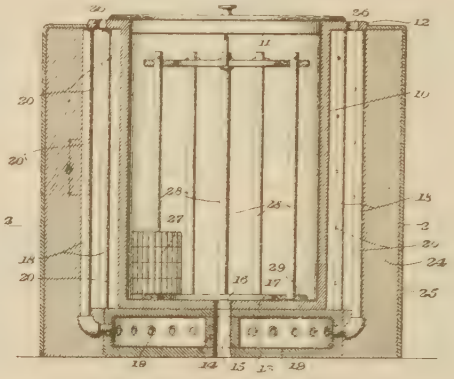
1. A pair of dish washing tongs comprising a lower broad dish sustaining jaw member and an upper comparatively narrow jaw member, said members having their adjacent faces concaved in opposite directions, whereby a dish can be readily washed while held in said tongs.

1,416,745. MOTOR CYCLE. JAMES ARTHUR PETERS, the White House, near Scarborough, England. Filed Jan. 12, 1922. Serial No. 528,682. 1 Claim. (Cl. 64—8.)



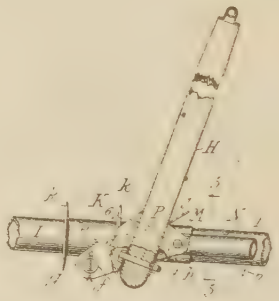
In a multi-speed control for motor cycles, including an automatically expansible drive pulley, a driven pulley for operating the rear wheel, a movable support for the drive pulley to permit said pulleys to be adjustably and relatively spaced, said support including a rod connected at its rear end to the axis of the driven pulley, links pivotally supported on the motor cycle and connected to the forward end of said rod, one end of said links being formed to provide a tooth sector, and a manually operable worm engaging said sector, whereby the links may be adjusted on their pivots to move the rod longitudinally, and a belt connecting the pulleys.

1,416,746. GAS FURNACE. WALTER C. PETERSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 4, 1919. Serial No. 269,668. 14 Claims. (Cl. 263—42.)



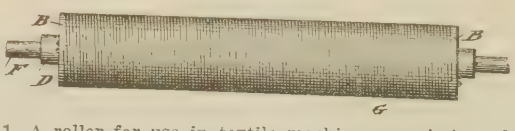
1. A gas furnace of the character described including in combination, a metal pot having a bottom and side walls, and means for directing a plurality of uniformly spaced jets of combustible fluid against the surface of said side walls for the purpose set forth.

1,416,747. CHASSIS STRUCTURE FOR AIRPLANES. WALTER H. PHIPPS, New York, N. Y., assignor to Ordnance Engineering Corporation, New York, N. Y., a Corporation of New Jersey. Filed Sept. 24, 1918. Serial No. 255,456. Renewed May 15, 1920. Serial No. 381,747. 10 Claims. (Cl. 244—2.)



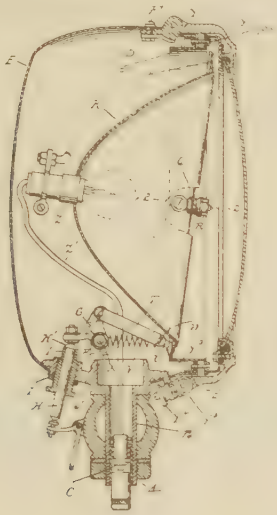
1. An airplane chassis construction including in combination, side frames, an axle extending laterally, wheels mounted on the end portions of the axle, and means for connecting the side frames to the axle, confining spools located upon the axle between the side frames and the wheels and adapted to receive elastic retaining means, and sleeves carried by the spools extending inwardly around the axle and attached thereto at points between the side frames and the center of the chassis.

1,416,748. ROLLER. FRANK R. PIPER, Fairfax, Ala. Filed Sept. 9, 1920. Serial No. 409,284. Renewed Jan. 4, 1922. Serial No. 527,051. 9 Claims. (Cl. 8—19.)



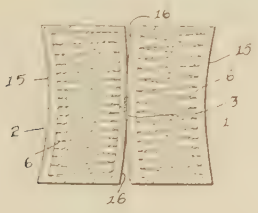
1. A roller for use in textile machines, consisting of a metal core or roller, and a removable covering for said roller, said roller having means for confining and retaining said covering in place.

1,416,749. TILTABLE REFLECTOR. HENRY T. PLATZ, Detroit, Mich., assignor to C. M. Hall Lamp Co., Detroit, Mich., a Corporation of Michigan. Filed Nov. 20, 1920. Serial No. 425,303. 3 Claims. (Cl. 240—41.)



1. In a lamp, the combination with an outer casing, of a reflector therein, a link connected to said reflector for tilting the same, trunnions mounted upon the inner walls of said casing forming a pivotal bearing for said reflector, a bearing engaging each trunnion having a forwardly extending threaded shank for engaging an aperture in a flange on said reflector, means for resisting rotation of said bearings, and a clamping nut for engaging said threaded shank.

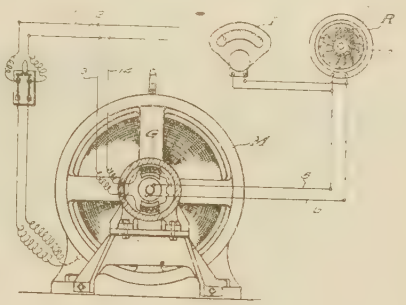
1,416,750. HEATER FOR WAVING HAIR. ZIVA POPIN, New York, N. Y. Filed May 17, 1919. Serial No. 297,764. 8 Claims. (Cl. 219—24.)



1. A heater comprising a pair of semi-cylindrical parts hinged together, each part being provided with a heating element, the free meeting edges of said parts being so constructed as to permit a layer of hair to pass therebetween.

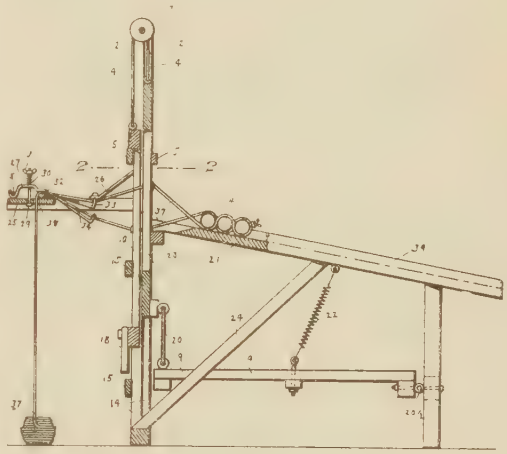
1,416,751. ELECTRICAL RECORDING APPARATUS. REECE WILMER PRESS and CHARLES WILLY SCHWENZFEIER, Glassboro, N. J., assignors to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 19, 1920. Serial No. 375,054. 4 Claims. (Cl. 234—1.5.)

1. The combination with a machine and driving means therefor, of an electric generator connected to be driven at a speed proportional to that of the machine, means for exciting the generator field from a constant potential source independent of the speed of said machine, and a recording indicator actuated by current supplied from



the generator and operative to produce a continuous record indicating the speed of the machine for all periods of its operation.

1,416,752. CORN STRINGER. CHARLES MARSH PUTNAM, Alma, Mich. Filed Oct. 24, 1921. Serial No. 510,172. 2 Claims. (Cl. 139—32.)

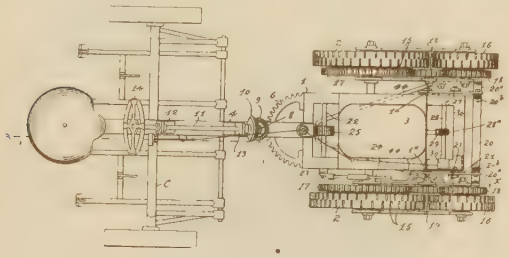


1. A corn stringer of the class described comprising an upstanding frame, complementary sliding frames mounted therein, a rope connecting said sliding frames, a pulley for supporting said rope mounted in said upstanding frame, a tension table attached to said upstanding frame provided with tension spring plates, bolts and springs, a slanting table opposite said tension table and attached to said upstanding frame, strings threaded through said tension means and passed through said sliding frames in pairs respectively, a treadle hinged to said slanting table and attached to one of said sliding frames and a weight attached to the other sliding frame whereby the movement of said treadle will alter the relation of said sliding frames and said weight upon the release of said treadle will return said sliding frames to normal position crossing and recrossing said pairs of string thereby stringing ears of seed corn in parallel relation.

1,416,753. TRACTOR. ALBERT D. RAY, Cleveland, Ohio. Filed May 16, 1921. Serial No. 469,838. 3 Claims. (Cl. 180—14.)

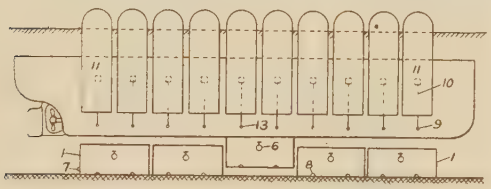
1. In a tractor, the combination of a supporting frame; a motor mounted on the frame; main traction wheels mounted on the frame and adapted to be driven by the motor, rocker arms journaled on the axis of the main

traction wheels and extending radially therefrom; auxiliary traction wheels journaled in said rocker arms; compound lever mechanism connected with the frame



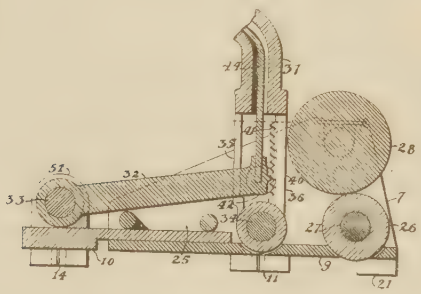
and the rocker arms for vertically oscillating said rocker arms; and means for actuating said lever mechanism, said means being operated by the motor.

1,416,754. DEVICE FOR RAISING SUNKEN VESSELS. JESSE W. RENO, New York, N. Y. Filed Mar. 17, 1921. Serial No. 453,108. 11 Claims. (Cl. 114—52.)



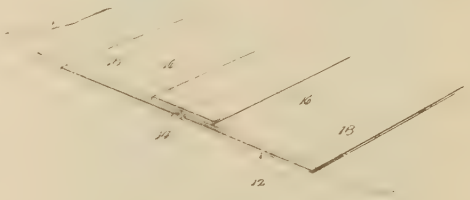
1. In the art of raising the deck of a sunken ship above the surface of the sea, the combination of buoyant pontoons, adapted to be secured to the ship, and raise, and suspend it in the sea, and an element adapted to be placed against the bottom of the suspended ship, and have the buoyant pontoons detached from the ship and attached to the said element, to enable the buoyant force of the pontoons to raise the deck of the ship above the surface of the sea.

1,416,755. CAR PUSHER. BENJAMIN FRANKLIN SCHMIDT and TRIPHON D. HEYL, Los Angeles, Calif. Filed Jan. 17, 1921. Serial No. 437,777. 9 Claims. (Cl. 254—35.)



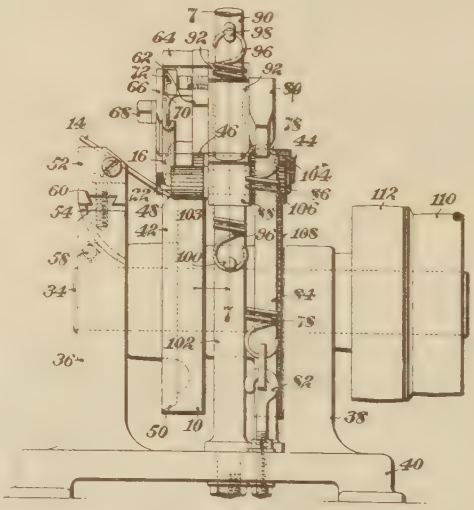
1. In a car pusher, the combination of a divided shoe having a front and rear portion each adapted to slide forward on a track rail, means on either portion of said shoe to prevent retrograde movement on the track rail, a roller rotatably mounted on the front portion of said divided shoe and adapted to frictionally engage the rail and be rotated thereby when said front portion of said shoe advances, another roller rotatably mounted on said front portion of said shoe adapted to be rotated by said first roller and further adapted to frictionally engage a car wheel and to tend to rotate it, a lever pivotally mounted to said front portion of said shoe, a rigid link engaging said rear portion of said shoe and said lever, whereby the downward movement of said lever will cause said front portion of said shoe to advance on the rail imparting a rotation to said rollers to assist in rotating the car wheel.

1,416,756. FASTENING DEVICE. HENRY A. SCHMIDT, Phoebus, Va. Filed Dec. 7, 1921. Serial No. 520,608. 2 Claims. (Cl. 16—16.)



2. A fastening for floor coverings consisting of a pair of base plates, upwardly extending portions formed along the adjacent edges of said base plates, and laterally directed flanges formed at the upper edges of said upwardly extending portions and cooperating with the base plates in defining a pair of grooves for the reception of the meeting of a floor covering, said laterally directed flanges consisting of upper and lower layers having their outer edges joined.

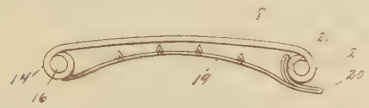
1,416,757. WELT GROOVING AND BEVELING MACHINE. THOMAS H. SEELY, Dorchester, and RALPH C. SIMMONS, Beverly, Mass., assignors, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 27, 1916. Serial No. 93,888. Renewed June 19, 1919. Serial No. 305,394. 13 Claims. (Cl. 12—67.)



1. A machine for operating on welting having, in combination, a support for a welt, guides for positioning the welt on the support with its inner edge projecting over the end of the support, a feed roll co-operating with the support and extending across the inner edge of the welt, and a beveling knife projecting under the support to operate on the inner edge of the welt under the feed roll.

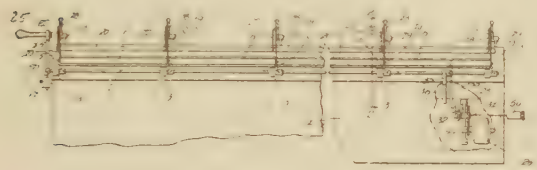
4. A machine for preparing welting having, in combination, a supporting roll having a beveled flange, a feed roll co-operating with the supporting roll, a beveling knife projecting under the beveled flange of the supporting roll, and means to permit adjustment of the knife to different angular positions about the edge of the beveled flange as an axis to vary the angle of the bevel cut.

1,416,758. LINGERIE CLASP. CHARLES SILVERMAN, Providence, R. I. Filed Dec. 31, 1921. Serial No. 526,210. 4 Claims. (Cl. 24—248.)



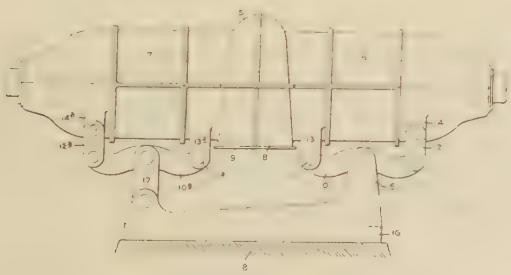
1. A lingerie clasp comprising a rigid jaw, and a resilient jaw, a loop on the free end of the rigid jaw, and an inwardly and upwardly directed lug carried by the resilient jaw adapted to engage the rear side of the loop.

1,416,759. MUSIC-ROLL-PRINTING MACHINE. TOM H. SPENCE and JULIUS A. TURNELL, Chicago, Ill., assignors to Q. R. S. Music Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1920. Serial No. 429,138. 10 Claims. (Cl. 101—97.)



1. In a machine for the purpose indicated, in combination with a table on which the strips to be printed may be extended, a rock shaft extending along the length of the table; a multiplicity of printing-block-holders and printing blocks carried thereby; means operatively connected to the rock shaft for giving the holders movement in planes transverse to the shaft and both parallel to and transverse to the planes of the printing faces of the blocks; said means being with respect to each holder, a lever member on the rock shaft which extends therefrom for swinging through an arc above the shaft extending both sides of the vertical plane of the latter, whereby its outer end moves downward at both limits of the swing, and a controlling arm connected at one end with the lever member and means for guiding the other end in a path approximately parallel to the strip-supporting surface of the table.

1,416,760. ELASTIC-FLUID TURBINE OR TURBINE-DRIVEN UNIT. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 3, 1920. Serial No. 393,932. 5 Claims. (Cl. 253—39.)

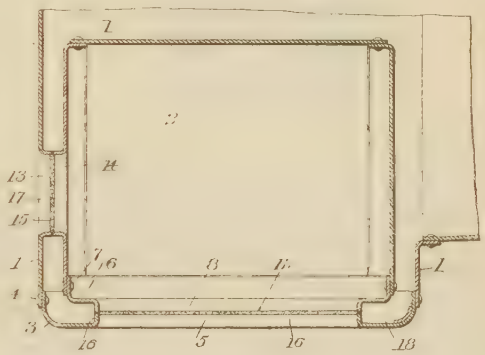


1. In combination, a unit which when in operation is subject to changes in temperature, a bed, and means comprising axially extending levers which support the unit on the bed, said means permitting the unit to expand axially due to temperature changes.

1,416,761. STORAGE-BATTERY SEPARATOR. GODFREY STEERUP, Chicago, Ill., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 11, 1919. Serial No. 316,832. 7 Claims. (Cl. 204—29.)

1. The method of preparing storage battery separators which consists of making a mass of non conducting material interspersed with electrical conductors, applying an electrical current to said conductors to fuse said mass into a coherent block, said mass being provided with a substance which will gasify under the influence of the electric current.

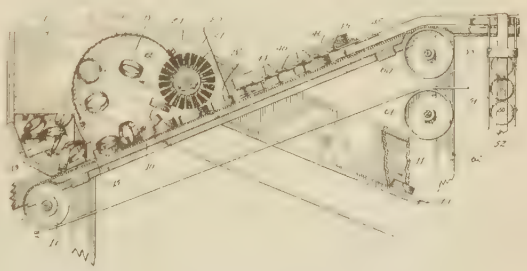
1,416,762. MUD RING FOR BOILERS AND METHOD OF APPLYING SAME. FREDERICK C. STIMMEL, Chattanooga, Tenn., assignor to The Casey-Hedges Co., a Corporation of Tennessee. Filed May 23, 1921. Serial No. 471,571. 6 Claims. (Cl. 122—369.)



1. A mud ring made in two sections for independent attachment, respectively, to the firebox and casing of a boiler, said sections having vertical flanges to be subsequently connected together for completing said mud ring.

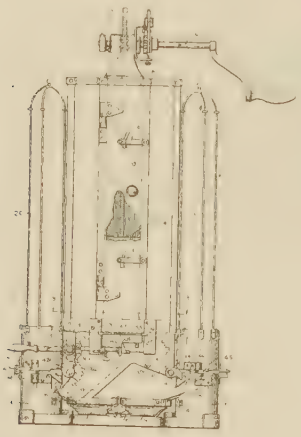
5. The method of applying a mud ring to a boiler which consists in forming said mud ring in two sections, attaching one section to the firebox of a boiler before it is placed in the casing of said boiler, attaching the other section of the mud ring to the boiler casing after said firebox has been inserted therein, and finally uniting said sections.

1,416,763. MECHANISM FOR ARRANGING AND FEEDING CYLINDRICAL BOX BODIES. JAMES C. THOM, Chicago, Ill., assignor to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 10, 1920. Serial No. 429,674. 10 Claims. (Cl. 198—29.)



1. Handling and arranging mechanism for annular box bodies, comprising a conveyor, means adjacent to the conveyor for separating articles into plural row arrangement, a discharge opening for surplus articles anterior to the separating means, and position rectifying means in advance of the separating means and discharge opening.

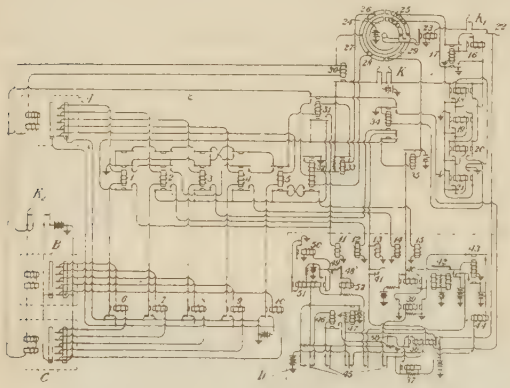
1,416,764. FOOD-DISPENSING APPARATUS. CHARLES J. VANN, Brooklyn, N. Y. Filed Jan. 13, 1916. Serial No. 71,926. 2 Claims. (Cl. 31—65.)



1. In an automatic butter feeding machine, means for feeding several columns of butter simultaneously, means for cutting off a chip from each of said columns simultaneously, means for feeding plates beneath said chips as cut for receiving a chip upon each plate, and means for discharging said plates with said chips thereupon.

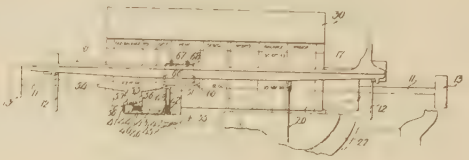
2. In an automatic butter feeding machine, means for feeding several columns of butter mechanically without changing the outer contour of said columns and in combination therewith means for cutting chips therefrom.

1,416,765. CIPHERING DEVICE. GILBERT S. VERNAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 23, 1920. Serial No. 398,358. 10 Claims. (Cl. 178—22.)



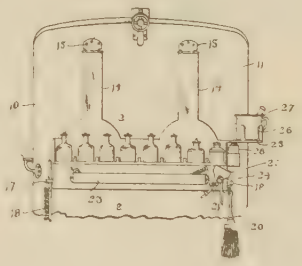
1. The combination of a plurality of selecting means upon which may be set up code combinations representing message characters or "stunt" signals, a printer associated with said selecting means and normally adapted to print the characters of said code combinations and to operate in accordance with said "stunt" signals, and relay means associated with said selecting means and said printer, said relay means being operative whenever a code combination representing a "stunt" signal in set up on said selecting means, and said relay means when operated preventing said printer from operating normally in accordance with said "stunt" signals and causing said printer to give a printed indication of said "stunt" signals.

1,416,766. COMBINED TYPEWRITING AND COMPUTING MACHINE. HARRY H. VICKERS, Corona, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1921. Serial No. 439,365. 11 Claims. (Cl. 235—60.)



1. In a combined typewriting and computing machine having a computing register and a proving register, and comprising a carriage having a platen journaled therein and around which a ledger-sheet is adapted to be fed, said ledger-sheet having an "old balance" column adjacent the left side edge thereof, a "balance" column near the right side edge, and a "proof" column adjacent the "balance" column, the amount in said "balance" column at the beginning of a computation being adapted to be copied into said "old balance" column and run into said computing and proving registers, the same amount being adapted to be copied into said "proof" column and subtracted out of the proving register to ascertain whether the amount in the "old balance" column was correctly copied at the beginning of the computation, a screen mounted on said machine and normally in ineffective position but adapted to be rendered effective to blind the amount in the "old balance" column when the "proof" column is in position to be typed, so that the amount typed in the "proof" column and subtracted from the proving register will be copied from the original "balance" column to avoid carrying over any mistake which might have been made in copying the amount into the "old balance" column.

1,416,767. RECEPTACLE FOR BARBERS' EQUIPMENT. GEORGE D. VOUGHT, Mount Union, Pa. Filed Jan. 28, 1921. Serial No. 440,736. 1 Claim. (Cl. 211—14.)



A device of the class described comprising an elongated box-like shelf provided with a relatively high rear wall and having a relatively low front wall, a substantially V-shaped longitudinal projection extending from the front wall of said receptacle, a pair of spaced extension members having flared lower ends extending from the upper edge of the rear wall of said shelf and a spacing rack removably disposed in said shelf.

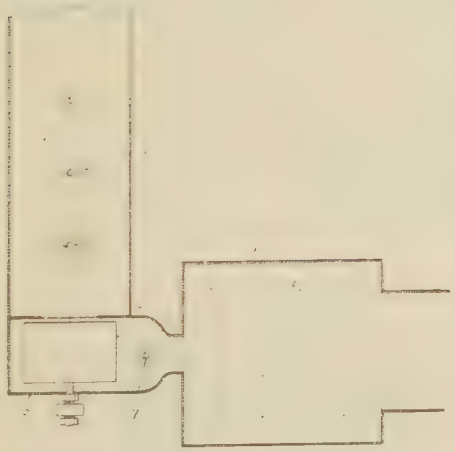
1,416,768. GRAB. JOHN MORECRAFT WELLINGTON and DUNCAN GORDON MACKENZIE, Ilford, England. Filed Feb. 27, 1920. Serial No. 361,754. 3 Claims. (Cl. 37—30.)

1. A grab, comprising, in combination, an opening ring loosely supported above said grab, a suspending hook pivotally connected with the grab and adapted to engage

said opening ring, and cooperating means carried by the grab and said suspending hook for positively controlling

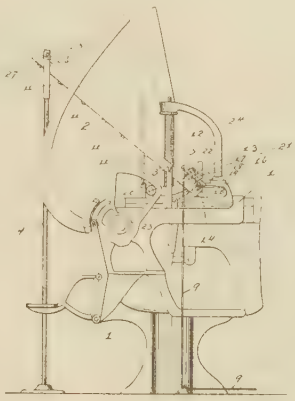
from the grab the angular position of said suspending hook with respect to the center line of the grab, thereby to permit opening and closing of said grab.

1,416,769. PROCESS AND APPARATUS FOR SEPARATION OF SUSPENDED MATERIAL FROM GASES. EDSON R. WOLCOTT, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed June 30, 1919. Serial No. 307,611. 8 Claims. (Cl. 183—7.)



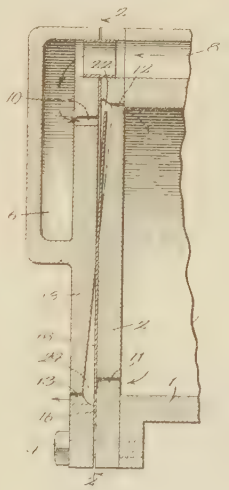
1. The process of removing solid suspended material from gases, which consists in humidifying the gases, cooling the gases sufficiently to cause the particles to become wet by moisture condensed on the particles from the gases, and then subjecting the gases to the action of an alternating electric field to cause agglomeration and precipitation of the suspended particles.

1,416,770. METAL FEEDER FOR TYPOGRAPHICAL MACHINES. WAYNE P. ZENT, Troy, N. Y. Filed July 21, 1919. Serial No. 312,432. 1 Claim. (Cl. 22—80.)



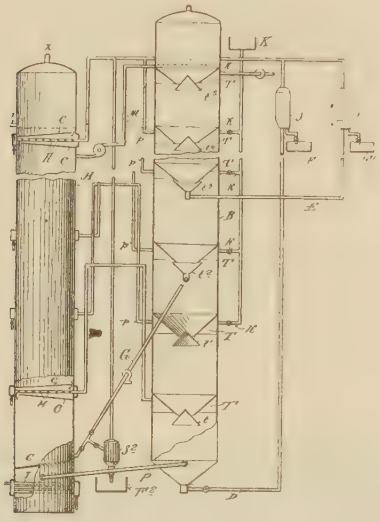
In an ingot-feeding mechanism, the combination with a movable melting-pot; of an ingot-chute rockable upon a horizontal axis arranged to be rocked by movement of the melting-pot while permitting movement of translation of the melting-pot relatively to the chute.

1,416,771. VALVE. HENRY B. BABSON and JACOB J. STAMPEN, Chicago, Ill. Filed Aug. 18, 1920. Serial No. 404,413. 3 Claims. (Cl. 251—123.)



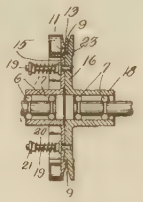
1. A valve structure having a flat valve seat having ports arranged in an arc, a thin, resilient plate the peripheral portion whereof is a ring severed from the internal portion except at a diametral zone, said internal portion being adapted to cover and uncover the ports by moving toward and from them in a direction substantially normal to the surface of the plate, and means for holding the peripheral portion of the plate in close contact with the valve seat, the internal portion being also partially severed from the diametral zone by slotted apertures running radially inward partway from the peripheral portion, to increase the flexibility.

1,416,772. PROCESS OF RECOVERING AMMONIUM CHLORIDE FROM SOLUTION. NATHANIEL T. BACON, Peace Dale, R. I., assignor to The Solvay Process Company, Solvay, N. Y., a Corporation of New York. Filed Dec. 27, 1919. Serial No. 347,832. 8 Claims. (Cl. 23—13.)



7. The improvement in the process of recovering ammonium chloride from solution which consists in evaporating the solution so as to precipitate ammonium chloride and at the same time maintaining free ammonia in the solution.

1,416,773. WELT-MOISTENING MACHINE. PERLEY E. BARBOUR and HARRY LYON, Brockton, Mass., assignors to Brockton Rand Company, a Firm composed of John A. Barbour and Perley E. Barbour, Brockton, Mass. Filed Nov. 20, 1920. Serial No. 425,404. 12 Claims. (Cl. 91—56.)

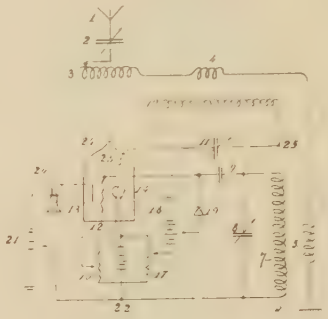


1. A welt moistening machine comprising a wheel having a channel in its periphery adapted to receive a welt strip edgewise, and means for so mounting said wheel that its lower part dips into a body of liquid, the wheel having also means additional to the walls of said channel for transferring liquid from such body to the welting traveling in said channel.

10. A welt moistening wheel having in its periphery a groove or channel arranged and adapted to admit a traveling welt strip edgewise, buckets on the outer side of the wheel, holes passing from said buckets to the nearer bounding side wall of the groove, and an annular groove in said side wall between the series of holes and the bottom of the groove.

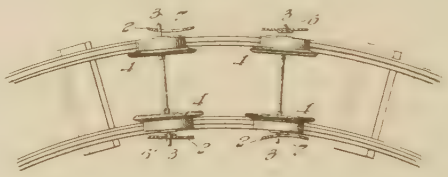
1,416,774. DEVICE FOR RECEIVING RADIOSIGNALS. CESARE BARDELONI, Rome, Italy. Filed Apr. 17, 1920. Serial No. 374,709. 7 Claims. (Cl. 250—20.)

1. A device for receiving radiotelegraphic and radiotelephonic signals, comprising an aerial, an adjustable main oscillating circuit containing a lamp with a hot filament as cathode, a grid, and a plate, said circuit being suitably coupled to the aerial, and connected at one side to the grid and on the other side to the hot cathode of the lamp, a rectifier of variable currents connected to said circuit on the same side as the grid and hot cathode



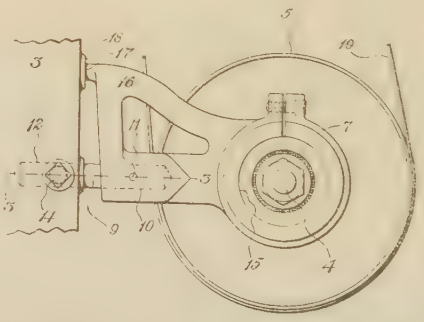
of the lamp, a receiving telephone in circuit with the plate of the lamp, and an auxiliary oscillating system which is also adjustable and suitably coupled with the aerial, said system comprising means so located relatively to the lamp that the oscillations of said system influence the electron stream of the lamp.

1,416,775. TOY CAR. FREDERICK C. BAUER, Philadelphia, Pa. Filed Jan. 14, 1922. Serial No. 529,168. 2 Claims. (Cl. 105—165.)



1. In a toy car, a body, wheels, an axle for said wheels, and opposite pedestals on said body, one of said pedestals having therein a cylindrical opening for one end of the axle mounted rotatably therein, and the other pedestal having therein a horizontally extending elongated slot in which the other end of said axis is both rotatably and slidingly mounted.

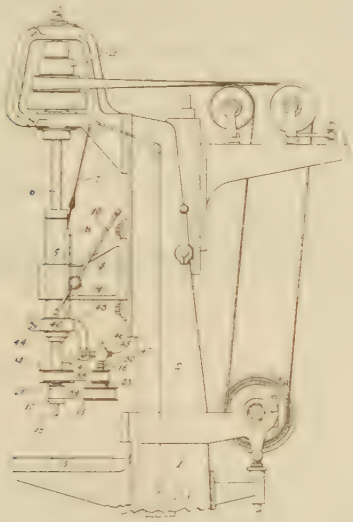
1,416,776. SUPPORTING MEANS FOR SHAFT BEARINGS. WILLIAM J. BAYRER, Hartford, Conn.; Homer H. Bayrer, being administrator of said William J. Bayrer, deceased, assignor to Robert G. Henry, West Hartford, Conn. Filed Sept. 18, 1919. Serial No. 324,629. 5 Claims. (Cl. 64—14.)



1. In combination, a support, a bracket having an opening to receive a bearing, a stud associated with the bracket and adapted for endwise and rotary adjustment in a socket for the support, a projection on the bracket adapted to engage the support to locate the bracket in the length-

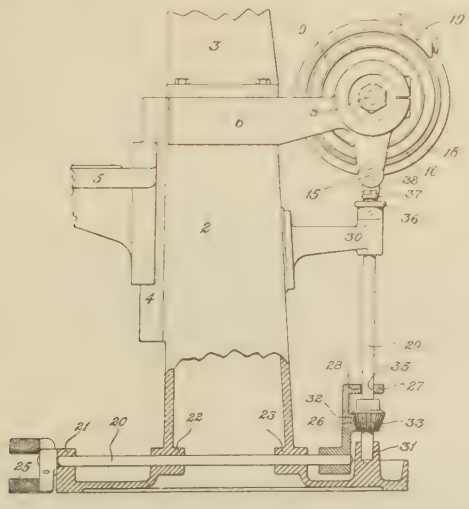
wise direction of the stud, and means for securing the stud in the support to hold the bracket in alignment with a predetermined alignment of a shaft bearing extending thereinto.

1,416,777. DRILLING MACHINE. WILLIAM J. BAYRER, Hartford, Conn.; Homer H. Bayrer, being administrator of said William J. Bayrer, deceased, assignor to Robert G. Henry, West Hartford, Conn. Filed Sept. 18, 1919. Serial No. 324,630. 3 Claims. (Cl. 77—55.)



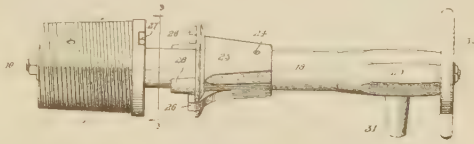
1. In a drilling machine, in combination, a support, a non-rotative longitudinally movable sleeve carried by the support, a rotary spindle extending through and movable with the sleeve, a tool carrier rotatably mounted on the spindle, and spindle driven means supported by the sleeve and adapted to drive the tool carrier.

1,416,778. BELT-SHIFTING MECHANISM. WILLIAM J. BAYRER, Hartford, Conn.; Homer H. Bayrer, being administrator of said William J. Bayrer, deceased, assignor to Robert G. Henry, West Hartford, Conn. Filed Sept. 18, 1919. Serial No. 324,632. 3 Claims. (Cl. 74—7.)



1. In combination, a shaft, a segment on the shaft provided with a slot, a gear, and a shaft for the gear extending through the slot in the segment to effect a relative location of the segment and gear.

1,416,779. FAUCET FOR BARRELS. LOUIS BEDNAR, Westville, and JOHN JASUS, Catlin, Ill. Filed Feb. 4, 1922. Serial No. 534,210. 6 Claims. (Cl. 225—2.)

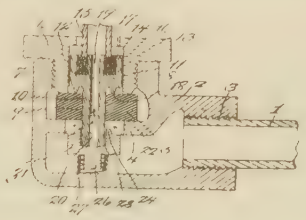


1. A combination with a barrel bung having an externally threaded cup-shaped casing and a revoluble valve member of cup shape fitted therein, the valve member and the casing having adjacent end walls provided with outlet openings adapted to be registered, an outlet pipe having its inner end formed to detachably engage said valve member and having a valve upon its outer end, and means carried by said outlet pipe engageable with and releasable from said bung casing whereby rotation of the outlet pipe may be transmitted to said bung casing for threading the latter into a barrel opening, said outlet pipe having openings adapted to register with the openings of the bung casing and barrel.

1,416,780. MUTE FOR STRINGED INSTRUMENTS. CHARLES B. BERGEN, Washington, D. C. Filed Aug. 25, 1921. Serial No. 495,246. 4 Claims. (Cl. 84—310.)

1. The combination with a musical instrument having strings and a bridge, of a mute comprising a body portion, a flat spring for holding said body portion in sliding contact with certain of the strings and a spring clip integral with said flat spring for removably holding said body portion in contact with said bridge.

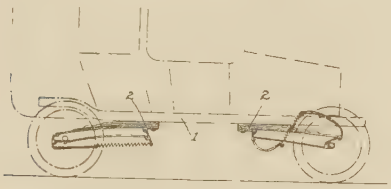
1,416,781. INFLATING COUPLING. EDWARD C. BEVINS, Cleveland, Ohio. Filed Sept. 20, 1920. Serial No. 411,396. 2 Claims. (Cl. 284—19.)



1. In an inflating coupling, a casing having a valve chamber and provided with inlet and outlet ends, a pliable washer clamped in said chamber and having a central opening, an auxiliary valve mounted in the inlet end of said chamber and adapted to normally engage one face of the washer, means for holding the auxiliary valve against the washer, a main valve mounted for movement in the outlet end of said chamber and having a tubular extension guided by said opening through the washer and engaging into the auxiliary valve, whereby upon depressing the main valve the auxiliary valve will disengage from said washer, the tubular extension of the main valve ter-

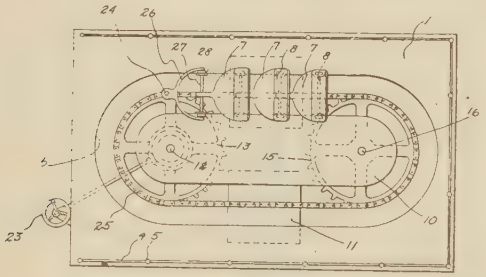
minating in a transverse slot communicating with the passage through the tubular extension, said slot adapted to normally position in the opening through the washer when the auxiliary valve is closed, and to position below the washer when the auxiliary valve disengages from the washer, to thereby open communication through said casing, and means for limiting the main valve in its movement in one direction when said main valve is allowed to assume its normal position.

1,416,782. SHOCK ABSORBER. ALDEN BLOSSOM, Newton Square, Pa. Filed Dec. 14, 1921. Serial No. 522,334. 3 Claims. (Cl. 267—17.)



1. In a shock absorber, the combination with a leaf spring, of a vehicle, of an axle, a spring bar connected to the axle, a spring bar connecting the rear end of the first spring bar and the fixed portion of the leaf spring, an additional spring bar connecting the forward end of the leaf spring and the first spring bar, and yieldable means connecting the additional spring bar and the lower end of the second spring bar, the construction and arrangement of said yieldable means being such as to absorb the shock incident to the front wheels of the vehicle coming in contact with an obstruction.

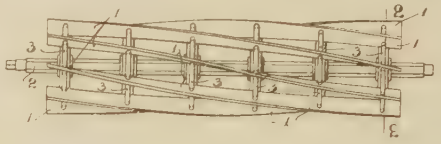
1,416,783. AMUSEMENT DEVICE. MICHAEL A. BRUNO, Brooklyn, N. Y. Filed Mar. 14, 1922. Serial No. 543,675. 3 Claims. (Cl. 104—53.)



1. A device of the class described comprising a wheeled platform body having an opening therein, a central platform secured in said opening, a series of cars tractionally mounted on a runway formed by the platform members, a pair of large sprocket wheels rotatably mounted beneath the central platform and at the forward and rear ends thereof, a bevel gear mounted beneath the forward sprocket wheel, an endless sprocket chain engaging and encircling both sprocket wheels and adapted to linear travel when said sprocket wheels are rotated, means driving the forward sprocket wheel and means for releasably coupling the cars to each other.

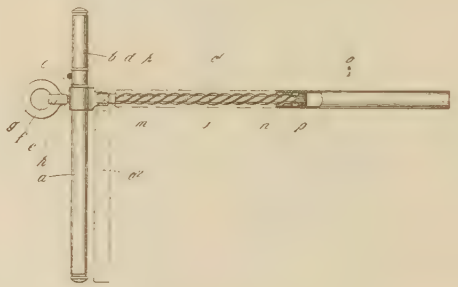
1,416,784. LAWN MOWER AND THE LIKE. GEORGE F. BULL, Birmingham, England, assignor of one-half to Charles H. Pugh, Limited, Birmingham, England. Filed July 8, 1921. Serial No. 483,126. 4 Claims. (Cl. 56—294.)

1. A lawn mower comprising a number of revolving cutter-blades, spacing discs carrying the said blades and having slots therein with which the blades are engaged, and means for securing the blades in the slots, the said means consisting of the metal of the discs adjacent the



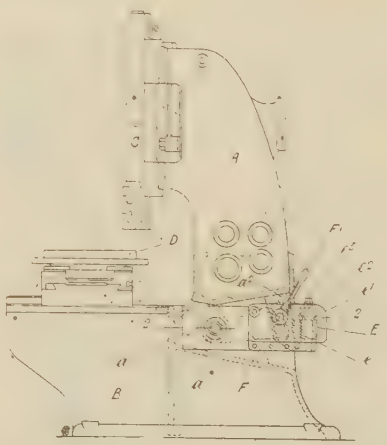
slots displaced against the sides of the blades so as to hold the latter securely and firmly in position.

1,416,785. CASE FOR CLINICAL THERMOMETERS. JOSEPH TOMSON BURDEN, London, England. Filed Feb. 12, 1921. Serial No. 444,319. 6 Claims. (Cl. 73—52.)



1. A clinical thermometer case having an Archimedean screw and a finger grip pivotally secured one on each side of said case, said screw being adapted to be folded to lie alongside said case or to be extended at right angles thereto whilst said finger grip is pivoted to said case coaxially with the screw when the latter is disposed at a right angle to said case to permit rotation of said case relatively to said finger grip and a sleeve nut threaded on said screw, said sleeve nut being adapted to be reciprocated relatively to said screw.

1,416,786. SLOTTING, SHAPING, MILLING, DRILLING, AND OTHER LIKE MACHINE TOOLS. HAROLD BUTLER, HERBERT BUTLER, RICHARD HENRY HAYHURST, and WILFRED ALDERSON, Halifax, England. Filed Aug. 23, 1920. Serial No. 405,299. 2 Claims. (Cl. 90—43.)



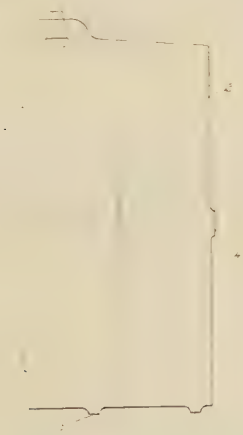
1. In a vertical shaping machine, an upper frame part hinged to a lower frame part, the said upper frame part having faced surfaces fitting accurately between faced surfaces on the lower part, a worm sector mounted on the upper part, a worm mounted on the lower part and gearing with the worm sector, means for actuating the worm,

means for indicating the angle to which the upper part has been moved and a draw bolt for securing the upper part in any adjusted position.

1,416,787. METHOD OF PREPARING PASTE. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Apr. 19, 1920. Serial No. 374,870. 1 Claim. (Cl. 204—29.)

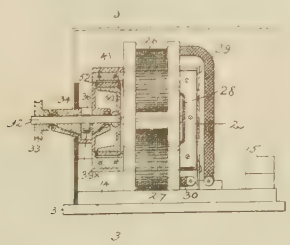
The method of preparing paste which consists in providing sponge lead, grinding same to a definite fineness and treating same with sulphuric acid, controlling the ratio of sulphuric acid and sponge lead, whereby to control the proportions of sponge lead and lead sulphate in the resulting product.

1,416,788. STORAGE-BATTERY PLATE. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 3, 1917, Serial No. 184,219. Renewed May 19, 1920. Serial No. 382,644. 17 Claims. (Cl. 204—29.)



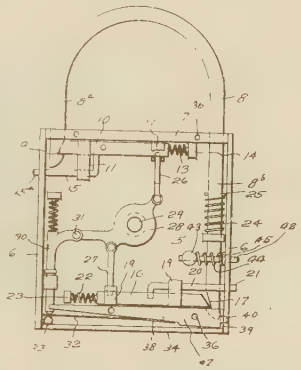
1. In combination, a battery jar, battery plates in said jar, the general outline of said plates being less in width than the corresponding dimension of the inside of said jar, each of said plates being provided with wall abutting projections on its side edges adjacent the side walls of said jar, whereby to prevent lateral shifting of said plates within said jar.

1,416,789. MAGNETO GENERATOR. WILLIAM . . CHAPMAN, Portland, Me. Filed May 5, 1919. Serial No. 294,773. 4 Claims. (Cl. 171—209.)



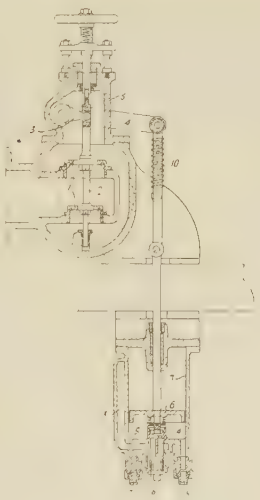
1. In a magneto generator, the combination of a shaft, a rotor on the end of said shaft having sectors on its periphery, a frame having a bearing for said shaft at one side of said rotor with a socket above and a socket below the rotor and laterally projecting lugs adjacent to said socket on each side, an induction coil core secured in each of said sockets, an upright pole piece secured to each of said lugs, coils on said cores, a yoke connecting their rear ends and a horse shoe magnet secured in a horizontal position to contact with the outer surfaces of said pole pieces, said poles and pole pieces conforming closely to the circular path of the outer surfaces of said sectors.

1,416,790. SECRET-COMBINATION LOCK. JOSEPH CIOTOLA and DOMINICK POLIDORO, Philadelphia, Pa. Filed Nov. 7, 1921. Serial No. 513,433. 5 Claims. (Cl. 70—108.)



2. A lock of the character described comprising a locking element, a plurality of latches for holding said locking element in closed position, detents engaging said latches and preventing their movement until withdrawn from engagement therewith and a movable casing section accessible from the exterior of the lock and connected to one of said detents to simultaneously operate them upon movement of the casing section to cause their withdrawal from engagement with the latches.

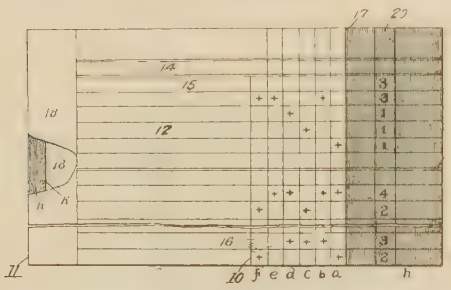
1,416,791. ENGINE STOP GEAR. DAVID COCKBURN and DONALD MACNICOLL, Cardonald, near Glasgow, Scotland. Filed Feb. 3, 1920. Serial No. 355,924. 1 Claim. (Cl. 137—153.)



In an engine stop gear, in combination, an emergency valve, a load tending to close said emergency valve, a chamber having at its lower end a connection for admission of fluid, and also having an overflow, a piston movable in said chamber, said piston operatively connected to said valve and normally held raised in opposition to said load

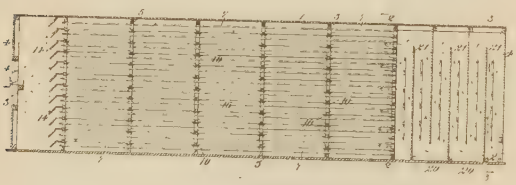
by pressure of liquid on the underside of said piston, a by-pass between the ends of said chamber, a by-pass valve at the lower end of said chamber controlling said by-pass and adapted to be closed by pressure of liquid in said chamber, a spring interposed between said piston and said by-pass valve, and a spring tending to open said by-pass valve on failure of liquid pressure on the underside of said piston.

1,416,792. BALLOT TALLY SHEET. RICHARD GARRETT COTTER, Sausalito, Calif. Filed Feb. 23, 1918. Serial No. 218,878. 3 Claims. (Cl. 283—5.)



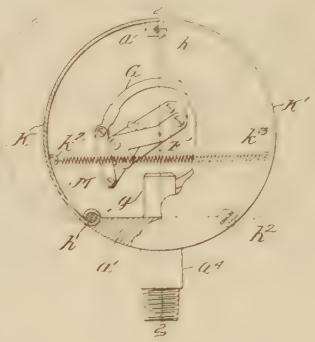
1. The herein described election ballot having two or more vertical columns of spaces for the names of candidates or propositions to be voted upon, each column being somewhat narrower than the adjacent column at the left and one or more columns of voting squares adjacent the lateral right hand edge of each column of spaces for names of candidates or propositions, said ballot being provided along the left hand edge with a suitable vertical space for fastening means, substantially as and for the purposes set forth.

1,416,793. DEHYDRATING APPARATUS. JOSEPH D. COX, Healdsburg, Calif. Filed Oct. 25, 1921. Serial No. 510,327. 5 Claims. (Cl. 34—39.)



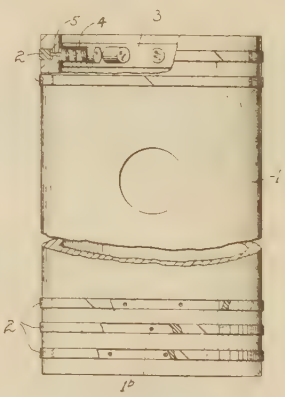
3. A dehydrating apparatus comprising a housing, a plurality of parallel spaced horizontally apertured supporting walls extending transversely thereof for its full width and vertically thereof for its full height, with the apertures of adjacent walls in register throughout the length of said housing providing a plurality of tray receiving compartments, a door for closing one end of each compartment, a plurality of parallel spaced heating elements extending longitudinally of the housing through said aligned wall apertures and transversely of each compartment, a tray guide on each compartment side wall between adjacent superimposed heating elements and extending transversely thereof providing a plurality of tray receiving racks in vertical spaced relation in each compartment, a plurality of open topped trays each of a length and width corresponding to that of one of said compartments and one adapted for removably positioning on each rack dividing said compartment longitudinally in a horizontal plane into a plurality of chambers communicating with each other through said wall apertures and each containing a heating element between the chamber forming trays, a fan at one end of the housing for creating an air circulation longitudinally therethrough, an air preheating chamber at the other end of said housing, and a valve for controlling the passage of air through each chamber.

1,416,794. PRESSURE GAUGE. ARTHUR E. CUTLER, Somerville, Mass., assignor to The Ashton Valve Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 12, 1916. Serial No. 125,298. 7 Claims. (Cl. 73—109.)



1. A pressure gauge casing having a front wall; a rear wall; and two members movable relatively to each other to provide an outlet intermediate of said walls while the latter are in their normal position, and a spring connecting said members to hold them normally closed.

1,416,795. PISTON. DOLPH B. CRAWFORD, Chicago, Ill. Filed Aug. 16, 1920. Serial No. 403,784. 5 Claims. (Cl. 74—108.)

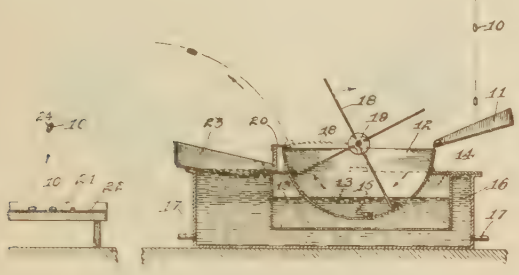


1. The combination with the piston of an internal combustion engine and a piston ring, of means attachable to the piston for holding a plurality of spring-held plungers, said plungers confined within the piston when the device is assembled and extending through the piston wall in order to exert pressure against said piston ring.

1,416,796. COATING PROCESS AND APPARATUS. CHARLES T. DAVIS, New York, N. Y. Filed May 12, 1920. Serial No. 380,816. 10 Claims. (Cl. 91—68.)

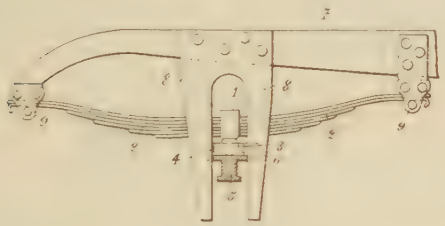
2. A coating process, including the application to pills and like articles of coating material in liquid form, and the subsequent forcible projection of the articles through

a gaseous hardening fluid while unsupported except by same fluid.



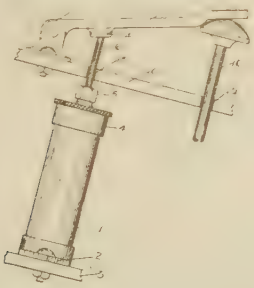
6. A coating apparatus, including means for applying a fluid coating to the surface of an article, and means for forcibly projecting the coated article through space.

1,416,797. SUSPENSION MEANS FOR MOTOR CARS. ALBERT DESCHAMPS, Paris, France. Filed Aug. 18, 1919. Serial No. 318,403. 3 Claims. (Cl. 267—52.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



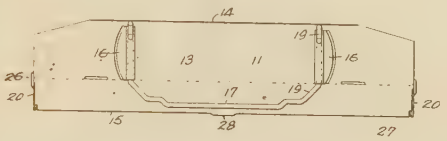
3. A spring suspension for motor cars comprising a leaf spring, means for holding the leaves of said spring together, a spherical surface joint arranged to connect the spring with the axle of the car and allowing universal motion of the spring, an extension connected with said joint, and a guide secured to the car frame and in sliding engagement with said extension, and means arranged to connect the ends of the spring with said frame.

1,416,798. FOOT THROTTLE CONTROL. CHARLES A. DESCHNER, Portland, Oreg. Filed Sept. 29, 1921. Serial No. 504,038. 2 Claims. (Cl. 74—81.)



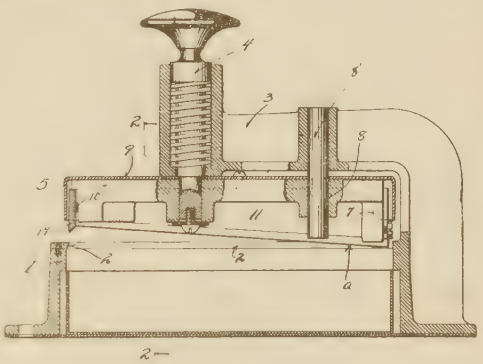
1. In combination with a foot throttle, an oil-governed spring control comprising a cylinder closed at each end, a packing nut through which a piston rod passes and has attached to the end within the cylinder, a piston head, said piston head having an opening therein through which the oil within the cylinder can pass, a coil spring installed within the cylinder and on the opposite side of the piston head from the piston rod, a pedal so installed as to fall in contact with the end of the piston rod and the foot throttle, so that the control and foot throttle will both be operated by the pressure of one foot of the vehicle driver and prevent the uneven opening and closing of the throttle valve which is caused by driving the car over uneven ground.

1,416,799. HOLDER FOR PENCILS AND THE LIKE. MAXIMILIAN DESROCHERS, Montreal, Quebec, Canada. Filed Jan. 22, 1921. Serial No. 439,198. 10 Claims. (Cl. 197—180.)



1. A device of the class described comprising a pair of parts each having a circularly curved wall, said parts being pivoted together to hold the curved walls in sliding relation to one another, stops engageable with the edges of said curved walls to limit the movement of the parts, and a clip carried by one of the parts adapted to attach the receptacle to a typewriter frame.

1,416,800. COUPON-CUTTING DEVICE. HENRY DETJEN, Manitowoc, Wis. Filed Dec. 21, 1920. Serial No. 432,213. 4 Claims. (Cl. 164—47.)



1. In a cutting machine having a reciprocative head, a base provided with a rectangular shearing-surface: the combination of a pair of rectangularly positioned blades carried by the head having their shearing edges obliquely disposed with relation to the base shearing-surface, the heels only of which blades normally engage said shearing-surface, spring means for normally separating the toes of the aforesaid blades whereby the lower cutting edges thereof overlap the rectangular shearing-surfaces of the base, and whereby the knives, when cutting progressively sever from heel to toe and simultaneously contract, causing the toe portions to come together to form an unbroken corner cutting surface, in the completion of the cutting stroke of the blades.

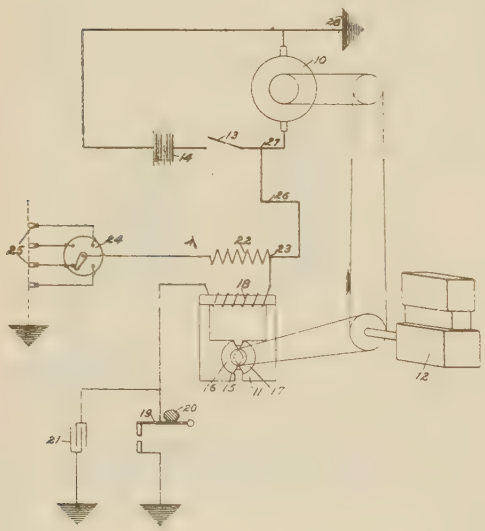
1,416,801. PROCESS OF MAKING BUTTONHOLES. WALTER DUESLER, Johnstown, N. Y., assignor to Diana Knitting Company, Johnstown, N. Y., a Corporation of New York. Filed Sept. 26, 1921. Serial No. 503,161. 6 Claims. (Cl. 112—264.)

1. The herein described method of forming and reinforcing a button hole, which consists in placing upon one face of a base material in which the button hole is to be formed, a reinforcing stay of substantially twice the width of the bights of stitching to be formed around the button hole aperture, the stay being located longitudi-

nally of and extending on opposite sides of the longitudinal axis of the button hole, and forming a row of stitches on opposite sides of the longitudinal axis of the button

hole, enclosing portions of the base material on opposite sides of said axis and the superimposed portions of the stay.

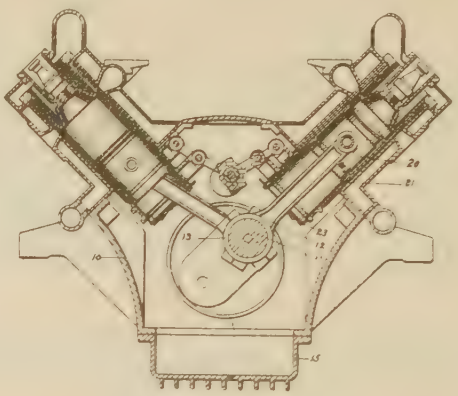
1,416,802. IGNITION SYSTEM. HENRY T. DUKET, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed June 15, 1917. Serial No. 174,930. 12 Claims. (Cl. 290—37.)



3. In combination, a starting system for an internal combustion engine including a battery, a dynamo-electric machine and a starting switch therefor, an ignition system for said engine comprising primary and secondary windings and an interrupter, means for connecting said primary winding and said interrupter directly through said dynamo electric machine to form a complete series circuit independent of said switch.

1,416,803. BAFFLE PLATE FOR V-TYPE MOTORS. HENRY J. EDWARDS, Elyria, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 13, 1918. Serial No. 253,898. 13 Claims. (Cl. 184—13.)

8. In an internal combustion engine, the combination of an open ended reciprocally mounted cylinder, a crank shaft operatively connected with said cylinder for reciprocating the same, a piston movable in said cylinder, a connecting rod extending through the open end of the cylinder and connecting the piston with said crank shaft,

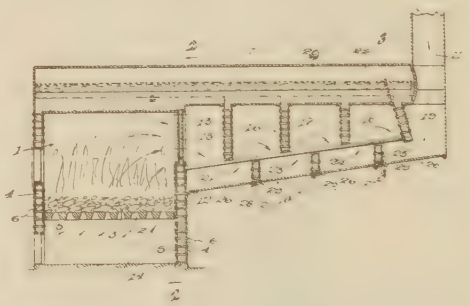


and a baffle plate secured upon the open end of the cylinder and movable therewith during reciprocation of the same.

1,416,804. CONTROL APPARATUS. EARL R. EVANS, Great Barrington, Mass. Filed Feb. 5, 1921. Serial No. 442,851. 14 Claims. (Cl. 172—179.)

1. A controller comprising a control member having a plurality of operative positions including an "off" position, means for normally locking the control member in the "off" position, electro-responsive means for releasing the control member, and a remote switch for actuating said electro-responsive means.

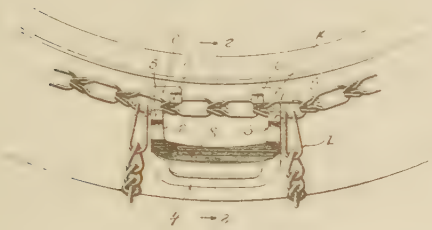
1,416,805. BOILER. PETER H. FERRIER, Jr., Chicago, Ill. Filed Oct. 31, 1918. Serial No. 260,503. 3 Claims. (Cl. 122—141.)



1. In a boiler, the combination, of a fire-box having hollow water containing walls, a main water and steam chamber, a stack, an enclosed passage way communicating with said stack and fire-box, and a plurality of water conducting tubes positioned within said enclosed passage and having direct communication with the interior of one wall of the fire-box and with said main water and seam chamber, and a plurality of hollow baffles extending into said enclosed passage and having communication with the interior of said main water and steam chamber, said baffle arranged in staggered relation to guide the combustion gases in a sinuous path

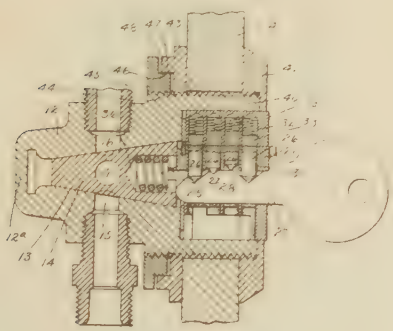
from the fire-box to said stack, the inner wall of said fire-box provided with an opening having communication with said enclosed passage, and a plurality of vertical tubes extending across said opening and having communication with the interior of the main water and steam chamber and the interior of the inner wall of the fire-box.

1,416,806. TRACTION LUG. FRANK M. FICHTEN, Manitowoc, Wis. Filed Oct. 8, 1921. Serial No. 506,377. 3 Claims. (Cl. 152—14.)



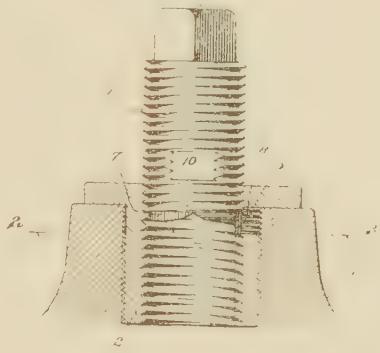
1. A traction lug having two arms connected by a web at one end and having jaws at the other end adapted to be secured to the longitudinally extending portion of an anti-skid chain, the inner sides of the arms being curved to conform to the side of a tire and an elongated spur connecting the arms above their web portion and extending outwardly.

1,416,807. LOCK VALVE. DANIEL C. FISHER, Boston, Mass. Filed Mar. 3, 1921. Serial No. 449,486. 1 Claim. (Cl. 251—6.)



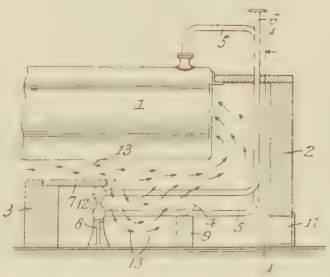
A stop-cock comprising a casing having at one end portion a tapered valve seat, and at its opposite end portion a socket communicating with the larger end of the seat; a tapered plug valve fitting said seat, and provided between its ends with a transverse passage adapted to connect inlet and outlet passages in the casing, and with a spring-receiving recess between said passage and the larger end of the valve; a pin tumbler lock, including a lock casing, and a valve-turning lock barrel adapted to turn without endwise movement in the lock casing, said barrel and valve being provided with complemental interengaging faces causing the valve to turn with the barrel, and permitting independent endwise movements of the valve; a spring located wholly within the periphery of the valve, and seated at one end on the barrel, and at its opposite end on the bottom of the said recess; and means securing the lock casing in said socket and maintaining the barrel in position to compress the spring.

1,416,808. ATTACHMENT FOR GREASE PLUGS. FRANK L. FISHER, Milwaukee, Wis. Filed June 9, 1921. Serial No. 476,229. 4 Claims. (Cl. 184—48.)



3. The combination of a grease cup having a bushing in threaded engagement therewith, and a plug for threaded engagement with said bushing internally, said bushing having a segmental recess intermediate its ends, a leaf spring normally disposed along the chord of said recess and frictionally engageable with the periphery of the plug when the latter is inserted, said plug having a flattened portion in its periphery to allow said spring to straighten when the plug is in a certain position with relation to the bushing and to prevent said plug from being accidentally moved outwardly from said position.

1,416,809. SUPERHEATER. ERNEST H. FOSTER, Dongan Hills, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1919. Serial No. 337,955. 2 Claims. (Cl. 122—469.)

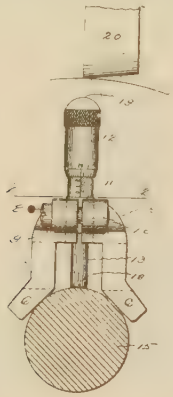


2. The combination with a return tubular boiler, its setting, and a bridge wall under the forward part of the boiler, of a superheater with its tubes in horizontal rows, placed back of said bridge wall and directly under the rear portion of the boiler, headers for said superheaters adjacent the bridge wall, and a slab of infusible material placed over the headers for protecting them from the direct action of the furnace gases which after passing over the forward portion of the boiler flow downward and then upward over the superheater tubes.

1,416,810. MICROMETER GAUGE. SHUBEL A. FOSTER, Hartford, Conn. Filed Dec. 27, 1920. Serial No. 433,169. 3 Claims. (Cl. 33—185.)

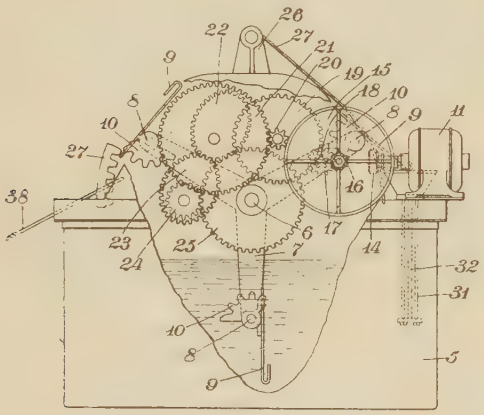
1. A head for a micrometer gauge having a fork with outwardly inclined surfaces at the ends of the fork, a

cylindrical perforation through the end of the head with a slit through the side of the head to said perforation,



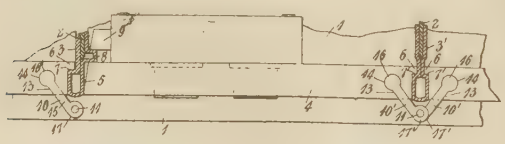
and a binding screw extending across the slitted portion of the head.

1,416,811. TEMPERING APPARATUS. LEE A. FRAYER and WILLIAM J. MILLER, Columbus, Ohio. Filed June 5, 1920. Serial No. 386,684. 12 Claims. (Cl. 266—6.)



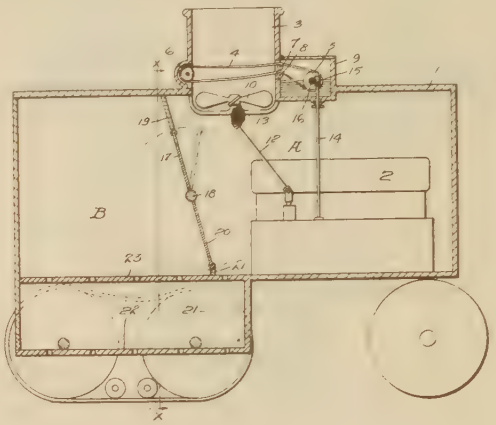
1. In a tempering mechanism, in combination with a tank to contain a bath, a revolving carrier for the article to be tempered adapted to carry the article into and out of the bath and mechanism for revolving said carrier adapted to cause a quick immersion of the article treated and a relatively slow motion of the article through the bath.

1,416,812. DOOR AND HINGE CONSTRUCTION. JOSEPH FREYBERG and LEO F. WUBBOLDING, Newport, Ky., assignors to The J. Baum Safe & Lock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 18, 1919. Serial No. 318,229. 4 Claims. (Cl. 16—128.)



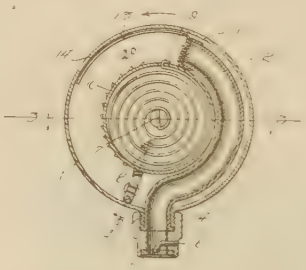
2. In a door and hinge construction, a door having a socket in its edge near one end thereof and having a slot leading from said socket out through the face of said door and over toward said end, and a hinge member comprising a head fitting in said socket and a shank fitting in said slot and projecting out therefrom and over past said end.

1,416,813. DUSTPROOFING AND COOLING TRACTOR CABS. RALPH E. FULLER, Washington, D. C. Filed Apr. 22, 1919. Serial No. 291,846. 5 Claims. (Cl. 98—23.)



3. In a cab, subdivided into compartments, a stack carried by said cab, a liquid reservoir carried by said stack, a travelling screen lying transversely of said stack and through said reservoir, means for drawing a current of air through said stack and said screen and delivering a portion of said current of air into one of said compartments and the balance into another of said compartments.

1,416,814. TIRE GAUGE. JACOB I. GLICKERMAN, Chicago, Ill. Filed Dec. 29, 1919. Serial No. 347,995. 4 Claims. (Cl. 73—31.)

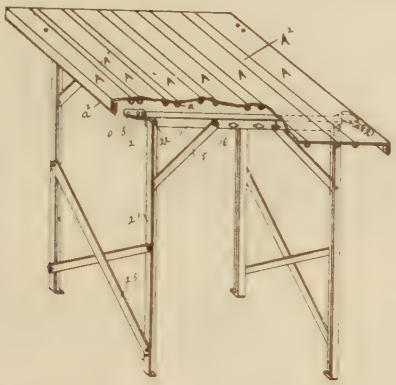


1. In a pressure gauge, a substantially cylindrical casing having a lateral inlet and having a relatively small opening at a distance from the inlet, a shaft axial of the casing, a spiral spring disposed so that it can be wound on the shaft and having its inner end locked against rotation with respect to the casing, a drum rotatable on the shaft and housing the spring and interlocked with the outer end of the spring, an indication-carrying strip fast with respect to the drum and having its indicating portion adapted to move past the said opening, and means operable by fluid pressure for rotating the drum against the resistance of the spring to cause the indicating strip to move past the said opening, the said means including a substantially cup-shaped head fastened to the periphery of the drum, a nipple arranged for securing the casing to a source of pressure, and a longitudinally expansible tube having its major portion disposed within the casing and having one end secured to the said nipple and its other end closed by and secured to the cup-shaped head.

1,416,815. FOLDING TABLE. WALTER S. GRAFFAM, Shrewsbury, Mass. Filed Nov. 15, 1920. Serial No. 424,055. 16 Claims. (Cl. 45—116.)

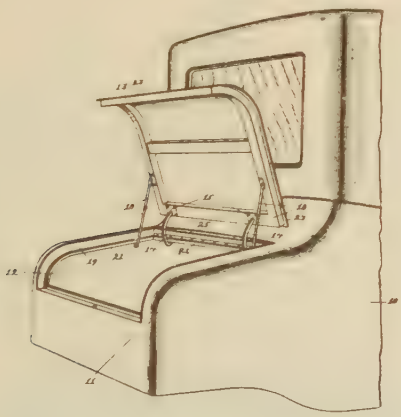
1. A folding table having a top comprising two series of parallel hinged panels, one series progressively increas-

ing in width all the way from one side to the other, the panel of that series near one edge being the narrowest and the one near the other edge being the widest of that series.



14. In a folding table, the combination of a top, with legs permanently pivoted thereto and adapted to support the top at a maximum height when held perpendicular to the top, means for holding them in such perpendicular position comprising braces pivoted to the legs, and means for holding said legs in crossed inclined relationship to support the top at a lower elevation comprising provisions below the top for holding the free ends of the braces at a different point.

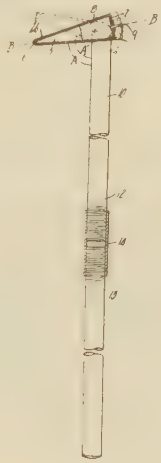
1,416,816. REAR-DECK CONSTRUCTION. ABUNDIUS GRAVEL, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 13, 1918. Serial No. 216,853. 4 Claims. (Cl 296—24.)



4. The combination with a vehicle provided with a rear deck having a storage compartment therein and a lid hinged to swing bodily outwardly for closing said compartment; of a frame surrounding the opening of said compartment and provided with a gutter extending entirely therearound and opening upwardly at the forward end and sides of said frame and rearwardly at the rear end of said frame.

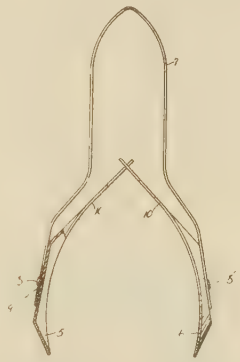
1,416,817. WINDOW WASHER AND CLEANER. ROSE A. GREELISH, South Braintree, Mass. Filed May 29, 1920. Serial No. 385,089. 3 Claims. (Cl. 15—232.)

1. A window cleaning tool having, in combination, a head with a narrow straight front edge, the opposite faces of said head diverging rearwardly from said edge, a straight handle fast thereto extending transversely of said edge and at a substantial distance therefrom, the median longitudinal plane of said head being inclined to the axial



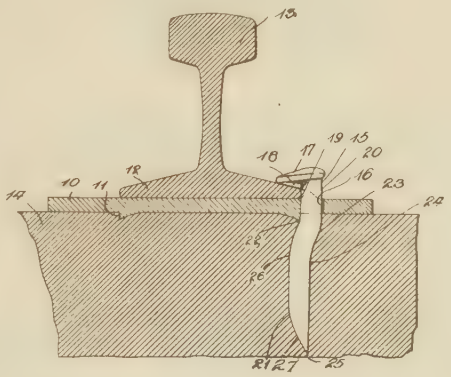
line of said handle, and means to attach a piece of fabric to said head extending across said front edge.

1,416,818. STRAWBERRY HULLER. NATHANIEL C. HALL, Old Lyme, Conn. Filed Mar. 22, 1922. Serial No. 545,759. 3 Claims. (Cl. 146—6.)



1. A strawberry huller comprising a pair of jaws connected with a spring-handle, and a bearing for the inner ends of said jaws.

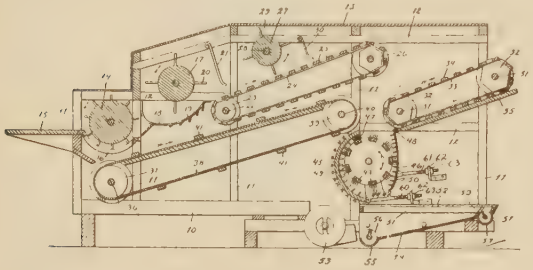
1,416,819. RAILWAY SPIKE. HUBERT E. HARRIS, Jonesboro, and JAMES H. DOWNEY, Gainesville, Ga. Filed Feb. 14, 1922. Serial No. 536,466. 4 Claims. (Cl. 238—295.)



2. A railway spike comprising a head having an overhanging lip, a surface below said lip inclined downward

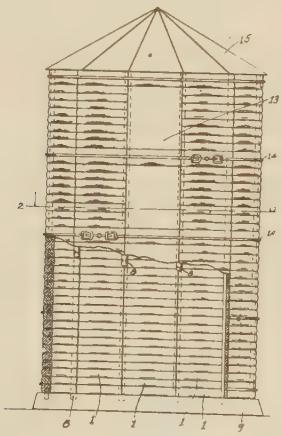
and in the direction of overhang of said lip and adapted to underlie an object to be held by said lip, a cam surface opposite said inclined surface adapted to throw said inclined surface under the object to be held by contact with the material into which the spike is driven.

1,416,820. COMBINED THRASHER AND CLOVER HULLER. JOHN HARVAT, Eastman, Wis. Filed June 26, 1920. Serial No. 392,125. 1 Claim. (Cl. 130—2.)



In a thrashing machine including a casing and conveyors therein, a hulling cylinder located between and below the adjacent ends of the conveyors, a pair of concaves pivoted at their upper corners to the casing and arranged at opposite sides of the cylinder, and means for holding either concave in operative and the other in inoperative relation to the cylinder comprising a bolt pivotally connected with the lower edge of each concave, a bracket secured within the casing and through which the bolt passes, and adjusting nuts on the bolt engaging both sides of the bracket.

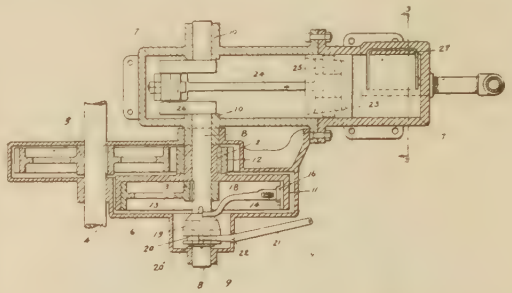
1,416,821. BUILDING STRUCTURE. EARL HEATH, Marinette, Wis. Filed Feb. 26, 1921. Serial No. 448,024. 9 Claims. (Cl. 20—1.4.)



1. A building wall comprising a series of cylindrical vertical posts and interposed tiers of log units having their ends vertically recessed hemispherically to receive the posts and allow the front and rear portions of the ends of the units of adjacent tiers to abut, the inner and outer surfaces of said log units retaining their natural cylindrical rounded contour.

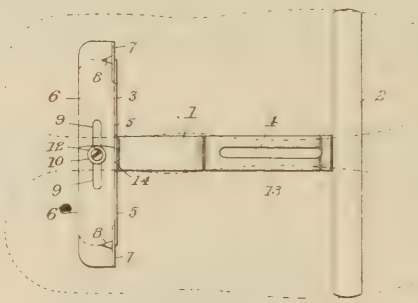
1,416,822. PNEUMATIC BRAKE FOR VEHICLES. RALPH D. HEATH, Portland, Oreg., assignor of one-half to John Ring, Portland, Oreg. Filed Jan. 24, 1921. Serial No. 439,582. 4 Claims. (Cl. 188—99.)

1. A braking device for a power shaft, having in combination therein, a united cylinder and crank case, a pipe extending from a port in the cylinder to one in the crank case, and provided with a throttle therein, a second pipe extending from and to similar ports, and provided with a check valve therein opening forwardly, a piston slidable



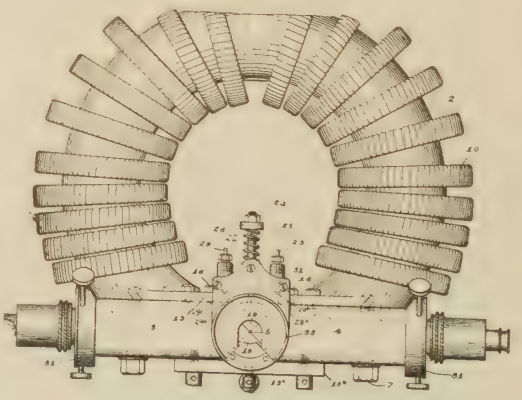
in the cylinder, and a crank shaft transversely in the crank case, provided with a connecting rod mounted at one end on the crank pin, its opposite end being mounted on a wrist pin of the piston.

1,416,823. SHOE REST. EPHRAIM S. HECHT, New York, N. Y. Filed Sept. 21, 1921. Serial No. 502,214. 8 Claims. (Cl. 211—14.)



1. In a shoe rest, the combination with a cross bar for supporting the heels of a pair of shoes, of devices to engage the inner faces of said heels for holding the shoes in position, said devices being adjustable on said bar for accommodating different sizes of shoes.

1,416,824. GALVANOMETER. CHARLES F. HINDLE, Elmhurst, N. Y. Filed July 2, 1917. Serial No. 178,136. 20 Claims. (Cl. 171—95.)

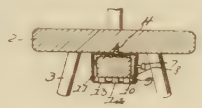


1. In a galvanometer having an electro-magnet with oppositely disposed pole members, adjustable means for suspending a string between said pole members, said means being laterally and longitudinally adjustable rela-

tively to said pole members into a plurality of parallel positions relative to itself.

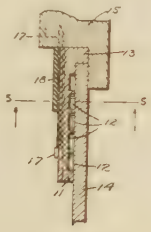
10. In a galvanometer having an electro-magnet with spaced opposed pole members, a conducting string, means for supporting said string under tension in the space between said pole members, and means for shifting said string supporting means in a plurality of directions transversely of the string without varying the tension of the string.

1,416,825. COMBINATION SOAP HOLDER AND GRATER FOR WASHING-MACHINE DASHERS OR AGITATORS. GOTTLIEB H. HOELSCHER, Battle Creek, Iowa. Filed Mar. 28, 1921. Serial No. 456,092. 3 Claims. (Cl. 68—15.)



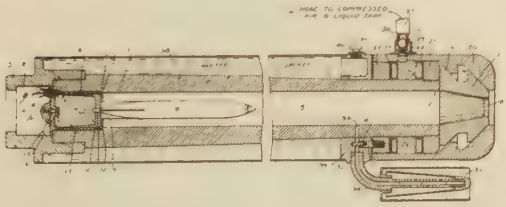
1. In a device for the purpose indicated, an agitator, a soap receiving receptacle carried thereby, a cover for said receptacle, said cover having openings through which grated particles of soap pass, and provided with flanges with which the soap engages for grating the same, the receptacle being large enough to permit the soap to agitate therein, whereby the flanges may grate the surface of the soap during its movement.

1,416,826. MIRROR FASTENER. WILLIAM H. HOLDER, Moscow, Pa. Filed Aug. 8, 1921. Serial No. 490,742. 6 Claims. (Cl. 20—56.4.)



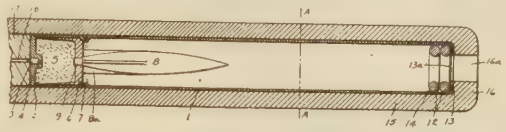
1. A fastener as characterized comprising a pad; a fastening member disposed prone thereupon for extending from one end thereof; and a resilient cover therefor, said cover and pad having a passage therebetween for said fastening member.

1,416,827. ORDNANCE. BRADFORD B. HOLMES, New York, N. Y. Filed Jan. 10, 1921. Serial No. 436,262. 13 Claims. (Cl. 89—1.)



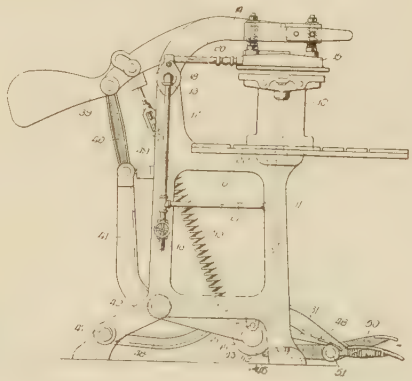
13. In a device of the class described in combination; a barrel; a powder charge in said barrel; a projectile; a piston set in motion by the expansive force of gases generated from the burning of said powder charge and adapted to impart motion to said projectile and seal said gases in said barrel; conical segments adapted to retard the motion of said piston near the muzzle of said barrel, said segments being retained by a sleeve and a hydraulic brake adapted to permit the slow and controlled expansion of said conical segments under the thrust of said piston, and to permit the expulsion of said piston after an interval of time, and a gas outlet operated and controlled by the motion of said sleeve to permit the escape of gases from said barrel during the time of retardation of said piston by said conical segments.

1,416,828. FIREARM. BRADFORD B. HOLMES, New York, N. Y. Filed Jan. 18, 1921. Serial No. 438,099. 13 Claims. (Cl. 89—1.)



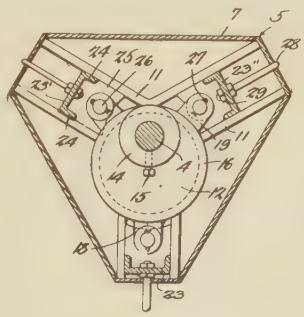
1. In a device of the class described, in combination, an explosive charge; a detonator to ignite said charge; a projectile; a piston adapted to impart motion to said projectile upon the ignition of the explosive charge; cushioning means arranged to permit the passage of said projectile but to arrest the motion of said piston, and a cartridge case containing the said parts and forming with them a single unitary structure.

1,416,829. PRESSING MACHINE. HANS C. HOTING, Neuss, Germany, assignor to Troy Laundry Machinery Co. Ltd., Chicago, Ill., a Corporation of New York. Filed Nov. 4, 1918. Serial No. 261,118. Renewed Oct. 31, 1921. Serial No. 511,843. 5 Claims. (Cl. 68—9.)



1. In a pressing machine, a pressing member, a lever operatively connected to said pressing member, a second lever for actuating the first lever to move the pressing member into a pressing position, a locking member carried by said first lever, and a locking member carried by said second lever for co-operating with the other locking member to lock the pressing member when said position is reached.

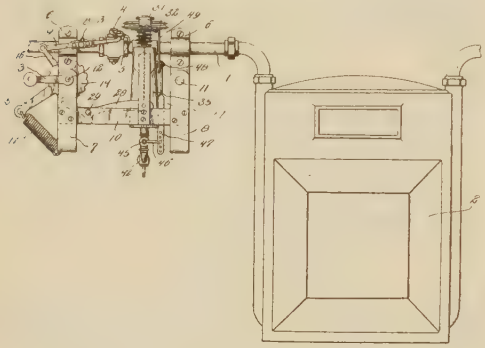
1,416,830. FEEDER DRUM. ERNST A. H. JACOB, San Antonio, Tex. Filed Aug. 24, 1920. Serial No. 405,761. 3 Claims. (Cl. 100—25.)



1. In a device of the class described, a fixed shaft; a drum comprising a shell and end walls journaled on the

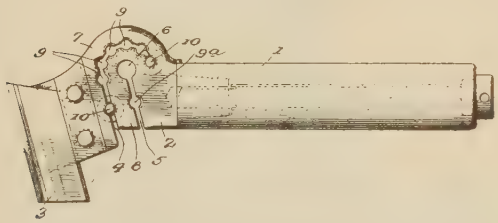
shaft, the end walls having guides; a slide having its ends mounted to reciprocate in the guides; a finger carried by the slide and mounted to reciprocate in the shell; an eccentric fixed to the shaft; and a strap surrounding the eccentric and pivoted to the slide.

1,416,831. AUTOMATIC GAS-CONDUIT CONTROL MEANS. HARRY JERVIS, Weirton, W. Va. Filed Aug. 17, 1921. Serial No. 492,958. 5 Claims. (Cl. 67—116.)



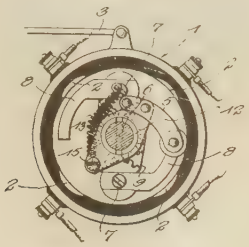
3. The combination of a conduit, a cut off valve therein, a pilot-burner, a conduit between the first-named conduit and the pilot burner and provided with a valve means to close the cut-off valve when the same is released, and thermostatic means to increase the opening of the pilot-burner valve and to release the cut-off valve.

1,416,832. TOOL HOLDER. ERNST AUGUST JOHANSSON, Strangnas, Sweden. Filed Oct. 2, 1920. Serial No. 414,359. 3 Claims. (Cl. 29—100.)



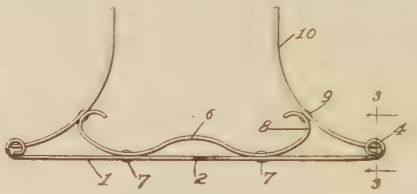
1. A tool of the class described comprising a cutter supporting member of elastic material having a transverse open ended slot extending a distance from its open end substantially parallel with the direction of the working thrust of the cutter, and then arching away from the cutter, and seats for a filling device spaced apart along said slot.

1,416,833. AUTOMATIC TIMER FOR AUTOMOBILES. HENRY V. JOHNSON, St. Paul, Minn. Filed Feb. 27, 1920. Serial No. 361,828. 1 Claim. (Cl. 200—26.)



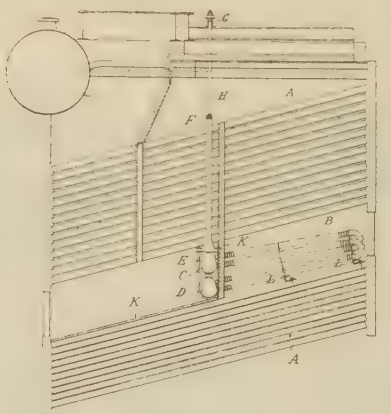
In a timer for internal combustion engines, the combination with a timer casing provided with a plurality of stationary contacts, and a timer shaft in the casing; of a flat base secured on the timer shaft, laterally extending pivot pins carried by the base, a pair of weighted arms pivoted on said pins, being moved on these pivots by centrifugal force, each arm being provided with a gear segment, a hub carried by said base, a pinion on the hub interposed between and coacting with said gear segments, said hub being provided with pairs of oppositely disposed spaced arms extending laterally from it, pins extending between and connecting the free ends of these arms, a circuit closing member including spaced plates arranged on opposite sides of one pair of said arms and having pivotal connection with the adjacent connecting pin, a contact roller arranged between the plates at one end, another pin arranged between and connecting the opposite ends of said plates, and a coiled spring connected to one of the pivot pins and one of the connecting pins on the arms of said hub to resist movement of the weighted arms and to return the latter to normal position.

1,416,834. AUTOMOBILE BUMPER. EVERETT R. JONES, Wyandotte, Mich., assignor of one-half to William E. Allen, Wyandotte, Mich. Filed Jan. 9, 1922. Serial No. 527,960. 3 Claims. (Cl. 293—55.)



3. A bumper for motor vehicles comprising a front strip having backwardly curled end portions provided with slots, forwardly diverging side strips projecting into the slots in the respective curled portions and mounted to move freely therein, a bow spring secured back of the front strip, and curved spring connections integral with the bow spring and joining the front and side strips, said front and side strips being formed of spring material.

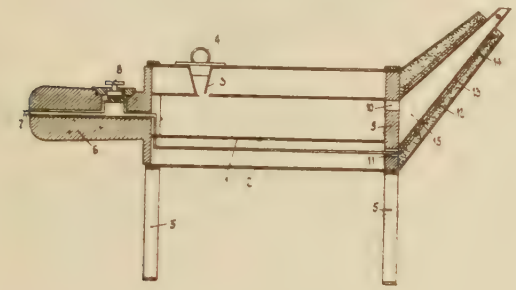
1,416,835. SUPERHEATER SUPPORT. WALTER F. KEENAN, Jr., New York, N. Y., assignor to Power Specialty Company, a Corporation of New York. Filed Jan. 29, 1921. Serial No. 440,847. 4 Claims. (Cl. 122—476.)



2. The combination with a water tube boiler having horizontal rows of staggered tubes divided horizontally to form a space for a superheater, of a superheater located in such space, a hanger connected to the headers of said superheater and passing up through the bank of

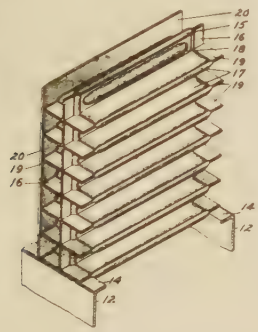
tubes above the same, the said hanger having passages through which pass the tubes of alternate rows, and a beam support above the boiler to which the upper end of said hanger is connected.

1,416,836. SEALING APPARATUS. ISAAC KEESING, Jr., Amsterdam, Netherlands. Filed Apr. 6, 1921. Serial No. 459,208. 1 Claim. (Cl. 120—116.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



An improved sealing apparatus having a box containing the sealing wax, a spout and means for heating said spout, the latter in the inoperative position of the apparatus being directed upwards; characterized in that the spout is separated from the box by means of a heat-insulating partition having an aperture made therein in such a way, that the granular wax in the operative position of the apparatus is allowed to pass from the box into the spout, the melted wax stayed behind in the spout in the inoperative position of the apparatus however being prevented from flowing back into the box.

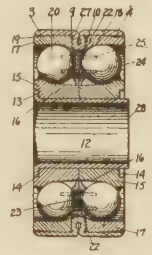
1,416,837. RADIATOR FOR AUTOMOBILES. THOMAS J. KEHOE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed June 15, 1917. Serial No. 174,928. 5 Claims. (Cl. 257—130.)



1. In a device of the character described, the combination of a heater having an opening therein, a water tube unit connected therewith comprising a flat tubular portion, and a plurality of hollow arms communicating therewith and extending therefrom, the lowermost of said arms resting upon said header and spanning said opening.

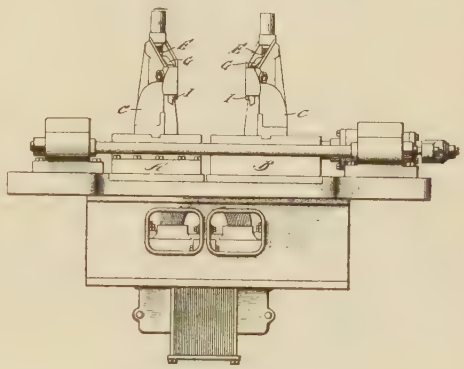
1,416,838. ANTIFRICTION BEARING. HARFORD C. KNOWLES, Elmira, N. Y., assignor to The Willys-Morrow Company, Elmira, N. Y., a Corporation of Ohio. Filed May 15, 1919. Serial No. 297,416. 9 Claims. (Cl. 64—36.)

6. A bearing casing having a portion thereof forced inwardly in such a manner that the side walls of the inwardly extending portions have their inner surfaces in contact with each other, the outer side walls of said



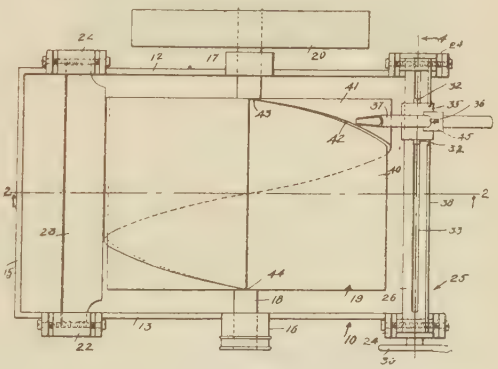
portions providing supporting surfaces, and cylindrical portions extending outwardly in opposite directions from the inwardly extending portions thereof.

1,416,839. CLAMP FOR WELDING-MACHINE ATTACHMENTS. HARRY W. KRANZ and JOHN LUKES, Cleveland, Ohio, assignors to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 24, 1920. Serial No. 383,700. 7 Claims. (Cl. 219—17.)



1. In a machine of the kind described, the combination with the base portions, of the castings connected thereto, a fluid operated rack arranged in each casting, gears meshing with said racks, and clamps operated by said gears all arranged as set forth.

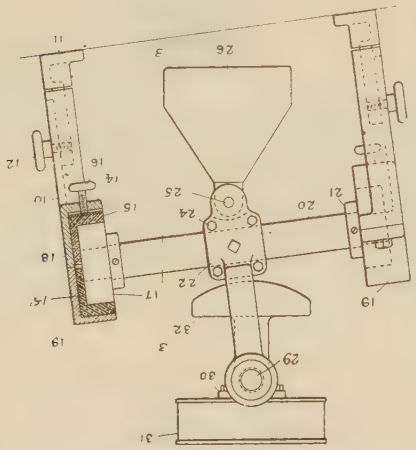
1,416,840. LIQUID-FEEDING APPARATUS. MAX KRAUT, Los Angeles, Calif. Filed May 9, 1921. Serial No. 468,133. 10 Claims. (Cl. 221—97.)



1. An apparatus of the class described, comprising a liquid receiving tank, a rotatable element having a mutilated rim mounted in said tank adapted to collect a film

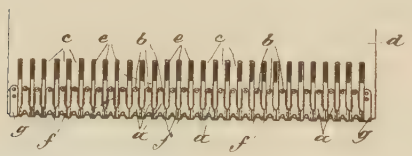
of the liquid on its rim face, and means for removing a predetermined quantity of said liquid from said liquid collecting rim face during its rotation.

1,416,841. AERONAUTICAL COMPASS. KARL A. KRETSCHMAR, Palmer, Mass. Filed Apr. 8, 1920. Serial No. 372,288. 6 Claims. (Cl. 33—215.)



1. In a compass mounting, the combination of two shafts arranged at right angles to each other, two frames, one carried by each shaft and capable of swinging about the axis thereof, one frame also being supported by the other shaft and a weight located on each frame below its shaft for keeping said frames in the same position irrespective of the position or angle to which the support for the shaft is turned.

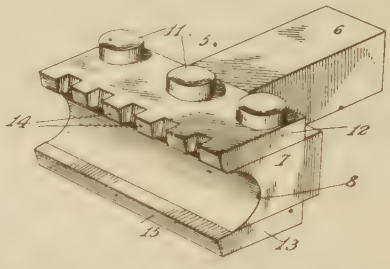
1,416,842. TYPEWRITING MACHINE. GEORG KROMM, Stuttgart, Germany. Filed Jan. 5, 1917. Serial No. 140,742. 2 Claims. (Cl. 197—107.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a typewriting machine, a comb-shaped guide plate, key-levers movable between the teeth of said plate, and a succession of locking means below and normally in the path of the key-levers, said locking means having a limited motion and pivotally connected one to each tooth of said plate.

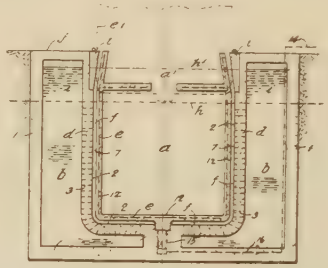
1,416,843. CUTTING TOOL. JOSEPH LABONTÉ, Blaisville, Quebec, Canada. Filed May 3, 1921. Serial No. 466,395. 2 Claims. (Cl. 29—97.)

1. A tool of the character described, comprising a shank, a head formed upon one end thereof, said head having an outer concaved surface, blades attached to the opposite sides of the head and a series of cutting teeth formed



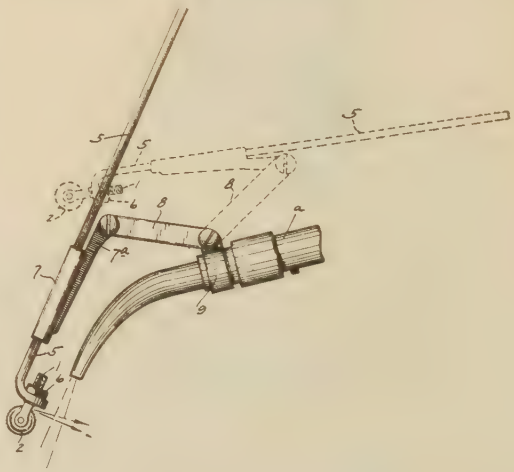
upon the outer edge of one of the blades, substantially as and for the purposes set forth.

1,416,844. MOLD FOR CASTING CONCRETE HULLS. EDWARD A. LARSEN, Larkspur, Calif., assignor to himself, James D. Whalen, Augustus J. Bowie, and E. N. Richardson, trustees, San Francisco, Calif. Filed Apr. 1, 1918. Serial No. 225,971. 20 Claims. (Cl. 25—130.)



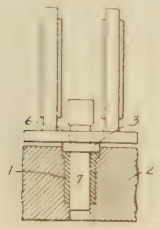
1. In a graving dock for molding the hulls of reinforced concrete hulls, forms in sections for giving shape to the interior of the hull and deck portions, hydraulic jacks along the keel line of the dock for auxiliary power in lifting the cast hull from the mold, openings through the walls of the dock to admit water for floating the vessel by forcing it through the perforations in the mold wall.

1,416,845. OXYACETYLENE LIGHTER. NAPOLEON G. LAVIGNE, Virginia, Minn. Filed Apr. 19, 1921. Serial No. 462,759. 3 Claims. (Cl. 67—6.1.)



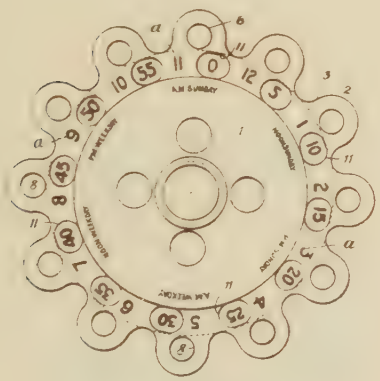
2. The combination with a blow torch of a lighting device secured to the body of the torch by a pivoted link and a sliding member pivotally connected to the end of said link.

1,416,846. METHOD OF MANUFACTURING BUSHINGS AND SIMILAR ARTICLES. JOHN WYCLIFFE LEIGHTON, Toronto, Ontario, Canada, assignor to Pressed Metals Company of Canada, Limited, Toronto, Ontario, Canada. Filed Feb. 17, 1919. Serial No. 277,601. Renewed Nov. 19, 1920. Serial No. 425,287. 10 Claims. (Cl. 29—156.)



1. The method of producing a bearing surface which consists in confining a heated blank on all sides except the side to be operated upon, then moving a tool over the unconfined surface applying progressively a stress to distort the crystalline formation.

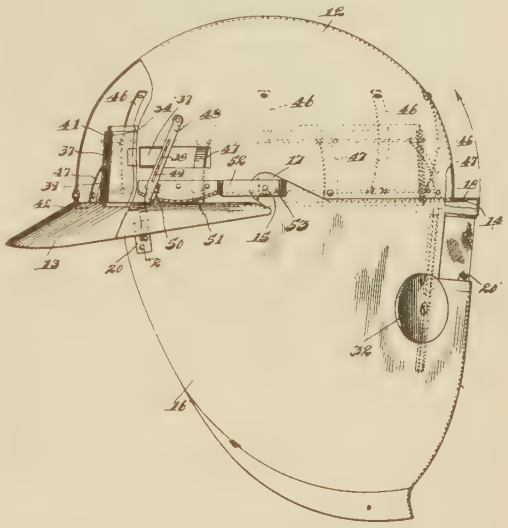
1,416,847. INDICATOR. JOHN LEWIS and SAMUEL DAVIES, Briton Ferry, Wales. Filed Mar. 25, 1921. Serial No. 455,392. 8 Claims. (Cl. 40—70.)



1. An indicator applicable for the purpose hereinbefore referred to, comprising a set of indicator plates arranged one behind another and rotatable relatively to one another, said plates bearing circular series of indications and being so formed that it is possible by rotating them relatively to one another, to bring desired indications into conjunction so as to thereby form a notice, and one of said plates being formed with means for suspending the indicator in definite positions for the display of the desired notice, substantially as set forth.

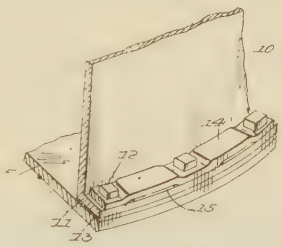
1,416,848. WELDING HOOD. JOHN M. LIGHTFIELD, Chicago, Ill. Filed Jan. 9, 1920. Serial No. 350,254. 7 Claims. (Cl. 2—117.)

1. A welding hood comprising a cap; a deflecting shield mounted on the rearward end of said cap; hooks on said shield; a face shield pivotally mounted on said cap; and



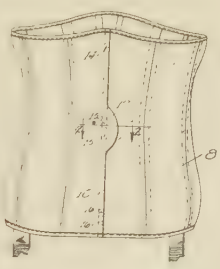
hooks on said face shield adapted to engage hooks on the deflecting shield for retaining same in operative position.

1,416,849. TANK. CHARLES H. LOOP, Pawhuska, Okla., assignor to C. H. Loop Steel Manufacturing Company, a Corporation of Oklahoma. Filed Sept. 25, 1920. Serial No. 412,728. 1 Claim. (Cl. 220—75.)



A tank including a head and a bottom, staves connecting the head and bottom, each of the staves having right angled ends, a reinforcing strip positioned over the right angled ends, bolts extending through the right angled ends, strips and bottom for securing the same together, and packing strips of material disposed between the bolts and under the reinforcing strips for causing the strips to bulge.

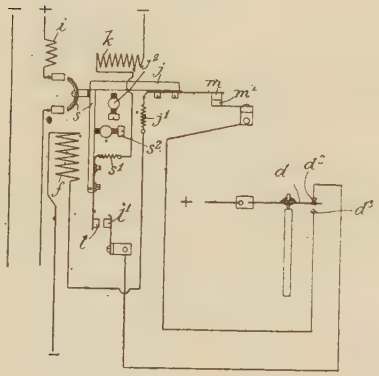
1,416,850. CORSET CLASP. GRACE ELIZABETH MCNAMARA, Plymouth, Ind. Filed Dec. 31, 1920. Serial No. 434,275. 1 Claim. (Cl. 2—74.)



The combination with a corset having overlapping portions, of a metal strip secured to the inner face of the

outer overlapping portion, and a metal strip secured to the outer face of the inner overlapping portion, one of said strips having a plurality of integral portions bent back upon the strip, each of said bent back portions having flanges bent inwardly to lie between the bent back portions and the body portion of the strip, and to constitute female clasp members, the other strip having integral portions bent back upon the strip to constitute male clasp members and arranged to engage the corresponding female clasp members, said clasp members lying between said strips when in clasping engagement, one of said overlapping corset portions having an extension flap for facilitating the clasping and unclasping of the corset.

1,416,851. THERMOSTATIC REGULATING OR CONTROLLING APPARATUS. ALFRED HENRY MCNEIL, Chingford, England. Filed Jan. 23, 1918. Serial No. 213,326. 1 Claim. (Cl. 175—375.)



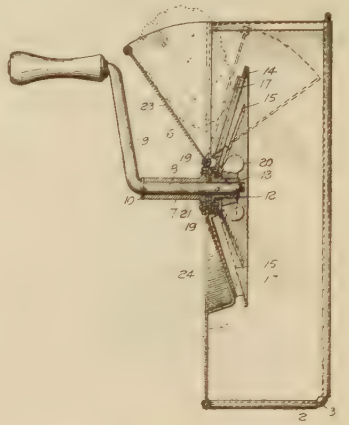
In apparatus of the class described, a thermo-sensitive member fixed at one end, a rod connected to said member and to which longitudinal movement is imparted by the expansion and contraction of said member, a normally open electric circuit including a relay and also including a contact blade normally held in open position by said rod, an electric switch controlled by said relay, a locking bar for said switch, a spring to move said locking bar to locking position, a relay to move said bar to unlocking position, a circuit in which said relay is included, said circuit also including a contact against which said blade is normally closed, a contact on the locking bar and in the circuit in which the first named relay is included, and a contact on the switch and in the circuit in which the second named relay is included.

1,416,852. WATERPROOFING COMPOSITION. GUSTAF W. MAGNUS, Seattle, Wash. Filed Jan. 26, 1922. Serial No. 531,931. 4 Claims. (Cl. 134—54.)

3. A waterproofing composition consisting of forty parts by weight of raw linseed oil, one part by weight of rubber, one and one-third parts of sugar lead, and sufficient gasoline to suitably thin the material for the purpose intended.

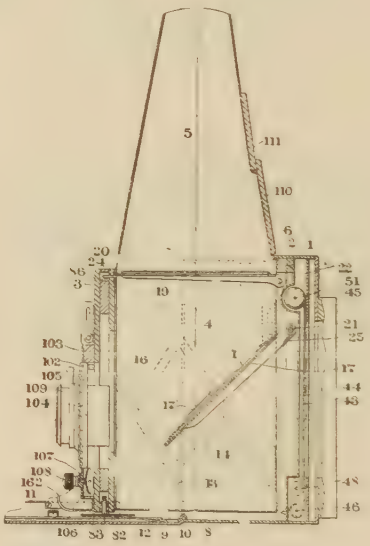
1,416,853. POTATO SLICER AND SHREDDER. ROY D. MAINE, Cheyenne, Wyo. Filed Oct. 13, 1920. Serial No. 416,652. 5 Claims. (Cl. 146—11.)

4. A potato slicer and shredder, comprising a holder having a feed opening, a rotary cutting disk mounted for rotation about an axis beneath said opening, and a tray hinged above the axis of rotation forward of said



opening and adapted to support a potato engaging with the working surface of the disk.

1,416,854. REFLEX PHOTOGRAPHIC CAMERA. PERCY GEORGE MASON, London, England, assignor to Newman & Guardia, Limited, London, England. Filed Aug. 17, 1920. Serial No. 404,143. 8 Claims. (Cl. 95—42.)

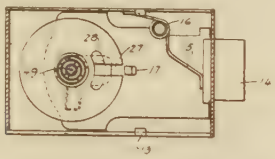


1. A folding or collapsible reflex camera of the type referred to, comprising a rigid camera body, a sliding front adapted to carry a focusing lens tube, flexible walls, and a flexible bottom directly connecting said sliding front to said rigid camera body, and a foldable focussing hood connected to the upper parts of said front, rigid body, flexible walls, and flexible bottom, and a focusing element connected with a sliding front.

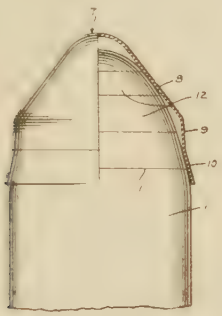
1,416,855. LOCK. JOHN MICHALEK, Chicago, Ill. Filed Apr. 22, 1921. Serial No. 463,437. 4 Claims. (Cl. (70—53.)

1. A combination lock comprising a series of outer disks: a series of inner slotted disks; means on each outer disk to engage and rotate one of said slotted disks; a bolt lockable in extended position; means on said bolt

adapted to slide in said slots; means engaging said bolt to withdraw the same when said slots are in predetermined alinement; and means on said disks co-operating with said means on said bolt to lock said bolt in withdrawn position.

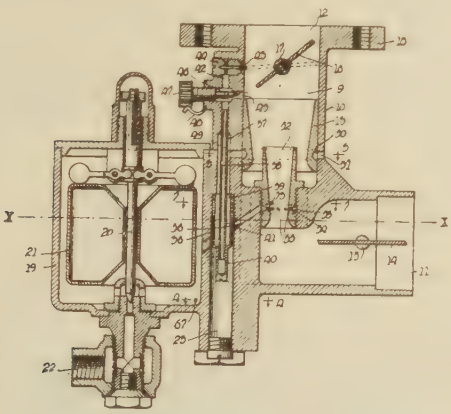


1,416,856. FUSE-CAP PROTECTOR. HARVEY F. MITZEL, Providence, R. I., assignor to The Revere Rubber Company, a Corporation of Rhode Island. Filed Mar. 27, 1920. Serial No. 369,265. 4 Claims. (Cl. 102—36.)



1. A moisture excluding cover of balatatious composition for the fuse end of shells having a cupped body portion and a marginal gripping portion, the body portion being shaped to embrace the shell end loosely and the marginal gripping portion being flared outwardly and adapted to be distended to grip and seal off the shell and also to support the body portion of the cover.

1,416,857. CARBURETOR. FRANK C. MOCK, Chicago, Ill., assignor to The Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 25, 1915, Serial No. 47,385. Divided and this application filed Aug. 9, 1919. Serial No. 316,309. 5 Claims. (Cl. 261—41.)

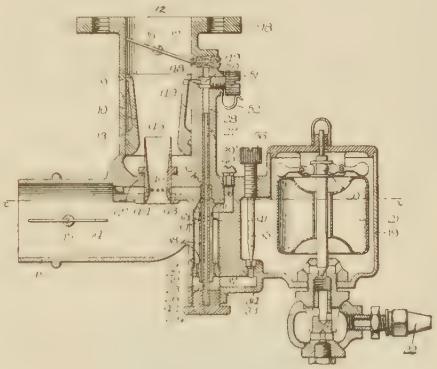


3. In a carburetor, a carbureting chamber having an air-inlet and a mixture outlet, a throttle valve in said outlet, a constant-level chamber supplying liquid fuel, a fuel-nozzle, a well connected with said constant-level chamber and said nozzle, said nozzle being fed from said well slightly below the normal level therein, air being bled into said well slightly below the normal level, a second nozzle leading to said carbureting chamber, above the throttle from said well at a point below the lowest fuel-level therein, another well communicating with the atmosphere and fed from said constant-level chamber by a restricted passageway, and a fuel-tube leading from said well to said carbureting chamber at a point slightly above said first-named nozzle, said fuel-tube being provided in said second well with a series of bleeder openings.

4. In a carburetor, a carbureting chamber having air and fuel inlets and a mixture outlet, a butterfly throttle in said mixture outlet, an opening in the wall of said carbureting chamber in proximity to the edge of the throttle when said throttle is in closed or substantially closed position, said opening being of such size that it extends beyond both sides of the throttle, a plug fitting in said opening but ending at a distance from the inner surface of said wall so as to form a recess, said plug having a small passageway therethrough, and a fuel passageway leading to said small passageway.

5. In a carburetor, a carbureting chamber having a portion thereof in the form of a Venturi tube and having fuel and air inlets and a mixture outlet, a throttle controlling said mixture outlet, a constant level fuel supply chamber, a fuel passageway leading from said fuel supply chamber to said carbureting chamber and discharging in proximity to the throttle when closed or substantially closed, and a passageway entirely above the fuel level in the supply chamber connecting said fuel passageway and said carbureting chamber between said throttle when closed or substantially closed and the most restricted zone of said Venturi tube.

1,416,858. CARBURETOR. FRANK C. MOCK, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 24, 1917. Serial No. 187,929. 2 Claims. (Cl. 261—41.)



1. In a carburetor, a casing forming a constant level liquid fuel supply chamber and a carbureting chamber side by side and a bore therebetween, said carbureting chamber having an air inlet and a mixture outlet, a throttle in said mixture outlet, a sleeve member in said bore forming a fuel passageway leading to said carbureting chamber and also forming an annular accelerating well about said passageway and connected therewith, means for the admission of air to the top of said accelerating well, a fuel nozzle in proximity to said throttle, and a fuel tube passing through said sleeve member and leading to said nozzle, said constant level liquid fuel supply chamber feeding said well and said passageway and said fuel tube.

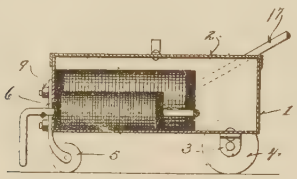
2. In a carburetor, a casing forming a carbureting chamber having fuel and air inlets, and a mixture outlet, a throttle in said mixture outlet, a passageway formed in the wall of said casing, the lower portion of said passageway being enlarged, a fuel supply chamber feeding into the enlarged portion of said passageway, a tube disposed in said enlarged portion of said passageway, with its upper end rigidly fitted to and feeding the upper portion, of

said passageway, a plug fitting into the bottom of the enlarged portion of said passageway and closing the same and receiving the lower end of said tube, and a fuel connection between said enlarged portion of said passageway and said tube.

1,416,859. PROCESS OF PRODUCING BENZYL ALCOHOL. RALPH E. MONTONNA, Syracuse, N. Y., assignor to Semet-Solvay Company, Solvay, N. Y., a Corporation of New York. Filed May 18, 1921. Serial No. 470,686. 7 Claims. (Cl. 260—156.)

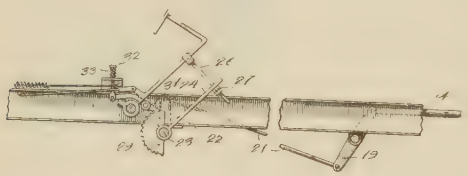
1. The process of producing chlorine-free benzyl alcohol which consists in combining crude benzyl alcohol and calcium chloride, breaking up the compound to set free benzyl alcohol and separating the benzyl alcohol from the residue.

1,416,860. MACHINE FOR COLLECTING WASTE METAL ARTICLES. WILLIAM NELESEN, Sheboygan, Wis. Filed June 15, 1920. Serial No. 389,103. 1 Claim. (Cl. 175—367.)



In a mechanism of the class described, a wheeled support, a housing carried thereby, a removable cover for said housing, a plurality of electro-magnets horizontally disposed within the housing with the cores thereof extending forwardly through the housing, then vertically downwardly and then laterally parallel to the surface over which the device is to be moved, and means for vertically adjusting the forward end of the housing and thereby vertically adjusting the laterally extending portions of said cores.

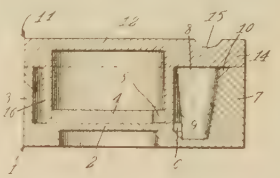
1,416,861. MOTOR-VEHICLE BUMPER. ERNEST NYSTROM, Oakland, Calif. Filed Jan. 10, 1921. Serial No. 436,394. 5 Claims. (Cl. 180—83.)



1. The combination with a motor vehicle of a bumper slidably mounted upon the front thereof; a pair of arms operatively connected to the bumper; means for adjustably connecting said arms with the clutch and brake pedals of the vehicle for actuating the same when the bumper is moved rearwardly toward the vehicle; means for normally retaining said bumper in its forward position; means for automatically engaging and retaining said pedals in their respective positions after movement by the bumper; and means operable by the operator of the vehicle for releasing said retaining means to permit the pedals to return to their normal positions.

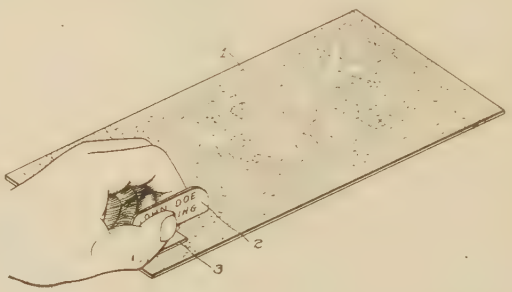
1,416,862. INKWELL. ERWIN HARRIS OAKMAN, Atlanta, Ga. Filed Oct. 16, 1920. Serial No. 417,289. 3 Claims. (Cl. 120—59.)

1. An ink well comprising an outer casing having an offset dip well, the casing including a side wall and a base, the outer portion of the face of the base adjacent to the wall having a shallow circuitous basin communicating with the dip well and adapted to convey ink thereto and to receive and distribute overflow of ink, the central portion of the base embodying an upstanding projection having an edge notch communicating with the basin, and an inner receptacle inverted in the casing, the receptacle compris-



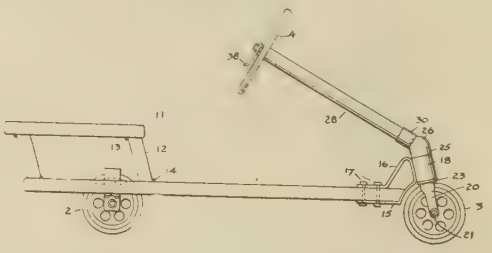
ing a tubular body surrounding the projection and closing the notch to prevent ink from flowing therethrough, the body being spaced from the wall and having an opening which is brought into registration with the notch when the inner receptacle is rotated, thereby to establish communication between the interior of the body and the basin.

1,416,863. BLOTTER. GEORGE D. PARKER, Riverside, Calif. Filed Apr. 21, 1920. Serial No. 375,438. 1 Claim. (Cl. 120—24.)



A finger or grip attachment for advertising blotters, the same comprising a body member formed of a single sheet of relatively stiff paper centrally cut inwardly from one side edge to approximately its center to provide a pair of foot members formed integral therewith and each of a length approximately one-half of the total length of the body, said members adapted to be bent on a longitudinal line toward opposite faces of said body to form foot members adapted for adhesively securing to and resting on the face of the blotter containing the advertising matter to cause the body member to project therefrom in a plane at substantially right angles to said face, said foot members projected one laterally from each face of the body providing a uniform support at opposite sides and ends of the body, and a finger rest at opposite sides of the body.

1,416,864. COASTER. RICHARD W. PARKES, San Francisco, Calif. Filed May 1, 1920. Serial No. 378,093. 2 Claims. (Cl. 280—87.5.)



1. A coaster of the character described, comprising a body, a rear wheel mounted upon said body, a front wheel, a rotatable shaft on the body and upon which said front wheel is mounted, a steering column pivotally connected

with said shaft, a steering rod fixed to said shaft and extending through said column, a steering wheel fixed to said rod, said steering rod being of angular construction at its lower end, said shaft having a slot in its upper end in which said angular portion of the steering rod is mounted.

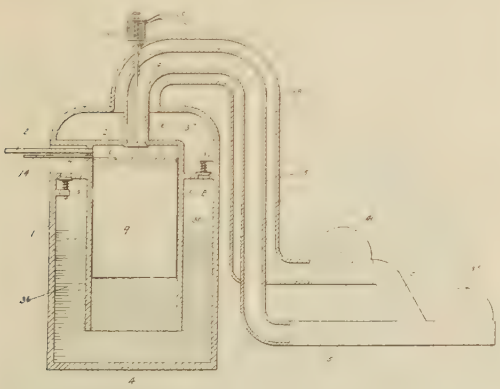
1,416,865. METHOD OR PROCESS OF REMOVING ENAMEL FROM ENAMELED METAL ARTICLES. WILLIAM E. PATCH, St. Louis, Mo. Filed July 28, 1921. Serial No. 488,228. 3 Claims. (Cl. 91—71.)

1. The method of de-enameling enameled metal articles which consists in subjecting the article in a closed oven to a temperature above the original baking temperature.

1,416,866. HOSE SUPPORTER. JOHN PATTERSON, Jr., Aldershot, England. Filed Mar. 5, 1921. Serial No. 449,987. 3 Claims. (Cl. 241—6.)

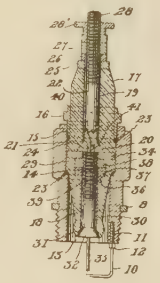
1. A hose supporter comprising a pad formed of a plurality of superposed layers of material, the upper layer provided with a looped end, resilient spring means attached to the looped end, a backing of elastic material, adjacent said spring means and secured to said pad and a gripping device secured to said spring means and elastic backing.

1,416,867. POWER-GENERATING SYSTEM. JOSHUA M. PHILBROOK, Scappoose, Oreg. Filed Dec. 12, 1918. Serial No. 266,467. 2 Claims. (Cl. 60—13.)



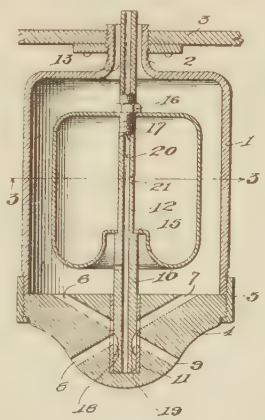
2. In a power generating system, the combination with an engine comprising a combustion chamber open at one end, a piston-float operatively disposed within its open end, and operative means for supplying and igniting explosive charges within said chamber, of a receptacle in operative communication with the piston-float and containing a power-storage fluid, of a liquid medium operatively disposed between the piston and the power-storage fluid that serves to support the piston within the combustion chamber and to transmit accretions of power imparted to it by impact of the piston to the power-storage fluid within the receptacle, and of two fluid motors in direct operative communication, one with the receptacle and the other with the interior of the combustion chamber, the former motor discharging into the source of supply of the latter whereby the two motors are compounded.

1,416,868. SPARK PLUG. STANLY P. PIETSZAK, Buffalo, N. Y. Filed Jan. 7, 1921. Serial No. 435,693. 1 Claim. (Cl. 123—169.)



A spark plug of the class described comprising a metallic shell, an upper and lower insulator section having a longitudinal bore, the lower end portions of the longitudinal bore in each section being outwardly tapered defining a socket in the ends of said insulator sections, an upper and lower electrode section being outwardly tapered at their lower ends for reception in the said sockets of the insulator sections, an angular lug upon the upper end of the lower electrode fitting within a socket in the enlarged lower end of the upper electrode, means for retaining the electrodes in the insulator sections and means for locking the insulator sections within the metallic shell.

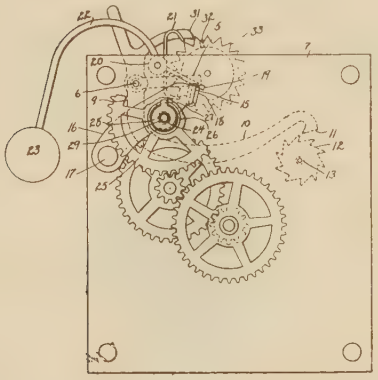
1,416,869. AUTOMATIC DISCHARGE VALVE. JOSEPH PITTMAN, Detroit, Mich. Filed Dec. 11, 1920. Serial No. 429,992. 4 Claims. (Cl. 137—103.)



1. In an automatic discharge valve, a casing, a valve block detachably connected to the lower end of said casing and provided with diagonal discharge passage ways, a

valve piston for controlling the discharge of condensation through said passage ways, a stem on said piston, a float on said stem for controlling the movement of the piston, and means for clamping said float against the upper end of said piston.

1,416,870. INTERMITTENT-ALARM CLOCK MOVEMENT. JAMES R. PUTNAM, Waterbury, Conn., assignor to Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed June 16, 1921. Serial No. 477,917. 1 Claim. (Cl. 58—18.)



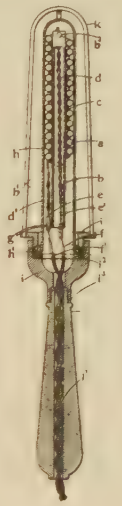
In an intermittent-alarm clock-movement, the combination with the front and rear movement-plates thereof, of an alarm-release spring secured to the front face of the front movement-plate and having its free end beveled and extended rearwardly therethrough, a rock-shaft pivoted between the said front and rear movement-plates, an intermittent-alarm lever mounted upon the said rock-shaft at the rear end thereof, adjacent to the forward face of the rear movement-plate, an intermittent-alarm wheel driven by the time-train and co-acting with the ends of the said lever, a verge-arbor pivoted between the said plates at a point close to the said rock-shaft, a verge mounted upon the said verge-arbor near the rear end thereof, a hammer-tail mounted in the said verge-arbor in position to co-act with the beveled end of the said alarm-release spring, and an alarm cut-out lever mounted upon the forward end of the said rock-shaft at a point closely adjacent to the rear face of the front movement-plate in position to engage with the beveled end of the said spring at a point forward of the engagement therewith of the said hammer tail and operating to normally hold the said rock-shaft in position to maintain the intermittent alarm-lever out of engagement with the intermittent alarm-wheel.

1,416,871. FLUX. BENJAMIN F. PYLE, Denver, Colo., assignor to The Pyle Metallurgical Company, Denver, Colo., a Corporation of Colorado. Filed Dec. 6, 1919. Serial No. 343,115. 2 Claims. (Cl. 148—23.)

1. The herein described flux consisting of soda, potash, fluorite, sodium chloride, silica, charcoal, coke, graphite, and carbon.

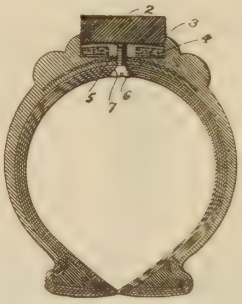
1,416,872. ELECTRIC HEATER. JOHN ROBERT QUAIN, London, England. Filed July 26, 1920. Serial No. 399,121. 7 Claims. (Cl. 219—41.)

1. An electric heater more particularly intended for use as an immersion heater, comprising a helically wound filament, a support carrying such filament, means for separating the convolutions of the filament, an outer and open silica casing separate from the said support, the said fila-



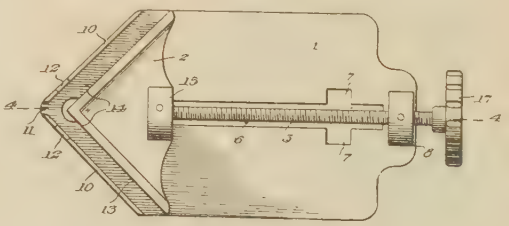
ment extending between the support and the outer casing and a carrier for the casing, substantially as described.

1,416,873. AUTOMOBILE AND MOTOR-CYCLE TIRE. GEORGE WILLIAM RAY, Atlantic City, N. J. Filed Nov. 8, 1921. Serial No. 513,834. 1 Claim. (Cl. 152—17.)



A tire having a recess passing circumferentially around its outer surface and having holes pierced through the center of the tire recess at regular spaced intervals, a tread composed of an outer layer of rubber and a backing of fabric and having embedded between the said subber and fabric, metal clamps tapped to receive a screw, the object being to pass the screws through the holes in the tire and into the clamps in the tread so binding the tread securely in the recess of the tire.

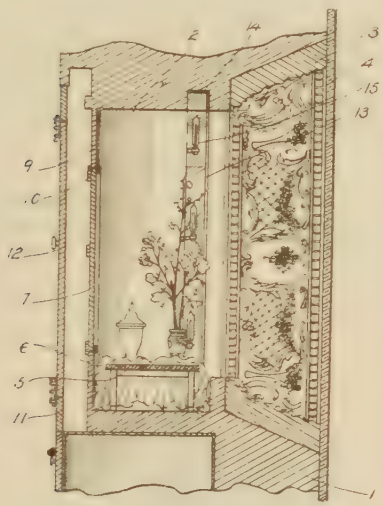
1,416,874. MITER CLAMP. GEORGE R. REEVES, Chicago, Ill. Filed June 4, 1921. Serial No. 475,133. 2 Claims. (Cl. 144—293.)



1. In a miter clamp, a body with angularly disposed flanges at one end of one side and between which flanges is an opening and also having at its opposite end a lug

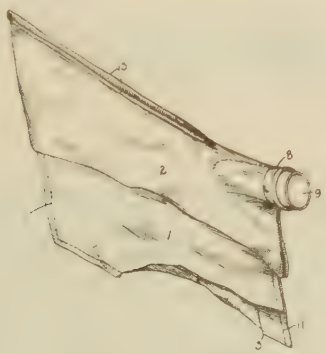
with a longitudinally disposed threaded bore, said body being longitudinally slotted, and the longitudinal slot having lateral portions adjacent to the said lug, a slidable member or jaw having angular portions corresponding to the flanges of the body and also having a lug at one side and a slide at its opposite side, said slide movable in the body slot and equipped with a transverse keeper portion, and a screw connected in swivelled manner to the lug of the slidable member or jaw and threaded through the lug on the body.

1,416,875. DISPLAY WINDOW. JOSEPH REICHL, Kansas City, Mo., assignor to Dean Hotel Company, Kansas City, Mo., a Corporation of Missouri. Filed July 12, 1920. Serial No. 395,659. 1 Claim. (Cl. 40—130.)



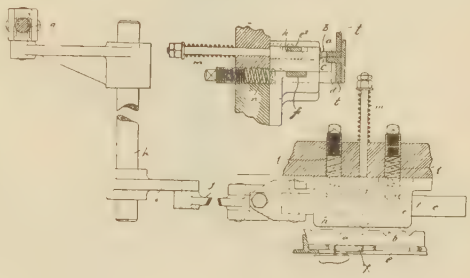
In a display device, a structure having a recess forming a sight opening and a front edge simulating a picture frame, a back for the recess having a picture thereon, an article-supporting stand between the frame and the back, the walls of the recess being grooved to house lighting devices, lighting devices in said grooves, and reflector devices in said grooves directing rays from the lighting devices over the article-supporting stand and restricting said rays from the back picture.

1,416,876. DUST COLLECTOR FOR PNEUMATIC CLEANERS. DANIEL B. REPLOGLE, Berkeley, Calif. Filed July 5, 1916. Serial No. 107,665. 25 Claims. (Cl. 183—44.)



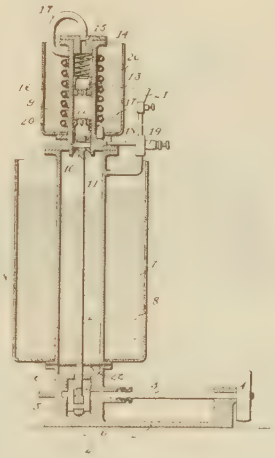
8. In a dust collector of the kind described having a cloth cover and mouth tube attached thereto, a separable porous paper bag operatively attached to said mouth tube and adapted to be closely enveloped by said cover.

1,416,877. PRESS FOR OPERATING UPON METAL AND OTHER SHEETS. CHARLES JOSEPH RHODES and THOMAS HENRY WEBB, Wakefield, England. Filed June 21, 1919. Serial No. 305,880. 3 Claims. (Cl. 164—117.)



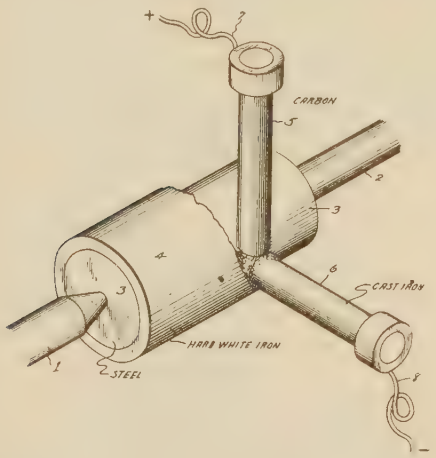
1. Sheet feeding mechanism for power presses and the like, including a carrier member mounted for movement in a right line and having spaced notches, a guide immovable longitudinally of the direction of movement of the carrier member, and a locating slide, arranged for movement in said guide and having means to engage the notches of said carrier member.

1,416,878. REFRIGERATING MACHINE. ARTHUR G. ROSS, Vancouver, British Columbia, Canada. Filed May 26, 1921. Serial No. 472,795. 3 Claims. (Cl. 62—115.)



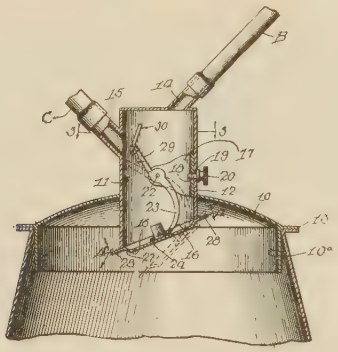
1. A refrigerating machine comprising a vertically elongated ammonia vessel, a pump cylinder in axial alignment and direct communication with the upper end of the said ammonia vessel, a condensing tube directly connected to the upper end of the pump cylinder and delivering into the upper end of the ammonia vessel, a crank case secured to the bottom and in axial alignment with the ammonia vessel, a crank rotatably mounted in said crank case, a piston in said pump cylinder, a connecting rod between said piston and said crank, said piston having a one-way valve and a back check valve in said pump cylinder for controlling the admission from the condensing tube to the piston substantially as shown and described.

1,416,879. PROCESS OF MAKING COMPOSITE METAL ARTICLES. JEAN FRANÇOIS REGIS ROUSSEAU, Indianapolis, Ind. Filed Apr. 15, 1920. Serial No. 374,176. 4 Claims. (Cl. 219—10.)



1. The process of producing a composite metal article which comprises welding ordinary cast iron to a suitable base of steel, localizing the heat of such welding to a relatively small section of the metals, and chilling the iron thereby to convert it into hard white iron.

1,416,880. MILKING MACHINE. NEALON D. RUTHERFORD, Lansing, Mich., assignor to United Engine Company, a Corporation of Michigan. Filed Apr. 26, 1920. Serial No. 376,529. 18 Claims. (Cl. 31—98.)



1. A vacuum chamber for milking apparatus having a valve controlled milk inlet, a valve controlled outlet, there being also a passageway leading through one wall of said vacuum chamber to an air exhausting device, and means for automatically closing one of said valves when the other valve is opened, comprising an arm extending between the said valves and being pivotally mounted intermediate thereof, and arranged in conjunction with one of said valves to form a baffle wall between the valve controlled milk inlet and the passageway adapted to lead from the chamber leading to the air exhausting device.

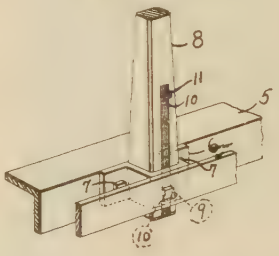
4. A vacuum chamber for milking apparatus having a milk outlet and a milk inlet, a gravity opened valve controlling the outlet, and a valve controlling the inlet operatively connected to the first named valve to operate reversely thereto.

7. A vacuum chamber for milking apparatus having a milk discharge valve yieldably held in open position by gravity, but shiftable to a closed position upon the exhaustion of air from said chamber, and a valve controlling the inlet of milk into said chamber and connected to the discharge valve to open when the discharge valve closes and to close when the discharge valve opens.

11. A vacuum chamber for milking machines, open at its lower end, a valve controlling discharge through the lower end of the vacuum chamber, a yoke supporting the valve having arms resiliently urged outward from each other, said yoke being disposed within the vacuum chamber and the arms resiliently engaging the wall thereof, and means for detachably engaging the yoke with the chamber wall.

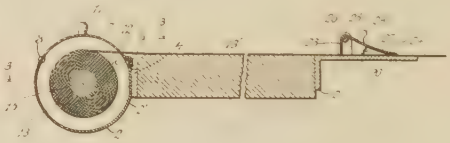
18. A vacuum chamber for milking machines, said chamber being vertically disposed and having an exhaust outlet at its upper end, a milk inlet adjacent its upper end and in its side wall, the lower end of the chamber being open and having its lower edge inclined downward and toward the wall having the milk inlet, a valve formed to close the lower end of the chamber, a support for said valve mounted within the chamber, and an arm operatively connected to the valve extending upward into the chamber and pivotally connected to the support and then extending upward and toward the inlet opening and formed to provide a milk inlet controlling valve gravity acting to hold the discharge valve open and the milk inlet valve closed, said discharge valve closing upon the exhaustion of air from the chamber and thereby opening the milk inlet valve.

1,416,881. STAKE LOCK. FRANK L. RUZICKA, St. Louis, Mo. Filed June 4, 1921. Serial No. 474,935. 2 Claims. (Cl. 280—147.)



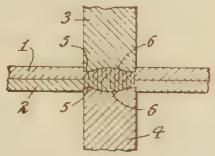
1. In combination with a stake pocket having a notch, a stake having a projection, the projection on said stake and the notch in said stake pocket being so positioned on their respective elements as to permit of selective engagement between said projection and said notch, and means of concealing the notch of said take pocket, and the projection on said stake.

1,416,882. CHIROPRACTIC SANITARY PAPER CONTAINER. NATHAN SANDALS, Jersey City, N. J. Filed June 26, 1920. Serial No. 391,958. 2 Claims. (Cl. 211—32.)



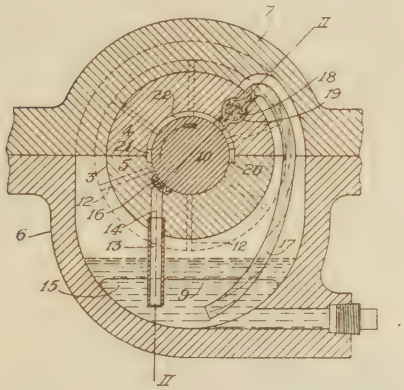
1. In a device of the character described, the combination with a support comprising a cylindrical box, the top wall of which is formed by a hinged cover section, said cover section being longitudinally slotted in alinement with the upper surface of said support, and means for supporting a roll of paper in the container, said means including a mandrel having a reduced end engaging in an opening in one end of the cylindrical box, the opposite end of said mandrel being formed with a socket, a screw threaded into an aperture in the adjacent end of the cylindrical box, and a pin on said screw projecting into the said socket, said last mentioned opening being large enough to permit of insertion of the mandrel therethrough.

1,416,883. METHOD OF SPOT WELDING. JACOB C. SANDER, Lynn, Mass., assignor to Thomson Spot Welder Company, Boston, Mass., a Corporation of Massachusetts. Filed May 10, 1920. Serial No. 380,082. 4 Claims. (Cl. 219—10.)



1. The method of spot welding consisting in assembling the work between annular shaped electrodes each having a slight depression in its contact face, passing an electric current from one electrode to the other and applying pressure whereby the electrodes which initially only contacted with the work annularly, ultimately contact with the work over their whole faces and leave a resultant bulge on the surface of the work resembling a rivet.

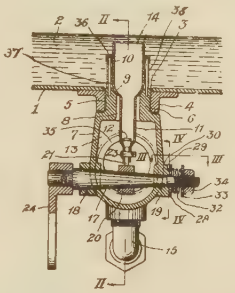
1,416,884. LUBRICATING JOURNAL BEARING. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1920. Serial No. 360,189. 14 Claims. (Cl. 64—24.)



1. The combination with a journal, a bearing block having an oil receptacle in the lower portion thereof, and a bearing therefor having a lubricating means operating by virtue of the vacuum produced by the rotation of the journal in the bearing for supplying oil from said receptacle to the bearing of an auxiliary lubricating means independent of the first-named means for constantly supplying the space between the journal and the bearing with oil from the said receptacle.

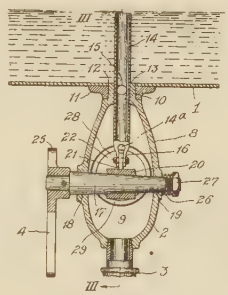
1,416,885. RESERVE-SUPPLY-CONTROLLING DEVICE FOR LIQUID RECEPTACLES. ANDREW J. SCHREINER, Cleveland, Ohio. Filed Apr. 16, 1920. Serial No. 374,461. 9 Claims. (Cl. 158—46.5.)

1. The combination with a receptacle adapted to contain liquid and having an outlet opening in the lower part thereof, of a tubular valve member extending through said opening provided with a shoulder adapted to be seated upon the wall surrounding said opening to form a fluid tight joint therewith, the end of said tubular valve member within said receptacle extending upward in said tank above the level of said aperture, the end of said tubular valve member which extends outward through said aperture being smaller in diameter than said aperture, said



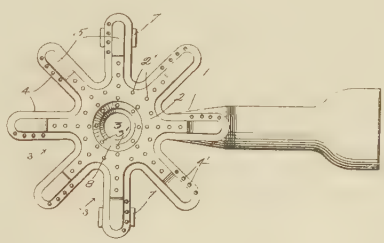
valve member being mounted for longitudinal movements in said aperture, and means for moving said valve member into and out of engagement with its seat upon said wall.

1,416,886. RESERVE-SUPPLY-CONTROLLING DEVICE FOR LIQUID RECEPTACLES. ANDREW J. SCHREINER, Cleveland, Ohio. Filed May 5, 1920. Serial No. 379,084. 9 Claims. (Cl. 158—46.5.)



1. The combination with a liquid receptacle provided with a substantially vertical outlet opening, of a valve housing secured to said receptacle, said housing having an aperture registering with said outlet opening, a tubular valve member in said aperture adapted to slide therein, one end of said valve member extending into said receptacle and having an outlet port, the other end of said tubular valve member having a port opening into a chamber in said houshing and means extending through the wall of said housing into said chamber and connected to said valve member for moving said valve member in said aperture to vary the height of said outlet port above the bottom of said receptacle.

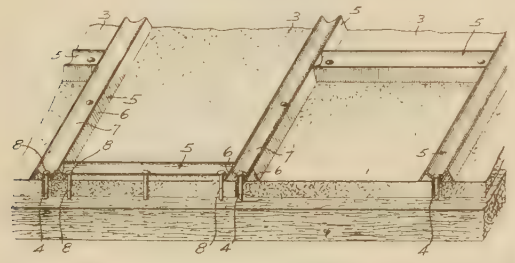
1,416,887. BURNER FOR GAS STOVES. JAMES G. SCOTT, Washington, D. C. Filed June 1, 1921. Serial No. 474,154. 1 Claim. (Cl. 158—116.)



A burner for gas stoves, including a flat top portion pierced by a central draft-opening, the said flat top portion being provided with a series of vertical perforations to project jets of flame vertically from the said flat top, the said top being also provided with a series of angularly arranged perforations disposed angularly with re-

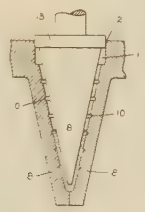
spect to the said top, to project jets of flame toward each other to a central point above the said central draft-opening, the said burner including a series of burner arms having downwardly and outwardly inclined sides, and provided with a series of perforations disposed in said arms angularly with respect to the vertical axis of each arm, to project jets of flame from the burner in a swirling manner, substantially as described and for the purposes set forth.

1,416,888. COVERING FOR JOINTS OF WALL BOARD. JOHN SCHUMACHER, Los Angeles, Calif. Filed June 11, 1921. Serial No. 476,895. 7 Claims. (Cl. 72—118.)



1. A covering strip for wall board comprising an integral strip of resilient material having a metal face with symmetrical sides upset therefrom inclined outwardly from each other in a direction away from said metal face so that the strip will be supported on its edges.

1,416,889. METHOD AND MEANS FOR MAKING CUP PASTRY. LEE C. SHARP, Plattsmouth, Nebr., assignor, by mesne assignments, to Alexander McLaren, Dayton, Ohio. Filed June 12, 1919. Serial No. 303,767. 34 Claims. (Cl. 107—58.)

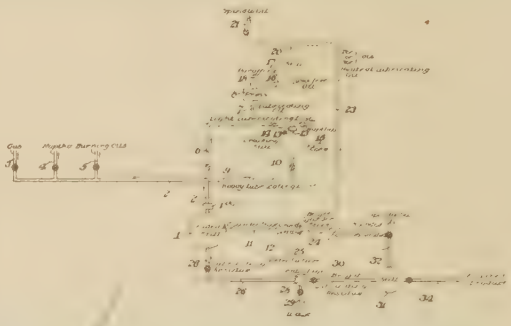


16. In apparatus of the character described, a female baking mold having a cavity provided with a throat at its mouth and a molding or die section beyond the throat, a core element adapted to enter and partially fill the molding cavity, means for plugging the throat before the core has reached its finally seated position against the escape of batter while permitting the escape of steam.

22. The method of making cup pastry in male and female baking bolds which consists in introducing batter to the mold, inserting the male mold into the female mold cavity in a manner which will distribute the batter to the extent desired and closing the mouth of the female mold cavity against the escape of batter while allowing for escape of steam, applying gradual pressure to the male mold to force it toward its final seated position, allowing the while for the escape of steam and then, when the steam has approximately all escaped, forcing the male mold to its final seated position and compressing the batter to the form desired.

1,416,890. METHOD OF REFINING PETROLEUM. PHILIP T. SHARPLES, St. Davids, Pa. Filed Mar. 12, 1920. Serial No. 365,135. 6 Claims. (Cl. 196—24.)

1. The method of treating a petroleum residue obtained by distilling off gas, naphtha and burning oils from crude petroleum without cracking the residue substantially, which consists in chilling the residue obtained thereby with precipitation of the wax therein; subjecting the chilled residue to centrifugal treatment adapted for separating wax from the residue, and separately discharging the separated wax and the wax freed residue continuously.



1,416,891. REFINING OIL. PHILIP T. SHARPLES, Merion, Pa. Continuation of application Serial No. 495,083, filed Aug. 24, 1921. This application filed Apr. 6, 1922. Serial No. 550,206. 9 Claims. (Cl. 196—24.)

1. The method of treating the residue obtained by distilling off lower boiling point constituents from crude petroleum which consists in distilling the residue so that the oil shall not be cracked substantially, treating the distillate to effect the precipitation of the wax and maintain the fluidity of the oil so that they can be separated by centrifugal force, and centrifugally separating and separately discharging the wax and the wax freed oil continuously.

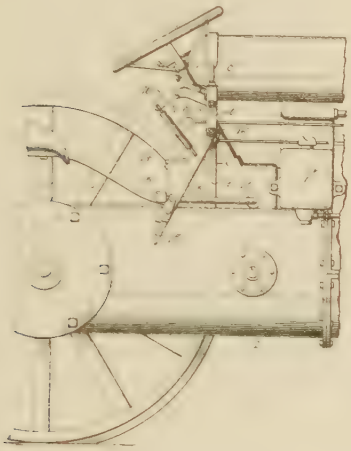
1,416,892. BELT BUCKLE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 25, 1921. Serial No. 464,252. 5 Claims. (Cl. 24—194.)

1. In combination with a buckle body having a front plate and side flanges provided with guide slots, a clamping member having heads at opposite ends cooperating with the outer faces of the side flanges, and flattened faces of greater width than the slot adjacent said heads, cooperating with opposite walls of the slots, the clamping member between said flanges having a belt engaging projection cooperating with the inner face of the front plate to clamp a belt.

1,416,893. CLUTCH CONTROL FOR FORDSON TRACTORS. WILY B. SHORTER, Freedom, Okla., assignor to Ernest G. Evans, Hillsdale, Okla. Filed Mar. 23, 1920. Serial No. 368,013. 1 Claim. (Cl. 74—81.)

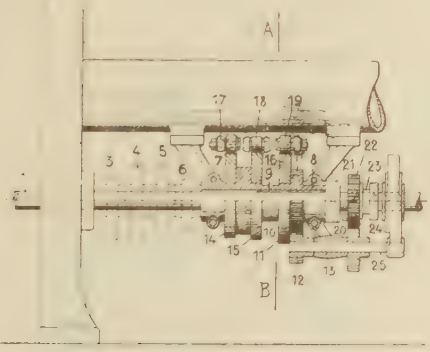
A clutch controlling attachment for tractors, comprising a supporting bracket removably secured to the dash-board of the tractor and including a portion which projects laterally and rearwardly toward the driver; a depending lever pivoted at its upper end to the bracket and having a notch in its free lower end, said lever being disposed in substantially the same vertical plane as the lateral portion of said bracket, a foot-operated clutch lever having a portion extending laterally across the depending lever at a point above said notch, but engage-

able in the notch when depressed so as to be retained thereby in depressed position; a spring connection between the depending lever and the lateral portion of the bracket tending to pull said lever in an upward direction



so as to hold it against the clutch lever at all times; and a pedal secured to the lower portion of said depending lever for depressing the same to disengage its notch from the clutch lever.

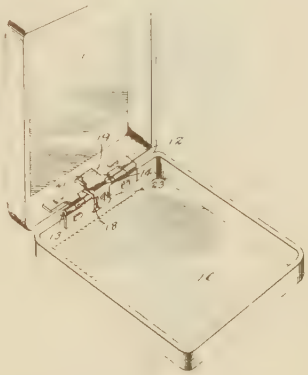
1,416,894. DEVICE FOR DRIVING THE SCALLOP MECHANISM IN EMBROIDERING MACHINES. GOTTWALT SIEBER, Plauen, Germany. Filed Sept. 10, 1921. Serial No. 499,859. 2 Claims. (Cl. 112—83.)



1. In an embroidering machine the combination with the main shaft, of means for driving auxiliary implements including a set of cams arranged co-axially with said main shaft and a speed reducing mechanism capable of being coupled to said shaft to transmit motion to said cams from said main shaft at a speed different from that of the latter.

1,416,895. SPRING-HINGE CONSTRUCTION. PARKER T. SIMMONS and RUSSELL I. RHODES, North Attleboro, Mass. Filed Mar. 3, 1920. Serial No. 362,893. 4 Claims. (Cl. 16—167.)

4. A spring device for hinged members comprising a plate having a central transverse enlargement and a transverse slot therein, a second plate inserted partly through the slot, said plates being bent adjacent the slot to form wings extending at an angle to each other, the wings of the two plates at the inner sides of the angle



being formed in their extremities to engage respective hingedly connected members.

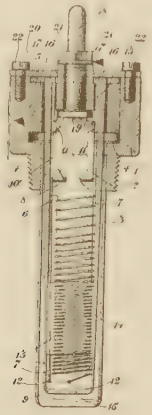
1,416,896. VEHICLE SUPPORT. PETER C. SIMMONS, Buffalo, Minn. Filed Dec. 18, 1920. Serial No. 431,728. 2 Claims. (Cl. 248—2.)

1. In an implement of the character named, a base, a tubular supporting standard mounted upon said base and having openings through its walls near the upper end, springs securely mounted within the standard, pins integral with the free ends of the springs in position to pass through the openings, a revoluble and slidable tubular standard mounted upon the supporting standard and having several shoulders formed in its walls to engage the pins when in proper positions, and to support the slidable standard and its load, and eccentrically formed walls adjacent to the shoulders whereby the revoluble movements of the outer standard will cause the pins to pass through the openings, or be forced out of them, as desired.

1,416,897. ELECTRIC HEATER. MAURICE SIMON, St. Louis, Mo. Filed July 12, 1920. Serial No. 395,451. 13 Claims. (Cl. 219—41.)

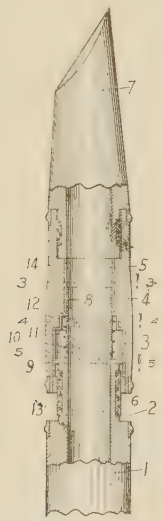
1. An electric heater, comprising a socket member having an open recess therein, a tapering case connected with the socket and opening thereinto, a heating element

including a resistance circuit and a tapering case sheathing the resistance circuit adapted to be inserted in said



first-named case, and means for effecting a wedging contact between the walls of said cases.

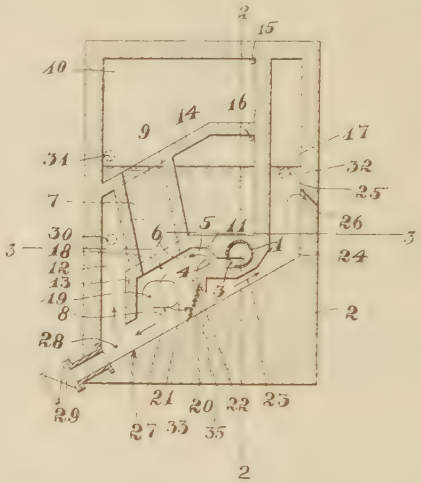
1,416,898. CLARINET BARREL. ALFRED J. SINCLAIR, Dayton, Ohio. Filed July 5, 1921. Serial No. 482,317. 8 Claims. (Cl. 84—386.)



1. The combination with a portion of an instrument and a barrel having one end mounted thereon and adjustable longitudinally thereof and having its other end adapted to receive a mouth piece, of a tube slidably mounted in said barrel, and means for retaining said tube in contact with the instrument during the adjustment of the barrel thereon.

1,416,899. PROCESS FOR PURIFYING LIQUIDS. CHARLES W. SIRCH, Los Angeles, Calif. Filed May 10, 1920. Serial No. 380,051. 7 Claims. (Cl. 210—8.)

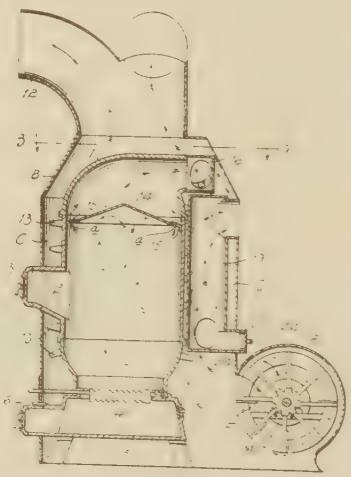
1. The herein described process of purifying liquids consisting in passing the unclean matter through a narrow space into a larger space over the whole width of the passing stream so as to cause a quick showing down of the movement thereby promoting the rising of light matter and the sedimentation of heavier matter, removing the scum from the surface automatically and continuously when the stream passes a certain point by subjecting the surface to expansion over the force contained in the incoming stream, removing the sediment from the stream automatically and continuously when the stream passes a certain point by subjecting the sediment to expansion over the force contained in the passing stream, maintaining an even level in the surface of the passing stream by holding the stream continuously



2

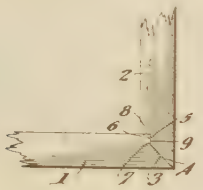
under pressure by the accumulating scum and sediment, and directing the cleared stream downwardly and rearwardly below the incoming stream so as to cause a dropping of especially heavy matter from the inpassing stream through the outgoing stream.

1,416,900. AIR-HEATING STOVE. FRED A. C. SKINNER, St. Louis, Mo. Filed July 27, 1921. Serial No. 487,930. 1 Claim. (Cl. 126—99.)



In an air heating stove, an inner stove, an outer casing spaced therefrom and forming an air-circulating chamber therewith, an outlet from the casing, a series of air deflecting spines radiating from the body of the stove and extending partially across the space between the stove walls and the outer casing for imparting their heat to the air and imparting a rotary motion to the air particles for thoroughly mixing the same, a conical baffle plate within the combustion chamber of the stove and spaced from the walls thereof for deflecting the gases of combustion against said walls, means for causing a circulation of air through the air chamber, the stove having an outlet for the waste gases at the top, a distributing head communicating with said outlet, pipes extending downwardly from said distributing head, and a flue between said pipes for receiving the waste gases, said distributing head, pipes, and flue being located in the air chamber.

1,416,901. MITER JOINT. Curtis E. Smith, St. Joseph, Mo. Filed May 31, 1921. Serial No. 473,821. 2 Claims. (Cl. 20—92.)

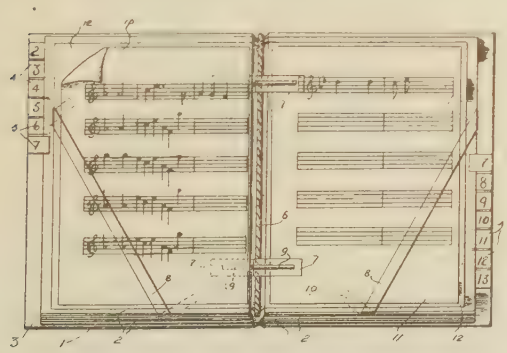


1. In a miter joint, a pair of members, the end of one member being provided with two surfaces disposed in intersecting planes and extending unbroken from the line of intersection to the opposite sides of said first member whereby a mitered end having a heel is provided, the end of the second member being provided with two faces disposed in intersecting planes and connected at their inner ends by a third plane surface, the first two of the second set of surfaces extending unbroken from the connecting surface to the opposite sides of the second member, whereby the second member is provided with a mitered end having abutment faces to receive the heel of the first member.

1,416,902. PRONGED EYE FASTENER. Elizabeth Jane Smith, Larchmont, N. Y. Filed Mar. 4, 1915. Serial No. 12,054. 2 Claims. (Cl. 24—227.)

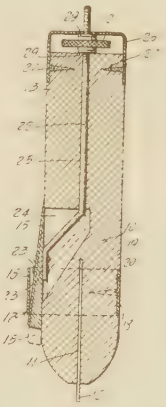
1. An eye fastener formed of integral sheet metal, with a hook-engaging bar, laterally-projecting base portions at the opposite ends thereof constituting a substantially H-shaped piece, and tapering prongs bent perpendicularly from the ends of said base portions, so that when passed through a fabric and flattened down they may clamp the fabric between themselves and such base portions, the hook-engaging bar being humped upwardly at its middle above the plane of said base portions, the lateral base portions being of a length approximating their distance apart, whereby the prongs enter the fabric at four widely separated points located in approximation to the corners of a square.

1,416,903. PORTFOLIO FOR SHEET MUSIC. Carl William Stalling, Kansas City, Mo. Filed Apr. 3, 1920. Serial No. 371,138. 1 Claim. (Cl. 129—1.)



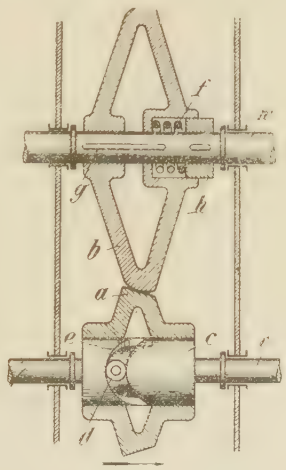
The combination with a book portfolio for loose sheets having a plurality of leaves, of a cable combined with the book and arranged between the leaves, and a clamping member slidably and rotatably mounted on said cable, said clamping member comprising a flexible transparent gripping member adapted for frictionally receiving said cable and for receiving loose sheets and a yielding clip mounted on the gripping member and adapted for holding the latter normally closed.

1,416,904. TOOL HOLDER. Peder O. Stangeland, Los Angeles, Calif. Filed Mar. 29, 1920. Serial No. 369,507. 1 Claim. (Cl. 145—47.)



A tool holder comprising a body formed with a groove to receive a tool, a handle on the body, a band extending around the grooved portion of the body, a wedge lying between the band and the body and movable in a direction longitudinal of the handle to cause gripping of the tool, a rod connected to the wedge and extending longitudinally through the handle, the body being slotted and the handle having a longitudinal bore to pass the rod, the end portion of the rod being screw-threaded, and a nut at the end of the handle threaded on the rod.

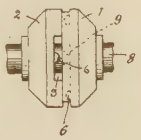
1,416,905. GEARING. Wilhelm Stoeckicht, Munich, Germany. Filed July 14, 1921. Serial No. 484,719. 4 Claims. (Cl. 74—26.)



1. Friction gearing, consisting of a driving shaft provided with a relatively-short peripheral groove; a driving wheel mounted immediately on the grooved portion of

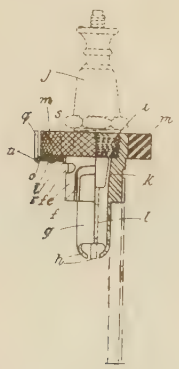
said shaft and having a single projection for coaction with said groove which is normally disposed at the center of the groove and is adapted to travel toward either end thereof when the rotation of the shaft commences, according to the direction of such rotation, and to maintain its end position throughout the continuation of the rotation; a driven shaft; and a wheel coupled to the driven shaft to rotate therewith and adapted to be driven from the driving wheel, the direction of said groove with relation to the axis of the driving shaft being such as to cause the driving wheel to move along said driving shaft toward the driven wheel so as to transmit to the latter a power which is proportional to the torque of the driving shaft.

1,416,906. SOIL-CULTIVATING TOOL. MATT STROM and ERICK HOGLUND, Duluth, Minn. Filed Mar. 8, 1921. Serial No. 450,595. 3 Claims. (Cl. 97—62.)



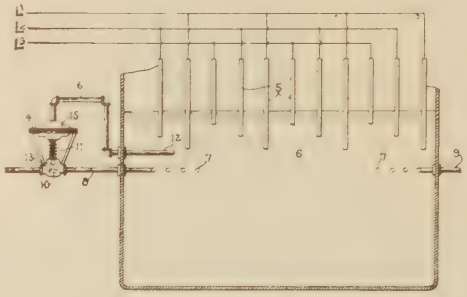
1. The combination with a two part hub of the class described having diametrically disposed recesses in each half thereof, of two part blades having shanks registrable within said cut-away portions, said shanks being provided with concavo convex tits thereupon registrable within depressions in one half and tits within the other half.

1,416,907. SPARKING PLUG. SYDNEY ERNEST TAYLOR, Westcliff-on-Sea, FREDERICK OLIVER ELLIS, Southend, and GEORGE EDWIN THOMAS ARCHER, Leigh, England. Filed June 15, 1920. Serial No. 389,204. 3 Claims. (Cl. 123—169.)



1. A spark plug including an attaching shell having a threaded nipple portion for engaging with the threaded opening in the motor and also having a socket provided at its upper edge with an interior annular locking portion, a plug carrying body adapted to be inserted in the socket, means for locking the plug in the socket against axial displacement, and a device mounted on the plug carrying body and having engagement with the interior locking portion of said shell.

1,416,908. FLUID RHEOSTAT. BENJAMIN F. TILLSON, Franklin, N. J. Filed Sept. 15, 1920. Serial No. 410,451. 5 Claims. (Cl. 219—57.)

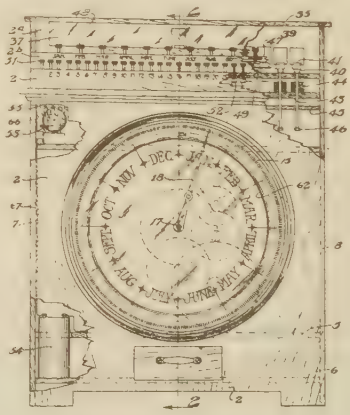


1. A fluid rheostat having means sensitive to variations in temperature of said rheostat to automatically compensate for such variations.

1,416,909. TICKET HOLDER. JAMES F. TOOHEY, Detroit, Mich. Filed Mar. 12, 1921. Serial No. 451,723. 3 Claims. (Cl. 206—39.)

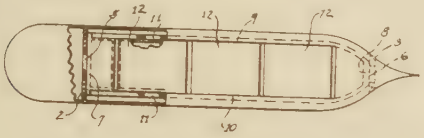
1. A ticket holder including a body provided with a recess to receive tickets, and a casing mounted on said body and having one end thereof extended to provide a closure engageable over said recess to prevent accidental displacement of the tickets from said recess.

1,416,910. TIME-CONTROLLED REMINDER APPARATUS. SAMUEL TOY, Boston, Mass. Filed Mar. 16, 1921. Serial No. 452,712. 6 Claims. (Cl. 161—5.)



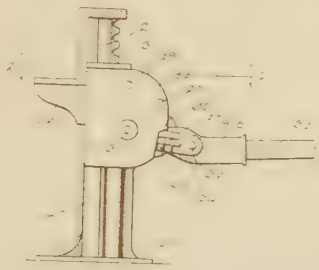
1. An apparatus of the character described comprising a plurality of electrically operated memoranda displaying instruments; circuits in which said instruments are arranged; a set of manually adjusted month switches and a set of manually adjusted day switches by means of which sets of switches said circuits are prepared for selective operation, and clock mechanism by which said circuits are selectively operated according to the adjustment of said switches.

1,416,911. AUTOMATIC STABILIZING DEVICE. ALFRED TRAPP, Milwaukee, Wis. Filed Sept. 21, 1921. Serial No. 502,273. 1 Claim. (Cl. 114—191.)



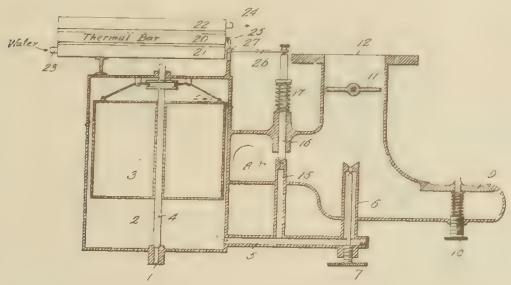
The combination with the hull of a ship, of a frame work pivoted longitudinally of said ship, and a plurality of cargo carrying units pivoted transversely of said frame work, said units being adapted to swing as one upon the longitudinal axis and to have independent pivotal movement upon their several transverse axes.

1,416,912. JACK. WILLIAM J. TRUMPOUR, Chicago, Ill., and WENCEL WIRTH, St. Joseph, Mich.; said Wirth assignor to said Trumpour. Filed Dec. 19, 1919. Serial No. 346,129. 15 Claims. (Cl. 254—95.)



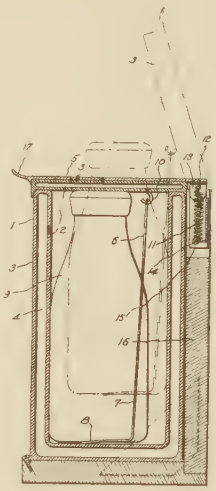
1. A jack comprising, in combination, with a standard having a rack bar mounted for vertical movement therein, a pinion pivotally mounted relative to the standard and meshing with the rack bar, a ratchet wheel of greater diameter than the pinion and rigid therewith, an operating handle pivoted co-axially with said pinion and having an actuating member for operatively engaging said ratchet, and a holding member engaging said ratchet for preventing rotation of the pinion.

1,416,913. CARBURETOR. EUGENE F. UTZ, Middletown, Ohio. Filed Mar. 6, 1918. Serial No. 220,777. 1 Claim. (Cl. 261—39.)



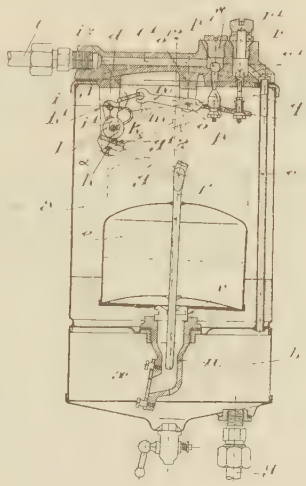
In combination with a carburetor, a main gasoline nozzle, an auxiliary gasoline nozzle vertically extending through the air chamber from a horizontal conduit from the bottom of a float chamber, said conduit supplying both said nozzles, a needle valve for closing the auxiliary nozzle, said needle valve including a stem having an interiorly threaded socket in its upper end, a set-screw adjustable in said socket, a spring for normally holding the needle valve in open position, a bell crank lever pivotally connected to the carburetor with one arm vertical and one arm horizontal and having an elongated opening in its horizontal arm through which the set screw passes, a horizontal thermal bar fixed at one end and having its other end engaged with the vertical arm of the bell-crank lever, and water legs on opposite sides of said thermal bar and in circuit with the cooling system of an internal combustion engine, said float chamber of substantially the height between said horizontal conduit and the top of said auxiliary nozzle stem and unitary with the housing for the said elements and provided on its top with a seat to receive said thermal bar.

1,416,914. RECEPTACLE. GEORGE A. VICKERY, Lexington, Mass. Filed Apr. 16, 1921. Serial No. 461,768. 3 Claims. (Cl. 232—41.)



1. A receptacle comprising a hollow body, a cover with a container stirrup carried thereby, a spring on the body adapted to hold the cover, stirrup and empty container in raised position, and when a full container is placed on the stirrup, to yield and permit the cover to close and container to drop into the receptacle.

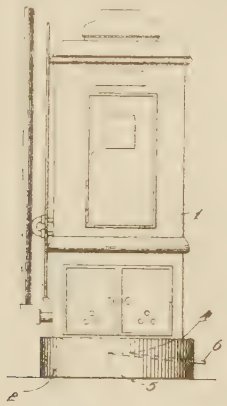
1,416,915. APPARATUS FOR FEEDING LIQUID FUEL TO INTERNAL-COMBUSTION ENGINES. STÉPHANE LOUIS JOSEPH VINDRIER, Lyon, France, assignor to the Firm Mathieu, Durand et Cie., Lyon, France. Filed Aug. 25, 1921. Serial No. 495,366. 2 Claims. (Cl. 158—36.)



1. In a device of the character described a container in which liquid rises and falls, a float in said container

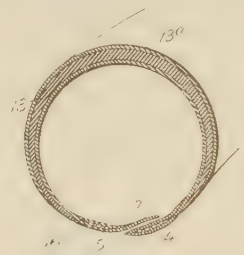
actuated by said rising and falling liquid, means for guiding said float a lever connected to said float and actuated thereby, a second lever or roller mounted thereon a spring pressing said roller on a surface of said first mentioned lever a third lever connected to said second lever and actuated thereby and valves actuated by said third lever.

1,416,916. BASE FOR HEATERS OR THE LIKE. CHARLES G. WALKER, Highland Park, Mich. Filed Aug. 1, 1921. Serial No. 488,877. 4 Claims. (Cl. 126—350.)



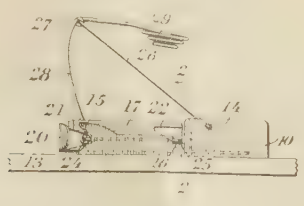
1. A base for heaters or the like, consisting of a concrete mass having means for locating the shell of the heater thereon and means therein for receiving the drippings from the heater.

1,416,917. INNER LINER FOR AUTOMOBILE TIRES. HERBERT N. WAYNE, Washington, D. C. Filed Aug. 21, 1920. Serial No. 405,004. 2 Claims. (Cl. 152—18.)



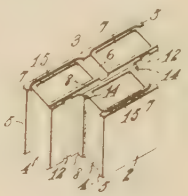
1. An inner lining for tire casings having its main body portion composed of fibrous material in mixed combination with rubber, and an outer covering of unvulcanized rubber.

1,416,918. BATTING DEVICE FOR BASEBALL GAME APPARATUS. ARTHUR W. WEEDEN, Quincy, Mass., assignor, by mesne assignments, to Weeden, Johnson & Co., Inc., a Corporation of Massachusetts. Filed Mar. 12, 1921. Serial No. 451,814. 5 Claims. (Cl. 46—61.)



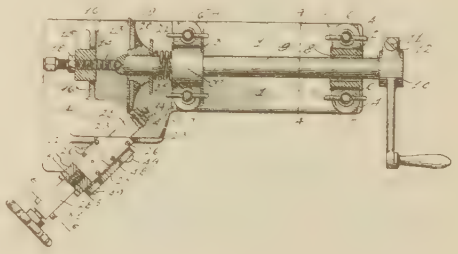
1. A batting device for baseball games, and the like, comprising a base having sides provided with lock-engaging notches, a projector slidably mounted in said base, said projector having its forward end adapted to receive the impact of the ball member to be batted, and having sides provided with openings having inclined wedge edges, a locking plate movable with the projector and provided with lock-engaging projections extending laterally therefrom through said wedge edged openings in the projector sides and adapted, in the rearward position of the projector relative to the base, to engage within the lock-engaging notches of the base, the wedge edges of said openings in the sides of the projector being adapted, in the rearward motion of the projector relative to the base due to impact of ball member on said projector, to release the lock-engaging projections of the locking plate from the lock-engaging notches of the base, and tension means interconnecting the locking plate and the base.

1,416,919. BUILDING BLOCK. JOHN A. WICKSON, Victoria, British Columbia, Canada. Filed Sept. 12, 1921. Serial No. 499,887. 5 Claims. (Cl. 72—41.)



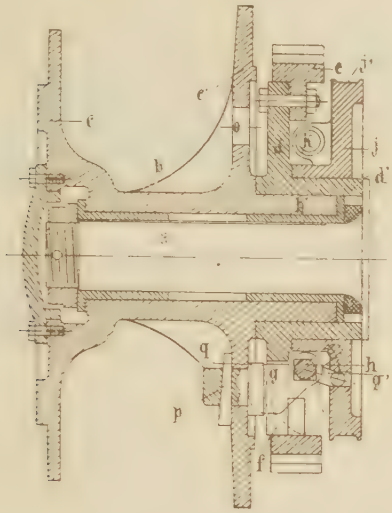
1. A building block the ends of which are half-lapped in vertical planes and having end shoulders the lap extensions of both ends being toward the same face of the block, each end of each lap extension and each end shoulder having portions removed within the outer faces of the blocks that will form recesses between the ends of adjacent blocks, and that portion of the block on which are the lap extensions having in its midlength a core space through its depth, the domensions of which correspond with those of the recesses formed between the ends of adjacent blocks.

1,416,920. VALVE TURNING AND GRINDING MACHINE. FREDERIC C. WILLIAMS, Coronado Beach, Calif. Filed July 1, 1920. Serial No. 393,400½. 4 Claims. (Cl. 82—1.)



1. A valve finishing tool comprising a base having head and tail stock bearings formed thereon and a vertical extension in alinement therewith, a valve stem adapted to receive a valve rotatably supported in said bearings, means on said stem for rotating the valve and stem, an adjustable centering pin supported in said extension for centering the valve in operating position, means for maintaining a resilient engagement between said valve and pin, a tool post rigidly held on said base, a tool holder movably disposed in said post for regulating the engagement of the cutting tool with the valve, and means for moving said tool holder, as set forth.

1,416,921. STEERING DEVICE FOR MOTOR VEHICLES. PETER M. WILSON, Marseille, France. Filed Aug. 15, 1921. Serial No. 492,257. 3 Claims. (Cl. 180—17.)



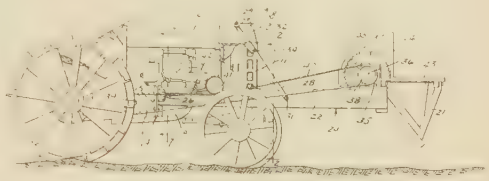
1. A steering device for motor vehicles of the type with independent driving wheels and cessation of the driving of one of the wheels, chiefly characterized by: two independent rims, an elastic coupling part between the two rims, a brake on one of them, an oscilalting driving part on the other rim constituting the driving rim, stops on the wheel in the track of the driving part, a device for bringing about disappearance of the driving part when the brake rim is stopped or locked.

1,416,922. SEPARATOR AND DRIER. CASIMIR J. WOOD, San Francisco, Calif. Filed June 4, 1919. Serial No. 301,700. 3 Claims. (Cl. 83—54.)

1. A device of the character described comprising a separating chamber in which granular material is introduced and suspended therein in a column of air, a valve casing arranged below the separator and communicating therewith, said casing having an inlet port therein for admitting said air to the separator and having an outlet port in a lower portion thereof, and a valve for controlling said ports whereby the separator will discharge through said valve casing and said outlet therein when the inlet port in the casing is closed.

1,416,923. SAWING ATTACHMENT FOR TRACTORS. SOLOMON A. WOOLDRIK, Sleepy Eye, Minn. Filed Apr. 20, 1920. Serial No. 375,197. 2 Claims. (Cl. 143—43.)

1. A sawing attachment for tractors including a frame affording an end extension for a tractor, means detachably supporting the frame from the tractor, a two-part hanger yoke adapted to straddle the tractor and having its ends secured to the frame forward of the tractor, resilient means connecting the members of the yoke, means inter-



mediately supporting the yoke in an oblique position from the tractor with freedom for endwise movement, a saw mounted on the frame outward of the yoke, and means for driving the saw from the tractor.

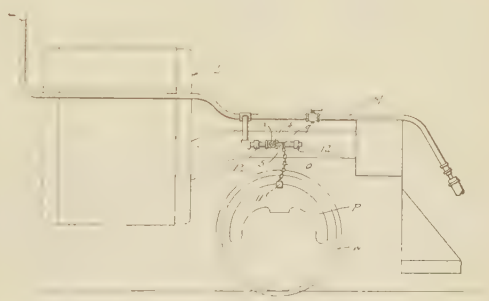
1,416,924. SOLDERING COMPOSITION FOR ALUMINUM. FLOYD A. ALBERTUS, Milwaukee, Wis., assignor of one-fourth to Clayton S. Flint, Milwaukee, Wis. Filed Dec. 3, 1919. Serial No. 342,264. 4 Claims. (Cl. 75—1.)

4. As a solder for aluminum, an alloy of a relatively large proportion of tin, a relatively large proportion of zinc, a relatively small proportion of aluminum, and relatively small proportions of antimony and phosphor tin, the proportions of antimony and phosphor tin being less than the proportion of aluminum.

1,416,925. BOILER-FUR PREVENTATIVE. OFFER LAURITZ KJÆR ANDERSEN, Struer, Denmark. Filed Aug. 29, 1916. Serial No. 117,535. 1 Claim. (Cl. 87—27.)

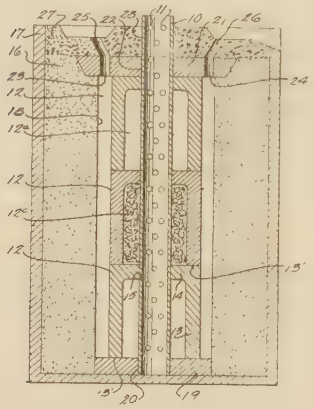
A solution for preventing boiler scale consisting approximately of 25 parts, by weight, of sodium hydroxide, 10 parts, by weight, of mangrove bark, 10 parts, by weight, of gambier, 30 parts, by weight, of catechu and 25 parts, by weight, of potato water.

1,416,926. SAFETY DEVICE FOR ROLLING STOCK. WILLIAM S. ARLESKIE, Pittson, Pa. Filed Dec. 10, 1921. Serial No. 521,387. 3 Claims. (Cl. 246—170.)



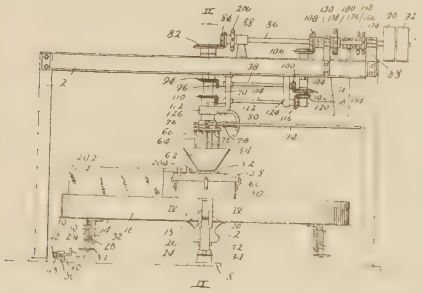
1. The combination with a vehicle, a mounting for a wheel therefor, and a pipe line for an air brake system carried by said vehicle; of a normally closed valve associated with said pipe line, an operating member for the valve, and a fragile connection between the operating member and the mounting for the wheel.

1,416,927. APPARATUS FOR MOLDING HOLLOW BODIES. PERCY A. E. ARMSTRONG, Loudonville, N. Y. Filed Jan. 22, 1921. Serial No. 439,184. 7 Claims. (Cl. 22—165.)



1. Apparatus for casting hollow bodies, comprising a mechanically strong core center and a plurality of collapsible mold core sections centered directly upon and supported by said member.

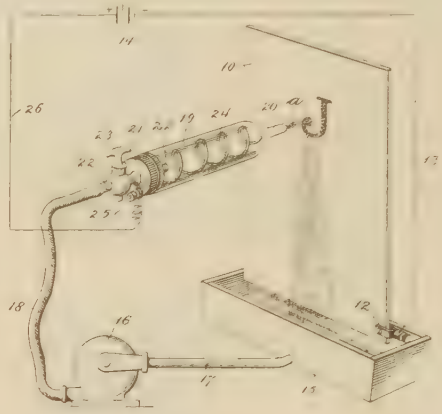
1,416,928. ORE CONCENTRATOR. JAMES B. ARTHUR, deceased, by Mary R. Arthur, executrix, Joplin, Mo. Filed Feb. 21, 1920. Serial No. 360,434. 5 Claims. (Cl. 83—87.)



1. In an apparatus of the character described, a rotary table, gates operably mounted on said table and provided with spouts, screw mechanism rotatable with the table for opening and closing said gates, and means independent of the table which said screw mechanism contacts and is actuated thereby during each revolution of the table.

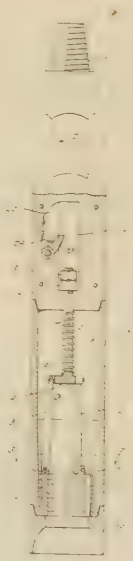
1,416,929. ART OF ELECTROLYSIS. WILLIAM E. BAILEY, Washington, D. C. Filed Nov. 7, 1921. Serial No. 513,471. 12 Claims. (Cl. 204—1.)

1. In the art of electrolysis, the method which comprises passing an electrolyte past an electrode connected to one pole of a source of current, forming a jet of said electrolyte and causing the jet to impinge on an article forming another electrode connected to the other pole of said source of current, thereby causing electrolytic action



at and closely adjacent to the point of impingement of such jet.

1,416,930. FISHING TOOL. DAVID A. BALL, Whittier, Calif. Filed Oct. 2, 1920. Serial No. 414,262. 2 Claims. (Cl. 294—102.)

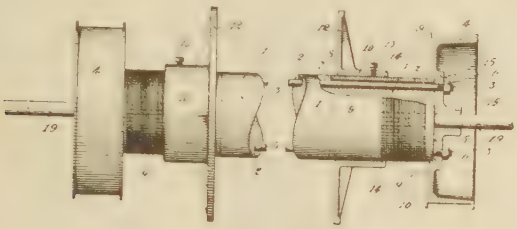


1. A fishing tool comprising a head, a socket detachably secured to said head having a tapered bore converging toward the mouth and provided with dove-tail slots on the tapered portion, slips having tenons mounted in said slots, a stem mounted in said socket so as to be freely slidable between te limits of its travel and connected to said slips by links and a detent disposed in said head to engage said stem and lock the latter adjacent the upper limit of its travel.

1,416,931. WARP BEAM AND ANALOGOUS DEVICE. ARTHUR BALTHASAR, Montclair, N. J. Filed Aug. 13, 1921. Serial No. 491,919. 9 Claims. (Cl. 139—56.)

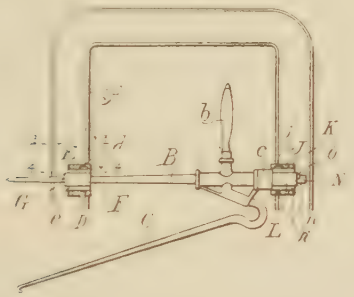
1. A roll having radially projecting, annular members, the hub portions of said members having internal smooth, true-cylinder, bearing surfaces and smooth, metal, true-

cylinder bearing surfaces on the roll, fitting said hub surfaces very accurately, the length of said metal bearing surface on the roll being equal to or greater than the desired range of adjustment of the flanges, and, beyond said



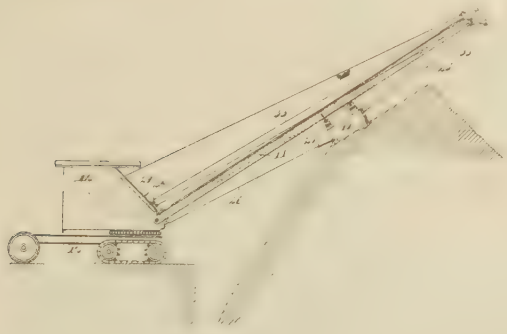
smooth bearing surfaces on the roll, and coaxial therewith, a threaded surface, the thread being depressed to a smaller radius than said smooth surface of the roll, and means engaging said threads arranged to force said hub and flange away from the end of the roll.

1,416,932. MAIL-BAG CATCHER. RICHARD H. BARNITZ, Washington, D. C. Filed Dec. 16, 1920. Serial No. 431,149. 4 Claims. (Cl. 294—21.)



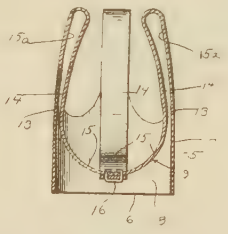
1. In a mail bag catcher, the combination with a fork having a straight portion, of devices for mounting the fork by engagement with said straight portion comprising a plate or base having projecting flanges, a block pivotally supported between the flanges of the plate and having a passage admitting that said straight portion of the fork and whereon the fork may be swung into the car, means for supporting the butt of the said straight portion of the fork, the said supporting means and the said butt having devices for limiting the rotary and longitudinal movements of said butt.

1,416,933. EXCAVATOR. HENRY L. BARTON, Gary, Ind. Filed May 9, 1919. Serial No. 295,898. 12 Claims. (Cl. 214—102.)



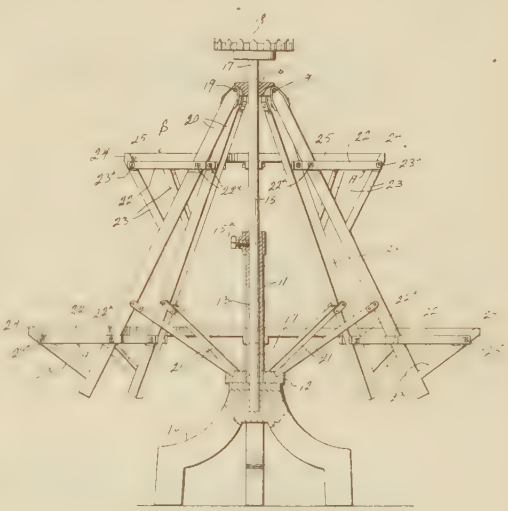
1. An excavator comprising a boom; a wheeled carriage mounted to travel on said boom; a scoop conveyor pivotally mounted at its rear end on said carriage; a guide roller at the forward end of said scoop resting loosely against the under side of said boom; an operating cable connected directly with the forward end of said scoop to draw said scoop through its operative movement; and an operating cable operatively connected to draw said scoop through its inoperative movement, substantially as described.

1,416,934. EGG CONTAINER. MAX F. BIERND, Miami, Fla. Filed July 2, 1921. Serial No. 482,210. 5 Claims. (Cl. 217—24.)



1. An egg container embodying a supporting member, arms carried by and extending from said supporting member, and a resilient container suspended between the arms in spaced relation to the body member.

1,416,935. DISPLAY STAND. FREDERICK C. BLOOM, Norwood, Ohio. Filed Jan. 11, 1922. Serial No. 528,478. 2 Claims. (Cl. 211—20.)

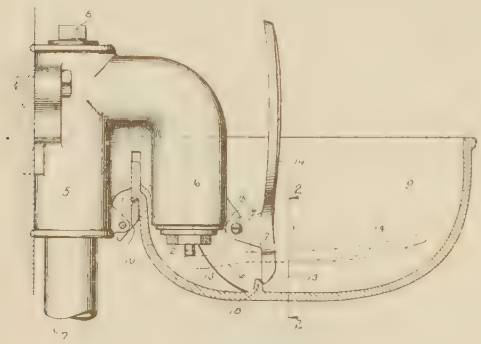


1. In a stand of the type described, a rotatable support, a plurality of arms pivotally connected at their upper ends with said support, shelf supports carried by each of said arms and a brace having a portion extending above the upper surface of the shelf support likewise carried by each arm, and shelf sections disposed intermediate adjacent arms and having their ends supported by corresponding supports thereof, the ends of said shelf sections being each provided with a notch partially receiving the portions of said braces projecting above the upper surface of the supports.

1,416,936. STOCK-WATERING DEVICE. FRANK H. BOGDA, Horicon, Wis. Filed Sept. 30, 1920. Serial No. 413,696. 3 Claims. (Cl. 119—75.)

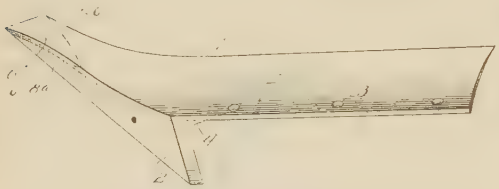
1. In a device of the class described, the combination of a supply pipe provided with a discharge nozzle, a valve adapted to control said nozzle provided with a valve stem,

a valve actuating member comprising a treadle pivotally secured to said nozzle and provided with an extension adapted to engage said valve stem to open said valve, and



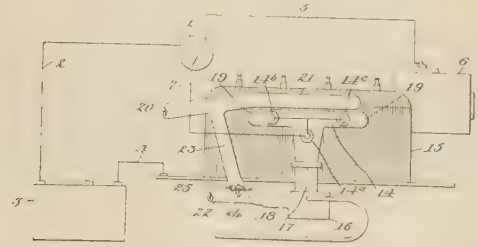
a bowl detachably secured to said nozzle and provided with a projection adapted to engage said extension to render said treadle inoperative.

1,416,937. PLOWSHARE. JOHN C. BOHMKER, Bradley, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Mar. 27, 1919. Serial No. 285,558. 2 Claims. (Cl. 97—22.)



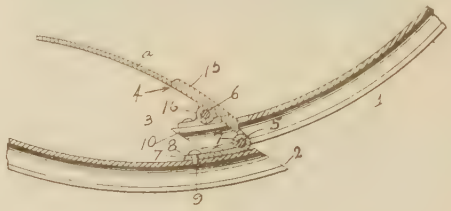
2. A plow share constructed to provide a point having a central reinforcing metallic core, and an outer wear-receiving sheath, said share comprising a landside of relatively soft metal constituting at its forward end the core of the point, a share blade of hardened material welded upon the upper side of the landside, and a wear-receiving member also of hardened material and welded to the landside with a portion abutting the share blade and the outer surface of such abutting portion flush with the outer surface of the landside rearwardly of said member.

1,416,938. VAPORIZING DEVICE FOR FUEL OILS. ROBERT LEE BOWMAN, Knoxville, Tenn. Filed Oct. 17, 1918. Serial No. 258,602. 2 Claims. (Cl. 219—38.)



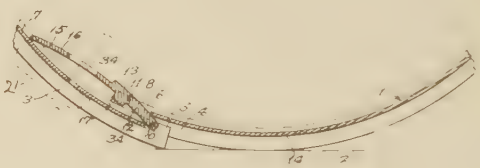
1. In combination with the exhaust and intake manifolds of an internal combustion engine, the latter including a carbureter; valve-controlled means capable of supplying heated air to the carbureter from the exhaust manifold under certain conditions, and electrically operated means for heating the carbureted air in the manifold under other conditions, said means including suitably introduced resistance elements with a common source of energy.

1,416,939. DEMOUNTABLE TIRE RIM. CHARLES GARLAND BRIDEN, Los Angeles, Calif., assignor of one-half to Homer Laughlin, Jr., Los Angeles, Calif. Filed Oct. 1, 1918. Serial No. 256,613. 3 Claims. (Cl. 301—33.)



1. The combination with a demountable tire rim in the form of an open ring having one end thereof slotted, so that, when the rim is expanded, an opening is formed which is bounded by the unslotted end of the rim, the prongs on the sides of the slot and the end wall opposite to the unslotted end, of a lever adapted to expand or to contract the rim and having on its outside a boss adapted to snugly fit said opening, said lever being pivotally seated adjacent to the unslotted end of the rim and also being pivotally seated opposite to said boss, so that, when the rim is expanded, the boss is tightly held in said opening and thus constitutes means that aids in preventing lateral and longitudinal displacement of the rim ends.

1,416,940. DEMOUNTABLE TIRE RIM. CHARLES GARLAND BRIDEN, Los Angeles, Calif., assignor of one-half to Homer Laughlin, Jr., Los Angeles, Calif. Filed Feb. 18, 1919. Serial No. 277,879. 7 Claims. (Cl. 301—33.)

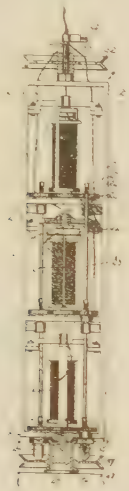


1. An open ring demountable tire rim slotted at both ends and provided near the inner end of one slot and at about equidistance from the outer end of the other slot with pintle holes in the body of said rim; pins in said pintle holes and extending transversely of the slots; and a lever having a thickened portion pivoted on said pins respectively; said thickened portion being practically equal in length to the length of both slots and filling the open spaces formed by said slots and having a concave face conforming to the curvature of said rim when the rim is expanded; said lever terminating in a handle having about the same length as the thickened portion so that when the handle is turned into collapsible position the ends of the rim may be lapped close to each other.

1,416,941. TWISTER. RICHARD W. BROCKWAY, Moodus, Conn., assignor to himself and Francis J. Meckensturm, a Partnership doing business under the name of Brockway & Meckensturm Machine Company, Moodus, Conn. Filed Mar. 20, 1920. Serial No. 367,527. 4 Claims. (Cl. 117—46.)

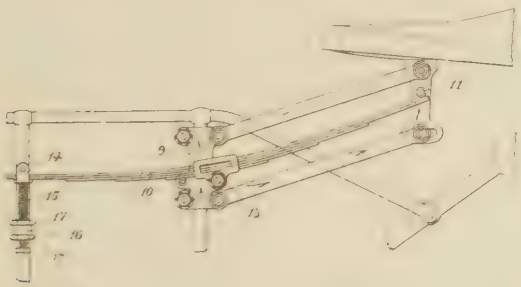
1. A rotatably mounted twister frame, a plurality of bobbins mounted for twisting rotation on said frame,

shafts rotatably mounted on said frame on opposite sides thereof, means comprising a frictional driving connection



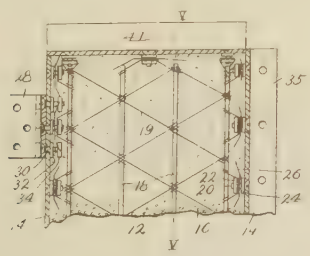
between said shafts and each of said bobbins, and means for driving said shafts.

1,416,942. CYCLE, MOTOR-CYCLE, AND ANALOGOUS SADDLE. BOULTBEE BROOKS, Birmingham, England, assignor to J. B. Brooks and Company, Limited, Birmingham, England. Filed Aug. 11, 1921. Serial No. 491,361. 5 Claims. (Cl. 208—100.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



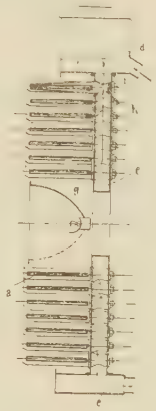
1. A cycle saddle comprising a saddle top, an attachment bracket, means for securing the attachment bracket to the carrier of the machine, depending members carried by the saddle top, parallel-motion links carried by the attachment bracket and connected to the depending members, and a leaf spring carried by the attachment bracket and supporting the saddle top.

1,416,943. FIREPROOF DOOR. WALTER C. BROUGHTON, Kansas City, Mo. Filed July 5, 1921. Serial No. 482,377. 4 Claims. (Cl. 72—97.)



1. A door structure consisting of a rectangular metallic frame, bolts spaced apart and extending into said frame, nuts threaded upon said bolts, wires connected to said nuts and draw taut thereby, and suitable material filling said frame.

1,416,944. RADIATOR CONSTRUCTION. JEAN BAPTISTE DOMINIQUE LÉON CHARDARD, Paris, France. Filed Sept. 20, 1919. Serial No. 325,205. 2 Claims. (Cl. 257—125.)



1. A radiator construction, comprising upper and lower headers; a series of detachable radiator elements arranged in nested parallel relation, each pair of adjoining elements being spaced apart to enable the passage of air therebetween; and a vertical collector embodying non-communicating upper and lower parts, one connected to the upper header and the other to the lower header; each radiator element communicating with both collector parts.

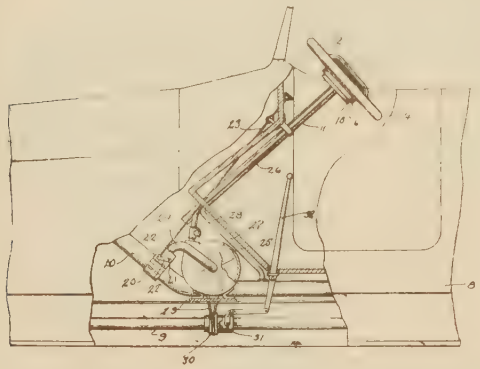
1,416,945. MOTOR-VEHICLE RADIATOR. JEAN BAPTISTE DOMINIQUE LÉON CHARDARD, Paris, France. Filed Mar. 24, 1920. Serial No. 368,294. 5 Claims. (Cl. 257—129.)

1. An automobile radiator unit comprising, in combination with the hot and cold water headers, a union rigidly attached to each header; a junction pipe connected to each union; a plurality of water-circulating elements connected at opposite ends to said junction pipes; a connecting rod extending through each junction pipe and the corresponding union for fastening the two together, each rod being rotatable from the exterior of the radiator unit, and means carried by each rod and operable by the rotation thereof for controlling communication between the junction pipes and the unions.

1,416,946. STEERING-WHEEL HEATER. LAWRENCE J. COBUS, Milwaukee, Wis. Filed July 9, 1920. Serial No. 394,976. 3 Claims. (Cl. 237—12.3.)

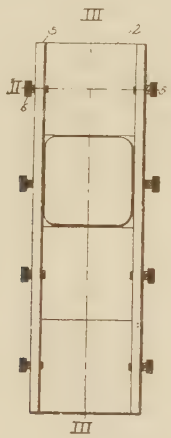
3. A device of the character described, comprising a controlling member, inlet and outlet pipes connected to

the controlling member, a fan having an intake and an outlet leading therefrom, a valve controlled passage connecting the fan intake with the exhaust of the



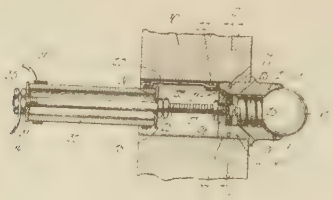
engine in connection with which the device is employed, and a tube connecting the fan outlet with said inlet pipe, whereby the engine exhaust gases will be rapidly circulated through the controlling member.

1,416,947. LENS-FORMING PROCESS. GILBERT S. DEY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Corporation of Massachusetts. Filed Jan. 3, 1920. Serial No. 349,292. 11 Claims. (Cl. 49—79.)



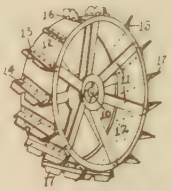
1. As an article of manufacture, a dropped toric ophthalmic lens blank having axis designations fused thereon by the heat of the dropping operation.

1,416,948. COMBINATION SOCKET AND RESISTANCE. ALFRED H. DONAHOE, Chicago, Ill., assignor to Associated Engineers Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 7, 1921. Serial No. 450,437. 13 Claims. (Cl. 219—49.)



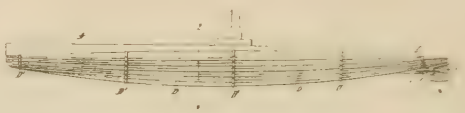
1. In a device of the character described a lamp socket, a rod-like member having one end thereof secured within said socket and forming the central contact thereof, and a resistance element mounted on and surrounding said rod-like member rearwardly of said socket.

1,416,949. TRACTOR WHEEL. EUGENE J. FARKAS, Detroit, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed Aug. 4, 1920. Serial No. 401,269. 2 Claims. (Cl. 301—44.)



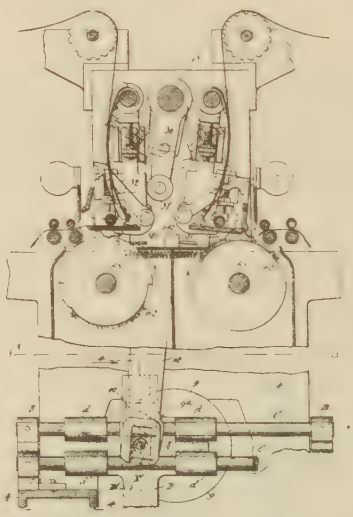
1. In a traction wheel, a lug attached to the periphery of the wheel, an auxiliary lug attached to said first lug having fastening ears and traction ears, the space between the fastening ears being of substantially the same size and shape as the traction ears.

1,416,950. SHIP PROTECTION. HAROLD J. W. FAY, Westboro, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Aug. 26, 1918. Serial No. 251,417. 3 Claims. (Cl. 114—15.)



1. Mechanism of the kind described comprising a vessel, a source of compressed air located thereon, and means whereby such compressed air may be delivered at points about said vessel to serve as an absodbent to compressional waves originating in said vessel, said means comprising a series of elastic tubes located at different levels about the vessel's sides and connections between said tubes and said compressed air source.

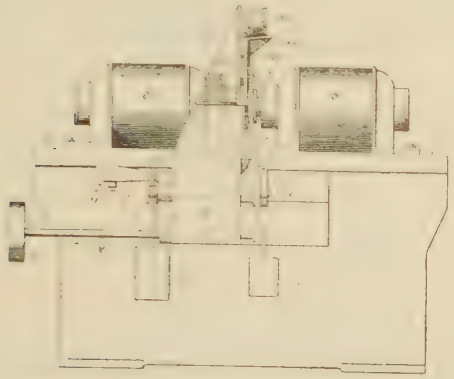
1,416,951. COMBING MACHINE. JOSEPH FOSSEL, Grafton, Mass., assignor to Alsatian Machine Works, Limited, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1921. Serial No. 437,423. 3 Claims. (Cl. 19—118.)



1. In a machine of the kind described, in combination with the nipper mechanisms, means for operating them alternately comprising a rock shaft, an arm mounted to

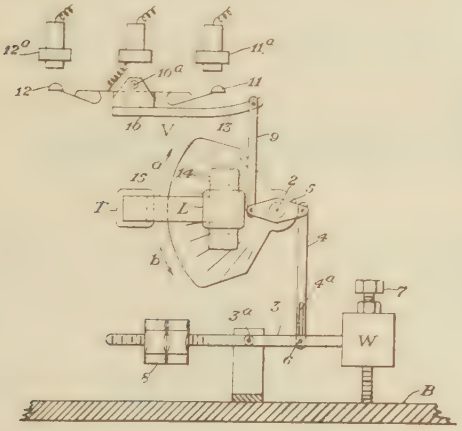
rock therewith and adapted to engage and operate said nipper mechanisms, and means for rocking said rock shaft comprising a crank disk, a crank pin thereon, a pendulum lever mounted on said rock shaft, and means connecting said crank pin and said pendulum lever whereby said lever will be given an oscillation equal in regard to time and amplitude in each direction about said rock shaft.

1,416,952. RING-GRINDING MACHINE. RALPH D. GARDNER, Beloit, Wis. Filed Dec. 9, 1920. Serial No. 429,314. 7 Claims. (Cl. 51—116.)



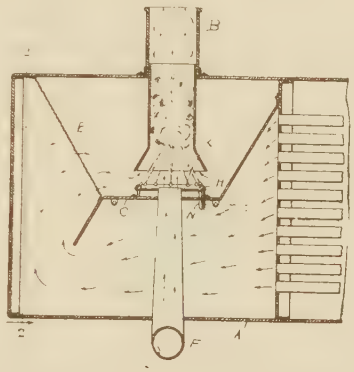
1. In a grinding machine, the combination of a pair of opposed grinding tools, a chute extending between said tools, and means for feeding objects along said chute by a step by step movement so that the objects are operated upon by the tools at one side of a vertical central plane extending therethrough and subsequently by the tools at the opposite side of said plane.

1,416,953. THREE-POSITION RELAY. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 26, 1919. Serial No. 306,807. 5 Claims. (Cl. 200—91.)



4. A relay comprising a member mounted to move in opposite directions from an intermediate position to two extreme positions, and biased by its own weight to move from one extreme position to the other extreme position, a counterweight, means interposed between said counterweight and said member for raising said counterweight when the member moves from its intermediate position to its said other extreme position, but for permitting movement of said member from its intermediate position to the first-mentioned extreme position without interference by said counterweight, the weight of said member being depended upon to return the member from the first-mentioned extreme position to the intermediate position, means for moving said member to its extreme positions in opposition to the forces biasing it to the intermediate position, and contacts controlled by said member.

1,416,954. NOISELESS BLOWER FOR LOCOMOTIVES. HUBERT E. HARRIS and LEE O. SWAIM, Atlanta, Ga., assignors of one-third to J. F. Pickard, Atlanta, Ga. Filed June 23, 1919. Serial No. 306,013. 2 Claims. (Cl. 162—4.)

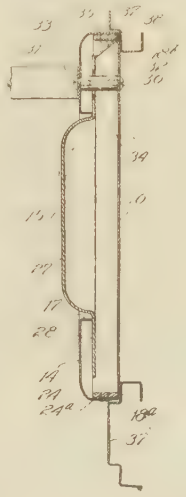


1. The combination with a locomotive smoke box of a stack leading therefrom and provided with a funnel at its inlet end and a jet ring the center of which lies in the extended axis of the stack, said jet ring provided with nozzles inclined toward the axis in position to deliver actuating fluid in directions parallel to the walls of the funnel and lying in a cone the apex of which is within the stack.

1,416,955. PROCESS FOR REFINING CRUDE CARBON. CHARLES FREDERICK CHRIS HERTING, Berkeley, Calif. Filed Oct. 4, 1921. Serial No. 505,277. 7 Claims. (Cl. 134—60.)

6. The process of refining crude lamp black which consists in boiling the same in an alkaline liquid, heating the product with a sulphuric acid until it changes to a thick paste and adding the paste to a saline solution.

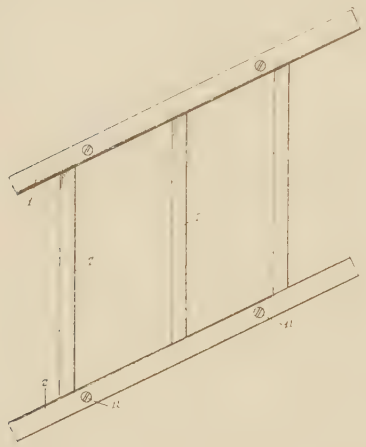
1,416,956. STOVE CONSTRUCTION. RUDOLPH HOFFMAN, Kankakee, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Sept. 13, 1920. Serial No. 409,771. 19 Claims. (Cl. 126—190.)



1. In a stove construction, a door comprising a frame having inner and outer inturned edge portions, the outer

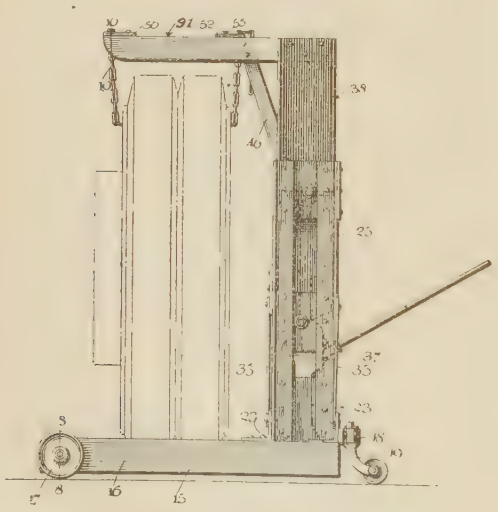
portions having associated therewith a rigid reinforcing bar, a panel engaging at its side edges with the inner edge portions of the frame, and a back plate mounted in spaced relation with reference to said panel.

1,416,957. BALUSTER-RAILING CONSTRUCTION. ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed May 26, 1921. Serial No. 472,787. 8 Claims. (Cl. 20—10.)



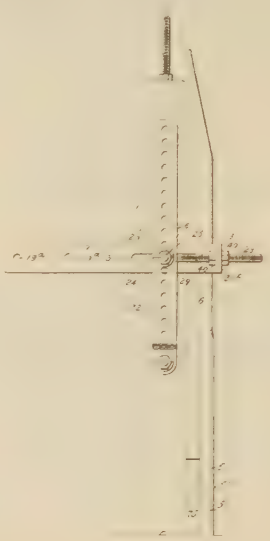
1. In a baluster railing construction, the combination of a plurality of spaced rails placed in superposed relation and provided with a plurality of spaced openings, a plurality of spaced parallel vertical bars, the ends of each bar passing through oppositely disposed openings in the rails, parallel strips secured on opposite sides of the bars, and means for securing the strips to the sides of the rails.

1,416,958. PORTABLE CRANE. EMMOR H. KELLEY and GEORGE A. STEWART, Jr., South Brownsville, Pa. Filed Feb. 5, 1921. Serial No. 442,854. 10 Claims. (Cl. 212—140.)



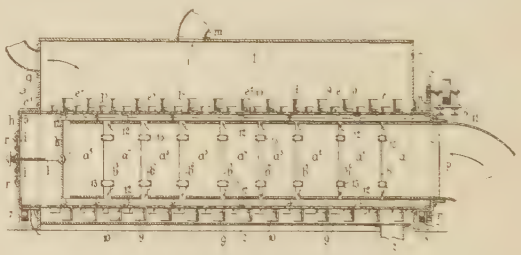
1. A portable crane comprising a standard, a lifting member slidably carried thereby and inclusive of a pair of spaced side bars, said lifting member being provided with a pair of angle bars connected to said side bars and having inwardly directed flanges constituting a contact element for the head of a jack.

1,416,959. CAM-HOLDER FRAME. MALCOLM R. KESTER, Chicago, Ill. Filed Mar. 25, 1921. Serial No. 455,427. 7 Claims. (Cl. 187—1.)



5. In an elevator installation of the character described, the combination with the car and bracket members movable with and projected laterally from the car: of a frame supported in vertical position on the bracket members, a pair of opposing cam sections, means for adjustably mounting the said sections along one face of the frame toward or from each other and a gap closing element whose opposite ends engage the corresponding cam surface ends of the separated cam sections.

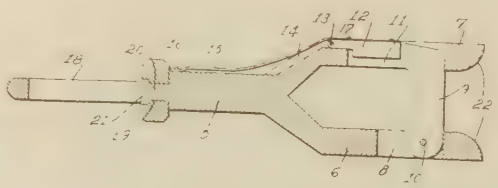
1,416,960. DRIER. KARL LADISCH, Meissen, Germany. Filed Aug. 15, 1921. Serial No. 492,582. 4 Claims. (Cl. 34—44.)



3. In a drier, a rotatable perforated heating drum, in combination with a concentric distributer tube therein spaced from said drum, said tube composed of a number of spaced sections, and means to adjustably secure the sections together to vary the width of said spaces

---

1,416,961. SAFETY HOOK. LEONARD LOOP, Tulsa, Okla. Filed Dec. 22, 1921. Serial No. 524,265. 1 Claim. (Cl. 24—241.)



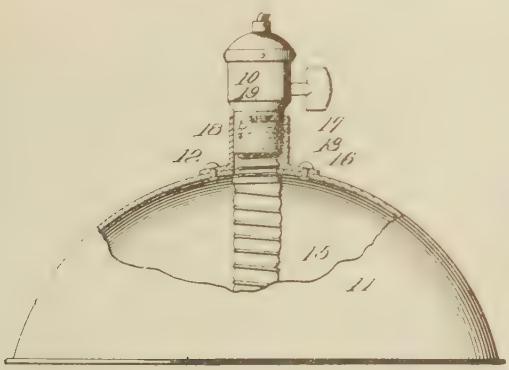
In a hook, a body portion including opposed arms, a latch member supported by one of the arms, the opposite

arm having an opening to accommodate the free end of the latch member, a locking arm adapted to normally lie in the path of travel of the latch member to restrict movement thereof, a spring member having one end secured to the locking arm and having its opposite end secured to the body portion, the intermediate portion of the spring lying in spaced relation with the body portion to permit the intermediate portion of the spring to move downwardly, and rock the locking arm upwardly and release the latch member.

1,416,962. SOAP HOLDER. FRED MEEKS, Los Angeles, Calif. Filed Nov. 23, 1921. Serial No. 517,294. 4 Claims. (Cl. 45—28.)

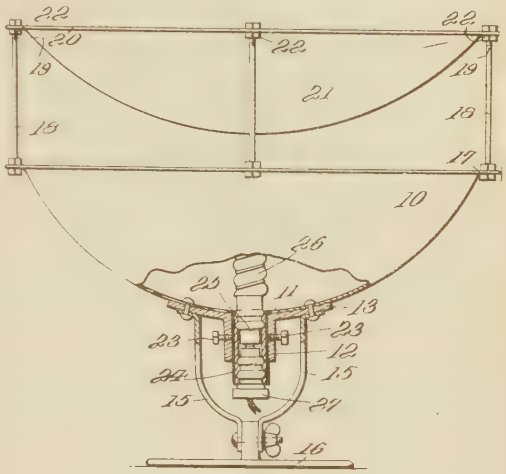
3. A combination of a cake of soap, and an endless piece of flexible tape passing through the cake of soap and extending beyond the same, those portions of the piece of tape which are extended beyond the ends of the soap being stitched to provide loops adapted for the reception of the fingers.

1,416,963. ELECTRICAL HEATER. HENRY H. MORETON, Venice, Calif. Filed July 30, 1920. Serial No. 399,981. 14 Claims. (Cl. 219—34.)



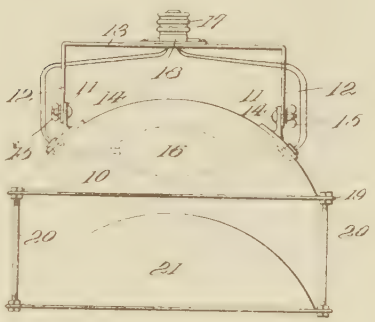
1. A heater of the character described comprising a parabolic reflector, a heating unit, and means whereby both may be connected to and supported by a standard lamp socket.

1,416,964. ELECTRICAL HEATER. HENRY H. MORETON, Venice, Calif. Filed July 30, 1920. Serial No. 399,982. 21 Claims. (Cl. 219—34.)



1. A heater of the character described comprising a main heat reflector, a heating unit co-operating therewith, and a supplemental heat reflector supported in juxtaposition with said main reflector.

1,416,965. ELECTRICAL HEATER. HENRY H. MORETON, Venice, Calif. Filed July 30, 1920. Serial No. 399,983. 12 Claims. (Cl. 219—34.)

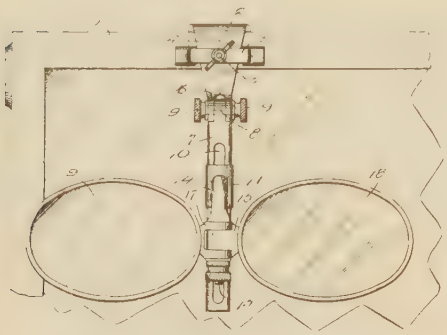


1. A heater of the character described comprising a reflector unit, a heating unit co-operating therewith, means for connecting said heating unit with a source of electrical energy, and means for providing rotative and angular adjustments of the reflector unit relative to said connecting means.

1,416,966. SAFETY DRIVING MIRROR FOR AUTOMOBILES. EDGAR LESLEY MORRIS, Charlotte, N. C. Filed Dec. 17, 1921. Serial No. 523,048. 3 Claims. (Cl. 45—97.)

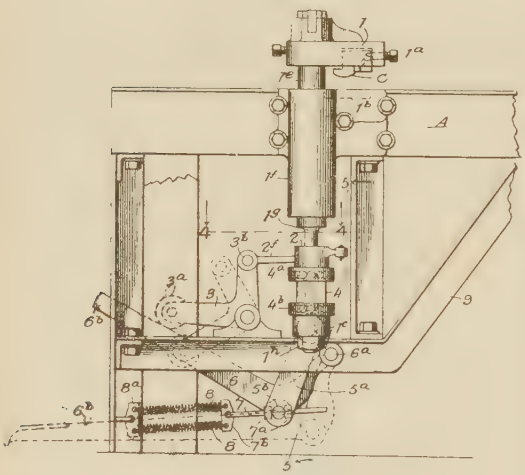
3. In a device of the class described, the combination of a hook engageable over the top of a windshield, said hook having a right angularly bent portion, means for detachably clamping the hook to the top of the windshield, a depending bar adjustably secured to the angu-

larly bent portion of the hook, mirror supporting means vertically adjustable on the depending bar, a plurality



of mirrors laterally swingable from said means, and means for fastening the mirrors in the desired adjusted position.

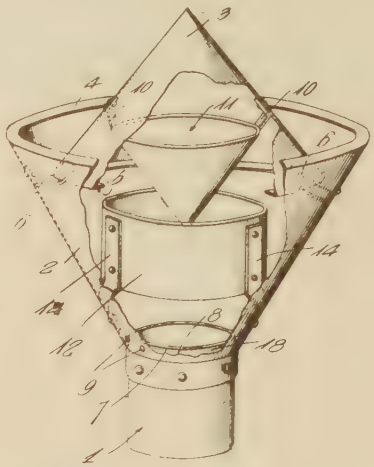
1,416,967. STAMPING ATTACHMENT FOR HIDE SPLITTERS. JEWETT FOWLER NEILEY, Endicott, N. Y. Filed July 27, 1921. Serial No. 487,997. 22 Claims. (Cl. 101—3.)



1. In a machine of the character specified a movable member; means to depress said member, spring means for normally holding the member in raised position; and means for turning the member in one direction as it rises and in the opposite direction as it lowers substantially as described.

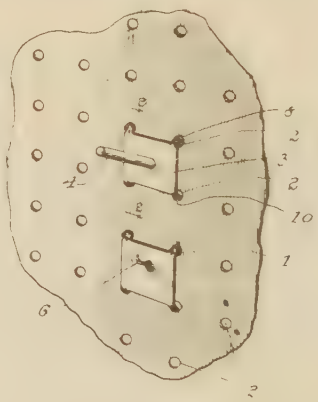
1,416,968. SPARK ARRESTER. WILLIAM BUCKRIDGE NUTTING, Portland, Oreg. Filed Nov. 3, 1921. Serial No. 512,556. 3 Claims. (Cl. 183—103.)

1. A spark arrester including superposed cones, the upper one of which is comparatively larger and has its apex disposed upwardly and the lower one of which is considerably smaller and has its apex disposed downwardly with its base portion arranged within the corresponding portion of the first named cone and with its apex extending below the base of said first named cone, the base portion of said inverted cone being spaced from the inner face of the large cone, whereby the smaller cone



is permitted to act as a deflector and as means for preventing direct contact of the hot particles with the upper and apex portion of the large cone.

1,416,969. DETACHABLE SUPPORT. JOHN B. O'CONNOR, Aurora, Ill., assignor to Lyon Metallic Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Sept. 20, 1920. Serial No. 411,438. 1 Claim. (Cl. 248—22.)

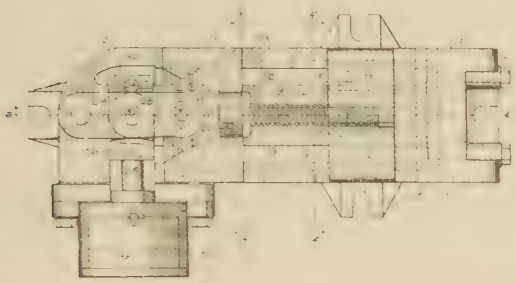


The combination with a sheet metal upright provided with spaced holes, of a substantially rectangular sheet metal base plate having a pair of spaced tabs extending from both its upper and lower edges, said tabs being bent to be engageable respectively through selected holes to detachably interlock with and support the base plate from the upright, the upper pair of tabs extending backward and upward and the lower pair of tabs extending backward and downward with respect to the base plate, and a supporting member extending outwardly from the base plate, said base plate being disposed in parallelism to the upright when in its supported position.

1,416,970. MACHINE VISE. JOHN A. OLSON, Chicago, Ill., assignor to The S-P Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 29, 1919. Serial No. 285,992. 4 Claims. (90—60.)

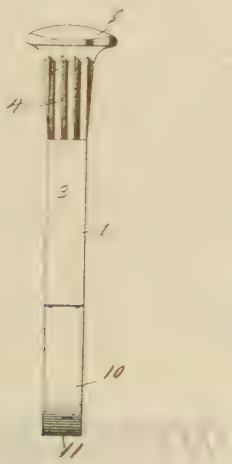
1. In a vise, the combination of a support having a fixed jaw extending upwardly therefrom, a slideway in said support, a slidable jaw mounted in said slideway, a

slide mounted on said support, a screw rotatably secured to said slide and engaging with a threaded hole in said



slidable jaw, a toggle connected with said slide for actuating the same, and means for actuating the toggle.

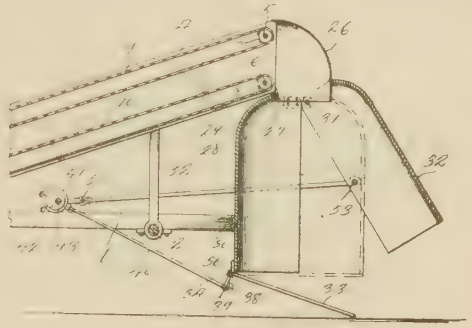
1,416,971. RAILROAD SPIKE. ROBERT E. OSBORNE, Hamburg, N. Y. Filed Oct. 6, 1921. Serial No. 505,816. 2 Claims. (Cl. 85—19.)



1. A railroad spike comprising a shank and a head carried by said shank, vertically disposed elongated teeth on the inner face of said shank and disposed adjacent the head thereof, the outer face of said shank being provided with downwardly and inwardly extending bevelled surfaces, thereby forming horizontally disposed shoulders, the upper inclined surface having its upper end extending outwardly beyond vertical alignment with the upper ends of the inclined surfaces, the vertically disposed teeth inclined downwardly and inwardly, the lower end of said spike being provided with a curved surface which curves downwardly and outwardly from the inner face of the spike and forms means for tilting the spike during its downward movement into a tie.

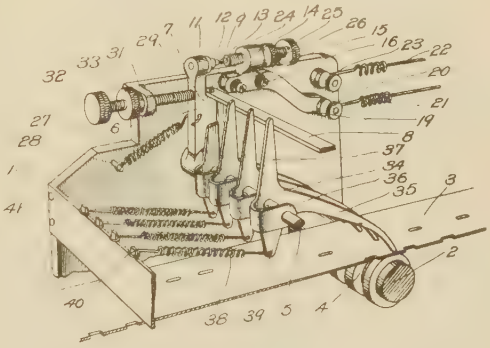
1,416,972. GATHERING AND COCKING MACHINE. LOUIS PAGEL, Forestville, Wis. Filed Oct. 20, 1920. Serial No. 418,300. 2 Claims. (Cl. 56—346.)

2. The combination with a cocking device comprising a receptacle having a rearwardly movable pivoted section and a downwardly movable bottom closure pivoted to the bottom of the receptacle and provided with a downwardly extending operating arm, of means for simultaneously moving rearwardly the rearwardly movable portion of the receptacle and the downwardly movable bottom, said means comprising a rotatable shaft having cranks, connecting rods connecting said cranks to the rearwardly



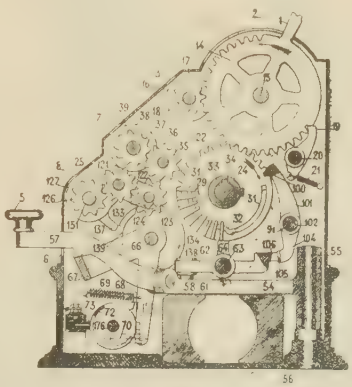
movable member, an eccentric carried by the shaft and having an eccentric rod connection with the downwardly extending arm of the bottom.

1,416,973. CIRCUIT MAKING AND BREAKING DEVICE. EDWIN H. PIERSEN, Topeka, Kans. Filed Oct. 2, 1919. Serial No. 328,051. 7 Claims. (Cl. 200—46.)



1. In combination with relatively fixed and movable contact members, a record member having alternating portions for the support and release of an actuator, a yieldingly urged actuator supported by the record member and operable on the movable contact member when released, and adjustable means restraining movement of the movable contact member.

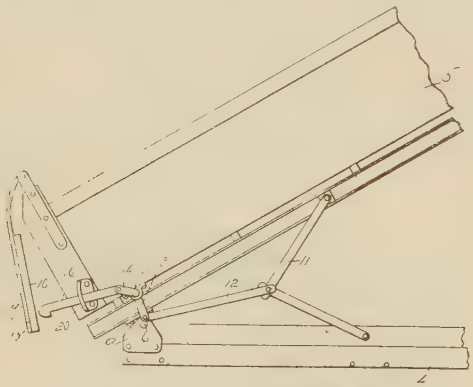
1,416,974. CALCULATING MACHINE. ROBERTO TAEGGI PISCICELLI, Paris, France. Filed Apr. 25, 1912. Serial No. 693,047. 18 Claims. (Cl. 235—62.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A multiplying machine operating by repeated additions comprising wheels having handles serving to set up

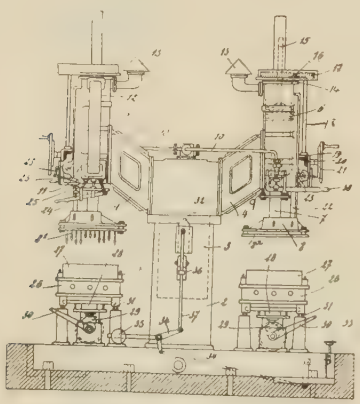
the multiplicand and placed in fixed planes, product indicator wheels also placed in fixed planes, repeating drums, an electric motor, a multiplication handle movable in two cross-wire directions, and electric contacts actuated by the said handle when the latter is moved in one of the two directions and adapted to supply current to the electric motor, the repeating drums being adapted to be moved in the direction of their axis by the handle when the latter is moved in the second direction so that they are brought into cooperation either with the wheels having handles or with the product indicator wheels, and the motor being adapted to revolve or turn the repeating drums.

1,416,975. DUMP WAGON. JAMES PULLAR, Hartford, Conn. Filed Sept. 10, 1920. Serial No. 409,305. 3 Claims. (Cl. 298—23.)



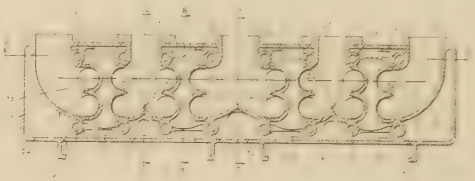
1. A frame, a wagon body pivotally mounted on said frame, a tail-board pivotally connected to said body, toggle levers pivotally connected to the frame and body, a longitudinally movable and vertically swinging latch for holding the tail-board in its closed position, and a connection between said levers and said latch for operating the latter by the tipping movement of the body, which tipping movement operates said toggle levers.

1,416,976. MOLDING MACHINE. NICOLAS RAPPEZ, Haine St. Pierre, Belgium. Filed Feb. 14, 1919. Serial No. 277,086. 17 Claims. (Cl. 22—41.)



1. In a molding machine, in combination, a plurality of driving cylinders, a central column, a central pivot supported in said column, a support rotating on said central pivot, arms projecting from said support and carrying the cylinders arranged in a circle around the central pivot, a piston in each cylinder, means for controlling the stroke of each piston, a rod for each piston, ramming members supported by certain of these piston-rods, levelling members supported by others of these piston-rods, a plurality of operating tables cooperating with the driving-cylinders, the said tables being arranged in a circle around the central column, a wedging member mounted on the central column, notches provided in the rotating support and in which the wedging member is engaged under the action of air pressure and means for releasing the wedging members from said notches.

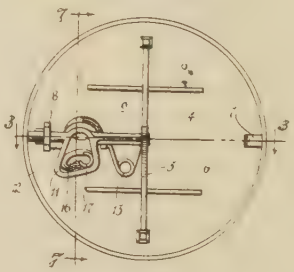
1,416,977. INTERNAL-COMBUSTION ENGINE. ROBERT M. ROOF, Anderson, Ind. Filed June 21, 1920. Serial No. 390,449. 6 Claims. (Cl. 123—59.)



2. A cylinder head construction for a four cylinder internal combustion engine, including an intake manifold and an exhaust manifold upon the same side, comprising a pair of separated chambers for each cylinder, one chamber being adapted to discharge gases from the cylinder and the other of said pair of chambers being adapted to supply fuel to said cylinder, the six intermediate chambers being grouped in pairs, each pair communicating with each other within the cylinder head, said cylinder head being provided with but five openings upon the same side, three being adapted to be connected to one manifold and the other two to the other manifold, said five openings being positioned in staggered relation, the end openings each communicating with one of said chambers, and each of the intermediate openings communicating with one of said pairs of communicating chambers.

1,416,978. LOCK FOR METER BOXES. EDWARD [illegible] SON, Dallas, Tex. Filed [illegible] No. 440,892. 1 Claim. (Cl. 137—13.)

WITHDRAWN

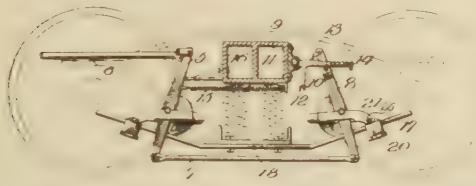


In a lock for meter boxes, in combination with the cover, comprising a bolt, a main rib on the underside of the cover, a lug opposite the rib, an aperture in the lug and rib to slidably receive the bolt, said bolt having a loop-like formation at approximately its center with an opening to receive a key, a key hole registering with said opening in the loop-like formation, a spring having one end seated in the rib and its opposite end attached to said bolt, and a projection adjacent the key hole on the underside of the cover to prevent movement of the bolt without the use of the key, and means on the cover to prevent rotation of the bolt.

1,416,979. BRAKE OR CLUTCH LINING. JOSEPH H. SARIS, Beloit, Wis. Filed Aug. 16, 1920, Serial No. 403,929. Renewed Oct. 28, 1921. Serial No. 511,108. 12 Claims. (Cl. 188—259.)

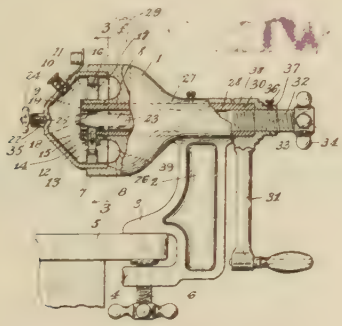
1. A brake or clutch lining, comprising a composition sheet or strip including fibrous material, granulated cork, and a heat and oil resisting binder.

1,416,980. AUTOMATIC SLACK ADJUSTER. NORMAN J. SAUVAGE, Flushing, N. Y. Filed Jan. 12, 1916. Serial No. 71,673. 12 Claims. (Cl. 188—199.)



12. In an automatic slack adjuster, in combination, a car bolster and spring plank, a member secured to said spring plank and disposed longitudinally of the truck, live and dead levers at opposite sides of the bolster, means for returning the levers to normal position, a push rod connecting the lower ends of the levers and frictional take-up devices associated with each lever and coacting with the member secured to the spring plank.

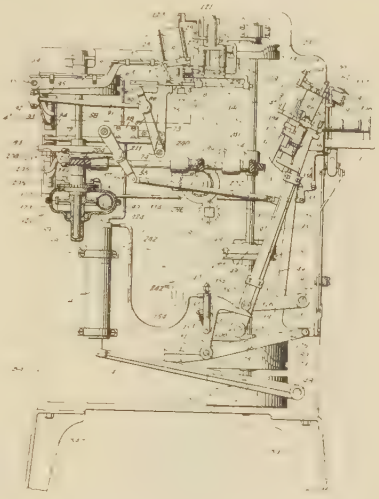
1,416,981. SURFACING MACHINE FOR COMMUTATORS. LEO A. SCHAUER and ERNEST C. MYERS, Pittsburgh, Pa. Filed June 7, 1920. Serial No. 387,131. 7 Claims. (Cl. 90—12.)



1. In a surfacing machine for commutators, a chuck, a revoluble spindle mounted therein, a cutting tool on the end of the spindle, and means for adjusting the intensity of pressure exerted by the cutting tool when the revoluble spindle is operated.

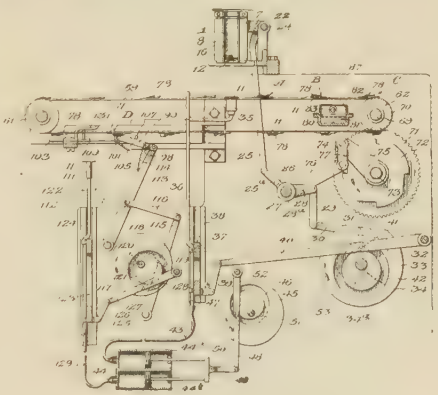
1,416,982. CIGAR-BANDING MACHINE. REINHOLD D. SCHOENWETTER, Baltimore, Md., assignor, by mesne assignments, to The National Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Aug. 16, 1916. Serial No. 115,200. 47 Claims. (Cl. 131—61.)

18. In a banding machine, a cradle having holding means comprising movable jaws, mechanism to deposit the article to be banded between said jaws, mechanism to automatically open said jaws to receive the article and then cause them to close thereon, band applying mechanism, mechanism to move said cradle into operative relation with said depositing mechanism and band applying



mechanism alternately, and means to open said jaws of said cradle after a band has been applied to a cigar and before the cradle comes into position to receive a cigar from the depositor.

1,416,983. CIGAR-BANDING MACHINE. REINHOLD D. SCHOENWETTER, Baltimore, Md., assignor, by mesne assignments, to The National Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed May 17, 1917. Serial No. 169,248. 9 Claims. (Cl. 131—61.)

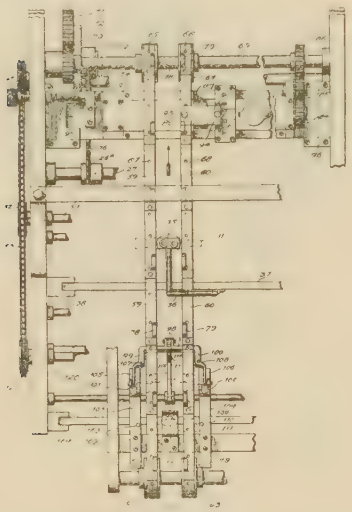


9. The combination with a magazine adapted to contain a stack of cigar bands, of a belt conveyer, spring clips carried by said belt conveyor for holding said bands, means for delivering the bands from the magazine to the conveyor, means for subsequently removing the bands from the clips and for positioning same on a plate and pneumatic means for removing the bands thus positioned.

1,416,984. COATING MACHINE. REINHOLD D. SCHOENWETTER, Baltimore, Md., assignor, by mesne assignments, to The National Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Original application filed May 17, 1917, Serial No. 169,248. Divided and this application filed July 2, 1919. Serial No. 308,134. 14 Claims. (Cl. 91—51.)

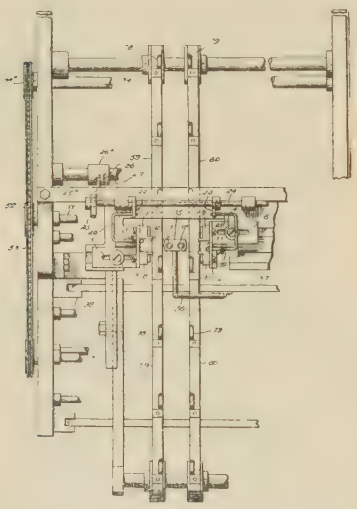
1. The combination with a tank, of a pair of rollers one of which is adapted to extend into liquid in said tank, and

the other constructed of yieldable material and pressed upon said first-named roller, and a belt conveyor having



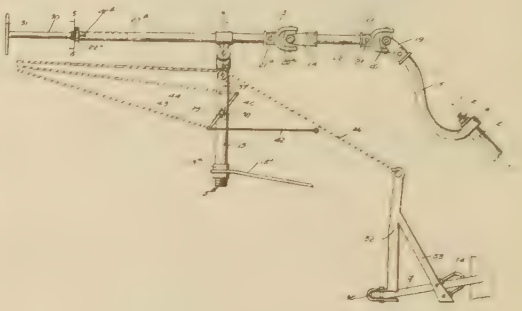
band holding means adapted to pass a portion of said bands between said rollers.

1,416,985. SHEET-FEEDING MACHINE. REINHOLD D. SCHOENWETTER, Baltimore, Md., assignor, by mesne assignments, to The National Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Original application filed May 17, 1917, Serial No. 169,248. Divided and this application filed July 23, 1919. Serial No. 312,704. 19 Claims. (Cl. 271—31.)



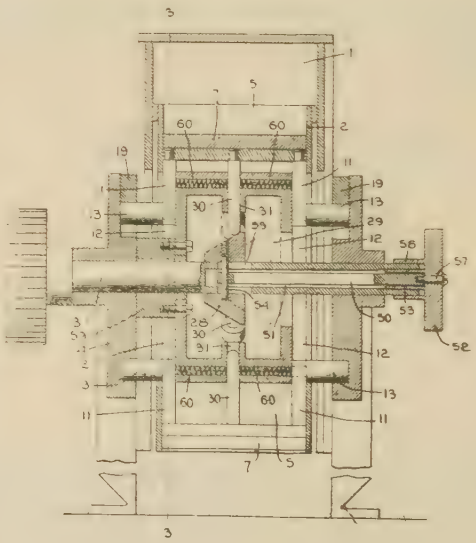
1. The combination with a magazine adapted to contain a stack of superposed cigar bands, of means acting endwise on said bands for bulging downward one or more bands adjacent to the bottom of the stack to separate them from those above and for lifting the latter.

1,416,986. STEERING DEVICE. EDWARD JOHN SELLA, Jewell, Iowa. Filed Mar. 25, 1919. Serial No. 285,118. 5 Claims. (Cl. 180—77.)



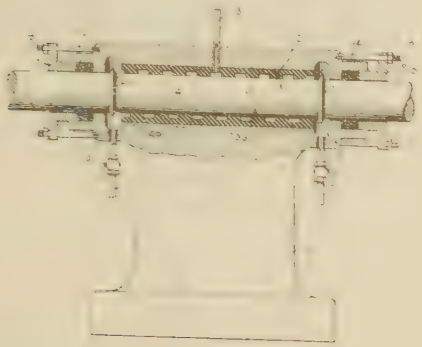
1. In a device of the class described, an upright post, a bearing supported thereon for adjustment in one plane, a steering rod in said bearing, means for connecting said steering rod with the steering post of a self-propelled vehicle, said means including a universal joint device, a shaft mounted on said post, arms on said shaft, means for moving said arms, and a throttle control rod connected with one of said arms.

1,416,987. DIVIDER. FRANK H. SHARPE, Dorchester, Mass. Filed Apr. 30, 1921. Serial No. 465,823. 4 Claims. (Cl. 107—15.)



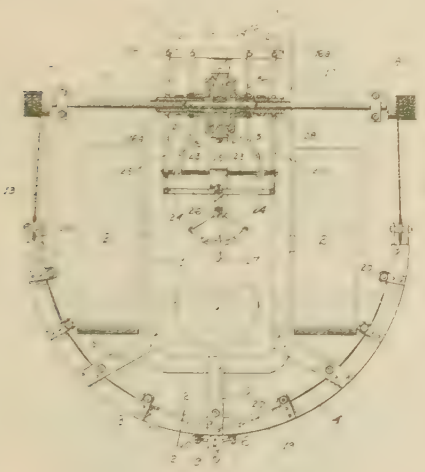
1. In a divider, the combination with a rotary divider element having a plurality of pockets, each provided with a movable bottom, of a rotatable shaft on which said dividing element is carried, means to move the pocket bottoms inwardly as the dividing member rotates, and a cone shaped controlling member adjustable longitudinally of the shaft and determining the extent to which the pocket bottoms can move inwardly.

1,416,988. BEARING. CHARLES FREDERIC SHERWOOD, Los Angeles, Calif. Filed Feb. 24, 1920. Serial No. 360,702. 10 Claims. (Cl. 64—10.)



4. In a bearing, a rubber member adapted to support a journal and a recess in said member for lubricant.

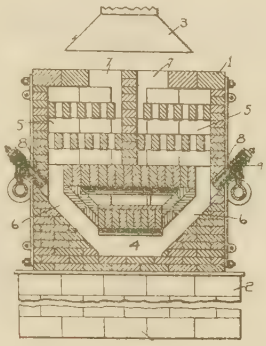
1,416,989. IMPLEMENT-STEERING ATTACHMENT FOR TRACTORS. ANTONE J. SILVA, Milton, Calif. Filed May 10, 1921. Serial No. 468,388. 10 Claims. (Cl. 180—14.)



1. An implement steering attachment for tractors including a horizontal track fixed on the tractor, a carriage supported and guided by the track and adapted for connection to the tongue of a drawn implement, a power driven shaft, a shaft on each side thereof, and normally disconnected therefrom, means for operatively connecting either at a time of said shafts with the driven shaft, a drum on each shaft, and cables wound on said drums and leading to the opposite ends of the carriage.

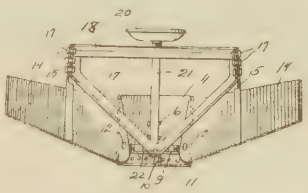
1,416,990. FURNACE. HARRY F. SMITH, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 4, 1917. Serial No. 205,383. 5 Claims. (Cl. 158—7.5.)

1. In a regenerative furnace, a working chamber, air regenerators, valveless passages connecting said regenerators to the atmosphere, passages connecting said regenerators to the working chamber, nozzles for passing gas



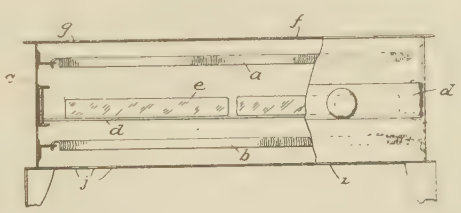
along said passages, and means for directing the flow of gas through the nozzles.

1,416,991. DITCHING DEVICE. JOHN C. STARLING, Lethbridge, Alberta, Canada. Filed Mar. 24, 1920. Serial No. 368,434. 3 Claims. (Cl. 97—12.)



2. A ditching device comprising a plow portion, earth-deflecting wings pivotally connected to said plow portion and extending in rearwardly diverging relation therefrom, curved standards formed with a series of perforations and rigidly secured to said wings and extending above the same, a longitudinal runner extending rearwardly from said plow portion, a substantially triangular frame carried by said runner and provided with a series of perforations adapted to register with said series of wing perforations, and bolts adapted for securing the members in adjusted relation.

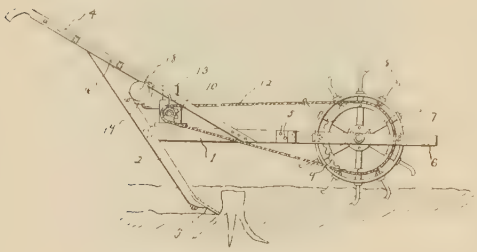
1,416,992. ELECTRIC TOASTER. PAUL K. STEHMAN, Elizabethtown, Pa., assignor to Earl M. Miller, Elizabethtown, Pa. Filed Feb. 3, 1921. Serial No. 442,016. 9 Claims. (Cl. 219—19.)



1. An electric toaster comprising a body the top and bottom of which are perforated, the aggregate area of the

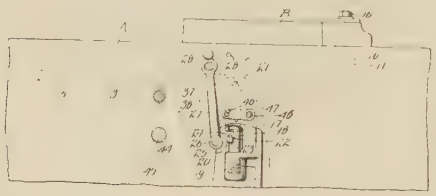
perforations in the bottom being greater than that of the perforations in the top, and a resistance element positioned within the body.

1,416,993. POWER-DRIVEN CULTIVATOR. THOMAS S. STEPHENS, Griffin, Ga. Filed July 8, 1920. Serial No. 394,856. 1 Claim. (Cl. 180—19.)



A tractor comprising a substantially horizontally disposed frame, said frame comprising a rearwardly extending beam, rearwardly and upwardly extending handle members carried by said beam, a rotatably mounted tractor wheel, the forward end of said beam being provided with a looped member in the same plane as the beam and having parallel sides, a tractor wheel disposed in said looped member and having bearings in the parallel sides thereof, said tractor wheel being provided with ground engaging elements in staggered relation to each other, an engine carried by the rear end of the plow beam and disposed between the handle members and provided with a drive shaft, a sprocket wheel rotatably mounted on the engine drive shaft, a sprocket carried by one side of tractor wheel and disposed within the looped member, a chain extending around said sprockets, a depression in one side of the sprocket carried by the engine drive shaft, a slidable clutch member feathered on the engine drive shaft, means whereby said clutch member may be moved into and out of engagement with the depression in the sprocket; said slidable clutch member allowing running of the engine by slipping of the clutch members.

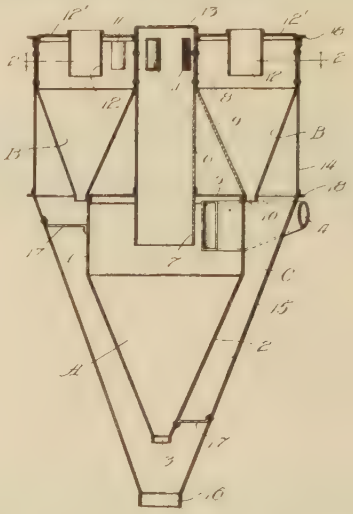
1,416,994. POSITIONING MEANS FOR GRINDING-WHEEL CARRIAGES. PAUL STONER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1920. Serial No. 424,904. 17 Claims. (Cl. 51—166.)



1. In a grinding machine, a base, a carriage thereon, means acting to move the carriage and spring exerted means acting alternately therewith to lock it in any one of a plurality of predetermined positions.

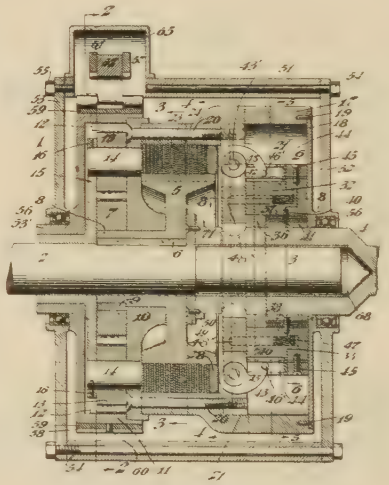
1,416,995. DUST COLLECTOR. EDMUND H. STROUD, Chicago, Ill. Filed June 16, 1919. Serial No. 304,446. 8 Claims. (Cl. 183—34.)

1. In combination, a primary dust collecting chamber and a plurality of secondary dust collecting chambers, said chambers having dust outlets, peripheral air inlets and axial air outlets, means for conducting the air passing from said primary chamber to the air inlets of said secondary chambers, and a casing enclosing said chambers



for receiving material therefrom, said casing having a conical lower portion provided with a common dust outlet at its lower end.

1,416,996. AUTOMATIC CHANGE-SPEED MECHANISM. MATTHEW STUCATUR, Philadelphia, Pa. Filed June 10, 1921. Serial No. 476,369. 32 Claims. (Cl. 74—97.)

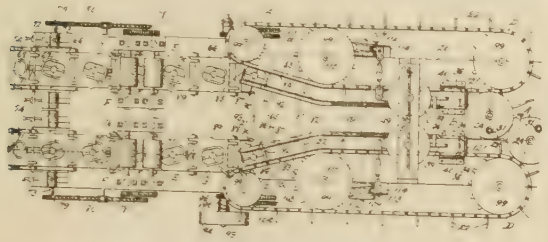


1. In a device of the class described, a driving shaft, a driven shaft, a driving gear and clutch element carried by said driving shaft, a planet carrier having a co-operating clutch element carried by said driven shaft, planet pinions on said carrier meshing with said driving gear, an orbit gear with which said planet pinons also mesh and centrifugal means on said driven shaft for effecting the automatic actuation of one of said clutch elements with respect to the other clutch element.

1,416,997. MACHINE FOR FILLING AND CLOSING CANS. WILLIAM E. TAYLOR, East Orange, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Original application filed Nov. 17, 1911, Serial No. 660,814. Divided and this application filed Apr. 18, 1916. Serial No. 91,914. 32 Claims. (Cl. 226—75.)

1. In a machine of the class described, the combination with an oil measuring and feeding device, of flange tuck-

ing mechanism and fusing means, substantially as specified, and a can conveyer having means for supporting the flanges

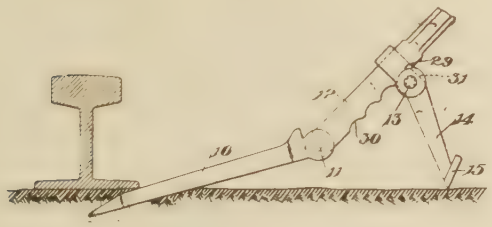


of the cans against downward pressure, and by which the cans are conveyed to be operated on by said instrumentalities.

1,416,998. SEAM-MARGIN-OPENING DEVICE FOR SEWING MACHINES. CARLYLE W. THOMAS and PHILIP W. SOMERS, Bridgeport, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed July 28, 1920. Serial No. 399,535. 9 Claims. (Cl. 112—147.)

1. In a sewing machine, in combination, stitch-forming mechanism, feeding mechanism, and a plurality of folding scrolls concluding their folding action rearward of the point of seam formation to completely fold back a plurality of united margins of superposed plies of material in the operation of uniting the plies by stitches.

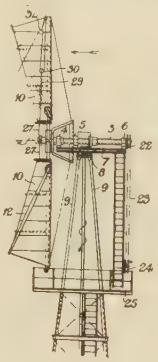
1,416,999. TOOL FOR ALIGNING TRACKS. MITSU UNO, San Francisco, Calif. Filed Apr. 5, 1921. Serial No. 458,716. 6 Claims. (Cl. 254—44.)



1. In an aligning device for railway tracks a pinch bar to engage beneath the rail at one end, a lever pivoted directly to the opposite end of the pinch bar and a swinging fulcrum support for the lever intermediate the ends of the latter, said parts being initially set so that when the lever is moved downwardly at its outer end the pinch bar is raised and simultaneously thrust forward.

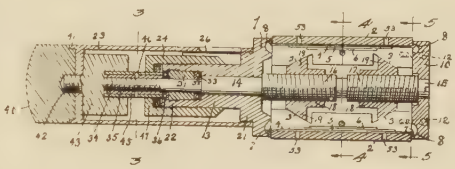
1,417,000. WINDMILL. HENRIC CHRISTIAN VOGT, Copenhagen, Denmark, WILLIAM VINCENT BOBY, London, and SIDNEY DAVID LANCASTER, Barkingside, England. Filed Mar. 9, 1922. Serial No. 542,228. 6 Claims. (Cl. 170—62.)

1. In a windmill, in combination, a hollow sleeve forming the hub of the mill, masts secured to said sleeve, flexible sails secured to said masts, a sprit arranged diagonally across each sail, a plurality of spars located



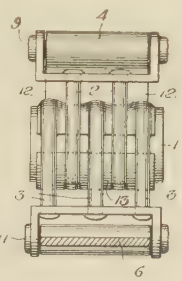
transversely on each sail, and means for regulating the angle of the sails to the direction of the wind.

1,417,001. GAUGE. HARRY VOLIS, Detroit, Mich. Filed Mar. 14, 1921. Serial No. 452,122. 6 Claims. (Cl. 33—178.)



1. In a gauge, the combination of a hollow cylindrical body having a radial slot, a shaft rotatably mounted in the body and having two groups of threads, heads threaded on said threaded portions and having projections inclined to the axis of the shaft registering with said radial slot, a blade mounted in the slot and having inclined surfaces engaging the inclined projections on the heads whereby the blade is forced outwardly when the shaft is turned in one direction, and a spring to force the blade inwardly when the heads are moved in the opposite direction.

1,417,002. SHOCK ABSORBER. WILLIAM L. WALKER, New York, N. Y. Filed Mar. 7, 1917. Serial No. 153,143. 7 Claims. (Cl. 267—30.)



7. A shock-absorber for vehicles and the like comprising a hollow cylindrical cushion of resilient composition and rings surrounding said cushion at intervals, alternate rings being adapted to connect with parts of the vehicle on opposite sides of said cushion respectively.

1,417,003. MOTOR. LEIGH WATKINS, New Orleans, La. Original application filed May 12, 1920, Serial No. 380,568. Divided and this application filed Mar. 18, 1921. Serial No. 453,424. 6 Claims. (Cl. 121—88.)

1. A device of the character described, comprising a casing, a shaft supported concentrically in the casing, a rotor having blades thereon mounted on the shaft, an eccentrically mounted cylinder in the casing through which said blades project, pins in the cylinder, and said casing having grooves therein receiving the ends of the pins.

1,417,004. OIL LAMP. WALTER WILLIAM WEBB, London, England. Filed Nov. 23, 1921. Serial No. 517,388. 6 Claims. (Cl. 67—35.)

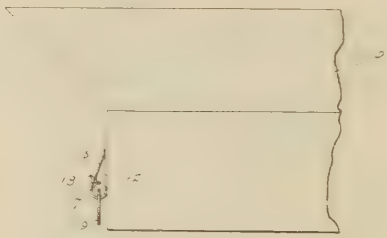
6. Oil lamp in the form of a candle, comprising a tubular reservoir, a spring spigot at the lower closed end of the tubular reservoir, a packing of absorbent material in said tubular reservoir, a wick holder, a wick therein, a perforated positioning component for said wick holder, and a removable centrally perforated cap at the upper end of the tubular reservoir, the wick holder with its wick passing through the perforated cap, substantially as described.

1,417,005. CINEMATOGRAPHIC APPARATUS. WILLIAM BURTON WESCOTT, Wellesley Hills, Mass., assignor to Kalmus, Comstock & Wescott, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed June 25, 1917. Serial No. 176,652. 23 Claims. (Cl. 88—19.3.)

1. In cinematographic apparatus having a light path therethrough, the combination of a shutter in said light path, means for actuating said shutter recurrently to shutter said path, means operating in synchronism with said first means for gradually varying the shuttering

effect of the shutter while in operation, and automatic means whereby said second means is started when said first means is started.

1,417,006. CHECK HOLDER FOR MINE CARS. JAMES EDWARD WHEWELL and HARLEY I. YODER, Hollsopple, Pa. Filed Dec. 14, 1920. Serial No. 430,811. 1 Claim. (Cl. 40—15.)



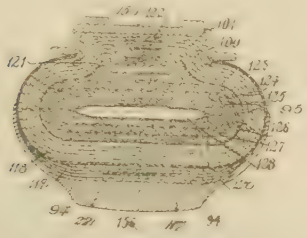
A check holder for mine cars comprising a hanger formed of a single strip of metal and cut to provide a base, a relatively narrow extension projecting from one end of the base and being bent to provide a hook for said member, a retaining arm formed by the cut out portion of the base and the free end of the arm being curved inwardly while the free end of the hook is curved outwardly.

1,417,007. PROCESS OF MAKING ELECTRIC STORAGE BATTERIES. HORACE M. WILLIAMS, Providence, R. I., assignor to Electrol Manufacturing Company, a Corporation of Rhode Island. Filed Aug. 19, 1920. Serial No. 404,667. 2 Claims. (Cl. 204—29.)

2. The herein described method of forming electric storage batteries with a solid filling surrounding lead plates and holding a sulphuric acid electrolyte in suspension, which comprises the following steps: first, charging and discharging the plates in a free solution of sulphuric acid of original standard battery specific gravity until the acid in the pores of the plates has a specific gravity approximately 1.200: second, removing said free electrolyte and substituting a mixture by volume of liquid silicate of soda, one part, water, three parts, and sulphuric acid of 1.400 specific gravity, five parts, whereby after chemical combination of the silicate of soda with a portion of the acid to form a voluminous mass of

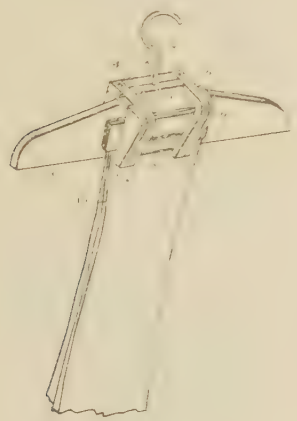
colloidal silica of gelatinous consistency, there will remain in suspension in said mass a residual content of sulphuric acid of approximately 1.200 specific gravity, as the active electrolyte for the battery so produced.

1,417,008. WHEEL EQUIPMENT AND METHOD OF CONSTRUCTING THE SAME. JOSEPH S. WILLIAMS, Riverton, N. J. Filed Apr. 15, 1913. Serial No. 761,193. 4 Claims. (Cl. 152—1.)



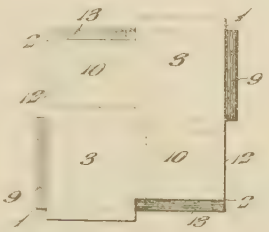
3. A resilient wheel equipment comprising an inner annular support, a tension belt having its outer portion transversely disposed substantially on transverse section lines parallel with the major transverse axis of the belt, with curvatures at the sides of approximately one hundred and eighty degrees, and with seating parts secured to said support, a resilient belt within said tension belt and extending into resilient support with the curvatures at the sides and having a clearing space approximately equalling in width the distance between the vertical axes of said curvatures, and a tread encircling said tension belt.

1,417,009. GARMENT HANGER. JOHN WILLIAM WOODWARD, Montreal, Quebec, Canada. Filed Mar. 28, 1921. Serial No. 456,305. 1 Claim. (Cl. 211—13.)



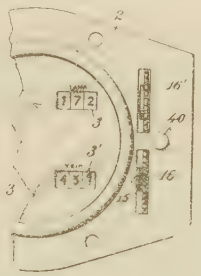
The combination of a coat hanger and a trousers hanger in which the frame of the trousers hanger straddles the coat hanger, the latter projecting upwardly within the trousers hanger frame and having a suspension hook projecting therefrom, said trousers hanger frame being rigidly secured to the hanger and having roller side guards and converging to said coat hanger to support a roller which forms the fastening member for the trousers.

1,417,010. PAVING BLOCK. GEORGE S. WRIGHT and CHARLES WESLEY WRIGHT, Philadelphia, Pa. Filed Aug. 6, 1921. Serial No. 490,314. 3 Claims. (Cl. 94—13.)



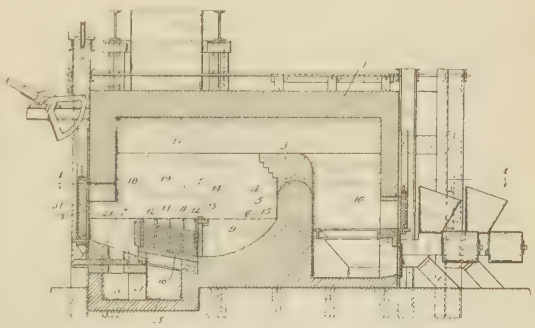
1. The herein described paving block, composed of upper parallel vertical walls, upper downwardly converging walls, lower vertical parallel walls and lower downwardly diverging walls, said upper vertical walls merging into said lower downwardly diverging walls, and said upper downwardly converging walls merging into said lower vertical walls.

1,417,011. REGISTER. JACOB J. ALBRIGHT, Columbus, Ga. Filed Dec. 7, 1920. Serial No. 428,910. 20 Claims. (Cl. 235—144.)



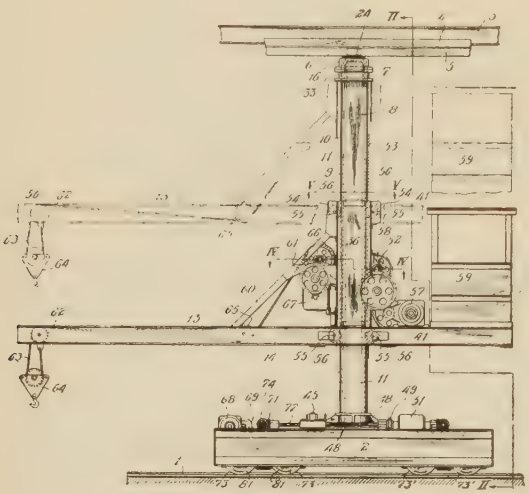
1. In registering mechanism, the combination with two counter groups, of intermeshing gear wheels, one connected to actuate one counter group and the other connected to actuate the other counter group, one of said gear wheels being shiftable relative to the other for being moved out of mesh therewith.

1,417,012. METHOD OF AND FURNACE FOR HEAT-TREATING SHEET AND TIN-PLATE BARS. THOMAS V. ALLIS, deceased, late of Pittsburgh, Pa., by Hannora E. G. Allis, administratrix, Pittsburgh, Pa. Filed Apr. 10, 1920. Serial No. 372,981. 17 Claims. (Cl. 263—6.)



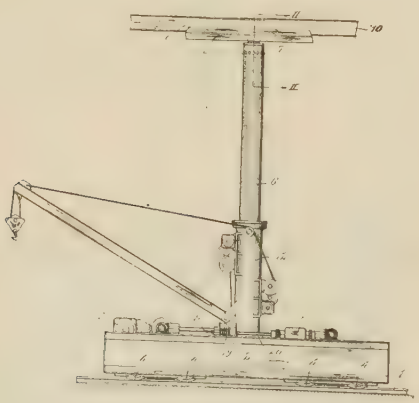
1. The method of heating sheet and tinplate bars, which consists in piling them into a mass with their side, longitudinal and end edges in alignment, in the center of a furnace hearth, and heat-treating said mass to obtain uniformly heated bars.

1,417,013. HOISTING AND CONVEYING MACHINE. DONALD S. ANDREWS, Cleveland, Ohio, assignor to Andrews Crane Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed Feb. 28, 1921. Serial No. 448,437. 16 Claims. (Cl. 212—64.)



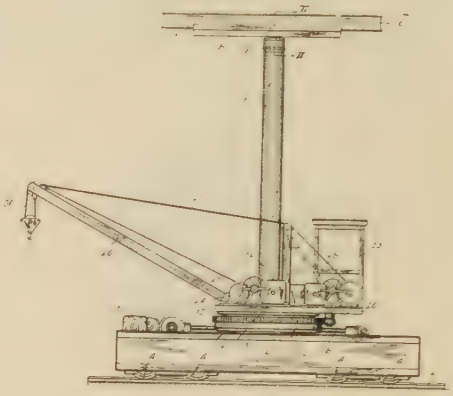
1. In a hoisting and conveying machine, the combination of a ground track; a car adapted to run upon and means for moving same along said track; overhead longitudinal guiding means; an upright supporting structure having its base mounted upon said car and having its upper portion engaging said guiding means, whereby the stability of said supporting structure is maintained; a boom extending laterally from said supporting structure and movable longitudinally with reference thereto, said boom being rotatable with reference to the axis of said supporting structure and in a horizontal plane; and means for effecting said longitudinal and rotative movements.

1,417,014. HOISTING AND CONVEYING DEVICE. DONALD S. ANDREWS, Cleveland, Ohio, assignor to Andrews Crane Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed July 2, 1921. Serial No. 482,005. 3 Claims. (Cl. 212—17.)



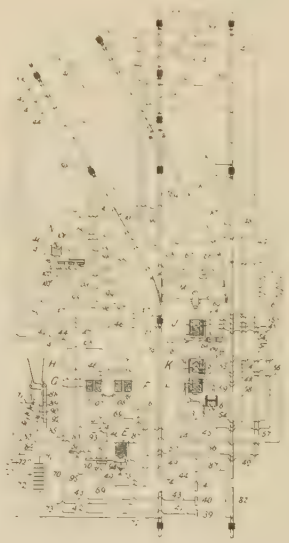
1. In a hoisting and conveying device, the combination of a ground track; a truck adapted to travel upon said track; a vertical mast mounted upon said truck; an overhead support for said mast; a sleeve mounted upon the latter, rotatable thereon but vertically fixed; an oscillatory boom mounted upon said sleeve; means for rotating the latter; and means for actuating said truck to travel upon said track.

1,417,015. HOISTING AND CONVEYING DEVICE. DONALD S. ANDREWS, Cleveland, Ohio, assignor to Andrews Crane Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed July 2, 1921. Serial No. 482,006. 2 Claims. (Cl. 212—17.)



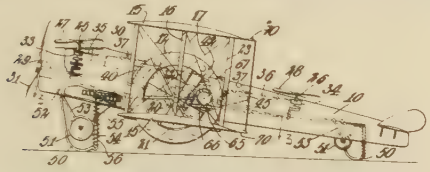
1. In a hoisting and conveying device, the combination of a ground track; a truck adapted to travel upon said track; a turn table mounted upon said truck; a mast mounted upon the latter; an overhead support for said mast in traveling engagement therewith; and an oscillatory boom mounted upon said turn-table.

1,417,016. RAILWAY SAFE-RUNNING DEVICE. ARTHUR REGINALD ANGUS, Minehead, England. Filed Feb. 10, 1912. Serial No. 676,891. 30 Claims. (Cl. 246—71.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



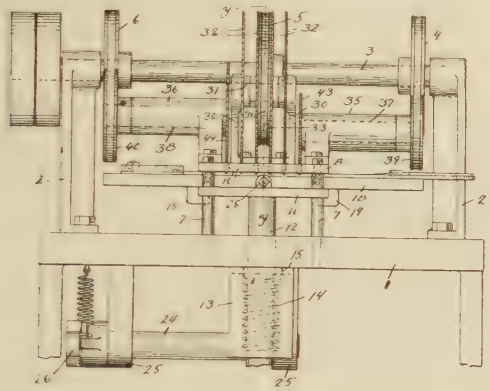
30. Train protecting apparatus comprising track apparatus with means adapted to operate the same from a moving train, and means adapted to be operated from a track station and to be thereby caused to effect the operation of said track apparatus and to prevent said track apparatus from being operated from said moving train.

1,417,017. MULTIPROPELLED AEROPLANE. JOSEPH ARDO, Newhall, W. Va. Filed Aug. 1, 1921. Serial No. 488,779. 5 Claims. (Cl. 244—2.)



4. In an aeroplane, wheels and skids, and a common operating mechanism for said wheels and skids adapted to raise and lower the same and to move said wheels and skids inversely in unison.

1,417,018. SOLE-GROOVING MACHINE. OSCAR F. ARMSTRONG, Haverhill, Mass., assignor to Ernest D. Haseltine Co., Haverhill, Mass., a Corporation of Massachusetts. Filed Apr. 18, 1921. Serial No. 462,225. 6 Claims. (Cl. 12—40.)

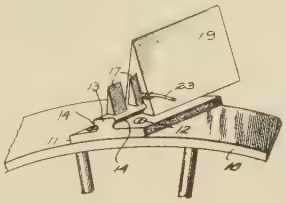


1. A sole-grooving machine comprising a gang of rotary grooving cutters, a guard plate through which said cutters extend a distance corresponding to the depth of groove to be cut, a sole-support, spring actuated means for moving said support perpendicularly of its face, to press a sole thereon against said plate and in position to be engaged by said cutters, manually operated means for withdrawing said support from said plate, and manually operated means for moving said support transversely.

1,417,019. MUSICAL TOY. JEROME BARTOLOWSKY, Oakland, Calif. Filed Feb. 15, 1921. Serial No. 445,230. 6 Claims. (Cl. 46—46.)

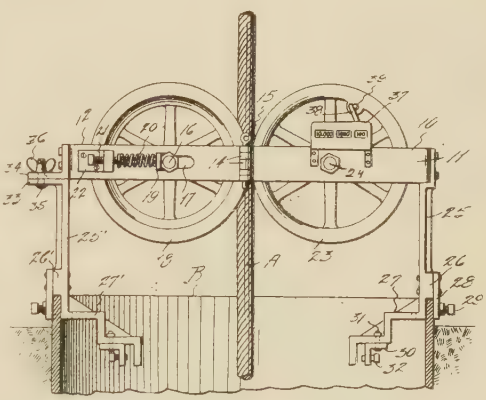
1. A musical toy including a bar, a handle journaled on one end of said bar for rotating it, a sound box on the other end of said bar, a pair of sound chambers in said sound box, a slotted plate and reeds between said chambers.

1,417,020. CLEAT FOR TRACTOR WHEELS. EARL H. BASS, Derby, Iowa. Filed June 22, 1921. Serial No. 479,496. 5 Claims. (Cl. 301—44.)



4. A cleat for wheels or the like including a base member secured to the rim of the wheel, a pair of guide ribs formed on the base, said base having a plurality of screw-threaded openings formed therein between said guide ribs, prongs having screw-threaded shanks received in said screw-threaded openings, a spade cleat member having a pair of grooves therein adapted to receive said guide ribs, said spade cleat being hollow, whereby said spade cleat may be slid on said base and over said prongs for covering them and a locking bar adapted to be yieldingly held in position for preventing movement of said spade cleat member.

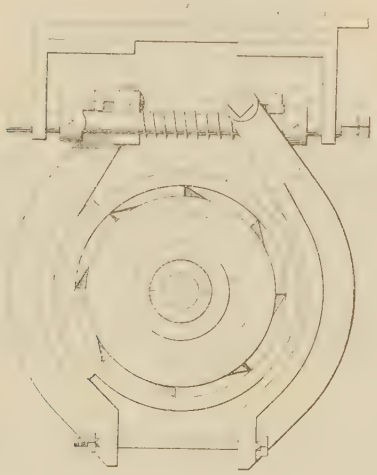
1,417,021. MEASURING DEVICE. JACK H. BEVEL, Dallas, Tex. Filed May 24, 1920, Serial No. 383,662. Renewed Apr. 3, 1922. Serial No. 549,169. 3 Claims. (Cl. 33—134.)



1. In a measuring device of the character described, a pair of substantially horizontal U-shaped frame sections having their open ends arranged innermost, a hinge joint connecting the inner ends of corresponding sides of the frame sections whereby one frame section may be swung horizontally with relation to the other frame section and the frame section securely held against perceptible vertical movement with relation to each other, a plurality of apertured ears formed upon the inner end of the opposite side of one frame section, a plurality of apertured ears formed upon the inner end of the opposite side of the other frame section and adapted to interfit with the first named apertured ears, a pin adapted for insertion through the apertured ears so that they are securely locked together and one frame section held against vertical movement with relation to the other frame section, a friction wheel arranged within and supported by one frame section, a co-acting friction wheel arranged within and supported by the other frame section and adapted to move bodily toward and away from the first named friction wheel, yielding means to urge the second named friction wheel toward the first named friction wheel, a register supported

upon one frame section near one friction wheel and actuated thereby, and supports attached to the outer ends of the U-shaped frame sections and depending therefrom.

1,417,022. HOISTING APPARATUS. WILLIAM EDWARD BOEHCK, Jersey City, N. J., assignor to Revolvator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,616. 6 Claims. (Cl. 192—15.)



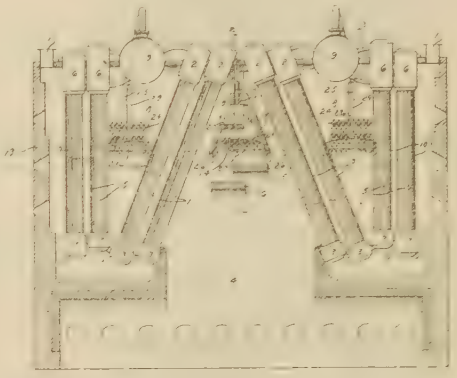
2. A hoisting apparatus including a drive-shaft; a pin angularly-disposed to and fixed upon the same; a drive-pinion mounted loose thereon and having one of its faces formed with a cam-surface over which the pin rubs; a brake for preventing backward rotation of the drive-shaft during hoisting; and means for releasing the brake to lower away the load while the drive-pinion remains clutched to the drive-shaft; the drive-pinion and the brake being arranged to be pressed towards each other by the cam-action of the pin rubbing over the cam-surface and the drive-pinion to be clutched frictionally to the drive-shaft.

4. A hoisting apparatus including a drive-shaft; a friction-disk mounted fast thereon; a brake member for preventing backward rotation of the drive-shaft during hoisting; teeth formed on said brake member; a pawl-carrying member loosely mounted on said drive-shaft; a pawl carried by said pawl-carrying member and arranged to engage said teeth during backward rotation of the drive-shaft; a drive-pinion loosely mounted on the drive-shaft; means for forcing the drive-pinion and pawl-carrying member lengthwise along the drive-shaft towards the friction-disk and clutching the drive-pinion and pawl-carrying member frictionally to the drive-shaft; and mechanism for releasing the brake member to lower away the load while the drive-pinion remains clutched to the drive-shaft.

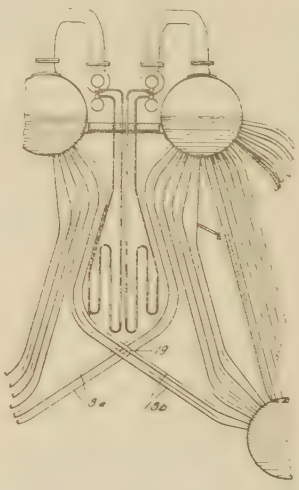
1,417,023. BOILER WITH SUPERHEATER. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed May 9, 1918. Serial No. 233,448. 5 Claims. (Cl. 122—460.)

1. In a boiler the combination of two downwardly diverging banks of tubes, a furnace in the lower part of the space between the banks, a superheater in the upper part, means below the superheater to intercept the direct radiation from the furnace but permitting the passage of hot gases to the superheater, and a hood over the superheater provided with a dampered opening at one side.

4. In apparatus of the class described, the combination of a wall having a slot, a plurality of superheater units, each comprising a plurality of pipe lengths and all its parts lying in a single plane, said units lying in parallel planes and in a space adjacent to one end of the slot, there being a free space in the group of units in alignment with the slot wide enough so a unit may be inserted into it; whereby, during removal and replacement of a unit, it may be brought into a position such that it projects into the space, diagonally through the slot, and out into the space outside of the wall.

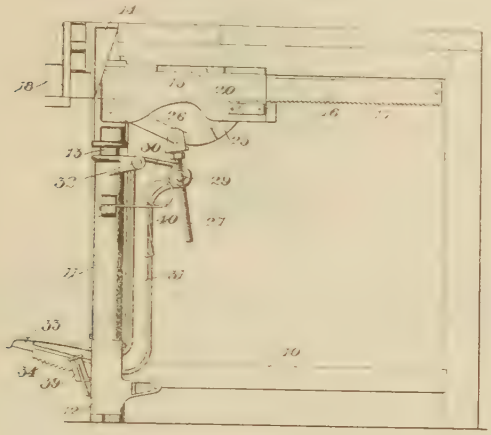


1,417,024. WATER-TUBE BOILER WITH SUPERHEATER. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed June 4, 1919. Serial No. 301,819. 2 Claims. (Cl. 122—473.)



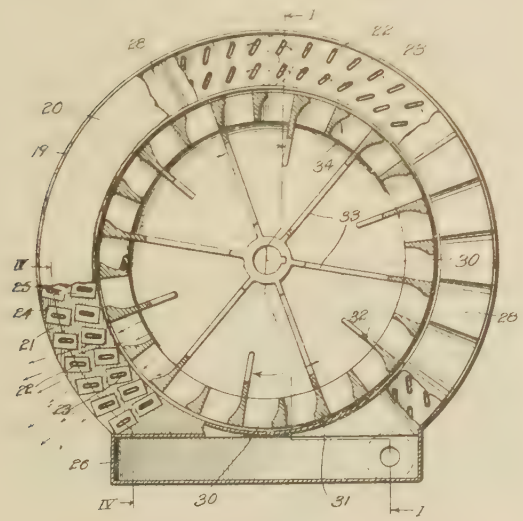
1. In a boiler, the combination of two upper and two lower spaced parallel drums, two diverging banks of tubes connecting the two upper to the two lower drums, two additional rows of spaced tubes each communicating with an upper drum and adjacent and parallel to one of the diverging banks for a certain distance from the top and then bent toward and communicating with the opposite lower drum so that the tubes of one cross those of the other and thereby screen the upper portion of the space between the diverging banks from the lower, superheater headers above the upper portion of said space, and tubular superheater elements secured to the headers and looping into said upper portion of the space.

1,417,025. BENCH VISE. WILLIAM H. BRYAN, Jr., Fresno, Calif., assignor to Georgie D. Bobo, Napa, Calif. Filed Oct. 20, 1921. Serial No. 508,976. 5 Claims. (Cl. 81—30.)



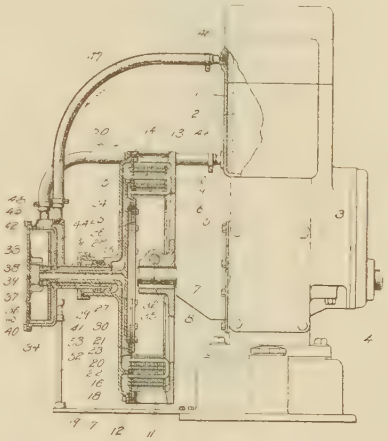
1. A bench vise of the foot operated type comprising a vertically adjustable frame, a stationary jaw on the upper portion thereof, a guide member thereon, a toothed bar slidably mounted in the guide member and carrying a jaw to cooperate with the stationary jaw, a slidable pawl for operating said toothed bar, toggle links for actuating said pawl, a bell crank lever pivotally mounted on the lower portion of the frame for spreading the toggle links apart whereby to accentuate the pawl, and a longitudinally adjustable thrust connection between said bell crank lever and the toggle links, for operating the latter, whereby the distance between the toggle links and bell crank lever may be varied.

1,417,026. RADIATOR. ARTHUR W. CAPS, Topeka, Kans., assignor to The Piersen Manufacturing Company, Topeka, Kans., a Corporation of Kansas. Filed June 7, 1920. Serial No. 386,929. 4 Claims. (Cl. 257—126.)



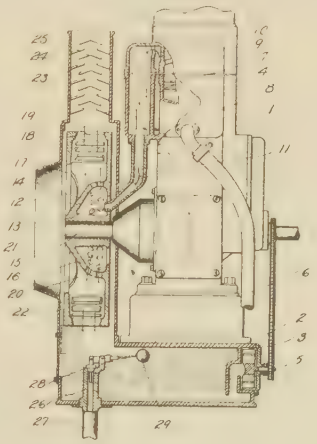
1. A radiator comprising a substantially cylindrical casing having oppositely disposed compartments, flat tubes transversely connecting said compartments and arranged tangentially to the circumference of the radiator, and an air impeller within the radiator for directing the air in stream lines parallel to the walls of the tubes.

1,417,027. ENGINE RADIATOR. ARTHUR W. CAPS, Topeka, Kans., assignor to The Piersen Manufacturing Company, Topeka, Kans., a Corporation of Kansas. Filed July 22, 1920. Serial No. 398,205. 6 Claims. (Cl. 257—127.)



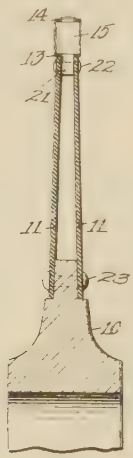
1. The combination of a rotating radiator, an impeller casing communicating with the radiator, a ported impeller shaft within the impeller casing and in ported communication with the rotating radiator, and an impeller thereon, said impeller casing and impeller being distant from but concentric with the rotating radiator.

1,417,028. ENGINE-CYLINDER-COOLING MEANS. ARTHUR W. CAPS, Topeka, Kans., assignor to The Piersen Manufacturing Company, Topeka, Kans., a Corporation of Kansas. Filed Oct. 22, 1920. Serial No. 418,846. 1 Claim. (Cl. 123—174.)



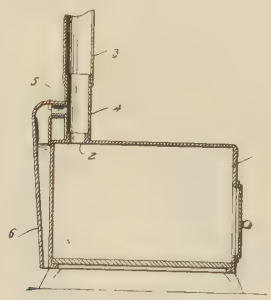
In combination with an engine comprising a water jacket and a crank shaft, a hollow fly wheel on the crank shaft, having a slotted rim and a lateral air intake port, a hub on said wheel having an annular chamber provided with peripheral ports and with an annular side opening, a reservoir below the fly wheel, a casing enclosing the fly wheel and opening to the reservoir, means for delivering cooling liquid from the reservoir to the water jacket, and a conduit leading from the water jacket and delivering to the hub chamber through said annular opening.

1,417,029. ROTOR. AXEL W. CARLSON, Worcester, Mass., assignor to Carling Turbine Blower Co., Worcester, Mass., a Corporation of Massachusetts. Filed July 11, 1919. Serial No. 310,003. 1 Claim. (Cl. 253—39.)



A rotor having in combination a hub, a pair of discs mounted thereon, inner and outer concentric bands, a plurality of vanes having their outer ends secured to the outer band and their reduced inner ends formed of uniform cross section throughout their length and projecting through the inner band and between said discs, and fastening devices extending through said discs and between certain of said projecting portions, each fastening device being disposed in notches in the adjacent faces of two adjacent projecting portions and preventing withdrawal thereof and also firmly holding said discs against the outer faces of the inner ends of said vanes.

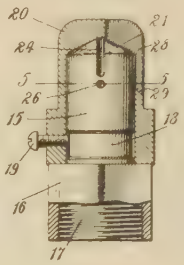
1,417,030. SMOKE-FUEL ATTACHMENT. JAMES H. CARMICHAEL, Cedar Falls, Wash. Filed Nov. 26, 1920. Serial No. 426,440. 2 Claims. (Cl. 126—89.)



1. A ventilating attachment for a stove consisting of a casing formed with a back and two side flanges and adapted to fit against one end of the stove to serve as an air passageway, the upper end of said casing having an elbow, and a pipe section having a laterally extending nipple in telescopic engagement with the upper end of said elbow.

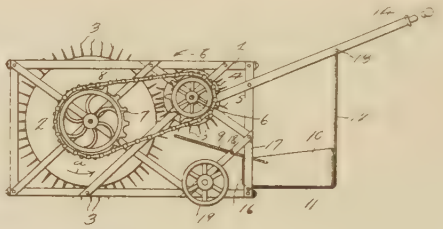
1,417,031. NOZZLE. NAPOLEON P. CASORSO and CLEMENT VACHER, Santa Barbara, Calif. Filed Dec. 9, 1920. Serial No. 429,451. 3 Claims. (Cl. 299—139.)

1. The combination with a nozzle, of a cap rotatably mounted thereon, said nozzle having a pair of elongated slots formed in the end thereof and extending a distance through the side thereof, said nozzle having a pair of circular openings formed in the end and side thereof and the said cap having an elongated slot formed in the end and extending through one side thereof and a circular opening for registration with the slots and openings in



the nozzle to regulate the force of water passing therethrough and direct the stream of water either forward or to the side respectively of the nozzle as required.

1,417,032. LAWN CLEANER. CLARENCE M. CHAFFIN, Springfield, Mo. Filed Mar. 8, 1921. Serial No. 450,657. 1 Claim. (Cl. 55—145.)



A lawn cleaner comprising a frame, a rotatable ground engaging drum carried by said frame, leaf piercing engaging fingers carried by said drum, said frame having its lower end positioned to engage the ground and limit the distance the fingers will enter the ground, a second drum rotatably mounted in bearings of the frame and disposed to the rear of the first mentioned drum and adjacent the upper end thereof, said second drum being provided with a plurality of cleaning fingers interengaging with the piercing fingers on the ground engaging drum, connecting means between said drums whereby the second drum will be rotated at a greater rate of speed than the ground engaging drum, a pivoted inclined plate pivoted in the frame, the forward end of said frame being disposed beneath the second drum, a removable hopper carried by the frame, the rear end of the pivoted plate being disposed above the forward end of the hopper, and wheels for supporting the frame, said wheels being located adjacent the rear end thereof.

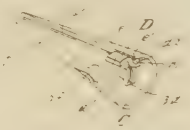
1,417,033. MANUFACTURE OF GOLD-COLORED SULPHURS AND VERMILIONS OF ANTIMONY. PAUL CHAILLAUX, Paris, France. Filed June 23, 1920. Serial No. 391,207. 1 Claim. (Cl. 134—58.)

A process for the manufacture, by dry-process, of gold-colored sulfides and vermilion of antimony consisting in melting natural sulfide of antimony, Sb_2S_5, in a closed vessel, and then passing a current of atmospheric air through the melted mass while maintaining said mass at a temperature corresponding to the coloration desired for the sulfide, Sb_2S_5, to be obtained.

1,417,034. PENCIL SHARPENER. CLEMENT CLEVELAND, New York, N. Y. Filed Dec. 6, 1919, Serial No. 342,891. Renewed Aug. 20, 1921. Serial No. 493,962. 20 Claims. (Cl. 120—93.)

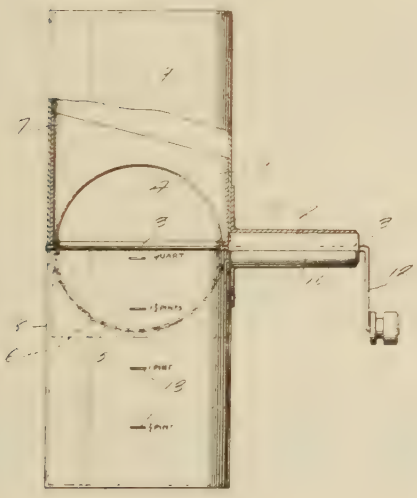
3. A pencil sharpener comprising a split tubular cone for receiving the lead pencil therein, the split edge por-

tions of the cone providing a plane edge and a knife edge, and means for positioning the plane edge and knife edge for co-action therebetween for cutting the encased end of



the lead pencil by the knife edge, said means for positioning the knife edge forming an opening at the mouth of the tubular cone for inserting therein the unencased lead of the pencil for pointing said lead by the knife edge.

1,417,035. FLOUR SIFTER. BOZENA CMEYLA, Kewaunee, Wis. Filed Feb. 24, 1921. Serial No. 447,483. 3 Claims. (Cl. 83—60.)

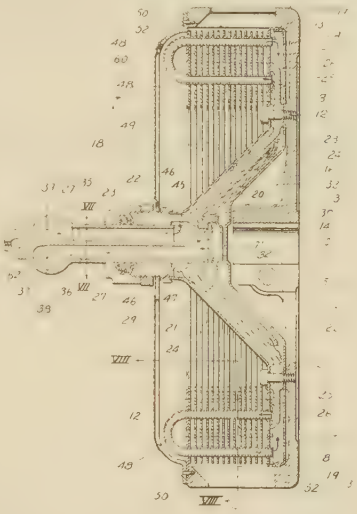


1. The combination with a sieve having a sifting and agitating element and a radially disposed handle spaced from the ends thereof, of receptacles telescopically engaging the ends of said sieve, said receptacles adjacent their open ends being provided with handle members radially disposed and adapted to engage the handle member of the sieve.

1,417,036. [WITHDRAWN.]

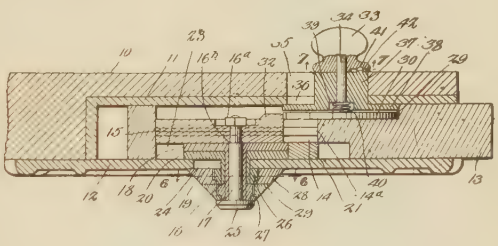
1,417,037. RADIATOR. EVERETT B. CUSHMAN, Topeka, Kans., assignor to The Piersen Manufacturing Company, Topeka, Kans., a Corporation of Kansas. Filed Mar. 15, 1920. Serial No. 365,737. 16 Claims. (Cl. 257—127.)

1. In combination with a mechanical structure comprising passages for the circulation of a fluid, a rotatable radiator having passages corresponding to those in said structure and connected therewith, and means for directing air from the side of the radiator remote from the structure in



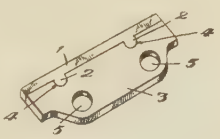
cooling relation to said passages in the radiator, the side of the radiator adjacent the structure being closed.

1,417,038. LOCK. LOUIS P. DAGES, Baltimore, Md., assignor of one-half to Leonel F. Revell, Baltimore, Md. Filed Oct. 22, 1921. Serial No. 509,597. 5 Claims. (Cl. 70—53.)



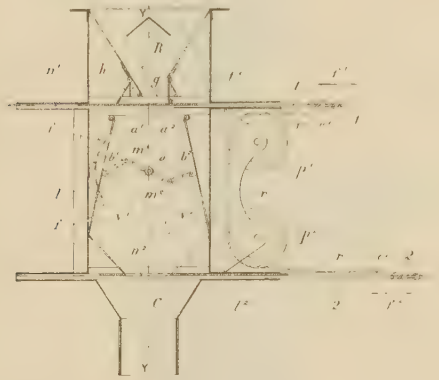
1. A permutation lock comprising a casing, a slidable bolt in the casing and having a longitudinal slot, a block in the slot on which the bolt is slidable, a bolt-retracting stem carried by the block, telescopically connected sleeves rotatably mounted on the stem, rotatable tumblers carried by the sleeves, a stationary plate having an opening in which the tumblers work and an exit slot for the tumblers leading from said opening, dial rings adjustably mounted on the sleeves, and a knob on the outer end of the stem, said knob and dial rings being concentrically arranged.

1,417,039. METHOD OF MAKING SHIMS. BRADFORD DARRACH, Jr., Elizabeth, N. J., assignor to Laminated Shim Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed May 25, 1920. Serial No. 384,109. 5 Claims. (Cl. 29—148.)



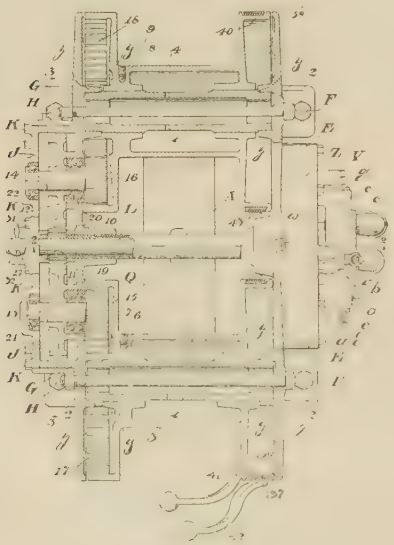
1. The herein described method of making shims which consists in providing a solid soft metal facing member and a body portion, and securing the parts edge to edge by pressure.

1,417,040. DELIVERING OR BAGGING APPARATUS. CHARLES AUGUSTE DEFAUCONPRET, Paris, France. Filed Mar. 6, 1919, Serial No. 280,932. Renewed Apr. 12, 1922. Serial No. 552,063. 2 Claims. (Cl. 221—113.)



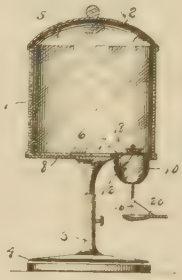
1. A delivering apparatus comprising in combination a measuring chamber, a feeding reservoir located above said measuring chamber and having at its bottom a passage adapted to be put in communication therewith, a reciprocating slide valve provided with an opening adapted to be brought into or out of register with the said passage, an inclined plate projecting into the said passage and a spring mounted scraper at the outer side of said inclined plate, substantially as described and for the purpose set forth.

1,417,041. DOUBLE-DRUM HOIST. JESSE DITSON, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 20, 1921. Serial No. 486,098. 6 Claims. (Cl. 254—185.)



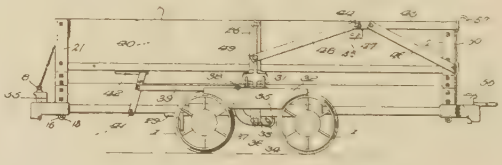
1. A double drum hoist, comprising a base plate, a supporting frame mounted in upright position at one end of the base plate, a gear box mounted in upright position at the opposite end of the base plate, a removable cover plate for said gear box, a central driving shaft having bearings in said frame and gear box, a reversible fluid pressure motor secured at the outside of said supporting frame and operatively connected to drive said driving shaft in either direction, drum bearings supported by the said frame and gear box at each side of the central driving shaft and maintaining the outer portions of the frame and gear box in spaced relation, bolts passing through the drum bearings for holding the parts together, drums rotatably mounted on said drum bearings, and driving connections mounted in the gear box between the driving shaft and drums including shiftable means for connecting the driving shaft to one or the other of the drums.

1,417,042. DISPENSING DEVICE. JACK DOBIS, Detroit, Mich. Filed Sept. 18, 1919. Serial No. 324,635. 4 Claims. (Cl. 226—108.)



1. In a dispensing device, a container for material, a measuring chamber at the bottom thereof having a discharge opening, an apertured plate through which the material from the container may flow into the measuring chamber, a filler valve normally above the aperture in the plate and movable into contact with the said plate to close the aperture therein, hinged closing means for the discharge opening of the measuring chamber, a receptacle support movable relative to the measuring chamber, movement of the support in one direction opening the hinged closing means and movement thereof in the opposite direction closing the same, springs yieldably resisting downward movement of the support and means for operating the filler valve on movement of the receptacle support.

1,417,043. MINE CAR. WALTER A. DORSEY, Columbus, Ohio, assignor to The Bonney-Floyd Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 6, 1918, Serial No. 220,792. Renewed Aug. 11, 1921. Serial No. 491,560. 8 Claims. (Cl. 105—364.)

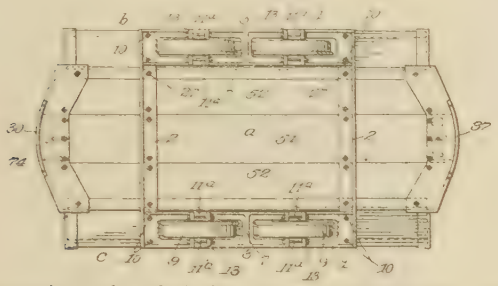


6. In a knock-down mine car, in combination: a bottom central frame having axle bearings; end frames comprising side members and bottom bars having inwardly and upwardly extending flanges and outwardly extending coupling elements which are rigid with said bottom bars; and a continuous draw bar separably united with said bottom bars and adapted to be united with said coupling elements by the draft-coupling pins.

1,417,044. CAR. WALTER A. DORSEY, Columbus, Ohio, assignor to The Bonney-Floyd Company, a Corporation of Ohio. Filed July 7, 1919, Serial No. 308,954. Renewed Feb. 24, 1922. Serial No. 539,055. 10 Claims. (Cl. 105—180.)

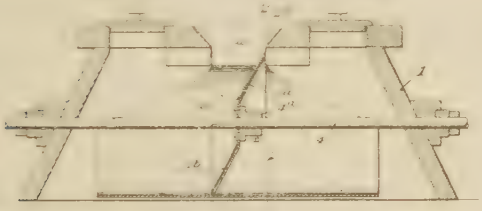
1. In a mine or industrial car, a relatively short truck frame having two wheel supporting sills, one at each side of the car, and comprising two longitudinal bars and two short end bars integral with the longitudinal bars and the cross girts each rigidly secured to both of the side sills, said sills and girts forming a unitary

frame, in combination with the car body and its base frame constituting a unitary structure separately connected to the truck frame and the base having the end



bumper bars, the relatively wide vertically disposed angle plates at the sides of the car, the uprights, and the wall closing elements rigidly secured to said end bars, side plates and uprights.

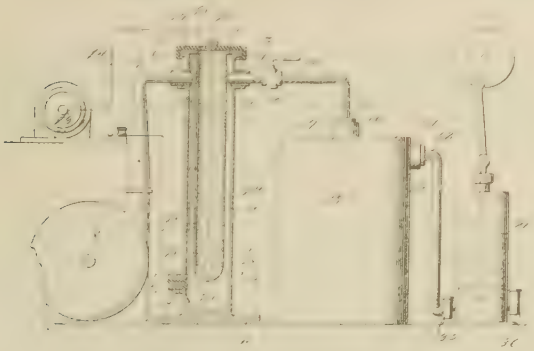
1,417,045. STOCK DIVIDER. EDWARD C. EBERTS, Jeffersonville, Ind. Filed July 19, 1921. Serial No. 485,937. 4 Claims. (Cl. 83—44.)



2

1. A stock divider comprising a stationary cylindrical casing, having an intermediate feed opening at the top, and discharge passages below and on opposite sides of said feed opening, and a divider wheel rotatably mounted in said casing below said feed opening and having segmental receiving chambers disposed on opposite sides of the plane of the axis of the opening and designed to communicate alternately with said feed opening and to discharge the material alternately into the discharge passages.

1,417,046. APPARATUS FOR PRODUCING OZONE. HARRY ELLWOOD ELLIS, Jacksonville, Fla. Filed Dec. 10, 1920. Serial No. 429,655. 2 Claims. (Cl. 204—32.)

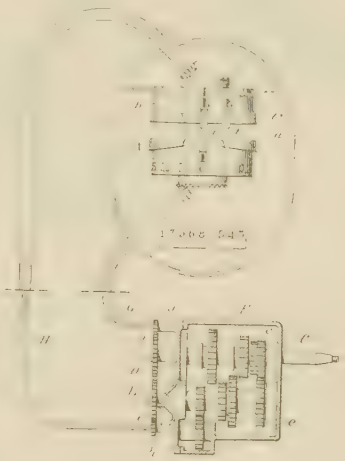


1. An apparatus for producing ozone gas, said apparatus comprising a main receptacle, an auxiliary receptacle disposed within the main receptacle for the reception of water, said auxiliary receptacle provided with a flange engaging a flange of the main receptacle, the upper end of said auxiliary receptacle being opened, a member extending across the upper end of the auxiliary receptacle, an electrode disposed within the auxiliary receptacle and suspended from the member extending across the upper end thereof, said member also forming means for securing the receptacles together, an electrode disposed within the chamber of the main receptacle adjacent the lower end thereof and means for forcing air through the main receptacle.

1,417,047. CHEMICAL COMPOSITION. CHARLES S. EPPLEY, York, Pa., assignor to New Ideal Power Company. Filed Sept. 30, 1920. Serial No. 413,910. 2 Claims. (Cl. 252.)

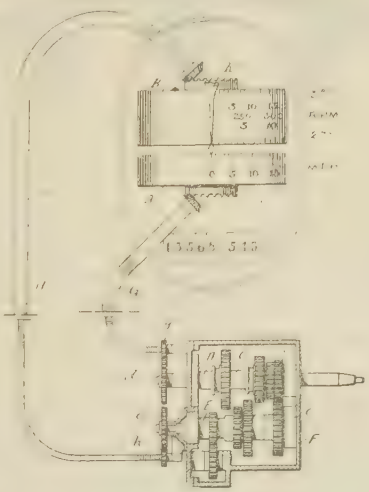
2. A chemical composition which expands under heat comprising a mixture of anhydrous ammonia, carbon dioxide and lubricating oil.

1,417,048. GEAR INDICATOR. THOMAS FARMER, Jr., New York, N. Y. Filed May 24, 1919. Serial No. 299,581. 9 Claims. (Cl. 235—103.5.)



3. An automobile gear indicator comprising two speed-responsive vibrating members, one representing the speed of a shaft having a definite speed ratio with respect to the clutch-shaft but changeable speed ratio with respect to the propeller-shaft, and the other member representing the speed of said propeller-shaft, the members being so related as to show synchronism of gears that are about to be engaged.

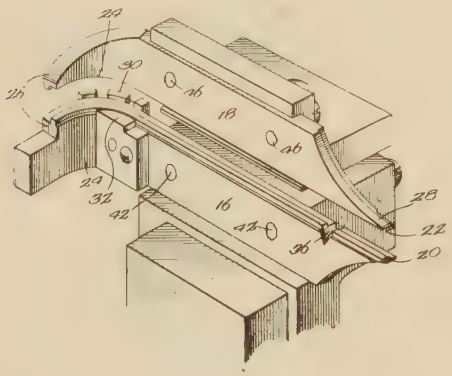
1,417,049. SPEED INDICATOR. THOMAS FARMER, Jr., New York, N. Y. Filed Aug. 21, 1919. Serial No. 319,021. 4 Claims. (Cl. 235—103.5.)



1. The combination of two shafts arranged to be disengaged and reengaged with respect to each other, and

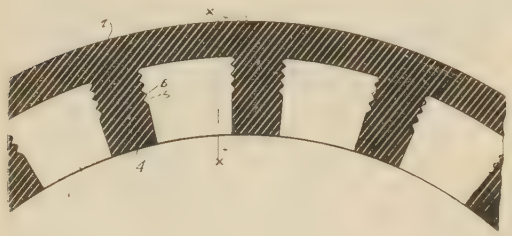
two adjacent vibrating speed indicators driven by the respective shafts, one indicator being graduated to represent the speed of its driving shaft and the other to represent the speed of its driving shaft multiplied by a factor corresponding to the gearing relation between the two shafts.

1,417,050. DIE TRACK FOR FORMING SPIRAL STEEL TUBING. JAMES FENTRESS, Chicago, Ill. Filed July 14, 1919. Serial No. 310,843. 11 Claims. (Cl. 113—35.)



1. In mechanism of the class described, two metal bars of considerable curved length and comparatively thin in one dimension, placed with their thin edges face to face, working surfaces for forming metal on said oppositely disposed thin faces and extending lengthwise of said metal bars, said working faces occupying substantially the whole of the thin opposing faces of the bar and means for rigidly securing said bars in position with reference to each other.

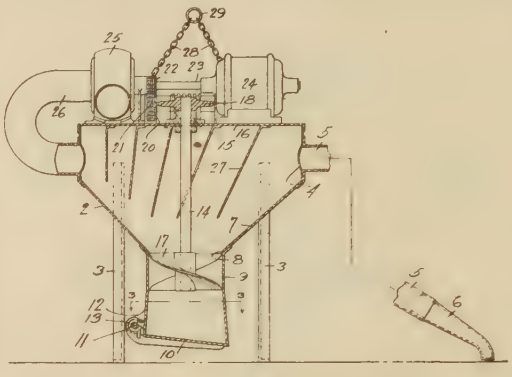
1,417,051. RUBBER TIRE. ABRAHAM L. FREEDLANDER and WILLIAM GEORGE GOODWIN, Dayton, Ohio, assignors to The Dayton Rubber Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 5, 1921. Serial No. 449,778. 4 Claims. (Cl. 152—1.)



1. A tire constructed of a casing having a tread portion and interior piers extending to the inner periphery thereof, placed in succession one after another and duly spaced apart, portions of the body of the piers being omitted at places not affecting the union of the piers and the tread portion.

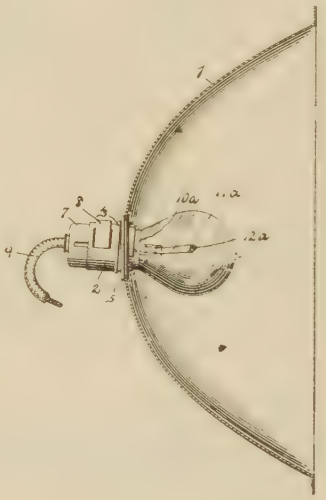
1,417,052. PNEUMATIC CONVEYER. JUSTUS A. GASTEIGER, Dormont, Pa. Filed Jan. 7, 1920. Serial No. 349,942. 1 Claim. (Cl. 183—38.)

In a pneumatic conveyer, the combination of a suitable receptacle, means for maintaining suction in said receptacle, downwardly extending baffles in said receptacle, a sealing chamber disposed below said receptacle forming a discharge outlet for same, a vertically arranged spiral conveyer in said sealing chamber and forming a close fit



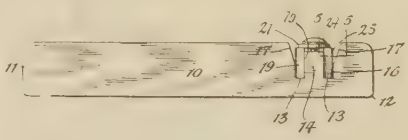
therewith, means for driving said spiral conveyer, and a spring-actuated valve controlling the discharge outlet of said sealing chamber.

1,417,053. FOCUSING DEVICE. CHARLES E. GODLEY, Detroit, Mich. Filed May 23, 1921. Serial No. 471,615. 3 Claims. (Cl. 240—44.)



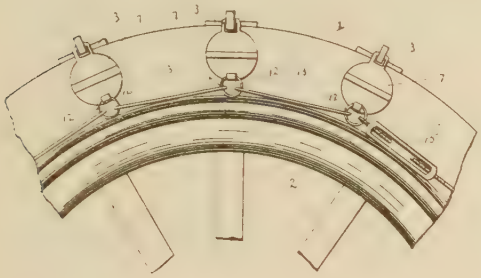
1. The combination of a reflector, a flexible thimble mounted thereon, a connector sleeve in the thimble, and a light bulb mounted in the sleeve and adapted to be moved transversely to the focal axis of the reflector by bending the thimble.

1,417,054. KNIFE SHARPENER. MARTIN T. GRAF, Buffalo, N. Y., assignor of one-half to Frank X. Irr, Buffalo, N. Y. Filed Mar. 14, 1921. Serial No. 452,197. 3 Claims. (Cl. 76—88.)



1. A knife sharpener comprising a holder bar which is provided on one side with a laterally opening notch and on its opposite side with a recess, a sharpening blade seated in said notch, a washer engaging with the outer end of said blade, a washer seated in said recess, and a rivet passing through said bar and connecting said washers.

1,417,055. NONSKID CHAIN FOR AUTOMOBILE TIRES. JAMES M. GREEN, Chicago, Ill. Filed Feb. 23, 1921. Serial No. 447,142. 3 Claims. (Cl. 152—14.)



2. In a non-skid attachment for automobile tires, cross chains and side chains, said cross chains composed of central and side disc-shaped members having ribs thereon, the ribs on the central members terminating in hooks lying beyond the plane of the disc, the said side members having eyelets cast integrally therewith and extending obliquely upwardly for engagement with the hooks on the central rib, a vertical lug carried by the side disc having an opening therein and a ring for connection to the side chains journalled in the said opening.

1,417,056. CEILING AND FLOOR CONSTRUCTION. ERIC E. HALL, Chicago, Ill. Filed Feb. 23, 1918, Serial No. 218,613. Renewed Aug. 12, 1921. Serial No. 491,875. 7 Claims. (Cl. 72—71.)

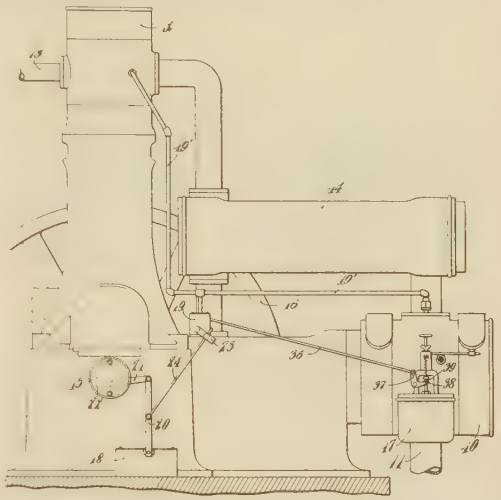
4. In a floor and ceiling construction, the combination with a flooring, of plural parallel rows of separated anchor supports firmly embedded in the under side of the flooring and secured against an upward thrust, depending rods individually secured to said supports, sheets of expanded metal having skeletonized channels open at the top formed therein parallel to the rows of supports and in which the lower ends of the rods are secured to prevent upward movement of either the channels or rods, and plaster spread upon and forced through the under side of said expanded metal to form the ceiling.

1,417,057. LUBRICATING MECHANISM. HALBERT B. HALVORSEN, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Original application filed Oct. 30, 1918, Serial No. 260,306. Divided and this application filed Aug. 2, 1920. Serial No. 400,714. 23 Claims. (Cl. 230—24.)

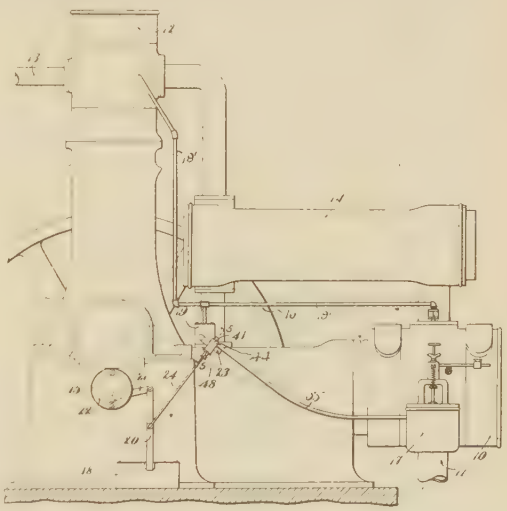
1. The combination with a compressor and unloading means therefor, of lubricating means for said compressor controlled by said unloading means.

12. The combination with a compressor having an unloading valve, of lubricating means for said compressor, and means for actuating said lubricating means including a connection rendered operative and inoperative by opening and closing of said unloading valve.

23. The combination with a compressor, of lubricating means therefor, means for actuating said lubricating means including a normally operative connecting member, and means whereby said member is withdrawn to disconnect said lubricating means from said actuating means when said compressor is unloaded.



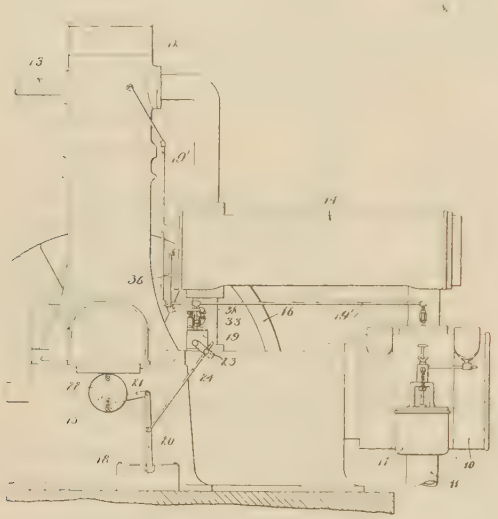
1,417,058. LUBRICATING MECHANISM FOR COMPRESSORS. HALBERT B. HALVORSEN, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 30, 1918. Serial No. 260,306. 28 Claims. (Cl. 230—24.)



5. The combination with a compressor, of mechanically driven lubricating means therefor controlled by variations in fluid pressure incidental to the loading and unloading of said compressor.

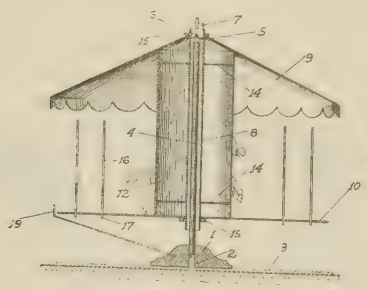
19. The combination with a compressor having an intake and an unloading valve for controlling said intake, of a lubricator for said compressor having an operating member, actuating means including a reciprocating rod, a casing carried by said operating member in which said rod is longitudinally movable, said casing having a cylinder portion, a piston in said cylinder portion, a spring for normally holding said piston in engagement with said rod to restrain the same against movement with respect to said casing, and conduit means connecting said cylinder portion with said intake, whereby when said unloading valve is closed vacuum conditions in said intake cause movement of said piston out of engagement with said rod against the tension of said spring.

1,417,059. LUBRICATING MECHANISM. HARRY C. JOHANSEN, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 18, 1919. Serial No. 283,375. 13 Claims. (Cl. 230—24.)



1. The combination with a multiple cylinder compressor having an intercooler and provided with unloading means whose operation causes variation in intercooler pressure, of lubricating means controlled by the pressure in the intercooler.

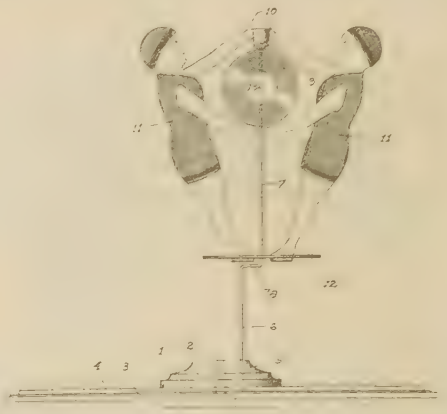
1,417,060. MERRY-GO-ROUND ATTACHMENT FOR PHONOGRAPHS. EDWARD M. HANSLEY, Stockton, Calif. Filed Jan. 26, 1921. Serial No. 439,963. 9 Claims. (Cl. 46—40.)



1. A merry go round attachment for phonographs including a base adapted to be seated centrally on a disc record, to turn therewith, a merry go round structure mounted on the base, means between said base and structure whereby the latter will normally revolve at a lesser speed than the base, and means whereby the vertical spacing of the structure from the base may be altered at will.

1,417,061. ADVERTISING NOVELTY AND TOY. EDWARD M. HANSLEY, Stockton, Calif. Filed Mar. 29, 1921. Serial No. 456,582. 3 Claims. (Cl. 46—40.)

1. A device of the character described comprising a base adapted to be mounted on a phonograph record for rotation therewith, an upright stem mounted on the base, the upper portion of said stem being off-set from the



lower portion but substantially parallel thereto, and fanciful members supported by and turnably mounted on the offset portion of the stem.

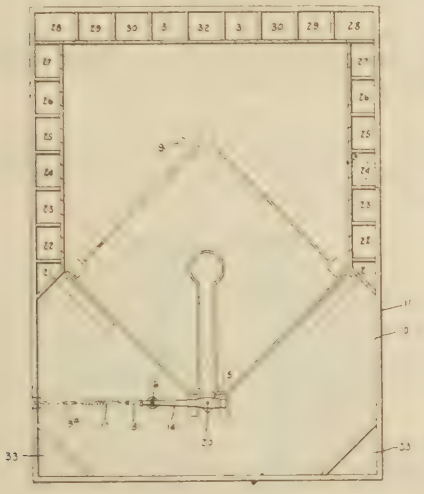
1,417,062. ELECTRIC TRANSPORTATION SYSTEM. ELBERT E. HAWKINS, Binghamton, N. Y. Filed Oct. 14, 1920. Serial No. 416,878. 13 Claims. (Cl. 104—88.)

1. In an electric railway system, the combination of a receiving station and a plurality of local stations, a suspended main line track connecting the plurality of local stations with the receiving station, a suspended local branch track having its terminals arranged adjacent to the main line track, switches at the junctions of the terminal of the local track with the main line track for momentarily directing electrically propelled vehicles from the main line track to one end of the local track and permitting the vehicle to pass from the other end of the local track on to the main line track, a plurality of electrically propelled vehicles adapted to run upon the main line track, electrically operated motor means at each local station for controlling the switch thereat which directs the incoming vehicles from the main line track on to the local track, and electric circuit controlling means upon the respective electrically propelled vehicles for energizing the electrically operated motor means whereby said vehicles belonging to the respective local stations will automatically control the operation of the switches of the corresponding local station so that the vehicles belonging to the respective stations will automatically leave the main track and respectively pass upon the local tracks when they reach the proper local station.

1,417,063. BASEBALL GAME. SAMUEL F. HIMES, Indianapolis, Ind. Filed Nov. 24, 1919. Serial No. 340,183. 3 Claims. (Cl. 46—61.)

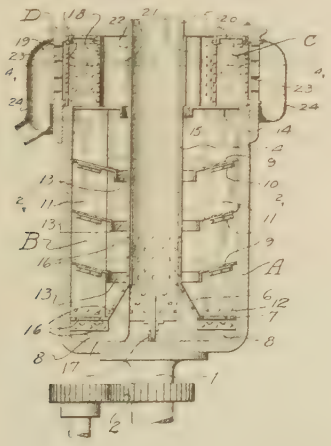
1. A baseball game including a flat base-board suitably marked to represent a miniature diamond, the bases being

positioned intermediate the corners of the board, compartments arranged around the end opposite the second base and along the adjacent sides thereof up to the first and third bases, said compartments projecting above the plane of the board and being positioned around the edges of said board to provide a relatively large and unobstructed outfield area, each compartment having an opening therein



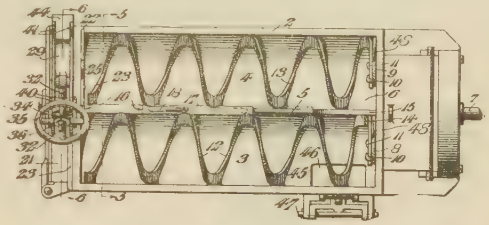
adapted to receive the batted ball, a bat positioned adjacent the home plate for batting the ball into one of said compartments, and an upstanding pin positioned within each compartment adjacent the opening thereof for deflecting the batted ball into said compartment and for retaining said deflected ball in said compartment after the same has passed through the opening thereof.

1,417,064. CENTRIFUGAL SEPARATOR. CHARLES H. HOLMGREN, Bloomfield, N. J. Filed Feb. 25, 1921 Serial No. 447,710. 7 Claims. (Cl. 233—2.)



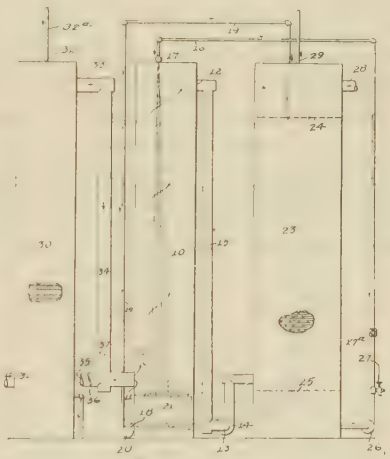
1. A centrifugal separator including a revoluble casing provided with a separating chamber therein having an inlet for the liquid to be clarified at one end of said chamber and an outlet at the other end, and a plurality of spaced baffle plates arranged between said inlet and said outlet, snugly fitting the interior walls of said chamber and provided with openings axially arranged with respect to said casing and gradually decreasing in size from said inlet to said outlet.

1,417,065. CUTTING AND MIXING MACHINE. CHARLES W. HOTTMANN, Philadelphia, Pa., assignor to Christopher Offenhauser, Philadelphia, Pa. Filed Feb. 5, 1921. Serial No. 442,601. 15 Claims. (Cl. 17—20.)



4. In a cutting and mixing machine, a casing having a cutting chamber with a portion of its peripheral wall forming a valve controlling discharge from said chamber, means to actuate said valve, and cutting mechanism in said cutting chamber.

1,417,066. PROCESS FOR ENRICHING METALLURGICAL GASES CONTAINING SULPHUR DIOXIDE. GUY C. HOWARD, Tacoma, Wash, assignor to American Smelting & Refining Company, a Corporation of New Jersey. Filed Nov. 29, 1918. Serial No. 264,555. 14 Claims. (Cl. 23—1.)



1. In the art of forming a substance having a relatively high sulphur dioxide content from a gas having a relatively low sulphur dioxide content, the process which consists in discharging sulphur dioxide gas from a water solution thereof and causing said discharged gas to mix with said relatively low sulphur dioxide content gas thereby to increase the sulphur dioxide content of said low content gas.

1,417,067. PROCESS FOR RECOVERING SULPHUR DIOXIDE FROM WASTE METALLURGICAL GASES. GUY C. HOWARD, Tacoma, Wash., assignor to American Smelting & Refining Co., a Corporation of New Jersey. Filed Mar. 6, 1919. Serial No. 281,010. 14 Claims. (Cl. 23—1.)

1. In the art of recovering sulphur dioxide from gases, the process which consists in passing a solution containing sulphur dioxide counter current through a mixture of sulphur dioxide gas and water vapor and then removing the sulphur dioxide from said solution.

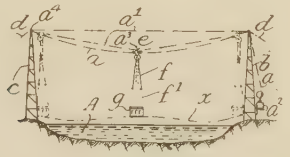
1,417,068. PROCESS FOR MAKING SULPHUR FROM SULPHUR DIOXIDE. GUY C. HOWARD, Tacoma, Wash., assignor to The American Smelting & Refining Co., a Corporation of New Jersey. Filed Sept. 9, 1918, Serial No. 253,157. Renewed Nov. 28, 1921. Serial No. 518,428. 9 Claims. (Cl. 23—10.)

3. In the art of producing sulphur from liquid sulphur dioxide, the process which consists in vaporizing the liquid, subjecting air to the action of a refrigerant agent, mixing the refrigerated air with the vaporized sulphur dioxide gas and reducing the mixture.

1,417,069. PRESSED-STEEL AUTOMOBILE BRAKE-SHOE CONSTRUCTION. WILLIAM Q. HOWELL and CRANSTON B. RADER, Denver, Colo. Filed Apr. 4, 1921. Serial No. 458,203. 12 Claims. (Cl. 188—259.)

5. An annular brake shoe of the character disclosed, in which the curvilinear complementary sections thereof are each shaped from a flat blank of sheet metal of suitable thickness, which flat blank is simultaneously punched and cut to initially provide a longitudinal series of apertures, a tongue at one end having a curved side edge face, and triangular side edge face recesses towards the other end thereof, forming a neck terminating in a head portion, the said punched and cut blank being subsequently bent into the integral form of an internally channeled segmental section, and the said head portion being inturned at its neck for closing said side edge face recesses, to provide a trussed engaging face for an operating expanding element, substantially as described.

1,417,070. SUSPENSION TRANSPORTER ARRANGEMENT. ALEXANDER GEORGE MCKENZIE JACK, Sheffield, England. Filed Dec. 8, 1919. Serial No. 343,439. 13 Claims. (Cl. 104—90.)



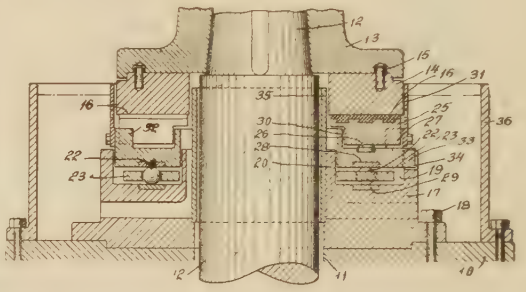
1. A suspension transporter arrangement comprising overhead flexible suspension means, standards between which said suspension means is supported, a controller carried by and adapted to travel along said suspension means, gear mechanism on said controller, said flexible suspension means being adapted to gear with and positively drive said gear mechanism when the controller is moved along said suspension means, compensating lowering and raising mechanism carried by said controller and driven from the gear mechanism thereon, and suspending means for a platform or support said raising and lowering mechanism acting to raise the suspending means when the controller descends the curved portions of the flexible suspension means and to lower said suspending means when the controller ascends the curved portions of the flexible suspension means.

1,417,071. GRAVITY TOY RAILROAD. ARTHUR E. JONES, Ridley Park, Pa. Filed June 14, 1921. Serial No. 477,387. 3 Claims. (Cl. 46—47.)

1. In a gravity toy railroad, a central section having tracks thereon, outer sections also having tracks thereon and hinged to the ends of said central sections, the tracks of said central and outer sections being in alignment, abutments at the outer ends of the hinged outer sections,

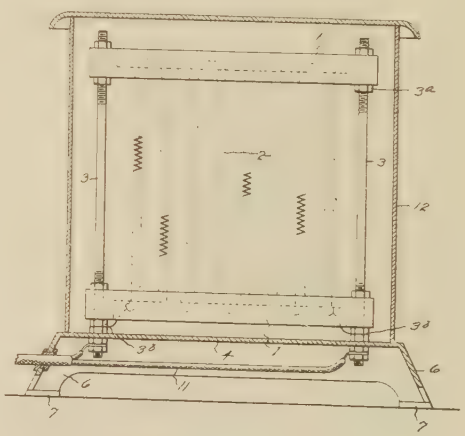
a cord extending between said abutments and passing unded a pulley supported upon said central section and signalling devices operated by said pulley.

1,417,072. BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Filed Aug. 16, 1916. Serial No. 115,124. 43 Claims. (Cl. 64—25.)



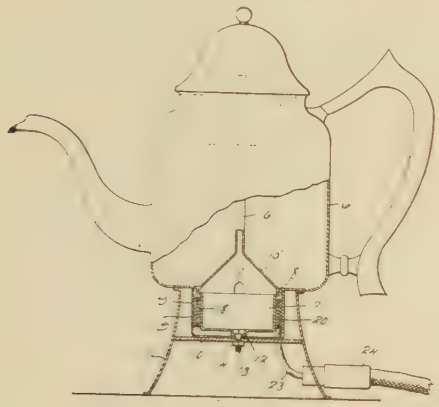
1. A bearing comprising a movable load carrying member, a stationary member, a pair of cooperating bearing parts interposed between the seationary and movable members and respectively associated therewith, rolling bearing members interposed between one of the bearing parts and the member with which it is associated and arranged to be active in either direction, and means for rendering the rolling bearings inactive after the bearing has been started in either direction.

1,417,073. ELECTRIC HEATER. HENRY KRUESHELD, New Washington, Ohio, assignor to The Perfection Electric Products Co., New Washington, Ohio, a Corporation of Ohio. Filed Feb. 1, 1921. Serial No. 441,525. 2 Claims. (Cl. 219—70.)



1. A heating element comprising a pair of bars, a coil extending between the bars, and spacing rods separating the bars, and adapted to tension the coil, the ends of the rods being extended beyond one of the bars and serving to rigidly attach the element to a support.

1,417,074. ELECTRICALLY-HEATED COOKING UTENSIL. HENRY KRUESHELD, New Washington, Ohio, assignor to The Perfection Electric Products Co., New Washington, Ohio, a Corporation of Ohio. Filed June 29, 1921. Serial No. 481,288. 2 Claims. (Cl. 219—44.)

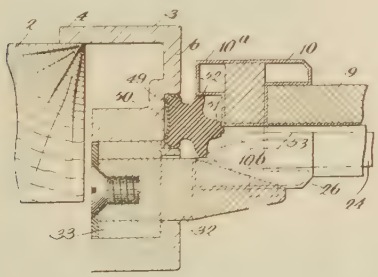


1. An electrically heated vessel having a well depending from the bottom thereof, a heating element surrounding said well and a cup enclosing said heating element.

1,417,075. PRODUCTION OF HEAT AND ITS APPLICATION FOR HEATING LIQUIDS AND OTHER PURPOSES. DAN LA COUR, Charlottenlund, near Copenhagen, and CECIL VILHELM SCHOU, Copenhagen, Denmark. Filed Sept. 30, 1915. Serial No. 53,474. 4 Claims. (Cl. 44—3.)

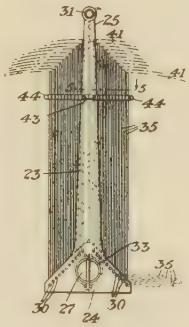
2. A heating cartridge comprising a capsule, a non-carbon combustible mixture contained therein, an igniting mixture comprising magnesium and a stable oxide of a heavy metal and not readily inflammable per se, said igniting mixture being disposed within a cavity in said combustible mixture.

1,417,076. WINDSHIELD. ALBERT L. LAMBERT, Narbeth, and ALFRED BELL, Philadelphia, Pa., assignors to American Motor Body Company, Philadelphia, Pa., a Corporation of Delaware. Original application filed Jan. 29, 1920, Serial No. 354,834. Divided and this application filed Mar. 2, 1921. Serial No. 449,009. 5 Claims. (Cl. 296—93.)



1. In a wind shield, the combination of fixed side frame members having vertical channels therein, upper and lower wind shields pivotally secured to said members to extend between the same, said shields extending in parallel planes when closed, overlapping at their respective lower and upper edges, and continuous wiping strips mounted in said channels and extending substantially from top to bottom of said members, said strips being so formed and positioned as to make contact with the edges of both said shields when the latter are closed.

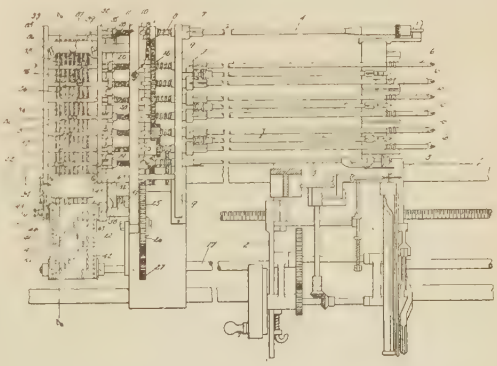
1,417,077. PRINT-WASHING DEVICE. VERA F. LANGTON and JAMES J. UNDERWOOD, New York, N. Y. Filed July 8, 1915, Serial No. 38,825. Renewed Oct. 19, 1921. Serial No. 508,829. 21 Claims. (Cl. 95—98.)



1. In a device of the class described, a washing tank provided with a compartment for containing a washing bath, perforated flexible means for positioning a flexible sheet to be washed vertically in said bath and means for causing currents of liquid to pass in said bath vertically past all portions of said flexible sheet, said tank provided with an outlet below said sheet positioning means and spaced therefrom to form a compartment for the liquid below the sheets whereby all portions of the sheet is subjected to a vertically falling sheet of liquid which drains off the entire lower edge of each sheet.

12. A book form of carrier for handling wet sheets comprising a base portion and a pair of vertically disposed end standards extending upwardly from opposite ends of the base portion, a plurality of sheet carrying frames positioned between and having their lower edges pivotally supported in the end standards whereby each frame can be lowered into a horizontal position or raised into a vertical stacked position and fastening means spaced from the pivoted edge of the frames and secured to the standards for securing any number of the vertical edges of the frames to the adjacent standard on each end thereof.

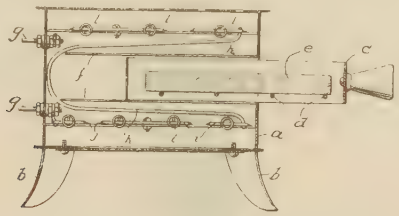
1,417,078. PATTERN MECHANISM. CHARLES LEA, Boston, Mass., assignor, by mesne assignments, to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 22, 1912. Serial No. 692,468. 51 Claims. (Cl. 28—44.)



1. In a machine having a plurality of operating parts to be intermittently actuated, a series of clutch members

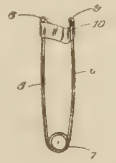
for intermittently controlling said respective parts, a common actuator for all of said clutch members as a group, and pattern-controlled devices for rendering effective selected clutch members.

1,417,079. ELECTRIC HEATING DEVICE. WILLIAM F. LEBZELTER, Elizabethtown, Pa., assignor, by mesne assignments, to Earl M. Miller, Elizabethtown, Pa. Filed Feb. 3, 1921. Serial No. 442,022. 3 Claims. (Cl. 219—19.)



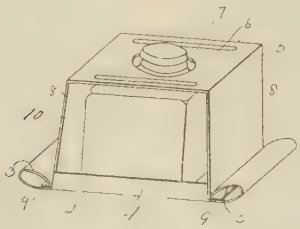
1. An electric heating device comprising a body, a plurality of bus bars, perforated adjacent their edges, supported by said body, and a plurality of coiled resistance wires the ends of which are hooked for engagement with said bars.

1,417,080. SAFETY PIN. GUST LETMOLEE, Kandahar, Saskatchewan, Canada. Filed Aug. 24, 1921. Serial No. 494,806. 2 Claims. (Cl. 24—156.)



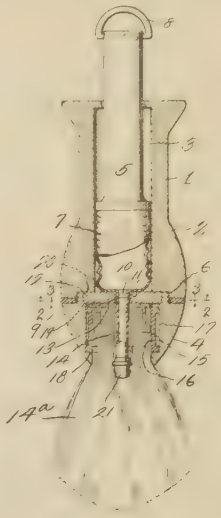
1. A safety pin of the character described comprising in combination a body member, a piercing member, a coil spring positioned intermediate the said body and piercing members, locking mechanism substantially mounted on the upper terminal of the said body member, said locking member comprising a flat piece of metal bent around and substantially mounted to the upper terminal of the said body member, a portion extending from the said terminal of the said body member, in spaced relation to the terminal of the said piercing member, a wall cottised angularly from the said extending portion, a semi-circular configuration at the terminal of the said wall, a lug on the said semi-circular configuration, and an arcuate terminal on the said lug.

1,417,081. INK-BOTTLE HOLDER. WALTER B. MCCONNELL, Philadelphia, Pa. Filed June 8, 1921. Serial No. 476,048. 6 Claims. (Cl. 120—73.)



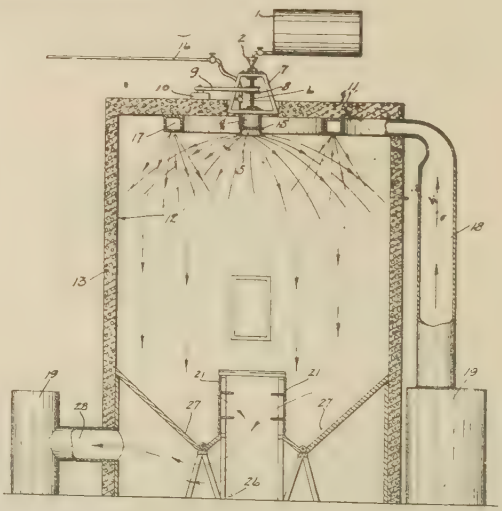
2. An ink bottle holder consisting of a base and a body, said base having an overlapping flange at each end and said body including side walls having an outward tension and provided with outwardly projecting flanges contacting with the overlapping flanges and normally held in engagement therewith by the outward tension of said side walls.

1,417,082. FOUNTAIN SHAVING BRUSH. VINCENT J. MCNAMARA, New York, N. Y. Filed Nov. 1, 1921. Serial No. 512,027. 2 Claims. (Cl. 15—135.)



1. A shaving brush comprising a handle member, said handle member being provided with a detachable chambered end, a shoulder carried at the lower end of the detachable chambered end, a bristle carrying member disposed on the shoulder of the detachable chambered end of the handle and disposed within the chamber thereof, a disc disposed in the upper end of the chamber of the detachable chambered end of the handle, a soap conducting tube extending downwardly from said disc and terminating in the bristles of the brush, a resilient member carried by said tube, a plunger slidably mounted in a chamber of the handle member, and means whereby a collapsible soap tube may be supported on the disc with its discharge opening in registration with the tube carried by the disc and in registration with the plunger.

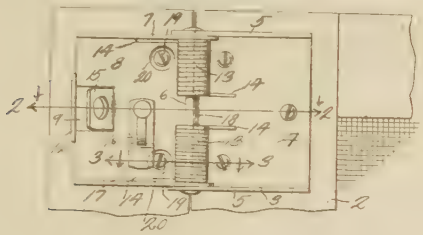
1,417,083. REDUCING SEMIFLUID FOOD SUBSTANCES TO DRY POWDERED FORM. JOHN C. MACLACHLAN, St. Paul, Minn. Original application filed Aug. 2, 1920. Serial No. 400,571. Divided and this application filed Apr. 9, 1921. Serial No. 460,057. 9 Claims. (Cl. 99—5.)



5. The process of preparing a breakfast food from oatmeal which consists in thoroughly cooking the oatmeal,

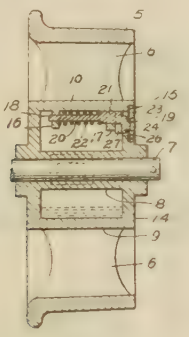
discharging the same while in a semi-fluid condition centrifugally in an umbrella like shower, directing a blast of hot dry steam through said shower to disintegrate the same, and directing a blast of heated air through said shower to form a dry coarse powdered material.

1,417,084. SPRING HINGE. FRANK X. MAIER, Sterling, Ill. Filed Nov. 1, 1921. Serial No. 512,029. 2 Claims. (Cl. 16—188.)



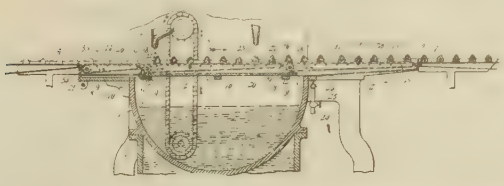
2. A spring hinge comprising hingedly connected leaves, springs for normally forcing said leaves towards an aligned position, a lug carried by one of said leaves, a member pivoted to the other leaf and adapted to be moved into engagement with the lug of the adjacent leaf for holding the leaves in angular positions in relation to each other.

1,417,085. MINE-CAR WHEEL. CHARLEY MALT, Irwin, Pa. Filed June 1, 1921. Serial No. 474,306. 3 Claims. (Cl. 64—26.)



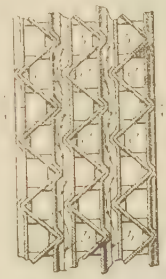
1. The combination with a mine car axle, of a wheel journaled thereon and having a hub-bearing member slotted to provide a lubricant passage, a chamber surrounding the bearing member and having a curved outer wall provided with an offset, a filling device within said offset and feeding fingers extending from said hub-bearing member to said curved wall for guiding lubricant through said lubricant passage.

1,417,086. CONFECTIONERY-COATING MACHINE. JOHN MASSARELLA, Cincinnati, Ohio. Filed Jan. 31, 1920. Serial No. 355,531. 10 Claims. (Cl. 91—3.)



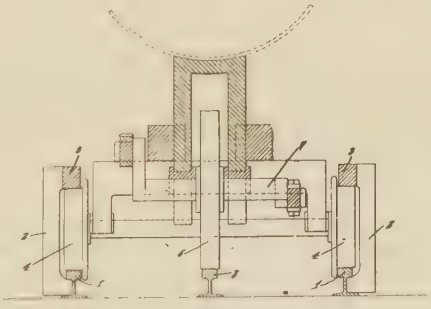
1. In a machine of the character described, a conveyor having a confection-receiving side, and having openings for passage of coating material downwardly through said conveyor, means for driving said conveyor, means for dropping coating material on said side of said conveyor, and means for catching some of said material and reapplying the caught material directly to said side of said conveyor, whereby some of said reapplied material is applied to the bottoms of confections placed on said reapplied material and some of the dropping material is applied to the upper parts of said confections.

1,417,087. RADIATOR CONSTRUCTION. PETER MATHES, Chicago, Ill. Filed Jan. 5, 1920. Serial No. 349,492. 6 Claims. (Cl. 257—130.)



1. A plurality of tubes each comprising a plurality of plates offset between their edges to substantially provide a channel web and a pair of side flanges, said tubes secured together at their flanges, the plates having inwardly extending ribs between the flanges and arranged with the ribs of one disposed substantially midway between the ribs of the other, said ribs terminating flush with the plane surface of their channel webs, and a spacing member arranged between the tubes and secured thereto, said spacing member having means interengaging with said tubes for preventing relative lateral movement therebetween.

1,417,088. RAILWAY. PEYTON L. MATHEWS, Baton Rouge, La. Filed Feb. 24, 1921. Serial No. 447,530. 1 Claim. (Cl. 105—144.)

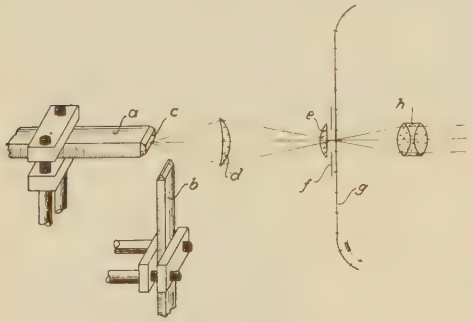


The combination with track rails and a third rail therebetween, of guard rails above and parallel with the track rails, a motor vehicle having wheels mounted on the track rails and extending under and retained by the guard rails, said wheels supporting a portion of the weight of the vehicle, and being flanged, and a flangeless power driven propelling wheel bearing on the third rail and supporting a portion of the weight of the vehicle.

1,417,089. ILLUMINATING DEVICE FOR MOVING-PICTURE APPARATUS. EMIL MECHAU, Rastatt, Germany. Filed May 7, 1921. Serial No. 467,588. 3 Claims. (Cl. 88—24.)

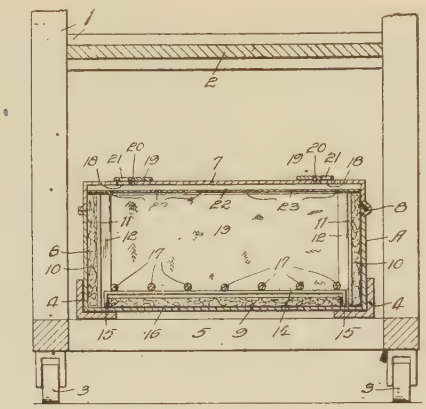
3. In an illuminating device for moving picture apparatus in combination, a positive and a negative carbon of rec-

tangular cross-section of an electric arc lamp and a collecting optical system of suitable focal length so related there-



to that the crater of the arc lamp is reproduced in the projector gate of the apparatus.

1,417,090. SOLE-TEMPERING BOX. CHARLES M. MELLAGE, St. Louis, Mo. Filed Dec. 6, 1920. Serial No. 428,514. 3 Claims. (Cl. 12—1.)



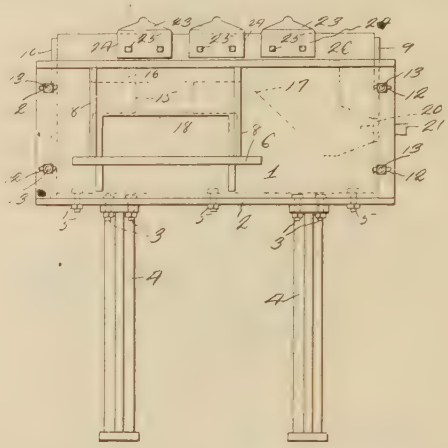
1. A shoe sole tempering box comprising a box like member having a hinged top, means positioned within said box for supplying moisture thereto for retaining the temper of shoe soles stored therein and means for ventilating said shoe sole tempering box.

1,417,091. LIQUID DAM PREPARATION. EDWARD C. MILLER, Williamsport, Pa. Filed Sept. 30, 1920. Serial No. 413,934. 1 Claim. (Cl. 167—9.)

A liquid dam preparation comprising a solution of alcohol, menthol in an amount sufficient to produce an astringency and dehydration of the tissue, and substantially one-half of one per cent of formaldehyde.

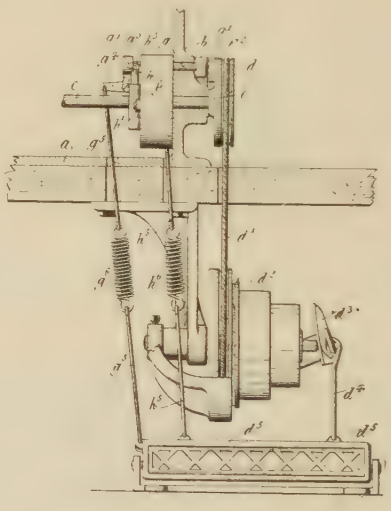
1,417,092. CRUDE-OIL-BURNING FURNACE. RICHARD MOELLER and OSCAR OTTERSON, Michigan City, Ind. Filed Aug. 13, 1920. Serial No. 403,435. 1 Claim. (Cl. 263—43.)

A furnace comprising a heating chamber and an elongated combustion chamber, one end of said combustion chamber being disposed above the heating chamber and having a passage of communication vertically disposed with the heating chamber, said combustion chamber extending downwardly to one side of the heating chamber, means for projecting fuel into the downwardly extending end of the combustion chamber, a metallic casing for the furnace comprising bottom, end and side plates, an aperture in one of the end plates in registration with the downwardly extending end of the combustion chamber for the



reception of a burner, transversely disposed clamping members for holding the upper end of the furnace, and means whereby the metallic sides and ends may move in relation to each other incident to expansion.

1,417,093. STOPPING MECHANISM FOR SEWING MACHINES, ETC. GEORGE E. MOLYNEUX, Bayonne, N. J. Filed July 25, 1917. Serial No. 182,603. 7 Claims. (Cl. 192—116.)

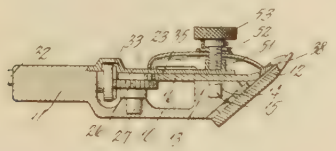


1. In a stopping mechanism, the combination of a relatively stationary member, a rotatable member, means to effect positive connection of said members, and a dashpot in operative relation with the connecting means to retard the operation thereof.

1,417,094. HAIR CLIPPER. COLLIER MONROE, Waco, Tex. Filed Mar. 25, 1922. Serial No. 546,553. 4 Claims. (Cl. 30—1.)

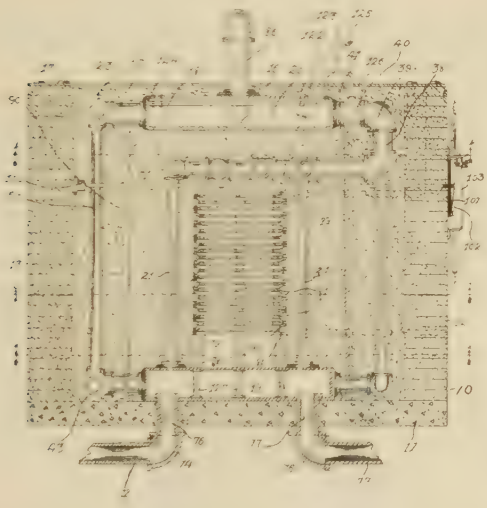
1. In a hair clipping device, a casing, a cutter blade carried at the front end of the casing, a reciprocating cutter blade operating on the first named cutter blade, an operating lever having a depending pivot element mounted in the casing and engaged with the reciprocating blade, means for swinging the lever to reciprocate said blade, a cover plate mounted on the casing and combining the lever in

position, a tension plate having one end resting on the cover plate and the other end engaging the reciprocating blade, a thumb screw passing through the tension plate



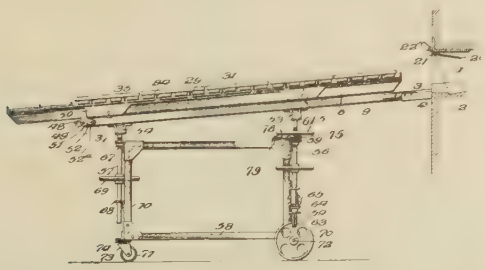
and engaging the cover plate, and a spring means between the screw and the plate for placing the latter under tension.

1,417,095. FURNACE. ROBERT P. MOODIE, Ottawa, Ontario, Canada, assignor of one-third to William Henry McIntyre and one-third to Adolphe Alfred Dion, Ottawa, Ontario, Canada. Filed Nov. 26, 1920. Serial No. 426,573. 20 Claims. (Cl. 219—38.)



1. A heat generating furnace, comprising a casing, water reservoirs mounted within said casing and connected with a water supply, heat generating elements arranged in said casing, a series of pipes connecting said reservoirs and surrounding said heat generating elements and means for heating said elements.

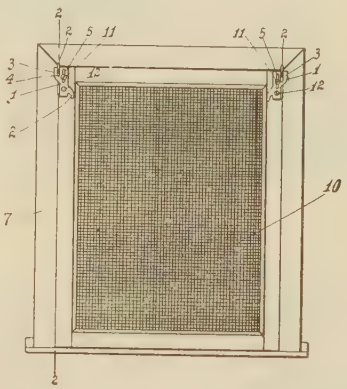
1,417,096. OVEN TRUCK. GEORGE MUELLER, Salt Lake City, Utah. Original application filed Aug. 23, 1920, Serial No. 405,362. Divided and this application filed Aug. 23, 1920. Serial No. 405,364. 7 Claims. (Cl. 107—56.)



1. An oven truck comprising a frame provided at one end with a single centrally arranged adjusting screw and having at the other end spaced double adjusting screws, a fixed nut mounted on the frame and engaging the single adjusting screw, an adjustable nut mounted on the frame and provided with operating means engaging the double adjusting screws, gearing connecting the double adjusting screws, means for rotating the double adjusting screws, and a tray carrying frame mounted upon and supported by the said screws and adapted to be arranged either in a horizontal or inclined position.

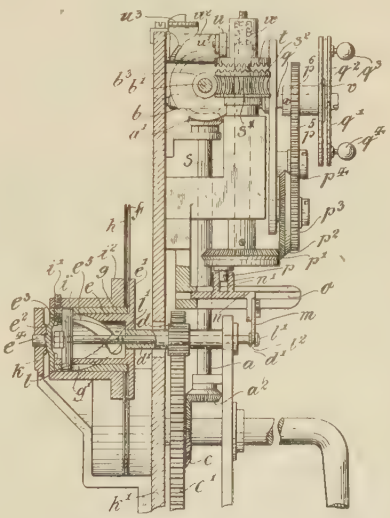
6. An oven truck including a truck frame, an adjustable superimposed track carrying frame comprising rails, spaced connecting bars arranged in pairs and central and side blocks secured between the connecting bars and provided with sockets, center and side adjusting screws mounted on the truck frame and arranged at opposite side of one end of the truck and at the center of the other end thereof and fitting in the screws and means for adjusting the screws.

1,417,097. WINDOW-SCREEN HINGE. HENRY MULLER, Oakland, Calif. Filed Jan. 25, 1921. Serial No. 439,748. 1 Claim. (Cl. 16—172.)



A hinge including a pair of leaves, a hook extending from one corner of each leaf, an offset on each leaf diagonally opposite the hook of the leaf, the offset of each leaf having a slot to receive the hook from the other leaf, and means for securing the leaves in position.

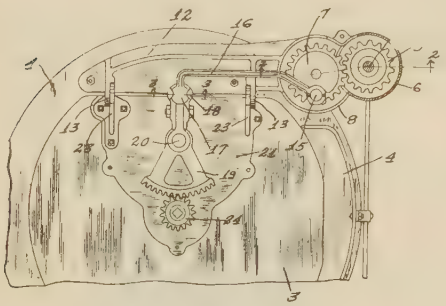
1,417,098. SHUTTER MECHANISM FOR MOTION-PICTURE MACHINES. ERIK W. NELSON, New Rochelle, N. Y. Filed Aug. 4, 1919. Serial No. 315,093. 5 Claims. (Cl. 88—19.3.)



1. In a motion picture camera, in combination with the main drive shaft, a plurality of shutter segments,

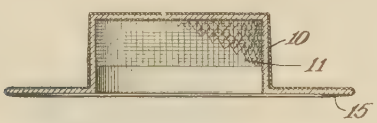
devices for changing the angular relation of the segments, and means to connect said devices operatively with the main drive shaft including a shaft operatively connected with said devices, a gear loosely mounted on the shaft, a second shaft driven from the main shaft and carrying a gear in mesh with the first named gear, and a slidable clutch element splined on the first named shaft and engageable with the first named gear.

1,417,099. OPERATING MECHANISM FOR WASHING MACHINES. JOHN NELSON and GEORGE SEEDS, Newton, Iowa, assignors to Automatic Electric Washer Co., Inc., a Corporation of Iowa. Filed May 26, 1921. Serial No. 472,675. 2 Claims. (Cl. 74—50.)



1. In a washing machine having a cover hinged to the top thereof, a driven shaft journalled in said cover and having a gear at its upper end, a gear segment pivoted to said cover and meshing with said gear, said gear segment having a power arm provided with a socket at its end, a pitman having a spherical knob operatively connected in said socket and means for reciprocating said pitman.

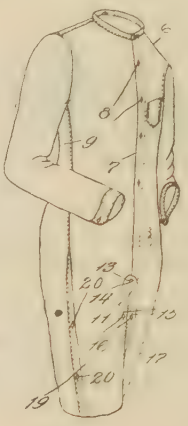
1,417,100. WATERPROOF HAT PROTECTOR. BARNA NEWMAN, New York, N. Y. Filed Feb. 9, 1921. Serial No. 443,601. 2 Claims. (Cl. 2—108.)



1. A hat protector comprising a covering member having a marginal portion adapted to project inwardly under the brim of the hat, said marginal portion being radially slit into several sections and having its edge backturned to form an annular chamber, an elastic band extending partially around said chamber, cords attached to the ends of said band, and means for preventing withdrawal of the ends of the said band from the sections of the said marginal portion in which they are engaged.

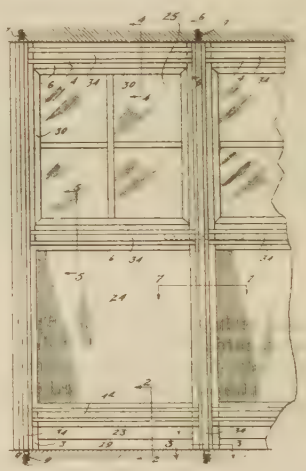
1,417,101. SHIRT. PHILIP H. NOLTING, St. Louis, Mo. Filed July 16, 1919. Serial No. 311,300. 1 Claim. (Cl. 2—144.)

The improvement in shirts comprising a coat-shirt having a back section provided with a gore; a substantially rectangular crotch-piece secured at its rear edge to the edge of said gore; and having central and side button-holes along its free edge; two front flaps extending downwardly from the front of the shirt, one of said flaps being permanently secured to the back section and the other of said flaps being secured to the meeting



edge of the back sections by buttons and so arranged to be opened while leaving the crotch-piece in closed position.

1,417,102. SHEET-METAL PARTITION. JOHN O. NYMAN and JOHN P. PEARSON, Canton, Ohio. Filed May 29, 1920. Serial No. 385,177. 8 Claims. (Cl. 189—34.)



1. In a metallic partition, a hollow upright formed of two channel shaped members, each of said channel shaped members having a central, inwardly disposed portion, panels located between the channel members of said uprights and bolts located through the channel portions of the channel members for clamping the upright together upon the edge portions of the panels, and filler strips located in said channel portions and covering said bolts.

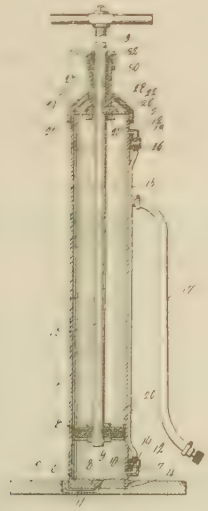
1,417,103. OIL COMPOSITION. JAY I. O'BANION, Seattle, Wash. Filed Jan. 16, 1922. Serial No. 529,794. 5 Claims. (Cl. 134—54.)

4. A method of compounding an oil composition consisting in boiling fifty gallons of raw linseed oil and s ven pounds of vulcanized rubber for approximately four hours at 440 degrees temperature, cooling the mixture, and then adding five gallons of benzine and five gallons of liquid drier.

1,417,104. WINDOW-SCREEN ADJUSTER. PETER CAROL PACHESA, Taylor Springs, Ill. Filed May 6, 1921. Serial No. 467,246. 1 Claim. (Cl. 156—39.)

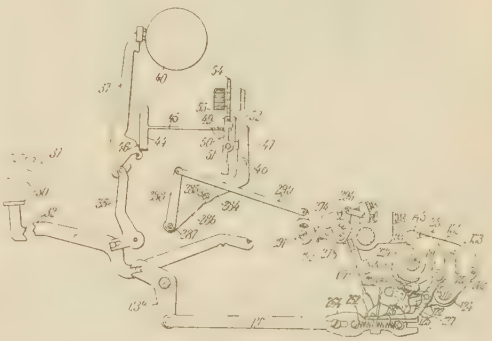
In a screen adjuster, the combination with a window frame, a sash operable therein, the sill of said frame containing a narrow passage extending the width of the window opening, of a roller rotatably mounted below said sill and extending from jamb to jamb of said frame, a bracket secured on the outside of one of said jambs, a spindle fixed in said roller extending through said jamb and said bracket, a flat spiral spring fixed at one end to said bracket and at the other to said pintle, a ratchet wheel on said spindle, a pawl engageable with said ratchet wheel, said pawl being operable from the exterior of the window frame, and a screen passing through said passage and engaged at its ends respectively with said sash and said roller.

1,417,105. DOUBLE-ACTION PUMP. EDWARD E. PIGG, Weatherford, Okla. Filed June 24, 1920. Serial No. 391,376. 2 Claims. (Cl. 230—27.)



1. A double acting pump comprising a cylinder, a by-pass communicating with the upper and lower ends of the cylinder and leading to a common outlet, a check valve at each end of the by-pass, an air inlet valve for the lower end of the cylinder, a piston in the cylinder, a cap for the upper end of the cylinder through which the piston passes, an air inlet valve for the upper end of the cylinder frictionally mounted upon the upper end of the piston, and a partition carried by the cap and spaced from the top thereof for limiting the movement of the valve carried by the piston.

1,417,106. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY L. PITMAN, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Mar. 13, 1919. Serial No. 282,277. 66 Claims. (Cl. 235—59.)



1. In a combined typewriting and computing machine, the combination of a driving shaft, a driven shaft, a series of computing units through the medium of which the driven shaft may be rocked through different angular distances to compute values from one to nine, inclusive, each computing unit comprising a cam on the driving shaft, adapted to co-operate with an arm on the driven shaft, and a stop to limit the movement of said driven shaft, a series of actuating elements, one for each computing unit, devices connected to said actuating elements, said stops being of various lengths and forming parts of said devices, co-operating members on said driven shaft to co-operate with said stops, and adjusting screws to facilitate individual adjustmens between said devices and said stops.

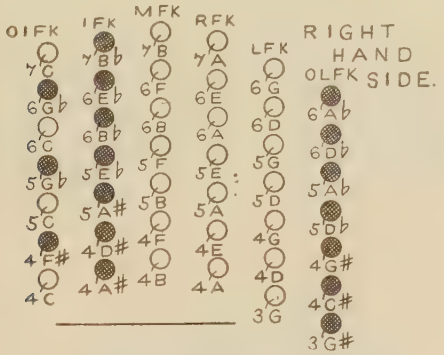
31. In a combined typewriting and computing machine, the combination of number-printing devices, computing mechanism, actuating mechanism for said computing mechanism, adapted when started by a number-printing device to act through one complete cycle, and means to prevent separate impressions of the same number without effecting computations of the same.

65. In a combined typewriting and computing machine, the combination with computing mechanism and number-keys, of driving means to actuate said computing mechanism, a holding pawl for said driving means, key-controlled means to actuate said holding pawl to release said driving means, and means to release said holding pawl from said key-controlled means after the driving means has been released.

1,417,107. CONCERTINA KEYBOARD. FRANCIS STANHOPE PITT-TAYLOR, Blackpool, England. Filed Nov. 11, 1919. Serial No. 337,353. 3 Claims. (Cl. 84—37.6.)

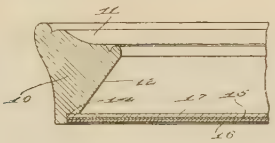
2. A keyboard with the keys grouped in pairs of rows of six, the keys of every pair being able to sound when pressed the naturals and the chromatics of one octave, those for the chromatic sounders being for one row the three outermost keys one on the one side and two on the other side of one row, and for the other row one outermost key on one side and one key next to an outermost key on the other side of the other row sounding in the first row the notes C sharp, D sharp and F sharp, and in the other

row G sharp and A sharp; every alternate row having keys for chromatic sounders of the same name and in the



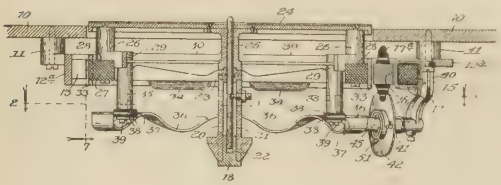
same position that only differ from each other by being in octaves of lower or higher pitch substantially as described.

1,417,108. PICTURE FRAME. BENJAMIN PROCTOR, Jr., Wellesley Hills, Mass. Filed Oct. 11, 1921. Serial No. 506,952. 2 Claims. (Cl. 40—152.)



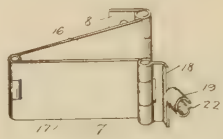
1. A picture frame having its moulding so arranged that the plane of the sight is in advance of the plane of the picture to be placed in said frame and the area of said sight smaller than the exposed area of said picture, the space between the plane of said sight and the plane of said picture being empty and unobstructed, whereby an illusion of heightened perspective or an added distance effect is given to said picture.

1,417,109. PHONOGRAPH DRIVE MECHANISM. HENRY K. SANDELL, Chicago, Ill., assignor to H. S. Mills, Chicago, Ill. Filed Apr. 11, 1921. Serial No. 460,229. 6 Claims. (Cl. 171—222.)



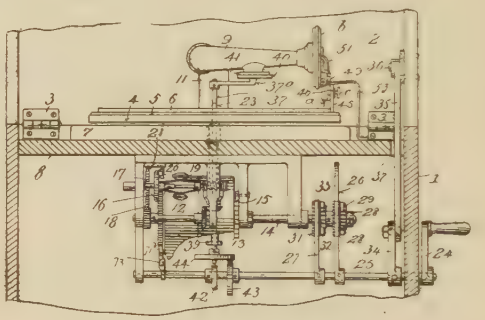
1. In a dynamo-electric drive for phonographs, a rotor secured to the phonograph table, said rotor comprising a magnetic ring, and a plurality of series connected windings at spaced angular intervals around the ring, a stator having a plurality of angularly spaced series connected pole windings and means for passing intermittent direct current impulses simultaneously through the stator and rotor windings, said means comprising a contact ring having a sine-wave contour, an oscillatable fork straddling the ring, said fork having on each side of the ring a contact member and a friction member spaced apart one-half of a wave of the ring, the contact member on each side facing the friction member on the other and being spaced therefrom somewhat more than the thickness of the ring whereby the contact members make contact with the ring simultaneously over one-half of each wave of the ring.

1,417,110. WINDOW HINGE. FREDERICK SCHLAIS, Brooklyn, N. Y. Filed July 13, 1921. Serial No. 484,311. 6 Claims. (Cl. 292—263.)



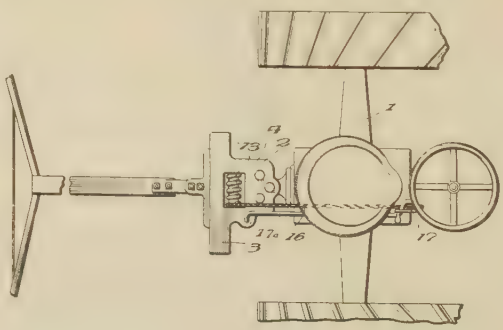
1. A hinge comprising an attaching plate, a rod secured to the sash of a window, a housing adapted to slide along said rod, and a folding part interposed between said housing and said attaching plate.

1,417,111. TALKING MACHINE. SIGMUND SCHLESINGER, New York, N. Y. Filed June 12, 1919. Serial No. 303,560. 19 Claims. (Cl. 274—14.)



1. A talking machine comprising a casing, a sound arm pivotally supported upon the casing for vertical and lateral movements, a rock shaft journalled in the casing and means co-operative between the shaft and sound arm for raising the arm and swinging it to one side when the shaft is operated in one direction and to swing the arm reversely and lower it when the shaft is operated in a reverse direction and means to manually rock the shaft in opposite directions.

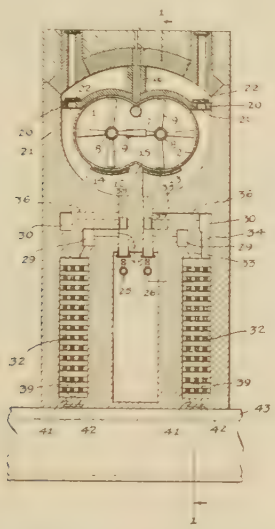
1,417,112. DRAFT APPLIANCE. ELI G. SHOCKEY, Sand Patch, Pa. Filed July 7, 1921. Serial No. 482,969. 3 Claims. (Cl. 213—67.)



1. In a draft appliance, a guide bar having a longitudinal slot therein providing shoulders, and a vertically ex-

tending opening with which a portion of the slot communicates, an elongated draft bar located in said slot and engaging said shoulders, teeth formed on one edge of the draft bar, and a worm in said opening for cooperating with said teeth.

1,417,113. FURNACE RETORT. CHARLES HOWARD SMITH, Short Hills, and EDWARD B. EDWARDS, East Orange, N. J., assignors to International Coal Products Corporation, Richmond, Va., a Corporation of Virginia. Filed June 10, 1919. Serial No. 303,222. 5 Claims. (Cl. 202—9.)

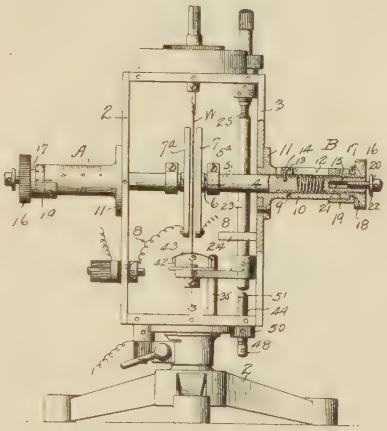


1. A furnace-retort construction having a longitudinally extending retort shell, combustion spaces exteriorly arranged along and on opposite sides of the longitudinally extending retort shell, each of which combustion spaces is located both below and at a side of the retort shell, burners for supplying fuel to the interior of the combustion spaces in a manner whereby alternate combustion spaces along each longitudinal half of the retort will receive fuel at a time when the other combustion spaces are serving as flues through which the products of combustion can pass on their way from the combustion spaces to which the fuel is being supplied, a longitudinally extending flue above the retorts itself and the combustion spaces at the side of the retort, each combustion space being in communication with the said longitudinally extending flue above it, main flues, a passageway extending between each of the combustion spaces and a main flue corresponding to the combustion space, and a regenerator, the construction being such that at one interval combustion is taking place in one half of the combustion spaces being supported by air flowing inwardly through one portion of the regenerator and so that at the same time the products of combustion are passing into and from the other half of the combustion spaces, thence inwardly through another portion of the regenerator, the construction also being such that these conditions can be successively reversed.

1,417,114. ELECTROMETER. FRED R. SOMMER, Brooklyn, N. Y. Filed June 15, 1920. Serial No. 389,109. 10 Claims. (Cl. 171—95.)

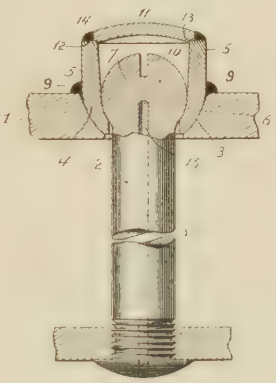
1. In an electrometer, the combination with the casing and the test wire, of a pair of pole plate units carried by the sides of the casing, each unit including a tubular support, a pole plate carrying shaft adjustable therein, means for accurately shifting the pole plate carrying shaft, and means for preventing the movement of the same beyond a predetermined inward limit.

8. In an electrometer, the combination with the casing and the test wire, of means for adjusting the tension of the test wire including a post arranged in a plane parallel to the test wire, and having a threaded end portion, a feel nut engaging with said threaded end portion of the post and having an externally threaded sleeve portion, lock nuts



carried by the sleeve portion of the feed nut to maintain the latter relatively fixed with respect to the casing, an off-set arm carried by the said post, and means carried by the off-set arm for engaging with the test wire.

1,417,115. STAY-BOLT STRUCTURE. BENJAMIN E. D. STAFFORD and ETHAN I. DODDS, Pittsburgh, Pa., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Sept. 10, 1919. Serial No. 322,880. 3 Claims. (Cl. 85—1.5.)

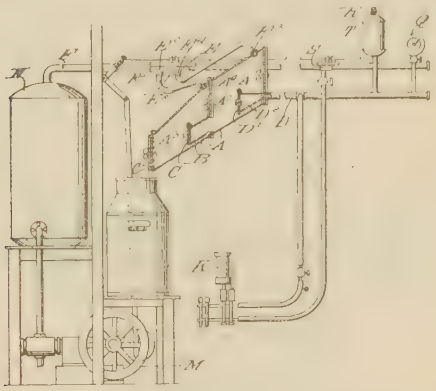


1. The combination with a boiler sheet having an opening, of a bearing member having initial universal mounting on the wall of said opening and permanently sealed to the boiler sheet, said bearing member permanently closed at its outer end, and a staybolt having a headed end mounted in said bearing member and having a tell-tale-hole extending from within said headed end to the other end of the bolt.

1,417,116. MILKING MACHINE. WILLIAM FREDERICK TURK and SIMON NIELSEN, Brisbane, Queensland, Australia. Filed Oct. 21, 1920. Serial No. 418,501. 7 Claims. (Cl. 31—101.)

1. In improvements in or relating to milking machines, a vessel having a receiver compartment and an ejector compartment, a milk pipe leading into said receiver, a valve on the end of said milk pipe, a valve on the outlet from said receiver to said ejector and a valve on the outlet from said ejector, and means for controlling the

alternate admission and withdrawal of air to and from said receiver and said ejector, alternately.



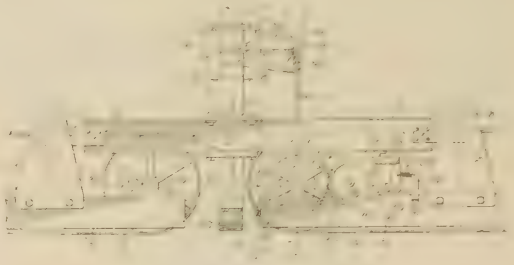
3. In improvements in or relating to milking machines, a pulsator having a port communicating with a vacuum pipe, a port which may be connected with a receiving compartment of a releaser, a port which may be connected with an ejector compartment of a releaser, a passage and port leading from said second mentioned port, means for controlling the passage of air through said passage and port, a slide in said pulsator adapted to close and open either of said ports.

5. In improvements in milking machines, a passage having a receiver compartment and an ejector compartment, a milk pipe leading into said receiver, a valve on the end of said milk pipe, a valve on the outlet from said receiver to said ejector, a valve on the outlet from said ejector, a pulsator having a port communicating with a vacuum pipe, a port communicating with said receiver compartment, a port communicating with said ejector compartment, a passage and port leading from said second mentioned port, means for controlling the passage of air through said passage and port, a slide in said pulsator adapted to close and open either of said ports, pipes for forming communication between said ports and said compartments, a teat cup, and a lining for said cup of uniform thickness having a number of indentations therein deeper and wider at the top and tapering to a point at the bottom.

6. In improvements in milking machines, a passage having a receiver compartment and an ejector compartment, a milk pipe leading into said receiver, a valve on the end of said milk pipe, a valve on the outlet from said receiver to said ejector, a valve on the outlet from said ejector, a pulsator having a port communicating with a vacuum pipe, a port communicating with said receiver compartment, a port communicating with said ejector compartment, a passage and port leading from said second mentioned port, means for controlling the passage of air through said passage and port, a slide in said pulsator adapted to close and open either of said ports, pipes for forming communication between said ports and said compartments, a teat cup and a lining for said cup of uniform thickness having a number of substantially semispherical indentations therein.

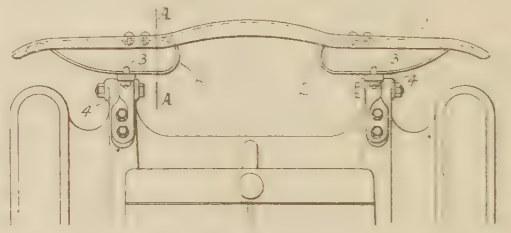
7. In improvements in or relating to milking machines, a vessel having a receiver compartment and an ejector compartment, a milk pipe leading into said receiver, a valve on the end of said milk pipe, a valve on the outlet from said receiver to said ejector, and a valve on the outlet from said ejector, a pulsator having a port communicating with a vacuum pipe, a port communicating with said receiver compartment, a port communicating with said ejector compartment, a passage and port leading from said second mentioned port, means for controlling the passage of air through said passage and port, a slide in said pulsator adapted to close and open either of said ports, and pipes for forming communication between said ports and said compartments, a teat cup, a lining or inflator for said teat cup having a number of indentations therein.

1,417,117. CUTTING MACHINE. ALVA W. TYLER, Chicago, Ill., assignor to The American Cement Plaster Company, Chicago, Ill., a Corporation of Kansas. Filed Nov. 15, 1919. Serial No. 338,190. 16 Claims. (Cl. 164—48.)



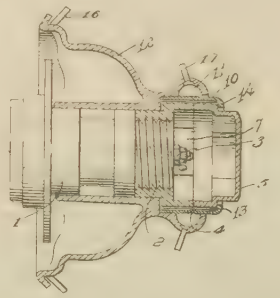
1. In a machine for cutting lengths from a continuously fed strip, a horizontally reciprocable frame, a cutter bar vertically movable in said frame, a member carried by said frame and co-acting with said cutter bar, a fluid actuating member carried by said cutter frame and connected with said cutter bar to move the same towards its co-acting member, means for reciprocating said frame at predetermined intervals, controlling means for said fluid member, and means operable in the forward movement of said frame for actuating said controlling means.

1,417,118. BUMPER FOR MOTOR VEHICLES. PER UTNE, South Orange, N. J. Filed Feb. 28, 1922. Serial No. 540,027. 2 Claims. (Cl. 293—55.)



1. A bumper comprising a bar; and a pair of springs, one end portion of each spring being bent in a half circle and secured at that end to the bar, and the other end pressing against the bar and having a sliding engagement therewith.

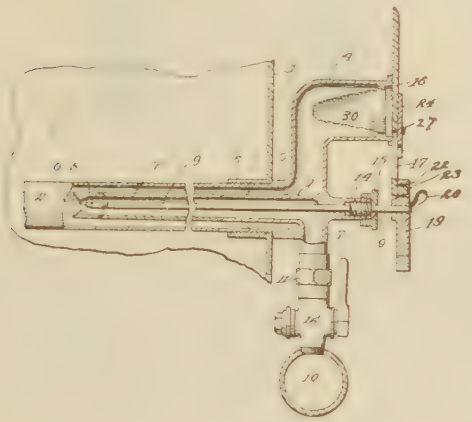
1,417,119. WHEEL HUB. MORTON VAN METER, Cadillac, Mich., assignor to Simplex Wire Wheel Company, Cadillac, Mich., a Corporation of Michigan. Filed July 7, 1920. Serial No. 394,431. 7 Claims. (Cl. 301—9.)



1. The combination of an inner hub member, an outer hub member, the inner hub member having terminal right hand screw threads, a two part cap therefor comprising an inner and an outer cap part revolubly mounted within

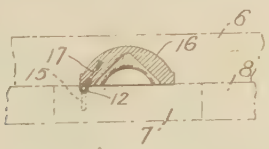
the outer hub member, the inner cap part having threads for engaging the threaded end of the inner hub member and being also provided with a pair of rectangular notches, a flat spring secured to the inner cap part adjacent each notch and extending therethrough, the outer cap part being provided with a pair of lugs adapted to engage in the said notches when assembled and a left-hand threaded retainer in threaded relation with the outer hub member having a series of serrations on the inner face thereof in which the spring ends engage, the retainer being also provided with a flange engaging over the outer cap member.

1,417,120. AIR VALVE FOR GAS BURNERS. EUGENE W. VEST, Mulberry Grove, Ill. Original application filed Dec. 13, 1919, Serial No. 344,566. Divided and this application filed July 30, 1920. Serial No. 400,148. 1 Claim. (Cl. 158—119.)



An air and gas valve for the burners of stoves, ranges and furnaces, comprising a Bunsen gas-burner casting, a gas-valve stem, an air-throat, an air-valve arranged to control the entrance of air to said air-throat, a cam on said gas-valve stem, a connecting means between said cam and said air-valve whereby both will move simultaneously when said stem is rocked or rotated, and an adjustable plate on said air-valve, for varying the size of the normal opening to said air-throat.

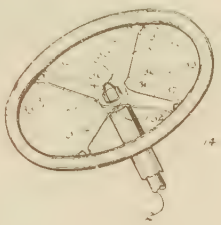
1,417,121. CIGAR-HOLDER CASE, PIPE CASE, OR SIMILAR RECEPTACLE. JOHN N. WHITEHOUSE, New York, N. Y. Filed May 6, 1920. Serial No. 379,252. 1 Claim. (Cl. 206—1.)



As a new article of manufacture, a receptacle and a cover therefor both composed of compressed baked wood-powder, cooperating hinge plates having their body portions arranged respectively within the walls of the receptacle and the cover with eyes of the plates projecting beyond the end surfaces of said walls, the walls of the receptacle and cover being first compressed and thereafter baked around the hinge members, and a connection between the eyes of the hinged plates.

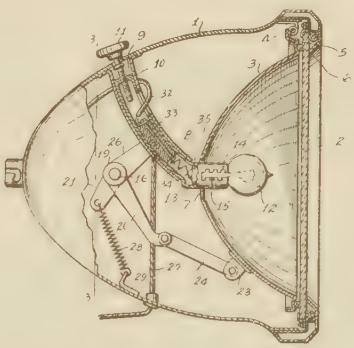
1,417,122. STEERING WHEEL. LEON E. WILLETT, Detroit, Mich. Filed Apr. 2, 1921. Serial No. 457,910. 3 Claims. (Cl. 74—33.)

1. In a hand wheel, the combination with a continuous annular rim, of a spider comprising a hub having an annular substantially radial surface and a neck projecting therefrom, a plurality of spokes adapted to be individually attached at their outer ends to the rim, and each having formed at its inner end an arcuate foot constituting a segment of an annulus corresponding to the annular surface of the hub and having a stud protruding transversely



thereof, the feet of said spokes being adapted to be nested together on the annular surface of said hub and about its neck and the hub having provided in its annular surface a socket for receiving the stud of each of the said spokes, and means for holding the spokes axially to the annular surface of said hub and securing the spokes and the hub together.

1,417,123. REFLECTOR LAMP. ARTHUR CHARLES WOOD, Mansfield, Ohio, assignor, by mesne assignments, to The Mansfield Lamp and Manufacturing Company. Filed Oct. 4, 1920. Serial No. 414,508. 8 Claims. (Cl. 240—44.)

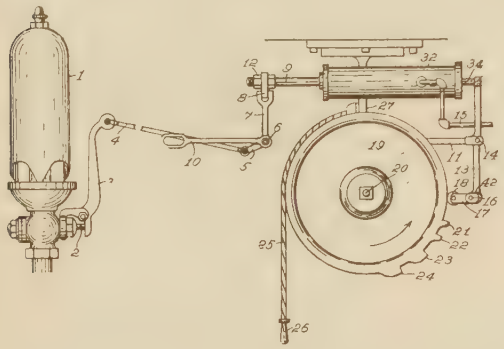


1. In a means for changing the direction of the projection of rays of light, a casing, a parabolic reflector hinged thereto, a curved bracket secured to said casing and means connected to said hinged reflector to actuate the reflector to travel in a path of the same curvature as the curved bracket and thereover.

1,417,124. SIGNAL-GOVERNING APPARATUS. ALBERTO I. WOODRING, Waterloo, Iowa, assignor to The A. I. Woodring Company, Waterloo, Iowa. Filed Dec. 8, 1921. Serial No. 520,918. 4 Claims. (Cl. 116—137.)

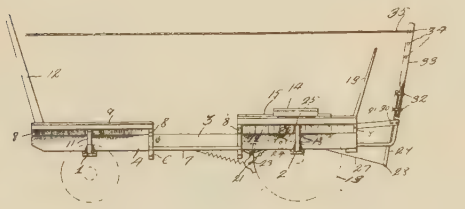
4. In combination, a signal, a manually-operable rock-body having tensioning means adapted to return the rock-body to initial position after operation and release, said rock-body having spaced circumferential projections of predetermined circumferential widths, the interspaces of said projections being of predetermined widths, a rock-lever mounted to have one end moved by said projections only while the reaction-device is reacting after release, a cylinder, a piston reciprocable therein having a rod projecting outwardly therefrom, operating connections between said piston-rod and said signal, said cylinder containing fluid-receiving and fluid-exhausting chambers, the former under constant communication with a source of fluid supply under pressure, valve-controlled ports in said chambers, valves controlling said ports operable by said piston-rod and by said lever alternately in setting and resetting, to

permit said source of fluid power to relay power impulses to said piston-rod and piston at each action of said lever, and tensioning-means operable on the valves to cause re



setting thereof, after actuation by said reaction rock-body projections of said lever and the release of the lever therefrom.

1,417,125. HAYRACK. CHARLES W. WORDEN, Dallas City, Ill. Filed June 22, 1920. Serial No. 390,785. 1 Claim. (Cl. 296—6)

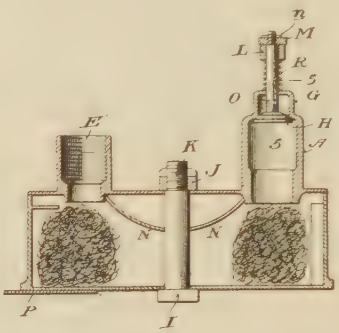


A hay rack comprising a pair of spaced converging sills adapted to rest upon bolsters of a wagon running gear, said sills having their lower edges connected together by a horizontally disposed bottom extending throughout the length and width of the space between the sills, a rectangular shaped frame surrounding the sills and having its longitudinal sides spaced from the sills, outwardly and upwardly extending platforms carried by the sills adjacent its ends and having their adjacent sides spaced from each other, horizontally disposed platforms extending outwardly from the lower edges of the sills substantially centrally thereof and apertures in the outwardly and upwardly inclined platforms for the reception of wagon stakes whereby lateral movement of the hay rack on the wagon bolsters will be prevented.

1,417,126. EXPANSION JOINT. JAY E. WUNDERLICK, Waterloo, Iowa, assignor of one-half to Charles N. Hostetler, Waterloo, Iowa. Filed May 17, 1920. Serial No. 381,935. 2 Claims. (Cl. 219—10.)

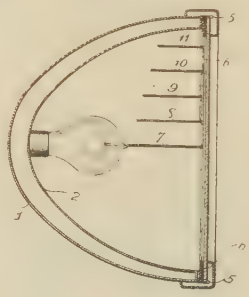
1. The method of forming an expansion joint between car-roofing plates and the like positioned to abut edge to edge in a single plane, wherein the abutted edges are upset in one direction in narrowly spaced relation, and an electrical welding device applied to both the upset edges to fuse said edges, bend the fused parts toward each other and weld them together into a closed arched joint.

1,417,127. APPARATUS FOR ADMITTING ADDITIONAL HEATED AIR INTO INTERNAL-COMBUSTION ENGINES. VICTOR YRURETA, Buenos Aires, Argentina. Filed Apr. 18, 1919. Serial No. 291,039. 1 Claim. (Cl. 123—122.)



An apparatus for supplying auxiliary heated air to internal combustion engines, comprising a metal receptacle adapted to be secured sufficiently close to the engine to be heated thereby; an upstanding valve casing on the top wall of the receptacle opening thereinto at its lower end and provided adjacent its upper end with an air inlet; a spring-controlled valve in said casing normally closing said inlet to prevent admission of air into the receptacle; an upstanding outlet member also on the top wall of the receptacle and opening therethrough; a connecting tube having one end engaged in said outlet member and the other end opening into the inlet pipe of the engine, whereby the engine suction exerted through said inlet pipe will open said valve and cause a current of atmospheric air to be drawn through said inlet successively into and through the valve casing, the receptacle and outlet member, the connecting tube and the inlet pipe and into the engine; and a mass of fine heat-conducting material disposed within the receptacle in the path of the air current and adapted to be heated by its contact with the walls of the receptacle and to heat said air current during the passage of the latter through the receptacle.

1,417,128. DEFLECTING DEVICE FOR AUTOMOBILE LAMPS. ALAN ANGELO, Atlantic City, N. J. Filed June 17, 1920. Serial No. 389,669. 1 Claim. (Cl. 240—48.4.)

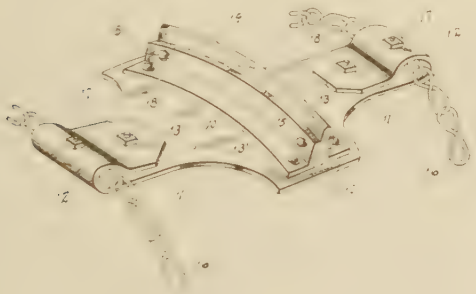


A deflector for automobiles comprising a curved frame member having integral lugs on its inner edge, deflecting members integral with said lugs and bent into horizontal planes and separate deflecting members secured to said frame member intermediate the integral deflectors.

1,417,129. CLOTH CLIP. RALPH W. ARMSTRONG, Westfield, N. J., assignor of two-thirds to Arthur Waterman, East Orange, N. J. Filed May 20, 1919. Serial No. 298,407. Renewed Oct. 19, 1921. Serial No. 508,833. 4 Claims. (Cl. 24—258.)

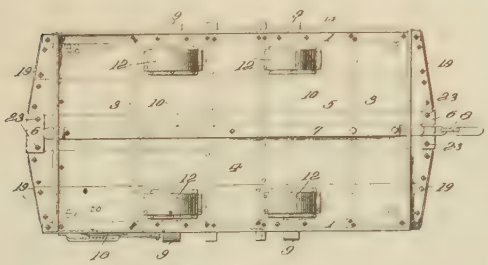
1. A clip comprising a U-shaped member having its two legs spaced apart to receive a pocket edge therebetween, U-shaped lugs extending inwardly from opposite sides of the lower end of one of the legs, and a lever received within and pivoted to said U-shaped lugs.

1,417,130. TRACTION DEVICE FOR NONSKID CHAINS. THEODORE C. AYERS, St. Clairsville, Ohio. Filed Oct. 4, 1920. Serial No. 414,542. 2 Claims. (Cl. 152—14.)



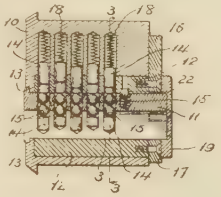
1. The combination with a non-skid chain having a pair of cross strands, of a body plate provided at its ends with means receiving the strands therethrough, means engaged through the first means and through said strands locking the plate against movement along the strands, and an upstanding calk carried by the plate.

1,417,131. MINE CAR. EMMETT L. BAILEY, Williamson, W. Va., assignor of one-half to Robert L. Bailey, Williamson, W. Va. Filed July 24, 1919. Serial No. 312,887. 3 Claims. (Cl. 105—364.)



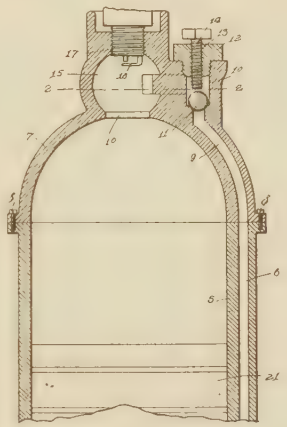
3. A mine car having a frame formed of angular members and a bottom formed of planking, said planking extending longitudinally of said car having a body mounted thereon formed of sheet metal, said planking extending outwardly beyond the ends of the body, wooden sills arranged at the ends of said car and a bumper arranged beyond said wooden sills formed of oppositely arranged angular members and a filler block secured together by a bolt extending through said planking, filler block and angular members.

1,417,132. PIN-TUMBLER LOCK. FRANK C. BARKER, St. Paul, Minn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Apr. 9, 1921. Serial No. 459,862. 9 Claims. (Cl. 70—47.)



3. In a pin tumbler lock, the combination of a cylinder, a sleeve mounted to rotate therein, a key plug mounted to rotate in the sleeve, a cam secured to the sleeve for actuating the associated lock mechanism, and a pin for locking the sleeve against rotation, the said pin being composed of sections one of which normally rests in the plug with its surface flush with the outer surface of the plug whereby the latter is normally free to rotate in the sleeve, the upper surface of the pin section in the plug being convex.

1,417,133. INTERNAL-COMBUSTION ENGINE. CARL E. BERG, Minneapolis, Minn. Filed Jan. 27, 1921. Serial No. 440,398. 1 Claim. (Cl. 123—191.)

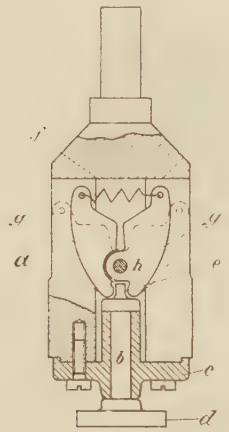


An internal combustion engine including a cylinder having a head formed with a spherical chamber, said cylinder having a passageway extending longitudinally thereof, said passageway terminating in a valve chamber, a ball valve seated in the valve chamber, means for regulating the ball valve to permit the same to open predetermined distances, a passageway for providing communication between the valve chamber and first mentioned chamber, and a spark plug having its firing points disposed within the first mentioned chamber.

1,417,134. MAGNETO-IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. JACQUES BOHLI, Obach-Solothurn, Switzerland, assignor to the Firm Scintilla, Solothurn, Switzerland. Filed July 30, 1921. Serial No. 488,694. 3 Claims. (Cl. 123—149.)

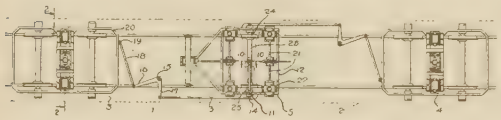
3. A magneto ignition device for internal combustion engines including a revolving magnet, a cam for determining the timing of the moment of ignition, an axial extension of said cam, a pair of weight members pivoted eccentrically and an elastic member connecting and restraining the motion of one pair of the ends of said

weight members, while the other pair of ends of said weight members are aadpted to coact with said cam extension to alter the relative angular position of said cam



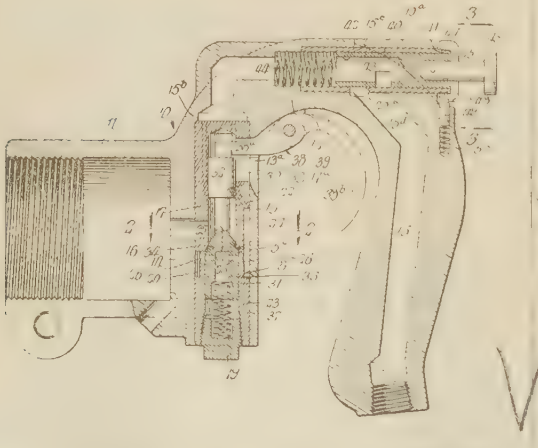
with regard to said revolving magnet, the said pair of weight members, said elastic member and said cam extension being located within the said revolving magnet.

1,417,135. CAR TRUCK. SAMUEL B. BRILHART, New York, N. Y. Filed Feb. 18, 1921. Serial No. 446,016. 13 Claims. (Cl. 105—4.)



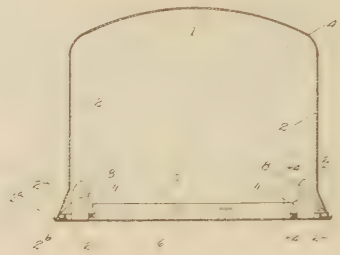
1. In a car truck a truck section frame, a car section arranged above the truck section frame, anti-friction rollers carried by the car section, a roller carried by the truck section frame for each of the rollers of the car section and a roller bar for carrying the rollers mounted on the truck section frame, said roller bar being mounted so that the rollers may move up and down.

1,417,136. AIR-INLET-VALVE MECHANISM FOR PNEUMATIC TOOLS. MATHEW J. BURKEL, Aurora, Ill. Filed July 10, 1918. Serial No. 244,159. 6 Claims. (Cl. 121—35.)



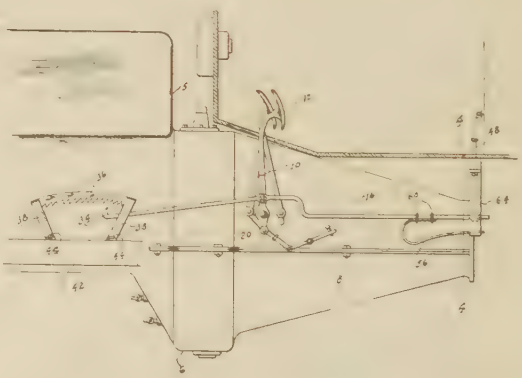
1. In combination with the handle of a pneumatic tool, an air inlet valve, a trigger on said handle for actuating said air inlet valve, a normally closed, combined adjustable throttle and safety valve for controlling the flow of air to said inlet valve, and a depressible stem for opening said throttle valve, said depressible stem being arranged at a right angle to the inlet valve and in convenient relation to said trigger and being adapted to be actuated by the thumb of the hand grasping the handle.

1,417,137. GRAVE VAULT. JACOB R. BURKHARDT, Springfield, Ohio, assignor to The Springfield Metallic Casket Company, Springfield, Ohio, a Corporation of Ohio. Filed Aug. 11, 1921. Serial No. 491,380. 6 Claims. (Cl. 27—35.)



2. In a structure of the character described, the combination with a vault having a separate bottom with a raised portion and marginal flange to receive the top portion of said vault, of a guide and spring latch located at each corner of said raised portion within the top portion of the vault to guide the top portion and lock it in position on said bottom, said latches being housed by said guides.

1,417,138. CLUTCH-PEDAL LOCK. RALPH R. BURKHART, Spokane, Wash., assignor of one-fourth to John E. Clark, Spokane, Wash. Filed Nov. 5, 1920. Serial No. 421,951. 5 Claims. (Cl. 74—81.)

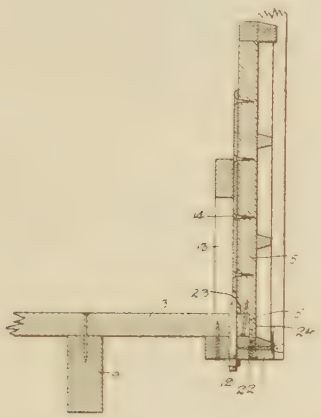


1. A lock for clutch pedals comprising a lever having means whereby it may be pivoted intermediate its ends upon the side of a clutch pedal, a locking member associated with the forward end of said lever, means acting on the rear end of the lever normally spacing the forward end thereof from said locking member, and a setting member slidably engaged with the rear end of the lever.

1,417,139. PROCESS OF RECOVERING SODIUM CARBONATE SULPHATE FROM SALINE WATERS. GEORGE B. BURNHAM, Borosolvay, Calif. Filed June 30, 1919. Serial No. 307,752. 5 Claims. (Cl. 23—22.)

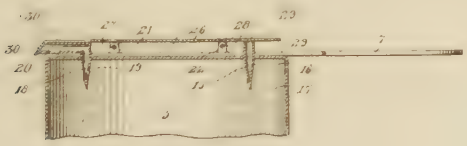
5. The process of producing sodium carbonate sulphate from Searles Lake brine, which consists in slowly evaporating the brine to produce saturation with sodium carbonate sulphate and continuing the slow evaporation to crystallize out sodium carbonate sulphate.

1,417,140. VEHICLE BODY. JOSEPH THEODORE CANTRELL, Huntington, N. Y., assignor to J. T. Cantrell & Company, Huntington, N. Y., a Copartnership. Filed Nov. 15, 1919. Serial No. 338,173. 1 Claim. (Cl. 286—1.)



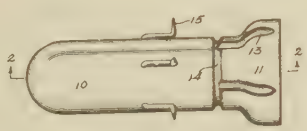
In a vehicle body, a bottom, a side board provided on its lower edge with a rabbet receiving the adjacent edge of the bottom and forming a downwardly facing shoulder which engages with the upper side of the bottom and a reduced tongue which projects downwardly beyond the lower side of said bottom, and a strip engaging with the underside of said bottom and provided on its upper side with a groove which receives the lower end of said tongue.

1,417,141. CAN CLOSURE. ROBERT EARL CARTER, Sykesville, Md. Filed May 11, 1921. Serial No. 468,575. 1 Claim. (Cl. 221—23.)



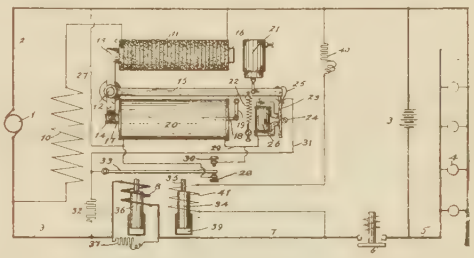
A device for forming vent and flow openings in a cam embodying a plate member with puncture forming and closing means and with integral oppositely extending side arms, one of said arms having a hook formed on the outer end thereof arranged to engage the margin of the can the other of said arms having a resilient catch thereon, guides on said other arm, and a radially movable hook member arranged to engage the margin of the can at the opposite side of the latter from that engaged by the first named hook, said movable hook member being slidably mounted in said guides and having transverse notches engagaged by said catch whereby said movable hook member is retained in radially adjusted positions.

1,417,142. SURGICAL INSTRUMENT. ALBERT B. COUCH, Marlin, Tex. Filed May 24, 1921. Serial No. 472,044. 3 Claims. (Cl. 128—303.)



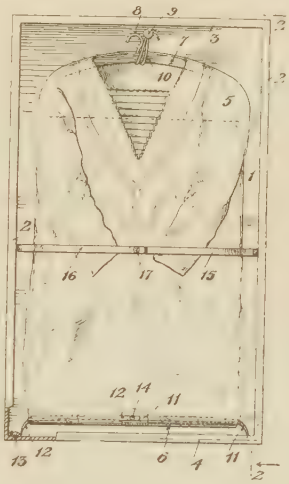
1. An instrument of the class described having a body adapted at one end to receive the organ to be operated upon, there being longitudinal needle grooves at said end at the exterior, as well as an annular groove from which said longitudinal grooves lead, and means on said body at the exterior beyond said grooves, with which the surplus portion to be removed may be engaged.

1,417,143. ELECTRIC REGULATION. JOHN L. CREVELING, White Plains, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Nov. 10, 1916, Serial No. 130,555. Renewed Sept. 17, 1921. Serial No. 501,425. 17 Claims. (Cl. 171—229.)



1. Means for regulating a generator comprehending a regulating element, means for operating said element normally tending to increase the output of the generator, means for stopping and permitting the operation thereof, and electromagnetic means governing the operating means.

1,417,144. BOX FOR GARMENTS. ROBERT F. CUTHBERT, New York, N. Y., assignor to Theo. Tiedemann & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 26, 1921. Serial No. 439,907. 1 Claim. (Cl. 206—7.)

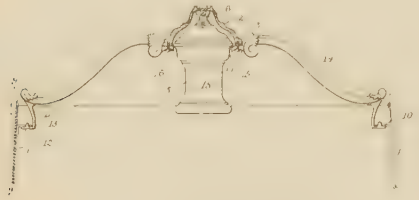


A device of the class described comprising a box for holding a garment, a garment hanger, a tape secured thereto, means for detachably securing said tape in the box, a pair of tapes secured to one end of the box, means for releasably uniting said tapes to form a continuous fastening tape lying within a fold in the garment, and a pair of tapes in the box intermediate of the hanger and the first-mentioned tapes and means for releasably uniting the last-mentioned tapes.

1,417,145. LIGHTING FIXTURE. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Feb. 15, 1921. Serial No. 445,081. 7 Claims. (Cl. 240—115.)

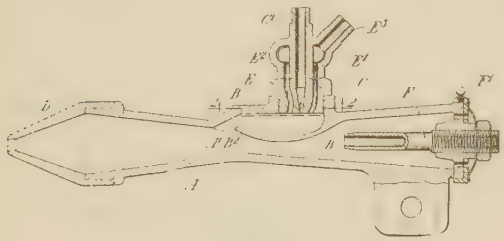
1. In a lighting fixture, in combination, a support, an open-top shade having a plurality of inwardly projecting

support elements, a substantially rigid symmetrical carrying structure for said shade including arms radiating outwardly from said support for a distance nearly equal to the radius of said shade, one arm corresponding to each



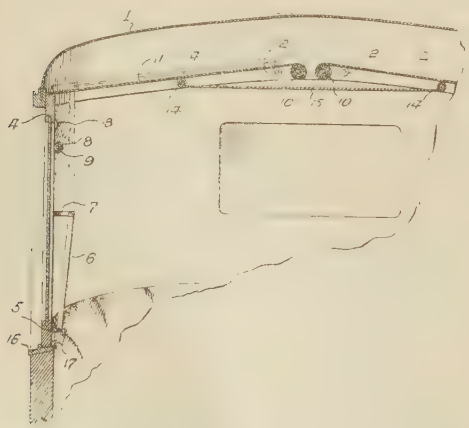
supporting element, said arms being constructed and arranged each to provide a rest for the corresponding support element and to obstruct said shade against rotation about its axis, whereby the shade is carried without positive clamping or securing means.

1,417,146. BURNER FOR FLUID FUEL. WILLIAM DEDERICH and SIGMUND WILLNER, London, England. Filed Apr. 22, 1920. Serial No. 375,875. 7 Claims. (Cl. 158—74.)



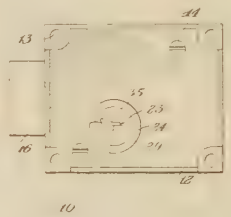
6. A burner for viscous fuels, comprising the combination of a burner-tube, a vaporizing-chamber that is situated in line with the bore of the tube, and has a constricted outlet opening into the tube, a conduit that traverses the vaporizing-chamber and extends through its outlet for supplying a hot fluid through the tube, a portion of the wall of said conduit in the vaporizing-chamber constituting an impact surface, and fuel-supply means for projecting a stream of heated fuel on to said impact surface.

1,417,147. WINDOW-SHIFTING MECHANISM. NARCISSE DES ROSIER, Detroit, Mich. Filed July 14, 1920. Serial No. 396,162. 1 Claim. (Cl. 296—45.)



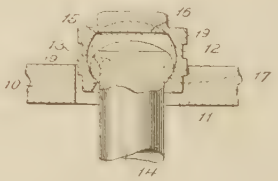
In a vehicle top having a side wall provided with a rigid shiftable sash, a support carried by the top side wall and attached to the lower end of said sash and adapted to cause the lower end thereof to swing outwardly when said sash is raised, flexible sash raising means in the upper part of the vehicle top attached to the upper edge of the sash and effective for raising the sash when the end of said sash is swung outwardly, and means including rolls carried by the top side wall and against which rolls the inner side of said sash bears and fulcrums during the raising action of the sash so that said sash is guided and caused to follow said flexible sash raising means and assume substantially a horizontal position in the automobile top.

1,417,148. LOCK. WILLIAM F. DIESEL, Rochester, and WILLIAM R. PRICE, New York, N. Y., assignors to Sargent and Greenleaf, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 13, 1921. Serial No. 461,137. 8 Claims. (Cl. 70—46.)



3. A lock comprising a bolt, a plurality of tumblers, an element for moving the bolt under control of the tumblers having openings therein communicating with opposite sides of the lock, a part corresponding to certain of the tumblers adapted for insertion in an opening of said element on one side of the lock, and a key corresponding to others of the tumblers adapted for insertion in the opening of said element on the other side of the lock for moving said element and part, adjusting all of said tumblers and moving the bolt.

1,417,149. STAY-BOLT STRUCTURE. ETHAN I. DODDS, Central Valley, N. Y., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Feb. 16, 1921. Serial No. 445,457. 5 Claims. (Cl. 85—1.5.)

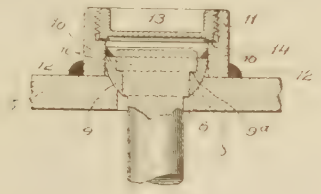


1. In a staybolt construction, the combination of an outer sheet of a boiler having a bolt opening therein, a bearing member of less diameter than the bolt opening, and a bolt permanently attached to the bolt bearing member, the bearing member being secured to the boiler sheet by welding.

1,417,150. STAY-BOLT CONSTRUCTION. ETHAN I. DODDS, Pittsburgh, Pa., assignor, to Flannery Bolt Company, Pittsburgh, Pa. Original application filed Jan. 22, 1921, Serial No. 439,153. Divided and this application filed June 2, 1921. Serial No. 474,375. 2 Claims. (Cl. 85—1.5.)

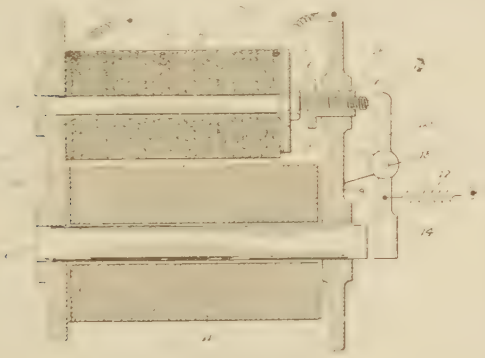
1. In a staybolt structure, the combination of a boiler sheet having a bolt opening the wall of which is concave to form a seat for a bolt bearing member, a convex bolt bearing member mounted in said seat and provided with

a seat for a bolt head, a bolt the head of which is supported by and mounted to move in said bearing member,



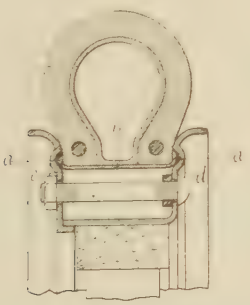
a sleeve welded to the boiler sheet around the bolt opening and a cap closing the outer end of said sleeve, the said bolt bearing member being welded to the sleeve.

1,417,151. COMPRESSIBLE-PILE REGULATOR. AUGUST W. DONOP, San Francisco, Calif., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Mar. 26, 1919. Serial No. 285,383. 2 Claims. (Cl. 219—51.)



1. In a compressible pile, a plurality of plates and operating means for said pile having frictional engagement with each of said plates.

1,417,152. ROAD-VEHICLE WHEEL. WILLIAM DUKES, Coventry, England, assignor to The Warland Dual Rim Company, Limited, Coventry, Warwick, England. Filed Oct. 24, 1921. Serial No. 510,076. 1 Claim. (Cl. 301—23.)

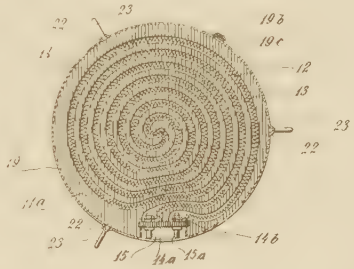


In a road vehicle wheel of the type specified the combination of a detachable rim for carrying a tire having flanges at its edges, the inner sides of the flanges being arranged at right angles to the peripheral surface of the rim and the outer sides being of convex form, coacting fixed and detachable flanges on the wheel and each having an inner groove to grip the outer curved surface of the flanges of the rim and outwardly flared circumferential portions and means for clamping the flanges on the wheel and about the rim, substantially as described.

1,417,153. PROCESS OF TREATING MANGANIFEROUS ORES OF THE PRECIOUS METALS. MATTHEW FRASER FAIRLIE and JAMES JOHN DENNY, Cobalt, Ontario, Canada. Filed July 7, 1921. Serial No. 483,069. 1 Claim. (Cl. 75—18.)

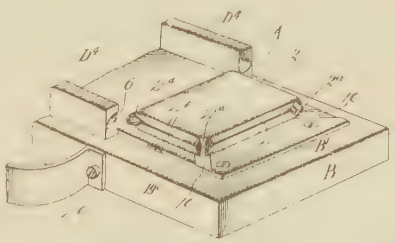
A process of treating gold or silver ores containing an oxide of manganese which consists in first treating the ore with metallic iron and sulphuric acid, separating the treated ore, and thereafter subjecting the ore to cyanidation.

1,417,154. ELECTRIC HEATING APPARATUS. THOMAS D. FINIZIO, Kitchawan, N. Y., assignor to Steatite Electric Products Corporation, a Corporation of New York. Filed July 15, 1920. Serial No. 396,469. 8 Claims. (Cl. 219—37.)



1. An electric heater comprising a pair of plates, a resistance element embedded in one of said plates and protected by the other thereof, and a member secured to one of said plates and engaging the other thereof to hold the same secured together, substantially as specified.

1,417,155. APPARATUS FOR APPLYING A COVER TO A CASING. CHARLES FISHER, Chicago, Ill., assignor to The Automatic Recording Safe Company, Chicago, Ill., a Corporation of Illinois. Filed May 5, 1921. Serial No. 467,080. 13 Claims. (Cl. 93—54.)



1. In means of the character set forth, the combination of a bed provided with means for positioning a cover and with a form-depression, means for clamping one wall of a casing and the folded margins of one portion of a cover to said bed, and an upper ironer provided with means for folding the margins of the other portion of the cover over the edges of the upper wall of said casing.

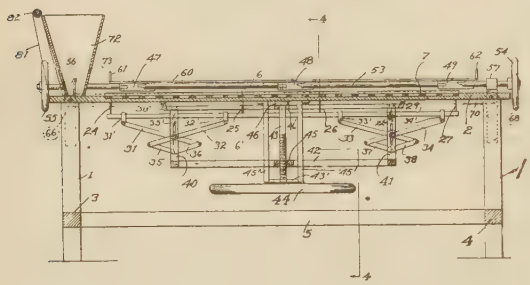
1,417,156. HEEL FOR WOMEN'S SHOES. ANTONIO A. FORTUNATO, Boston, Mass. Filed July 21, 1920. Serial No. 398,008. 1 Claim. (Cl. 36—41.)

In combination with a shoe, a metal plate secured to the shoe, a hollow metal heel slidably engaging the metal plate, the metal heel having inwardly extending apertured projections under the metal plate, the metal plate having apertures positioned to align with the apertures in the

aforesaid projections when the heel is engaged on the metal plate, said apertures being threaded, and screws

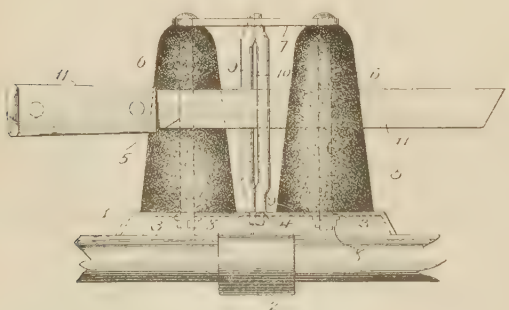
inserted through the interior of the shoe at the heel and securing the heel in rigid engagement with the metal plate, substantially as shown.

1,417,157. CAKE-FORMING MACHINE. JOSEPH FOUSEK, San Francisco, Calif. Filed Nov. 11, 1920. Serial No. 423,394. 4 Claims. (Cl. 107—29.)



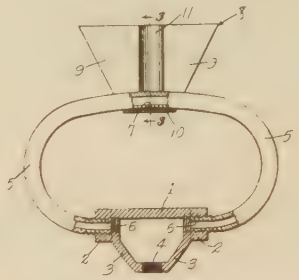
1. A machine of the character described comprising a table, a die plate thereon, an open bottomed hopper, means to move the hopper along the die plate and means to vertically raise the die plate after the hopper has been moved over the same in one direction.

1,417,158. SHARPENING DEVICE. WILLIAM HOWARD FRANKLAND, Jackson, Tenn. Filed Nov. 2, 1921. Serial No. 512,292. 4 Claims. (Cl. 51—214.)



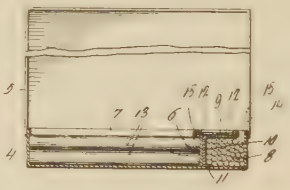
1. In a sharpener, the combination with a base and a cross-bar, of conical sharpening members disposed between the same and spaced apart, and a swiveled guide mounted between said sharpening cones.

1,417,159. OIL-GAS BURNER. LESTER C. FRASER, Los Angeles, Calif., assignor of one-half to Inez M. Walcott, Los Angeles, Calif. Filed Sept. 4, 1919. Serial No. 321,537. 2 Claims. (Cl. 158—66.)



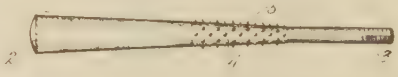
1. A burner comprising a hollow base and an arch assembled with the base, the crown of the arch having a combustion orifice; and a U-shaped guard straddling the crown of the arch at the combustion orifice, the guard including side wings between which the crown of the arch is insertible, the crown of the arch being gripped between the wings.

1,417,160. COMBINATION CIGARETTE AND MATCH CASE. WILLIAM H. FREDERICK, Cristobal, Canal Zone. Filed June 24, 1920. Serial No. 391,356. 2 Claims. (Cl. 206—38.)



2. In a receptacle, a partition forming a plurality of compartments, said partition consistsing of a pair of resilient plates disposed in close proximity to each other and secured by one edge to the receptacle, said strips having their opposite edge portions horizontally disposed in opposite directions to form a shelf to receive a striking surface and to provide a pair of jaws, the edges of said jaws being bent inwardly so as to retain the striking surface positioned upon said shelf portion.

1,417,161. KEY. GOTTLOB FUEGEL and HERMAN SCHMID, Brooklyn, N. Y., assignors, by mesne assignments, to Apollo Magneto Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Aug. 30, 1919. Serial No. 320,915. 1 Claim. (Cl. 287—52.)

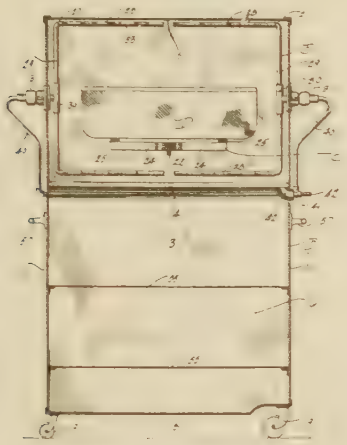


A key having one end shaped to be engaged by a tool and having threads at its opposite end, said key including a tapering portion between its ends, with projections substantially surrounding a part of said portion to provide a frictional surface to engage and hold a member in a desired position.

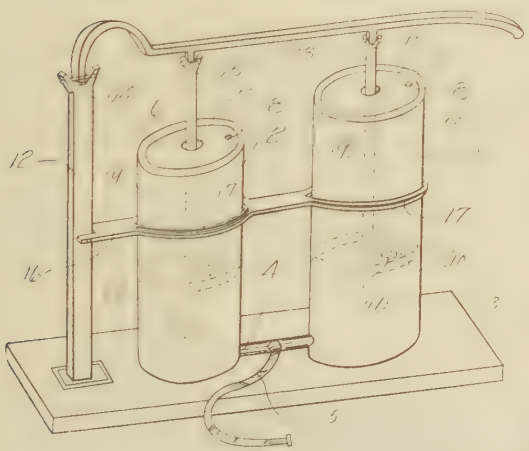
1,417,162. DISHWASHING MACHINE. JOHN EDWARD GAGEN, Pittsburgh, Pa. Filed Mar. 20, 1920. Serial No. 367,554. 12 Claims. (Cl. 141—9.)

2. A dish cleaning machine comprising an elongated housing, a support for dishes in the housing, a pair of

U-shaped hollow members rotatably supported by the opposite ends of the housing arranged to embrace the support, the hollow members having a plurality of outlet openings formed therein.

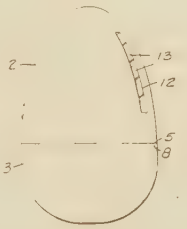


1,417,163. TIRE PUMP. RAY GARRETT, Burns City, Ind. Filed Feb. 12, 1921. Serial No. 444,375. 1 Claim. (Cl. 230—27.)



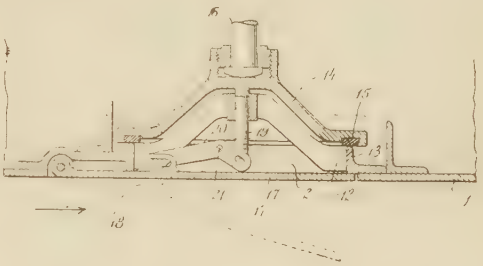
A two cylinder tire pump, comprising a base; a handle post extended vertically from the base; a relatively short pump cylinder on the base adjacent the handle post; a relative long pump cylinder on the base and aligned with the handle post and short cylinder; an air tube interiorly connecting the cylinders near their bases; valved pistons mounted in the cylinders; piston rods extended from the pistons slidingly out through the tops of the cylinders; and a handle pivotally connected to the ends of the handle post and piston rods.

1,417,164. SAVINGS BANK. JOHN H. GREER, San Francisco, Calif. Filed Jan. 12, 1921. Serial No. 436,674. 11 Claims. (Cl. 232—4.)



1. A savings bank consisting of a shell having separable sections with bayonet lug and slot interlocking means at their meeting edges, and a snap lock whose bolt enters one of the slots for securing the sections assembled.

1,417,165. VALVE MECHANISM FOR SUBMARINES. HUGO E. GRIESHABER, Groton, Conn., assignor to Electric Boat Company, a Corporation of New Jersey. Filed Nov. 10, 1920. Serial No. 423,024. 3 Claims. (Cl. 114—196.)



1. A valve mechanism for submarine vessels, comprising the combination of a frame including a valve seat, a valve adapted to be seated thereon, a scoop plate hinged to the frame and designed to close against it when the valve is closed, and means for simultaneously moving the valve inwardly to open it and swinging the scoop plate outwardly.

1,417,166. SECURING RIM FOR RECEPTACLE COVERS. ALBERT F. GUDKNECHT, Minneapolis, Minn. Filed June 10, 1920. Serial No. 387,827. 2 Claims. (Cl. 217—89.)

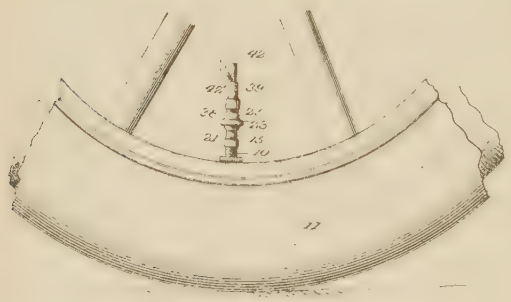
1. The combination with a receptacle, and a sectional overhanging removable cover therefor, of a securing rim

having an annular rim body surrounding the edge of the cover and provided at one edge with a top flange overhanging the cover and at its opposite edge with an offset extending beneath the cover whereby the rim will hold the sections of the cover assembled when the cover is removed from the receptacle, there being an annular skirt depending from said offset concentric to the rim body but of less diameter to snugly surround the receptacle beneath the cover.

1,417,167. COMPLEX SILVER SALTS OF α-AMINO ACIDS. MARKUS GUGGENHEIM, Basel, Switzerland, assignor to The Hoffmann-La Roche Chemical Works, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1919. Serial No. 327,557. 6 Claims. (Cl. 260—11.)

1. As new products, the complex silver salts of α-amino acids which can be obtained by treating non-complex silver compounds with a quantity of α-amino acid whose weight is not less than at least five times the weight of such compounds (calculated as silver oxide actually or potentially present therein) which would be needed to form the corresponding normal salts, which complex salts have the following characteristics: they are much more easily soluble than the normal silver salts of α-amino acids; their solutions are more stable than those of the normal silver salts of α-amino acids; they do not precipitate albumin, and have no irritating effect upon the mucous membrane.

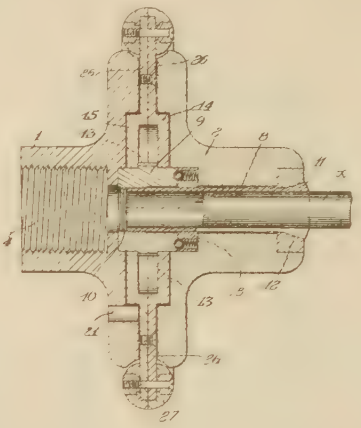
1,417,168. LOW-PRESSURE ALARM FOR PNEUMATIC TIRES. WILLIAM A. HARRIS, Greenville, S. C., assignor to Harris Accessory Company, Greenville, S. C., a Corporation of South Carolina. Filed Mar. 5, 1921, Serial No. 449,851. Renewed Apr. 10, 1922. Serial No. 551,209. 5 Claims. (Cl. 116—34.)



1. In a low pressure alarm, a casing, a spring actuated pressure controlled stem having an air conduit, means for adjusting the actuating spring of the said stem, including a cap threaded on the casing and adjustable with respect thereto, a pressure actuated whistle tube slidably interfitting and normally housed in the cap and shiftable to exposed position when the signal is sounded, means carried by said tube and engaging the cap to prevent accidental displacement of the tube in the housed and exposed positions, and spaced closure members against which the opposite ends of the said stem are shiftable to closed positions and between which the stem forms a conduit for the passage of pressure to the signal member.

1,417,169. CHUCK FOR LATHES AND THE LIKE. JOHN W. HEIGH, Rochester, N. Y. Filed Dec. 16, 1920. Serial No. 431,187. 7 Claims. (Cl. 279—53.)

1. A chuck comprising a collet, a rotary actuating member cooperating with the collet, and operating means controlling said actuating member and including an oscillatory hand wheel surrounding the chuck and having an

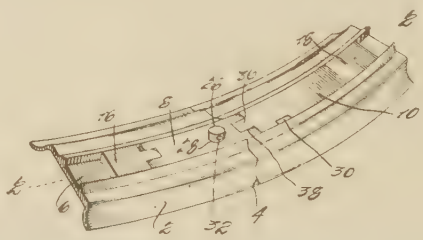


alternating grip and release engagement with said actuating member.

1,417,170. SHOE CONSTRUCTION. EDWARD EVERETT HOSMER, New York, N. Y. Filed Nov. 11, 1920. Serial No. 423,427. 6 Claims. (Cl. 36—1.)

1. In a shoe construction, a shoe having the interior surface of the bottom thereof formed in such a manner that the bearing surface for the heel is disposed substantially below the bearing surface for the ball of the foot whereby the heel shall sustain the entire weight of the body of the wearer.

1,417,171. SPLIT-RIM ATTACHMENT. ELDRIDGE R. HUNNEWELL, New York, N. Y. Filed Feb. 7, 1918. Serial No. 215,808. 4 Claims. (Cl. 301—33.)



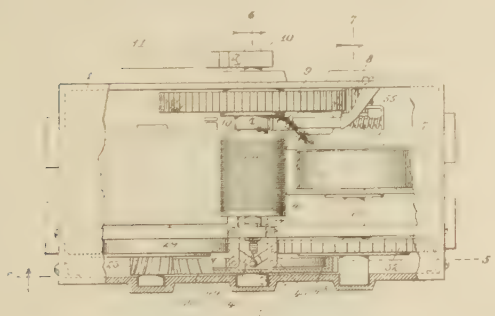
1. The combination with a one piece split rim normally under a tension tending to move it to contracted condition when broken at its joint and having ends shaped to be held by said tension in abutting relation when the rim is in normal condition, of means for moving said ends into abutting relation when the rim is broken, comprising a toggle, thrust bearings for the ends of said toggle upon opposite sides of the rim joint spaced on said rim

to spread said joint when said toggle is straightened, said toggle being shaped to lie against the inner face of said rim when said rim is in normal condition, and being of such length that it is disengaged from at least one of its thrust bearings when in this position.

1,417,172. SLED. HUGH HYNDMAN, Palmerston, Ontario, Canada. Filed Apr. 26, 1921. Serial No. 464,686. 1 Claim. (Cl. 280—22.)

A sled comprising normally straight flexible runners; knees secured thereto; main cross bars connected to the knees; side bars secured to the cross bar and extending forward to the forward ends of the runners; a cross bar secured to the forward ends of the side bars; a center plank secured to the main cross bars and the cross bar connecting the forward end of the side bars; a cross bar connecting the forward ends of the runners; a goose neck arm pivotally connected with the cross bar connecting the forward ends of the runners, passing over the cross bar connecting the forward end of the cross bars and pivoted to the center plank behind said cross bar; and a steering lever secured to the goose neck arm.

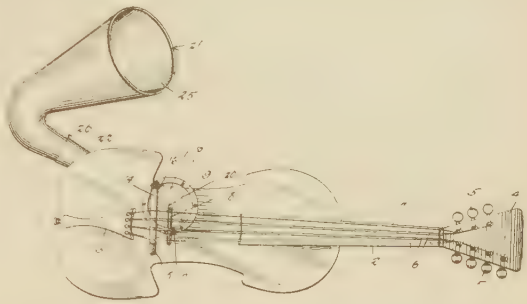
1,417,173. ELECTRICAL DOOR-OPERATING DEVICE. JACOB R. KAISERMAN, Livingston, Mont. Filed June 22, 1920. Serial No. 390,788. 6 Claims. (Cl. 268—9.)



1. The combination with a door of a shaft operatively connected with the door for moving the same, a motor, power transmitting means between the motor and said shaft, a spring connected with the said shaft and adapted to wind during the opening of the door by the said motor, a one-way acting clutch mechanism between the spring and said means for permitting the door to be operated independently of the motor, and an automatic device operatively connected with said means to limit the speed with which the door is moved by the motor and by the spring.

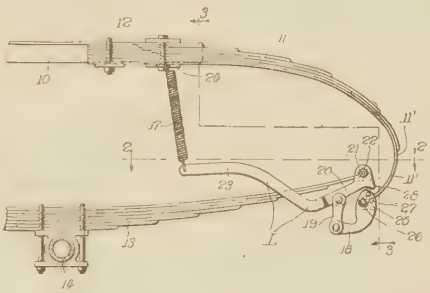
1,417,174. MUSICAL INSTRUMENT. JOHN KALAF, Jr., Meta, Mo. Filed Apr. 15, 1921. Serial No. 461,463. 3 Claims. (Cl. 84—296.)

1. An instrument of the string type comprising a body; a sound amplifier on the body, said amplifier comprising a diaphragm and a casing; a main bridge having its ends resting, respectively, on the body, and on the casing of the amplifier independently of the diaphragm; an oscillatory



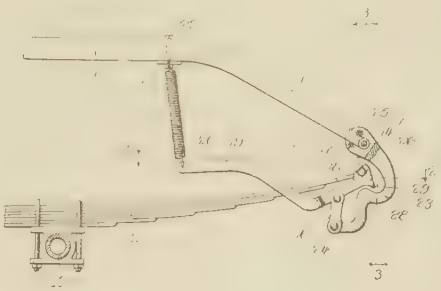
bridge engaging the diaphragm; and a string extended across the bridges.

1,417,175. SHOCK ABSORBER. JAMES M. KERR, Crawfordsville, Ind. Filed July 14, 1921. Serial No. 484,641. 7 Claims. (Cl. 267—17.)



1. In a vehicle, the combination of an upper vehicle spring secured to the vehicle body and extending outwardly and downwardly therefrom, a lower vehicle spring secured to the vehicle axle and terminating above the end of said upper spring, a lever fulcrumed on the end of said axle spring and extending toward said axle, a shock absorbing spring connecting between the inner end of said lever and the vehicle body, an abutment on said lever outside of its fulcrum point, an abutment on the end of the upper spring normally inside of the said lever abutment, a link connecting between said upper spring abutment and the lever at a point inside of the lever fulcrum, said link connection causing rocking of said lever when said springs approach each other, and said abutments engaging with each other to rock the lever when the springs move away from each other.

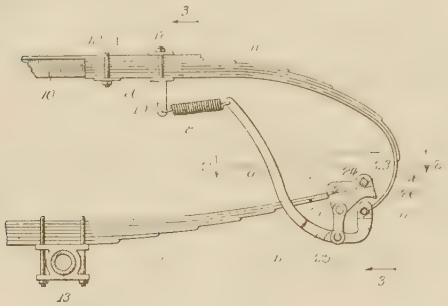
1,417,176. SHOCK ABSORBER. JAMES M. KERR, Crawfordsville, Ind. Filed July 14, 1921. Serial No. 484,642. 6 Claims. (Cl. 267—17.)



1. In a vehicle, the combination of the vehicle axle, a spring secured thereto, the vehicle frame above the spring

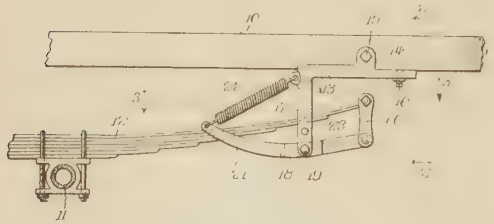
having an extension deflecting downwardly and terminating above the end of the spring, a lever fulcrumed at its outer end directly on the end of the vehicle spring and extending inwardly, an elastic connection between the inner end of said lever and the vehicle frame, a fitting secured to the end of the frame extension and extending downwardly and terminating below said lever near its fulcrum point, and a link connecting between the inner end of said extension and said lever.

1,417,177. SHOCK ABSORBER. JAMES M. KERR, Crawfordsville, Ind. Filed July 14, 1921. Serial No. 484,643. 5 Claims. (Cl. 267—17.)



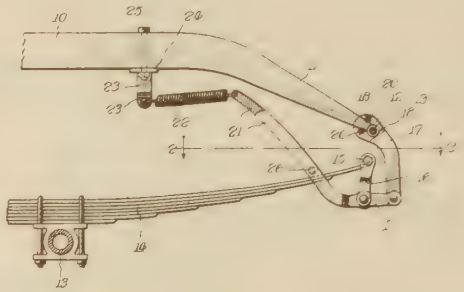
1. In a vehicle, the combination with the axle, a leaf spring secured to the axle at right angles thereto and extending outwardly therefrom, a block secured to the front end of said spring, the vehicle body structure, a leaf spring secured to said structure at its butt end and extending outwardly and terminating below said block, a lever fulcrumed at its outer end on the end of said body structure spring, said lever extending inwardly and then upwardly past and above the axle spring, a link pivoted on said block at the inner end thereof and pivoted to said lever a distance inwardly of the lever fulcrum point, an elastic connection between the upper end of said lever and the body structure, said elastic connection resisting swing of said lever during normal operation of said vehicle, said block forming an abutment for the fulcrumed end of said lever when said vehicle springs separate abnormally whereby the vehicle springs may resist and retard the recoil or rebound action.

1,417,178. SHOCK ABSORBER. JAMES M. KERR, Crawfordsville, Ind. Filed July 14, 1921. Serial No. 484,644. 2 Claims. (Cl. 267—17.)



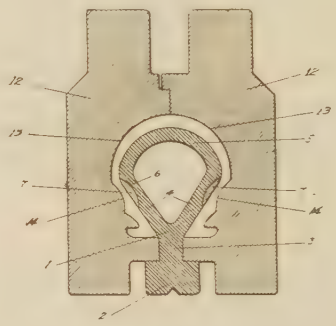
1. In a vehicle, the combination of the vehicle framework, the axle, a leaf spring secured on said axle at right angles thereto, an arm extending downwardly from said framework below said vehicle spring and a short distance inwardly of the spring end, a lever pivoted intermediate its ends on the lower end of said arm, a connection between the outer end of said lever and the spring end, a shock absorbing spring connecting between the inner end of said lever and the vehicle framework, and an abutment on said arm below said vehicle spring for engaging with said spring to cause said spring to snub recoil of the vehicle frame.

1,417,179. SHOCK ABSORBER. JAMES M. KERR, Crawfordsville, Ind. Filed July 14, 1921. Serial No. 484,645. 1 Claim. (Cl. 267—17.)



In a vehicle, the combination with the vehicle axle, a leaf spring secured on said axle at right angles thereto, a shackle member suspended from the outer end of said spring, the vehicle framework, said framework having a bolt hole originally used for securing said shackle member, a fitting secured to the framework by a bolt passing through said bolt hole, said fitting extending downwardly below and outside of the vehicle spring end, a lever fulcrumed at its outer end at the lower end of said fitting, said shackle member being pivoted to said lever, the inner end of said lever extending diagonally inwardly and upwardly past the vehicle spring, shock absorber springs connected at one end with the inner end of the lever and connected at the other end with the vehicle framework, and an abutment pin on said lever inside of the pivot connection of said shackle with the lever and above said vehicle spring for preventing reverse rotation of said lever during abnormal separation of said spring and framework.

1,417,180. METHOD AND APPARATUS FOR MANUFACTURING TIRES. WALTER KLINE, Chillicothe, Ohio, assignor to The Kline Engineering Company, Chillicothe, Ohio, a Corporation of Ohio. Filed Jan. 10, 1922. Serial No. 528,188. 12 Claims. (Cl. 18—38.)

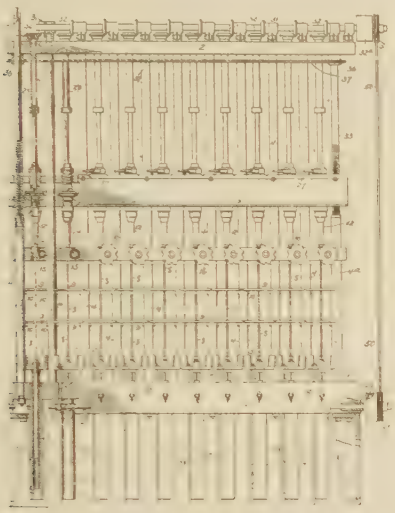


1. The method of forming tires, which consists in forming the tire casing about a core, removing a part of this core and pressing a portion of the tire into the cavity formed by the removed part of the core.

1,417,181. METAL-DRILLING MACHINE. FREDERICK K. LANDGRAF, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Mar. 15, 1919. Serial No. 282,867. 14 Claims. (Cl. 77—32.)

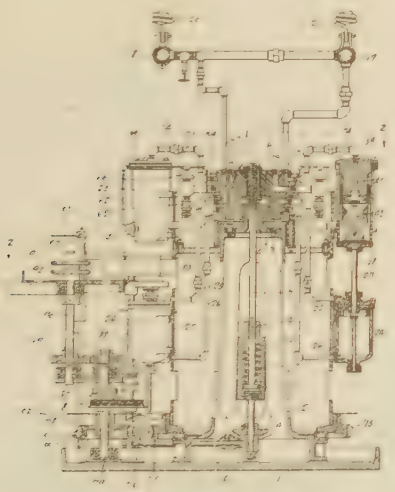
1. In a drilling machine, the combination with rotating means, and longitudinally movable constant fluid pressure feeding means, one of said means constituting a work receiver and the other of said means constituting a tool car-

rier, and constant fluid pressure means for feeding one of said means relatively to the other, of means geared to



said constant fluid pressure feeding means and operating to limit the speed to a predetermined rate regardless of varying resistance offered by varying texture of the work.

1,417,182. STERILIZING APPARATUS. FRANCIS H. LANDRUM and ALBERT N. CRAMER, Columbus, Ohio, assignors to The Wedoit Company, Columbus, Ohio. Filed Feb. 21, 1917. Serial No. 149,990. 31 Claims. (Cl. 99—2.)



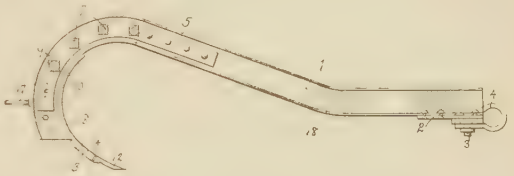
5. Sterilizing apparatus comprising a treating chamber to inclose the vessel containing the material to be treated, means within such treating chamber to engage the open end of the vessel, means for introducing a sterilizing agent into and around the vessel, and means to maintain a draft of the sterilizing agent from the interior of the vessel toward its exterior.

11. Sterilizing apparatus comprising a main supply valve and its casing, a treating chamber connected with said casing by a conductor, means for introducing a sterilizing agent into said treating chamber, and means for permitting the escape of said treating agent from the treating chamber, said conductor provided with means for preventing leakage of pressure from the ports of the main central valve passing through said conductor to the treating chamber after the initiation of said exhaust.

20. Sterilizing apparatus comprising a plurality of vessel supporting plates rotating about its center, feeding means rotating about positioned centers for feeding the vessels to and from the vessel supporting plates, a plate positioned beneath said feeding means to support the vessels, said plate elevated above said vessel supporting plates on the inlet and depressed below the top surface of said vessel supporting plates on the outlet to insure passage of said vessels.

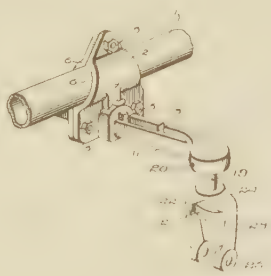
31. Sterilizing apparatus comprising a treating chamber, and means for introducing a sterilizing agent into said treating chamber, means for maintaining said treating agent under pressure in said treating chamber, and non-downwardly directed means for permitting a continual flow of treating agent from said treating chamber through a relatively minute opening.

1,417,183. SCRAPER. CHARLES L. LAWTON, Hancock, Mich. Filed Mar. 8, 1921. Serial No. 450,783. 6 Claims. (Cl. 37—40.)



1. In a scraper, the combination of two side bars connected at their front ends and connector bars attached to their rear ends, the portions of the connector bars extending beyond the rear ends of the side bars being circular, and a substantially cylindrical apron adjustably attached to the connector bars and embodying circular flanges adapted to fit against said circular rear ends, said flanges and side bars having registering holes, and bolts adapted to secure the flanges on the apron to the side bars in a plurality of positions.

1,417,184. STANCHION SUPPORT. JOHN MINOR BOTTS LEWIS, Lynchburg, Va. Filed May 20, 1920. Serial No. 382,966. 3 Claims. (Cl. 119—27.)

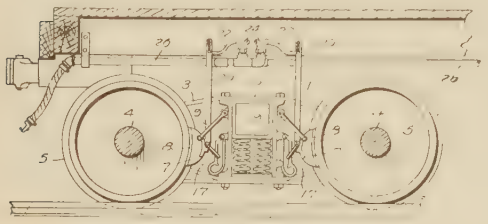


1. In a stanchion support, the combination with a horizontal stall rail, of complementary members adapted to be secured thereto and provided with registering openings, a supporting bar arranged in said openings, a rib formed on one face of the supporting bar, said rib being provided with transverse grooves, a locking pin adapted to be received in one of said grooves and means for securing the stanchion to the supporting bar.

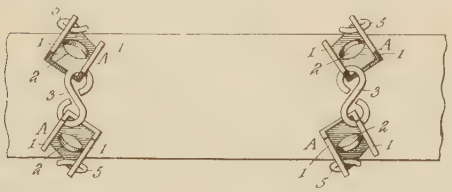
1,417,185. EMERGENCY STRUCTURE FOR RAILWAY CARS. HORACE W. LINDSEY, Atlanta, Ga. Filed Nov. 19, 1919. Serial No. 339,096. 7 Claims. (Cl. 246—169.)

1. An emergency structure for railway-cars including in combination a brake-beam, hangers therefor, a truck-bolster to which the hangers are connected, an auxiliary

beam-support associated with said hangers and comprising an angular member, a connecting-element between the support and the beam and slidable on the support, first in a vertical direction and then in an approximately horizontal direction, the member being formed with an enlargement into which the element is disposed by the abnormal movement of the brake-beam, and an associated air-brake syste moperable by movement of the connecting-element.

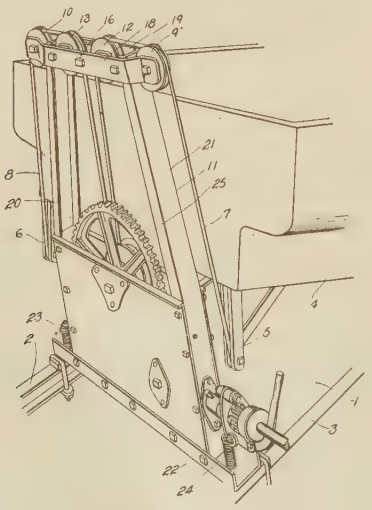


1,417,186. NONSKID-TIRE GRIP. NILS J. LINDSTROM, Evansville, Minn. Filed Aug. 12, 1919. Serial No. 316,951. 5 Claims. (Cl. 152—14.)



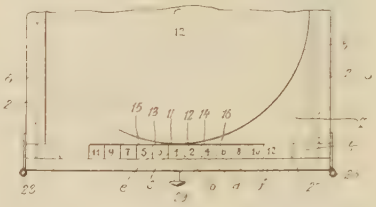
1. A non-skid tire grip including a channel-iron lug having a diagonal end, whereby one of the flanges is of greater length than the other, side chains, and means extending from the side chains to the opposite corners of the lug.

1,417,187. EQUALIZING HOIST. WINFIELD S. LIVENGOOD, Kansas City, Mo., assignor to Andrew A. Kramer, Kansas City, Mo. Filed Dec. 8, 1920. Serial No. 429,266. 4 Claims. (Cl. 298—19.)



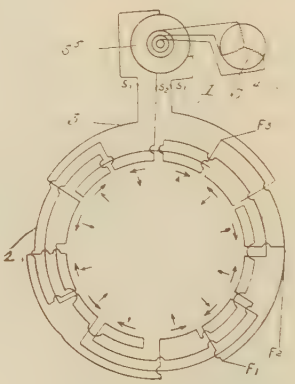
1. A hoisting mechanism comprising a vertical frame having sheaves at its upper end, a winding drum carried by the frame, cables connected to the winding drum and passing over the sheaves in opposite directions, and an equalizer carried by the frame between the sheaves and consisting of pivoted bars and sheaves mounted between them.

1,417,188. PHONOGRAPH-RECORD CABINET. OSWALD LORENZ, New York, N. Y. Filed Mar. 21, 1921. Serial No. 453,939. 3 Claims. (Cl. 211—16.)



1. In a phonograph record cabinet, a box-like record container, a series of vertically spaced shelves slidably supported in the side walls of said container, said shelves having notches formed in their front edges, said notches being of progressively increasing length from the lower to the higher shelves to expose portion of the shelves thereunder and being arranged to expose the said portions of alternate shelves at opposite ends of the said notches.

1,417,189. CONCENTRATOR. JOSEPH BARTHOLEMEW MCCARTHY, Copper Cliff, Ontario, Canada. Filed Jan. 12, 1920. Serial No. 351,049. 5 Claims. (Cl. 83—71.)

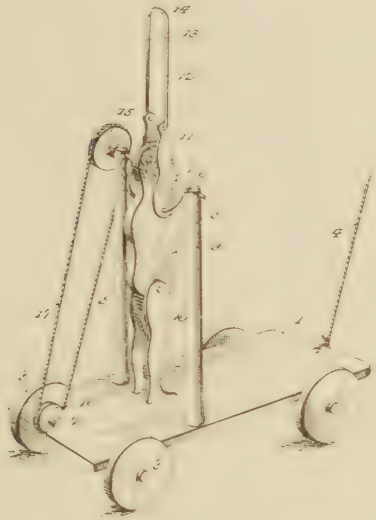


1. In a concentrator, means for producing a continuous magnetic field moving in a definite path, and inducing or tending to induce electric currents in the matter being concentrated which will react against the field and set the constituents of the matter in motion and cause the metallic particles to rotate about their own axes and gradually separate themselves from the other constituents.

1,417,190. WHEELED TOY. GILBERT A. MCCREARY, Edinburg, Pa. Filed Aug. 17, 1920. Serial No. 404,058. 2 Claims. (Cl. 46—45.)

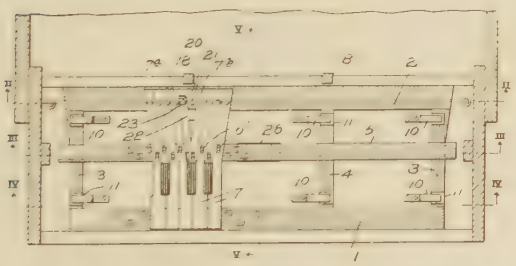
2. A toy having a base with a pair of spaced uprights and wheels supporting the base for travel, a shaft with a central crank and having driving connection with said wheels and being carried on the free end of said uprights, a figure with jointed legs freely suspended from said

crank, a pair of arms for said figure rigidly secured upon said crank and extending in diametrically opposite direc-



tion of the crank, and a loop connecting said arms and forming continuations thereof in the length direction.

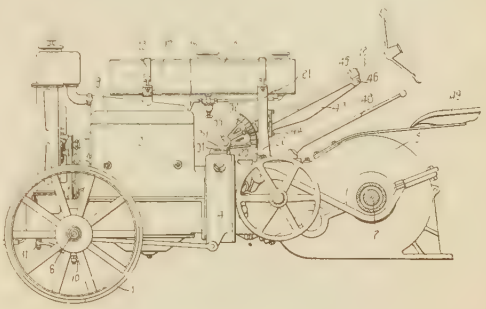
1,417,191. PIANO. CHARLES N. MANGOLD, Pittsburgh, Pa. Filed June 30, 1921. Serial No. 481,447. 4 Claims. (Cl. 84—447.)



3. In a transposing upright piano, a laterally movable keyboard provided with keys the rear ends of some of which diverge from each other, a fixed action including upright action rods, a frame supporting said rods, upwardly extending brackets back of the keyboard, the rear ends of adjacent pairs of diverging keys being provided with laterally extending blocks, having action-striking pins arranged to bring all keys into action in all positions of the keyboard.

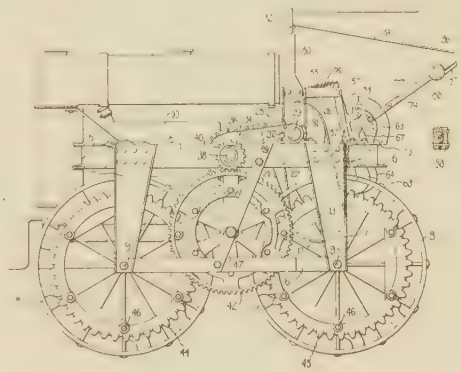
1,417,192. STEERING-GEAR AND FUEL-TANK SUPPORT. ARTHUR C. MASON, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 22, 1920. Serial No. 367,934. 4 Claims. (Cl. 180—54.)

1. In a self propelled vehicle having a frame including an engine casing the rear end of which forms a clutch housing, said frame also including a transmission casing fixed to said clutch housing, a fixture mounted on said clutch housing, a rock shaft supported by the fixture, said rock shaft forming part of a steering gear for the vehicle, a rearwardly inclined steering shaft having its lower end carried by said fixture, a supporting bracket separate from the fixture and mounted on the transmission casing, and having a rearwardly extending upwardly inclined arm intermediate its ends and the upper end of which arm



serves as a support for the upper end of said steering shaft, and means for turning the rock shaft, from the steering shaft.

1,417,193. TRACTOR. JOHN M. MEYERS, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 26, 1919. Serial No. 340,715. 9 Claims. (Cl. 180—1.)

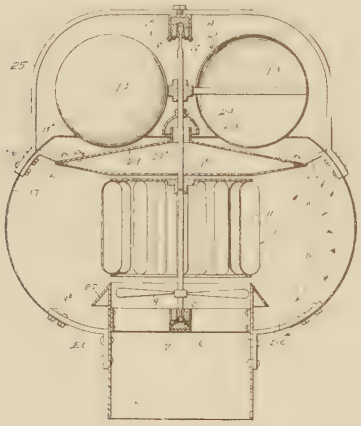


1. In a tractor, two driving wheels located on opposite sides thereof, a cross frame extending across the tractor from side to side and forming in its lower surface a pair of unobstructed channels extending longitudinally of the tractor and up substantially to the level of the tops of the wheels, an engine suspended by the cross frame and having its crank shaft located well below the tops of the wheels, and means for driving the wheels from the engine.

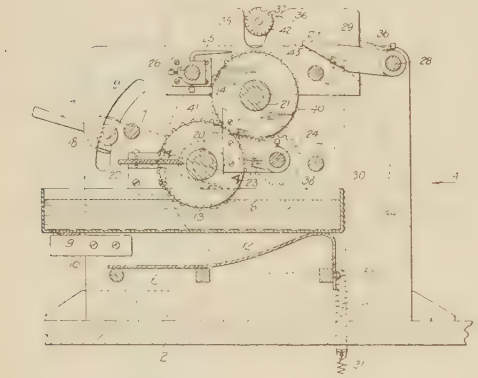
1,417,194. VENTILATOR. WORTHIE W. MOREY, Columbus, Ohio. Filed Aug. 27, 1920. Serial No. 406,341. 4 Claims. (Cl. 98—2.)

4. A device of the character described comprising a stem, a bearing supported therefrom, a spindle mounted to turn upon said bearing, a centrifugal fan carried by the spindle, a storm band surrounding the fan and supported from the stem with its lower edge spaced from the stem, a hood supported from the storm band with its outer edge spaced from the storm band, said storm band

having its upper and lower edges inwardly directed and presents at all points in its circumference a concave continuously curved wall the upper edges of which lies above the hood and the lower edge of which lies below the top of the stem.



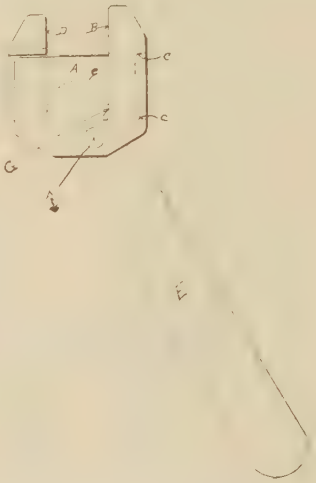
1,417,195. MACHINE FOR GLUING BOX SHOULDERS. ALFRED J. MORRISON, Denver, Colo., assignor of one-half to William E. Warneke, Denver, Colo. Filed Nov. 14, 1919. Serial No. 338,050. 12 Claims. (Cl. 91—50.)



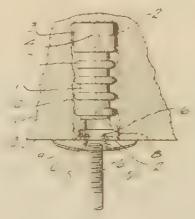
9. In a machine of the character described, the combination of a coating roller, means cooperating with said roller for the support of a box shoulder in contact with the peripheral face thereof, and an element adapted to engage with an upstanding member of the box shoulder adjacent the point of contact of an adjoining member of the same with the roller.

1,417,196. WRENCH. VICTOR L. OCHOA, El Paso, Tex. Filed May 17, 1921. Serial No. 470,453. 4 Claims. (Cl. 81—128.)

1. A wrench comprising a jaw, a second jaw movable with relation to the first and having a shank extending at right angles to the second named jaw, and a handle formed with a circular head larger in diameter than the width of the handle at the junction of the head, the handle being pivoted adjacent the junction of the head with the handle to said first named jaw, said pivot for the handle being disposed closely adjacent the shank for the second named jaw and the periphery of the head operating in the manner of a cam against the shank of the second named jaw to cause its movement relative to the first named jaw upon an oscillation of the handle.

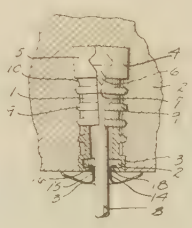


1,417,197. EXPANSION SHIELD. HENRY W. PLEISTER, Westfield, N. J., assignor, by mesne assignments, to Henry B. Newhall, Plainfield, N. J. Filed Mar. 31, 1921. Serial No. 457,264. 10 Claims. (Cl. 85—2.4.)



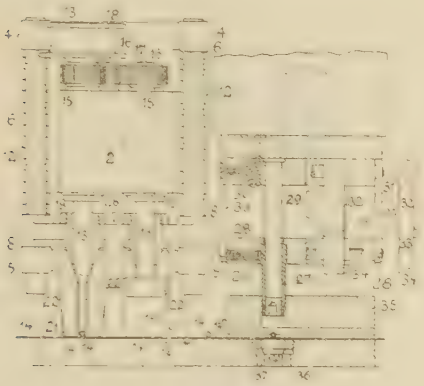
1. The combination in an expansion bolt of an expansion shield, the shield having a neck, an escutcheon plate, and means to connect the escutcheon plate with the interior of said neck.

1,417,198. EXPANSION BOLT. HENRY W. PLEISTER, Westfield, and JOHN KARITZKY, Garwood, N. J., assignors, by mesne assignments, to Henry B. Newhall, Plainfield, N. J. Filed Apr. 2, 1921. Serial No. 458,081. 5 Claims. (Cl. 85—2.4.)



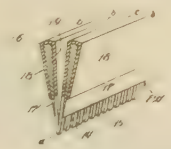
1. The combination of an expansion bolt having a neck provided with an interior groove, said groove having notches arranged at less than 180° apart adapted to receive the concentric lugs of an escutcheon plate.

1,417,199. METHOD AND APPARATUS FOR ROLLING IN THE NECK IN PRESS-BUTTON PARTS OR THE LIKE. PAUL PONDORF, Gossnitz, Germany, assignor to the Firm Maschinen- & Metallwaren-Fabrik G. m. b. H., Berlin, Germany. Filed Jan. 15, 1921. Serial No. 437,635. 2 Claims. (Cl. 79—3.)



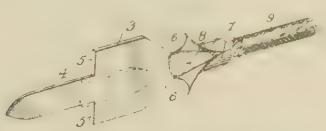
1. Apparatus for rolling in the necks in press-button parts comprising in combination a vertically reciprocable slide, a plurality of spindles rotatably mounted in said slide, means to rotate the spindles, a claw-head provided at the lower end of each of said spindles, claws pivoted to each of said claw-heads and adapted to effect in closing position the rolling in of the button-necks, downwardly conically reduced sleeves, rotatably mounted in a vertically reciprocable plate and loosely surrounding said spindles, said sleeves being adapted to engage with said claw-heads and to thereby effect the closing of the claws, pivoted to said claw-heads, a two-armed lever, adapted to be oscillated and to thereby effect the upward-movement of said plate, and spiral springs, adapted to effect the downward movement of the same.

1,417,200. HAIR-CUTTING DEVICE. FRANK J. PRICE, Brooklyn, and MERRILL W. GALLAWAY, New York, N. Y. Filed Aug. 7, 1920. Serial No. 401,831. 5 Claims. (Cl. 30—12.)



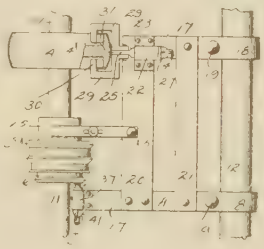
1. A sheet metal holder for the blades of a hair-cutting device wherein the sheet is folded centrally to provide a V-shaped portion having comb-like teeth, the margins of the sheet being folded reversely to provide external guide ways for the blades.

1,417,201. MASK. MAX PRILUKER, New York, N. Y. Filed Apr. 26, 1921. Serial No. 464,615. 1 Claim. (Cl. 24—115.)



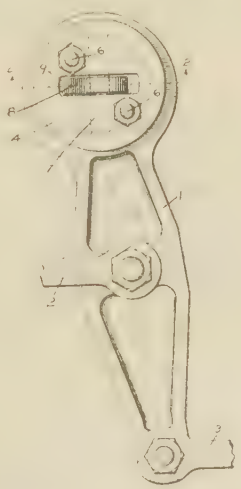
A device for coupling cords to masks and the like, comprising a flat blank of sheet metal having a body portion of substantially the same width throughout and having notches in its opposite margins, a tongue portion extending from one end and narrower than the body portion, forming stop shoulders, said tongue portion adapted to be bent to form an article engaging hook, the portion of the blank between the notches and the end opposite the tongue being adapted to be bent into cylindrical shape to engage a cord, and having indentations on one side forming spurs on the other side which also engages the cord.

1,417,202. FRICTION HEATING APPARATUS FOR POLISHING WHEELS. JULIUS PULS, Eagle Grove, Iowa. Filed June 7, 1921. Serial No. 475,783. 1 Claim. (Cl. 12—77.)



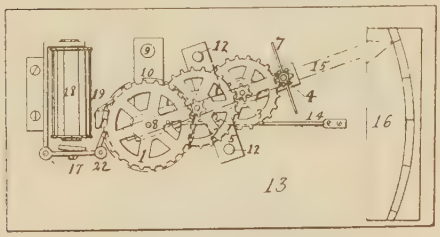
In combination with a burnishing machine having a burnishing wheel with laterally extending annular rim flanges, a heating device adapted to be attached to said machine, said heating device comprising a frame, a heating element thereon having a bifurcated arm, friction blocks thereon adapted to be brought into contact with the inner side of the flanges of the burnishing wheel, means for varying the tension on said friction blocks, said means including a shaft mounted in a bearing on the frame, a spring tending to force said shaft toward the face of the burnishing wheel, and a thumb nut on said shaft for drawing it toward the face of the burnishing wheel, said shaft having the bifurcated friction block carrying arm mounted on one of its ends.

1,417,203. BRAKE-LEVER CONNECTION. JOHN E. REDFORD, Kinloch Park, Mo., assignor to The American Brake Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 27, 1921. Serial No. 464,890. 4 Claims. (Cl. 188—1.)



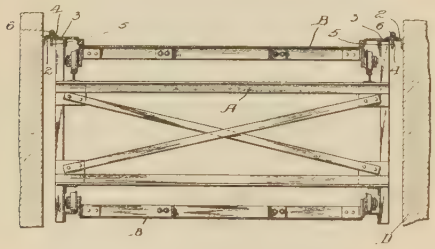
4. In a brake rigging, the combination with a brake lever and a pivot pin therefor, of a brake lever connection comprising oppositely disposed plates between which said pin is secured and provided with an annular bearing and a brake rigging member rotatably mounted on said bearing.

1,417,204. SPEED INDICATOR. HENRY H. RIGGS, Boston, Mass. Filed Nov. 18, 1918. Serial No. 263,007. 10 Claims. (Cl. 264—10.)



1. A speed indicator having a rotary wheel, a swinging frame, an arbor on which said wheel and frame are mounted, a steady mass mounted on said arbor and rotatable independently of said wheel, a pointer carried by said steady mass and having an elastic connection with said swinging frame, a damping mechanism carried by said frame and movable bodily by said frame in an arcuate path about the axis of said wheel as a center of rotation and intermediate mechanism whereby the damping mechanism is driven by said wheel.

1,417,205. LIQUID-SCREENING APPARATUS. GUSTAV R. RODDY, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 19, 1921. Serial No. 438,487. 8 Claims. (Cl. 210—172.)

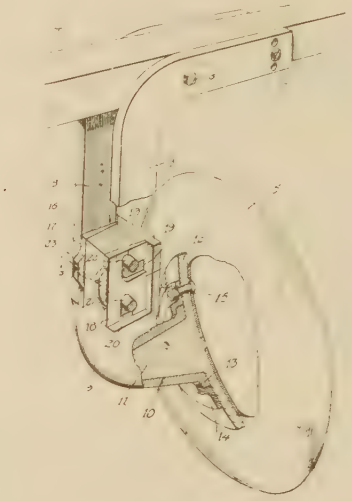


1. In a liquid screening apparatus comprising a chamber through which flows the liquid to be screened and a frame carrying the screen and adapted to be placed in the said chamber, cut-off means to separate the unscreened and the screened bodies of the liquid, located between the screen frame and the side walls of the chamber, and consistsing of flanges secured to the said chamber walls and projecting toward the screen frame, and other flanges carried by the screen frame and arranged to lie opposite to the said wall flanges and in approximately the same plane, but separated therefrom by narrow open spaces, and separate cover plates resting on the said flanges and closing the open spaces between them.

1,417,206. PROCESS FOR WEIGHTING OR CHARGING SILK TO BE DYED BLACK. ALBERT WILHELM SCHMID, Basel, Switzerland. Filed Feb. 18, 1922. Serial No. 537,537. 3 Claims. (Cl. 8—5.)

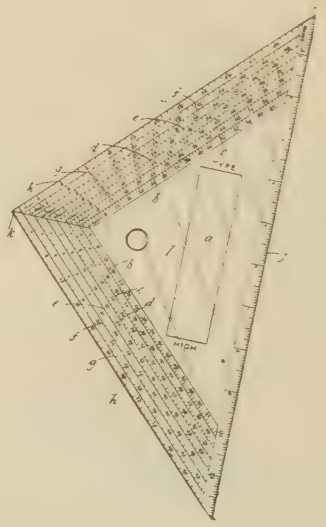
1. The herein described process for weighting or charging silk, to be dyed black, consisting in first weighting or charging silk according to the usual tin-phosphate process and treating it afterwards in a boiling lather or froth bath of a hæmatein solution to which chrysalides boiled up in water have been added.

1,417,207. DISK-ADJUSTING MECHANISM FOR AGRICULTURAL IMPLEMENTS. DUNY A. SCHUTT, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 7, 1921. Serial No. 450,307. 11 Claims. (Cl. 97—40.)



1. In disk supporting mechanism of the class described, a supporting member; a disk supporting bracket carried by said supporting member and capable of assuming three definite and predetermined positions and only three such positions relative thereto; a disk carried by said disk supporting bracket and rotatable relative thereto; and a plurality of wedges adapted when in place to hold said disk supporting bracket in either one of the three definite and fixed positions aforesaid relative to said supporting member.

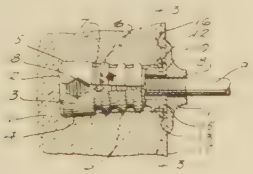
1,417,208. PRINTER'S TYPE GAUGE. FREDERICK GEORGE SHEPARD, Peckham, London, England. Filed Mar. 25, 1921. Serial No. 455,462. 1 Claim. (Cl. 33—113.)



A type gauge consisting of a transparent right angled triangle formed with a plurality of type gauge scales in parallel relation along its base and with a similar plurality of scales in parallel relation along its perpendicu-

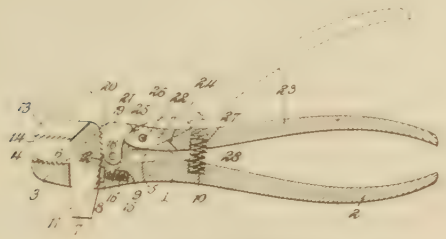
lar side, the said scales of each plurality starting from a line bisecting the right angle of the triangle and extending towards the hypotenuse substantially as set forth.

1,417,209. EXPANSION BOLT. DANIEL R. SHERWOOD, Plainfield, N. J., assignor to Henry B. Newhall, Plainfield, N. J. Filed Mar. 9, 1921. Serial No. 450,920. 4 Claims. (Cl. 85—2.4.)



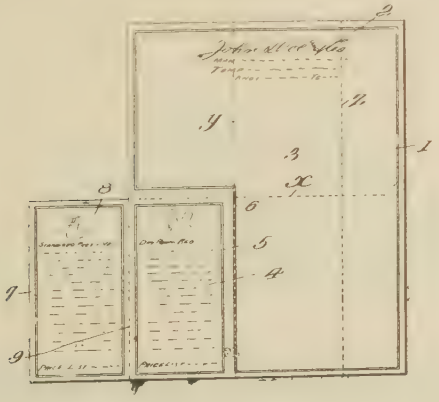
1. The combination of an expansion bolt, a detachable escutcheon plate, and means to hold the end of the expansion bolt against the inner surface of the escutcheon plate and in substantially the same vertical plane as the inner surface of said plate.

1,417,210. WRENCH. ABNER SHIRK, Decatur, Ill. Filed May 14, 1921. Serial No. 469,589. 6 Claims. (Cl. 81—138.)



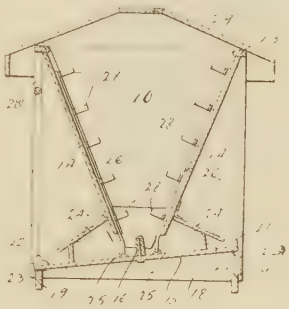
1. A wrench comprising a body member having at one end a stationary jaw and a handle at the opposite end, a movable jaw having its shank slidable on the body member and provided with teeth on its rear edge, a dog pivoted to said body member and provided with teeth adapted to engage with the teeth of the movable jaw, and a clamping lever pivoted to said body member and adapted to engage with the dog to rock the dog and also the movable jaw and move said jaw towards the stationary jaw.

1,417,211. COMBINED LETTER AND ENVELOPE STUFFER OR THE LIKE. EDWARD P. SHURICK, Knoxville, Tenn. Filed Dec. 14, 1921. Serial No. 522,240. 7 Claims. (Cl. 283—56.)



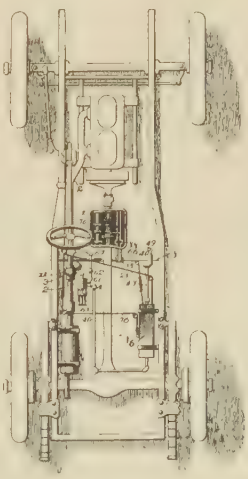
1. A device of the class described comprising a letter sheet having an integral flap or extension provided with suitable indicia, said flap or extension being of less length than the side of said letter sheet of which it is a part, said flap being foldable on and within the marginal line of the letter sheet in and for the purpose set forth.

1,417,212. HOG FEEDER. GEORGE W. SMIDLEY, New Holland, Ohio. Filed Sept. 23, 1919, Serial No. 325,765. Renewed Aug. 11, 1921. Serial No. 491,648. 5 Claims. (Cl. 119—54.)



5. In a stock-feeder, the combination of an open-bottomed feed-receptacle, supports therefor to hold it a little distance above ground, a tilting platform provided with troughs adjacent to the receptacle and projecting outside the troughs, to serve as foot supports for the animals and middle supports for said platform.

1,417,213. GEAR SHIFTER. WILLIAM GRANT STEVENS, Jr., Willis, Tex. Filed Sept. 30, 1919. Serial No. 327,416. 48 Claims. (Cl. 74—58.)

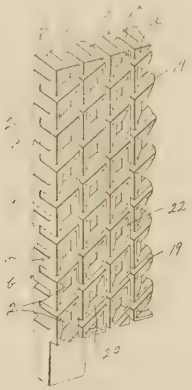


1. The combination, of an exhaust gas manifold, transmission gears, and means actuated by the pressure of the exhaust gas in said manifold for shifting said gears.

1,417,214. STORAGE-BATTERY ELEMENT. JOHN CLARENCE SUNDBY, Enderlin, N. Dak., assignor to Sundby Battery & Manufacturing Company, Enderlin, N. Dak., a Corporation of North Dakota. Filed Sept. 7, 1920. Serial No. 408,708. 6 Claims. (Cl. 204—29.)

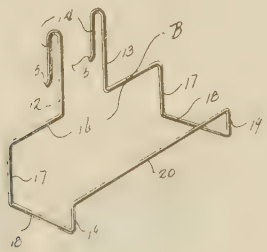
1. A battery element comprising a metallic plate having its opposite faces intersected by two series of grooves, the grooves of one series being disposed in angular rela-

tion to the grooves of the other series, the grooves thus dividing the active faces of the battery element into a series of electrically connected polygonal electrolyte con-



tacting portions, each of these polygonal portions being pierced transversely of the thickness of the plate to permit the passage of electrolyte through the plate.

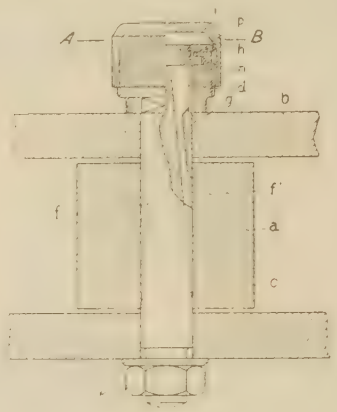
1,417,215. HEAT-UTILIZING DEVICE. JAMES F. SYRETT, Baltimore, Md. Filed Dec. 13, 1920. Serial No. 430,334. 2 Claims. (Cl. 126—332.)



1. As an article of manufacture, a wire supporting frame including a pair of supporting arms, each of said arms including a vertical stem portion provided with a hooked end, and a second vertical stem portion offset from said first mentioned stem portion by a horizontal portion, horizontal arms extending from the ends of said second vertical stem portion of each supporting arm and being provided on their outwardly projecting ends with upturned stems, shorter in length than the length of said supporting arm stem portions, and a supporting rail connecting the upper ends of said upturned stems in such manner that said supporting arms will lie in substantially the same plane, with said second mentioned vertical stem portions thereof offset farther with respect to each other than said first mentioned stem portions of said supporting arms, said rail lying substantially parallel with the plane defined by said supporting arms.

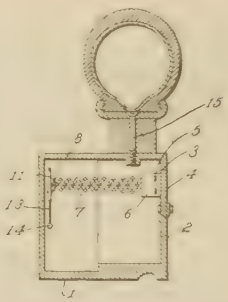
1,417,216. LUBRICATOR. EDWARD TATSCHKE, Berlin, Germany. Filed Nov. 3, 1921. Serial No. 512,669. 3 Claims. (Cl. 184—48.)

2. A lubricator for spindles and the like comprising a sleeve embracing an end of the spindle and having an undercut recess with an overhanging portion, a cap threaded on the sleeve having notches therein, and a locking ring lying within the outer portion of the sleeve and having an end thereon engaging non-rotatively with the sleeve and adapted to take into the recesses in the



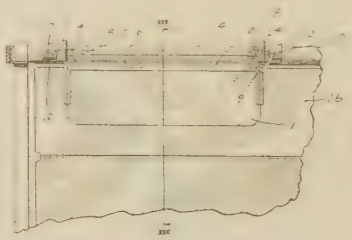
cap, said ring having fingers bent therefrom and lying within the recess and engaging the overhanging portion.

1,417,217. AUTOMOBILE ALARM. WILLIAM ALFRED TAYLOR, Detroit, Mich. Filed July 25, 1921. Serial No. 487,265. 4 Claims. (Cl. 116—33.)



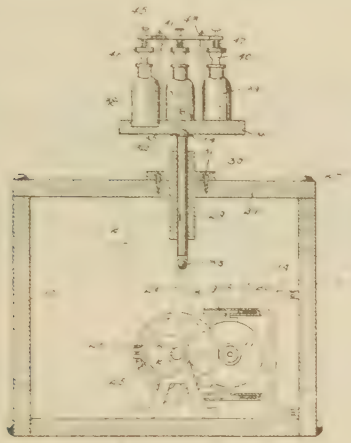
3. An alarm including a resonant housing, a segmental section thereon insertible between spokes of a wheel, a door normally closing said section, an extensible support upon the door, a strip mounted to rotate freely on the support, clappers loosely connected to the ends of the strip for striking the housing when the support is extended, and means for holding the support retracted into the extension.

1,417,218. ADJUSTABLE SUN AND LIGHT DIFFUSER. THOMAS J. TREICHEL, San Francisco, Calif. Filed Mar. 16, 1921. Serial No. 452,831. 2 Claims. (Cl. 296—97.)



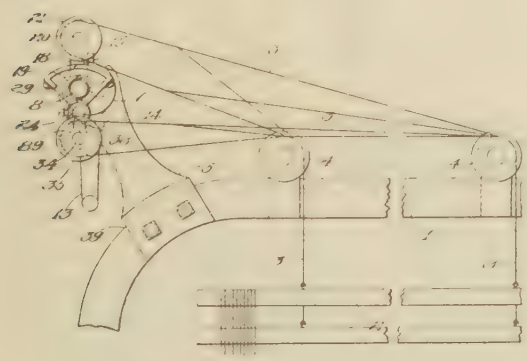
1. A wind shield attachment comprising a rod secured to the top member of the wind shield in parallel relation to the same, a plate, spring means associated with the rod supporting the plate and tending to revolve the same around the rod and flexible means actuated by the spring means for limiting the revolving motion of the plate.

1,417,219. AUTOHEMIC THERAPY POTENTIZER. THOMAS H. WARREN, Dexter, Iowa. Filed Aug. 22, 1921. Serial No. 494,261. 1 Claim. (Cl. 259—59.)



In a device of the class described, a support having a plurality of recesses therein for receiving the bottom end of bottles, a plurality of posts on said support, an annular member slidably mounted on said posts, means on said posts for limiting the upward movement of the annular member, a plurality of rods slidably mounted in said annular member having heads on their upper ends and caps, formed with a downwardly, extending, peripheral flange on their lower ends, springs on said rods between said caps and said annular member, whereby a closure member placed in the neck of a bottle may be engaged by said cap and yieldingly held in position for the purposes stated.

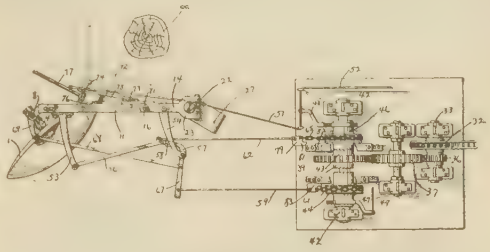
1,417,220. HARNESS-OPERATING DEVICE FOR LOOMS. JABEZ WILKINSON, Fall River, Mass. Filed Feb. 25, 1921. Serial No. 447,786. 8 Claims. (Cl. 139—80.)



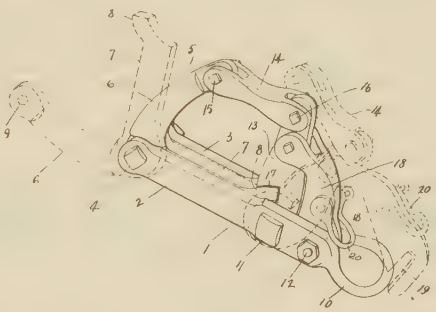
1. In combination with a harness supporting lever for a loom, a stud on which said lever is mounted, a rotatable eccentric bearing for said stud, and a forked support having a concaved seat between the branches of the fork for said bearing, said bearing being rotatable on its axis on said seat to shift the axis of the stud to a different position to lower the harness frame and being removable by lifting from its seat.

1,417,221. DISK PLOW AND THE LIKE. SHINKICHI YUASA, Cupertino, Calif. Filed June 1, 1921. Serial No. 474,152. 12 Claims. (Cl. 97—40.)

1. In combination with a gang plow, an auxiliary disk plow comprising two longitudinal frame members pivotally connected to each other, a disk secured to the rearward member, drawing means secured to the front member, and means for selectively adjusting the relative position of the frame members to each other between longitudinal alinement and angular relation, whereby the position of the disk is changed relative to the line of draft.

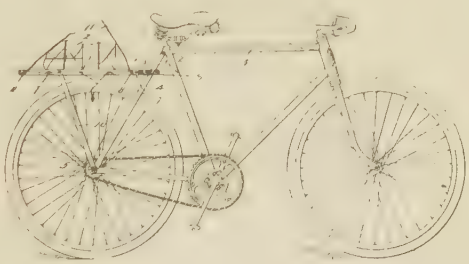


1,417,222. TOWING HOOK. JOHN ABRAHAM, Vancouver, British Columbia, Canada. Filed May 13, 1921. Serial No. 469,345. 1 Claim. (Cl. 114—217.)



A hook comprising a shank formed of a pair of parallel side bars connected at one end to form a shackle end, a bill pivotally mounted between the opposite ends of said bars having an arm lying normally therebetween, a normally vertical arm pivotally mounted between the bars adjacent the shackle end having a notch in which the end of the bill arm is normally engaged, an arm pivotally connected at one end to said vertical arm at a point above its midheight having its lower end provided with a notch and disposed between the shank bars behind the vertical arm and a bolt extending through said bars with which the last mentioned notch is normally engaged.

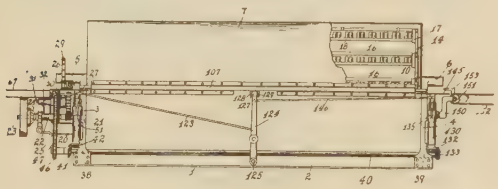
1,417,223. REAR PACKAGE CARRIER FOR BICYCLES AND THE LIKE. CARL A. ANDERSON, Minneapolis, Minn. Filed Oct. 18, 1920. Serial No. 417,702. 2 Claims. (Cl. 224—38.)



1. A package carrier comprising a supporting member adapted for attachment to a vehicle of the bicycle or motorcycle type, a clamping wing pivotally mounted near one end of the member, a second clamping wing pivotally mounted near the other end of said member, resilient

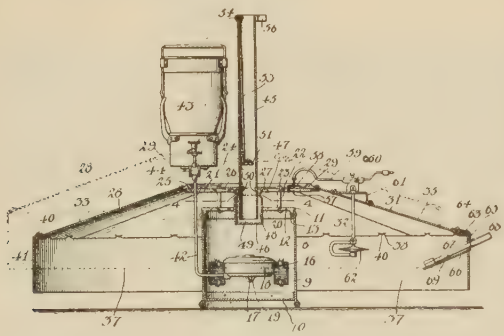
means exerting its influence to press each of said wings downwardly upon said member, whereby articles resting upon said carrier may be pushed horizontally thereof and resiliently held upon said supporting member, substantially as described.

1,417,224. EXHAUST BOX. JOHN F. ANDERSON, Oakland, Calif. Filed Jan. 31, 1921. Serial No. 441,211. 17 Claims. (Cl. 126—272.)



1. In an exhausting box of the character described, a substantially closed heated chamber, a reel rotatably mounted in said chamber, shelves on said reel, means for rotating the reel, means for feeding the cans to a point where they may be introduced into the chamber, means for subsequently positioning the cans to register with the shelves, and means for moving the positioned cans on to the shelves, means for removing the cans from the shelves and from said chamber.

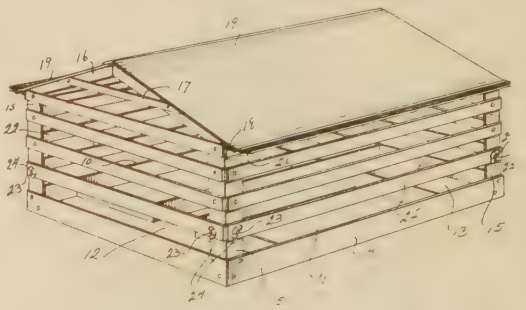
1,417,225. HOVER FOR POULTRY. ARLINGTON L. BALL, Dunkirk, N. Y., assignor of one-third to Harry C. Hequembourg and one-third to Gertrude P. Hequembourg, Dunkirk, N. Y. Filed July 31, 1918. Serial No. 247,526. 9 Claims. (Cl. 119—32.)



1. In a hover, the combination of a central heater casing having an opening in its top wall, a hover casing supported by said heater casing and having a central flat portion and a canopy portion carried by said flat portion and being directed outwardly and downwardly therefrom, said canopy portion having a flexible curtain secured to its edge with the lower edge of said curtain spaced from the floor, a pipe extending centrally through the hover casing, and a drum supported by said hover casing and extending into said heater casing and having openings in its sides at a point above the lower end of said pipe, the lower end of said pipe being spaced from the bottom of said drum.

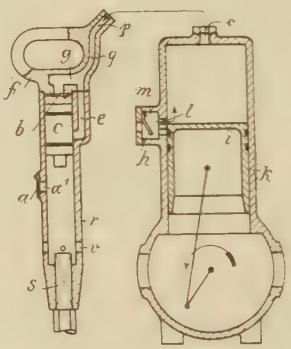
1,417,226. CHICKEN FEEDER. OVERTON M. BENNETT, Uniondale, Pa. Filed May 9, 1921. Serial No. 467,953. 2 Claims. (Cl. 119—16.)

1. A poultry feeder of the character described comprising a relatively shallow, rectangular pan having a rim, metallic posts angular in cross section attached to the corners of said rim and projecting upward therefrom, a roof supported on said posts, slats connecting the upper ends of the posts, said posts just above the wall of the pan being vertically slotted, and slats disposed immediately above and in spaced relation to the rim of the pan, and



bolts passing through said slats and into said posts whereby the slats may be raised or lowered relative to the rim of the pan.

1,417,227. ROCK DRILL AND LIKE CUTTING MACHINE. AUGUST BERNER, Nuremberg, Germany, assignor to C. & E. Fein, Elecktrotechnische Fabrik, Stuttgart, Germany. Filed Jan. 8, 1914. Serial No. 810,949. 5 Claims. (Cl. 255—42.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

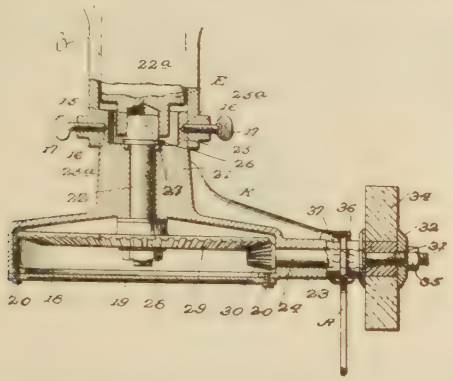


1. In a rock-drill or like cutting machine having a hammer cylinder with piston and a single acting air pump for operating it, means for rendering the change of the stroke of the hammer piston independent from the position of the pump piston and make it dependent from the position of the hammer piston, comprising an exhaust valve in the hammer cylinder arranged to open immediately after the forward stroke of the hammer piston whereby the change of stroke is effected after the forward stroke, and a valve in the rear cover of the hammer cylinder producing with its aid during the rearward stroke an air cushion between the hammer piston and the rear cylinder cover, initiating the change of stroke after the rearward stroke.

1,417,228. ATTACHMENT FOR MOTOR-DRIVEN DEVICES. ANDREW GEORGE BLOCKER, St. Louis, Mo. Filed June 27, 1921. Serial No. 480,651. 2 Claims. (Cl. 51—241.)

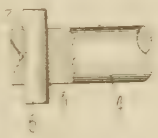
1. An attachment for motor driven devices of the class described having a casing including a barrel receiving the shaft of the motor, said attachment comprising a casting adapted to be detachably secured to the barrel and having angularly disposed bearings, a shaft journaled in one bearing and adapted to be operatively connected to the motor shaft for rotation therewith, a second shaft journaled in the other bearing, gears operatively connecting the two shafts, said casing having an enlarged hollow portion

between its said bearings, forming a housing for said gears and open at one side, a detachable cover plate normally closing said housing, and an element adapted to



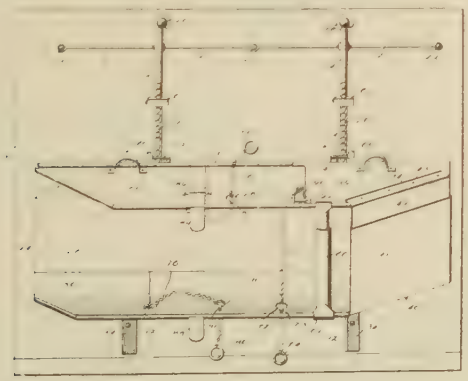
perform work when rotated, said element being secured to the second mentioned shaft for rotation therewith externally of the casing.

1,417,229. ROD AND CROSS PIN CONNECTION AND METHOD OF MAKING SAME. CHARLES F. S. BYRNE, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 8, 1920. Serial No. 364,089. 3 Claims. (Cl. 287—54.)



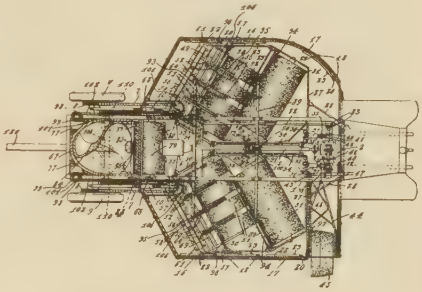
1. The method of securing a cross pin in an apertured rod having a countersink in its end, which consists in forming a recess in said pin, placing said pin in the recess of the rod so that the recess will be opposite said countersink, and distorting the metal beneath said countersink into said recess.

1,417,230. RESTRAINING APPARATUS. GIP CORTEZ, Tipton, Calif. Filed Dec. 11, 1920. Serial No. 430,029. 10 Claims. (Cl. 119—103.)



1. An animal restraining apparatus comprising a plurality of inclined brackets, a stationary section and a movable section mounted upon said brackets, spring latches carried by said movable section and having means engaging said brackets whereby to hold the movable section in position, said sections being provided with upstanding side walls, one of the side walls being provided with a hinged portion defining a gate, means to lock said gate to the side wall in a set position, a telescoping base inclusive of a pair of slidably connected sections having their outer ends joined to said side walls, a head confining member inclusive of a pair of slidably connected flat metallic sections adapted to flatly contact with the top of an animal's head, the outer ends of the sections of said head confining member being secured to the ends of said side walls, and chains carried by said side walls to engage the limbs of an animal.

1,417,231. STREET SWEEPER. ALBERT C. DEWEESE, Chicago, Ill. Filed Apr. 2, 1920. Serial No. 370,782. 2 Claims. (Cl. 15—19.)



1. In a device of the class described, a vehicle including a main frame; an auxiliary frame hinged to the main frame for raising and lowering; means for raising and lowering the auxiliary frame; a brush journaled for rotation in the auxiliary frame; means for rotating the brush; a fixed brush located to the rear of the first specified brush; means for connecting the fixed brush with the auxiliary frame for upward and downward swinging movement relative to the auxiliary frame; and means for applying suction to the fixed brush.

1,417,232. METHOD OF MAKING INSECTICIDES. HERBERT H. DOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Feb. 6, 1919, Serial No. 275,450. Renewed Oct. 24, 1921. Serial No. 510,100. 6 Claims. (Cl. 167—6.)

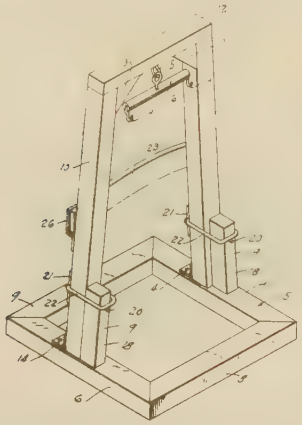
1. The method of making an insecticide, which consists in reacting between a suitable lead compound and an excess of arsenic acid and neutralizing the residual acid with an excess of an alkaline earth hydroxide.

1,417,233. DISK WHEEL. EMIL R. DRAVER, Richmond, Ind. Filed Oct. 4, 1920. Serial No. 414,552. 3 Claims. (Cl. 301—63.)

1. A disk wheel having a rim adapted to be equipped with a pneumatic tire and having a radial valve stem passage located on the inner side of the wheel disk, said wheel disk having an inwardly bulged pocket with a valve

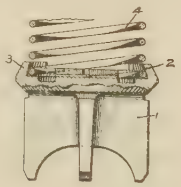
stem passage therein aligned with the valve stem passage in said rim, whereby the valve stem of an applied tire may be projected into said pocket where access may be had thereto from the outer side of the wheel.

1,417,234. BUTCHERING STAND. CHARLES M. DUKE, Murphysboro, Ill. Filed Feb. 23, 1922. Serial No. 538,599. 6 Claims. (Cl. 17—30.)



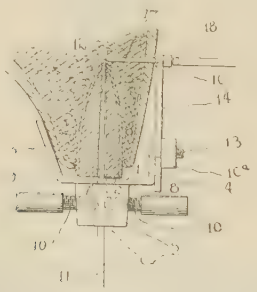
1. A butchering stand of the character described comprising a base, a frame movably connected to the base, means carried by the frame for supporting an animal, and means carried by the frame and operatively connected to the base to prevent movement of said frame relative to the base.

1,417,235. PUMP VALVE. ALEXANDER ENGLAND, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 5, 1920. Serial No. 371,252. 2 Claims. (Cl. 251—144.)



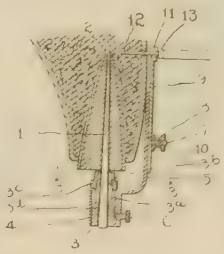
1. The combination with a coil spring, of a valve having an annular conical recess with a portion of the wall of the recess cut away to permit the end coil of the spring to be screwed into the recess.

1,417,236. DENTAL INSTRUMENT. GEORGE EVANS, New York, N. Y. Filed May 17, 1921. Serial No. 470,243. 7 Claims. (Cl. 32—10.)



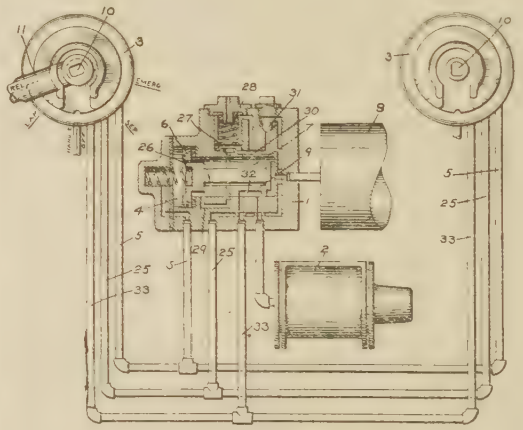
1. A dental instrument comprising means for determining the extent of a root canal, a holder therefor, and guide means carried by said holder to co-operate therewith and permit the drilling of a hole through the root embedding bone to intersect the root apex.

1,417,237. DENTAL INSTRUMENT. GEORGE EVANS, New York, N. Y. Filed Oct. 15, 1921. Serial No. 507,818. 3 Claims. (Cl. 32—10.)



3. In a dental instrument, in combination, a cylindrical holder having a flattened outer portion and an axial orifice for the reception of a probe, means for securing the probe in the holder with its length adjusted to measure the extent of a root canal, a socket member with an internal flat portion adapted to fit over the holder, means for securing the socket member to the holder, a bar extended from the socket member to lie alongside the gum, a supplementary bar having guide means for directing a drill into intersecting relation with the probe at the root apex, and means of lengthwise, adjustable engagement between the supplementary and extended bars.

1,417,238. SAFETY CAR-CONTROL EQUIPMENT. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Original application filed Mar. 26, 1920, Serial No. 368,908. Divided and this application filed July 26, 1921. Serial No. 487,655. 3 Claims. (Cl. 303—84.)

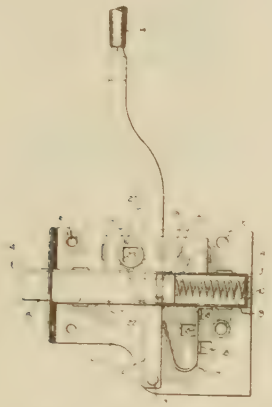


1. In a fluid pressure brake, the combination with a reservoir adapted to be charged with fluid under pressure and a pipe line adapted to be charged with fluid under pressure from the reservoir, of means operted upon a predetermined reduction in pressure in the reservoir for cutting off communication from the reservoir to the pipe line.

1,417,239. LATCH DEVICE FOR VEHICLE DOORS. KINGSTON FORBES, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 22, 1919. Serial No. 339,804. 3 Claims. (Cl. 292—169.)

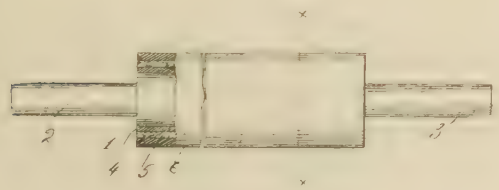
1. In a latch device of the class described, a latch plate; a bolt guide carried by said plate and located adjacent the central portion thereof; a reciprocating spring

actuated bolt slidable in said guide and having an abutment at its inner end; an oscillating operating lever the lower end of which is pivotally connected with said latch plate and which lever extends transverse to said bolt and upward beyond said plate and the free end of which serves as an operating handle, and which lever engages the abutment aforesaid to thereby operate said bolt; an



oscillating latch actuating member supported by said latch plate above said bolt guide and having two oppositely disposed cam portions in direct contact throughout their lengths with said lever and either one of which may operate the same, to thereby operate said bolt; and a spring acting to force said operating lever into engagement with said cam portions.

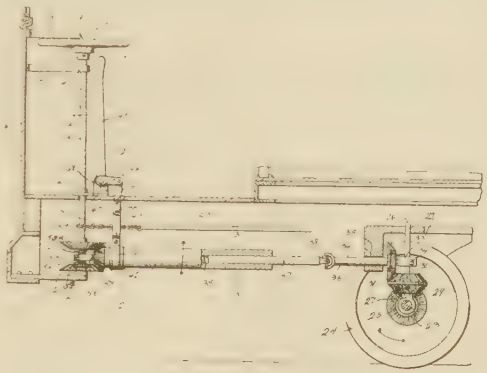
1,417,240. ELASTIC ROLLER. KINSUKE FUKUDA, Yokohama, Japan. Filed Oct. 8, 1920. Serial No. 415,636. 1 Claim. (Cl. 68—33.)



A roller for clothes wringers, comprising a metallic core, a thin layer of vulcanized rubber surrounding the core and coherent thereto, a substantial layer of sponge rubber surrounding and coherent to the first layer, and a third and external layer of dense, vulcanized rubber surrounding and coherent to the sponge rubber, the said metallic core being of greater diameter than the thickness of the combined layers.

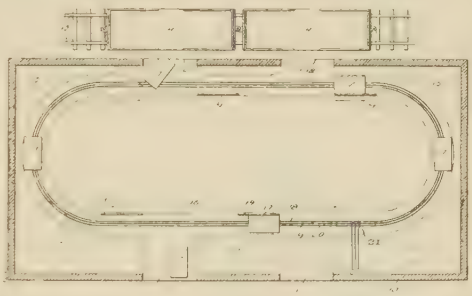
1,417,241. AUTOMATIC BRAKE MECHANISM. HARVEY F. GERHART, Philadelphia, Pa. Filed Oct. 19, 1920. Serial No. 418,060. 3 Claims. (Cl. 188—145.)

1. In a mechanism for automatically applying brakes, the combination with a brake stem having means for connection with brake shoes, of a driving mechanism for the stem, means shiftably connecting the mechanism and the stem for periodically transmitting power to the stem, means for shifting said shiftable means, whereby the stem may be periodically operated, a hand wheel loosely mounted on one end of the stem, a ratchet and pawl device connecting the hand wheel and the stem to hold the wheel movable with the stem in one direction, said hand wheel having a band ratchet, a fixed support, and a pawl mounted on the support and engaging the band ratchet,



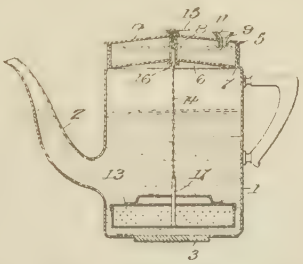
to hold the hand wheel against movement in the opposite direction, while the stem is being driven by the driving mechanism to apply the brakes.

1,417,242. FREIGHT-HANDLING SYSTEM. EDWIN B. GRACE and WILLIAM J. LAFFEY, Memphis, Tenn. Filed July 16, 1921. Serial No. 485,244. 3 Claims. (Cl. 104—29.)



1. A system of freight distribution comprising a walled inclosure having entrances and exits leading to and from the interior thereof, an endless runway within the inclosure, electrical conductors of a three wire system of distribution coextensive with said runway, trucks electrically operated from said conductors movable around said runway and manually operable to and from the entrances and exits of the inclosure, and deflectors arranged adjacent each entrance and exit of the inclosure for guiding the trucks into position on said runway.

1,417,243. COFFEE POT OR URN. CLARENCE D. GRAVES, Dublin, Ga. Filed Aug. 30, 1921. Serial No. 496,892. 5 Claims. (Cl. 53—3.)



1. A vessel for preparing decoctions having a condenser mounted in the upper portion thereof, a receptacle in

said vessel adapted to contain solid material, a chain or the like by means of which the solid material may be raised and lowered, and a tube extending through said condenser, through which tube said chain passes.

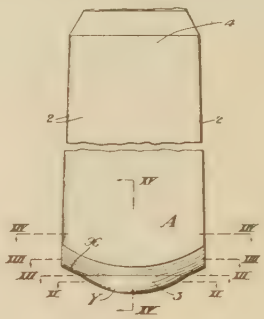
1,417,244. GARTER. ERICK O. HAMMERBERG, Chicago, Ill. Filed Dec. 13, 1919. Serial No. 344,557. 1 Claim. (Cl. 28—81.)

A garter or supporter comprising a pair of oppositely extended metal loops, each formed of a single wire and having a straight end portion, a rigid metal clasp for hinging said straight end portions together, said loops being formed with relatively narrow portions at their remote ends and each being formed with its intermediate portions converging, a cross strip for the proximate intermediate portions of each loop for dividing each loop into two portions, a flexible strip threaded upwardly through the inner portion of one loop, around said hinged straight portions of said loops, and then downwardly through the inner portion of the second loop, and a button carried at each end of said strip, each adapted to engage with the adjacent relatively narrow end portion of the adjacent loop.

1,417,245. ANIMAL POKE. OLIVER H. HARRIS, Moro, Ark., assignor of one-fourth to John L. Lee, Thomasville, Ark. Filed July 2, 1921. Serial No. 482,236. 3 Claims. (Cl. 119—140.)

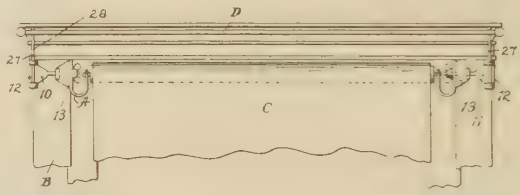
1. An animal poke comprising a neck yoke, an operating yoke straddling the upper portion of the neck yoke and pivotally connected therewith and normally aligned therewith, a fence engaging hook on said operating yoke for swinging the latter, and a pair of pricking prongs pivoted upon opposite sides of the neck yoke and pivotally and slidably connected with the ends of the operating yoke, the pricking points of said prongs being concealed intermediate the neck and operating yokes when said yokes are alined.

1,417,246. INGOT. BENJAMIN P. HAZELTINE, Wheeling, W. Va. Filed Mar. 5, 1921. Serial No. 449,789. 4 Claims. (Cl. 22—218.)



1. As a new article of manufacture, an ingot of rectangular cross section, having lengthwise tapering sides and having a rounded surface on the base or butt end thereof, said rounded surface having an unequal curvature of two radii.

1,417,247. SHADE AND CURTAIN BRACKET. JOHN A. HEMFLING, Lester Prairie, Minn. Filed July 17, 1920. Serial No. 397,060. 2 Claims. (Cl. 156—24.)

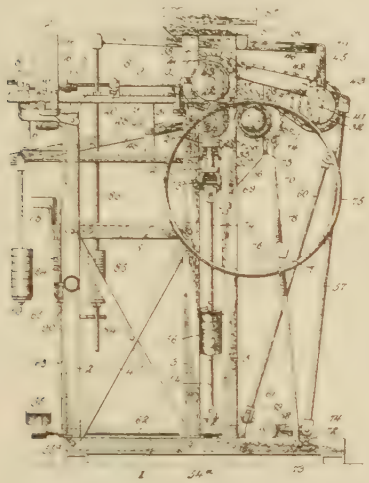


2. In a combined window shade and curtain pole supporting bracket, a pair of triangular shaped sections, right angularly extending jaws formed on the base portions of the sections, inwardly extending biting teeth formed on the outer edges of the jaws, an inwardly extending rod formed on the apex portion of one of the sections, a right angularly extending foot formed on the apex portion of the other section, the right angularly extending foot and jaw of the last mentioned section having aligned openings therein arranged to slidably receive the rod, the outer end of said rod being threaded, a winged nut fitted on said rod arranged to frictionally engage the last mentioned section, a depending resilient bendable plate formed on the lower edge of the jaw of the last mentioned section, a vertically disposed extension formed on said bendable plate provided with means for the reception of a pintle of a window shade roller, the other section having vertically aligned eyes formed therein, and a curtain pole supporting rod detachably fitted in said aligned eyes.

1,417,248. SOIL MIXTURE FOR A FORCED GROWING OF POTATOES AND METHOD FOR ITS MANUFACTURE. JEAN HUSSON, Berne, Switzerland. Filed Dec. 28, 1920. Serial No. 433,670. 5 Claims. (Cl. 71—9.)

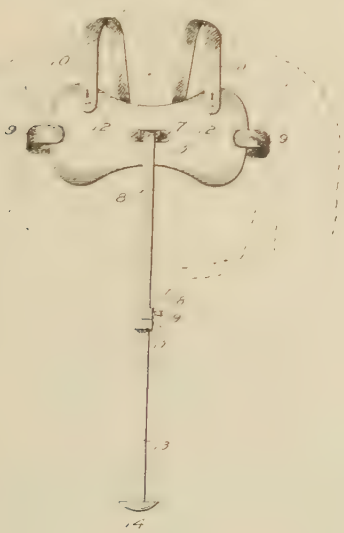
1. A soil mixture adapted for the artificial and forced growing of potatoes containing sand and a manure comprising a nitrogenous and a phosphatic substance and a salt of potassium in the following proportion: 2 to 3% of nitrogen, 3 to 4% of phosphoric acid soluble in water, 1 to 2% of potash.

1,417,249. SPIRAL MACHINE. THEODORE KARDONG, Minneapolis, Minn. Filed Apr. 20, 1920. Serial No. 375,298. 26 Claims. (Cl. 153—65.)



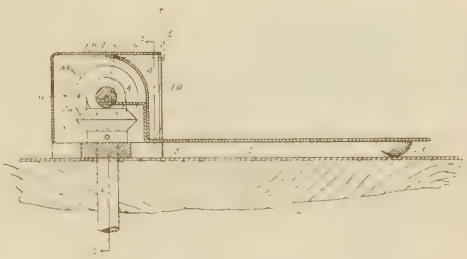
1. In a machine for producing helices, the combination of an upper roller, a lower roller, a third roller located to one side of the longitudinal vertical plane of the peripheries of the upper and lower rollers, a fourth roller located between the upper and lower rollers and the third roller, and means for positively driving all four rollers from the power shaft of the machine.

1,417,250. BACK BRACE. ROBERT EMMETT KELLY, Jacksonville, Fla. Filed Apr. 14, 1920. Serial No. 373,859. 4 Claims. (Cl. 155—37.)



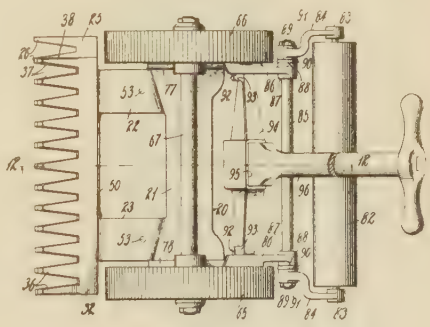
1. In combination, a breast plate, a post pivotally mounted on the front of the breast plate, and means for holding the breast plate in position on the chest of the wearer for supporting said post in a pendently swingable position from the chest, whereby when the wearer stands erect the post hangs downwardly in front of his body and when he stoops over the post will be swung out to contact with the ground.

1,417,251. DIRECTION INDICATOR. JESSE E. KELSEY, Theresa, N. Y. Filed Feb. 10, 1922. Serial No. 535,525. 2 Claims. (Cl. 116—52.)



1. In a direction indicator, a shaft, a target secured to said shaft, the attached end of said target having a right angular bend for disposing the free end portion of the target in a plane parallel to the attached end portion, a shaft disposed at right angles to the first shaft, bevel gears operatively connecting said shafts, a handle for operating said shafts, a housing enclosing the shafts, the gears, and the angular portion of said target, one side of said housing being normally opened, and a curved guard carried by the angular portion of the target and movable within the housing for preventing dust and dirt from reaching the gears.

1,417,252. LAWN MOWER. JOSEPH N. M. KEYZER, Lynchburg, Va. Filed Aug. 5, 1920. Serial No. 401,323. 8 Claims. (Cl. 56—262.)

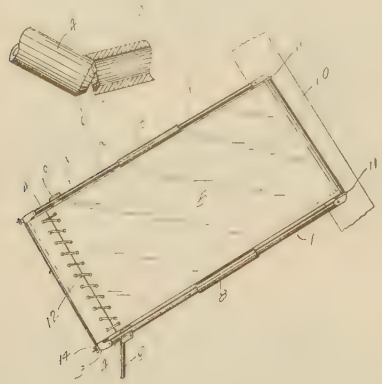


1. A mowing machine comprising a main frame including a hollow body having a hollow arm extending therefrom, bull wheels supporting the frame, a knife bar having a socket, the frame arm having an extension held in the socket, knives carried by the bar, a second knife bar slidably mounted upon the first knife bar and having knives in cooperative relation to the first named knives, a socket in the upper knife bar communicating with the hollow arm, a rocker pivoted within the arm and engaged at one end in the socket of the upper knife bar, and means for rocking the rocker from the bull wheels.

1,417,253. FOLDING CAMP BED. JOHN KIBLER, Jr., Walla Walla, Wash., assignor of one-half to Harry E. De Witt, Walla Walla, Wash. Filed Aug. 18, 1920. Serial No. 404,355. 2 Claims. (Cl. 5—5.)

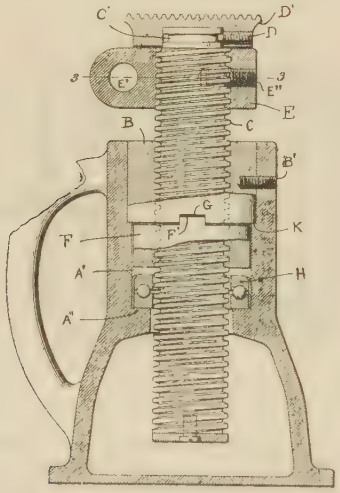
2. In a folding camp bed, a self stretching and folding frame, consisting of two major parts, each of said parts foldable upon itself, and each of said parts terminating in

one part of a ball and socket joint, to register with the socket and ball of its fellow, a sliding sleeve covering said joint, to maintain rigidity thereat, legs foldably at-



tached to said frame, an adjustable yielding bottom attached to said frame, independently adjustable tightening members supporting said bottom, and a means for tightening said members operably attached to said frame.

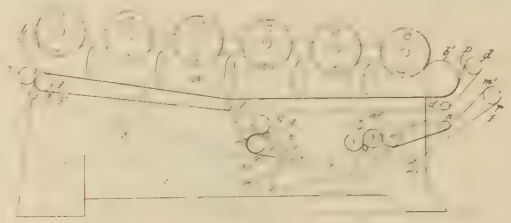
1,417,254. SAFETY LIFTING JACK. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed May 10, 1921. Serial No. 468,301. 10 Claims. (Cl. 254—98.)



1. A lifting jack of the nature disclosed combining a screw and a pair of elements cooperating therewith, one of which normally sustains the load and the other of which is adapted to sustain the load on the failure of the other element of said pair.

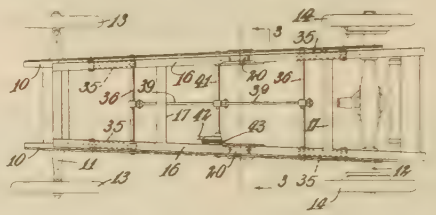
1,417,255. COMBINED IRONING AND FOLDING MACHINE. LEO M. KOHN, New York, N. Y. Filed Dec. 19, 1919, Serial No. 346,067. Renewed Nov. 12, 1921. Serial No. 514,822. 15 Claims. (Cl. 68—9.)

1. In a combined ironing and folding machine, the combination with the frame of a machine, of ironing devices arranged on said frame, means for passing the articles through said ironing devices, a plurality of article conveyors arranged on said frame in close proximity to said ironing devices, and folding devices co-operating with said conveyors to effect the folding of the articles in a



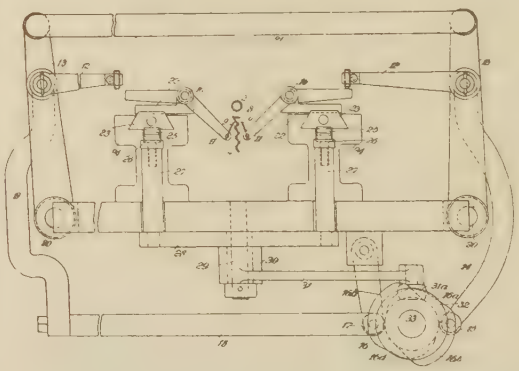
direction transverse to the direction of movement of said articles and to deliver said articles from the machine.

1,417,256. VEHICLE CHASSIS AND SPRING. LAWRENCE KOKOVAI, Dante, Va. Filed Oct. 13, 1921. Serial No. 507,582. 5 Claims. (Cl. 280—124.)



1. In an automobile, running gear including frame members, resilient supporting devices for said body carried by said frame members at three longitudinally spaced points, and means for vertically adjusting the front and rear devices to maintain a horizontal positioning of said body upon variation of the longitudinal disposition of the weight carried by said body, said means being adapted to effect an opposite adjustment in unison of the front and rear device.

1,417,257. MACHINE FOR THE MANUFACTURE OF RINGLET MESH OR NET WORK. REINHARD KÖLSCH, Pforzheim, Germany, assignor to the Firm of Louis Kuppenheim, Pforzheim, Germany. Filed June 29, 1920. Serial No. 392,898. 11 Claims. (Cl. 140—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



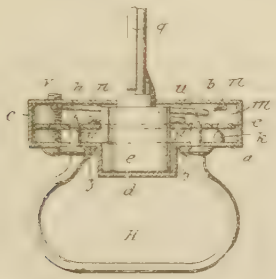
1. In a machine of the character described two ringlet row holding helixes one of which is arranged lower than the other for about half the diameter of a ringlet and having a space between their operating ends, one of said helixes for successively discharging ringlets and the other

taking up new ringlets as they are formed, means for rotating the helixes to produce the feed of the ringlet mesh and means to lift a freshly inserted ringlet from a horizontal position into a position to be taken up by one of the helixes.

1,417,258. PLUMBER'S SOIL. JOHN F. LEDDY, Hoboken, N. J. Filed Dec. 28, 1920. Serial No. 433,668. 3 Claims. (Cl. 134—1.)

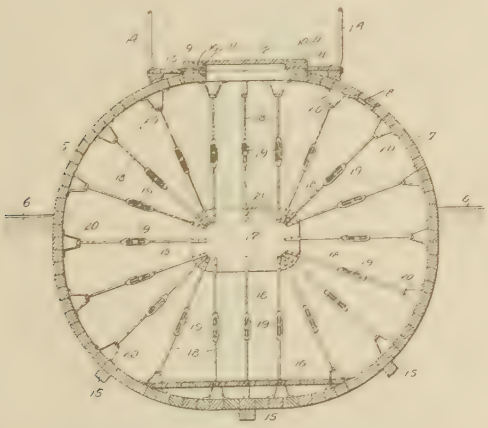
2. A plumber's soil, resulting from the admixture of the following ingredients in substantially the proportions indicated: ivory black, 2 lb.; chalk, 2 oz.; cylinder oil, 4 oz.; molasses, 1 lb.; vinegar, 5 oz.; sulphuric acid, 4 oz.; iron sulphate, 4 dr.; gum arabic, 6 dr.; hot water, 5 oz.

1,417,259. DAMPER-CONTROL DEVICE. WALTER L. LEEDY, Youngstown, Ohio. Filed Sept. 7, 1921. Serial No. 499,080. 6 Claims. (Cl. 126—295.)



1. In a device of the character described, a casing, a shaft rotatably mounted in said casing, a disk slidably mounted upon said shaft and locked against independent rotation, means for rotating said disk, and means for locking the disk in any desired position.

1,417,260. SHIP STRUCTURE. JOHN HJALMAR LINDROOS, Brooklyn, N. Y. Filed June 16, 1921. Serial No. 477,919. 5 Claims. (Cl. 114—83.)



1. In a device of the character described, a hull comprising a number of boards fitted together edge to edge and secured together in the proximate form of a cylinder, a plurality of tie rods connected with said cylinder and extending radially inward therefrom, and a brace plate connected with said tie rods at the inner ends thereof.

1,417,261. METHOD OF CONCENTRATING ORES. ROYER LUCKENBACH, Brooklyn, N. Y., assignor to Luckenbach Processes, Inc., San Francisco, Calif., a Corporation of Nevada. Filed Dec. 31, 1919. Serial No. 348,700. 9 Claims. (Cl. 83—85.)

1. The method of concentrating ores by flotation, which comprises aerating the ore pulp in the presence of a mixture comprising the reaction product of a bitumen and an alkali, and a mild acid in quantity sufficient to render the pulp non-alkaline and insufficient to decompose the reaction product, to form a froth, and separating the froth from the pulp.

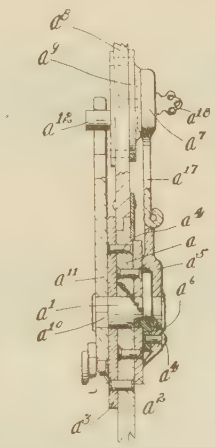
1,417,262. PROCESS OF CONCENTRATION OF ORES. ROYER LUCKENBACH, Brooklyn, N. Y., assignor to Luckenbach Processes, Inc., San Francisco, Calif., a Corporation of Nevada. Filed Jan. 3, 1921. Serial No. 434,758. 15 Claims. (Cl. 83—85.)

1. The process of concentrating ores, which comprises adding to a pulp composed of finely divided ore and water the reaction product of an alkali and lac, aerating the mixture to form a froth, and separating the froth from the remainder of the pulp.

1,417,263. CONCENTRATION OF ORES. ROYER LUCKENBACH, Brooklyn, N. Y., assignor to Luckenbach Processes, Inc., San Francisco, Calif., a Corporation of Nevada. Filed Jan. 13, 1921. Serial No. 437,027. 13 Claims. (Cl. 83—85.)

1. The process of concentrating ores, which comprises adding to a pulp composed of finely divided ore and water an alkali and a liquefied normally unsaponifiable resin, aerating the mixture to form a froth, and separating the froth from the pulp.

1,417,264. TRUNK LOCK. JOSEPH LUTTMANN, Cincinnati, Ohio, assignor to The Mendel-Drucker Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 7, 1921. Serial No. 435,732. 3 Claims. (Cl. 70—27.)

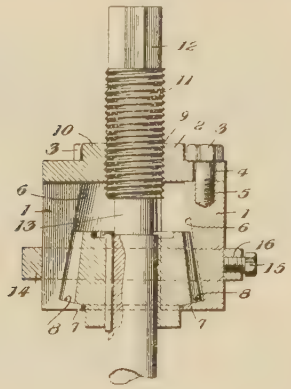


1. In a trunk locking device the combination of a revoluble pin mounted upon and extending through one relatively movable member of a trunk, a hasp mounted fixedly upon the pin exteriorly to the trunk, means to lock the hasp against rotatory motion, a stud mounted on the interior of the cooperating movable member of the trunk, and a hook mounted on the pin interiorly of the trunk and adapted to engage the stud when the hasp is locked against motion.

1,417,265. GEAR REMOVER OR PINION PULLER. GEORGE T. MCCLARRAN, Greensburg, Pa. Filed Jan. 15, 1921. Serial No. 437,534. 2 Claims. (Cl. 29—85.)

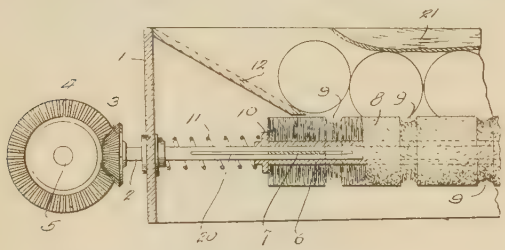
1. A pinion puller or gear remover including a substantially cylindrical body composed of sections and provided at one end with pinion engaging flanges and having threaded sockets in their other ends, a head fitted against

the latter ends of the sections and having openings registering with the said sockets, screws passing through the



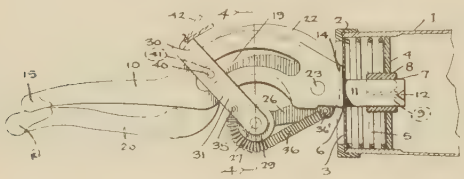
openings and engaging the threaded sockets, and a central shaft engaging screw mounted in the head.

1,417,266. FRUIT CLEANING AND BRUSHING MACHINE. REX DE ORE MCDILL, Haines City, Fla., assignor to Walter E. Richardson, Beaufort, S. C. Filed Feb. 2, 1922. Serial No. 533,642. 12 Claims. (Cl. 146—14.)



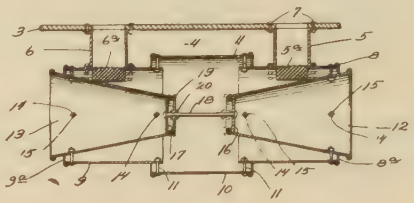
1. A machine for the purposes described, comprising a series of cylindrical brushes, means for rotating the brushes, stationary means for suspending the brushes, and means for alternately reciprocating the brushes longitudinally of said brushes on the stationary suspending means.

1,417,267. ATTACHMENT FOR ARTIFICIAL ARMS. WILLIAM A. MCELROY, San Francisco, Calif. Filed Aug. 31, 1921. Serial No. 497,091. 7 Claims. (Cl. 3—12.)



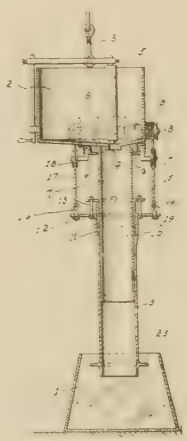
3. A device such as described comprising a supporting member; a relatively stationary hook member connected to said supporting member; and having a radial slot therein; a movable hook element pivotally connected to said first mentioned hook member, in juxtaposition therewith, and having a radial slot therethrough each of said slots being mounted eccentrically relative to each other; and means, pivotally connected to one of said hook members having an extended portion passing through said slots, adapted to move one of said hooks relative to the other.

1,417,268. COACH VENTILATOR. DALLAS MCINTYRE, Horton, Kans., assignor of one-half to William J. Stone, Horton, Kans. Filed Nov. 8, 1920. Serial No. 422,521. 4 Claims. (Cl. 98—22.)



4. A ventilator comprising a pair of alined open drums spaced apart, an enlarged central drum connecting and enclosing the adjacent ends of said drums; the said first-named drums having side openings at intermediate points beyond the ends of said central drum, conduits connecting said side openings with the interior of the car, a pair of alined truncated cones secured within and spaced from the walls of said drums with their reduced ends adjacent, a disk arranged between and of substantially the same diameter as the reduced ends of the cones, and supporting means for said disk to permit it, under the impact of an inrush of air through one of the cones, to slide rearwardly against and close the reduced end of the other cone.

1,417,269. MEANS FOR CASTING INGOTS. ALEXANDER MACMICHAEL and CHARLES SCHINK, Ashland, Ky. Filed Dec. 14, 1920. Serial No. 430,703. 5 Claims. (Cl. 22—79.)

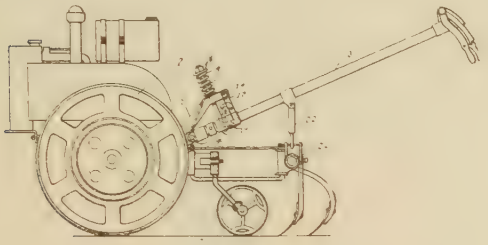


1. In an apparatus for casting ingots, the combination with a mold, and a ladle disposed above the mold, of a telescopic discharge spout carried by the ladle and adapted to enter the mold.

1,417,270. STEERING-POST SUPPORT FOR TRACTION MACHINES. JOSEPH MADER, Minneapolis, Minn., assignor, by mesne assignments, to Beeman Tractor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 7, 1919. Serial No. 308,923. 13 Claims. (Cl. 97—42.)

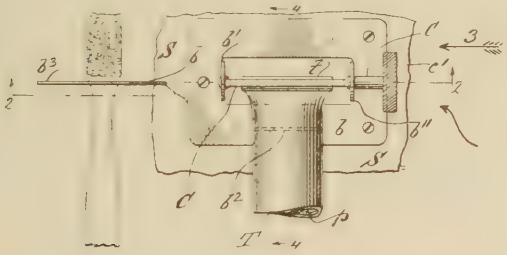
1. The combination, with a frame having supporting means, of a steering device mounted thereon for vertical

oscillation, means for supporting said device when raised to a predetermined point, and means co-operating with



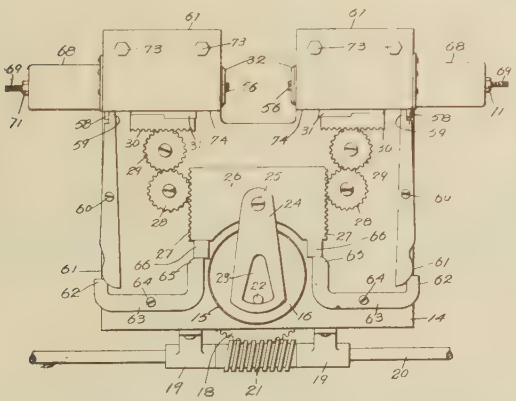
said supporting means for tripping it to release said steering device on continued upward movement thereof.

1,417,271. MEANS FOR MANIPULATING COLLAPSIBLE TUBULAR CONTAINERS. MORRIS MAER, Brooklyn, N. Y. Filed Mar. 31, 1921. Serial No. 457,308. 1 Claim. (Cl. 221—60.)



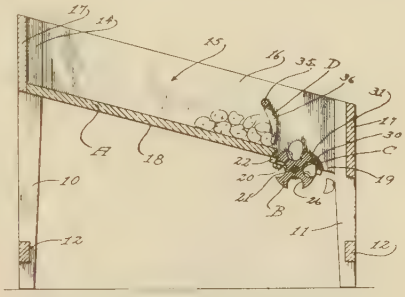
As an improved article of manufacture, a tube holder and compressor, embodying a single integral element comprising a body portion, flanges struck-up from said body portion within the confines thereof, and a tube rest struck-up from within the confines of said body portion and having its edge adapted to engage a tube, and a spindle supported in said flanges, said tube rest being disposed at right angles to the plane of the body portion.

1,417,272. NUTCRACKER. ARTHUR R. MANESS, St. Louis, Mo. Filed July 2, 1921. Serial No. 482,148. 9 Claims. (Cl. 146—3.)



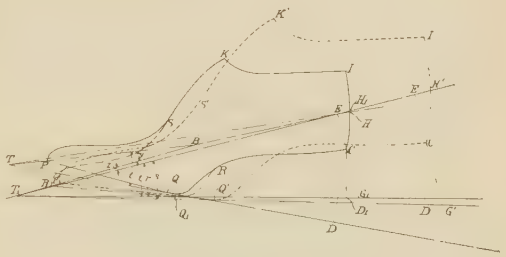
1. A nut cracker comprising a frame, sleeves slidably mounted in said frame, pincer collets slidably mounted in said sleeves, said collets adapted to pinch off the ends of the nut and then spread the shell away from the kernel.

1,417,273. SEED-POTATO CUTTER. JOSE SABINO MARQUEZ, Capulin, Colo., assignor of one-third to J. Luis Rivera, La Jara, Colo. Filed Oct. 17, 1921. Serial No. 508,149. 6 Claims. (Cl. 146—11.)



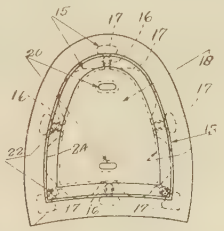
1. A seed potato cutter comprising a potato receiving bin having a lower inclined wall terminating short of the forward end of the bin, a rigid transversely extending knife disposed in the bin in front of the lower wall, and a transversely extending rotatable roller carried by the bin and disposed intermediate the rigid knife and the front edge of the inclined wall having a plurality of potato receiving grooves formed therein.

1,417,274. MODEL MAKING. RALPH S. MEGATHLIN, Somerville, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 1, 1921. Serial No. 488,860. 10 Claims. (Cl. 142—1.)



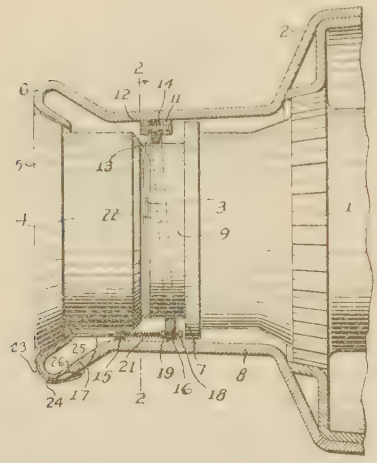
8. A last model of standard size and width differing from the standard model of that style by a bend between its forward part and its rear part, the bend being determined in connection with an assumed grade to produce a graded last having a predetermined profile characteristic.

1,417,275. REVERSIBLE INTERCHANGEABLE RUBBER HEEL. JOHN W. MEYERS, Elyria, Ohio. Filed July 17, 1920. Serial No. 397,130. 3 Claims. (Cl. 36—36.)



1. Means for attaching a rubber heel to a shoe comprising a metal plate, of similar shape, but smaller than the heel, adjustably secured to the heel portion of the shoe, said plate having a shouldered flanged periphery extending both above and below the plane of the central portion, and spaced headed studs secured to said plate adjacent the periphery adapted to cooperate detachably with socket members formed in a rubber heel.

1,417,276. WHEEL LOCK FOR QUICK-DETACHABLE WHEELS. GEORGE E. MOLYNEUX, Bayonne, N. J. Filed June 13, 1921. Serial No. 477,024. 14 Claims. (Cl. 301—9.)



1. In combination with the hub-shell of a quick detachable wheel and the inner hub-shell cooperative therewith, a locking device carried by one of the shells and adapted to lock the two shells together.

1,417,277. PROCESS OF PRODUCING UREA FROM LIME NITROGEN. OTTO NYDEGGER, Bern, and HENRY SCHELLENBERG, Personico, Switzerland. Filed Nov. 6, 1920. Serial No. 422,255. 1 Claim. (Cl. 260—125.)

Process of producing urea from lime-nitrogen by mixing lime-nitrogen with nitric-acid in presence of a concentrated solution of nitrate of calcium.

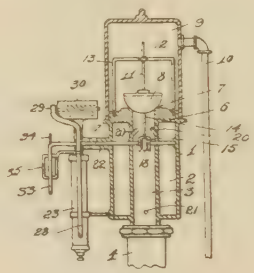
1,417,278. UNIVERSAL ALIGNMENT BEARING REAMER AND BABBITTING BAR. KARL R. PETERS, Philadelphia, Pa. Filed Aug. 7, 1920. Serial No. 402,071. 17 Claims. (Cl. 77—2.)

1. A device of the character described adapted to be detachably mounted upon a casing, comprising a boring-bar, bearing members, in which the boring-bar is mounted, said bearing members having arms extending in opposite directions from each other and at right angles to the length of the boring-bar, a bracket mounted upon each of said arms and adapted to engage the casing, and fastening devices for securing the brackets upon the said arms and rigidly secure the bearing members upon the casing.

1,417,279. SHIM FOR SPRINGS AND THE LIKE. KARL R. PETERS, Philadelphia, Pa. Filed Dec. 2, 1921. Serial No. 519,347. 7 Claims. (Cl. 267—50.)

1. A friction reducing shim adapted to be inserted between plates of springs and the like, consisting of a soft metal having antifriction qualities, and a stay sheet of relatively harder material upon which the said softer metal is applied.

1,417,280. FLUSHING TANK. HOMER L. PHILLIPS, South Bend, Ind., assignor of one-third to Chester Phillips, South Bend, Ind. Filed Apr. 1, 1921. Serial No. 457,684. 4 Claims. (Cl. 4—5.)



1. The combination with a flushing tank having a vertically movable controlling valve, of means for moving said valve vertically and delaying the receding thereof, said means comprising a rockable shaft, means carried by said rockable shaft for moving the valve vertically when it is rocked, an operating lever to the outside of the tank and normally held down by a spring, said lever being disposed over the rockable shaft, an arm carried by the rockable shaft and disposed adjacent the operating lever, a bracket carried by the operating lever and disposed beneath the arm of the rockable shaft and so positioned that when the operating lever is moved upwardly it will engage the arm of the rockable shaft and force the same upwardly to a substantially vertical position, an arm carried by the rockable shaft and so positioned thereon that when the operating lever reaches its lower position the arm carried thereby will engage the same, and cause the rockable shaft to rock in reverse direction.

1,417,281. SWIVEL FOR WATCH CHAINS AND THE LIKE. EDWIN L. ROBINSON, Providence, R. I., assignor of one-half to Henry J. Spooner, Providence, R. I. Filed Mar. 23, 1921. Serial No. 454,949. 4 Claims. (Cl. 24—240.)

3. In a swivel for watch chains and the like having a hollow body closed at one end and open at the opposite

end, a ring rotatably mounted on said closed end, a cap immovably secured upon and closing said open end and provided near one side of its face with a perforation, a two-arm spring vertically disposed within said hollow body, the combination with said parts of a hook member consisting of a loop member secured at one end to the face of said cap in alinement with said perforation,

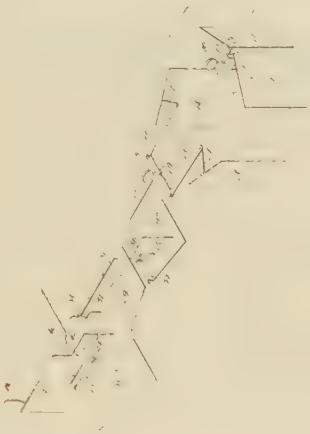
and a latch member provided in one edge with a laterally directed notch arranged and adapted on the insertion of asid latch through said perforation to engage said cap to thereby hold said latch in operative position fulcrumed on said cap for oscillating movements of said latch, and means for operatively connecting said latch member with one arm of said spring.

1,417,282. MILK-BOTTLE COVER. JOHN SENIO, Southington, Conn. Filed May 2, 1921. Serial No. 466,054. 4 Claims. (Cl. 215—51.)

1. A milk bottle cover comprising a resilient clip adapted to partially encircle the neck of the bottle, a resilient member projecting from said clip between the ends thereof and having its end adapted to extend over the lip of the bottle and press downwardly by its resiliency thereon, and a cover element hinged to said member.

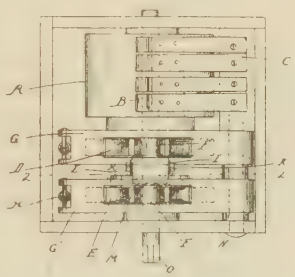
1,417,283. EYE-TESTING APPARATUS AND PROCESS. CLARK SLOAN, East Cleveland, Ohio. Filed Aug. 10, 1918. Serial No. 249,264. 13 Claims. (Cl. 88—20.)

13. In an instrument of the character described, the combination of a supporting casing having a pair of convergent partitions forming therebetween a narrow slit for application to the eyes of an observer, and means within said casing and adjustably supported therefrom for simultaneously obscuring opposite portions of the retinal fields



of the eyes of such observer, thereby to produce an intermediate band or zone of obscuration.

1,417,284. SNAP DRUM SWITCH. CURTISS F. SMITH, Detroit, Mich. Filed Feb. 21, 1921. Serial No. 446,811. 5 Claims. (Cl. 200—17.)

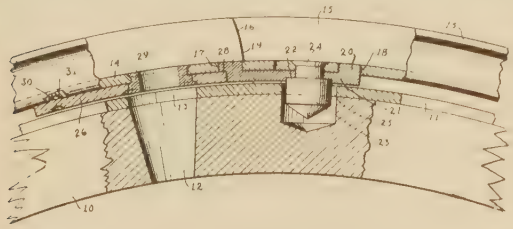


1. In an electric switch, the combination with a rotatable member having a plurality of electrical contacts mounted thereon, of a pair of star wheels, one having a positive driving engagement with said member and the other having a limited relative movement thereto, yieldable dogs for engagement with the respective star wheels, a lost-motion positive drive connection from one star wheel to the other, permitting a movement of the actuating member before positively communicating said movement to the actuated member, and a resilient torque connection between said star wheels placed under tension by the initial movement of the actuating member.

1,417,285. RIM. DAN C. SWANDER, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 22, 1918. Serial No. 246,038. Renewed Oct. 24, 1921. Serial No. 510,102. 2 Claims. (Cl. 301—30.)

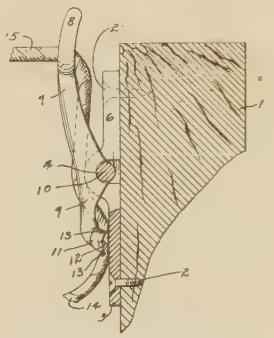
2. A transplit vehicle rim having perforations in its opposite ends, a latch plate having tongues projecting into said perforations and a recess in its inner side, a rivet seated in said recess and securing said plate rigidly to one end of the rim and projecting inwardly from said

plate to constitute a driver for the rim, and a locking lever pivoted on the opposite side of the split from said



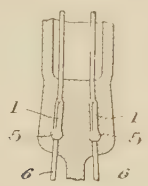
rivet and adapted to swing into and out of locking engagement with said plate and a hollow pivot for said lever adapted to receive the valve stem of a tire.

1,417,286. FASTENER. PAUL WERNER, St. Louis, Mo. Filed Dec. 15, 1919. Serial No. 345,071. 2 Claims. (Cl. 24—133.)



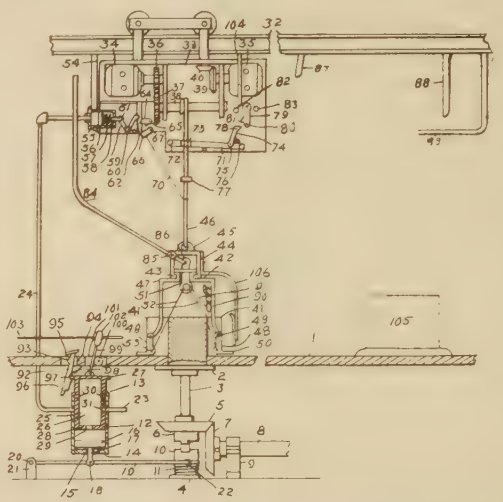
1. A line clamp comprising a plate adapted for connection with a fixture, a tongue mounted for pivotal movement on the plate, that portion of the tongue above the pivot being formed to provide a rope receiving yoke, that portion of the tongue below the pivot being provided with a laterally extending gripping member formed on the surface next the plate with a concavity to present upper and lower biting edges arranged in a plane vertical of the tongue at an incline to the surface of the plate, said biting edges curving upwardly from their respective ends toward their centers, whereby said biting edges will engage the line with unequal holding effects and their curved formation tends to direct the line toward the longitudinal centers of said edges.

1,417,287. COPPER CONDUCTOR FOR ELECTRIC-LAMP BULBS AND OTHER VACUUM TUBES. TEIZO YANAI, Tokyo, Japan, assignor to Nihon Denki Kogijo Kabushiki Kaisha, Tokyo, Japan. Filed May 29, 1918. Serial No. 237,183. 1 Claim. (Cl. 176—36.)



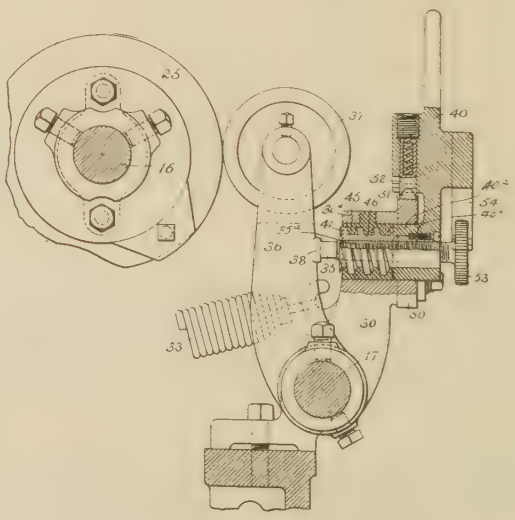
A leading-in conductor for vacuum containers comprising a single length of material having a slit tube formed integral therewith at one end thereof, the longitudinal edges of said tube overlapping, and a wire closing the open end of the tube.

1,417,288. WIRE-COIL CONVEYER. SAMUEL ZOPPELT and JOHN ZOPPELT, Monaca, Pa. Filed Feb. 24, 1921. Serial No. 447,614. 2 Claims. (Cl. 242—79.)



2. An apparatus for the purpose set forth comprising a carrier on which the wire is coiled, means for revolving the carrier to coil the wire, a clutching mechanism for connecting said means with a prime mover therefor, a cylinder provided with a piston head connected with said clutching mechanism for shifting the latter to disconnect said means from the prime mover, means for supplying fluid pressure to said cylinder, a hollow plunger operating in said cylinder and controlling the supply of fluid pressure thereto, and a suspension element for suspending said plunger from the wire during the coiling operation and including means whereby said plunger is shifted if the wire is defective to cause the supply of pressure against said head to discontinue the operation of the means for revolving the carrier.

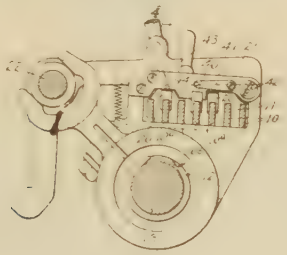
1,417,289. LOOP-REGULATING MECHANISM FOR KNITTING MACHINES. MELCHIOR ZWICKY, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Oct. 17, 1919. Serial No. 331,430. 2 Claims. (Cl. 66—28.)



1. In a full fashioned knitting machine, the combination with a loop regulating mechanism comprising a spring-retracted needle-bar presser lever, an operating cam shaft

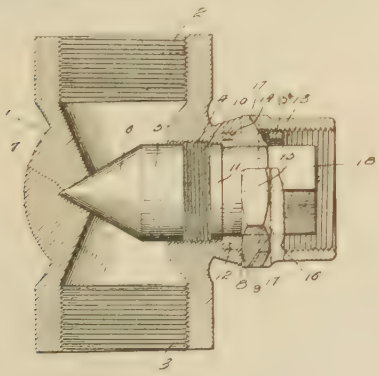
therefor, and a loop-regulating shaft having lever-stop arms fixed thereto and a cam-operated contact arm loosely mounted thereon; of a rocking arm fixed to said loop-regulating shaft, a contact-setting lever having a hollow hub portion screw-threaded in said rocking arm and an axial contact-pin screw threaded in said hub portion, and means for locking said hubbed lever in different screw-adjusted positions to determinedly project the separately adjustable contact pin.

1,417,290. SELVAGE-REENFORCING ATTACHMENT FOR FULL-FASHIONED KNITTING MACHINES. MELCHIOR ZWICKY, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1920. Serial No. 352,798. 1 Claim. (Cl. 66—12.)



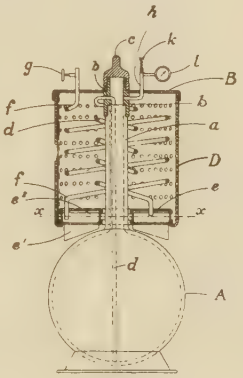
In a full fashioned knitting machine having a carrier rod stop screw, thread carrier rods certain of which carry selvage threads and are provided with stop dogs, and others of which carry plating threads only and are provided with differently located dogs, and a plating nut on said screw carrying both a plating rod stop member and a separate selvage rod stop member, said members being arranged to swing independently into and out of dog-contacting position.

1,417,291. VALVE. JACKSON M. ALLEN, Grove City, Pa. Filed Oct. 20, 1920. Serial No. 418,278. 1 Claim. (Cl. 251—49.)



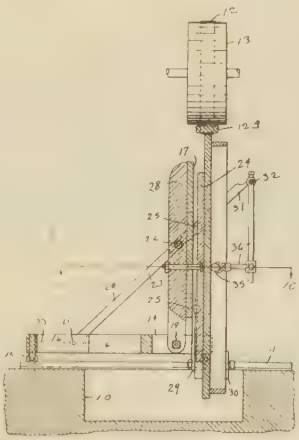
In a valve of the class described, a threaded casing, a cone valve threaded and seated in said casing, a shoulder formed on said valve continuous with the threaded portion thereof, a screw threaded boss formed on said casing, a hollow closure member screw threaded to said boss, said closure and valve being spaced to provide a clearance for the shoulder within the boss, said closure member forming an abutment for the shoulder to prevent the valve from being forced outwardly by internal pressure within the casing, a polygonal raised portion on said closure adapted to abut said boss, and a drainage passage and opening therefor machined in said raised portion for the discharge of moisture or leakage in the valve.

1,417,292. VAPORIZER FOR LIQUEFIED GASES. EWART SIGMUND ANDREWS, Beckenham, England. Filed Aug. 21, 1920. Serial No. 405,158. 8 Claims. (Cl. 62—92.)



1. In a vaporizer attachment for a liquefied gas container having an elongated neck, the combination of a siphon tube passing into the liquefied gas container down the neck, a boiler into which said tube leads, a tube leading out of said boiler at a point remote from the inlet thereto, a throttle valve attached to said tube and means for detachably securing said attachment to the neck of the container.

1,417,293. SANDING MACHINE. VINCENZO AVOLIO and FERDINANDO LATTANZI, Portland, Oreg. Filed Apr. 27, 1921. Serial No. 464,865. 3 Claims. (Cl. 51—145.)

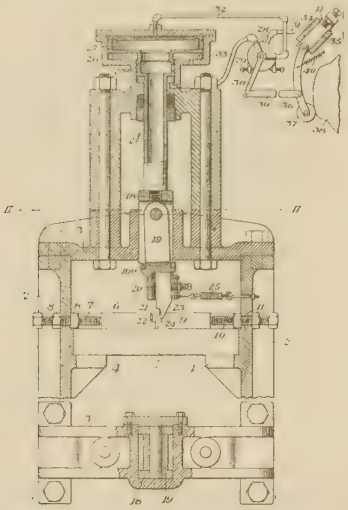


1. In a sanding machine, the combination of a sanding belt with a track under and at right angles to said belt, a carriage on said track, a tiltable turn-table mounted on said carriage, a pair of adjustable rolls on said carriage adapted to support a circular object concentrically with and alongside of said turntable, and a clamping means for holding said circular object against the turntable.

1,417,294. GRIPPING DEVICE. LAURENCE J. BERKELEY, Racine, Wis., assignor to Hercules Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Aug. 12, 1920. Serial No. 403,102. 12 Claims. (Cl. 10—11.)

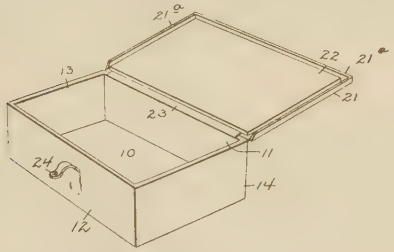
1. A device of the character described, comprising a plurality of gripping dies, an operable forging die cooperat-

ing therewith, fluid pressure actuated means for moving one of the gripping dies relative to the other, and means



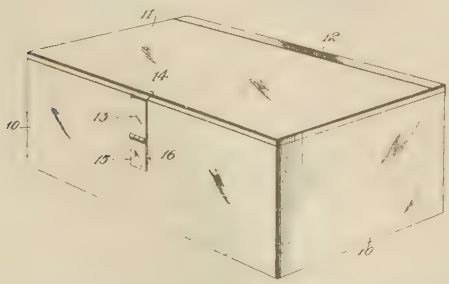
controlling said fluid pressure actuated means in timed relation to the operation of the forging die, substantially as described.

1,417,295. BOX AND METHOD OF MAKING THE SAME. LOUIS BINDER, Newark, N. J. Filed May 18, 1920. Serial No. 382,212. 2 Claims. (Cl. 217—2.)



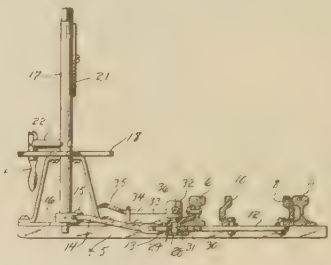
1. A box made of thick cardboard and having its bottom, sides and ends formed of one piece, the bottom being inset between the sides, and the ends being inset between the sides and resting on the bottom.

1,417,296. BOX FASTENING. LOUIS BINDER, Newark, N. J. Filed Feb. 23, 1921. Serial No. 447,181. 4 Claims. (Cl. 229—47.)



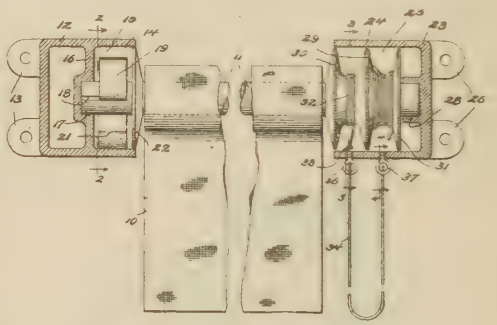
1. The combination of a box having a lid, with a fastening comprising a swinging plate with a lip at the end so disposed that when the plate rests against the side of the box the lip rests in a slit in the lid.

1,417,297. RAILWAY SAFETY SWITCH. ISAAC M. BRITTAIN, Denver, Colo., assignor of one-half to George W. Allan, Denver, Colo. Filed Feb. 20, 1922. Serial No. 537,949. 5 Claims. (Cl. 246—448.)



1. In locking devices for railway switches providing a switch point head bar that projects laterally beyond the track and means for actuating the same in reverse directions, the combination of a retaining block suitably formed for snug attachment to a fixed rail of the track in direct operative association with the projecting end of said head bar, and coacting means between said retaining block and the projecting end of said head bar which is set, upon starting to throw the switch in either direction, and automatically operates to immediately lock said head bar at the end of each reverse actuation thereof.

1,417,298. WINDOW-SHADE ROLLER. ELLIS R. BROCK, Athens, Ga. Filed June 18, 1920. Serial No. 389,950. 3 Claims. (Cl. 156—28.)

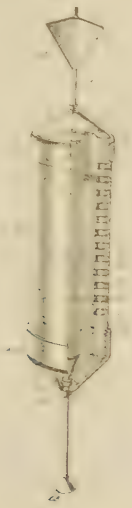


2. A shade roller and support comprising three easily detachable parts including two end sockets of similar size and shape adapted to be secured in place on the window frame and each having a cylindrical chamber open at one end facing each other and a smaller central cylindrical bearing socket within and removed from the open ends of said chambers, a shade roller having ends adapted to longitudinally enter and turn in said bearing sockets, and circular flanges on said shaft so positioned as to substantially close and turn in the open ends of said cylindrical chambers.

1,417,299. AERIAL BOMB. THOMAS J. CAHILL, Philadelphia, Pa. Filed May 8, 1920. Serial No. 379,846. 1 Claim. (Cl. 102—29.)

In an aerial bomb, a hollow cylindrical wooden body portion having a plurality of radially extending bores communicating with its interior and terminating short of its outer periphery, whereby to provide an integral frangible exterior shell, metal bushings in the bores, projectiles located entirely within the bushings, pads within the

bushings covering the inner and outer ends of the projectiles, and the interior of said body adapted to receive



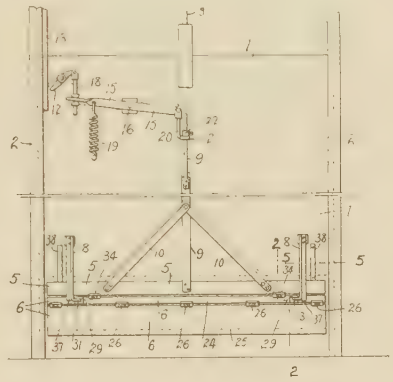
a common charge for projecting said projectiles radially through the frangible walls of the body upon explosion of the charge.

1,417,300. DRIVING MECHANISM FOR LAUNDRY MACHINES. FORREST J. COUCH, Rochester, N. Y., assignor to Clark, Cadle, Harmon Corporation, Rochester, N. Y., a Corporation of New York. Filed July 11, 1919. Serial No. 310,071. 11 Claims. (Cl. 74—50.)

1. A support, driving and driven elements thereon, gearing connecting said elements including a clutch for disengaging the driving and driven elements and reversing the motion of the driven element, means for intermittently and automatically operating said clutch to reverse said driven element, and manually operable means for disabling said automatic means and disengaging the clutch including automatic mechanism for preventing overtravel of the clutch in such disengaging movement and for positively locking it in disengaged position.

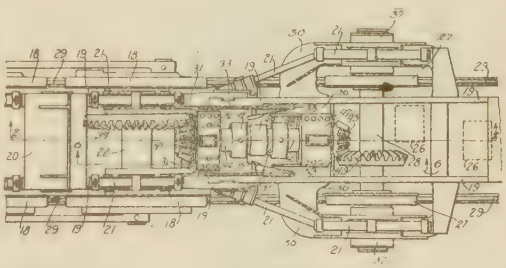
1,417,301. SAFETY DEVICE FOR DOORS. ANTHONY L. CRESCI, Vineland, N. J. Filed Aug. 17, 1920. Serial No. 404,245. 9 Claims. (Cl. 20—19.)

2. A sliding door, a stationary member located adjacent to the path of the door, locking mechanism movable with the door adapted to engage said stationary member and hold the door against forward closing movement, a movable member slidably mounted upon the door, connecting means between the movable member and the locking mechanism, a guard strip adapted to project beyond the forward edge of the door, bearing members secured



upon the door upon which said guard strip is fulcrumed upon an axis extending parallel with the forward edge of the door, and mechanism associated with the guard strip for communicating motion to the said movable member when the guard strip is swung upon said axis for operating the locking mechanism.

1,417,302. BOOSTER APPLIANCE FOR LOCOMOTIVES AND OTHER AUTOMOTIVE MACHINES. FRANK V. DE ARMOND, Topeka, Kans. Filed June 18, 1921. Serial No. 478,732. 6 Claims. (Cl. 105—117.)

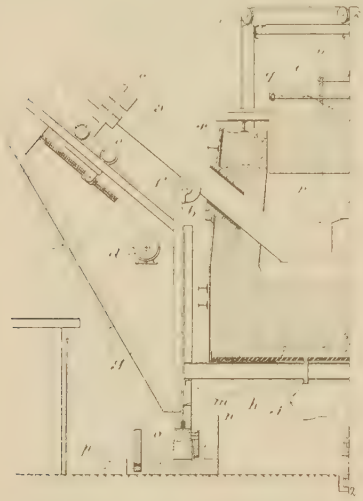


1. The combination with a locomotive embodying axle-united driving wheels, spaced bearings for the axle, a journal box carried by the bearings, a shaft journaled in the box, a pinion carried by the shaft, a gear between the spaced bearings carried by the axle and intermeshing with he pinion. a bogy attached to a pivot rigid with the journal box, truck wheels journaled in the bogy and means to transmit motion from the shaft to the truck wheels.

1,417,303. ELECTRIC FURNACE. HECTOR DE NOLLY, Lyon, France, assignor to La Societe Metallurgique du Frayol, Lyon, France. Filed Apr. 8, 1920. Serial No. 372,176. 3 Claims. (Cl. 204—64.)

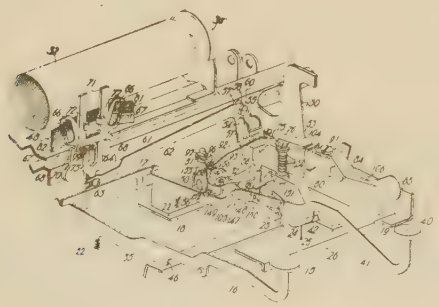
1. An electric furnace comprising a body of refractory material open at its upper part, a block of graphite vertically movable in said open upper part and fitting therein so as to form a vaulting and forming with said body the reduction chamber of the furnace, means for effecting the movement of said block, inclined movable electrodes passing through the side walls of said body, means for imparting movement to said electrodes, a polar plate at the bottom of said reduction chamber, lateral

polar plates mounted in parallel with said bottom polar plate and extending into said reduction chamber, means for conveying electric current to said polar plates and



to said electrodes, means supporting said body and means whereby said body can be rocked upon said supporting means.

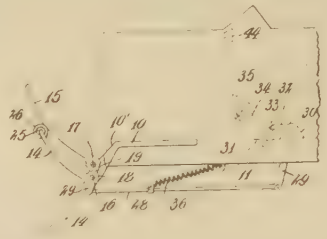
1,417,304. TYPEWRITING MACHINE. WILLIAM A. DOBSON, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 13, 1920. Serial No. 373,618. 9 Claims. (Cl. 197—83.)



1. In a typewriting machine; type and key-levers therefor; a ribbon-vibrator to be operated from each of a plurality of type-keys; a universal bar for such plurality of keys; a lever actuated by the universal bar; another lever for actuating the ribbon-vibrator; a link connecting said last two levers, said link having a sliding bearing in one of said levers and a shoulder for engagement therewith, whereby the link may be moved by the universal bar and, through said shoulder, may actuate the ribbon-vibrator lever in one direction, the sliding bearing permitting movement of the ribbon-vibrator-actuating lever independently of the universal bar; and a separate key-lever ineffective on said universal bar but effective on the second-mentioned lever so as to actuate the latter without effecting longitudinal movement of said link.

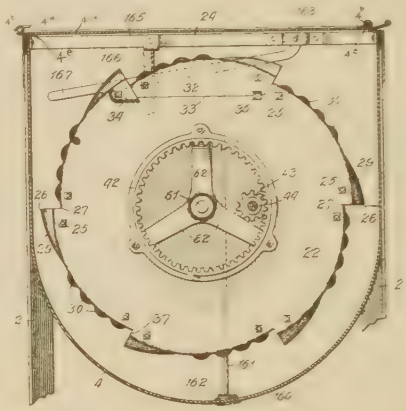
1,417,305. AUTOMOBILE SAFETY DEVICE. MARIA DOUJAK, New York, N. Y. Filed Feb. 13, 1922. Serial No. 536,183. 4 Claims. (Cl. 293—45.)

3. In combination with a motor vehicle, hinged fender and back elements, meshing gear segments causing said fender and back elements to move oppositely in unison, a link connected at one end to said fender element, a lever to which the other end of said link is connected, a finger projecting from said lever, and a foot pedal having a detent shoulder engaging said lever, and a spring con-



nected to said link and urging the fender to lowered position.

1,417,306. WASHING MACHINE. ALBERT J. DREMEL, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a Corporation of Iowa. Filed Feb. 11, 1918. Serial No. 216,436. 6 Claims. (Cl. 68—18.)



1. In a washing machine a washing plate having its front edge in the form of a scoop, ribs in said scoop extending at right angles to and rearwardly from said front edge teeth adjacent said front edge, and the portion of said plate in the rear of said scoop being corrugated in a direction at right angles to said ribs.

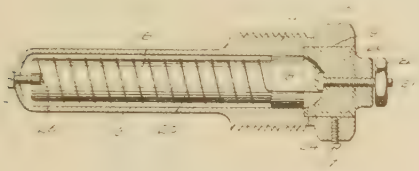
4. In a washing machine, a tank, a lid on said tank, and means operable upon the opening of said lid for automatically removing excess moisture therefrom.

1,417,307. CONNECTING ROD. JOHN R. DU PRIEST, Baltimore, Md. Filed Oct. 8, 1920. Serial No. 415,578. 5 Claims. (Cl. 64—55.)

1. The combination of a rod; a yoke mounted to slide longitudinally thereon; bearing members mounted in said

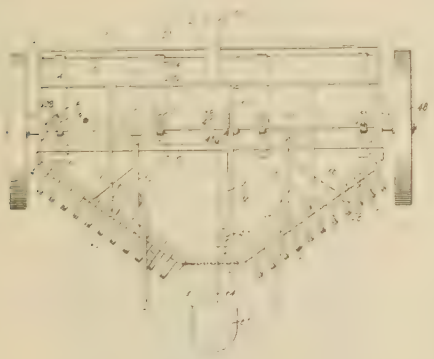
yoke and adjustable by the relative movement of said rod and yoke; and a member differentially threaded to said rod and said yoke and rotatable to adjust the same.

1,417,308. EXPLOSIVE-ENGINE ATTACHMENT. JOHN T. ELLIS and ORA A. KERN, Nashville, Tenn. Filed Apr. 14, 1921. Serial No. 461,354. 2 Claims. (Cl. 219—38.)



1. An attachment of the class described comprising a cylindrical metal shell closed at its inner end and adapted to be removably inserted into the manifold of an engine, a core of insulating material disposed within said shell and spaced concentrically of the bore thereof, a coil of resistance wire wound on said core, a screw threaded inwardly of the closed end of said shell and engaging the inner end of said core to space the same concentrically thereof, said screw acting to secure the inner terminal of said coil and to ground the same to said shell, and an insulated binding post carried at the outer end of said shell and having connection with the other terminal of said coil.

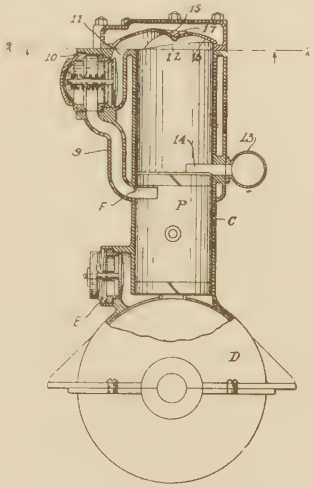
1,417,309. BEET AND VEGETABLE HARVESTER. CHARLES M. EWING and HERBERT N. BRYAN, Deweyville, Ohio. Filed Aug. 10, 1920. Serial No. 402,524. 7 Claims. (Cl. 55—9.)



1. In an apparatus for harvesting vegetables, a frame element, means for transporting said frame element over the ground, a plurality of beams supported by said frame element and provided with shovels adapted to dig vegetables in a plurality of rows from the ground as said frame element is moved, and two independently and pivotally mounted means carried by the frame element for gathering said vegetables from said plurality of rows and depositing said vegetables in a single row as said frame element is moved.

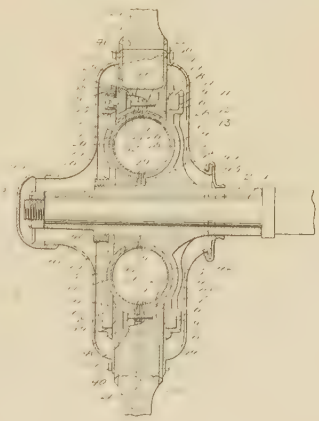
1,417,310. SCAVENGING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. WILLIAM H. FAUBER, Brooklyn, N. Y. Filed Nov. 7, 1916, Serial No. 129,932. Renewed Oct. 25, 1921. Serial No. 510,289. 15 Claims. (Cl. 123—65.)

1. In an internal combustion engine, the combination with a cylinder, having a piston working therein, there being a fluid intake and a fluid outlet to said cylinder,



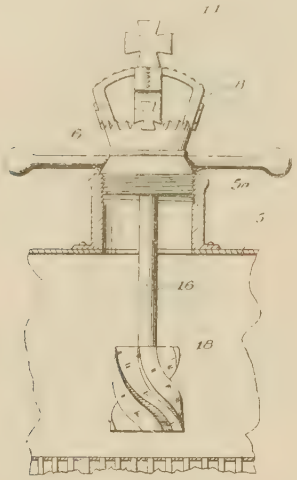
and a concavo-convex deflector forming a continuation of said intake and having a central diminished terminal.

1,417,311. PNEUMATIC OR CUSHION VEHICLE WHEEL. HENRY L. FLESHER, Riley, Ind. Filed May 10, 1917. Serial No. 167,772. 3 Claims. (Cl. 152—41.)



3. A vehicle wheel comprising a hub, a flange secured to the hub, another flange adjustable on the hub, a rim located between the flanges, said rim having on one side an annular hollowed part provided with a shoulder, a cushioning device interposed between the flanges, the rim, and the hub and bearing against said shoulder on the rim, an annular clamping ring located within the hollowed part aforesaid, said clamping ring having a concaved annular part bearing on the cushioning device and a flat part secured to the shoulder on the rim and holding the cushioning device against said shoulder, there being provided an annular groove, a portion of which is provided in the outer face of the clamping ring and the remainder in the rim, a detachable wear plate seated in the groove thus provided, an annular wear plate at the opposite side of the rim, and antifriction bearings carried by the flanges and bearing on the wear plates, and means for holding the adjustable flange on the hub.

1,417,312. RADIATOR ATTACHMENT. FRANK GADE, Chicago, Ill. Filed Nov. 21, 1921. Serial No. 516,760. 5 Claims. (Cl. 116—118.)

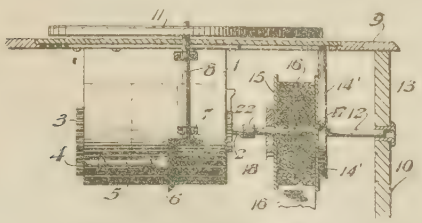


3. A water-level indicator comprising a support, a tubular shaft rotatably and slidably carried by the support, an indicator, a tubular shaft carrying the indicator, and provided with longitudinal slots, a cross pin carried by the first-mentioned shaft, said shaft slidably fitting the second-mentioned shaft, and the cross pin seating in the aforesaid slot, and a float carried by the first-mentioned shaft and having an impeller shape.

1,417,313. FILM REEL. WILLIAM F. GAMMETER, Cadiz, Ohio. Filed July 12, 1921. Serial No. 484,232. 4 Claims. (Cl. 242—70.)

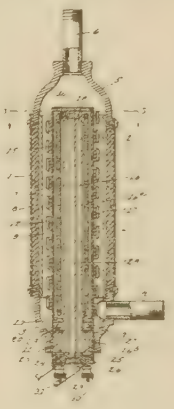
2. A film reel comprising side plates, a hub disposed between and abutting the side plates at the centers thereof and consisting of an inner cylindrical shell having internal ribs stamped therein, outer arcuate plates secured at their ends to the ends of the said shell and bridging the outer sides of said internal ribs, and fastening devices housed between the said ribs and the said arcuate plates and having their ends secured in the side plates.

1,417,314. WINDING DEVICE FOR MOTORS OF TALKING AND OTHER MACHINES. CHARLES J. GOODMAN, Philadelphia, Pa. Filed Aug. 28, 1920. Serial No. 406,557. 2 Claims. (Cl. 185—39.)



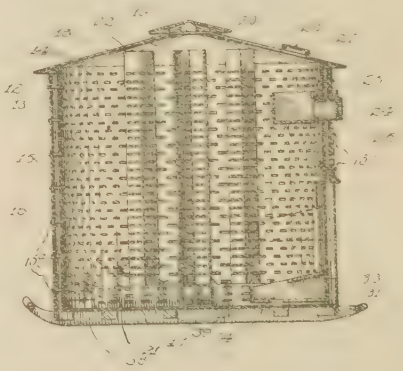
1. In a spring motor of a character stated, a winding shaft for said motor, a toothed wheel on said shaft connected stationarily therewith, a flexible member, a carrier for the latter mounted freely on said shaft adapted to have said flexible member wound thereon and rewound therefrom, a pawl-like member on said carrier adapted to engage the teeth of said wheel and interlock said carrier with said shaft in one direction of rotation of the latter, and an auxiliary spring at one side of and attached to said carrier and connected with a casing and with said carrier whereby when said flexible member is unwound said auxiliary spring is adapted to cause automatically the rewinding of said flexible member.

1,417,315. ELECTRIC WATER HEATER. WALTER W. GRAFF, Cleveland, Ohio. Filed July 6, 1921. Serial No. 482,758. 4 Claims. (Cl. 219—39.)



1. A heater comprising a casing, a tube within the same, a heating element inside the tube, and a water pipe between the casing and the tube, having a plurality of spray holes directed toward the tube.

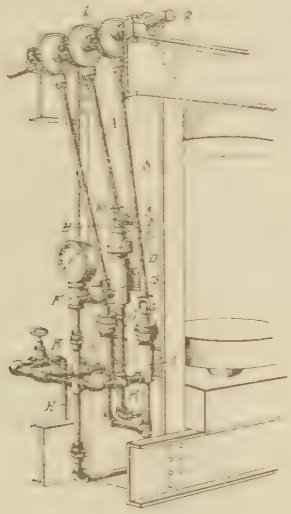
1,417,316. DRYING GRAIN BIN. JAMES F. GREEN, Jarbalo, Kans., assignor of one-half to B. F. Samuels, Leavenworth, Kans. Filed Sept. 28, 1916. Serial No. 122,638. 3 Claims. (Cl. 98—26.)



3. In a drying grain bin, a portable base, a flat bottom resting on said base, a cylindrical shaped perforated shell rising from said bottom, a roof resting on said shell and extending outwardly therefrom, a weather proof opening in said roof, upper and side walls crossing said shell and resting on said bottom and forming laterally disposed rectangular shaped pipes along said bottom, the said bottom forming the bottom wall of said pipes, said pipes opening outwardly through said shell, the side and upper walls of said rectangular pipes perforated, perforated pipes rising from said rectangular shaped pipes and extending above said cylindrical shaped perforated shell and presenting open ends underneath and adjacent said roof,

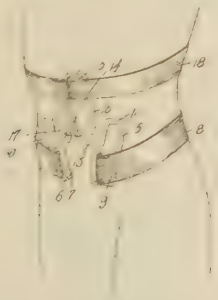
an outer shell encircling said perforated shell and extending upward to near said roof and forming an opening between said roof and the upper end of said shell, and said outer shell extending downwardly below said bottom and forming an opening at the bottom thereof and weatherproofing said rectangular pipes so that air can enter said pipes from the bottom or top of said outer shell and rain cannot enter said pipes.

1,417,317. QUICK-LIFT PUMP. MORTIMER N. GRIFFIN and RUGAR E. GEORGE, Rome, Ga. Filed June 26, 1919. Serial No. 306,905. 5 Claims. (Cl. 138—17.)



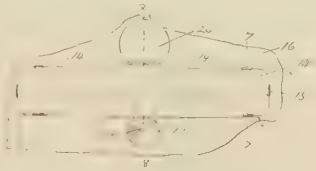
1. In a hydraulic press, the combination with high pressure pumps, of an auxiliary pump comprising an inner and outer plunger having a spring interposed therebetween, and a barrel to the bore of which the outer plunger is fitted, a stop for the outer plunger, a check-valve, and pipe lines for the several pumps.

1,417,318. MEDICAL APPLIANCE. LEON ADOLPHUS HALL, Keene, N. H. Filed Aug. 13, 1920. Serial No. 403,221. 2 Claims. (Cl. 128—100.)



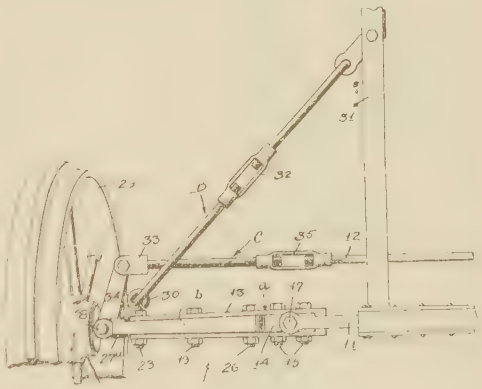
1. A medical appliance for relieving constipation, said appliance being adapted to lie against and exert pressure against the intestinal cavity, said appliance including a pair of loop portions, a curved outwardly extending portion forming a continuation of each of said loop portions, and inwardly, downwardly and horizontally extending portions forming a continuation of each of said curved portions, a substantially vertical extending portion forming a continuation of said latter portion, a downwardly extending portion forming a continuation of each of said vertically extending portions, a horizontal portion extending between and connecting the lower ends of each of said downwardly extending portions, and means connected to said loop portions, and said vertically extending portions for retaining said appliance in intimate contact with the body to which it is applied.

1,417,319. CARD HOLDER. FRED HASKEL, Detroit, Mich. Filed Feb. 5, 1921. Serial No. 442,694. 5 Claims. (Cl. 40—11.)



3. The combination with a base, of a card holder having a body provided with a securing portion, a neck extending transversely thereto and arranged at one side of said securing portion, a clamping portion for engaging the card connected to said neck portion, and a thumb portion extending transversely from the body portion on the side thereof opposite said neck portion, the outer end of said thumb portion being spaced from the base whereby upon movement of said thumb portion toward said base the neck portion and the clamping portion will be flexed outwardly from said base to release the card.

1,417,320. EXTENSION STEERING DEVICE. OSCAR MILTON HATCHER and JAMES CHAPMAN CAMPBELL, Mankato, Minn. Filed May 31, 1921. Serial No. 473,725. 5 Claims. (Cl. 280—961.)

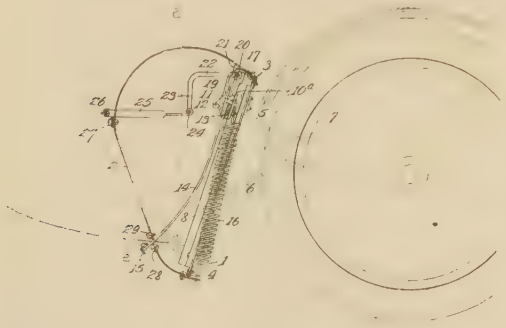


1. In a device of the class described, a knuckle extension member including a reach and an auxiliary axle pivoted thereon, said reach comprising a pair of plates, between which said auxiliary axle is positioned, and a block between said plates, said block being designed to fit within the knuckle bosses of a tractor axle and to receive a securing bolt passing through said bosses, means for bracing the extension member laterally, said auxiliary axle being supplied at its outer end with a knuckle designed to receive the spindle body of a tractor steering wheel and support said wheel in inwardly dished relation, means for securing the auxiliary axle in vertically adjusted positions within the reach and an adjustable tie-rod extension for connecting the extended steering wheel with the tractor tie-rod.

1,417,321. VEHICLE FENDER. WILLIAM H. HINK, Wheeling, W. Va., assignor of one-half to J. P. Morningstar, Wheeling, W. Va. Filed Feb. 25, 1922. Serial No. 539,118. 5 Claims. (Cl. 293—37.)

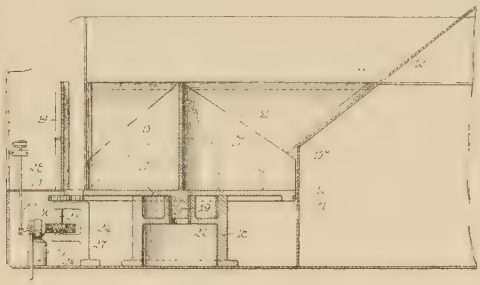
1. In a vehicle fender, a main frame embodying a plurality of approximately vertical guide-members, slide-blocks movable on said guide-members, a carrier frame having pivoted link connection with said slide-blocks, coil springs tending to hold said carrier frame in a lowered

substantially horizontal position, means normally holding said carrier frame in an elevated substantially vertical



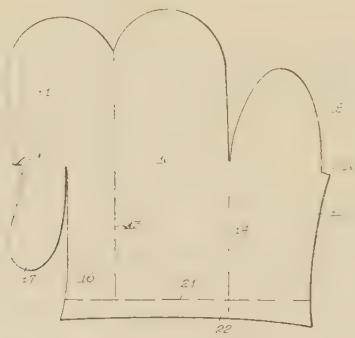
position against the tension of said springs, and a buffer whereby said holding means may be shifted for releasing said carrier frame.

1,417,322. LOCOMOTIVE TENDER. FRANCIS HOGG, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Dec. 9, 1921. Serial No. 521,146. 6 Claims. (Cl. 105—232.)



1. A tender for locomotives having a fuel bin, and a rotatable element within the bin, and having upstanding radial partitions forming an annular series of compartments.

1,417,323. MITTEN. MICHAEL J. HOLLENBECK, Gloversville, N. Y. Filed Oct. 7, 1920. Serial No. 415,260. 4 Claims. (Cl. 2—102.)

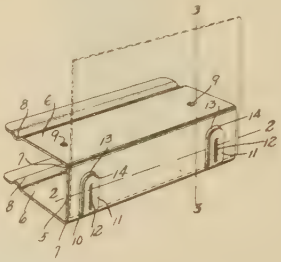


1. A one-piece mitten, comprising a back, a front, a thumb made in two parts, one of the thumb parts having an integral shoulder at the outer edge of its base and the other thumb part having an integral shoulder at the inner edge of its base, and a continuous row of stitches connecting the back with the front and connecting the edges of the thumb parts with each other, the shoulders of the thumb parts being fastened by the stitches to the corresponding edges of the front and back to provide an enlarged base for the thumb.

1,417,324. METHOD OF FORMING HELICALLY-CONVOLUTED TUBES. BRADFORD B. HOLMES, Bellingham, Wash. Filed Aug. 20, 1919. Serial No. 318,841. 7 Claims. (Cl. 153—72.)

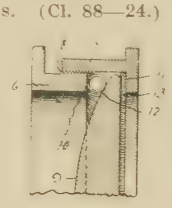
1. A method of forming helically corrugated tubes which consists in taking a cylindrical tube, starting crest and trough flexures along helical lines, and gradually increasing said flexures by the use of helically ribbed forming rolls whose lead decreases and whose depth increases as the forming operation progresses, one of said rolls acting against the internal face of said tube and the other against the external face thereof.

1,417,325. TICKET HOLDER. HERMANN HOPP and LEO HOPP, New York, N. Y. Filed Jan. 14, 1922. Serial No. 529,163. 1 Claim. (Cl. 40—11.)



As an article of manufacture, a ticket holder adapted for attachment to the edge of shelves and comprising a substantially U-shaped member, the leg portions of which are adapted to receive the shelf therebetween, one of said leg portions having perforations provided therein for the reception of fastening means, an inwardly disposed integral bead formed on each of the leg members, a plurality of retaining clips formed in the base of the U-shaped member by cutting the said base and forcing the clips therefrom, and an inwardly disposed depressed portion formed on each of said clips, the protuberance formed on each of said depressed portions lying within the confines of the opening resulting from the formation of its respective clip.

1,417,326. LENS MOUNTING. AXEL T. JACOBSSON, Cleveland, Ohio. Filed Jan. 18, 1921. Serial No. 438,098. 2 Claims. (Cl. 88—24.)

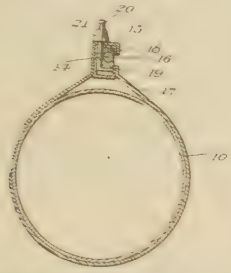


1. The combination with an optical lens having a convex face, of a mounting comprising inner and outer rings screwed together, and a coiled spring packing confined between the inner end of the inner ring and the convex face of the lens.

1,417,327. SUPPORT FOR OIL CANS. GORDON B. JONES, Wilson, N. C. Filed June 13, 1921. Serial No. 477,187. 2 Claims. (Cl. 248—30.)

2. The combination with the radiator brace rod of an automobile, of a container, a longitudinally slotted sleeve carried by the container for receiving the brace rod, a

clamping bar located within the sleeve and means extending through the sleeve and connected to the clamping



bar for adjusting the latter to removably secure the container to the brace rod.

1,417,328. PHOTOGRAPH POSITIVE AND NEGATIVE. ROBERT JOHN, New York, N. Y., assignor, by mesne assignments, to Daylight Film Corporation, a Corporation of New York. Filed May 6, 1916. Serial No. 95,957. 15 Claims. (Cl. 101—395.)

1. As an article of manufacture, a base having on its surface great numbers of naturally photographically formed, extremely minute, individual protuberances which are distributed and grouped irregularly so as to represent photographic lights and shades.

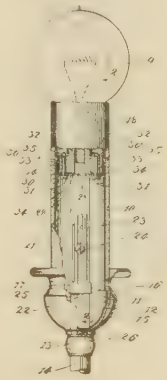
1,417,329. BUNDLING MACHINE. WALTER O. JONES, Lyons Platt, Ohio. Filed Apr. 10, 1920. Serial No. 372,757. 32 Claims. (Cl. 100—31.)

12. A bundling machine, comprising a compressor head formed of independent sections, a clamping lever pivotally carried by each of said sections, means for operating said sections and said clamping levers in unison throughout a portion of the stroke of the head and then operating said clamping levers independently of the head sections throughout the remainder of the stroke, substantially as described.

28. A bundling machine, comprising a compressor head, means for operating the same, a wire feeding mechanism, electrically controlled means for regulating the wire fed by said mechanism, a circuit for said electrically controlled means, and a plurality of switches in said circuit, one of said switches being operated by the wire, and the other of said switches by the operating mechanism for the compressor head, substantially as described.

1,417,330. ELECTRIC-CANDLE-LIGHTING FIXTURE. WALTER R. KAHNS, Brooklyn, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 20, 1921. Serial No. 462,789. 1 Claim. (Cl. 240—52.)

In an electric lighting fixture, the combination of a vertical cylinder, a lamp socket within the same, a cover of insulating material surrounding the socket shell and provided with openings in its opposite sides adjacent its lower end, a cup upon which the lower end of said cylinder rests, a shell surrounding said cup, a supporting arm having a threaded end extending through alined openings in the bottom of said shell and cup, a support for said socket comprising two members adjustably connected together, a threaded stud carried upon one end of one of said mem-



bers for connection with the threaded end of said arm, the free end of the other member being provided with a right angle extension, clips upon opposite sides of the socket each provided with a spur engaging the openings in said insulating cover, and screws for securing said clips and said extension to the socket.

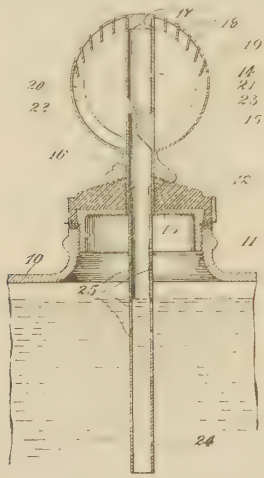
1,417,331. WELL-CASING RIPPER. JOHN ELMER KELLER, Independence, Kans. Filed Jan. 7, 1922. Serial No. 527,633. 1 Claim. (Cl. 81—193.)

The combination, in a well-casing ripper, of a block slotted so as to carry a knife or blade, a knife or blade hinged upon a pin and carrying a projection or vane, a pin, a means of holding the point of said knife or blade against the casing, a water-course or channel through said block, there being an orifice directing the flow of water against said vane or projection, a threaded recess in the top of said block, a hollow tube one end of which is threaded to screw into said recess and the other end of which is threaded to receive a collar, a collar to screw on said tube, and a second block threaded on one end to receive a drill-pipe coupling and having a hole through it longitudinally to receive said tube.

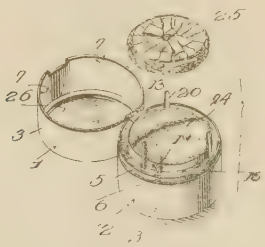
1,417,332. ALARM FOR AUTOMOBILE RADIATORS. KARL KELLER, Brooklyn, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed May 29, 1920. Serial No. 385,130. 6 Claims. (Cl. 116—109.)

6. The combination with an automobile radiator having a filler opening and a cap therefor provided with a centrally disposed aperture, of a casing disposed above said cap and having an opening in register with the aperture

therein, a whistle located within the casing with its tubular stem passing through the opening therein and through the aperture in the cap, a vertical tube connected with the whistle and extending into the radiator a predetermined distance, whereby when steam is generated in the radiator after the water has reached a predetermined level, the whistle is automatically sounded, the escape of steam and water of condensation being retarded by said casing.

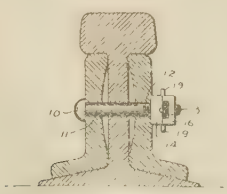


1,417,333. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J. Filed July 22, 1918. Serial No. 246,213. 9 Claims. (Cl. 132—83.)



9. In an article of the class described, compartment members, one of said members having a rim to fit within the open side of the other member when the members are closed, a supporting plate positioned to lie within the rim when the compartment members are closed, means hingedly connecting the compartment members with each other and with the said supporting plate, and article retaining means upon each face of the supporting plate.

1,417,334. NUT LOCK. MATTHEW D. KIMBALL, Omaha, Nebr., assignor of one-half to David P. Feder, Omaha, Nebr. Filed June 30, 1921. Serial No. 481,524. 4 Claims. (Cl. 151—17.)

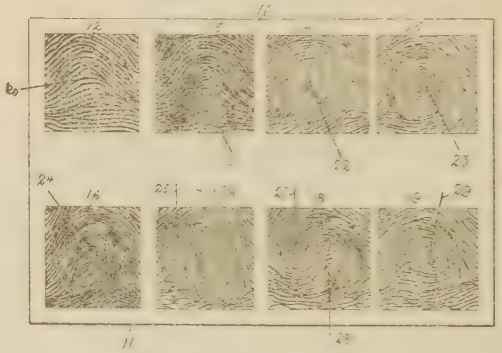


1. Nut locking means comprising, in combination, a bolt having a main threaded portion and a reduced oppositely-threaded extended portion, a main nut adapted to fit upon the main threaded portion of the bolt, a locknut adapted to fit upon the reduced extended portion of the bolt and to engage the adjacent end-face of the main nut, the adjoining faces of the main nut and locknut having registering Y-grooves therein, and a cotter-pin having a split end-portion entering the bifurcated portions of a pair of the registering Y-grooves.

1,417,335. TRACTOR HITCH. MADISON MONROE KNOWLES and JAMES NICHOLAS BATES, Fort Branch, Ind. Filed Aug. 10, 1921. Serial No. 491,162. 1 Claim. (Cl. 213—67.)

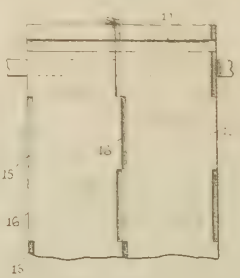
A hitch, comprising a pair of bars extending parallel to each other, one of said bars being provided with an opening at each end thereof, the other of said bars being provided with an opening in one end thereof, in register with one opening of the other bar, and a down-turned threaded end passing through a draft-fitting, and the other opening of the other bar, a bolt for said registered openings, and a screw nut for said down-turned end.

1,417,336. GAME. EUGENE H. LEDERER, State College, Pa. Filed Nov. 13, 1920. Serial No. 423,803. 2 Claims. (Cl. 46—41.)



1. A game apparatus comprising a body having thereon a plurality of representations of finger prints each containing a distinct characteristic feature, and a plurality of blank elements adapted to receive the finger prints of individual players to be compared with the characteristic finger prints on the body.

1,417,337. KNOCKDOWN BARREL. GEORGE A. LE FEVRE, Richmond Hill, N. Y., assignor to Baxflat Barrel & Crate Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1920. Serial No. 403,468. 8 Claims. (Cl. 217—44.)



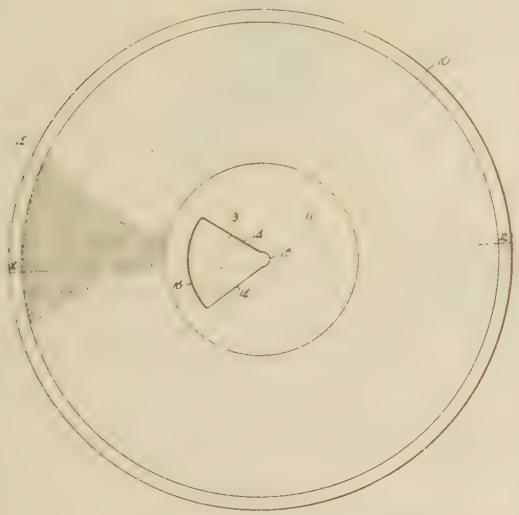
1. A knock-down barrel having essentially flat staves with meeting edges in substantial contact at all times at

the outer faces of the staves, and with transversely coacting complementary members at the inner corners of the staves which are out of engagement when the barrel is flat, but which engage when the barrel is set up in arc form to prevent endwise movement of the staves.

1,417,338. WRENCH. JOHN ELMER LENAHAN, Newburgh, N. Y. Filed Dec. 3, 1921. Several No. 519,680. 4 Claims. (Cl. 81—58.)

1. A wrench of the class described, comprising a handle terminating at one end in a jaw-carrying member with an elongated threaded stud projecting from one face thereof and provided with a circular series of sockets concentric with the stud and a nut threaded to be applied to the stud, and a jaw member for application to the threaded stud and to receive the nut entering the jaw member for a distance less than the thickness of said jaw member, whereby the handle member and the jaw member may be clamped together in adjusted positions.

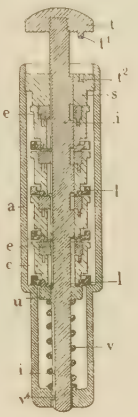
1,417,339. RECORD DISK. FRANK LENTON, New York, N. Y. Filed Mar. 9, 1921. Serial No. 451,063. 4 Claims. (Cl. 274—41.)



1. As a new article of manufacture, a sound reproducing record disk provided with an opening therethrough having a pin receiving portion at its inner end located at the center of the record disk and constituting means adapted for engagement with the centering pin of a graphophone turntable to effect the coincidence of the center of rotation of the record with the center of rotation of the graphophone turntable, the major portion of the opening serving as a means for visualizing the pin through the disk and facilitating the application of the disk to the turntable.

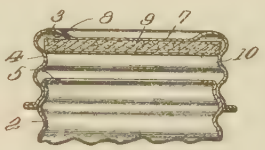
1,417,340. PERMUTATION LOCK FOR AUTOMOBILES. ANDRÉ PIERRE LITREM, Paris, France. Filed Nov. 28, 1919. Serial No. 340,992. 5 Claims. (Cl. 70—53.)

1. In a locking device for automobiles, a casing having an opening, a plurality of combination elements in the casing and provided with notches, a bolt extending through the elements and provided with studs for engaging the notches thereof, intermediate washers sepa-



rating the elements, means for preventing the washers from turning, and a spring secured to each intermediate washer for engaging with the corresponding element.

1,417,341. DOUBLE-SEAL SPRING CAP. JOHN FREDK. MCGARRAHAN, Congress Park, Ill., assignor to J. S. Giles & Sons, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1920. Serial No. 431,382. 2 Claims. (Cl. 220—46.)

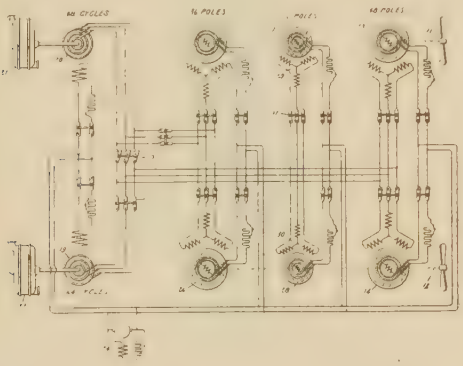


1. The combination with a metal container body having a relatively small top portion provided with an opening into the container body and having an inwardly extending flange surrounding said opening the inner free edge of which is unsupported; of a cap therefor having a depending portion extending down over the top portion, said cap and top portion having inter-engaging means whereby said cap is securely held on the container body, said cap having a central indented portion of less diameter than the opening into the container and an annular channel disposed above said flange and extending from said indented portion to the depending portion of the cap, and a sealing disk of substantially the same diameter as said cap located within and frictionally held in said cap, said indented portion of the cap operating to force the sealing disk into the opening in the container body and thereby embedding the inner edge portion of the flange in said sealing disk and thus forming a tight seal.

1,417,342. ELECTRIC SHIP PROPULSION. JOHN MARTIN and FREDERICK H. CLOUGH, Rugby, England, assignors to General Electric Company, a Corporation of New York. Filed Mar. 24, 1921. Serial No. 455,187. 4 Claims. (Cl. 172—8.)

2. An electric ship propulsion system comprising a pair of propeller shafts, a pair of similar synchronous motors, each mounted on separate shafts, a source of relatively high frequency alternating current, a source of relatively low frequency alternating current, means for connecting said motors in parallel to the high frequency source another pair of driving motors each having a rotor and the rotors mounted on separate shafts, said latter motors having fewer poles than the other motors and means for connecting said motors in parallel to the low frequency

source, the arrangement being such that when the synchronous motors are synchronized, the rotors of the second pair of motors are likewise in synchronism, whereby there can be no appreciable circulating currents between the second pair of motors.



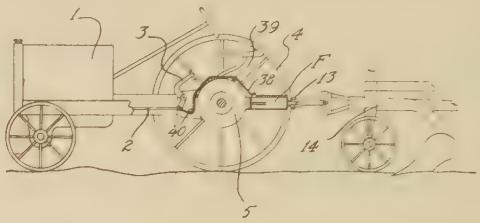
4. In an electric ship propulsion system comprising two alternators, one operated by a low speed prime mover and the other by a high speed prime mover, two propeller shafts each having a plurality of synchronous motors of differing pole numbers, the motors having a larger pole number being furnished with squirrel cage windings, and a dynamo electric machine on each shaft having an armature and a field member of such a number of poles that there is an even number of poles on all of the motors for each of the poles of this field member, the method of starting the ship which consists in running the low speed prime mover, operating the synchonous motors of larger pole numbers in parallel without field excitation from the alternator driven from the low speed prime mover, supplying excitation to the field members of the dynamo electric machines, connecting their armatures in opposition, supplying field excitation to the operating synchonous motors, gradually speeding up the alternator supplying the motors to its normal speed, running the high speed alternator at the speed of the active alternator, disconnecting the first alternator, connecting the high speed alternator to the synchonous motors with large pole numbers, gradually increasing the speed of the high speed alternator to its normal value, and connecting the low speed alternator to the motors with the fewer poles.

1,417,343. MUSICAL TOY. FRED MICHALICEK, Ely, Iowa. Filed Mar. 12, 1921. Serial No. 451,682. 3 Claims. (Cl. 46—46.)

1. An instrument of the class described comprising a mouth piece having a longitudinally extending bore with a member at its outer end having a flexible vibratory strip arranged transversely thereof and disposed edgewise relatively to the bore of said mouth piece, and a key connected with the free end of said strip to vary the tension thereof for altering the tone of the instrument.

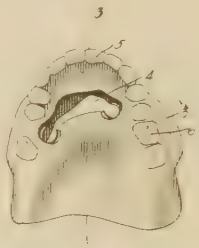
1,417,344. HITCH. EMIL NEWMAN, Fessenden, N. Dak. Filed Mar. 7, 1921. Serial No. 450,456. 3 Claims. (Cl. 180—14.)

1. In combination with a tractor having a clutch pedal for disassociating the engine shaft from the drive wheels of the tractor; of a hitch, including an open frame secured to the tractor, brace means between said frame and tractor, a spring influenced draw bar movable through the frame, a spring influenced flexible element between the hitch and the clutch pedal for operating the latter, spring influenced clutch means carried by the hitch frame and engaging with said flexible means for holding the latter



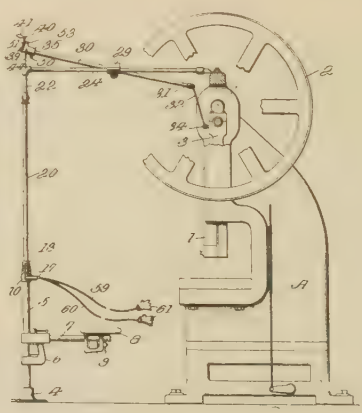
in non-clutch operating position, a contact element included in said clutch means, and a striker element on the draw bar designed for engagement with the striker element for influencing the clutch means to release the flexible clutch pedal operating means when the draw bar has been drawn a predetermined distance outwardly through the hitch frame.

1,417,345. DENTURE AND METHOD OF APPLICATION. ALFREDO PIMIENTA, New York, N. Y. Filed Dec. 28, 1921. Serial No. 525,324. 6 Claims. (Cl. 32—4.)



1. A denture comprising a plate formed with an opening for receiving certain natural teeth when the denture is in use, and a number of artificial teeth arranged in front of said opening, said artificial teeth being so positioned that when the denture is in use they will register with the oppositely positioned natural teeth.

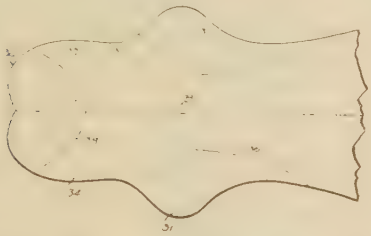
1,417,346. SAFETY DEVICE FOR PRESSES. MINARD A. POSSONS, Cleveland, Ohio. Filed June 27, 1921. Serial No. 480,901. 22 Claims. (Cl. 74—105.)



1. A safety device for presses or the like, comprising a rocker-arm pivotally supported in front of and in sepa-

rated relation to the press and above an operator thereof, one end of the rocker-arm in operative connection with the press and the other end of the rocker-arm in operative connection with the press operator, whereby at a predetermined time the hands of the operator are withdrawn from engagement with the press.

1,417,347. METHOD OF MAKING STOCKINGS. SOLOMON B. RAINS, Brooklyn, N. Y. Filed Jan. 19, 1921. Serial No. 438,492. 1 Claim. (Cl. 2—23.)



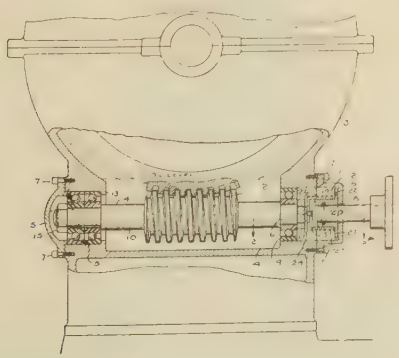
A stocking formed from a single blank of material cut to provide oppositely disposed heel sections and toe sections, said blank being folded along a central line to form a stocking in such a manner that the seam falls on the bottom of the foot and on the back of the leg portion of the stocking, and reinforcing elements secured to the stocking at the heel and toe sections, the reinforcing element at the toe section being formed of a single piece of material, one of the edges of which is scalloped to provide two wings, a portion of each of said wings forming a reinforcement for the top of the foot portion and a portion of each of said wings forming a reinforcement for the bottom of the foot portion, the scalloped edge of said reinforcing element being adapted to register with the seam of the stocking at the toe portion thereof and being secured to the stocking throughout its marginal edge, and the reinforcement at the heel section being a plurality of separate pieces of material secured to the stocking throughout the marginal edges of said separate pieces.

1,417,348. ALLOY. ALONZO U. RANDALL, Springfield, Ohio. Filed Nov. 29, 1920. Serial No. 427,003. 2 Claims. (Cl. 75—1.)

1. An alloy consisting of from 80 to 87 per cent zinc and from 20 to 13 per cent aluminum.

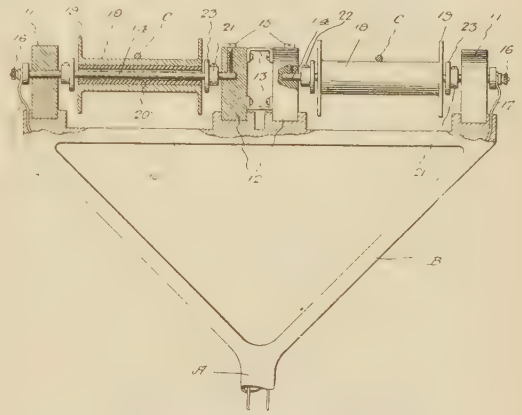
2. An alloy consisting of 84 per cent zinc and 16 per cent aluminum.

1,417,349. SHAFT CASING. LUTHER RINGER, Eden, N. Y., assignor of one-half to Louis M. Mundie, Eden, N. Y. Filed Oct. 6, 1921. Serial No. 505,917. 5 Claims. (Cl. 64—22.)



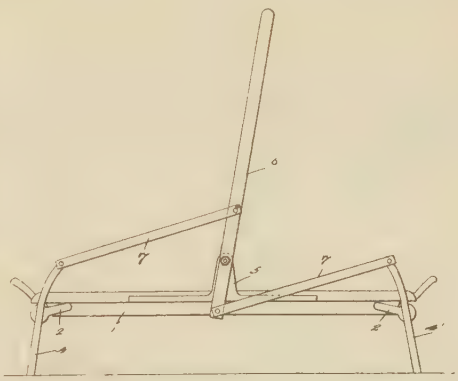
1. The combination with an oil chamber and a shaft operating in said chamber of means for preventing the escape of oil from said chamber comprising a head secured to said chamber as an end closure therefor and having an opening through which said shaft projects, a sleeve mounted slidably but nonrotatably on said shaft and formed to engage the inner face of said head with sealing effect, said sleeve being also formed to engage said shaft with sealing effect, and means for constantly pressing said sleeve against said head.

1,417,350. TROLLEY WHEEL. ELLYSON SHIRLEY ROBINSON and JOHN BOWERS, Richmond, Va. Filed Jan. 3, 1922. Serial No. 526,728. 2 Claims. (Cl. 191—56.)



1. A trolley pole head comprising a support, a pair of longitudinally aligned spindles stationarily mounted thereon, wires connected with said spindles and extending downwardly along the trolley pole, and spools rotatably mounted upon the spindles and having end flanges.

1,417,351. PANCAKE IRON. NANCY ANN ROSE, Republic, Wash. Filed July 11, 1921. Serial No. 483,844. 1 Claim. (Cl. 53—7.)

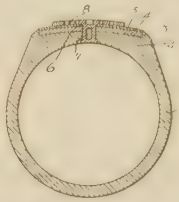


A cooking utensil having downwardly and outwardly extending lugs at its corners, a cross bar rotatably supported by each pair of lugs, legs connected with said cross bar, a bracket on the utensil, a lever pivoted to the bracket and links connecting the lever with one leg of each pair.

1,417,352. RING AND PLATE THEREFOR. RUBIN ROSENTHAL, Brooklyn, N. Y. Filed Jan. 29, 1921. Serial No. 440,955. 1 Claim. (Cl. 63—15.)

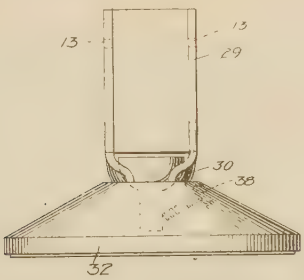
A ring of the character described, comprising a body having a recess in its face and an opening in the center of the bottom of the recess, a thin metallic plate coated

on one face with enamel and having a central opening, said plate removably fitting in the recess and the body,



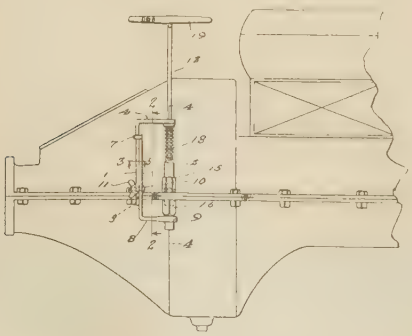
and an ornament fitting on the enamel plate and having a stem projecting through the openings of the plate and the body and riveted on the inner face of said body.

1,417,353. LADDER FOOT. FRED J. RYNERSON, San Diego, Calif. Filed Oct. 11, 1919. Serial No. 329,898. 1 Claim. (Cl. 228—61.)



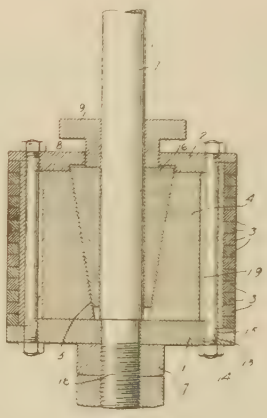
A ladder foot comprising a pair of plates secured upon opposite sides of each leg of a ladder, said plates having their lower ends formed with extensions of concavo-convex form mating to define a substantially hemispherical socket, a block associated with each pair of plates and formed in its upper face with a partially spherical concavity receiving the assembled socket members, the block being further formed with a bore leading into the concavity and a half-ball member fitting within said socket and having a stem secured within said bore.

1,417,354. WRENCH. WILLIAM H. SCOTT, Goffs, Kans. Filed Aug. 17, 1920. Serial No. 404,076. 2 Claims. (Cl. 81—55.)



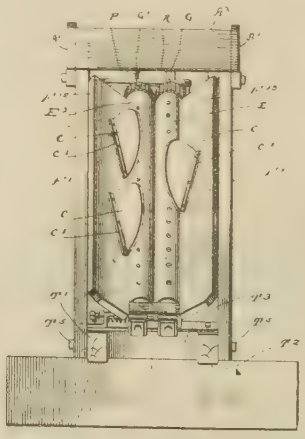
1. A wrench comprising a frame made up of lapped bars one of which is provided with a transverse aperture and the other of which is provided with a longitudinal slot, and one of which has a loop receiving the other and both of which have angularly-disposed arms spaced apart in parallel relation and in one of which is a circular aperture and in the other of which is an angular aperture alined with the circular aperture, a headed and threaded bolt extending through the slot and aperture of the lapped bars, and a nut mounted on said bolt; a shaft of circular form in cross section arranged in the circular aperture of one arm of the frame and having an exteriorly-angular inner end, a spring surrounding the shaft and interposed between said exteriorly-angular end thereof and one of the frame arms, a handle detachably fastened on the outer end of the shaft, and socket members, one removably arranged in the angular aperture of the frame and the other removably arranged on the exteriorly-angular end of the shaft, said wrench capable of disassembly for convenient carriage in a tool box.

1,417,355. PISTON PACKING. JAMES P. SIMPSON, New York, N. Y. Filed Sept. 20, 1921. Serial No. 501,888. 2 Claims. (Cl. 74—109.)



1. A packing construction for pistons, which comprises a plurality of annular split sections forming a piston body portion, said sections having tapered inner walls, a pair of plates disposed against the upper and lower faces of the sections, means for clamping said plates on to said sections, a plurality of packing rings disposed around said sections and between said plates, a tapered plug disposed within said sections, a flanged plate bearing on said plug, and adjustable means connecting said flanged plate with one of said previously mentioned plates to adjust the position of the plug, whereby the split sections can be expanded or contracted to determine the position of the packing rings.

1,417,356. CORN-HUSKING MACHINE. HORACE L. SMITH, Prince George County, Va. Filed Apr. 27, 1921. Serial No. 464,774. 6 Claims. (Cl. 130—5.)



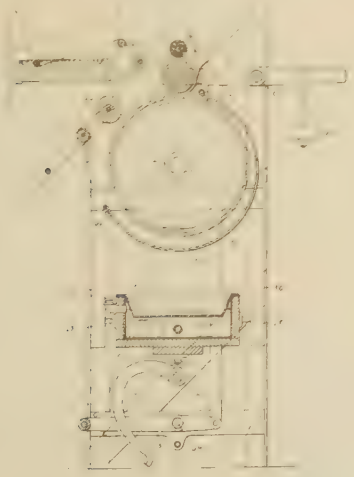
1. In a corn husker, the combination of husking rolls; a corn ear trough above said rolls; and a plurality of corn

ear controllers comprising plates attached to said trough, each of said plates having a straight edge for attachment to the trough and a curved edge extending over the path of travel of the ears on said rolls.

1,417,357. NEEDLE. JASPER FRED SNIDER, Clare, Mich. Filed Sept. 24, 1920. Serial No. 412,554. 1 Claim. (Cl. 223—37.)

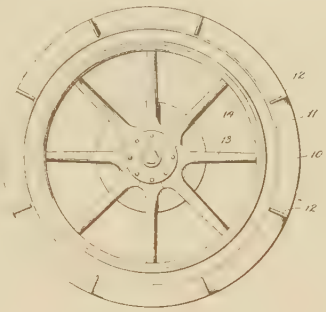
A needle, comprising a shank having a central passage with a wall closed on all sides and opening through one end of said shank, and also a transverse slot forming an eye intersecting said passage and opening through opposite sides of the shank, and a cross web intermediate the length of the slot and centrally located relative to the passage.

1,417,358. MACHINE FOR MAKING GELATINE FILMS AND PRINTING THEREFROM. ARCHIBALD H. SPAULDING, Hingham, Mass. Filed Aug. 23, 1919. Serial No. 319,519. 3 Claims. (Cl. 101—132.)



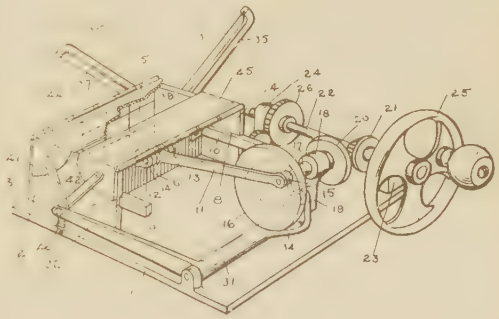
1. In a printing machine of the character stated comprising a supporting frame, a rotary cylinder journalled in said frame, means for maintaining said cylinder at a constant temperature comprising refrigerating means, and a screen, said screen being supported by the frame, said screen being formed to partially surround the cylinder to protect the same against the influence of the outside air.

1,417,359. TIRE ARMOR. WILLIAM G. STOCKHAM, Piqua, Ohio. Filed Nov. 18, 1920. Serial No. 424,894. 1 Claim. (Cl. 152—16.)



The combination with a pneumatic tire, of an armor therefor comprising a continuous resilient metallic band completely encircling the circumference of the tire and covering the major portion of the side walls thereof and held in position on said tire solely by the inherent resiliency of the band when the tire is inflated, said band having its side edges formed with terminal laterally curved lips and its side walls provided with spaced relatively thin substantially triangular traction plates disposed at substantially right angles thereto with their outer end edges flat and arranged in the same transverse plane as the crown of the band and merging into said crown and their outer side edges straight and terminating short of the lips, said traction plates being disposed in staggered relation with the exterior walls of the band between said plates at both the sides and crown of the band smooth and unobstructed.

1,417,360. BOILED-POTATO-SLICING MACHINE. ROBERT S. TRYNOSKI, Chicago, Ill. Filed Dec. 15, 1921. Serial No. 522,642. 4 Claims. (Cl. 146—7.)

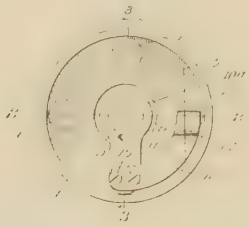


1. A machine for slicing boiled potatoes, comprising a magazine, a pusher plate operating to slide back and forth in said magazine from one end thereof, a wire mesh at the opposite end thereof, a cutting wheel on the outside of said wire mesh, a cover over said magazine, and means for simultaneously operating said pusher plate, said cutting wheel, and said cover, to hold the potatoes contained in said magazine from being forced through the top thereof, to force them through said wire mesh and to cut them with said cutting wheel.

1,417,361. TIMER MECHANISM. EARL W. TURNER, Kokomo, Ind. Filed Oct. 30, 1919. Serial No. 334,501. 1 Claim. (Cl. 200—24.)

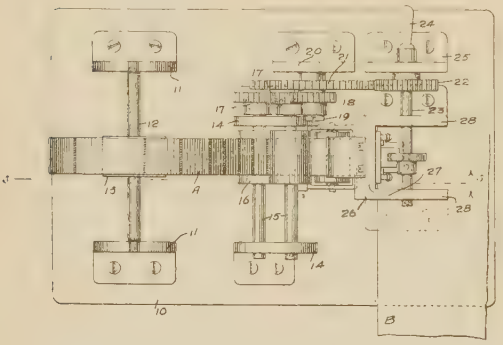
In a timer structure for explosive engines, a movable

contact element adapted for connection with a timer arm constructed of resilient material including a body curved



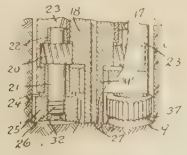
concentrically to the axis of the timer arm and having one end rolled and having the medial portion off set.

1,417,362. STAMP-AFFIXING MACHINE. ANTHONY VILLANI and JOHN VILLANI, Brooklyn, N. Y. Filed Dec. 21, 1920. Serial No. 432,288. 1 Claim. (Cl. 216—25.)



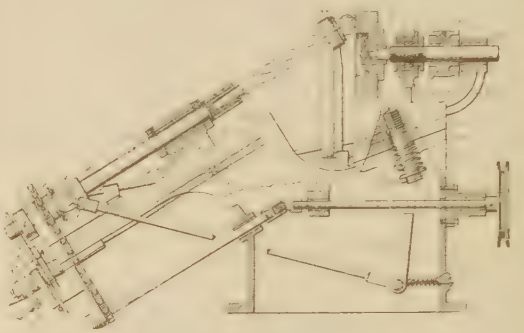
A machine of the class described, including a reciprocating cutter, a bracket on said cutter having a horizontal portion and an upstanding member, a spring pressed vertical plunger carried by the horizontal portion of said bracket and yieldable relatively to the bracket and thus yieldable relatively to the cutter when stamping, a drive shaft, means on said shaft to engage the upstanding member of said bracket to move the cutter and plunger in one direction, means to restore the cutter after movement by said shaft, and means to feed stamps to said cutter and plunger.

1,417,363. ROTARY BORING DRILL. FRANK L. O. WADSWORTH, Pittsburgh, Pa., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Original application filed Feb. 6, 1918, Serial No. 215,589. Divided and this application filed Apr. 10, 1920. Serial No. 372,885. 13 Claims. (Cl. 255—71.)



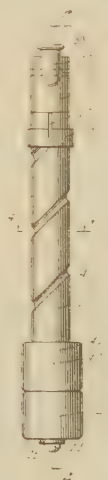
1. In a rotary drill bit, the combination of a head, and two disc-shaped members inclined slightly from the horizontal and rotatably mounted on the end thereof; each of the said members having a peripheral reaming surface, a lower milling and grinding face, and a peripheral groove on the reaming surface adjacent to the lower milling face to provide a sharp shearing edge at the end of the said member.

1,417,364. DRILL-GRINDING MACHINE. DAVID ALDON WALLACE, Waterloo, Iowa. Filed Oct. 5, 1920. Serial No. 414,749. 20 Claims. (Cl. 51—131.)



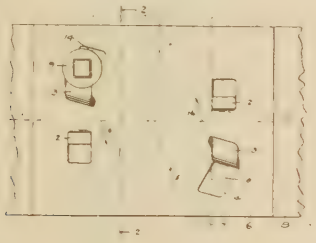
1. A grinding machine, including a grinding element, a shaft, a tool receiving socket attached to said shaft, a traveler supporting said shaft and being adapted to move the same longitudinally, a screw threaded rod engaging said traveler whereby to move the same, an annular ratchet member attached to said rod, a lever rotatably secured to said rod, a pawl attached to said lever and adapted to engage said ratchet, a cam fixedly secured to said shaft and adapted to rotate with the same, said cam being capable of bearing against said lever whereby to move the same and consequently rotate said rod.

1,417,365. THERMOMETER CASE. CHARLES ROBERT WALLENDORF, Brooklyn, N. Y. Filed May 8, 1920. Serial No. 379,871. 3 Claims. (Cl. 73—52.)



1. A thermometer case comprising a tubular member having a reduced end and an external spiral thread, a handle member revolubly mounted on the reduced end of said tubular member, a cap adapted for engagement with the open end of said tubular member, a thermometer carried by said cap, means pivotally mounted on said cap and adapted for engagement with the open end of said tubular member to support the thermometer at right angles thereto, and means adapted for engagement with said spiral thread to rotate said tubular member.

1,417,366. ANTICREEPER TIE PLATE FOR RAILWAY RAILS. WILLIAM S. WESTON, Dallas, Tex. Filed Oct. 1, 1921. Serial No. 504,539. 9 Claims. (Cl. 238—304.)



1. An anti-creeper tie plate for railway rails manufactured of resilient metal, having integral shoulders arranged to form a space slightly smaller than the rail base and to have a friction grip on said rail base when seated therein by force, the said arrangement of shoulders being such that in functional operation a rotative strain produced in the plate establishes a lever grip on the rail.

1,417,367. PROCESS FOR THE MANUFACTURE OF ANTHRAQUINONE. COURTNEY CONOVER, Philadelphia, Pa., and HARRY D. GIBBS, San Francisco, Calif.; said Conover assignor to James M. Selden, Pittsburgh, Pa. Filed June 7, 1917. Serial No. 173,404. 2 Claims. (Cl. 260—51.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

2. The method of oxidizing anthracene, which comprises passing a mixture of anthracene in the vapor phase, and an oxygen containing gas into contact with an oxid of vanadium as a catalyzer heated to a temperature of about 300° C. to 500° C. whereby anthraquinone is produced.

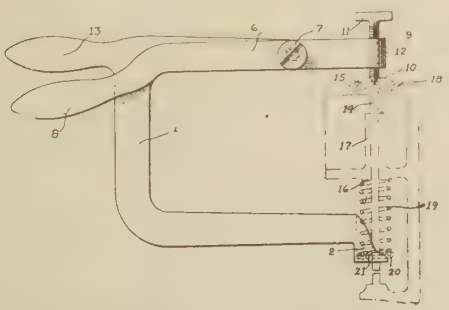
1,417,368. MERCURY NITRATE AS A REAGENT FOR THE PREPARATION OF NITROPHENOLS. TENNEY L. DAVIS, Somerville, Mass. Filed Apr. 16, 1921. Serial No. 462,029. 2 Claims. (Cl. 260—143.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. The process of producing nitrophenols, comprising treating an aromatic compound with nitric acid and mercury nitrate to produce a complex compound and then decomposing the complex compound with nitric acid into nitrophenol.

1,417,369. PROCESS FOR THE PREPARATION OF GUANIDINE. TENNEY L. DAVIS, Somerville, Mass. Filed Apr. 16, 1921. Serial No. 462,030. 3 Claims. (Cl. 260—125.) (Filed under the act of Mar. 3, 1883, 22 Stat L., 625.)

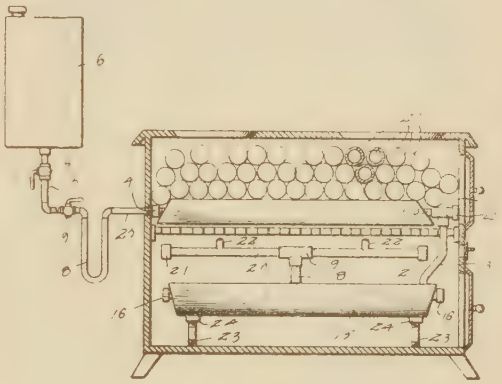
3. In the preparation of guanidine from dicyaniamide, the use of ammonia as a hydrolytic agent.

1,417,370. VALVE LIFTER. EDWIN E. FARIS, Chattanooga, Tenn. Filed Feb. 3, 1920. Serial No. 356,058. 3 Claims. (Cl. 29—86.3.)



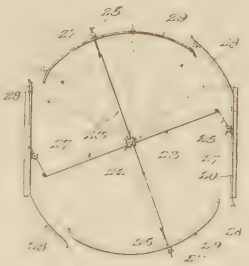
1. A tool for compressing valve springs comprising two pivoted members, one of said members being U-shaped and having the other member pivoted thereto, means upon one member to engage a valve spring, means upon the other member to engage the valve, a handle formed on said U-shaped member, and a handle formed at the adjacent end of the lever, the said handles being so positioned that the valve spring will be compressed by causing said handles to approach each other.

1,417,371. OIL BURNER. JAMES W. FARRAR, Buffalo, N. Y., assignor to Farrar Motors Corporation, Buffalo, N. Y., a Corporation of New York. Filed Aug. 4, 1920. Serial No. 401,137. 1 Claim. (Cl. 158—63.)



A fuel burner having a burner plate, a pipe in communication with a source of fuel supply embedded in said plate to constitute a supply passageway and a preheating chamber for fuel, a fuel pan below said burner, a pipe in communication with the first mentioned pipe and supported by said fuel pan, and a burner disposed intermediate said burner plate and second mentioned pipe supported by and in communication with the second mentioned pipe.

1,417,372. REVOLVING DOOR. JACOB M. FRIEDLAND, New York, N. Y. Filed Jan. 8, 1921. Serial No. 435,851. 16 Claims. (Cl. 20—18.)

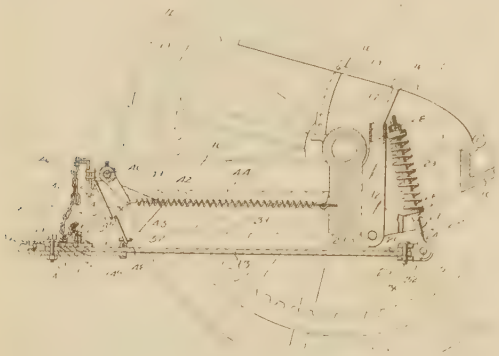


2. The combination, with side-walls of a passageway, of a revolving door therebetween comprising wings and leaves movably mounted thereon arranged to have closing cooperation with said side-walls in positions different with respect to said wings from those assumed when out of said cooperation, means having a tendency to restrain movement of said leaves relatively to said wings, and guide members and guides preventing sudden movement of said leaves.

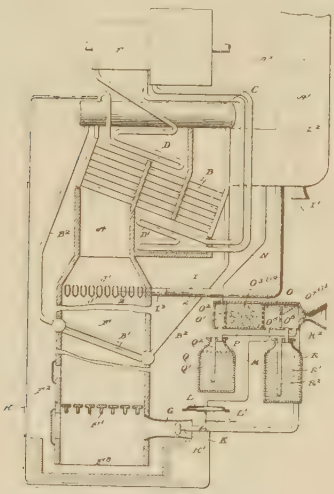
1,417,373. HITCH FOR TRACTORS. DAVID FRANKLIN GEIGER, Minneapolis, Minn., assignor of one-third to Arthur D. Cole, Minneapolis, Minn. Filed Aug. 16, 1920. Serial No. 403,896. 12 Claims. (Cl. 213—67.)

1. In a device of the class described, the combination with the frame of a draft vehicle, of a draw bar attached

at its forawrd end to said frame and free to swing both vertically and horizontally, a quadrant forming a horizontal slide for the free end of the draw bar and mechanism on the frame for yieldingly supported the quadrant.



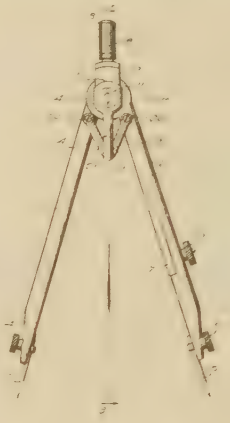
1,417,374. FURNACE. GEORGE H. GIBSON, Montclair, N. J. Filed Nov. 17, 1917. Serial No. 202,478. 5 Claims. (Cl. 236—15.)



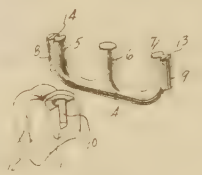
4. In a furnace having primary and secondary air supplies and means for regulating the ratio of primary to secondary air, the combination therewith of means automatically adjusting said ratio regulating means in response to the chemical composition of the gaseous products of combustion issuing from the furnace so as to minimize the variations in the chemical composition of said products dependent on said ratio.

1,417,375. DRAWING INSTRUMENT. CHARLES A. GREEN and HENRY F. SCHUH, Chicago, Ill., assignors to The C. F. Pease Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1921. Serial No. 471,673. 3 Claims. (Cl. 33—157.)

1. A drawing instrument comprising a pair of legs, a yoke pivotally connecting said legs, a guide secured thereto, said guide comprising a base and side flanges, a portion of the side flanges engaging the yoke to maintain the guide in alinement with the yoke, and connections between said guide and said legs.

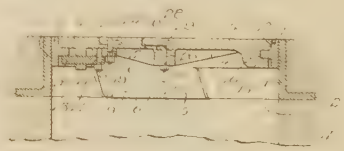


1,417,376. ARTIFICIAL TOOTH. SAMUEL L. GREENBERG, New York, N. Y. Filed Nov. 14, 1921. Serial No. 515,052. 3 Claims. (Cl. 32—12.)



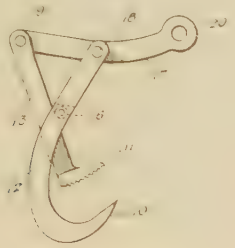
1. The combination of a support for artificial teeth having curved walls acting as tongues to engage the teeth, of a tooth having grooves in its faces to engage with said tongues.

1,417,377. MANHOLE FRAME AND COVER. LEON GSCHWIND, Youngstown, Ohio, assignor to Morris Bonnevie, Chicago, Ill. Filed June 7, 1920. Serial No. 387,267. 1 Claim. (Cl. 94—35.)



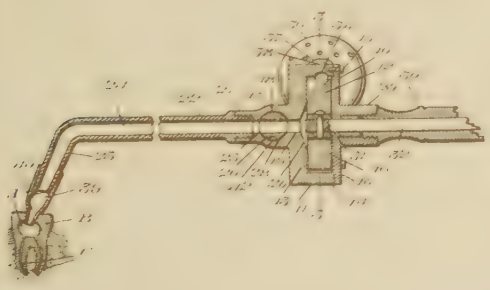
In a device of the class described, a frame member formed with an inwardly extending annular rib positioned at a spaced distance from the upper edge thereof, a closure for said frame member arranged to rest upon the upper surface of said annular rib, said closure being provided with a boss at its outer edge, said boss having a slot adapted to receive said rib, whereby a portion of the boss underlies the latter when the closure is in operative position, said closure being also provided with an integral guide keeper depending from the lower surface thereof below the plane of said rib, and positioned at a point diametrically opposite said boss, a locking member carried by said closure and guided by said keeper, said locking member being arranged for movement into and out of operative engagement with the under surface of said rib, and means extending through said closure and operable at will externally thereof for operating the locking member.

1,417,378. GRIP HOOK. LUCIUS HANDY, Woodlynn, N. J. Filed Oct. 23, 1920. Serial No. 419,001. 2 Claims. (Cl. 294—46.)



1. A grapple comprising a pair of relatively movable jaws each having a shank, the shank of one jaw being slotted to slidably receive the shank of the other jaw, a link pivoted at a point between its ends to the shank of the first mentioned jaw, and a pivotal connection between the free end of the link and the adjacent end of the other shank whereby the second mentioned jaw is movable toward and away from the first jaw.

1,417,379. METHOD AND MEANS FOR TREATING AND FILLING TOOTH CAVITIES AND NERVE CANALS. ARTHUR L. HARVIN, Washington, D. C. Filed Apr. 21, 1921. Serial No. 463,238. 8 Claims. (Cl. 32—10.)

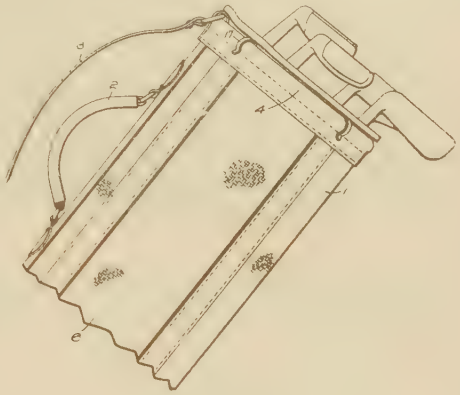


2. The method of treating teeth where the nerve canals are involved which consists in connecting air tight a duct to an opening in said canals, exhausting air sufficiently to withdraw by suction the contents of said canal and then continuing said suction to form a vacuum in said canals and that portion of said duct adjacent said canals, exposing a medicament located in said duct intermediate of said vacuum and a relief port for said vacuum, then withdrawing said medicament by air suction.

6. In combination, a dental instrument handle carrying a shaft operable by a dental engine, of a pump connected to said handle and operated by said shaft, a pump nozzle adapted for airtight connection to a tooth cavity or nerve canals, an air duct line connecting said nozzle and pump, a chamber in said duct line having a cut-off therefrom and an air inlet, said cut-off and inlet being positioned relatively to admit therebetween the lodgement of a medicament and filling in said chamber.

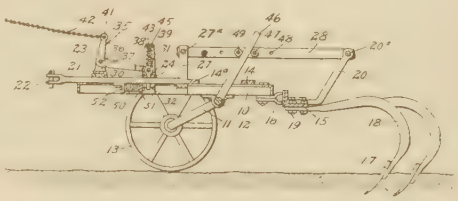
1,417,380. GOLF-CLUB SEPARATOR. HERBERT F. HATCH, Newton, Mass. Filed Apr. 14, 1922. Serial No. 552,491. 2 Claims. (Cl. 150—1.5.)

2. As an article of manufacture and sale, a golf club separator for golf bags, comprising a ring-like spider member of flexible material having a diameter substantially equalling that of the golf bag to which it is to be attached, said member having a plurality of resilient clips rigidly



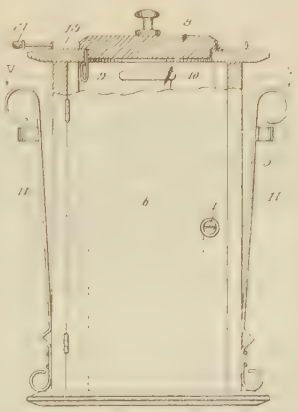
attached to its perimeter at spaced intervals and adapted to be sprung over the upper rim of the golf bag and to receive the golf clubs in the openings of said member.

1,417,381. CULTIVATOR. FREDRICK G. HENGST, Covina, Calif. Filed July 2, 1920. Serial No. 393,548. 5 Claims. (Cl. 97—34.)



1. In a device of the character described, the combination of a frame having traction supporting members, said supporting members having means for elevating cultivator teeth, said cultivator teeth pivotally mounted on said frame, a draw bar supported by said frame, and means whereby said draw bar dependently changes the angularity of said teeth and actuates said supporting members.

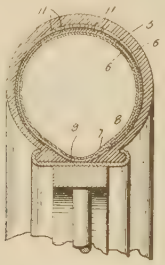
1,417,382. COMBINED MILK BOTTLE RECEPTACLE AND MAIL BOX. JOZSEPH HORVÁTH, South Bethlehem, Pa. Filed June 23, 1921. Serial No. 479,879. 3 Claims. (Cl. 232—41.)



1. In combination with a milk bottle receptacle having top and front doors respectively provided with automatic

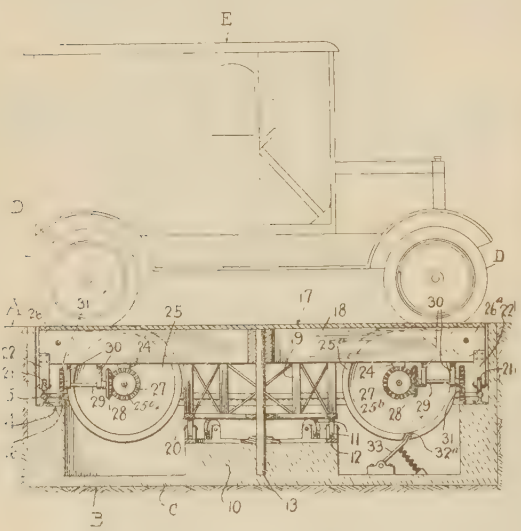
and key actuated locking devices, the automatic locking devices being operable to automatically lock the top door upon closing of the latter and releasable only from the interior of the receptacle when the front door is open, the top of said receptacle being provided with a mail receiving slot leading into the interior of said receptacle, of a pair of vertically slidable partition sections dividing said receptacle into a rear mail receiving compartment, and means to retain said partition sections in any desired vertically adjustable position whereby the mail may be prevented from falling into the milk bottle compartment of the receptacle and whereby said partition sections may be elevated for permitting ready withdrawal of the mail from the front door opening of said receptacle.

1,417,383. PNEUMATIC-TIRE TUBE. ORSON J. HUMPHREY, Elyria, Ohio. Filed Oct. 25, 1919. Serial No. 333,259. 1 Claim. (Cl. 152—13.)



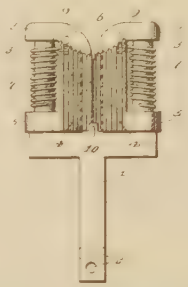
A tire tube structure having continuous reinforcing material impregnated with rubber, continuous elastic means vulcanized to said rubber including a portion bridging spaced portions of said material, a continuous protecting flap extending from, free and beyond one of said portions to cover the bridging portion of the elastic means, and means extending from the exterior of said material to engage the inner wall of a shoe to prevent creeping.

1,417,384. AUTOMOBILE TURNTABLE. THOMAS E. IMLER, Salina, Kans. Filed May 24, 1920. Serial No. 383,937. 5 Claims. (Cl. 104—41.)



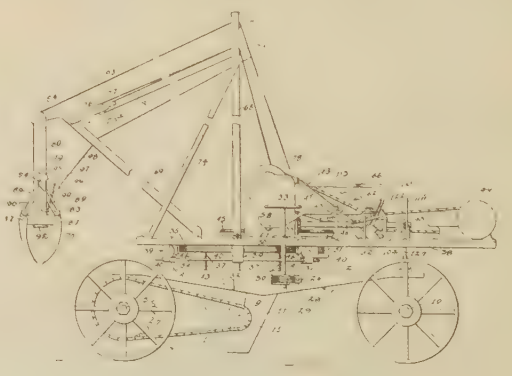
1. A device of the character described, comprising a circular pit formed within a driveway, a central upstanding projection within the pit, a shaft rising therefrom, a circular ring on said projection, a flange formed at the periphery of the pit, a circular rack on said flange, a turntable including a platform rotatable upon said shaft, a sub-structure carried by the platform, rollers on said sub-structure traveling on said ring, said platform being provided with parallel guides adapted to receive the wheels of a motor vehicle, a shaft journaled beneath the platform at the ends of said guides at each side thereof, wheels secured upon said shafts and extending within said guides, a gear carried by each of said last named shafts, counter-shafts journaled beneath the platform at opposite sides thereof, gears on said counter shafts meshing with said first named gears, and gears on said counter-shafts meshing with said circular rack.

1,417,385. HITCH RACK. LEARCUS H. JACOBS, Carthage, Ark. Filed Mar. 17, 1919. Serial No. 283,094. 1 Claim. (Cl. 280—185.)



A hitch rack of the class described comprising a T-shaped supporting member having a stem provided thereon and having a pair of folds formed therein arranged at right angles to each other, means for securing the device to the vehicle body, an upright shaft carried by the cross piece of the supporting member at each end thereof, gripping members rotatably supported on the latter, said members being of semi-circular formation in cross section and provided with a laterally extending part at each end thereof and having openings provided therein to receive the shaft, each of said semi-circular portions having longitudinal openings therein, a coiled spring located on each shaft and having one end secured thereto and its upper end secured to a part of the gripping members to hold said members with the semi-circular members, the end of the coiled spring passes through a slot formed in the semi-circular portion into longitudinal openings, a bar supporting the end of the spring and engaging said openings to hold the spring in engagement with said members, a wedge-shaped projection provided on the cross piece of the supporting member midway its ends for limiting the movement of said members.

1,417,386. HOISTING MACHINE. JOHN G. JOHNSON, St. Louis, Mo. Filed Feb. 24, 1919. Serial No. 278,599. 3 Claims. (Cl. 212—38.)



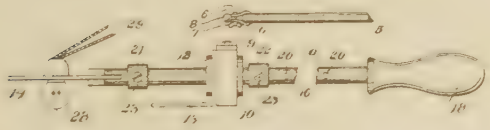
1. In a machine of the class described, a truck, a platform mounted on the truck for pivotal movement,

hoisting means mounted on the platform, means to propel the truck, steering means for the truck including a bearing mounted for vertical pivotal movement and also including a steering post mounted in said bearing and, hence, arranged for vertical pivotal movement so that said steering post can be lowered out of the way of the platform when the latter is to be turned.

1,417,387. RADIATOR TUBE. FREDERICK F. JUNGERHELD, Saginaw, Mich., assignor of one-fourth to Wellington B. Wylie, Saginaw, Mich., and one-fourth to Stork Motor Company, Saginaw, Mich., a Corporation. Filed Jan. 7, 1920. Serial No. 349,903. 2 Claims. (Cl. 257—130.)

1. A radiator core comprising a plurality of water tubes, the sides of each tube made from two sheets of metal, one sheet wider than the other, the two longitudinal edges of said wider sheet bent upon and enclosing respectively the two longitudinal edges of the narrower sheet, each provided with a plurality of rows of outwardly projecting offsets to form abutments between adjacent tubes, and inwardly projecting offsets intermediate said outward offsets to form spacers for the sides of said tube.

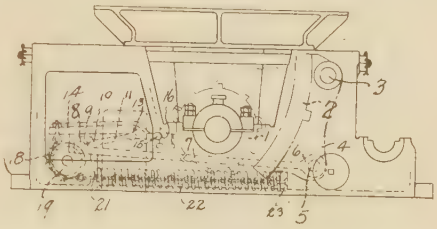
1,417,388. AUTO SIGNAL. LOUIS M. KOLB, Philadelphia, Pa. Filed Oct. 29, 1921. Serial No. 511,242. 7 Claims. (Cl. 116—52.)



1. A direction signal comprising a support and means for connecting the same to a vehicle, a longitudinally split rod journaled in said support and diametrically separated into two half portions one part thereof being adapted for limited longitudinal displacement relative to the other part, an angle plate shield mounted on one side of the support, a signal arm pivoted to one part of the split rod and having a cam slot therein, said signal arm being adapted for oscillatory movement by means of a pin carried by the other part and engaging in the cam slot aforesaid, and adjustable spacing collars secured to half of the split rod for arresting its reciprocation to effect the oscillation of the signal arm from non-signalling to signalling position and vice versa.

1,417,389. STONE CRUSHER. GEORGE E. KRIDER, Duncanville, Pa., assignor to McLanahan Stone Machine Co., Hollidaysburg, Pa. Filed Oct. 7, 1921. Serial No. 506,045. 5 Claims. (Cl. 83—14.)

1. A cushioning unit for crushers including in combination with the disintegrator roll and the breaker plate, a relatively horizontally disposed rod connected with the breaker plate, a lever having its fulcrum located at one end and a resilient connection at the other, and a motion

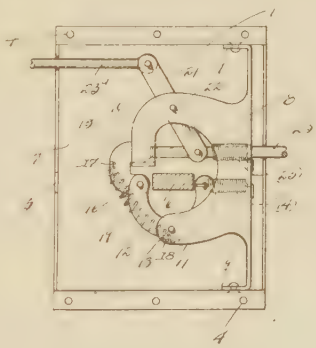


transferring link arranged between the said rod and lever.

1,417,390. WRENCH. WILLIAM H. KRUMSICK, Spokane, Wash. Filed Apr. 18, 1921. Serial No. 462,135. 5 Claims. (Cl. 81—174.)

1. A wrench embodying a handle, means whereby either a longitudinally movable member or a rotatable member may be mounted upon the handle and means engageable with either of said members, whereby the same may be operated.

1,417,391. DOOR LATCH. JOSEPH KUCZKOWSKI, Bay City, Mich. Filed Apr. 7, 1921. Serial No. 459,222. 4 Claims. (Cl. 292—220.)

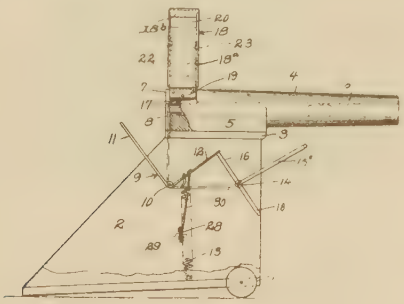


1. A door latch comprising a case, a bracket rigidly mounted in the said case and having laterally extending forked extremities, a substantially arcuate member pivoted to one of said extremities, a latch member pivoted at the outer end of said member, the inner end being yieldably connected to the bracket, and a spring member anchored to the said arcuate member and the said latch for normally forcing it into engagement with the other bracket extremity, and means for releasing the said latching mechanism.

1,417,392. TOY GUN. SAMUEL LANDER, Sutersville, Pa. Filed June 14, 1921. Serial No. 477,527. 5 Claims. (Cl. 124—13.)

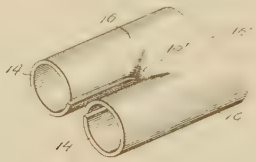
1. In a toy gun, a barrel provided with a slot communicating with the bore of the barrel, a magazine communicating at its discharge end with said slot and including two members for confining between them projectiles, one of said members being resilient and normally pressing inwardly toward the other member to prevent

discharge of the projectiles from the magazine, projecting means positioned to act upon projectiles discharged from the magazine into the barrel, and means actuated



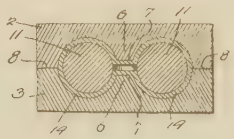
by said projecting means for causing outward movement of said resilient member for feeding the projectiles from said magazine into the barrel.

1,417,393. METHOD OF MAKING RETURN BENDS. COLUMBUS K. LASSITER and JULIUS KINDERVATER, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,246. 10 Claims. (Cl. 29—157.6.)



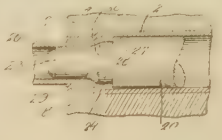
1. The method of making the leg end of a return bend, which consists in shaping one end of a piece of tubular stock to form leg and crotch portions divided by a cleft across the crotch and along the inner sides of the legs, introducing a mandrel through the opposite end of the stock to back the leg and crotch portions, subjecting said leg and crotch portions to the action of dies and while under welding heat so as to close said cleft and weld the walls thereof, said dies having surfaces which enter the space between the legs and cooperate with the mandrel for a backing action in said cleft closing and welding operation, and then suitably closing the said opposite end of the bend.

1,417,394. DIES FOR MAKING RETURN BENDS. COLUMBUS K. LASSITER and JULIUS KINDERVATER, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,247. 8 Claims. (Cl. 78—60.)



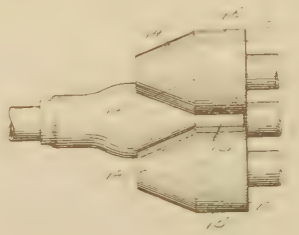
1. Dies for use in making the leg-end of a return bend from a piece of tubular stock comprising shaping die members having surfaces of a shape adapted for initially compressing one end of the stock to form incomplete leg and crotch portions each having opposed walls separated by a gap, similar walls of said portions being connected by spaced bridge pieces, and welding die members having surfaces complemental to the surfaces of the first-named die members, and adapted after removal of said bridge pieces for compressing said walls and closing said gap and welding the opposed walls together.

1,417,395. CONNECTING PIPES AND RETURN BENDS. COLUMBUS K. LASSITER and JULIUS KINDERVATER, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,248. 14 Claims. (Cl. 29—157.6.)



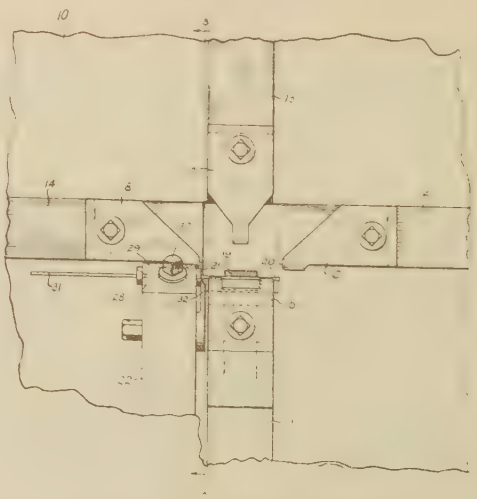
1. The method of connecting pipes and return bends, which consists in providing a bend with split tubular leg portions, fitting ends of pipes in the leg portions, and then closing and welding the walls of said split leg portions and simultaneously welding said pipe ends to and within said leg portions.

1,417,396. RETURN BEND AND METHOD AND APPARATUS FOR MAKING SAME. COLUMBUS K. LASSITER and JULIUS KINDERVATER, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,249. 22 Claims. (Cl. 29—157.6.)



1. The method of forming the cap end of a return bend, which consists in reducing the bend from a cross-sectionally elliptical form to a form in which it tapers toward its open end and terminates at such end in a substantially circular constricted portion, and then spinning down the walls of the tapered portion of the bend by rolling compression on lines converging in the direction of the open end until such walls at such end merge and are solidly welded together.

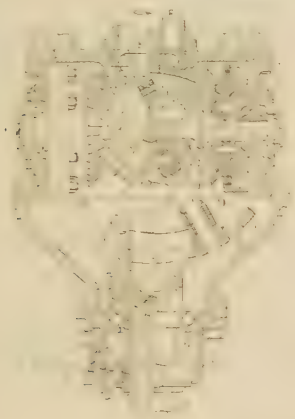
1,417,397. METAL-FORMING MACHINE. ARTHUR J. LEWIS, Stratford, Conn., assignor to The Baird Machine Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 9, 1921. Serial No. 443,603. 11 Claims. (Cl. 153—34.)



1. In a machine of the character described, the combination of a form, reciprocating forming tools adapted

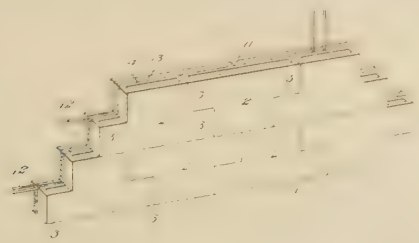
to co-act therewith, a cut-off bracket having a recess, a quill seated in said recess, and means for retaining the quill in place, said means leaving one side of the quill unobstructed.

1,417,398. MOTION-TRANSMITTING APPARATUS. GEORGES LHERMITTE, Nantes, France. Filed Sept. 4, 1920. Serial No. 408,311. 4 Claims. (Cl. 74—54.)



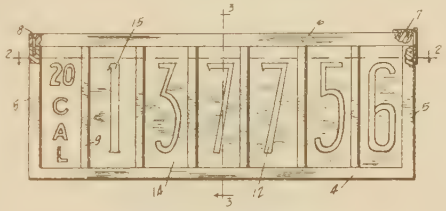
1. A motion transmitting apparatus, comprising a rotary driving shaft, a rotatable driven shaft in alignment with the said driving shaft, a crank arm on the said driving shaft, a slot in said crank arm, secondary shafts located at right angles the one to the other in a plane at right angles to the common axis of the driving and driven shafts, a connecting rod guided at one end within the slot of the crank arm of the driving shaft, means respectively fast with the secondary shafts and connected with the rod, at the other end thereof, at the intersection of both secondary shafts, and adapted to transmit from said rod, on rotary motion of the driving shaft, intermittent motions to the said secondary shafts, ratchet means connecting the secondary shafts and the driven shaft and adapted to transform the said intermittent motions of the secondary shafts into a continuous motion of the driven shaft, and means for adjusting the free end of the connecting rod within the slot of the crank arm of the driving shaft.

1,417,399. HOLLOW CONCRETE WALL BLOCK CONSTRUCTION. JAMES M. MCCURBY, San Luis Obispo, Calif. Filed Dec. 8, 1917. Serial No. 206,338. 2 Claims. (Cl. 72—30.)



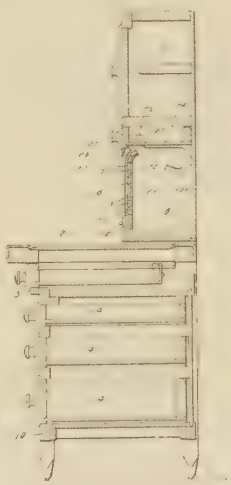
1. A hollow concrete wall construction including a plurality of separate interlocking hollow blocks arranged in vertical staggered relation, each of said blocks including relatively narrow end portions and an extended intermediate portion, a central wall dividing the blocks vertically and longitudinally to form an inner chamber, end walls connecting one of the side walls with the partition to form said inner chamber, which is closed at both ends, and an outer chamber open at each end and a bar positioned transversely of the outer chamber intermediate its ends, said outer chamber being filled with concrete.

1,417,400. ILLUMINATED LICENSE PLATE. EDGAR MCGARVIN, Los Angeles, Calif. Filed Jan. 18, 1921. Serial No. 438,178. 1 Claim. (Cl. 40—133.)



An illuminated license plate comprising a casing, a frame sustained on the casing and including grooved side and top rails, the top rail being hingedly supported on one of the side rails to occupy open and closed positions, means on the side rail for locking the top rail in closed position, upstanding partitions secured at regularly spaced intervals on the bottom rail of said frame and having their vertical edges formed with grooves, and color and number plates slidably fitted in the grooves of said partitions and adapted to be secured therein by said top rail.

1,417,401. KITCHEN CABINET. CLARENCE MAHONEY, Elwood, Ind., assignor to G. I. Sellers and Sons Company, Elwood, Ind., a Corporation. Filed Sept. 9, 1921. Serial No. 499,394. 1 Claim. (Cl. 45—16.)

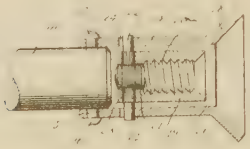


A cabinet having a compartment fitted with a roller door, the side walls of the compartment being provided with communicating substantially horizontal and substantially vertical guide grooves and the door consisting of a plurality of roller bars terminally fitted for movement in said grooves, outlet grooves being provided in communication with said horizontal grooves for permitting the removal of the door from its guides, and supplemental guides arranged above the plane of said horizontal guides and in communication with the outlet groove, in combination with a sliding drawer having ribs fitted in said supplemental guides for closing the interval between the upper edge of the roller door and the top of the cabinet.

1,417,402. WINDING DEVICE. DAVID L. MATTERN, New York, N. Y., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Mar. 2, 1921. Serial No. 449,035. 20 Claims. (Cl. 64—89.)

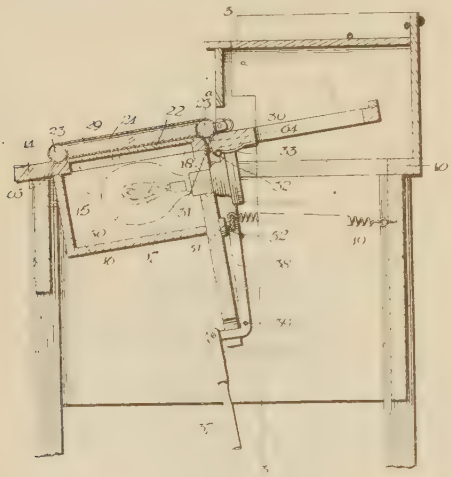
19. In a winding mechanism for motors, a shaft to be wound, flexible connection means provided upon the shaft,

and detachable winding means adapted to be connected to said flexible connection means, and means whereby said



last named means may be directed into engagement with the connection means.

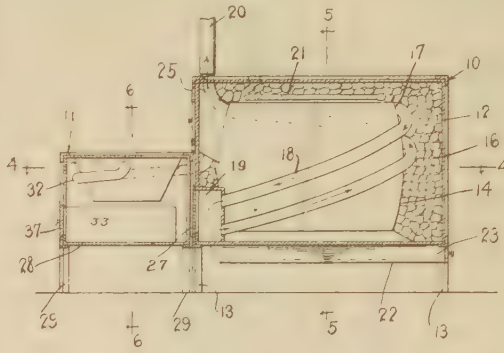
1,417,403. PHOTOGRAPHIC-PRINTING APPARATUS. ROBERT DEMAS MONINGER, Washington, Pa.; Annie R. Moninger being administrator of said Robert Demas Moninger, deceased. Filed June 25, 1920. Serial No. 391,601. 8 Claims. (Cl. 95—73.)



1. In a photographic printing apparatus of the character described, a transparent support, a presser coacting with said support and constrained to reciprocatory movement thereacross and consisting of a pair of spaced rollers, a presser block arranged between said rollers and a flexible band having its ends secured and extending around said rollers and said block and relatively movable with respect thereto, means for reciprocating said presser across said transparent support including a bell-crank lever having a yoke end and a link pivotally connecting each arm of said yoked end to the presser, and a spring for each link connection, each of said springs having one end secured to said lever and the other end secured to said link whereby said presser is urged into contact with said support in all positions.

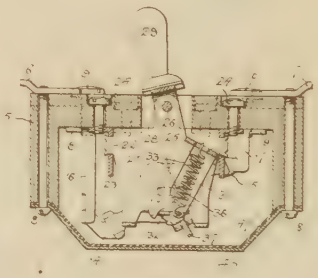
1,417,404. OVEN. PETER MUSTONEN, Superior, Wis. Filed Nov. 20, 1920. Serial No. 425,587. 2 Claims. (Cl. 126—4.)

1. A stove comprising a heating section, a fire box located therein and spaced from the side and rear walls thereof to provide a heating chamber, heat retaining elements filling said chamber, a smoke pipe surrounding the fire box and communicating with the interior thereof and



a cooking section having detachable engagement with the heating section.

1,417,405. ELECTRIC SWITCH. ARVID H. NERO, New Britain, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 15, 1920. Serial No. 351,661. 4 Claims. (Cl. 200—67.)



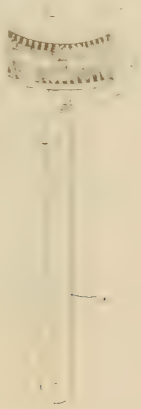
1. In a snap switch mechanism, a pivoted lever with inwardly offset lugs at its inner end, a pivoted rocker slotted to receive said lugs, a pivoted switch yoke and an actuating spring operatively connected between said rocker and switch yoke.

1,417,406. MOTOR-VEHICLE TRANSMISSION MECHANISM. PERRY B. NEWKIRK, Seattle, Wash., assignor to Fred M. Bawden (in trust), Toronto, Ontario, Canada. Filed Mar. 4, 1922. Serial No. 540,950. 4 Claims. (Cl. 180—10.)

1. Transmission mechanism for motor vehicle, comprising a dead axle having an end bearing, a traction wheel thereon having a concentric gear, a live axle or jack shaft provided with a pinion in mesh with said gear, a housing having bearings in which said live axle is mounted, a swinging mounting journaled at its opposite ends upon said dead axle and said housing respectively,

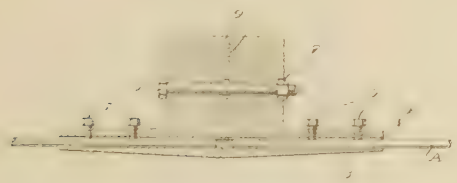
and a vehicle support rigidly secured to said housing, whereby the latter is maintained in parallel relation with the vehicle body but may move in an arcuate path with respective to said dead axle.

1,417,407. TOOTHBRUSH. JOSEPH NOVAK, Chicago, Ill. Filed Oct. 22, 1921. Serial No. 509,502. 3 Claims. (Cl. 15—167.)



1. In a toothbrush, a head structure comprising spaced connected plates curved to conform to the curvature of the user's mouth, and bristles attached to and extending inwardly from the facing surface of said plates, said bristle carrying plates being connected by a web having an arcuate slot therein and a resilient member slidable in said slot and adapted to be gripped by the teeth of the user.

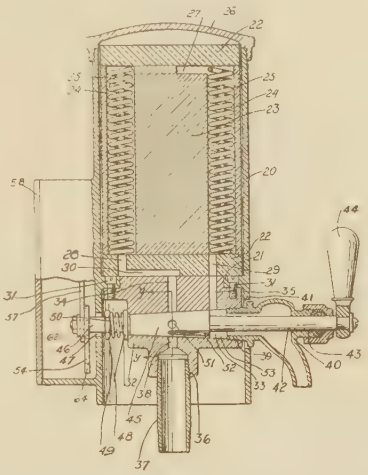
1,417,408. WIRE CONNECTOR. GEORGE W. PUGH, Leona Mines, Va. Filed Oct. 24, 1921. Serial No. 510,173. 3 Claims. (Cl. 191—44.1.)



1. A device of the class described comprising a pair of members having extensions at the lower ends, means for connecting the end of a wire to each extension and means for connecting the bodies of the two members together.

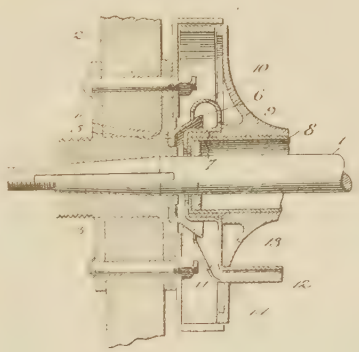
1,417,409. ELECTRICAL WATER HEATER. THOMAS L. RALPH, Bridgeport, Conn., assignor, by mesne assignments, to Henry Bobker, New York, N. Y. Filed Jan. 20, 1921. Serial No. 438,599. 10 Claims. (Cl. 219—39.)

1. An electric water heater comprising a heating element having a continuous passage and an inlet and an outlet opening, a valve body having a bore and provided with openings extending between said bore and said inlet and outlet openings, respectively, said valve body further having an opening extending between said bore and a water supply pipe, a faucet projecting from said bore, and a ported plug arranged in said bore, whereby said supply pipe opening may be closed, or communication may



be had from said supply pipe, through said element and to said faucet, or water may flow to said faucet direct from said supply pipe.

1,417,410. OIL AND GREASE DEFLECTOR. JOHN H. RAM, Jersey City, N. J., assignor of one-half to Edgar E. Elder, Brooklyn, N. Y. Filed Aug. 27, 1920. Serial No. 406,470. 5 Claims. (Cl. 64—22.)

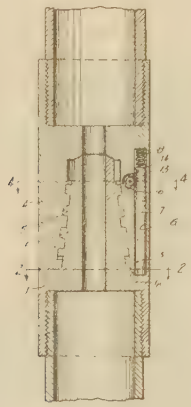


1. In a device of the class described, the combination of a member including a portion for attachment to a rotary member, and a conical oil-slinging portion, an axle-housing cap member having an annular groove adapted to co-act with the first said member for catching and conducting oil thrown off from the first said member.

1,417,411. TOOL-JOINT LOCK. CHARLES B. REYNOLDS and CLARENCE D. REYNOLDS, Whittier, Calif. Filed Nov. 11, 1920. Serial No. 423,408. 3 Claims. (Cl. 285—146.)

1. The combination with members having a threaded joint, of a locking pin projected from one member, a cir-

cumferential groove in the other member adapted to receive said pin, one of the longitudinal contacting surfaces



between said pin and groove being stepped circumferentially of said members.

1,417,412. MEDICINE AND HYGIENIC FOOD. JOSEPH C. RICHARD, New York, N. Y. Filed Mar. 14, 1914. Serial No. 824,671. 9 Claims. (Cl. 99—11.)

1. Fruit juice in which lactic acid has been developed by fermentation of the *Bacillus bulgaricus*.

8. The process of making products contanning lactic acid micro-organisms, which consists in subjecting fruit juice and a nontoxic neutralizing agent, to lactic acid fermentation.

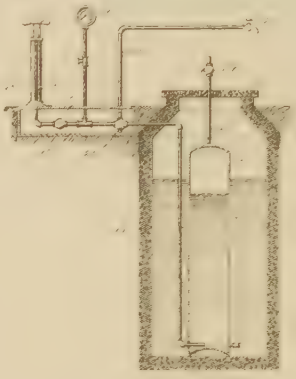
1,417,413. COLORATION OF METALLIC SURFACES. TITO RONDELLI, Turin, and QUIRINO SESTINI, Bergamo, Italy, assignors of one-third to Sestron (Foreign Patents) Limited, London, England. Filed June 30, 1920. Serial No. 393,198. 10 Claims. (Cl. 204—1.)

1. The process for colouring metallic surfaces which comprises submitting the surface to be coloured to anodic oxidation in the presence of a concentrated alkaline electrolyte containing copper.

1,417,414. PROTECTOR. LOUIS J. SANDERS, Takoma Park, Md. Filed Mar. 29, 1921. Serial No. 456,732. 5 Claims. (Cl. 128—87.)

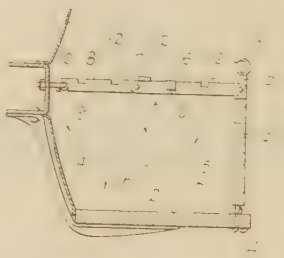
1. A digit protector constructed from a plane sheet of material comprising a central disk and radiating arms, the said arms being bent to encircle the axis of the disk.

1,417,415. PUMPING APPARATUS FOR CISTERNS. THEODORE SARLLS, Sanders, Ky., assignor of forty-nine per cent to Thomas E. Weldon, Sparta, Ky. Filed Feb. 5, 1921. Serial No. 442,863. 1 Claim. (Cl. 103—8.)



The combination with a cistern or reservoir; of a vertical cylinder located within said cistern or reservoir and provided at its lower end with a check valve opening inwardly to the cistern, an air pump, a pipe line connecting said air pump and the lower end of said cylinder said pipe line including a check valve opening away from said pump and a three-way valve, a draw-off pipe connected to said three-way valve and provided with an outlet bibb, and a blow-off valve connected to the upper end of said cylinder.

1,417,416. AUTOMOBILE ACCESSORY. CARL WILHELM SCHOPPE, Portland, Oreg. Filed June 27, 1921. Serial No. 480,525. 2 Claims. (Cl. 224—29.)

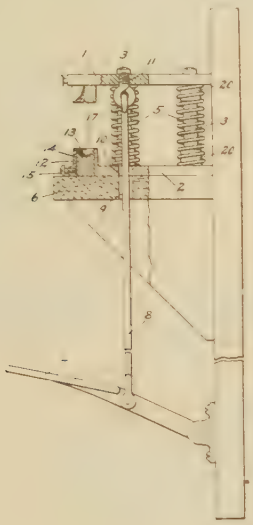


2. In a device of the character described, the combination of an automobile having a running board, with a foot mat having one edge hingedly attached to the running board, spring clamps attached to the edge of the foot mat opposite the hinges, and a rod of slightly greater length than the mat removably secured in the spring clamps.

1,417,417. PRESS. PHILLIP A. SEEWAGEN, Los Angeles, Calif. Filed May 27, 1920. Serial No. 384,682. 3 Claims. (Cl. 18—42.)

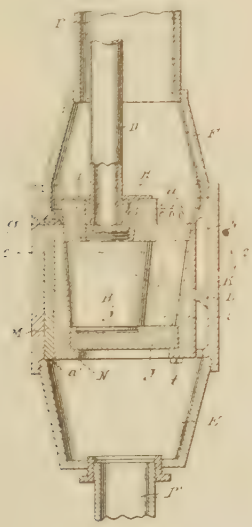
1. A press comprising die plates movable toward and away from one another and each having a plurality of die recesses, the die recesses of one die plate being ar-

ranged to co-operate with the die recesses of the other plate, the die recesses of the die plates having co-operating



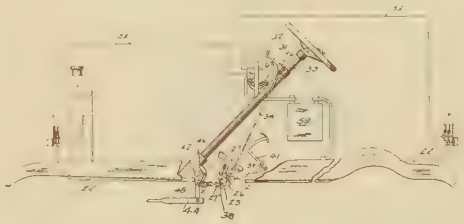
cross channels connecting the respective recesses of the die plates.

1,417,418. ROTARY PUMP. JOHN F. SMITH, Wooster, Ohio, assignor of one-half to Charles M. Jeffries, Apple Creek, Ohio. Filed Mar. 5, 1921. Serial No. 449,997. 2 Claims. (Cl. 103—44.)



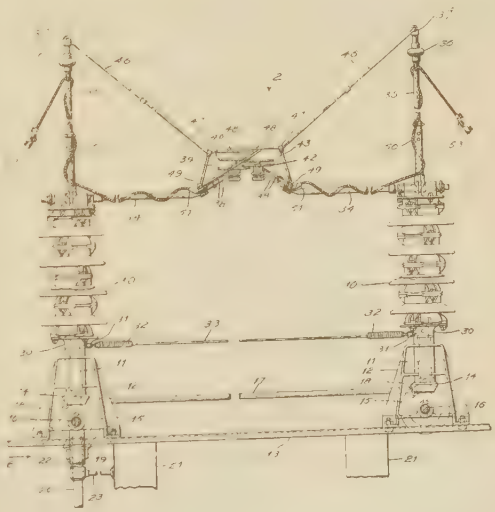
1. In a device of the character described, the combination with a cylindrical casing, of a piston rotor seated eccentrically therein, a wing slidably mounted in said rotor adapted to conform with the wall of said conical well, while said rotor revolves; cavities within the wall of said casing, a vertical diaphragm dividing the cavities longitudinally; a spiral diaphragm in relation to said vertical diaphragm, dividing said cavities laterally; openings from said cavities inwardly on both sides of said vertical diaphragm; openings from and into said cavities above and below said spiral diaphragm, respectively, and means for actuating said piston rotor, substantially as set forth.

1,417,419. SIGNALING DEVICE. RAYMOND G. SMITH, Moss Beach, Calif. Filed Aug. 12, 1919. Serial No. 317,031. 4 Claims. (Cl. 116—36.)



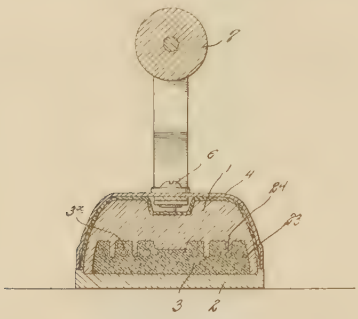
1. In a signaling device for automobiles, a pivotally mounted lever, a U-form link pivotally attached at one end to said lever, a normally concealed signal mediately connected to the other end of said link, means operated by the driver for turning said lever past its dead center to expose said signal and retain it in exposed position, a second lever pivotally mounted adjacent said first lever, means connecting said second elver with the steering wheel and means on said second lever for moving the first lever off its dead center when said second lever is moved in either direction by the steering wheel.

1,417,420. HIGH-POTENTIAL SWITCH. GEORGE T. SOUTHGATE, New York, N. Y. Filed Apr. 26, 1920. Serial No. 376,748. 13 Claims. (Cl. 200—48.)



3. In an electric switch the combination with a pair of arms, of a contact mounted on one end of each arm, revoluble supports for the other ends of said arms having parallel axes, means for turning said supports, masts axially in line with said supports and discharge horns extending between each of said arms and the corresponding mast.

1,417,421. ELECTRICALLY-HEATED FLATIRON. EMIL STRANSZKY, Dover, Ohio. Filed Mar. 5, 1921. Serial No. 449,890. 9 Claims. (Cl. 219—25.)

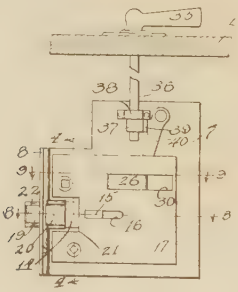


1. A unit for incorporation in an electrically heated iron comprising a cupped or chambered clamp body, a filling of dielectric and refractory plastic material in the cup or chamber of said body, and a heating unit embedded in the said filling of plastic material.

1,417,422. CIGAR LIGHTER. FRANK W. STRUBING, Hartford, Wis. Filed Sept. 27, 1920. Serial No. 412,965. 5 Claims. (Cl. 219—32.)

1. In a cigar lighter, a base, a block of insulating material detachably secured in said base, a coil of thin wire wrapped about said block to form a resistance, and means for connecting said coil into an electric circuit in series.

1,417,423. AUTOMOBILE DOOR LOCK. BAYARD E. TAYLOR, Oak Park, Ill. Filed June 21, 1920. Serial No. 390,342. 6 Claims. (Cl. 70—29.)



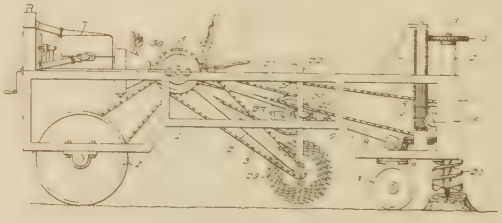
1. A door lock comprising a latch bolt, a wedge member, an arm pivotally mounted on said wedge member and engaging said latch bolt, resilient means engaging said arm for first impelling said latch bolt and then the wedge member outwardly into latching position, and handle mechanisms operable independently of each other for retracting the latch bolt and wedge member against the action of said resilient means.

1,417,424. CALENDAR. SIMPSON THOMAS, Southampton, N. Y. Filed Mar. 10, 1921. Serial No. 451,232. 9 Claims. (Cl. 40—115.)

1. A calendar comprising connected cover plates, and an interposed disc revolubly mounted between the cover plates, the edge of the disc being arranged to protrude beyond the cover plates at one point, and the cover plates being cut away for exposing portions of the disc, the cut away portion of one cover plate being at a different edges from that of the cut away portion of the other cover plate, the disc bearing at one face indicia of sub-

divisions of time and at its opposite face indicia of other sub-divisions of time, each so located on its respective face as to be co-operatively exposed at the cut away portions, and the exposed faces of the cover plates bearing indicia of other sub-divisions of time arranged to co-operate with the indicia of the exposed portions of the disc.

1,417,425. POWER GRUBBER. ELMER THOMPSON, Eau Claire, Wis. Filed Dec. 14, 1920. Serial No. 430,744. 2 Claims. (Cl. 144—3.)



1. An apparatus of the class described comprising a wheeled frame, a motor on the frame, means for connecting the drive wheels of the frame with the motor, a slidably mounted block on the frame, an auger shaft rotatably mounted in the block, a roller gear vertically arranged in the frame, a gear on the shaft engaging said roller gear, a horizontally arranged drum, circular saws carried by the drum, a supporting frame for the drum pivotally mounted in the main frame, means for lowering and raising said frame by the motor and means for rotating the drum and the roller gear and raising the block by the motor.

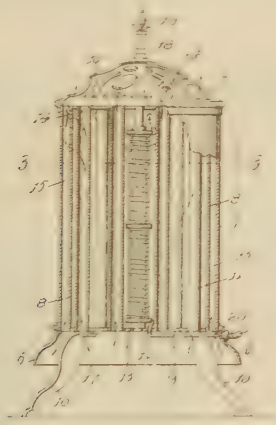
1,417,426. AXLE AND WHEEL CONSTRUCTION FOR POWER-DRIVEN VEHICLES. VIGGO V. TORBENSEN, Cleveland, Ohio, assignor, by mesne assignments, to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 18, 1919. Serial No. 311,838. 8 Claims. (Cl. 74—7.)

1. In apparatus of the character described, the combination of a dead-axle, a driven shaft, a wheel structure,

gearing for driving said wheel structure from the driven shaft, a spider rigidly and detachably secured to the dead-

axle and having a central portion projecting beyond said gearing, and outer and inner bearings for the wheel structure carried on said spider outwardly of said gearing.

1,417,427. ELECTRIC HEATER. LAURENCE J. TRACY, St. Louis, Mo.; Jennie O'Leary being administratrix of said Laurence J. Tracy, deceased, assignor, by direct and mesne assignments, of one-fourth to Walter L. Deering, St. Louis, Mo., one-fourth to Charles J. Gevecker and Harry Gevecker, one-tenth to Mary Connell, one-tenth to Margaret Decker, one-tenth to Rebeca McGrane, one-tenth to Jennie O'Leary, one one-tenth to James Tracy. Filed Mar. 11, 1921. Serial No. 451,616. 4 Claims. (Cl. 219—34.)



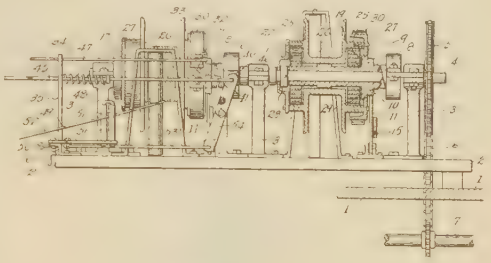
1. An electric heater comprising an outer shell, a drum located in the outer shell and suitably spaced therefrom, a plurality of air circulating flues passing through said drum and a heating unit located centrally in said drum, substantially as specified.

1,417,428. SOLDERING COMPOSITION. ARNOLD TRALIOT, Lexington, Ky. Filed Apr. 2, 1921. Serial No. 458,034. 5 Claims. (Cl. 148—24.)

1. A solder composition composed of aluminum, sulfur, and a plurality of metals melting at low temperatures.

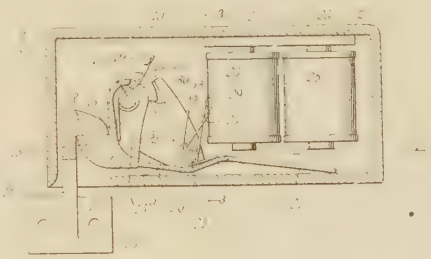
1,417,429. AUTOMATIC REELING DEVICE. THOMAS J. TREW, Seattle, Wash., assignor to King Automatic Troller Co., Seattle, Wash., a Corporation of Washington. Filed Feb. 16, 1920. Serial No. 359,102. 3 Claims. (Cl. 242—85.)

1. An automatic reeling device for trolling lines comprising in combination with a rotatably driven shaft, a sleeve hub rotatably mounted on the shaft, a reel rotatably mounted on the sleeve, a spring coiled about the sleeve and having a fixed connection at one end with the reel and a disconnectable winding connection with the sleeve hub, independently operable means engageable with the sleeve



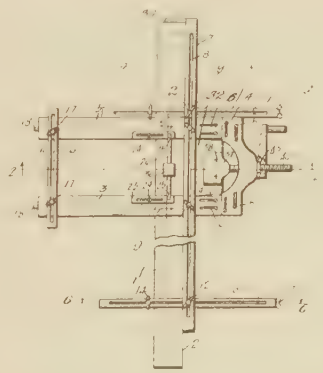
hub to preclude free reverse winding of the reel and means on the shaft engageable with the hub to drive the latter to rotate the reel.

1,417,430. LOCK. DAVID M. TULLOCH, Dunellen, and WILLIAM BODGE, Nutley, N. J., assignors, by mesne assignments, to Bertha L. Armstrong, Dunellen, N. J. Filed Nov. 9, 1920. Serial No. 422,807. 8 Claims. (Cl. 70—50.)



1. In a lock, a bolt, a latch adapted to interlock with said bolt, a device holding said latch in locking position with respect to said bolt, means for releasing said device to permit the retraction of said latch, and means adapted when said latch is retracted to automatically hold said latch in retracted position, said means being adapted to automatically release the latch from its retracted position when said bolt is in interlocking position with respect to said latch.

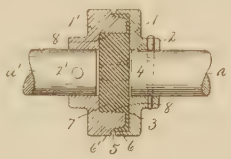
1,417,431. BUTT-INLET-CUTTING DEVICE. AUGUST C. VOGT, Los Angeles, Calif. Filed Jan. 18, 1921. Serial No. 438,171. 4 Claims. (Cl. 144—27.)



1. In a recess cutting device, a vertically disposed slotted bar, a combined supporting and gage plate projecting laterally from the upper end of said bar, a horizontally disposed frame adjustably connected to said slotted bar, means for clamping said frame to the work, a pair of cutting members adjustably arranged in said frame, one of

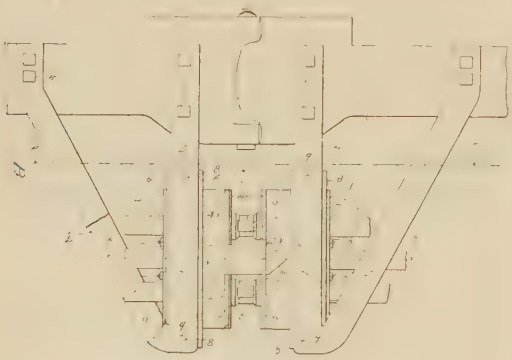
which cutting members is disposed at right angles to the other, a pair of horizontally disposed bars adjustably connected to said slotted bar, and means on said horizontally disposed bars for clamping the same to the work.

1,417,432. SHAFT COUPLING. WILLARD R. WALKER, Syracuse, N. Y., assignor to The Walker Brothers Company, Syracuse, N. Y., a Corporation of New York. Filed Oct. 27, 1920. Serial No. 419,790. 2 Claims. (Cl. 64—96.)



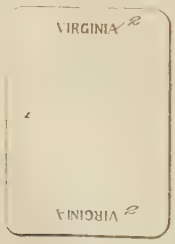
1. A coupling comprising a pair of rotary members arranged end to end in axially spaced relation and provided with substantially circular sockets in their adjacent ends forming annular flanges surrounding the sockets, a disk of resilient material extending into both sockets and seated against the end and peripheral walls thereof, said disk having a series of axially extending openings, and lugs on both of said members projecting into the openings in the disk, the lugs of each member being extended axially into the socket of the other member, the outer faces of the extensions of each member being spaced apart radially from the inner face of the flange of the other member to avoid contact therewith.

1,417,433. AUTOMATIC HOSE COUPLING. WILLIE F. WALL, Bay Shore, Calif. Filed Mar. 24, 1920. Serial No. 368,397. 7 Claims. (Cl. 285—24.)



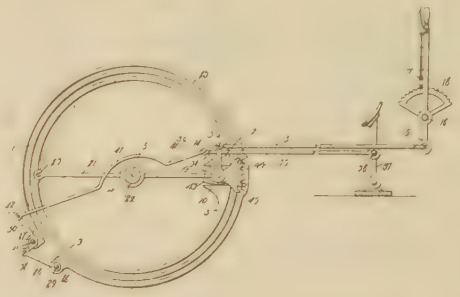
1. A coupling device having casing sections, registrable chamber members thereon, coupling means passing through said members, opposed chamber walls extending from said members and at an angle thereto, and spring means intermediate the chamber walls, and a mounting means for said sections cooperating with said spring means.

1,417,434. EDUCATIONAL APPARATUS. WILLIAM P. WEISS, Bloomsburg, Pa. Filed Mar. 1, 1921. Serial No. 448,813. 3 Claims. (Cl. 46—25.)



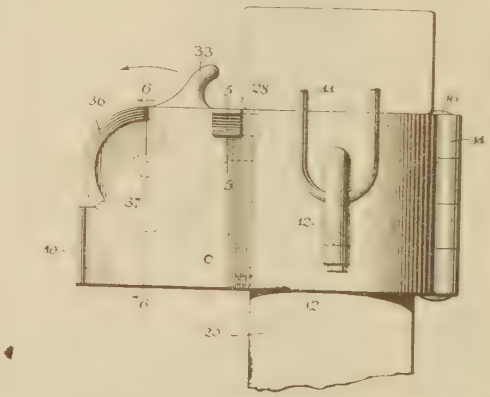
1. An educational card game comprising two decks of playing cards, the cards of one deck each bearing indicia of a State of the Union, or Territory thereof, and the cards of the other deck each bearing indicia of the capital of a State of the Union, or Territory thereof.

1,417,435. BRAKE. JOHN W. WHITE, San Antonio, Tex. Filed Sept. 27, 1918. Serial No. 255,919. 7 Claims. (Cl. 188—140.)



1. In a device of the class described, the combination of a brake drum, inner and outer brake bands carried adjacent said drum and having spaced apart ends, means for applying the outer brake band to said drum, a cam interposed between the ends of the inner brake band, a rack member carried by said outer brake band, a sector shaped rack member connected to said cam and engaging the first mentioned rack member, whereby when the outer brake band is applied to said drum and moves for a distance therewith, said rack members will move to shift the cam to expand the inner brake band, thus causing the inner brake band to be bought into a binding engagement with said drum.

1,417,436. LIFTING DEVICE. LEE WILKINSON, Sour Lake, Tex. Filed Mar. 2, 1921. Serial No. 449,015. 5 Claims. (Cl. 294—90.)



1. A device of the character specified comprising hinged connected sections having radial extensions, and a latch of disk shaped formation arranged between the sections and pivoted to one of the sections, said latch being provided with a laterally projecting arcuate cam adapted to engage one of the sections whereby to separate the sections when the latch is rotated in one direction.

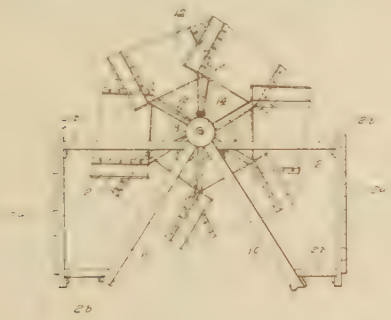
1,417,437. FINGER-GRASPING SAFETY RAZOR. JOHN A. WILLIAMSON, Denver, Colo. Filed July 16, 1921. Serial No. 485,392. 5 Claims. (Cl. 30—12.)

1. A finger grasping safety razor, comprising a single finger grasping plate arranged to be held by the fingers in shaving position, said plate being provided with a support for interchangeable razor blades, means for releasably securing said razor blade in said support, and a movable safety guard for said razor blade, including a housing, for securing the razor blade against displacement therefrom; said support having a wall member, and means for clamping said razor blades against said wall member; said

support consisting of a flat sided channeled member arranged to receive said razor blades against the inside portion wall of its outer side, and a tilting member secured in said channeled member, provided with free ends, one of

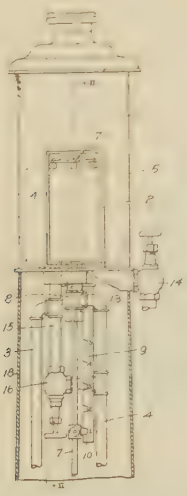
which is arranged to clamp said razor blades against said channeled member's outer side wall and the other is arranged to form a safety guard for the cutting edge of said razor blades.

1,417,438. WINDMILL. EDWIN R. WILSON, Sykes, Mont. Filed Sept. 29, 1920. Serial No. 413,463. 2 Claims. (Cl. 170—10.)



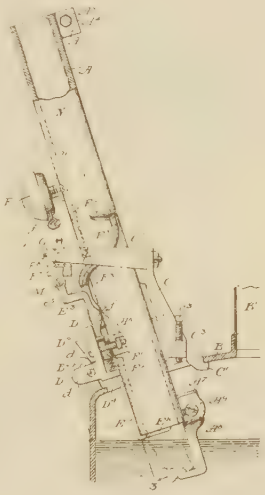
1. A windmill having angularly disposed standards wider apart at their bases than at their upper ends, bearings each mounted by a pair of said standards at their upper ends, a wind wheel having a shaft journaled in said bearings, arms extending outwardly from said standards adjacent to the bearings, arms shorter than and spaced from said arms extending outwardly from said standards, and shields mounted below said shaft by the first and second mentioned arms to prevent undue impingement of the air against said wheel below its axis.

1,417,439. LIQUID-VENDING APPARATUS. FRANK WOODRUFF, Rochester, Pa. Filed Oct. 30, 1920. Serial 420,603. 12 Claims. (Cl. 221—100.)



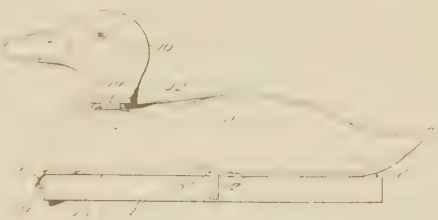
1. In an apparatus for dispensing liquids the combination of a chamber having a normally open overflow port or opening, a valve controlled outlet or discharge port, a displacement body movable to vary the quantity of liquid below the level determined by the overflow.

1,417,440. METAL-FEEDING APPARATUS. HENRY C. ZENKE, Richmond Hill, N. Y., assignor to Simplex Metal Feeder Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 5, 1919, Serial No. 321,761. Renewed Aug. 16, 1921. Serial No. 492,872. 4 Claims. (Cl. 22—80.)



2. Metal-feeding apparatus for line-casting machines, comprising a chute for the cold metal and means for feeding it at desired times, a melting pot, and a spider carrying the metal-feeding apparatus, the latter being supported at three points over an opening in the melting pot, one of the points of support being adjustable to vary the angle of inclination of the chute.

1,417,441. DECOY. JOHN QUINCY ADAMS, Hickman, Ky., assignor of one-half to Walter J. McMurry, Hickman, Ky. Filed July 19, 1921. Serial No. 485,813. 4 Claims. (Cl. 43—3.)

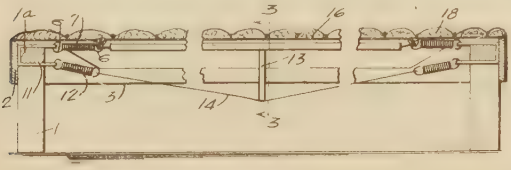


1. The combination in a decoy, of a bar, a body connected with and supporting the bar, said bar spaced from the upper side of the body and being of angular form in cross section, a cable interposed between and connecting one end of said bar and a point on the body remote from the bar, and a head having a slip sleeve, of angular form in cross section, adapted to snugly receive the bar to hold the head in upright position and also adapted to receive the cable when the head is to be swung downwardly on the body.

1,417,442. BOX COUCH. JOSEPH AVRIL, Los Angeles, Calif., assignor of one-half to Lake C. Alexander, Los Angeles, Calif. Filed May 11, 1921. Serial No. 468,599. 5 Claims. (Cl. 5—26.)

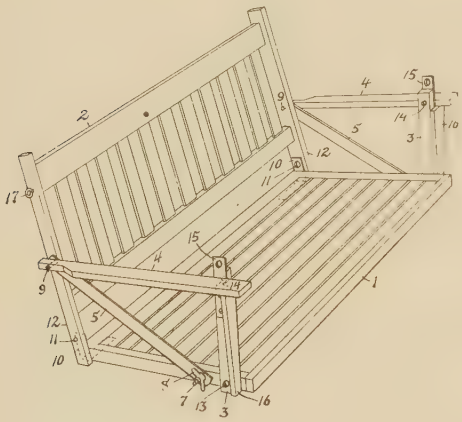
1. In a couch, a frame having end rails, brackets arranged on said end rails, springs secured to the upper portions of said brackets, slats connected to said springs,

a transversely disposed member arranged beneath said slats, springs secured to the lower portions of said



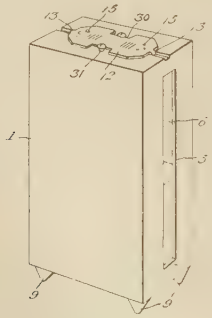
brackets and wires connecting the ends of the last mentioned springs, which wires bear against the under side of said transversely disposed member.

1,417,443. FOLDING SWING CHAIR. JACOB BAUGHER, North Webster, and WILLIAM F. KLINE, South Milford, Ind. Filed June 22, 1921. Serial No. 479,492. 1 Claim. (Cl. 155—68.)



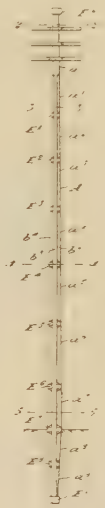
In a folding swing chair, a seat proper having rigidly fixed at each end thereof adjacent its rear edge a bracket, one end of which projects above the plane of the seat; a back proper having pivotal connections respectively with the projecting ends of the brackets; an arm post at each end of the seat pivotally connected at its lower end thereto and having a laterally projecting bracket fixed on its front face; an arm rest in pivotal connection with each post; a perforated plate fixed on each post and arranged between the corresponding post and arm rest; and a brace at each end of the seat having removable connection therewith at one of its ends and having at its opposite end pivotal connection in common with the rear end of the corresponding arm rest and the adjacent end of the back.

1,417,444. CONDIMENT HOLDER. ERNEST F. BLAIR, Warren, Ohio. Filed June 7, 1921. Serial No. 475,693. 1 Claim. (Cl. 65—45.)



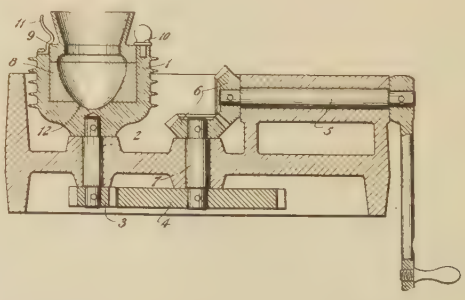
A condiment holder comprising a receptacle having compartments to receive condiments and also having a top in which are holes in communication with the compartments and in the outer side of which are alined grooves, a slidable plate opposed to the outer side of the said top and having pendent ears at its ends movable in said alined grooves, and also having sets of apertures to be moved into and out of registration with the holes in the top and further having recesses in its side edges, and headed screws connected to the top and having shanks arranged in said recesses and adapted to serve as stops.

1,417,445. CONSTRUCTION OF REENFORCED-CONCRETE COLUMNS OR POSTS. FREDERIC WILLIAM BRADSHAW, Perth, West Australia, Australia. Filed Apr. 28, 1920. Serial No. 377,270. 5 Claims. (Cl. 72—85.)



1. A reenforced concrete column comprising a plurality of vertical members of monolithic construction throughout their whole extent symmetrically disposed to form a hollow structure, transverse diaphragms arranged at intervals along the length of the column dividing said vertical members into sections and supporting said sections, and reenforcing means embedded in and extending longitudinally throughout said vertical members and secured to said transverse diaphragms.

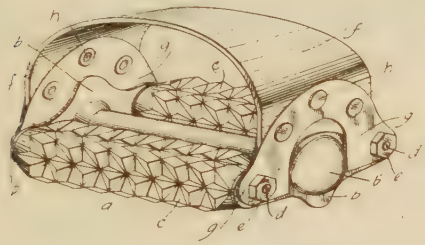
1,417,446. MANUFACTURE OF CONFECTIONS OF THE COATED TYPE. NELSON E. BRIGHAM, Holyoke, Mass., assignor to Conoid Candy Machine Company, South Hadley Falls, Mass., a Copartnership, consisting of Henry M. Chase and Nelson E. Brigham. Filed May 20, 1919, Serial No. 298,513. Renewed Nov. 28, 1921. Serial No. 518,433. 8 Claims. (Cl. 107—1.)



1. The method of forming coated confections of the chocolate cream type, in which a coating is first formed by inserting the material into a mold, then rotating the

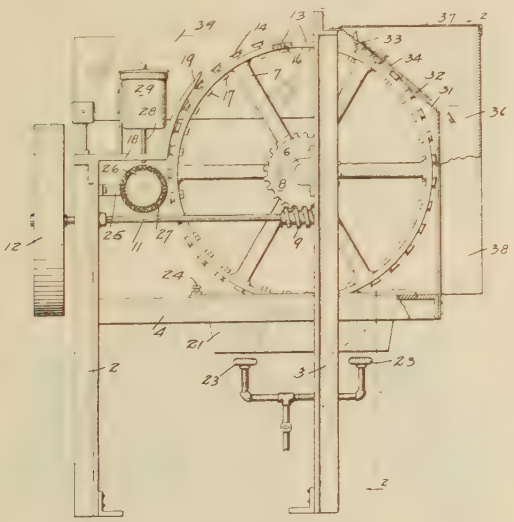
mold, to cause the material to be forced up the inner surface of the same to form part of the coating of the confection, next stopping the rotation of the mold and introducing the filling material, next completing the coating of the confection by adding material on to the filling material and allowing it to unite with the coating first formed whereby the coating is completed and the filling is completely encased.

1,417,447. TOE CLIP. JOSEPH S. BROWN, Portland, Oreg. Filed July 13, 1920. Serial No. 395,889. 4 Claims. (Cl. 208—71.)



1. A toe clip for bicycle pedals comprising a flexible band, a reinforcing plate on each end of the band, said plate being bent upon itself, straddling, and being secured to, the end of the band, the reinforcing plate having a portion cut away so as to be adapted to straddle the end of the pedal spindle, the extremities of the reinforcing plates being perforated for insertion therethrough of the rods supporting the treads of the pedal.

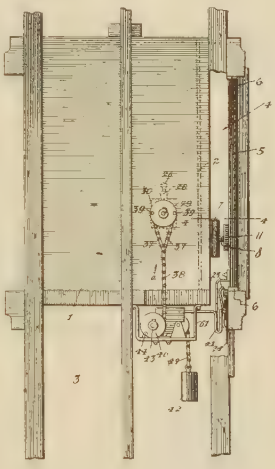
1,417,448. EAR-TINNING MACHINE. WILFORD E. BURNS, San Francisco, Calif., assignor to M. J. Brandenstein & Co., San Francisco, Calif., a Firm composed of Max. J. Brandenstein, Manfred Brandenstein, and Edward Brandenstein. Filed June 12, 1920. Serial No. 388,526. 11 Claims. (Cl. 113—59.)



1. An ear tinning machine comprising a wheel, means for retaining ears on said wheel, a solder bath, means for rotating said wheel to pass the ears therethrough, and a slotted plate for detaching the tinned ears from the wheel.

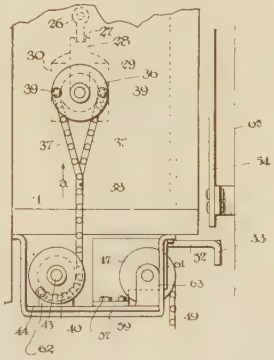
1,417,449. ELEVATOR LOCK. WILLIAM S. CAMPBELL, New Kensington, Pa. Filed Nov. 25, 1919. Serial No. 340,447. 7 Claims. (Cl. 187—49.)

1. In combination, elevator shaft door pivoted locking means connected thereto causing it to gravitate to the operative position when the door is closed, retracted elevator-carried means engageable therewith at the lightest side to release the door upon the approach of the elevator,



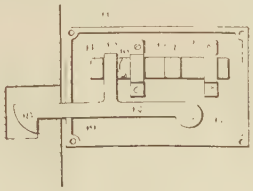
and means operatively associated with the elevator controller for projecting said engaging means on movement of the controller handle to neutral and thereby release said locking means.

1,417,450. ELEVATOR LOCK. WILLIAM S. CAMPBELL, New Kensington, Pa. Original application filed Nov. 25, 1919, Serial No. 340,447. Divided and this application filed Dec. 22, 1920. Serial No. 432,531. 6 Claims. (Cl. 187—49.)



5. An elevator lock, comprising means operatively associated with an elevator controller, assuming a retracted position in respect to the elevator when the controller is out of a neutral position, but projected in respect thereto when the controller is in the neutral position; and an element fixed on an adjacent shaft door, in registration with said means and normally out of engagement, but engageable with said means when said door is opened.

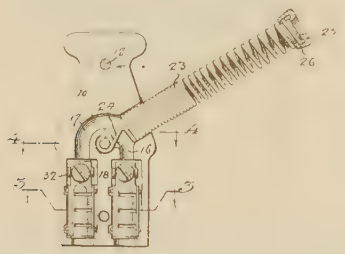
1,417,451. ELEVATOR LOCK. WILLIAM S. CAMPBELL, New Kensington, Pa. Filed Dec. 22, 1920. Serial No. 432,532. 3 Claims. (Cl. 187—61.)



2. Means for locking a shaft door, comprising a casing carried by the shaft door, with a pivoted latch adapted

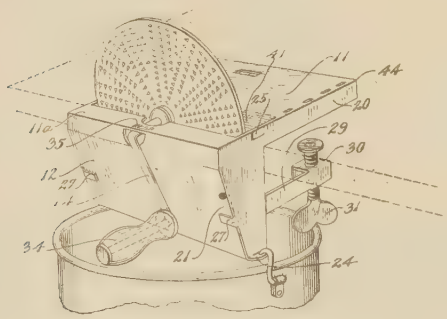
to come into locking engagement with a jamb; adjacent actuating means mounted in the casing engaging a part of the latch and having a projection through a slot in the casing; and means on an elevator door, engageable with the projection when the elevator reaches the shaft door, enabling the concomitant opening of both doors, the initial movement of the elevator door raising the latch from locking engagement through said actuating means.

1,417,452. ATTACHMENT PLUG. HOYT CATLIN, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 30, 1919. Serial No. 293,703. 8 Claims. (Cl. 173—332.)



1. In an attachment plug fitting or the like, a terminal comprising a pair of opposed straps of like construction recessed in register to form a channel to receive a cooperating stud, and freely interengaged elements at their sides serving to prevent the separation of the straps under the action of an inserted jack.

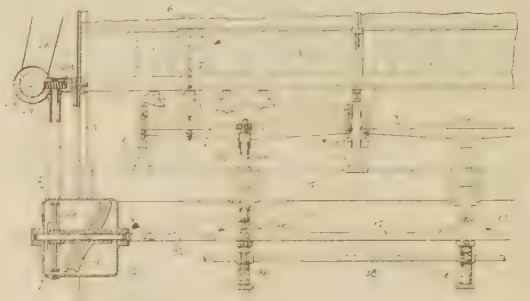
1,417,453. KITCHEN UTENSIL. ROBERT W. CHARLTON, Pineville, La., assignor of one-third to August F. Klumpp and one-third to Arthur R. Chamberlain, Pineville, La. Filed Dec. 4, 1920, Serial No. 428,252. Renewed Apr. 7, 1922. Serial No. 550,514. 7 Claims. (Cl. 146—9.)



3. A kitchen utensil comprising a work table and discharge chute, a tool holding shaft and detachably connected manipulative means therefor arranged transversely of said work table, and a tool removably connected to said shaft, said table engaging the manipulative means to prevent its removal from the utensil when detached from said shaft.

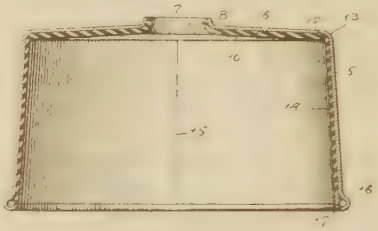
1,417,454. TRAVERSE MECHANISM. JAMES CLAYTON, Sebakwe, Babbacombe, England, assignor to The Viscose Company, Marcus Hook, Pa., a Corporation of Pennsylvania. Filed Oct. 12, 1920. Serial No. 416,534. 7 Claims. (Cl. 118—54.)

1. In a machine of the type described, a series of builder bars, spinning devices supported thereon, a horizontally reciprocating traverse bar common to said series of builder bars, and lifting cams fixed on said traverse bar, said cams being shaped to effect the simultaneous



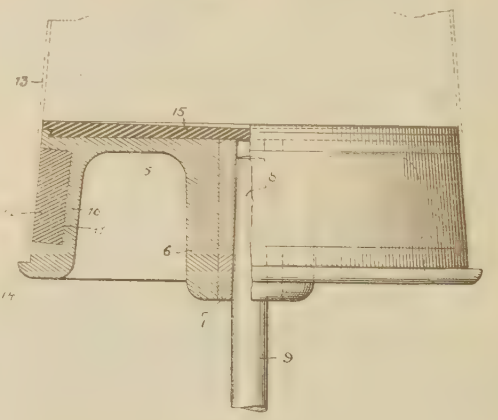
rise and fall of independent builder bars in opposite directions.

1,417,455. SPINNING BOX FOR ARTIFICIAL SILK. JAMES CLAYTON, Sebakwe, Babbacombe, England, assignor to The Viscose Company, Marcus Hook, Pa., a Corporation of Pennsylvania. Filed Nov. 11, 1920. Serial No. 423,315. 8 Claims. (Cl. 118—49.)



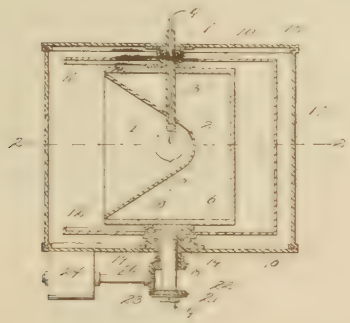
1. A spinning box for use in the manufacture of artificial silk, comprising a metallic box body of truncated cone shape, substantially closed at one end, a lining plate for said closed end, and an independent lining for the side wall of the box.

1,417,456. SPINNING BOX FOR ARTIFICIAL SILK. JAMES CLAYTON, Sebakwe, Babbacombe, England, assignor to The Viscose Company, Marcus Hook, Pa., a Corporation of Pennsylvania. Filed Nov. 11, 1920. Serial No. 423,316. 2 Claims. (Cl. 118—49.)



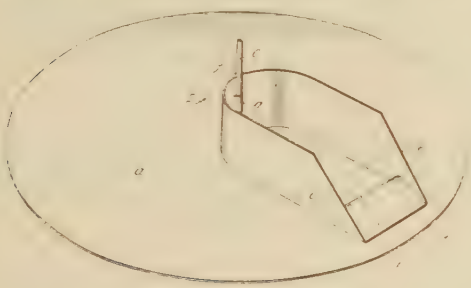
1. In apparatus for spinning artificial silk, a rotary base for a spinning box, said base having a peripheral channel, and an expansible rubber ring lying in said channel and adapted to expand under centrifugal action into gripping engagement with the wall of a box sleeving upon said base, substantially as described.

1,417,457. ELECTRIC ILLUMINATION. WALTER H. COOK, New Orleans, La. Filed June 14, 1920. Serial No. 388,917. 4 Claims. (Cl. 240—49.)



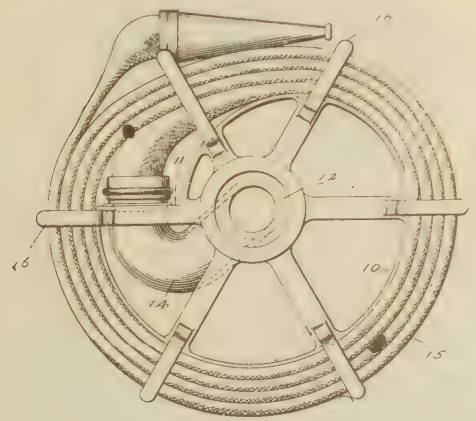
1. An illuminating device comprising a source of light, revoluble means for concentrating such light into a beam and projecting such beam, a revoluble shutter for intermittently intercepting said beam, and means for simultaneously revolving said concentrating and projecting means and shutter in reverse directions.

1,417,458. UNIVERSAL PUTTING DISK. CHARLES B. CORY, Chicago, Ill. Filed Apr. 4, 1921. Serial No. 458,416. 5 Claims. (Cl. 46—4.)



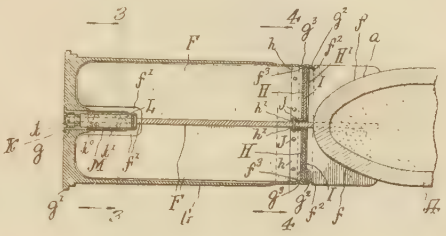
1. In a device of the class described, the combination with a base, of a cup member pivoted thereon on a vertical axis and open at one side, and a retaining member across said open side, for the purpose described.

1,417,459. COMBINED HOSE DRUM AND COUPLING. WILLIAM A. COX, Phoenix, Ariz. Filed Oct. 25, 1920. Serial No. 419,237. 2 Claims. (Cl. 299—78.)



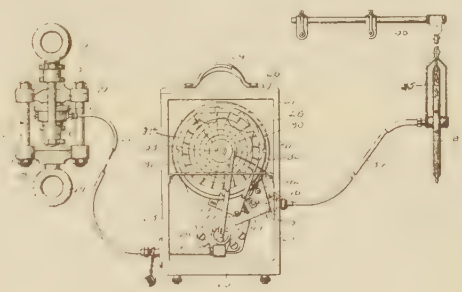
1 A device of the character described comprising a water conducting pipe, a drum rotatable thereon and formed of spiral shape whereby to have a radial shoulder, a conduit formed within said drum and having one end leading to a hole in said shoulder and having its other end communicating with said pipe, and a hose connected within the hole in the shoulder and adapted to be wound upon the drum.

1,417,460. FIXED AMMUNITION. LOUIS L. DRIGGS, Jr., New York, N. Y. Filed Sept. 8, 1920. Serial No. 408,825. 3 Claims. (Cl. 102—12.)



1. Fixed ammunition of the character described, comprising an elongated projectile, a stabilizing tail comprising a plurality of fin plates joined together axially and secured to said projectile, the said fin plates being provided with engaging notches on their exterior near their forward ends, and a cartridge case mounted over said tail and having portions of its forward portion pressed into said notches.

1,417,461. DYNAMOMETER RECORDING INSTRUMENT. CLARENCE M. EASON, Moline, Ill., assignor to Hyatt Bearings Division, General Motors Corporation, Newark, N. J., a Corporation of Delaware. Filed May 20, 1920. Serial No. 382,725. 4 Claims. (Cl. 234—19.)

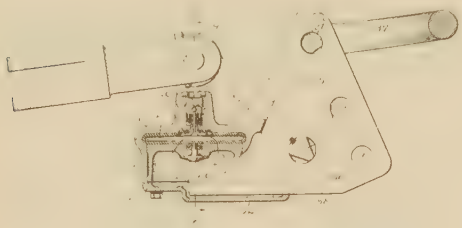


1. In a dynamometer recording instrument, the combination of a dynamometer adapted to transmit variations in pressure, an odometer wheel for measuring units of ground travel, a recording instrument comprising a disk-shaped rotatable record chart, connections between the odometer wheel and the disk-shaped chart for rotating the latter at a speed conformable with the rotation of the odometer wheel, an inscribing instrument movable toward and from the center of the disk-shaped chart for inscribing a record line thereon, a connection between the dynamometer and the inscribing instrument for moving the latter responsively to changes in pressure imparted by the dynamometer, and a time recording instrument movable radially across the face of the chart in fixed time relation for inscribing a time record on the variably movable chart, substantially as described.

1,417,462. DYNAMOMETER. CLARENCE M. EASON, Moline, Ill., assignor to Hyatt Bearings Division, General Motors Corporation, Newark, N. J., a Corporation of Delaware. Filed May 20, 1920. Serial No. 382,726. 6 Claims. (Cl. 265—47.)

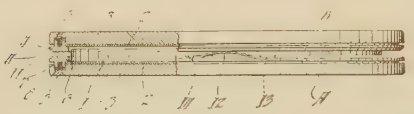
1. In a dynamometer, the combination of a casing provided with a recess, a flexible capsule located within the

recess, means for establishing communication from the interior of the capsule to the exterior of the casing, a draft connection secured to the casing, a plunger slidable within the casing and bearing against the exposed side of the cap-



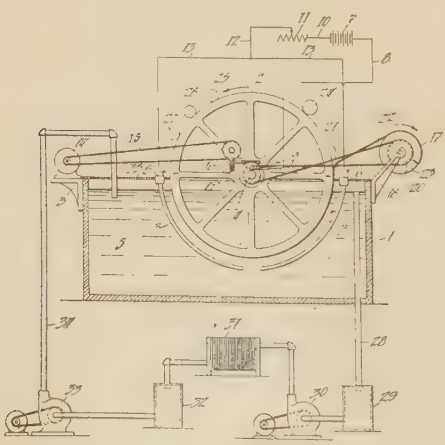
sule, a fulcrum carried by the casing, a bell crank lever mounted upon said fulcrum, and a draft connection for said bell crank lever, adjustable to different positions to vary the lever ratio, substantially as described.

1,417,463. MOLD. THOMAS A. EDISON, West Orange, and CHARLES G. KIRCHER, Irvington, N. J., assignors to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed July 3, 1919. Serial No. 308,380. 12 Claims. (Cl. 18—5.5.)



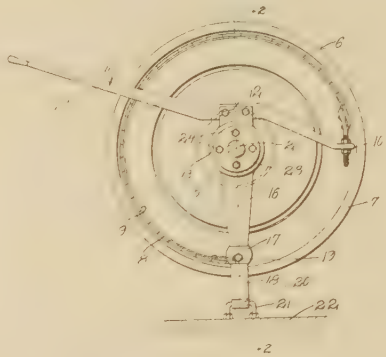
1. A mold die provided with means distinct from any working or molding portion of said die and adapted to coact with a second mold die when said dies are disposed in proper co-operative position to maintain the dies in opposed spaced relation, substantially as described.

1,417,464. PRODUCTION OF THIN METAL SHEETS OR FOILS. THOMAS A. EDISON, Llewellyn Park, West Orange, N. J. Filed July 16, 1920. Serial No. 396,825. 11 Claims. (Cl. 204—6.)



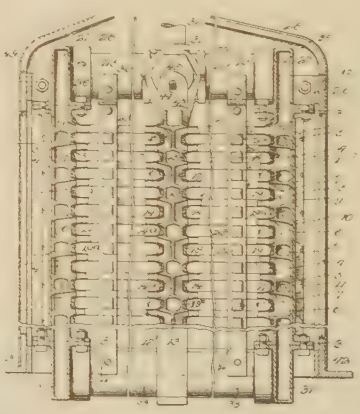
1. The method which consists in continuously moving an electrode of an electrolytic cell capable of plating a metal in an endless path only part of which includes the bath of the cell, and continuously stripping from said electrode at a point in said path without said bath, the metal deposited thereon in the bath, substantially as described.

1,417,465. HOISTING-DRUM CONTROL. LINN D. EKIN, Butler, Pa. Filed Feb. 12, 1921. Serial No. 444,419. 7 Claims. (Cl. 192—17.)



1. In drum control means, a rotatably mounted shaft, a drum loosely mounted on the shaft, a control lever, braking means, and means for securing the drum to the shaft for rotation therewith when the lever is rocked in one direction and for releasing the drum from the shaft when the lever is rocked in the other direction, said lever being extended and secured to said braking means for applying the latter to the drum when the lever is rocked in drum releasing direction and releasing the braking means when the lever is rocked in drum securing direction.

1,417,466. RADIATOR FOR MOTOR VEHICLES. PAUL KUHNE, Chicago, Ill., assignor of one-half to Werner Kuhne, Birmingham, Ala. Filed June 10, 1918, Serial No. 239,201. Renewed June 22, 1921. Serial No. 479,707. 14 Claims. (Cl. 257—131.)



2. A radiator of the class described comprising two vertical end heads and detachable upper and lower hollow end caps each formed with a lateral opening, the end heads having openings between the ports for the passage of air to cool the water passing through the ports, flat tubular members connecting the end heads to form a circuitous passage, a longitudinal re-enforcing rib in each tubular member and crimped into the latter, a pipe connecting and communicating with the lateral openings of the upper caps, a pipe connecting and communicating with the lateral openings of the lower caps, the end heads having openings adjacent the ends of the flat tubular members, and cover plates for closing the latter openings.

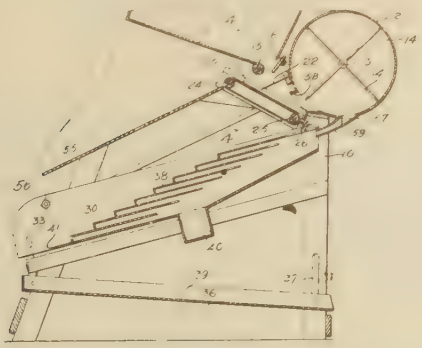
1,417,467. MANUFACTURE OF CORN STARCH AND PRODUCTS THEREFROM. ADOLPH W. H. LENDERS and PAUL W. ALLEN, Cedar Rapids, Iowa, assignors, by mesne assignments, to Penick & Ford, Ltd., Incorporated, a Corporation of Delaware. Filed Nov. 18, 1918. Serial No. 263,026. 16 Claims. (Cl. 127—23.)

16. Improvement in the art of manufacturing a solid saccharine product from corn starch which consists in making soluble and dissolving in water substantially all the residual protein impurity in the starch, separating the starch from the water and dissolved protein, converting the starch and evaporating and crystallizing the entire yield of the conversion step.

1,417,468. LENS-CUTTING MACHINE. LEROY Q. PRESBY, Boston, Mass., assignor to Globe Optical Company, a Corporation of Massachusetts. Filed June 11, 1921. Serial No. 476,934. 2 Claims. (Cl. 33—28.)

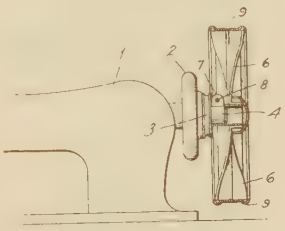
1. In a machine of the kind described, a work support thereon, a bracket mounted on the base and at one side of the work support, studs on said bracket, a lever, and a work clamp adapted to be held and supported by said lever, said lever having cam slots co-operating with the studs on the bracket to limit the clamp to movement in a vertical direction.

1,417,469. FANNING MILL. HERMAN A. STEIN, Georgetown, Minn. Filed July 21, 1921. Serial No. 486,365. 6 Claims. (Cl. 130—15.)



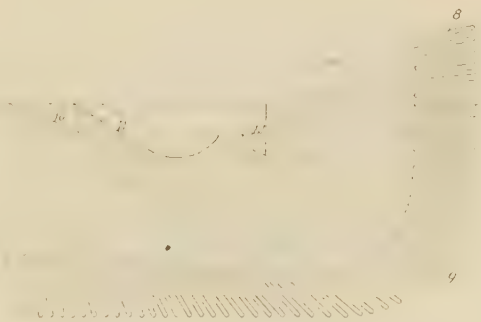
1. A grain cleaner comprising a feed roller, a plurality of grating rods located below the feed roller, a fan for creating an air blast and a flue for directing it up through the forks, a carrier co-operating with the forks to carry the dirt out of the machine, a plurality of overlapping sieves carried by a shaker positioned below said carrier, and a second flue for directing an air blast through them.

1,417,470. FAN FOR SEWING MACHINES. EGIDIO DELIA and VINCENT CORRADO, New York, N. Y. Filed July 27, 1920. Serial No. 399,293. 1 Claim. (Cl. 230—9.)



A sewing machine attachment embodying a fan provided with a split hub adapted to fit over the hub of the fly wheel of the machine, a clamping screw for contracting the hub of the fan to grip the hub of the fly wheel tightly for the purpose of supporting the fan thereon, and a solid, smooth-faced annular band, surrounding the outer ends of the blades of the fan and attached to and carried by said blades, said band being at least as wide as the thickness of the fan so as to completely overlie the fan and serve as a protector to preclude the inadvertent engagement of the hands of the operator with the fan blades.

1,417,471. RECORD-FILING RACK. EARNEST W. LADD, New York, N. Y., assignor to Eleanor V. George, New York, N. Y. Filed Apr. 4, 1921. Serial No. 458,430. 2 Claims. (Cl. 211—16.)

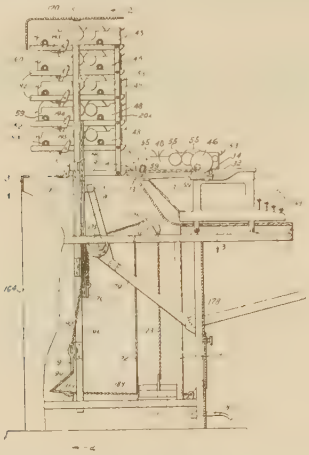


1. In a rack for phonograph records of the disc type, a base, a top, partitions extending inwardly along said base and top a relatively short distance so as to provide an open uninterrupted space beyond the inner edges of said partitions permitting intimate association of the inner edges of records filed adjacent to each other, substantially all of said partitions being arranged out of parallel with each other and extending inwardly from the sides and front of said rack.

1,417,472. TYPEWRITING MACHINE. CLIFFORD W. MARSH, Bridgeport, Conn. Filed Mar. 11, 1921. Serial No. 451,611. 63 Claims. (Cl. 197—126.)

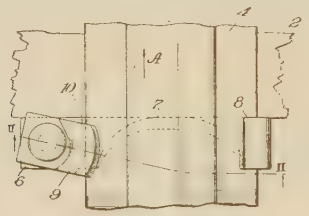
1. The combination with the printing devices of a typewriter having a reciprocating mechanism, of a car-

rier comprising in combination as a unit, a platen, work sheets and transfer material; and means to removably



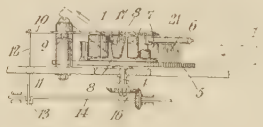
connect said carrier unit with said reciprocating mechanism.

1,417,473. RAIL ANCHOR. EDWIN E. SLICK, Johnstown, Pa. Filed Aug. 9, 1919. Serial No. 316,380. 6 Claims. (Cl. 238—322.)



1. An anticreeping device for rails, comprising a bar having a portion adapted to abut against one side of a tie, and having provision at one end for engaging one side of the base flange of the rail, and a horizontally swinging member on the opposite end of said bar having wedging faces effective on different portions of the base flange of the rail at substantially right angles, substantially as described.

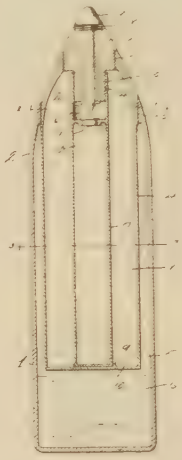
1,417,474. FILM-WINDING DEVICE. WALTER VOLLMANN, Berlin, Germany. Filed Apr. 12, 1922. Serial No. 552,033. 6 Claims. (Cl. 88—18.7.)



1. In moving picture apparatus, the combination of means for progressing an endless film through a closed path and for winding the same on itself in a roll at one point in the path, and means within said roll for momentarily pressing against the innermost winding thereof, at different points therein in succession, to prevent said roll from tightening unduly.

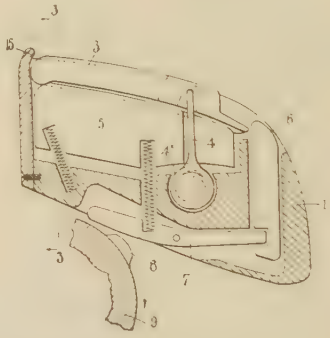
1,417,475. SHELL. THEODORE L. WEEKE, Okawville, Ill. Filed Feb. 28, 1922. Serial No. 539,853. 2 Claims. (Cl. 102—29.)

2. A shell comprising a main casing having its forward end provided with a threaded opening, and intermediate casing threaded into the threaded opening of the main casing and axially disposed within the chamber of the main casing, an inner casing axially disposed within the chamber of the intermediate casing, an annular flange carried by the inner side of the bottom of the intermediate casing and engaging the end of the inner casing, said in-



termediate casing being provided with a threaded opening, a removable nose threaded into the threaded opening of the intermediate casing and a threaded extension carried by said nose and threaded into the end of the inner casing, a firing pin carried by said nose and a firing cap carried by the inner casing in alignment with the firing pin.

1,417,476. SEWING MACHINE. FREDERICK BAKER, Blackheath, England, assignor to Cyril Ernest Hart, Warnford Court, London, England, and Henry Herbert Bunyan, Maidenhead, England. Filed May 10, 1920. Serial No. 380,342. 12 Claims. (Cl. 112—197.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

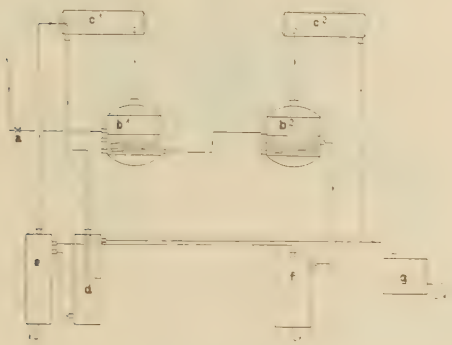


1. In a single thread sewing machine, the combination with a reciprocating needle, and the needle plate, of means located below the needle plate for drawing loops of thread from the needle and a thread loop detainer comprising a loop arresting and detaining member which after arresting a loop becomes shrouded and then without itself moving keeps the arrested loop under tension while the bight is being withdrawn towards the needle until the time of its release.

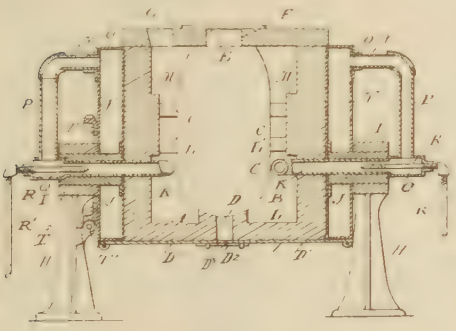
1,417,477. PROCESS OF SEPARATING EXTRACTIVE MATTERS FROM SOLUTIONS OF MIXTURES OF SOLVENTS AND OF RECOVERING THE LATTER. HERMANN BOLLMANN, Hamburg, Germany. Filed Jan. 13, 1922. Serial No. 529,078. 6 Claims. (Cl. 195—15.)

1. An improved process of separating extractive matters from mixed organic liquid mixtures of constant boil-

ing points, such mixtures containing water and volatile organic liquids, and recovering said liquids, which comprises (*a*) evaporating a portion of the solution in a distilling vessel, sufficiently for expelling the greater part at least of the witer with a part of the solvent-mixture, (*b*) separating the distillate into two fractions, of different specific gravities, (*c*) further evaporating the remainder of the solution in a distilling vessel while the vapors are kept separate from those produced in the first evaporation step, and condensing such vapors, and (*d*) combining the second distillate with the lighter of the two liquids separated in step "*b*."



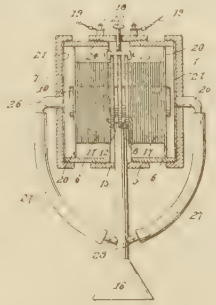
1,417,478. FURNACE. JAMES A. GASKILL, Cleveland, Ohio. Filed May 28, 1920. Serial No. 385,087. 4 Claims. (Cl. 263—13.)



1. A melting furnace comprising a body mounted on trunnions, a crucible spaced therefrom and enclosed therein, tangentially discharging burner nozzles passing through said trunnions, an exterior annular air chamber, a tangential air inlet at the bottom of said chamber, downwardly directed air outlet pipes communicating with the top of said chamber, mixing chambers into which said downwardly directed air pipes discharge, said tangentially discharging nozzles communicating with said mixing chambers, said fuel nozzles discharging within said mixing chambers.

1,417,479. TELEPHONE RECEIVER. SIGMUND HONIG, New York, N. Y. Filed July 19, 1920. Serial No. 397,437. 18 Claims. (Cl. 179—119.)

1. In a loud talking telephone received, a pair of diaphragms, means for vibrating same including horse shoe magnets and pole extensions therefor, each end of said extensions being associated with one of said diaphragms, an ear piece, and sound conducting means connected to



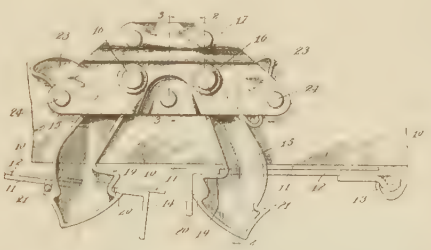
said ear piece and communicating with opposite sides of both of said diaphragms.

REISSUES.

15,359. CAP FOR VALVE TUBES. DAVID H. COX, Roselle, N. J. Filed Apr. 11, 1922. Serial No. 551,661. Original No. 1,392,746, dated Oct. 4, 1921, Serial No. 456,073, filed Mar. 28, 1921. 7 Claims. (Cl. 152—12.)

1. A cap for tire valve tubes constructed of a material having a lower coefficient of hardness than the tube and provided with a smooth surfaced bore provided at its inner end with a yielding cushion to form a seat for the end of a valve tube.

15,360. RAILWAY CAR. WILLIAM F. CREMEAN, Toledo, Ohio, assignor to The Wine Railway Appliance Company, a Corporation of Ohio. Filed Mar. 9, 1922. Serial No. 542,494. Original No. 1,336,134, dated Apr. 6, 1920, Serial No. 294,369. filed May 3, 1919. 19 Claims. (Cl. 105—308.)

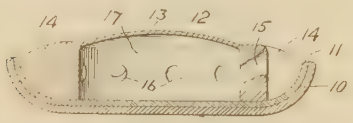


1. A drop bottom car door supporting device, comprising a pivoted hook, said hook provided with an auxiliary ledge for supporting the door in a temporary partly closed position and said hook further provided with a main supporting ledge for holding the door in its final closed position.

15,361. ASH TRAY. JOHN P. GRIFFIN, Waddington, N. Y., assignor to Griffin Choker Ash Tray Inc., Dover, Del., a Corporation of Delaware. Filed Nov. 16, 1921. Serial No. 515,730. Original No. 1,342,805, dated June 8, 1920, Serial No. 300,020, filed May 27, 1919. 3 Claims. (Cl. 131—51.)

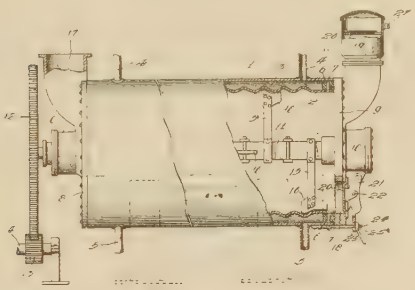
3. An ash tray comprising a base member providing a dish shaped recess and a ring member loosely seated

within said recess and engaging the walls thereof and provided with a plurality of downwardly tapered perforations extending through the ring member and opening



into said recess and adapted to receive the lighted end of cigarettes, said ring member being relatively heavy to retain it in position in the recess in the base member.

15,362. FERTILIZER DRIER. PETER J. HAMLER, deceased, late of Chicago, Ill., by Jerome P. Hamler, Chicago, Ill., assignee. Filed Feb. 14, 1921. Serial No. 444,880½. Original No. 1,321,628, dated Nov. 11, 1919, Serial No. 300,353, filed May 28, 1919. 6 Claims. (Cl. 34—7.)



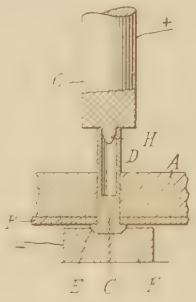
1. In an apparatus of the class described, the combination with an outer cylinder, an inner inclosed annularly corrugated cylinder, and an intermediate spacing-ring at each end of said cylinder, of opposite heads bolted to the outer faces of the rings and provided with bearings, an agitator-shaft mounted for rotation in the bearings, agitator-arms radiating from the shaft, and blades carried by said arms and having their outer edges curved to conform to the corrugations of the inner cylinder and positions in close proximity therewith.

15,363. CURLER. KATHERINE MCCLAIRE, Chicago, Ill. Filed Mar. 3, 1922. Serial No. 540,882. Original No. 1,397,532, dated Nov. 22, 1921, Serial No. 476,081, filed June 8, 1921. 8 Claims. (Cl. 132—43.)

1. A curler comprising a bar of soft copper of substantial size, circular in shape, a tube of flexible material surrounding said bar, the ends of said tube stitched together and securely tied and said ends extending beyond the stitched portion.

15,364. ELECTRICAL RIVETING. ALBERT B. RYPINSKI, Brooklyn, N. Y., assignor to Thomas E. Murray, New York, N. Y. Filed Jan. 20, 1921. Serial No. 438,761. Original No. 1,329,144, dated Jan. 27, 1920, Serial No. 319,917, filed Aug. 26, 1919. 12 Claims. (Cl. 219—2.)

1. The method of uniting a metal plate to a non-metal plate, which consists in forming registering openings in both plates, inserting in said openings a tubular metal rivet with its head in contact with said metal plate and its shank protruding beyond said non-metal plate, placing said plates and rivet between electrodes, establishing current through said rivet to heat and soften the pro-



truding portion of said shank, and compressing said portion while so softened to form a head in contact with said non-metal plate.

DESIGNS.

60,972. EMBROIDERED LACE. JEAN AEMISEGGER, West New York, N. J., assignor to Inflexible Co., West New York, N. J. Filed Nov. 18, 1921. Serial No. 516,217. Term of patent 3½ years.

The ornamental design for an embroidered lace substantially as shown.

60,973. HOLDER FOR ASH TRAYS OR SIMILAR ARTICLES. FRANK M. ARCHER, Brookline, Mass., assignor to The Moxie Company, Boston, Mass., a Corporation of Maine. Filed Apr. 26, 1921. Serial No. 464,697. Term of patent 14 years.

The ornamental design for a holder for ash trays or similar articles, as shown.

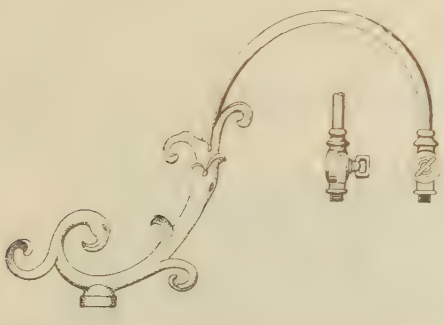
60,974. TOY SADDLE HORSE. WALTER E. BARTHOLOMEW, Niles, Mich. Filed Jan. 14, 1921. Serial No. 437,366. Term of patent 7 years.

The ornamental design for a toy saddle horse as shown.

60,975. ARM FOR LIGHTING FIXTURES. MICHAEL B. BOWEN, Decatur, Ill., assignor to Faries Manufacturing Company, Decatur, Ill., a Corporation of Illinois. Filed Oct. 14, 1921. Serial No. 507,801. Term of patent 7 years.

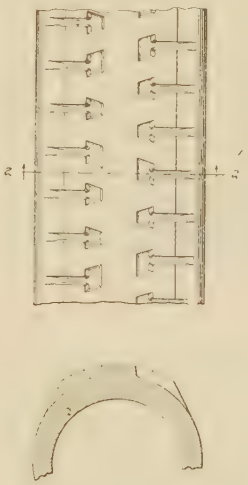
The ornamental design for an arm for lighting fixtures, as shown.

60,976. ARM FOR LIGHTING FIXTURES. MICHAEL B. BOWEN, Decatur, Ill., assignor to Faries Manufacturing Company, Decatur, Ill., a Corporation of Illinois. Filed Oct. 14, 1921. Serial No. 507,802. Term of patent 7 years.



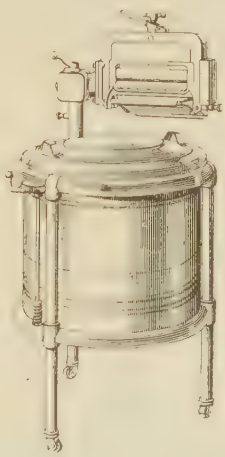
The ornamental design for an arm for lighting fixtures, as shown.

60,977. TIRE TREAD. JOHN C. BROWN and LOUIS E. KRAFT, Fort Wayne, Ind., assignors to Fort Wayne Tire & Rubber Manufacturing Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Mar. 26, 1920. Serial No. 369,103. Term of patent 3½ years.



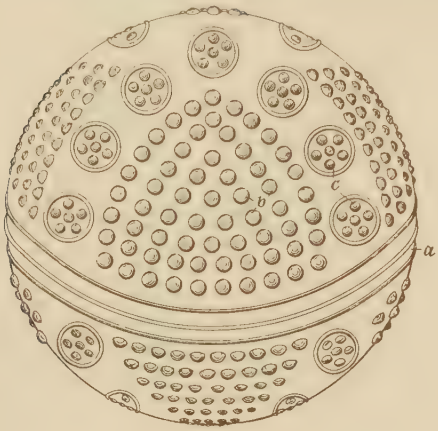
The ornamental design for a tire tread as shown.

60,978. COMBINATION WASHING-MACHINE TUB AND FRAME. FRANCIS M. CASE, Cleveland, Ohio, assignor, by mesne assignments, to The Foote-Burt Company, a Corporation of Ohio. Filed Oct. 20, 1921. Serial No. 509,188. Term of patent 14 years.



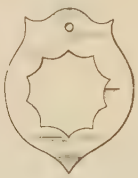
The ornamental design for a combination washing machine tub and frame, as shown.

60,979. TOY BALL. FRANK A. CIGOL, Paterson, N. J. Filed Sept. 29, 1921. Serial No. 504,264. Term of patent 14 years.



The ornamental design for a toy ball, as shown and described.

60,980. BROOM AND MOP HANGER. JOSEPH L. CLEMENTS, Birmingham, Ala. Filed Nov. 7, 1921. Serial No. 513,607. Term of patent 3½ years.



The ornamental design for a broom and mop hanger substantially as shown.

60,981. LIGHTING FIXTURE. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Dec. 30, 1920. Serial No. 434,156. Term of patent 7 years.

The ornamental design for a lighting fixture as shown.

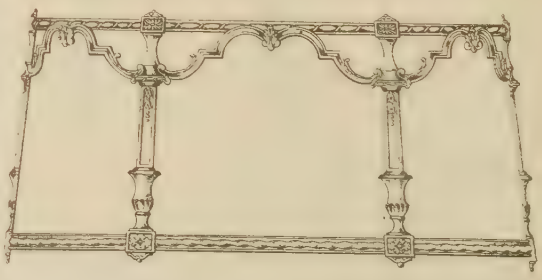
60,982. CANOPY FOR LIGHTING FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Dec. 30, 1920. Serial No. 434,157. Term of patent 3½ years.

The ornamental design for a canopy for lighting fixtures as shown.

60,983. BODY FOR LIGHTING FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Dec. 30, 1920. Serial No. 434,159. Term of patent 3½ years.

The ornamental design for a body for lighting fixtures as shown.

60,984. SHADE FRAME FOR LIGHTING FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Dec. 30, 1920. Serial No. 434,160. Term of patent 3½ years.

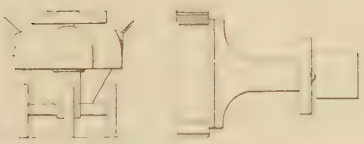


The ornamental design for a shade frame for lighting fixtures as shown.

60,985. FINGER RING. SARAH GLASER, Boston, Mass., assignor to Glaser Bros., Boston, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1922. Serial No. 506. Term of patent 7 years.

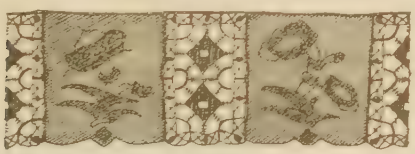
The ornamental design for a finger ring as shown.

60,986. TOY TRUCK. CLARENCE A. GUSTAVESON, Whitewater, Wis. Filed Oct. 8, 1920. Serial No. 415,710. Term of patent 3½ years.



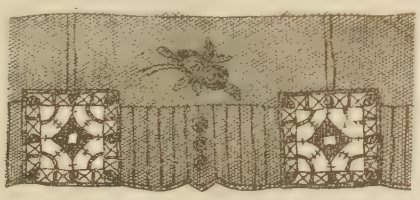
The ornamental design for a toy truck, as shown.

60,987. EMBROIDERY, LACE, OR ARTICLE OF SIMILAR NATURE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, New York, N. Y., a Firm composed of Franz Hoenig and Walter R. Tobler. Filed Feb. 10, 1922. Serial No. 640. Term of patent 3½ years.



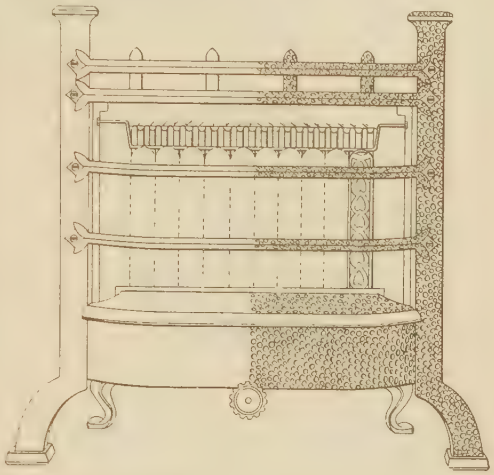
The ornamental design for embroidery, lace, or article of similar nature, as shown.

60,988. EMBROIDERY, LACE, OR ARTICLE OF SIMILAR NATURE. FRANZ HOENIG, New York, N. Y., assignor to Tobler & Hoenig, New York, N. Y., a Firm composed of Franz Hoenig and Walter R. Tobler. Filed Feb. 10, 1922. Serial No. 641. Term of patent 3½ years.



The ornamental design for embroidery, lace, or article of similar nature as shown.

60,989. GAS HEATER. HUBERT R. HUMPHREY, Kalamazoo, Mich. Filed Sept. 27, 1921. Serial No. 503,622. Term of patent 14 years.



The ornamental design for a gas heater, as shown.

60,990. CHRISTENING CARD. WILLIAM JANICKI, Chicago, Ill. Filed Mar. 14, 1921. Serial No. 452,330. Term of patent 3½ years.

The ornamental design for a christening card as shown.

60,991. PIN, BROOCH, BRACELET, FINGER RING, OR ARTICLE OF SIMILAR NATURE. SAMUEL KLEINMAN, Los Angeles, Calif. Filed June 15, 1921. Serial No. 477,836. Term of patent 3½ years.

The ornamental design for a pin, brooch, bracelet, finger ring, or article of similar nature, substantially as shown and described.

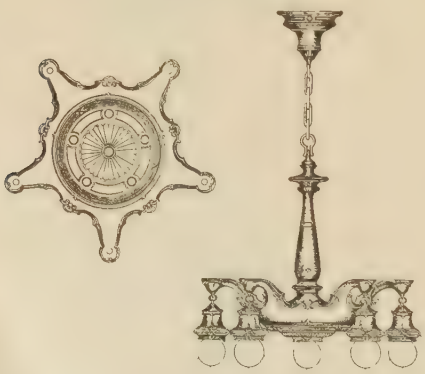
60,992. SEAL, MEDALLION, BUTTON, AND SCARF-PIN. EDWARD A. MARSH, Newton, Mass., assignor to Horological Institute of America, Washington, D. C., a Corporation of the District of Columbia. Filed Dec. 19, 1921. Serial No 523,570. Term of patent 3½ years.

The ornamental design for a seal, medallion, button, and scarfpin, as shown.

60,993. RING. THOMAS M. OBSBOUM, Chicago, Ill. Filed Jan. 15, 1919. Serial No. 271,330. Term of patent 3½ years.

The ornamental design for a ring, as shown.

60,994. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 12, 1921. Serial No. 491,865. Term of patent 3½ years.



The ornamental design for a chandelier as shown.

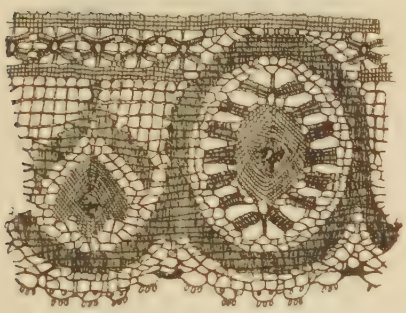
60,995. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 13, 1921. Serial No. 492,164. Term of patent 3½ years.

The ornamental design for a chandelier, as shown.

60,996. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 13, 1921. Serial No. 492,165. Term of patent 3½ years.

The ornamental design for a chandelier, as shown.

60,997. LACE. GEORGE RADFORD, Oakland Beach, R. I., assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Feb. 18, 1922. Serial No. 763. Term of patent 3½ years.

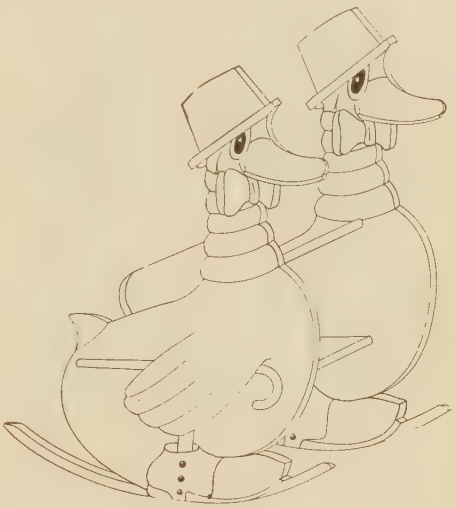


The ornamental design for lace, as shown.

60,998. CABINET UNIT. JAMES H. RAND, Jr., Tonawanda, N. Y., assignor to American Kardex Company, Tonawanda, N. Y. Filed May 27, 1920. Serial No. 384,740. Term of patent 14 years.

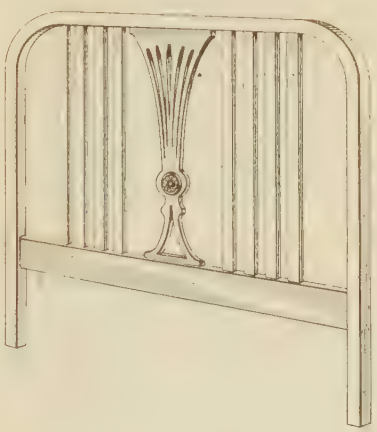
The ornamental design for a cabinet unit, substantially as shown.

60,999. TOY. ROBERT L. ROBERTS, Sacramento, Calif. Filed Sept. 21, 1921. Serial No. 502,311. Term of patent 3½ years.



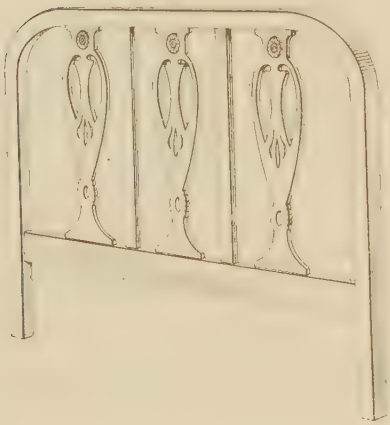
The ornamental design for a toy, as shown.

61,000. BEDSTEAD END FRAME. ERNEST L. ROSENBURGH, Rome, N. Y., assignor to Rome Metallic Bedstead Company, Rome, N. Y., a Corporation of New York. Filed July 14, 1921. Serial No. 484,770. Term of patent 7 years.



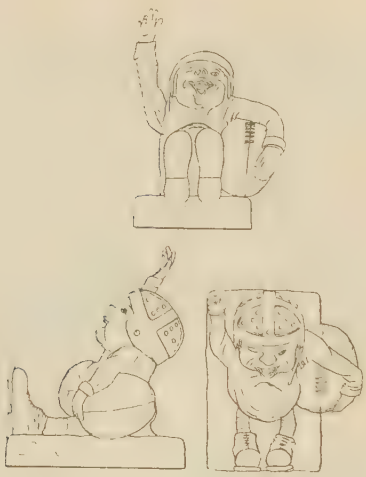
The ornamental design for a bedstead end-frame as shown.

61,001. BEDSTEAD END FRAME. ERNEST L. ROSENBURGH, Rome, N. Y., assignor to Rome Metallic Bedstead Company, Rome, N. Y., a Corporation of New York. Filed July 14, 1921. Serial No. 484,771. Term of patent 7 years.



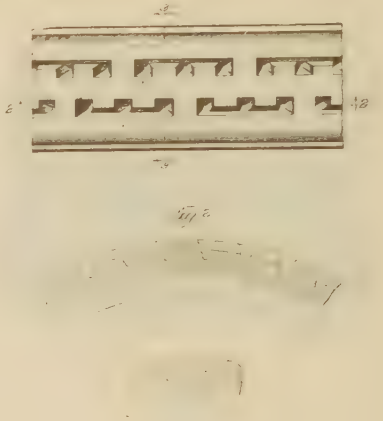
The ornamental design for a bedstead end-frame as shown.

61,002. DOLL. ADA S. SIMMONS, Kansas City, Mo., assignor of one-half to Marguerite M. Zimmerman, Kansas City, Mo. Filed Nov. 16, 1921. Serial No. 515,719. Term of patent 3½ years.



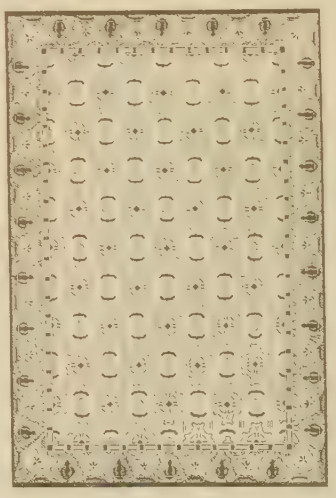
The ornamental design for a doll, as showu.

61,003. RESILIENT TIRE. JOHN C. TUTTLE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 21, 1920. Serial No. 432,363. Term of patent 14 years.



The ornamental design for a resilient tire, as shown.

61,004. RUG. ALGERMONT H. WALDO, St. Paul, Minn., assignor to Crex Carpet Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1921. Serial No. 525,261. Term of patent 3½ years.

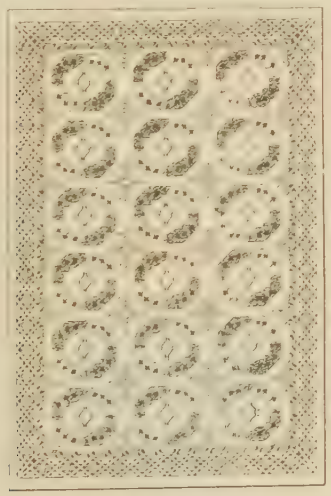


The ornamental design for a rug, as shown.

61,005. RUG. ALGERMONT H. WALDO, St. Paul, Minn., assignor to Crex Carpet Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1921. Serial No. 525,262. Term of patent 3½ years.

The ornamental design for a rug, as shown.

61,006. RUG. ALGERMONT H. WALDO, St. Paul, Minn., assignor to Crex Carpet Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1921. Serial No. 525,263. Term of patent 3½ years.

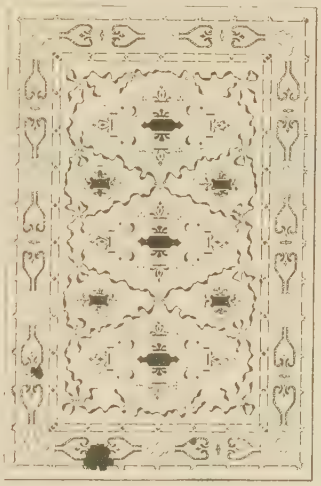


The ornamental design for a rug, as shown.

61,007. RUG. ALGERMONT H. WALDO, St. Paul, Minn., assignor to Crex Carpet Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1921. Serial No. 525,264. Term of patent 3½ years.

The ornamental design for a rug, as shown.

61,008. RUG. ALGERMONT H. WALDO, St. Paul, Minn assignor to Crex Carpet Company, New York, N. Y., Corporation of Delaware. Filed Dec. 27, 1921. Seria No. 525,265. Term of patent 3½ years.



The ornamental design for a rug, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 23, 1922.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 114,428. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN E. DE VAN, Baltimore, Md. Filed Nov. 30, 1918.

No claim is made to the words "Aromatic" and "Tablets" nor to the word "Dyspepsia" apart from the association shown.

Particular description of goods.—Tablets to be Used for Indigestion.

Claims use since Nov. 1, 1918.

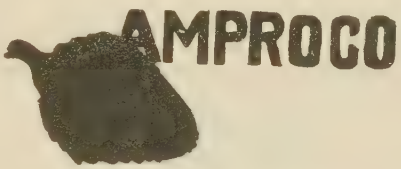
Ser. No. 124,325. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HERBERT ALEXANDER WANKLYN, trading as The Peace Pillow Co., London, England. Filed Oct. 29, 1919.

The lining representing the colors, red, orange, and black are indicated.

Particular description of goods.—Eau de Cologne.

Claims use since November, 1914.

Ser. No. 127,792. (CLASS 15. OILS AND GREASES.) AMERICAN PINE PRODUCTS CORPORATION, New York, N. Y. Filed Jan. 31, 1920.



Particular description of goods.—Flotation Oil.

Claims use since January, 1917.

Ser. No. 128,764. (CLASS 39. CLOTHING.) THE DEFIANCE WELDING COMPANY, Defiance, Ohio. Filed Feb. 24, 1920.

INVINCIBLE

Particular description of goods.—Acid-Resisting Garments Formed of Rubberized Cloth—Viz., Aprons, Sleeves, and Leggings.

Claims use since Feb. 20, 1919.

Ser. No. 131,848. (CLASS 39. CLOTHING.) THE WESTERN SHIRT COMPANY, New York, N. Y. Filed Apr. 29, 1920.

Particular description of goods.—Work Shirts.

Claims use since Jan. 1, 1920.

Ser. No. 134,650. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALEXIS JOURION, Brussels, Belgium. Filed July 7, 1920.

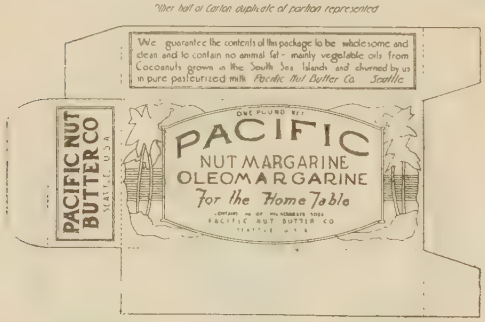
The portrait on trade-mark is fanciful.
Particular description of goods.—Perfumery.
Claims use since December, 1919.

Ser. No. 139,262. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HENRIETTE GABILLA, Paris, France. Filed Nov. 6, 1920.

MON CHÉRI

Particular description of goods.—Toilet Preparations, Including Perfumery Extract, Toilet Waters, Face Powder, Sachet Powder, Skin Lotion Vegetale, Eau de Cologne, Hair Dressing, Talcum Powder, Eau de Dentifrice, and Rouge.
Claims use since Sept. 10, 1910.

Ser. No. 139,750. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PACIFIC NUT BUTTER COMPANY, Salt Lake City, Utah. Filed Nov. 17, 1920.



Other half of Carton duplicate of portion represented
We guarantee the contents of this package to be wholesome and clean and to contain no animal fat - mainly vegetable oils from Cocoanuts grown in the South Sea Islands and churned by us in pure pasteurized milk Pacific Nut Butter Co. Seattle
ONE POUND NET
PACIFIC
NUT MARGARINE
OLEOMARGARINE
For the Home Table
PACIFIC NUT BUTTER CO
SEATTLE U.S.A.

No claim being made to the exclusive use of the representation of the container of the goods or to the reading matter shown on the drawing with the exception of the word "Pacific" apart from the mark shown on the drawing.

Ser. No. 141,925. (CLASS 39. CLOTHING.) THE REPUBLIC RUBBER CORPORATION, Youngstown, Ohio. Filed Jan. 6, 1921.

OAK-IDE

Particular description of goods.—Shoe Soles and Heels Made of Rubber or of Composition Rubber.
Claims use since Dec. 10, 1920.

Ser. No. 142,034. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) RUBBER WELD CO., Boston, Mass. Filed Jan. 10, 1921.

Particular description of goods.—Repair Outfits Comprising Patches of Sheet Rubber and Adhesive Material.
Claims use since Dec. 1, 1920.

Ser. No. 142,471. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) RALPH B. CARTER COMPANY, New York, N. Y. Filed Jan. 20, 1921.

HUMDINGER

Particular description of goods.—Diaphragm Pumps.
Claims use since Dec. 15, 1920.

Ser. No. 143,386. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) FORT WAYNE ENGINEERING & MANUFACTURING CO., Fort Wayne, Ind. Filed Feb. 10, 1921.

Particular description of goods.—Deep-Well Pumps, Suction Pumps, and Displacement Pumps, and Parts Thereof.
Claims use since May 1, 1908.

Ser. No. 144,245. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS. THE NORTH AMERICAN HYGIENIC COMPANY, INC., San Juan, Porto Rico. Filed Mar. 2, 1921.

KLINODENTO

Particular description of goods.—Dentifrice in Paste Form.
Claims use since Oct. 19, 1920.

Ser. No. 144,744. (CLASS 37. PAPER AND STATIONERY.) HENRY A. SCHMIDT, College Point, N. Y. Filed Mar. 14, 1921.

EVER-FLO

Particular description of goods.—Stylographic Ink Pencils.
Claims use since Feb. 17, 1921.

Ser. No. 144,756. (CLASS 12. CONSTRUCTION MATERIALS.) UNITED STATES FIBER PRODUCTS COMPANY, Sacramento, Calif. Filed Mar. 14, 1921.

THERMASTOP

Particular description of goods.—A Fibrous Cellular Material in Sheet Form Consisting Principally of Fiberized Cereal Straw and Used as Heat-Insulating Material, Sound-Insulation Material, and Sheathing.
Claims use since Dec. 18, 1919.

Ser. No. 145,196. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE WESTERN TOOL & MANUFACTURING COMPANY, Springfield, Ohio. Filed Mar. 24, 1921.

CHAMPION

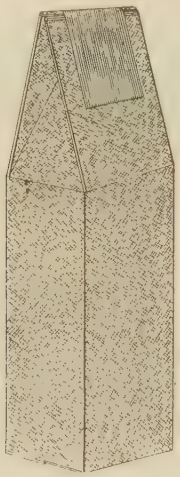
Particular description of goods.—Tool Holders, Expanding Mandrels, Vises, Lathe Dogs, Clamps, Power Hack Saws, Emery-Wheel Dressers, Vise Stands, Tool Stands, Shop Stands, Hack-Saw Stands, Bench Legs, and Molders' Benches.
Claims use since on or about Jan. 1, 1910.

Ser. No. 145,703. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) ATTILIO PIERINI, doing business as Great Northern Fur Dyeing and Dressing Co., Brooklyn, N. Y. Filed Apr. 4, 1921.

Northern Seal

No claim being made to the word "Seal" apart from the mark as shown.
Particular description of goods.—Dyed Rabbit Skins.
Claims use since Feb. 16, 1921.

Ser. No. 146,283. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WEST DISINFECTING COMPANY, New York, N. Y. Filed Apr. 16, 1921.



The trade-mark is applied to packages containing the goods by using an orange-colored carton and affixing to said carton a red band as shown in the drawing.

Particular description of goods.—Liquid Disinfectants, Antiseptics, and Purifiers.

Claims use since Nov. 1, 1906.

Ser. No. 146,980. (CLASS 45. BEVERAGES, NONALCOHOLIC.) THE REMER-DELL PRODUCTS CORPORATION, Columbia, S. C. Filed Apr. 29, 1921.

No claim being made to the words "Fruit Blend" apart from the mark shown.

Particular description of goods.—Nonalcoholic, Noncereal, Maltless Beverages Sold as Soft Drinks and Sirups for Making Same.

Claims use since Oct. 10, 1920.

Particular description of goods.—Stockings.
Claims use since Jan. 8, 1921.

155,322. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE FAULTLESS RUBBER COMPANY, Ashland, Ohio. Filed Feb. 6, 1922. Serial No. 158,921.

Faultless

Particular description of goods.—Squawkers, Balloons, Balls, Dolls, and Animals, All Made Essentially of Rubber.
Claims use since 1901.

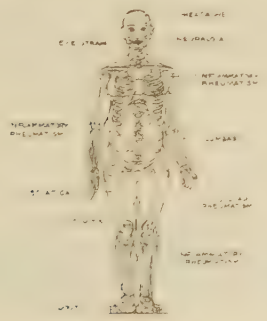
155,323. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE FAULTLESS RUBBER COMPANY, Ashland, Ohio. Filed Feb. 6, 1922. Serial No. 158,922.

Faultless

Particular description of goods.—The Following Articles, All Made Essentially of Rubber: Air Pillows, Baby Comforters, Ice-Bags, Sponge Bags, Breast Pumps, Bulbs, Ice Caps, Water Caps, Carrel Tubing, Catheters, Attachments for Water Bottles and Fountain Syringes, Fountain Syringes, Water Bottles, Combination Fountain Syringes and Water Bottles, Finger Cots, Crutch Tips, Cushions, Drainage-Gauze Covers, Medicine Droppers, Surgeons' Gloves, Face Bottles, Nursers, Hard-Rubber Syringe Pipes and Connections, Syringes, Stoppers, Nipples, Nursing Bottles, Pessaries, Surgeons' Sponges and Fountain Syringes, Syringe Fixtures, Rectal Tubes, Colon Tubes, Stomach Tubes, Tubing.
Claims use since 1901.

155,324. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) OSCAR GEO. FEGLEY, Philadelphia, Pa. Filed Sept. 16, 1921. Serial No. 152,992.

NOT-A-PAIN



℞ Bromo-Aspirin

Particular description of goods.—A Medicine for the Treatment of Colds, Grippe, Headache, Neuralgia, Lumbago, Rheumatism, and Pains and Inflammations Generally.
Claims use since about July 1, 1920.

155,325. (CLASS 5. ADHESIVES.) WELCOME E. FITES, San Francisco, Calif. Filed Nov. 22, 1920. Serial No. 139,965.

Quikstiker

Particular description of goods.—Glue Adhesive Paste and Mucilage.
Claims use since about April, 1896.

155,326. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) FLETCHER ALLTONES NEEDLE CO., San Antonio, Tex. Filed Nov. 11, 1920. Serial No. 139,519.

ALL TONES

Consisting of the word "Alltones."
Particular description of goods.—Phonograph Needles.
Claims use since Sept. 29, 1920.

155,327. (CLASS 39. CLOTHING.) FROLASET CORSET COMPANY, Detroit, Mich. Filed Aug. 1, 1921. Serial No. 151,211.

STOUTFORM

Particular description of goods.—Corsets, Brassières, Corset Waists, Girdles, Hose Supporters, Dresses, Hosiery, and Textile-Fabric Underwear.
Claims use since Sept. 1, 1919.

155,328. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GARRETT & COMPANY, INC., Brooklyn, N. Y. Filed Oct. 27, 1921. Serial No. 154,642.

SHERRY-JELL

Particular description of goods.—Flavoring Extracts for Food Purposes.
Claims use since Oct. 5, 1920.

155,329. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) B. F. GLADDING & CO. INC., South Otselic, N. Y. Filed Oct. 28, 1921. Serial No. 154,691.

Particular description of goods.—Braided Irish-Linen Fishing Lines.
Claims use since Sept. 1, 1912.

155,330. (CLASS 39. CLOTHING.) GREATER MANHATTAN KNITTING MILLS, INC., New York, N. Y. Filed Dec. 16, 1920. Serial No. 141,168.

DUBBEL KNIT

Particular description of goods.—Sweaters.
Claims use since Sept. 20, 1920.

155,331. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARTMAN SPECIALTY COMPANY, Philadelphia, Pa. Filed Sept. 25, 1920. Serial No. 137,616.

Particular description of goods.—A General Medicinal Tonic.
Claims use since 1899.

155,332. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MAX HEIDELBERG, Neuilly-Sur-Seine, (Seine,) France. Filed Dec. 22, 1920. Serial No. 141,422.

D'HORTYS

Particular description of goods.—Hygienical Products, Perfumery Goods—Namely, Perfumed Waters, Oils, Face Pastes and Powders, Scent Bags, Perfume Cushions—and Paints for the Face.
Claims use since Feb. 1, 1917.

155,333. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) WILLIAM HERTZBERG, New York, N. Y. Filed Nov. 23, 1920. Serial No. 140,036.

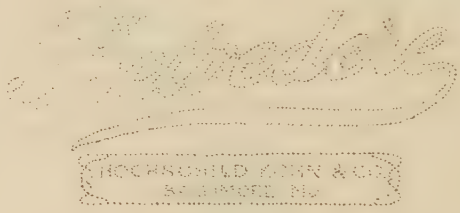
WIRE-GRIP

Particular description of goods.—Brushes—Namely, Hat, Clothes, Cloak, Beauty, Hand, Hair, Shampoo, Massage, Complexion, Bath, Shower-Bath, Dental Plate, Manicure, Crumb, Silverware, Dish-Washing, Kitchen, Glass, Bottle, Sink, Pastry, Scouring, Ice-Chest, Pipe, Percolator, Shoe, Stove, Cuspidor, Crevice, Upholstery, Wall, Bathtub, Bowl, Floor, Window, Dustpan, Dusting, Radiator, Phonograph-Record, Screen, Automobile, Wire-Wheel, Wooden-Wheel, Engine, Double-Ender, Spark-Plug, and Fountain Brushes—Mops, Pot Cleaners, Brooms, Dusters, and Tube Cleaners.
Claims use since Jan. 1, 1920.

155,334. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HERMA L. HICKS, Rocky Mount, N. C. Filed Nov. 15, 1921. Serial No. 155,405.

Particular description of goods.—A Medicinal Compound Used in the Treatment of Neuralgia, Sciatica, Pneumonia, Typhoid Fever, La Grippe, and Influenza.
Claims use since July 1, 1919.

155,335. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) HOCHSCHILD, KOHN & COMPANY, INC., Baltimore, Md. Filed Mar. 9, 1921. Serial No. 144,525.



Particular description of goods. Talking Machines.
Claims use since Nov. 15, 1920.

155,336. (CLASS 11. INKS AND INKING MATERIALS.) KEE LOX MANUFACTURING COMPANY, Rochester, N. Y. Filed Sept. 24, 1921. Serial No. 153,303.

MIGHTY MANIFOLDER

Particular description of goods.—Carbon Paper.
Claims use since about Jan. 1, 1917.

155,337. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LUNDBORG INC., New York, N. Y. Filed Dec. 23, 1921. Serial No. 157,070.

CLUNY

Particular description of goods.—Perfumes, Toilet Water, Toilet Creams, Dental Creams, Talcum Powder, Sachet and Dental Powder.
Claims use since Mar. 15, 1916.

155,338. (CLASS 39. CLOTHING.) MADISON MILLS, INC., New York, N. Y. Filed Feb. 18, 1921. Serial No. 143,769.

BETTER *Madison* MADE

Particular description of goods.—Dress, Negligée, and Work Shirts, for Textile Underwear One and Two Piece Garments for Men, Women, and Children.
Claims use since Jan. 1, 1919.

155,339. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE MAT COMPANY, Muskegon, Mich. Filed July 13, 1921. Serial No. 150,321.

Never-Slip

Particular description of goods.—Cocoa-Fiber Automobile Running-Board Mats.
Claims use since Jan. 1, 1918.

155,340. (CLASS 12. CONSTRUCTION MATERIALS.) MERCHANT & EVANS COMPANY, Philadelphia, Pa. Filed Feb. 4, 1922. Serial No. 158,880.

ALMETL

Particular description of goods.—Fire Doors and Shutters.
Claims use since 1914.

155,341. (CLASS 28. JEWELRY AND PRECIOUS METAL WARE.) THE MIDDLETOWN SILVER COMPANY, Middletown, Conn. Filed Jan. 14, 1922. Serial No. 157,935.

MIDDLETOWN SILVERWARE

Particular description of goods.—Silver-Plated Hollow Ware and Silver-Plated Tableware.
Claims use since on or about Dec. 15, 1920.

155,342. (CLASS 31. FILTERS AND REFRIGERATORS.) THE MILLER PASTEURIZING MACHINE COMPANY, now by change of name The H. H. Miller Industries Company, Canton, Ohio. Filed July 16, 1920. Serial No. 135,055.

TYSON

Particular description of goods.—Ice-Cream Freezers.
Claims use since in or about the year 1905.

155,343. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) LOUIS A. MUNGER, Long Island City, N. Y. Filed Dec. 17, 1921. Serial No. 156,850.

Particular description of goods.—Spark Plugs and Spark-Plug Corés.
Claims use since Sept. 1, 1920.

155,344. (CLASS 39. CLOTHING.) ADOLPH NEUVILLE, St. Louis, Mo. Filed Feb. 26, 1921. Serial No. 144,099.

Neuville

Particular description of goods.—Ladies', Misses', Men's, and Boys' Shirts, Shirt Waists, and Waists.
Claims use since Feb. 22, 1921.

155,345. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) NOVELTY BRAID & TRIMMING CO., New York, N. Y. Filed Nov. 11, 1920. Serial No. 139,546.

Particular description of goods.—Braid.
Claims use since July, 1920.

155,346. (CLASS 27. HOROLOGICAL INSTRUMENTS.) I. OLLENDORFF CO. INC., New York, N. Y. Filed Aug. 25, 1921. Serial No. 152,181.

Artistic

Particular description of goods.—Watches, Watchcases, Watch Movements, and Clocks.
Claims use since July 13, 1921.

155,347. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ANTHONY OVERTON, Chicago, Ill. Filed Dec. 3, 1921. Serial No. 156,236.

CORNOUT

Particular description of goods.—A Preparation for Corns, Bunions, and Calluses.
Claims use since Apr. 12, 1919.

155,348. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JAMES PESICCHIL, Denver, Colo. Filed June 18, 1921. Serial No. 149,364.

Safe-T-Tube

Particular description of goods.—Prophylactic Preparations.
Claims use since Aug. 14, 1920.

155,349. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS. PITMAN-MOORE COMPANY, Indianapolis, Ind. Filed Nov. 30, 1921. Serial No. 156,108.

PITMAN-MOORE
Anti-Hog-Cholera
Serum

Particular description of goods.—Anti-Hog-Cholera Serum.
Claims use since early part of 1914.

155,350. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PURE OIL COMPANY, Columbus, Ohio. Filed July 15, 1920. Serial No. 135,018.

TEXTOL

Particular description of goods.—Textile Oils Employed in the Manufacture of Fabrics.
Claims use since July 1, 1920.

155,351. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HERMAN REUTER, Milwaukee, Wis. Filed Mar. 27, 1920. Serial No. 130,293.

Particular description of goods.—Make-Up Paste for Undertakers.
Claims use since Apr. 1, 1918.

155,352. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROBESON PROCESS COMPANY, New York, N. Y. Filed Nov. 30, 1920. Serial No. 140,473.

Particular description of goods.—Liquid Composition of Matter Employed as a Treating and Tanning Agent.
Claims use since Oct. 27, 1914.

155,353. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THOMAS W. RYAN, Concord Junction, Mass. Filed Jan. 14, 1922. Serial No. 157,958.

RYAN

Particular description of goods.—Ball Cocks.
Claims use since Mar. 11, 1911.

155,354. (CLASS 39. CLOTHING.) THEOPHILUS C. SCHAFFNER, Chicago, Ill. Filed Sept. 12, 1921. Serial No. 152,866.

"INSTANT FITTING"

Particular description of goods.—Men's Outer Garments—Namely, Coats, Vests, and Trousers.
Claims use since about Sept. 5, 1917.

155,355. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SEVILLE LABORATORIES, Chicago, Ill. Filed Apr. 16, 1921. Serial No. 146,277.

SEVILLE

Particular description of goods.—Hair Tonic.
Claims use since June 6, 1920.

155,356. (CLASS 39. CLOTHING.) SMITH-MCCORD-TOWNSEND DRY GOODS CO., Kansas City, Mo. Filed Sept. 23, 1921. Serial No. 153,263.

Knit Well

Particular description of goods.—Sweaters, Bathing Suits, Knitted Caps, Infants' Sacks, Bootees, Knitted Scarfs, Ladies', Children's, and Men's Knitted Underwear.
Claims use since Mar. 2, 1921.

155,357. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) R. J. STRASENBURGH COMPANY, Rochester, N. Y. Filed Dec. 5, 1921. Serial No. 156,316.

PULMOTONE

Particular description of goods.—A Preparation for the Treatment of Coughs and Bronchial Disorders.
Claims use since Jan. 6, 1915.

155,358. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TOWER MANUFACTURING CO., INC., New York, N. Y. Filed Sept. 24, 1921. Serial No. 153,317.

INDOPHENAL

Particular description of goods.—Dyes.
Claims use since Mar. 5, 1921.

155,359. (CLASS 45. BEVERAGES, NONALCOHOLIC.) C. DUNCAN VREELAND, Lake Charles, La. Filed May 5, 1921. Serial No. 147,265.

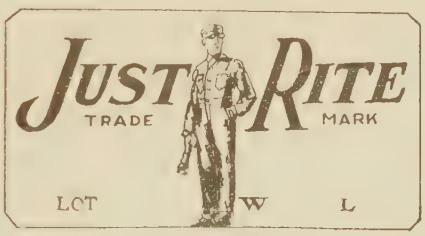
Particular description of goods.—A Nonalcoholic, Noncereal, Maltless Beverage Sold as a Soft Drink.
Claims use since Jan. 28, 1921.

155,360. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RICHARD E. WALSH, Fall River, Mass. Filed Dec. 7, 1921. Serial No. 156,430.

QUICK-LAX

Particular description of goods.—A Laxative in Candy Form.
Claims use since 1910.

155,361. (CLASS 39. CLOTHING.) THE WINER MFG. CO., Hammond, Ind. Filed Dec. 15, 1920. Serial No. 141,147.



Particular description of goods.—Overalls, Jackets, and Work Shirts.
Claims use since Jan. 1, 1916.

INTERNATIONAL TRADE-MARK REGISTRATIONS

MAY 23, 1922.

The following International Registration has been received from the Bureau at Habana and has been placed upon the Register in accordance with the provisions of section 1 (a) of the act of March 19, 1920.

No. 155,362. International Registration No. 635 of March 1, 1922. Registered in Haiti on December 2, 1921, No. 289. Proprietor: THE BAYER COMPANY, INC. Address: 117 Hudson Street, New York, N. Y.

ASPIRINA

Merchandise to which the mark is affixed.—Pharmaceutical Products.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE KELLER.

Decided November 24, 1920.

PATENTS—INVENTIONS—AUXILIARY WINDSHIELD.

Where the variety of constructions in automobile windshields would not permit the auxiliary shield of appellant's patent to be applied generally on account of the varying height at which the clamp could be applied, *Held* that it would not be invention broadly to make the parts between the clamp and the auxiliary shield adjustable.

APPEAL from Examiners-in-Chief.

WINDSHIELDS.

Mr. James T. Barkelew and *Messrs. Myers, Cushman & Rea* for applicant.

MANN, *Assistant Commissioner:*

This is an appeal from a decision of the Examiners-in-Chief affirming the action of the Primary Examiner finally rejecting claim 9 and holding suggested claims 12 and 13 unpatentable.

Claim 9 reads as follows:

9. In a windshield, a transparent shield member, supporting means for the shield member embodying a bar spaced from and extending across the face of the shield member, and means for adjustably supporting the bar, in which means the bar is both rotatively and longitudinally adjustable.

This application is directed to improvements on the windshield shown in the appellant's prior patent, No. 1,284,357, now reissued No. 14,919.

The prior patent shows an auxiliary windshield consisting of a piece of glass having secured thereto a bar or rod which extends parallel to the face of the glass and is spaced slightly therefrom, the bar allowing the shield to be swung outwardly and inwardly under the control of a lock 33, and a supporting bracket or clamp supporting the bar and adapted to be secured to the frame of the ordinary windshield. In this structure the position of the auxiliary shield, so far as height is concerned, was taken care of in locating the clamp or bracket on the side of the main windshield. Appellant represents, however, that the windshields of various automobiles differ so widely in construction that he found it impracticable to use this sort of mounting for his auxiliary shield because the point at which the fastening could be secured to the side of the main windshield was at very different heights in the case of different machines. He therefore devised the structure set forth in the present application in which the up-and-down or longitudinal adjustment of the auxiliary shield is between the support bracket and the hinge bar or rod. The appealed claim is distinguished from the prior patent merely by the words "and longitudinally adjustable" in the last line. In other words, this claim is for appellant's auxiliary shield in combination with any means which, while allowing the swinging movement of the auxiliary shield, will also permit up-and-down movement relative to the means for securing the device to the main windshield. It is believed that any mechanic, or even the average layman, in finding, as appellant did, that the variety of construction in windshields would not permit the device of his patent to be applied generally on account of the varying height at which the clamp could be applied to the windshield would have immediately recognized that the up-and-down adjustment would necessarily have to be placed between the clamp and the auxiliary shield. In other words, it is believed that the appealed claim recites nothing unobvious over the prior art.

The decision of the Examiners-in-Chief is affirmed.

The suggested claims 12 and 13 are broader than the appealed claim and are regarded as unpatentable for the same reason.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

IN RE KELLER.

No. 1467. Decided February 6, 1922.

PATENTS—REJECTION OF CLAIMS AS OBVIOUS CHANGES OF CONSTRUCTION UNDER PREVIOUS PATENT AFFIRMED.

Rejection by the Patent Office of two claims for an auxiliary automobile windshield to be adjusted to the side frame of an ordinary windshield, consisting of an improvement over a similar windshield shown in a previous patent to applicant, on the ground that the claims represented obvious changes in the construction shown in the patent, *Held* correct.

Mr. A. B. Cushman and *Mr. John J. Darby* for Keller.

Mr. T. A. Hostetler for the Commissioner of Patents.

ROBB, *J.:*

This appeal is from a Patent Office decision refusing two claims for an auxiliary automobile wind-

shield adapted to be adjusted to the side frame of an ordinary windshield, and constituting in some respects an improvement over a similar windshield shown in a patent issued to applicant. The Patent Office rejected these claims as representing obvious changes in the construction shown in the patent.

For the reasons stated in detail by the tribunals of the Patent Office, which we need not restate here, the decision is affirmed.

Affirmed.

In this case Mr. Justice HOEHLING of the Supreme Court of the District of Columbia sat in the place of Mr. Chief Justice SMYTH.

ADJUDICATED PATENTS.

(U. S. D. C. N. Y.) The Cordley patent, No. 1,054,677, for improvements in coolers for liquids, *Held* invalid. *Cordley* v. *Richardson Corporation*, 278 Fed. Rep., 683.

(U. S. D. C. Del.) The Fleming patent, No. 803,684, claim 1, for an audion, *Held* valid and infringed, but claim 37 *Held* not infringed. *Radio Corporation of America* v. *Radio Audion Co.*, 278 Fed. Rep., 628.

(U. S. D. C. Del.) The Fleming patent, No. 1,079,238, for bottle cap, *Held* valid and infringed. *American Metal Cap Co.* v. *Anchor Cap & Closure Corporation*, 278 Fed. Rep., 670.

(U. S. C. C. A. Pa.) The Johnston patent, No. 1,061,915, for a spark plug, *Held* not to involve invention. *Helfi Co.* v. *Silvex Co.*, 278 Fed. Rep., 613.

(U. S. D. C. N. Y.) The Kries patent, No. 1,224,880, for electric switch and fuse box, *Held* valid and infringed. *Westinghouse Electric & Mfg. Co.* v. *Metropolitan Electric Mfg. Co.*, 278 Fed. Rep., 666.

Revival of Patent Agreement with Germany.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 15, 1922.

A communication from the Department of State, dated May 12, 1922, states that the Patent Agreement concluded between the United States and the German Empire on February 23, 1909 (145 O. G., 515), came into force again on May 8, 1922, on appropriate notice of revival communicated under that date to the German Government.

THOMAS E. ROBERTSON,
Commissioner.

PATENT CONVENTION BETWEEN THE UNITED STATES AND GERMANY.

[Reprinted from 145 O. G., 515.]

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.

A PROCLAMATION.

Whereas a Patent Agreement between the United States of America and the German Empire was concluded and signed by their respective plenipotentiaries at Washington on the twenty-third day of February, one thousand nine hundred and nine, the original of which Agreement being in the English and German languages is word for word as follows:

The President of the United States of America and His Majesty the German Emperor, King of Prussia, in the name of the German Empire, led by the wish to effect a full and more operative reciprocal protection of patents, designs, working patterns, and models in the two countries, have decided to conclude an agreement for that purpose and have appointed as their plenipotentiaries: the President of the United States of America, Mr. Robert Bacon, Secretary of State of the United States; and His Majesty the German Emperor, King of Prussia, His Excellency Count von Bernstorff, his Ambassador Extraordinary and Plenipotentiary to the United States; who, after having communicated each to the other their respective full powers, found to be in good and due form, have agreed to the following articles:

ARTICLE I.

The provisions of the laws applicable, now existing or hereafter to be enacted of either of the contracting parties, under which the non-working of the patent, working pattern (*Gebrauchsmuster*), design or model carries the invalidation or some other restriction of the right, shall only be applied to the patents, working patterns (*Gebrauchsmuster*), designs or models enjoyed by the citizens of the other contracting party within the limits of the restrictions imposed by the said party upon its own citizens. The working of a patent, working pattern (*Gebrauchsmuster*), designs or model in the territory of one of the contracting parties shall be considered as equivalent to its working in the territory of the other party.

ARTICLE II.

This Agreement shall take effect from the date of its promulgation and remain in force until the expiration of 12 months following the notice of termination given by one of the contracting parties.

ARTICLE III.

The present Agreement shall be ratified and the ratifications shall be exchanged at Washington as soon as possible.

In witness whereof the respective plenipotentiaries have executed the present Agreement and affixed their seals thereunto.

Done in duplicate in the English and German languages at Washington this 23rd day of February, 1909.

ROBERT BACON. [SEAL.]
J. BERNSTORFF. [SEAL.]

And whereas the said Agreement has been duly ratified on both parts, and the ratifications of the two governments were exchanged in the city of Washington, on the fourteenth day of July, one thousand nine hundred and nine; now, therefore, be it known that I, William Howard Taft, President of the United States of America, have caused the said Agreement to be made public, to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this first day of August in the year of our Lord one thousand nine hundred and nine, and of the Independence of the United States of America the one hundred and thirty-fourth.

[SEAL.] WM. H. TAFT.

By the President:
ALVEY A. ADEE,
Acting Secretary of State.

Amendment to the Rules of Practice.

(ORDER No. 2,743.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 3, 1922.

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Secretary of the Interior, the following rules of the Rules of Practice of the United States Patent Office have been amended as follows:

Rule 17, paragraph (*a*):

(*a*) Any attorney at law who is in good standing in any court of record in the United States or any of the States or Territories thereof and who shall furnish a certificate of the clerk of such United States, State, or Territorial court, duly authenticated under the seal of the court, that he is an attorney in good standing, *and who shall file proof that he is possessed of the legal and technical qualifications enumerated in paragraph (b.)*

Rule 22, paragraphs (*c*) and (*d*):

(*c*) *The Commissioner of Patents may, after notice and opportunity for a hearing, suspend or exclude, either generally or in any particular case, from further practice before his office any person, agent, or attorney shown to be incompetent or disreputable, or guilty of gross misconduct, or who refuses to comply with the rules and regulations, or who shall, with intent to defraud in any manner, deceive, mislead, or threaten any applicant or prospective applicant, or other person having immediate or prospective business before the office, by word, circular, letter, or by advertising, or who shall guarantee the successful prosecution of any application for patent or the procurement of any patent, or by word, circular, letter, or advertisement shall make any false promise or misleading representation, or who uses the name of any member of either House of Congress or of any officer of the Government in advertising his business. (Act approved April 27, 1916.) The reasons for any such suspension or exclusion shall be duly recorded. And the action of the Commissioner may be reviewed upon the petition of the person so refused recognition or so suspended or excluded by the Supreme Court of the District of Columbia under such conditions and upon such proceedings as the said court may by its rules determine.*

Rule 30, line 5, by changing $15 to *$20.*

Rule 185:

185. An assignment, grant, or conveyance of a patent will be void as against any subsequent purchaser or mortgagee for a valuable consideration without notice unless recorded in the Patent Office within three months from the date thereof *or prior to such subsequent purchase or mortgage.*

If any assignment, grant, or conveyance of any patent shall be acknowledged before any notary public of the several States or Territories or the District of Columbia, or any commissioner of *any court of the United States for any District or Territory,* or before any secretary of legation or consular officer authorized to administer oaths or perform notarial acts under section 1750 of the Revised Statutes, the certificate of such acknowledgment, under the hand and official seal of such notary or other officer, shall be prima facie evidence of the execution of such assignment, *grant* or conveyance.

Rule 188:

188. In every case where it is desired that the patent issue to an assignee, the assignment must be recorded in the Patent Office at a date not later than the day on which the final fee is paid. *In the case of an application for a design patent the assignment must be recorded before the case is allowed.* (See Rule 26.) The date of the record is the date of the receipt of the assignment at the office *in proper form and accompanied by the full legal fee for recording.*

Rule 191, page 57:

191. The following is the schedule of fees and of prices of publications of the Patent Office:

On filing each original application for a patent, except in design cases	*$20.00*
On filing each renewal application for a patent, except in design cases	*20.00*
On issuing each original patent, except in design cases	20.00
In design cases:	
For 3 years and 6 months	10.00
For 7 years	15.00
For 14 years	30.00
On every application for the reissue of a patent	30.00
On filing each disclaimer	10.00
On an appeal for the first time from the primary examiner to the examiners in chief	10.00
On every appeal from the examiners in chief to the Commissioner	20.00
For certified copies of patents if in print:	
For specification and drawing, per copy	.10
For the certificate	.25
For the grant	.50
For certifying to a duplicate of a model	.50
For manuscript copies of records, for every 100 words or fraction thereof	.10
If certified, for the certificate additional	.25
For photostat copies of records.	
Size 10 by 15 inches, per copy	*.25*
Size 8 by 12½ inches, per copy	*.15*
If certified, for the certificate additional	*.25*
For uncertified copies of the specifications and accompanying drawings of patents, if in print, each	.10
For the drawings, if in print	.10
For copies of drawings not in print, the reasonable cost of making them.	
For photo prints of drawings, for each sheet of drawings:	
Size 10 by 15 inches, per copy	.25
Size 8 by 12½ inches, per copy	.15
For 20-coupon orders, each coupon good for one copy of a printed specification and drawing, and receivable in payment for photographic prints	2.00
For 100 coupons in stub book	10.00
For recording every assignment, agreement, power of attorney, or other paper, of 300 words or under	1.00
Of over 300 and under 1,000 words	2.00
For each additional 1,000 words or fraction thereof	1.00
For each additional patent or application included or involved in one writing, where more than one is so included or involved, additional	*.25*
For abstracts of title to each patent or invention:	
For the search, one hour or less, and certificate	2.00
Each additional hour or fraction thereof	1.00
For each brief from the digest of assignments, of 200 words or less	.20
Each additional 100 words or fraction thereof	.10
For searching titles or records, one hour or less	1.00
Each additional hour or fraction thereof	1.00
For assistance to attorneys in the examination of publications in the Scientific Library, one hour or less	1.50
Each additional hour or fraction thereof	1.50
For copies of matter in any foreign language, for every 100 words or a fraction thereof	.10
For translation, for every 100 words or fraction thereof	.60

Rule 191, pages 58 and 59 remain unchanged.

THOMAS E. ROBERTSON,
Commissioner.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 298—No. 5. TUESDAY, MAY 30, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Reciprocity of the Laws of New Zealand Recognized.

(Order No. 2,747.)

Department of the Interior,
United States Patent Office,
Washington, D. C., May 20, 1922.

Notice is hereby given that the laws of New Zealand are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921 (H. R. 15,662), and that consequently all the privileges specified in said act will be extended to its citizens, subject to the limitation that extensions will not be granted to relieve defaults falling under section 2 of the act for a longer period than six years, five months, and six days, upon the filing of a letter or statement by the applicant or his agent that he was prevented from doing the act in the prescribed time by reason of circumstances arising from the state of the World War. If the statement is made by an associate attorney in the United States, it should set forth that it is based upon information furnished by the applicant or his agent in the foreign country or set forth facts within his personal knowledge.

THOMAS E. ROBERTSON,
Commissioner.

Disclaimers.

828,242.—*Robert F. Phillips*, Carrick, Pa. Self-Oiling Car Wheel. Patent dated August 7, 1906. Disclaimer filed May 15, 1922, by the assignee *The Phillips Mine & Mill Supply Company.*

Hereby disclaims from claim 2 any self-oiling car wheel in which the valve spring is inserted through a hole in the inner side wall of the hollow hub opposite the oil inlet;

Thereby limiting claim 2 to a self-oiling car wheel in which the valve spring is inserted otherwise than through a hole in the inner side wall of the hollow hub opposite the oil inlet.

882,583.—*John M. Phillips* and *Robert F. Phillips*, Carrick, Pa. Running Gear for Mine Cars. Patent dated March 17, 1908. Disclaimer filed May 15, 1922, by the assignee *The Phillips Mine & Mill Supply Company.*

Hereby disclaims from claim 2—

"Any running gear for mine cars having a wheel which does not have an axle cap and enlarged bearing-forming bore extending through the hub and terminating at the cap, a bore of diminished diameter extending through the cap only, the shoulder between the two bores forming a thrust bearing, a second thrust bearing at the inner end of the hub, and an oil chamber in the hub terminating short of the outer end of the enlarged bearing-forming bore."

RETURNED TO PUBLISHER

NOTICE.—PATENTS MAY NOT ISSUE IN JULY.

The Patent Office has been informed by the Public Printer that it will be impossible to do work in June preparatory to issuance of patents in July because the appropriation for the current year has been exhausted by work already in hand for getting out the June patents. A deficiency appropriation has been requested from Congress. If relief is not given, it will be impossible to issue any patents or register any trade-marks during the first three weeks of July, and it may be that some patents normally in the last issue of June will have to be deferred. This notice is given in order that attorneys and applicants may examine their cases to determine whether they should take any action in view of this situation.

Condition of Applications Under Examination at Close of Business May 20, 1922.

(Total number of applications waiting action, excluding Trade-Mark division, 66,287; Trade-Mark division, 8,727. Oldest new case, Mar. 24; oldest amended, Mar. 23, 1921. The dates given are 1921 except where * indicates 1922.)

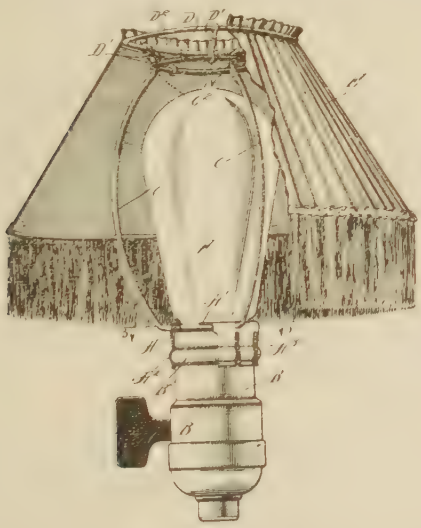
PATENTS

GRANTED MAY 30, 1922.

1,417,480. MANUFACTURE OF RAILWAY DRAFT-GEAR YOKES. HARRY T. ANDERSON, Butler, Pa., assignor to Harry Vissering & Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1919. Serial No. 305,034. 5 Claims. (Cl. 29—167.)

1. That improvement in the manufacture of yokes for railway draft gear which consists in forging top and bottom flanges on a plate metal blank, forging on a second blank similar flanges which are adapted to overlap the flanges on the first blank when the blanks are placed side-by-side, forming a draft-gear pocket in the webs between the front and rear ends, and securing the plates together in spaced relation with the flanges thereof in overlapped relation.

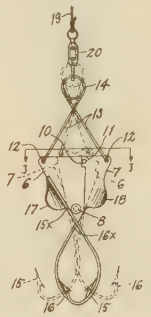
1,417,481. SHADE HOLDER. LAURITZ W. ANDERSEN, Waterbury, Conn. Filed Sept. 14, 1918. Serial No. 254,070. 1 Claim. (Cl. 240—111.)



A device of the kind described comprising a slotted and grooved sheet metal collar having an inwardly projecting flange and a plurality of resilient wire arms extending therefrom at spaced intervals, the free ends of said arms being hooked, the collar being adapted to frictionally fit upon an incandescent lamp socket, the arms being so spaced as to receive an incandescent bulb therebetween and the hooked ends of the arms being capable of engagement with the annular portion of a shade.

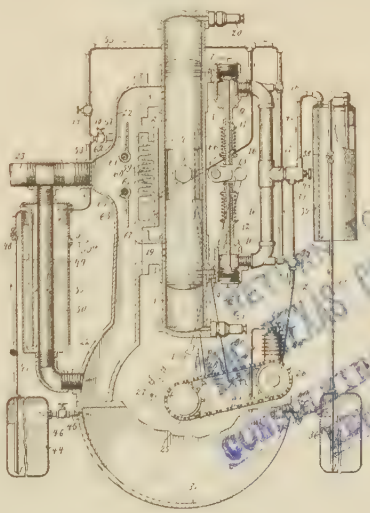
1,417,482. FISHHOOK. JULIUS O. ASPELIN, Skandia Township, Murray County, Minn. Filed Aug. 15, 1921. Serial No. 492,608. 3 Claims. (Cl. 43—36.)

1. In a device of the class described, a coil spring adapted to be secured to the end of a fish line and having its ends formed with crossing arms normally tending to close toward each other, a pair of metal plates pivotally attached at their upper ends to said arms and having their lower parts loosely pivoted together in overlapped position and spaced apart at the pivoted point, a fish hook secured to each plate and arranged to overlap each other in parallel spaced relation when the device is



set, and means at the upper ends of the plates for catching and holding the plates and the spring arms in spread position when the hooks are in overlapped position, said holding means arranged to be disengaged by swinging the hooks laterally toward each other, the pivot joint affording both swinging and tilting movement of the plates.

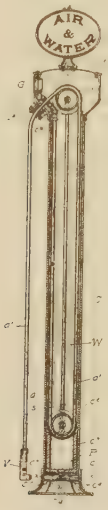
1,417,483. DEVICE FOR CHARGING INTERNAL-COMBUSTION ENGINES. LEONARD ATWOOD, Boston, Mass., assignor to Albert H. Gillard, Englewood, N. J. Filed Sept. 16, 1916. Serial No. 120,457. 11 Claims. (Cl. 123—25.)



THE CHEMICAL FOUNDATION, INC. 60 EAST 42nd STREET NEW YORK

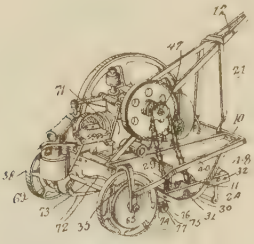
1. A device for charging an internal combustion engine comprising a reservoir adapted for receiving and containing liquid fuel and water means for unitedly heating the liquid fuel and water under pressure, and means for delivering the resultant vapors to the engine.

1,417,484. APPARATUS FOR HOUSING HOSE. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Dec. 20, 1920. Serial No. 432,009. 4 Claims. (Cl. 299—77.)



1. In an apparatus for housing hose, the combination of an elongated upright housing, a sheeve for the hose pivoted near the top of the housing, a weight longitudinally movable within the housing and close enough fitting therein so that the air beneath it will be compressed and may gradually escape, a sheeve for the hose pivoted to said weight, and an opening for the hose in the housing near its top; said apparatus adapted to have the hose secured to the source of fluid supply pass over the sheeves and out to the exterior of the apparatus.

1,417,485. TRACTOR LAWN MOWER. WILLIAM HALL BALDWIN, Middletown, Conn. Filed May 13, 1919. Serial No. 296,826. 10 Claims. (Cl. 56—26.)

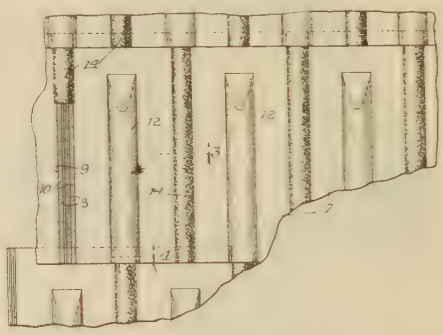


1. A tractor lawn mower device comprising a frame, a motor supported on the upper side of the said frame, a tractor driving roll connected to the said frame, positioned on the under side of the rear portion thereof, and operatively connected to the said motor, the front portion of the said frame being provided with means for being connected to a lawn mower, and the parts being constructed and arranged so that the front part of the said frame will be supported by means of the said connection of the frame with the lawn mower and that the lawn mower will be operatively driven through the medium of such connection.

1,417,486. PROPELLER. JULIUS BARTHA and ARTHUR E. GLASSMANN, New York, N. Y., assignors to Glassmann-Bartha Welding Corp., New York, N. Y. Filed Nov. 15, 1920. Serial No. 424,333. 2 Claims. (Cl. 170—166.)

1. A propeller having a hub, a plurality of primary blades extending therefrom, and a plurality of secondary blades extending from said primary blades and adapted to co-act as pilots for said primary blades all of said elements being merged into each other in screw formation.

1,417,487. ROOF STRUCTURE. LEROY BAUMGARTL, Chicago, Ill., assignor to Federal Cement Tile Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 21, 1921. Serial No. 454,113. 4 Claims. (Cl. 108—10.)

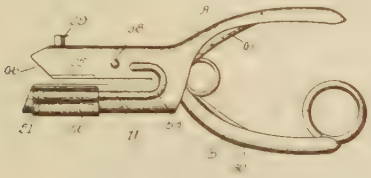


1. In combination, slabs arranged side by side in edgewise opposed relation, said slabs presenting an upwardly opening groove at their opposed edges for receiving material to fill the joint between the slabs, the upper surface of each slab having an upwardly extending rib extending lengthwise thereof and located between said grooves and the main body portion of the slab, the upper surfaces of said slabs also containing channels extending alongside said ribs, and plastic cementitious, filling material extending into said groove and into said channels and forming an exposed filler rendering water-tight the joint between said slabs.

1,417,488. PUNCH. ALBERT BECK, Chicago, Ill., assignor to McGill Ticket Punch Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1919. Serial No. 333,039. 10 Claims. (Cl. 164—121.)

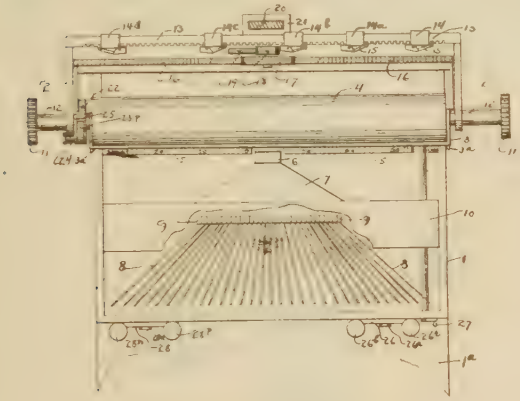
1. In a punch of the class described, the combination of a body member provided with a slot for receiving a ticket or the like, a die secured in the body member on one side of said slot, a die pin reciprocally mounted in said

body member on the other side of said slot, and a lever pivoted in said body member and operatively connected with said die pin whereby said pin may be moved into



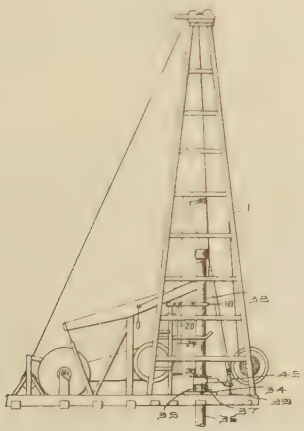
and out of said die, said body member having a sight opening, permitting accurate placing of the ticket in said slot whereby the part to be punched may be placed under the die pin.

1,417,489. TYPEWRITING MACHINE. ALEXANDER BLOCK, New York, N. Y. Filed Nov. 13, 1920. Serial No. 423,948. 93 Claims. (Cl. 197—1.)



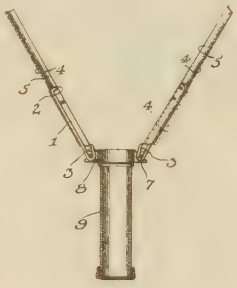
1. In a typewriting machine, a universal type holder, types adapted to be severally received by said type holder, means for delivering said types, one at a time, to said holder, and mechanical means controllable from a keyboard for actuating said universal type holder and forcing said holder to move the type into printing position for performing the printing operation.

1,417,490. PIPE-HANDLING APPARATUS. ARTHUR H. BRANDON, Toledo, Ohio, assignor to Arthur H. Brandon & Company, Toledo, Ohio. Filed Sept. 20, 1920. Serial No. 411,573. 17 Claims. (Cl. 255—35.)



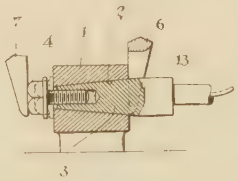
1. Means for sustaining a pipe in a well including open side jaw carrying frame closed for holding the pipe against rotation, and open sides jaw carrying rotatable means rigidly mounted coaxially as to the sustaining means and provided with a pipe grip operable to engage a pipe for rotation as to the held pipe.

1,417,491. FASTENER FOR UMBRELLA STRETCHERS AND RIBS. ANDREW G. BRANDT, Scranton, Pa. Filed Mar. 2, 1921. Serial No. 448,957. 3 Claims. (Cl. 138—29.)



2. In combination with a stretcher of channel cross section, a hook formed of wire having a spring shank part, the end of the shank opposite the hook bent at an angle to said shank and adapted to be fixedly secured between the sides of said channel stretcher so that the spring shank lies in the bottom of the channel, the hook on the other end of said shank adapted to be normally closed by the end of the side walls of the stretcher.

1,417,492. TOOL. JOSEPH MARTIN BRANDT, Bellevue, Iowa. Filed Nov. 24, 1920. Serial No. 426,166. 1 Claim. (Cl. 29—84.)

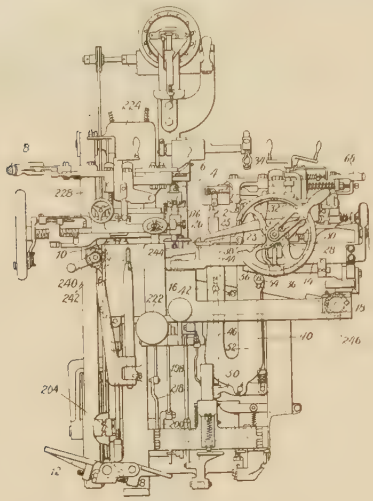


A tool for removing terminal connections from battery posts comprising a pair of jaws having their intermediate portions interiorly screw threaded, a screw threaded through the intermediate portions of said jaws, a second screw threaded through the terminal portion of one of the jaws and engaged with the terminal portion of the other jaw, the forward terminal portions of one of the jaws being straight and adapted for engagement with the screw of the terminal connection and the terminal portion of the other jaw being forked to straddle the terminal connection and engage the battery posts on opposite sides of the terminal connection.

1,417,493. LASTING MACHINE. MATTHIAS BROCK, deceased, late of Boston, Mass., by Edward L. Brock, administrator, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 24, 1919. Serial No. 278,914. 57 Claims. (Cl. 12—14.)

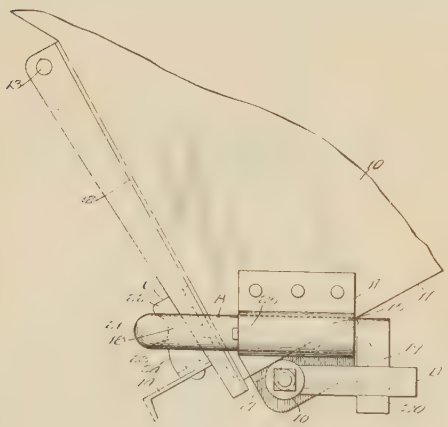
1. In a machine of the class described, the combination with shoe end clamping means, of mechanism for operat-

ing said clamping means to cause it to press upon a shoe comprising a member adjacent to the shoe end having a



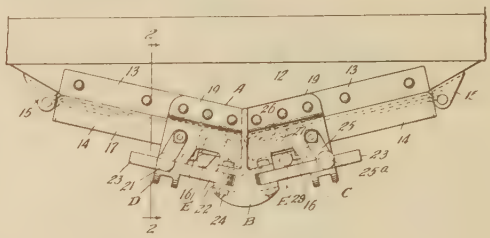
wedge face formed to operate with increasing mechanical advantage as the pressure on the shoe increases.

1,417,494. CAR-DOOR-LOCKING MECHANISM. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1921. Serial No. 504,236. 8 Claims. (Cl. 105—308.)



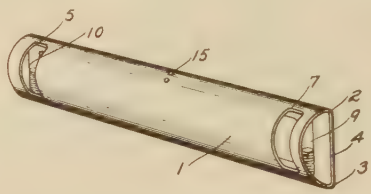
1. In a door locking mechanism for dump cars having a discharge hopper defined by a sloping bottom sheet and side sheets and a hopper door hinged to swing about its upper edge, the combination with a latching element pivotally supported from a side outer sheet to rotate about an axis transverse to the pivotal axis of the door, said element projecting beyond the closed position of the door and provided with an arm extending laterally therefrom, said element having also an operating section; of a shouldered element secured to the outside of the door adjacent its edge nearest said side hopper sheet and behind which shouldered element said arm is adapted to engage to lock the door in closed position when said latching element is rotated; and means for holding said latching element in operative position.

1,417,495. CAR-DOOR-LOCKING MECHANISM. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 27, 1921. Serial No. 525,104. 10 Claims. (Cl. 105—308.)



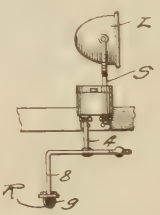
1. In a dump car having a pivoted door, the combination with a bracket secured to a fixed part of the car adjacent an edge of the door when the latter is in closed position; of a bar rigid with the door and projecting from said edge in line with said bracket; a locking lever pivotally supported on said bracket to swing against said bar on the under side of the latter; and means for holding said lever in locked position.

1,417,496. HAND LEVEL. JAMES H. CARMEAN, Kansas City, Mo. Filed Oct. 29, 1920. Serial No. 420,433. 2 Claims. (Cl. 33—209.)



1. A hand level comprising an elongated casing open at its ends, a pair of vertical liquid containing conduits off-set with one another by respect to their mounting in the casing to permit comparison of the liquid levels in the conduits, and connecting conduits for the vertical conduits.

1,417,497. DIRIGIBLE HEADLIGHT. HARRY E. CARY and THOMAS T. MCGUIRE, Oakland, Calif. Filed Jan. 29, 1919. Serial No. 273,813. 1 Claim. (Cl. 240—62.)

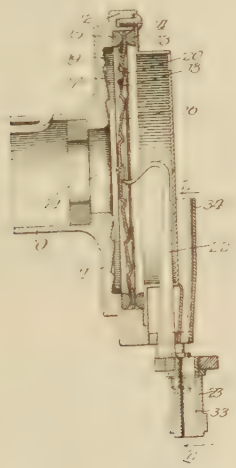


In combination with a frame, brackets and gear housing carried thereby secured to the frame, a steering apparatus, a rotatable shaft in each of the gear housings operable by the steering apparatus, a rotatable lamp standard within each of said housings, a toothed gear and mutilated gear secured on the upper ends of the respective shafts and standards of each housing, a transversely extending rack bar operable therewith and in mesh with said gears, each of said mutilated gears having a flattened side adapted to normally maintain the same out of engagement with the rack bars, whereby the mutilated gears will be caused to rotate as the said rack bar is moved in one direction for independently rotating the lamp standards upon opposite sides of the frame at selected time, and means co-operating with said steering apparatus and said rack bar for automatically shifting the same as said steering apparatus is operated.

1,417,498. LOCOMOTIVE. RUFUS N. CHAMBERLAIN, Chicago, Ill., assignor of one-half to George R. Berger, Chicago, Ill. Filed Oct. 11, 1920. Serial No. 416,230. 6 Claims. (Cl. 105—35.)

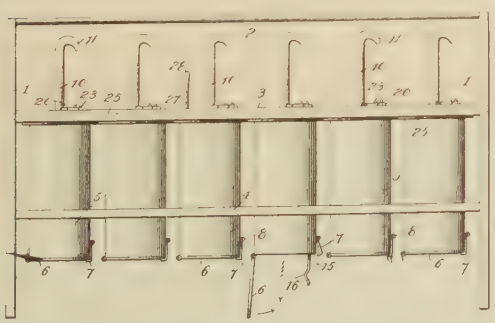
5. A motor vehicle comprising a driving motor, a storage battery for supplying energy to said motor, a prime source of power for charging said battery and having a normal load which is considerably less than that of the storage battery, substantially as described.

1,417,499. SOUND BOX. FOREST CHENEY, Chicago, Ill., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 30, 1917. Serial No. 165,401. 10 Claims. (Cl. 274—35.)



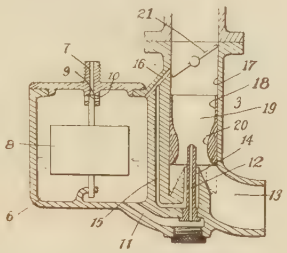
1. A sound box, comprising in combination, a diaphragm and an opposed wall, said diaphragm and wall being convex with relation to a plane which is perpendicular to the outlet from the box and which intersects the space between the wall and diaphragm, substantially as described.

1,417,500. ADVERTISEMENT DISTRIBUTOR. ALBERT COLEY and ARTHUR W. MARLER, Sapulpa, Okla. Filed June 23, 1920. Serial No. 391,251. 10 Claims. (Cl. 244—1.)



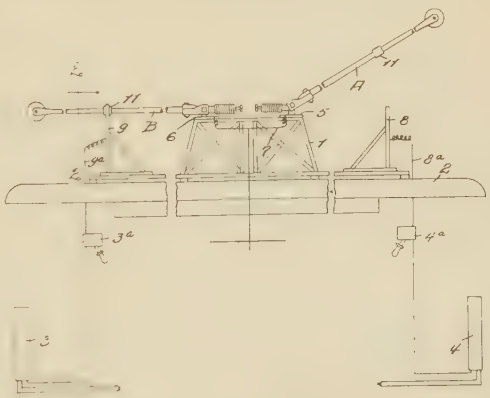
1. An advertisement distributor comprising a barrel, a door hinged to the lower end of the barrel, means for holding the door closed, a plunger operable in the barrel, scrapers carried by the plunger and engaging the inner wall of the barrel, and means for releasing the door.

1,417,501. CARBURETOR. WILLIAM H. COLLIER, Brentwood, Tenn. Filed Dec. 26, 1916. Serial No. 138,895. 3 Claims. (Cl. 261—72.)



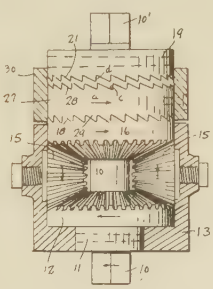
3. In a carburetor, the combination of a main air passage, a nozzle therein, a source of fuel supply connected to that nozzle, a passage for equalizing vacuum between the space around said nozzle and said source of fuel supply, and a sliding suction-operated valve controlling said main air passage anterior to said nozzle.

1,417,502. ELECTRIC TROLLEY CAR. CHARLES H. COPLEY, Springfield, Mo., assignor of one-half to Clarence N. Nichols, New York, N. Y. Filed May 28, 1920. Serial No. 384,923. 10 Claims. (Cl. 191—50.)



1. In an electric trolley car, a controller, a trolley pole, and means for preventing said controller from being utilized to start and operate the car unless the trolley pole projects rearwardly or in an opposite direction to the proposed path of travel of the car.

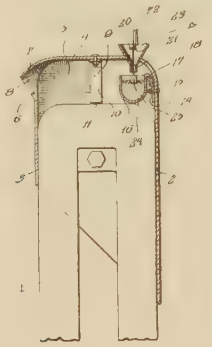
1,417,503. MECHANICAL MOVEMENT. ALBERT E. CRANSTON, Spokane, Wash. Filed Mar. 28, 1921. Serial No. 456,418. 5 Claims. (Cl. 74—54.)



1. A mechanical movement comprising a shaft to be driven, a driving member rotatably mounted on said shaft

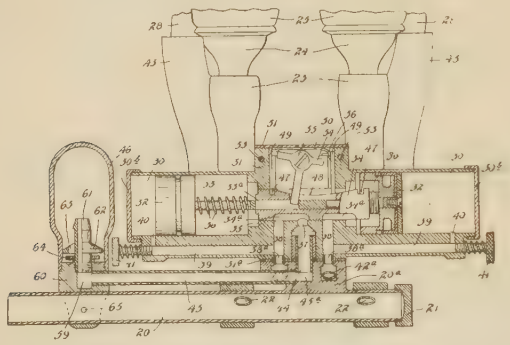
and slidable with respect thereto; a driven member secured to said shaft and adapted to be directly driven by said driving member only when said driving member is rotated in one direction, a third member secured to said shaft, an intermediate member rotatably mounted on said shaft and adapted to be driven by said driving member only when said driving member is rotated in the opposite direction, means operatively connecting said intermediate and said third members whereby their direction of rotation is opposite when said shaft or said intermediate member is rotated.

1,417,504. ATTACHMENT FOR RADIATORS. JOHN J. DESJARDINS, Martinette, Wis. Filed Jan. 6, 1920. Serial No. 349,775. 2 Claims. (Cl. 237—78.)



1. A radiator attachment comprising a hood designed to be slipped over the upper portion of a radiator, means within the hood engaging the top of the radiator for holding the top of the hood in spaced relation to the radiator, a plate secured against the rear wall of the hood and formed with a retaining lip, an elongated trough removably mounted within the hood and formed with a flange detachably engaged upon said lip, and means mounted upon the top of the hood for feeding water to said trough.

1,417,505. MILKING APPARATUS. LAURITS DINESEN, Minneapolis, Minn., assignor, by mesne assignments, to Perfection Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Apr. 10, 1920. Serial No. 372,748. 8 Claims. (Cl. 31—101.)



1. In a milking apparatus, a main line tube, a coupling head connected to the extended end of said tube and provided with milk intake ports and with air intake ports, of a group of teat cups, milk and air tubes connecting said teat cups, respectively, to the milk and air intake ports of said coupler head, and a pulsator mechanism comprising a vacuum motor detachably secured to said coupler head and having ports alignable with the air intake ports of the latter.

2. In a milking apparatus, a main line tube, a coupling head connected to the extended end of said tube and provided with milk intake ports and with air intake ports, of a group of teat cups, milk and air tubes connecting said teat cups, respectively, to the milk and air intake ports of said coupler head, and a pulsator mechanism comprising a vacuum motor detachably secured to said coupler head and having ports alignable with the air intake ports of the latter, the aligned ports of said coupler head and vacuum motor being at offset points and having telescoping parts that hold said motor and coupler head aligned.

3. In a milking apparatus, a main line tube, a coupling head connected to the extended end of said tube and provided with milk intake ports and with air intake ports, of a group of teat cups, milk and air tubes connecting said teat cups, respectively, to the milk and air intake ports of said coupler head, a pulsator mechanism comprising a vacuum motor detachably secured to said coupler head and having ports alignable with the air intake ports of the latter, and means for rigidly but detachably connecting said motor to said coupling head, comprising a spring yoke arranged to embrace said coupler head and having interlocking engagement with said motor.

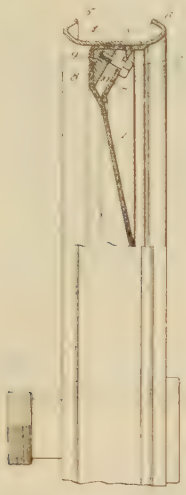
6. In a milking apparatus, the combination with a milk receptacle and a main combined milk and air tube extended therefrom, of a coupler head connected to the extended end of said main tube and provided with milk conducting nipples and air conducting nipples projecting therefrom, a group of two-chambered teat cups, milk tubes extended from the inner chambers of said teat cups to said milk conducting nipples, air tubes connecting the outer chambers of said teat cups to said air conducting nipples, an equalizing chamber located on said coupling head and having a port for the delivery of air therethrough, a vacuum motor detachably connected to said coupling head, said coupling head and the motor having opposing faces and, in said opposing faces, having intermediate and outer air ports arranged to be alternately connected by said motor, said intermediate port being connected to said equalizing chamber and said outer ports being connected to different members of said air conducting nipples.

7. In a milking apparatus, the combination with a milk receptacle and a main combined milk and air tube extended therefrom, a coupler head connected to the extended end of said main tube and provided with four milk conducting nipples and four air conducting nipples projecting therefrom, two groups of two-chambered teat cups, milk tubes connecting the inner chambers of said teat cups to said milk conducting nipples, air tubes connecting the outer chambers of said teat cups and said air conducting nipples, an equalizing chamber located on said coupler head and having a port for the delivery of air thereto, a vacuum motor detachably connected to said coupling head, said motor and said head having opposing bearing faces, means for securing said motor to said coupling head, said coupling head and motor, in their opposing faces, having intermediate and outer air ports arranged to be alternately connected by said motor, said intermediate port being connected to said equalizing chamber and said outer ports being connected to different members of said air conducting nipples.

1,417,506. DISK-WHEEL RIM. THOMAS I. DUFFY, Chicago, Ill., assignor, by direct and mesne assignments, to Nels Gross, Chicago, Ill. Original application filed Nov. 15, 1919, Serial No. 338,335. Divided and this application filed June 12, 1920. Serial No. 388,477. 3 Claims. (Cl. 152—21.)

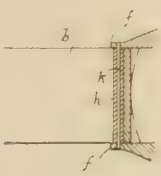
1. In a vehicle wheel, a rim member comprising a member formed with a tire-retaining flange at one edge, in combination with a web of the wheel at the circumference of which the rim member is rigidly positioned, said web extending from the rim in a plane offset from the middle toward the flanged edge of said rim member, and a removable rim member formed with an opposing tire-retaining flange and having an annular part which extends into lodgment against the wheel web at a distance inward from the

rim toward the wheel center, and fastening screws which clamp said annular part of said second rim member at its greater and lesser circumferences respectively, against the



margin of the first rim member opposite the flange thereof and against the wheel web at a distance inward from the rim.

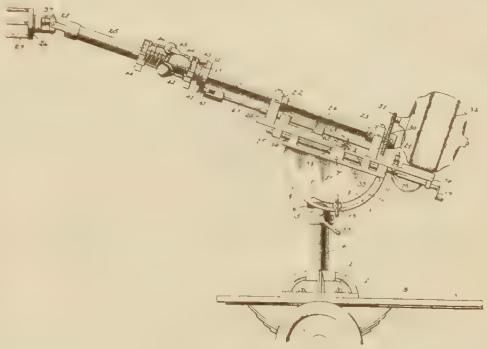
1,417,507. STRAP CONNECTOR. EZRA C. FITCH, Manchester, Mass., assignor to Waltham Watch Company, Waltham, Mass., a Corporation of Massachusetts. Filed Feb. 8, 1921. Serial No. 443,327. 6 Claims. (Cl. 224—4.)



1. The combination of a member having lugs spaced apart, with a second member having a loop or eye in its end adapted to enter between such lugs, a tube occupying said eye, and a pin passing through said tube and into the lugs and being of springy material and offset between its ends to an extent which causes it to be clutched by the ends and intermediate part of the tube.

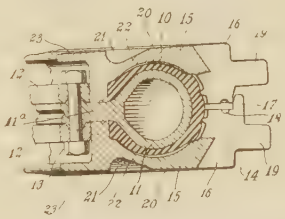
1,417,508. STARTING DEVICE FOR AEROPLANE ENGINES. ROBERT T. FOSTER, Seattle, Wash. Filed May 10, 1920. Serial No. 380,111. 5 Claims. (Cl. 244—31.)

1. A device of the character described comprising a base member, a vertical post supported by the base member, a platform supported revolubly on said post and adapted to be tilted to various degrees of inclination, a starting shaft comprising telescoping sections, mounted revolubly on said platform and extendible therefrom, a clutch head at the outer end of the shaft removably applicable to the propeller of an aeroplane or the like to effect driving connection with the aeroplane engine, means for extending the telescoping shaft sections, a locking dog for retaining the sections normally extended, a spring for telescoping the shaft sections when the dog is released, a motor on the platform for driving the starting shaft and a governor mechanism on the shaft operable



to release the dog when said shaft is revolved at a predetermined speed to effect the release of the clutch head from the aeroplane propeller.

1,417,509. VULCANIZING MOLD FOR TIRE CASINGS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,440. 7 Claims. (Cl. 18—38.)

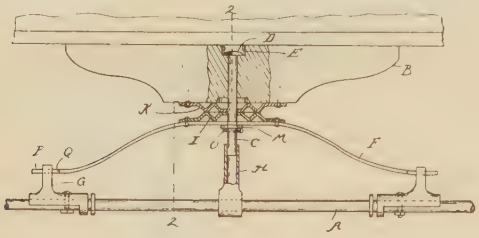


1. A tire mold comprising a pair of continuous annular members formed with a molding cavity, said mold having its tread portion transected by a series of venting slots.

1,417,510. FLASH IGNITER. FRANK A. GAUGER and ROY W. JOHNSON, Milwaukee, Wis. Filed Dec. 6, 1920. Serial No. 428,569. 6 Claims. (Cl. 158—115.)

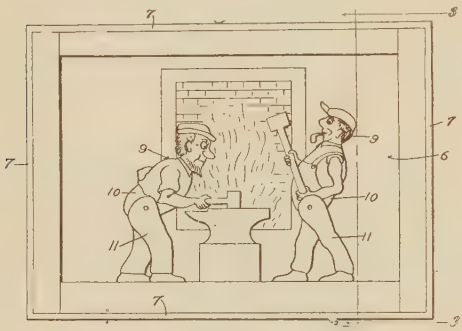
1. A valve of the class described comprising a body provided with a well and with ports communicating with said well at points spaced longitudinally of the well, a valve sleeve plug engaged in the well and terminating short of the inner port and provided in its periphery with an annular recess registering with the other port and further provided with openings at said recess, the sleeve plug being reduced in bore outwardly of the ports, a valve steam movable through said reduced bore portion, and a head on the stem co-acting with the inner portion of the sleeve plug.

1,417,511. SPRING SUPPORT FOR VEHICLES. BENJAMIN D. GEER, Ypsilanti, Mich., assignor to Lewis-Geer Mfg. Company, Ypsilanti, Mich., a Corporation of Michigan. Filed July 23, 1921. Serial No. 487,005. 7 Claims. (Cl. 280—136.)



1. A child's wagon comprising a bolster, an axle, a spring for supporting said bolster upon said axle, a king bolt passing through said bolster and spring, and a tubular member secured to said axle for telescopically engaging said king bolt.

1,417,512. SAND TOY. GEORGE J. GENUNG, Beaver Falls, and WILBERT L. WELSH, New Brighton, Pa. Filed Jan. 29, 1921. Serial No. 441,060. 3 Claims. (Cl. 46—40.)

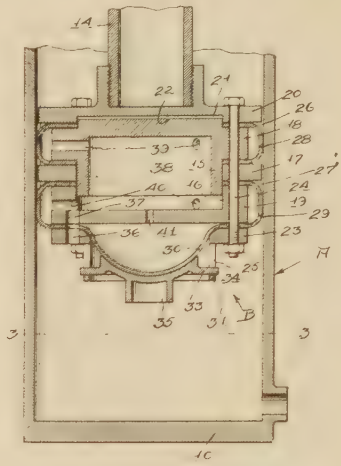


1. In a toy, a casing including front and rear walls, pivoted members supported by the front wall, a propelling wheel, a member including a pair of arms pivotally connected to the propelling wheel, a pin extending from the propelling wheel and adapted to contact with the arms, curved arms having connection with the pivoted members, a rod connecting the curved arms to move the same, a gutter disposed between the front and rear walls, said gutter having an opening to permit the passage of sand therefrom, said opening adapted to direct sand to the propelling wheel for rotating the same, and a bracket for supporting the propelling wheel.

1,417,513. ROOF STRUCTURE. GEORGE GEYER, Hammond, Ind., assignor to Federal Cement Tile Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 16, 1921. Serial No. 452,690. 3 Claims. (Cl. 108—10.)

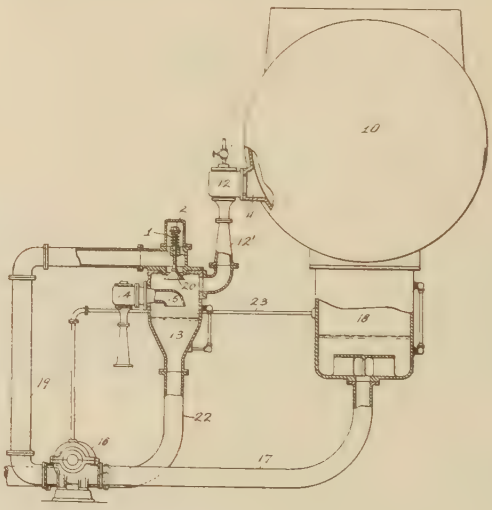
2. In combination, slabs arranged side by side in edgewise opposed relation, said slabs presenting an upwardly opening groove at their opposed edges, the upper surface of each of said slabs having an upwardly extending rib extending lengthwise thereof and located between said groove and the main body portion of the slab, said plastic cementitious filling material filling said groove and forming an exposed filler rendering water-tight the joint between said slabs.

1,417,514. PISTON. HUGO GLASER, St. Paul, Minn. Filed Apr. 30, 1921. Serial No. 465,654. 5 Claims. (Cl. 74—109.)



1. The combination with a cylinder, of a piston adapted to be propelled in said cylinder by the pressure of a fluid medium, an inflatable packing ring encircling the body of the piston and a compressible buffer bag beneath said body, said ring and bag being in communication with the bore of the cylinder and adapted to be inflated by the propelling medium therein.

1,417,515. CONDENSER SYSTEM. JOHN F. GRACE, Kearney, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 24, 1920. Serial No. 426,142. 4 Claims. (Cl. 103—79.)

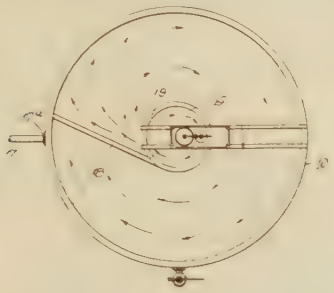


4. The combination with a two-stage pump, one stage of which delivers against a lower head than the other, of means for increasing the head on the stage delivering against the lower head to secure the proper operation of the pump.

1,417,516. SETTLING TANK. WALTER H. GREEN, Chicago, Ill., assignor to International Filter Co., Chicago, Ill., a Corporation of Illinois. Filed July 12, 1919. Serial No. 310,385. 8 Claims. (Cl. 210—60.)

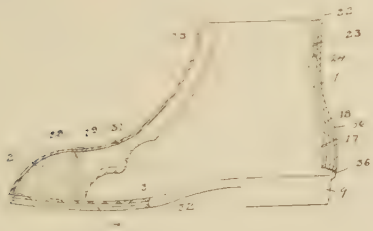
1. A settling tank comprising an inner and an outer chamber having a communicating opening at the bottom,

means to cause the water to travel around within the wall of the inner chamber from the top to the bottom, and



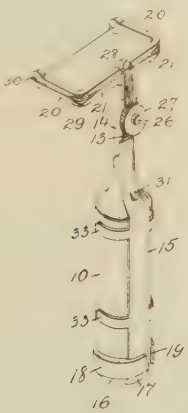
means to cause the water to travel around within the wall of the outer chamber from the bottom to the top.

1,417,517. SHOE. JOSEPH HAJEK, Follansbee, W. Va. Filed Aug. 5, 1919. Serial No. 315,479. 2 Claims. (Cl. 36—3.)



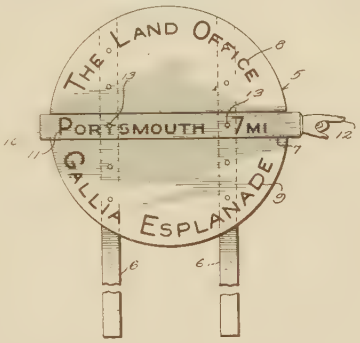
1. In a shoe, means for forcing a circulation of air thereinto, said means including a series of tubes, said tubes being perforated at intervals, and means for distributing said air in the shoe, said last means consisting of a grooved toe box, the grooves of which are perforated, certain of said tubes being located between the slip sole and insole of the shoe, certain other of said tubes being located against the vamp of the shoe, and within the lining of the vamp, said tubes being flexible, whereby pressure thereon will cause them to pump air, valves located in said tubes, certain of which permit ingress and prevent egress of air therethrough.

1,417,518. DENTAL FLOSS HOLDER. GEORGE C. HENERLAU, Newark, N. J. Filed Jan. 25, 1922. Serial No. 531,530. 5 Claims. (Cl. 132—92.)



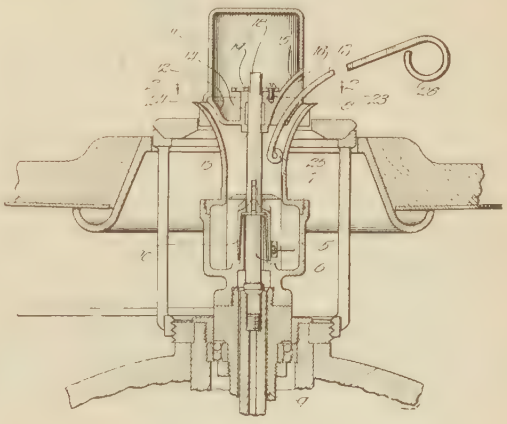
3. A dental floss holder comprising a container slitted at one side from top to bottom, a shield covering the slit, and having spring arms to embrace the container, the container being narrower at the top to form a stem, the shield terminating short of the top of the stem to permit the passage of a strand of floss from the spool, and separated arms at the top of the stem for holding the strand.

1,417,519. SIGN. CHARLES W. G. HANNAH, Portsmouth, Ohio. Original application filed Oct. 4, 1921. Serial No. 505,322. Divided and this application filed Nov. 30, 1921. Serial No. 519,024. 3 Claims. (Cl. 40—125.)



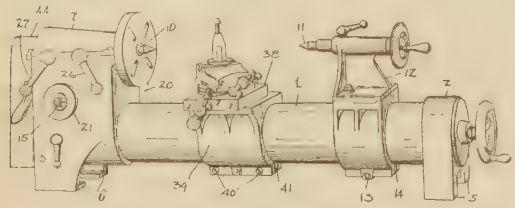
1. In a sign of the character described, a body provided with a central opening extending substantially horizontal, said body being provided with advertising data above and below the central opening, means to support the body, a strip adapted to be mounted within said opening and provided at one end with a hand permanently connected therewith, said strip being provided upon its opposite sides with data which is identical, said data indicating in substance the name and location of the desired place, and means for detachably holding said strip within said opening, whereby the strip may be shifted so that its hand may point in either direction and the data upon either side may be properly read.

1,417,520. OIL BURNER. FRANKLIN HARDINGE, Chicago, Ill. Filed May 16, 1921. Serial No. 470,209. 6 Claims. (Cl. 158—77.)



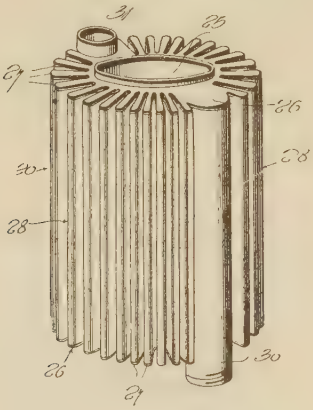
3. An oil burner comprising an outwardly flaring rotary atomizing nozzle, a standpipe projecting upwardly into said nozzle for supplying oil thereto, and means secured to the upper end of said standpipe for holding a cleaning device in engagement with the inner surface of said atomizing nozzle.

1,417,521. LATHE. GEORGE HAUMANN, Cleveland, Ohio, assignor, by mesne assignments, to The Urban Machine and Tool Company. Filed June 4, 1919. Serial No. 301,761. 9 Claims. (Cl. 82—2.)



1. In a lathe, the combination of a slotted tubular member of large diameter and relatively thin material having a cylindrical exterior; supports sleeved upon the respective ends of said member, one of said supports constituting a head-stock change speed gear casing and motor support; a tool-carriage adjustably mounted on said member; a longitudinally disposed work-spindle mounted in said head-stock; a transversely disposed power shaft in said head-stock; a second shaft parallel with said spindle; a worm drive connecting said two shafts; change-speed gearing adapted to connect said second shaft with said spindle; a feed screw centrally housed within said tubular member; a gear train connecting said work spindle and feed screw; and a member mounted on said tool carriage coacting with said feed screw.

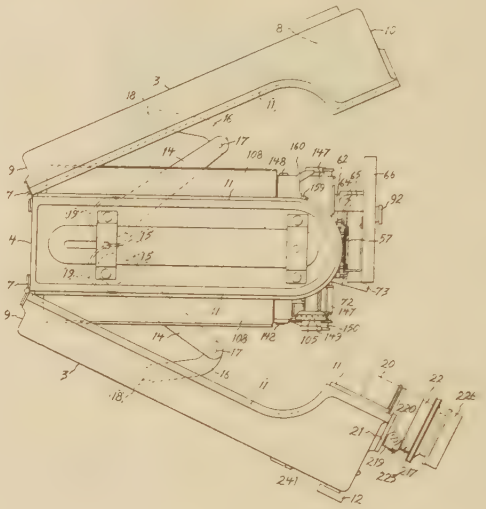
1,417,522. BOILER FOR INCUBATOR HEATERS. DAVID M. HOLBROOK, Portland, Oreg. Filed Jan. 22, 1920. Serial No. 353,258. 1 Claim. (Cl. 122—155.)



A boiler comprising an open-ended hollow cylinder, a water inlet pipe at one side of said cylinder and a water outlet pipe at the diametrically opposite side thereof, both of said pipes being outside of said cylinder and extending longitudinally thereof, a pair of fluted sheets both secured along one of their edges to one of said pipes and each secured along its opposite edge to the other pipe, said sheets extending arcuately around opposite halves of said cylinder in spaced relation therewith, and end plates secured to the ends of said fluted sheets and said cylinder and forming therewith a water chamber, said pipes having openings communicating with said chamber.

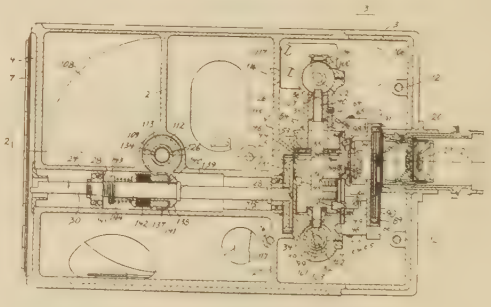
1,417,523. MOTION-PICTURE CAMERA AND TRIPOD. ALBERT SUMMERS HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1919. Serial No. 293,249. 20 Claims. (Cl. 88—17.)

1. A device of the character described including a central frame having upper and lower walls; a closure fitted to said central frame on each side thereof to form an enclosure thereabout with said upper and lower walls, said closures extending beyond said upper and lower walls at one end and including upper and lower wall portions



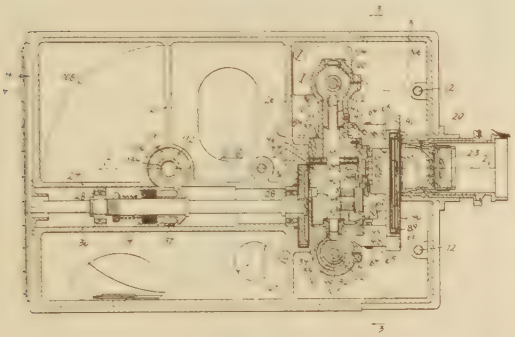
meeting to complete the enclosure; and means for securing said closures in closed position on said central frame and adapted to be actuated to allow movement to said closures away from their closed positions to permit access to the central frame.

1,417,524. FILM-FEEDING MECHANISM FOR MOTION-PICTURE CAMERAS AND THE LIKE. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell and Howell Company, Chicago, Ill., a Corporation of Illinois. Original application filed Apr. 28, 1919, Serial No. 293,249. Divided and this application filed Oct. 11, 1919. Serial No. 330,032. 14 Claims. (Cl. 88—18.4.)



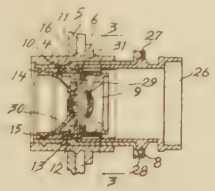
1. A device of the nature described including a pair of film magazines arranged in parallel spaced relation, a rotatably mounted driving shaft disposed between said film magazines in parallelism therewith, a spur gear affixed to said shaft to rotate therewith and disposed outwardly of said magazines, step by step mechanism including rotatably mounted coaxial cams disposed on the side of said gear opposite said magazines in front of the adjacent end of said shaft on an axis normal thereto and parallel with said magazines, and a gear driving connection between said gear and said cams disposed outwardly of said magazines and including a second spur gear meshing with said first mentioned gear and spiral gearing.

1,417,525. ACTUATING MECHANISM FOR MOTION-PICTURE CAMERAS AND THE LIKE. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell and Howell Company, Chicago, Ill., a Corporation of Illinois. Original application filed Apr. 28, 1919. Serial No. 293,249. Divided and this application filed Oct. 11, 1919. Serial No. 330,143. 9 Claims. (Cl. 88—17.)



1. A device of the nature described including a rotatably mounted spur gear, step by step mechanism including a rotatably mounted cam disposed on an axis disposed on one side of the plane of said gear and normal to the axis thereof, a driving connection between said gear and said cam including a spur gear meshing with said first mentioned gear and disposed on an axis parallel to the axis of said first mentioned gear and extending past one side of the axis of said cam and a spiral gearing connection between said second mentioned gear and said cam including a spiral disposed on an axis coincident with that of said second mentioned gear, a rotatably mounted shutter disposed on the side of said cam opposite said first mentioned gear and disposed on an axis coincident with said second mentioned gear, and a driving connection between said first mentioned driving connection and said shutter to rotate the same in unison with said cam.

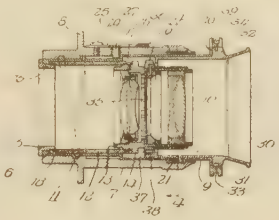
1,417,526. LENS MOUNT FOR CAMERAS. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell and Howell Company, Chicago, Ill., a Corporation of Illinois. Original application filed Apr. 23, 1919. Serial No. 293,249. Divided and this application filed Oct. 11, 1919. Serial No. 330,144. 9 Claims. (Cl. 95—45.)



1. A device of the character described including an internally threaded bush, an externally threaded bush screwthreaded into said first mentioned bush, and a friction device including a friction element mounted on one of said bushes and frictionally engaging the other bush and adapted to be disengaged from said other bush to permit easy manipulation of said bushes into and out of screw-threaded engagement.

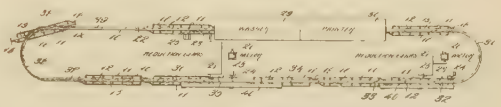
1,417,527. FOCUSING DEVICE FOR CAMERA LENSES. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1920. Serial No. 411,514. 12 Claims. (Cl. 95—45.)

1. A device of the nature described including a camera lens, a support therefor adapted to permit movement of the lens relatively thereto longitudinally of the axis of the to permit the focusing of the lens, an adjustable iris diaphragm device for the lens, an indexing device adapted to indicate predetermined adjustments of the iris diaphragm



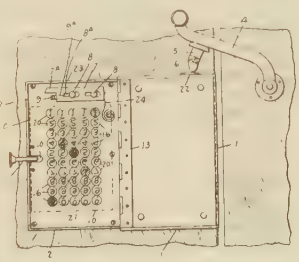
device, and an indexing device adapted to indicate predetermined focal adjustments of the lens relatively to said support both with relation to the distance between objects to be focused and the support and with relation to the adjustment of the iris device.

1,417,528. ELEVATED CARRIER FOR HANDLING FRAMES AND THE LIKE. WILLIAM E. IRISH and ALOIS KARL NOWAK, Cleveland, Ohio, assignors to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 8, 1919. Serial No. 329,326. 16 Claims. (Cl. 104—91.)



1. In an elevated carrier, the combination with an endless track having portions thereof level, portions thereof upwardly inclined, and portions thereof downwardly inclined, of carriers movable upon said track, independent moving devices for moving the carriers up the inclined portions of said track and along the level portions thereof, and means associated with said moving device for absorbing any forward thrust imparted thereto by the forward movement of said carriers upon contact therewith.

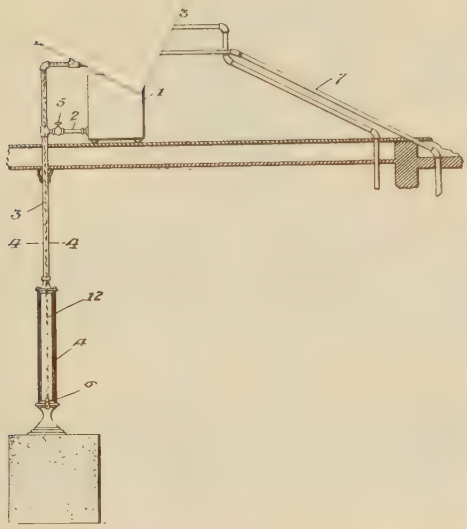
1,417,529. AUTOMATIC LOCK. SALVATORE IZZO, Rome, Italy, assignor to Rev. Marino Priori, Indianapolis, Ind. Filed Apr. 16, 1920. Serial No. 374,469. 7 Claims. (Cl. 70—54.)



1. A lock having in combination a latch, including a recessed tooth, a hinged casing having an opening in one end of each hinged portion, said openings registering when said hinged casing portions are in closed position to receive said recessed tooth, a bolt slidable into engagement with said recessed tooth to retain the same in the lock and the lock casing in closed position.

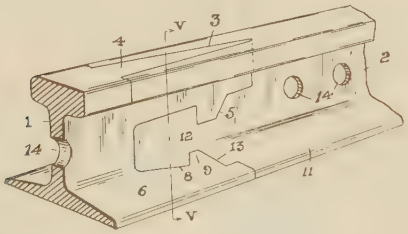
1,417,521 assignors to ... 883

...ING SYSTEM FOR OIL ...NSING SYSTEMS. Clar-E. Kendall, Odin M. Kenancock, Houston, Tex. Filed No. 479,156. 7 Claims. (Cl.



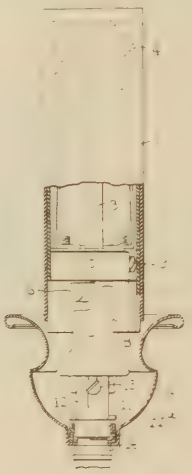
1. A viscosity indicator system for liquid dispensing and displaying systems, comprising a receptacle having transparent walls, an air-supply duct communicating with the interior of said receptacle in the lower portion thereof, means for supplying air under pressure to said duct, means for controlling the degree of pressure of the air so supplied, an outlet pipe communicating with the interior of the upper portion of said receptacle, and a branch pipe communicating with the upper part of said outlet pipe and having an open end arranged to return to the supply reservoir for said receptacle such liquid as may be carried up from said receptacle by the escaping air.

1,417,531. RAIL CONNECTOR. William H. Kirkwood, Kittanning, Pa. Filed Oct. 29, 1921. Serial No. 511,484. 1 Claim. (Cl. 238—233.)



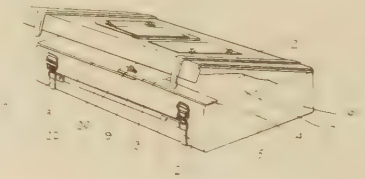
In a continuous rail joint the combination of the adjacent ends of two rails provided with interlocking means, which includes a tongue comprising the end portion of the head of one of said rails, the web having a portion cut away on the lower side thereof and a slot formed in the base flange; the head of the adjacent rail having a slot and the web a cut away portion on the upper side and an extension on the base flange, the web of the last mentioned rail having a notch, and the web of the adjacent rail a prong, the projection and prong of one rail being adapted to engage in the corresponding slot or recess on the adjacent rail forming a substantially continuous rail joint.

1,417,532. ELECTRIC CANDLE AND THE LIKE. Charles J. Klein, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 21, 1917. Serial No. 176,036. 5 Claims. (Cl. 240—52.)



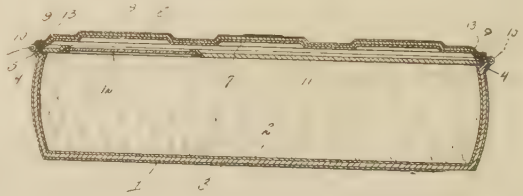
1. The combination with a candle shell, of a lamp socket fitting therefor, a cup to receive said shell and fitting and an extensible supporting device for said shell and fitting arranged within said cup and providing for adjustment of said shell and fitting relative to said cup.

1,417,533. SHIPPING CASE. Victor L. Krannert, Urbana, Ill., assignor to Saf-Pak Manufacturing Company, Anderson, Ind., a Copartnership consisting of Claud A. Behringer and Herman C. Krannert. Filed Sept. 20, 1921. Serial No. 501,951. 6 Claims. (Cl. 150—52.)



1. A shipping case comprising a box portion, a fabric covering for said box portion, an address flap having one edge hingedly secured to said cover, and means for securing said flap in position on either side of the hinged edge for the purpose of concealing the address of the sender and revealing the destination of the receiver.

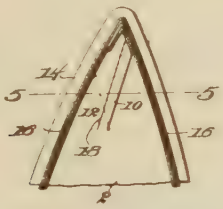
1,417,534. BURIAL CASKET. Francis J. Leo, Buffalo, N. Y. Filed Sept. 10, 1921. Serial No. 499,713. 1 Claim. (Cl. 27—3.)



In a casket, the combination with a body comprising outer and inner metallic layers, and an interposed filling of cork between said layers and arranged with its upper edge exposed, of a cover including outer and inner layers

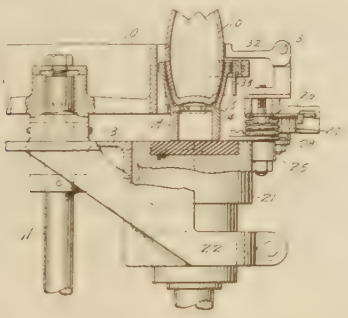
of metal, and an interposed filling of cork, said filling arranged outwardly beyond the inner layer to bear on the upper edge of the body filling, an inner cover superimposed on the body and having a transparent portion, and a seal of plastic material occupying a cavity in the body filling and receiving the edge of the inner cover.

1,417,535. SOLE. AUGUSTINE FRANK LITTLEFIELD, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 4, 1919. Serial No. 315,096. 10 Claims. (Cl. 36—22.)



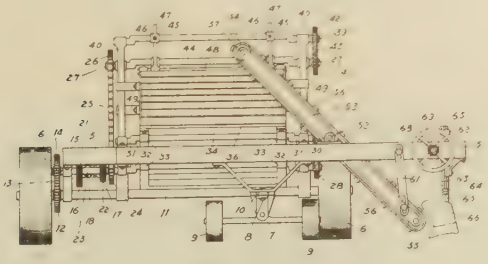
10. A sheet of reinforce for soles having a central longitudinal slit extending inward from one end edge of such length as to permit the two ends thus produced to be overlapped.

1,417,536. PACKAGING APPARATUS. FRANK L. LLOYD, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, a Corporation of Maryland. Filed July 20, 1918. Serial No. 245,796. 3 Claims. (Cl. 226—77.)



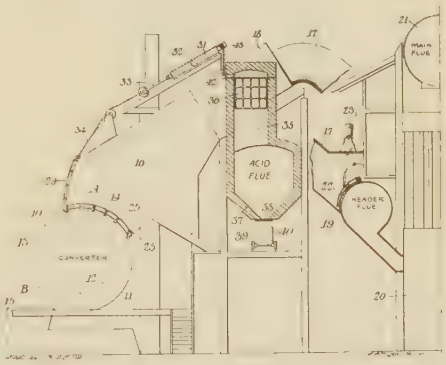
3. In packaging apparatus, a feeding dial having a bottle receiving pocket therein, a support having vertical movement with respect to said dial, an operating lever, a connecting member for swinging said lever, and a wiper located above the dial rim and in the path of the bottles, said wiper being pivotally mounted in said connecting member.

1,417,537. QUACK-GRASS DIGGER. ROBERT LUCY, Olga, N. Dak. Filed Oct. 7, 1921. Serial No. 505,996. 8 Claims. (Cl. 55—51.)



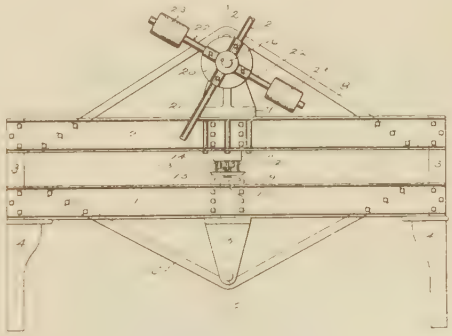
1. A machine of the class described consisting of a wheel supported frame adapted to be drawn, an inclined elevator mounted transversely in the front end of the frame, a plow adapted to turn dirt over onto the lower end of the elevator, a lower shaker positioned longitudinally of the machine, the same having its forward end under the upper end of the elevator and being inclined rearwardly, an upper shaker positioned over the greater part of the lower shaker, said upper shaker being adapted to reciprocate vertically, and means for simultaneously actuating said elevator and shakers.

1,417,538. CONVERTER PLANT. ALEXANDER GRANT MCGREGOR, Warren, Ariz. Filed Aug. 26, 1920. Serial No. 406,119. 27 Claims. (Cl. 266—18.)



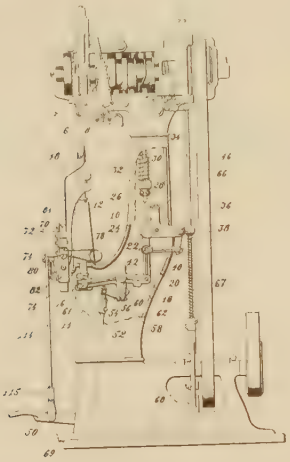
1. The combination with a horizontally disposed, tilting or rotary converter having in its side an opening or spout, and a hood having a mouth disposed about said spout when said converter is in operative position, of means for closing the space between said hood and the outer surface of said converter, said means being adapted to permit rotation of said converter.

1,417,539. PUNCH PRESS. ROBERT M. MACGREGOR, Hartford, Conn. Filed Apr. 30, 1921. Serial No. 465,639. 5 Claims. (Cl. 164—102.)



1. A punch press having a frame comprising a pair of parallel bars arranged horizontally and supported at their ends upon legs, a die bed mounted on said bars intermediate the legs, a pair of parallel bars horizontally arranged and supported at their ends above the first mentioned bars, a ram guide mounted on said upper bars intermediate the end supports, a tool carrying ram movable up and down through said ram guide, rotatory means mounted on said upper bars for reciprocating the ram, and a weighted hand wheel for rotating said ram reciprocating means.

1,417,540. WORK SUPPORT. FRED L. MACKENZIE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 1, 1918, Serial No. 247,732. Renewed July 16, 1921. Serial No. 485,349. 65 Claims. (Cl. 1—41.)

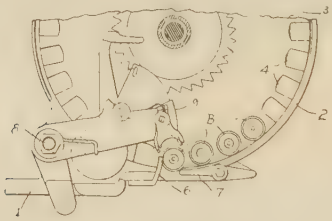


1. In a machine of the class described, a work support movable between work-receiving and work-clamping positions and normally locked in work-receiving position, manually operable means for moving the support toward work-clamping position, and means for automatically adjusting the support to variations in the thickness of work and for locking said support in adjusted position preliminarily to the operation of the machine.

8. In a machine of the class described, a work support movable between work-receiving and work-clamping positions, manually operated means for moving the support toward work-clamping position, spring means for then completing the upward movement of the work support to measure the work, and means for locking the work support after the measuring operation.

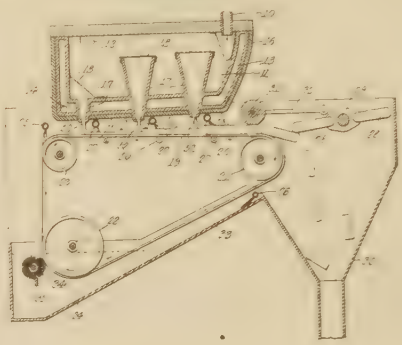
16. In a machine of the class described, a work support normally locked in position on the machine, a spring for moving said support, and manually controlled locking means operative to release said support to the action of the spring and to lock said support at the termination of its movement by the spring.

1,417,541. TRANSFERRING MECHANISM FOR AUTOMATIC FILLING-REPLENISHING LOOMS. EVARISTE MARTIN, Manchester, N. H., assignor of one-half to Azade Duval, Manchester, N. H. Filed May 22, 1920. Serial No. 383,429. 6 Claims. (Cl. 95—45.)



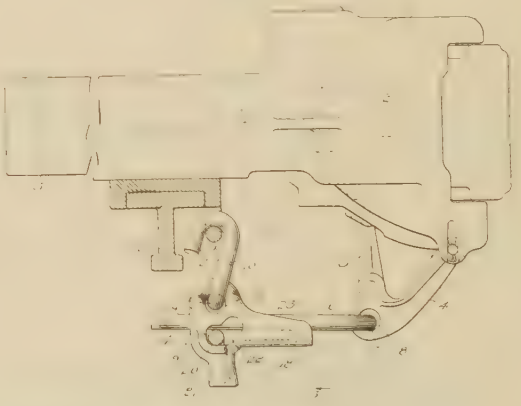
1. In a transferring mechanism for automatic filling replenishing looms, the combination of a head operating on the butt of the filling carrier, with a shaft carried thereby extending from said head parallel with the filling carrier to a point opposite the tip thereof, and grippers carried by the shaft comprising a downwardly extending arm fixed to the shaft and terminating in a fixed jaw in position to enter the shuttle and to engage the filling midway on the winding cone at the tip end of the filling carrier; a movable arm pivoted to the shaft adjoining the fixed arm and terminating in a movable jaw in position to enter the shuttle and having a closing finger in position to engage the top of the filling carrier when the head and shaft descend to transfer the filling, so located and of such shape that as the grippers descend it will engage the filling carrier and close the movable jaw on the fixed jaw, thereby gripping the filling on the filling carrier near the tip and holding the filling carrier firmly in position until the head and shaft are withdrawn, together with a spring adapted to normally separate the movable jaw from the fixed jaw.

1,417,542. PROCESS AND APPARATUS FOR CASTING HOT LIQUID MATERIAL. JOHN L. MAUCH, Brooklyn, N. Y. Filed May 10, 1921. Serial No. 468,223. 25 Claims. (Cl. 18—57.)



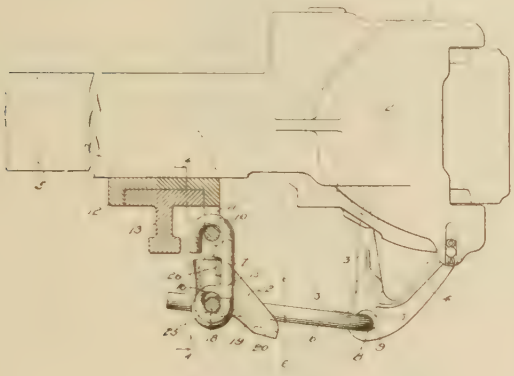
1. The herein described method of casting hot liquid material which consists in depositing said material in a thin layer upon a moving and previously wetted rubber-surfaced carrier and thereafter artificially cooling said material.

1,417,543. UNCOUPLING MECHANISM. ISAAC H. MILLIKEN, Aspinwall, and WILLIAM J. REGAN, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1921. Serial No. 505,690. 14 Claims. (Cl. 213—59.)



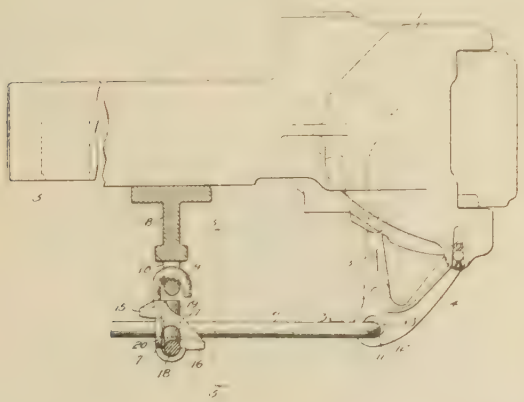
1. In an uncoupling mechanism, the combination with a car coupler and its lock, of means for moving said lock to unlocked position, said means involving a rotatable member operatively connected to said lock, means for actuating said rotatable member, an uncoupling lever for operating said actuating means, and swinging means pivotally connected to said actuating means at the center of rotation of said rotatable member for supporting said actuating means.

1,417,544. UNCOUPLING MECHANISM. ISAAC H. MILLIKEN, Aspinwall, and WILLIAM J. REGAN, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1921. Serial No. 505,691. 14 Claims. (Cl. 213—59.)



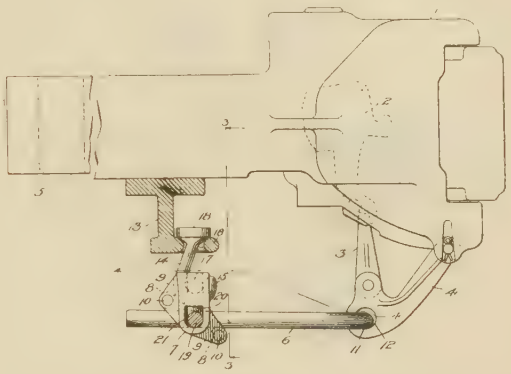
1. In an uncoupling mechanism, the combination with a car coupler and its lock, of means for moving said lock to unlocked position, said means involving a member pivotally connected to said coupler, a link interposed between and movably connecting said pivoted member and said lock, a rotatable member operatively connected to said lock, means adapted to swing lengthwise of the car engaging and supporting said rotatable member rearwardly of said lock, and means movable with respect to said swinging means for engaging and actuating said rotatable member.

1,417,545. UNCOUPLING MECHANISM. ISAAC H. MILLIKEN, Aspinwall, and WILLIAM J. REGAN, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1921. Serial No. 505,692. 12 Claims. (Cl. 213—59.)



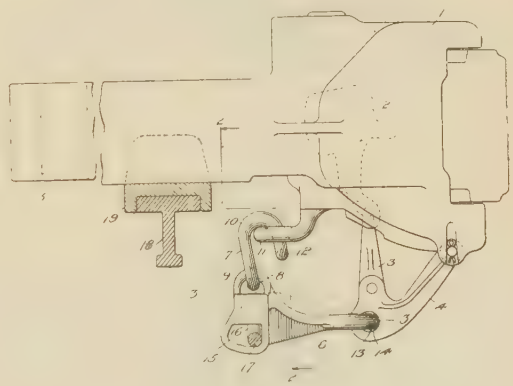
1. In an uncoupling mechanism, the combination with a car coupler and its lock, of means for moving said lock to unlocked position, said means involving a rotatable member operatively connected to said lock and extending rearwardly therefrom, the center of rotation of said member being to the rear of said lock and at a fixed distance from the adjacent end of the car, and swinging means for supporting said rotatable member, said last named means being movable with respect to said rotatable member and being adapted to swing upon the center of rotation of said member.

1,417,546. UNCOUPLING MECHANISM. ISAAC H. MILLIKEN, Aspinwall, and WILLIAM J. REGAN, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1921. Serial No. 505,693. 11 Claims. (Cl. 213—59.)



1. In an uncoupling mechanism, the combination with a car coupler and its lock, of means for moving said lock to unlocked position, said means involving a swinging member provided with a plurality of spaced anti friction rollers, means for movably supporting said swinging member, a rotatable member operatively connected to said lock and extending between said rollers, and means for actuating said swinging member to cause said rotatable member to perform an unlocking movement.

1,417,547. UNCOUPLING MECHANISM. ISAAC H. MILLIKEN, Aspinwall, and WILLIAM J. REGAN, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1921. Serial No. 505,694. 11 Claims. (Cl. 213—59.)

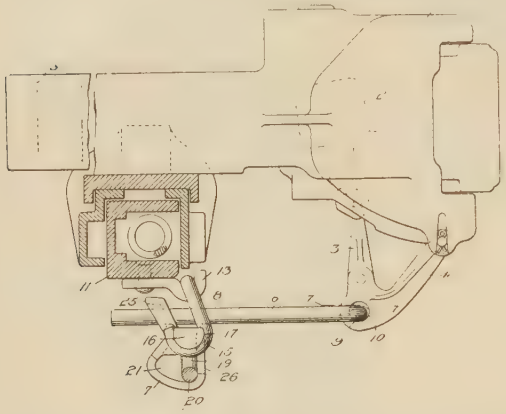


1. In an uncoupling mechanism, the combination with a car coupler and its lock, of means for moving said lock to unlocked position, said means involving a rotatable member operatively connected to said lock, means for actuating said rotatable member, and means coextensively movable with said coupler lengthwise of the car and adapted to swing in said lengthwise direction for supporting said rotatable member rearwardly of said lock.

1,417,548. UNCOUPLING MECHANISM. ISAAC H. MILLIKEN, Aspinwall, and WILLIAM J. REGAN, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1921. Serial No. 505,695. 12 Claims. (Cl. 213—59.)

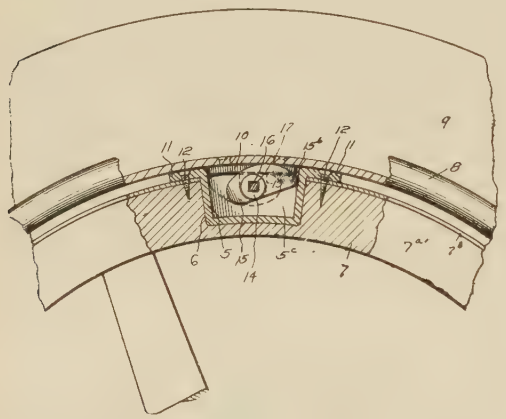
1. In an uncoupling mechanism, the combination with a car coupler, its lock and carrier iron, of means for moving

said lock to unlocked position, said means involving a rotatable member operatively connected to said lock, a bail swingingly supported by said carrier iron, means pivotally



connected to said bail adapted to actuate said rotatable member, and an uncoupling lever supported on said actuating means at a point below the point of pivotal support of said actuating means.

1,417,549. LOCK FOR DEMOUNTABLE RIMS AND TIRES. ROBINSON MONCURE, Alexandria, Va. Filed Apr. 21, 1921. Serial No. 463,110. 4 Claims. (Cl. 301—29.)

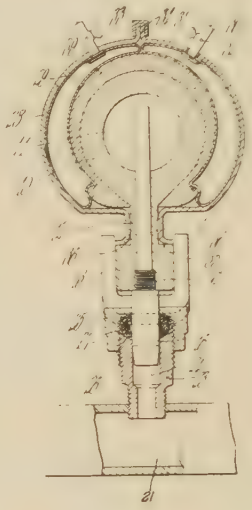


1. A rim lock of the character described comprising a housing adapted to be inserted in a recess formed in the face of the felloe of a wheel, a cam mounted in said housing and having hubs upon its opposite sides which have bearing in the side walls of said housing, means for imparting partial rotation to said cam from the exterior of the housing, the said cam being adapted to exert lateral thrust against an inwardly extending projection of a demountable rim.

1,417,550. INCUBATOR EGG TRAY. WILLISTON L. MORSE, Pawnee City, Nebr. Filed Feb. 20, 1920. Serial No. 360,025. 3 Claims. (Cl. 119—44.)

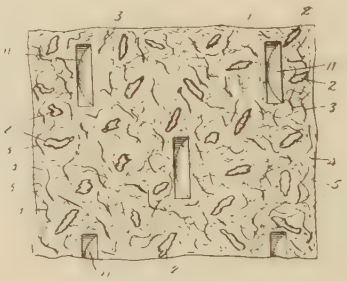
1. In an incubator tray having side walls provided with slots, rollers supported in the slots, an endless belt trained over the rollers and constituting a bottom for the incubator, an intermediate roller for the belt supported on the sides of the incubator, an adjustable guide roller over the intermediate roller adapted for engagement with the belt, and means for actuating the intermediate roller whereby to move the belt and turn the eggs resting thereupon.

1,417,551. VULCANIZING EQUIPMENT. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 11, 1919, Serial No. 316,665. Renewed Sept. 24, 1921. Serial No. 503,084. 14 Claims. (Cl. 18—38.)



3. A vulcanizing unit comprising a core, means for heating the core, and a mold surrounding the core and constructed and arranged to exert a yielding pressure upon a tire casing mounted on the core.

1,417,552. INDENTED FIBER BOARD. CARL G. MUENCH, St. Paul, Minn. Filed Sept. 29, 1920. Serial No. 413,549. 2 Claims. (Cl. 72—124.)

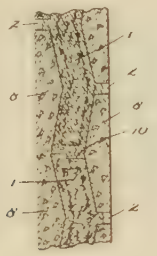


1. The herein described new article of manufacture comprising a board composed of a plurality of classes of felted cellulose fibers and provided with clean cut indentations, substantially as described.

1,417,553. CONCRETE BUILDING CONSTRUCTION. CARL G. MUENCH, St. Paul, Minn. Filed Sept. 29, 1920. Serial No. 413,550. 3 Claims. (Cl. 72—45.)

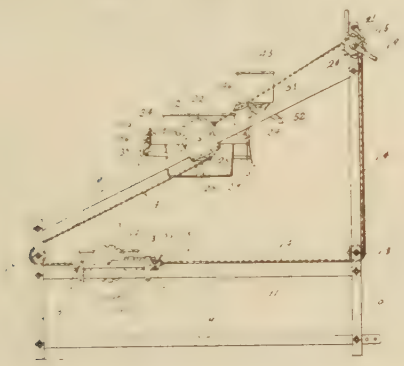
1. A concrete building construction comprising a wall having a continuous core of fibrous felted material entrain-

ing an abnormal quantity of air, and coated on both sides with a plastic material and having interlocking connections



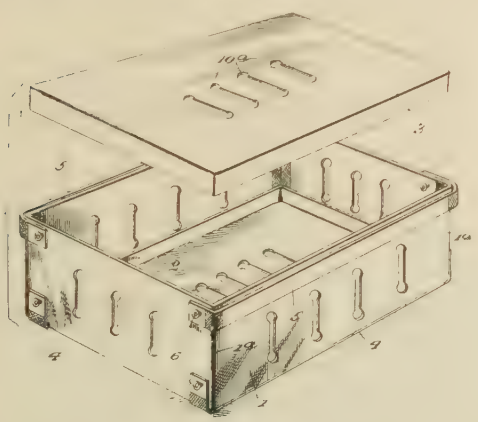
between said fibrous and plastic materials, substantially as described.

1,417,554. AUTOMATIC CALF FEEDER. MATH NEUMANN, St. Cloud, Minn. Filed Aug. 6, 1920. Serial No. 401,721. 9 Claims. (Cl. 119—81.)



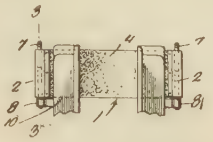
1. In an apparatus of the kind described, the combination with a frame having two sets of track rails, of two sets of travellers mounted on the track rails, means for simultaneously moving the two sets of travellers in reverse directions, a supplemental frame carried by one set of the travellers and a trough carried by the other set thereof, and pail holders carried by the supplemental frame.

1,417,555. CRATE. HENRY G. ORTH, Fulton, N. Y. Filed July 3, 1920. Serial No. 393,912. 5 Claims. (Cl. 229—41.)



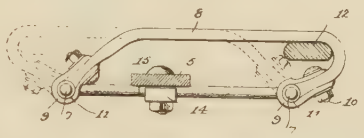
5. A crate comprising a collapsible shell, swingable flexible top and bottom confining bails permanently pivoted to and collapsible with the shell, and a separate top and a separate bottom for said shell.

1,417,556. TYPEWRITER PAD. BLANCHE G. OSBORNE, Corning, Iowa. Filed Sept. 20, 1919. Serial No. 325,115. 1 Claim. (Cl. 197—150.)



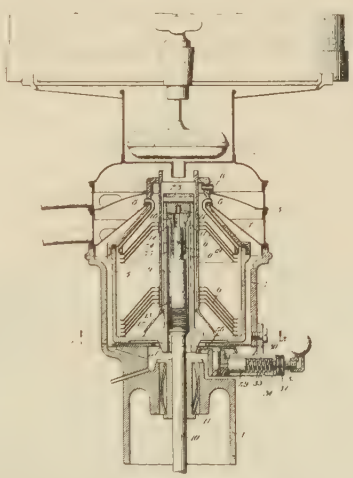
A typewriter pad comprising inked fabric, tubular supports engaging the opposite ends thereof, said supports being split longitudinally and provided with radially extending clamping lips to receive the ends of the pad and to connect them to the ribbon vibrator of a typewriter.

1,417,557. PICKER-STICK CHECK. WILLIAM M. PATTERSON, Greenville, S. C. Filed Dec. 1, 1921. Serial No. 519,151. 6 Claims. (Cl. 139—22.)



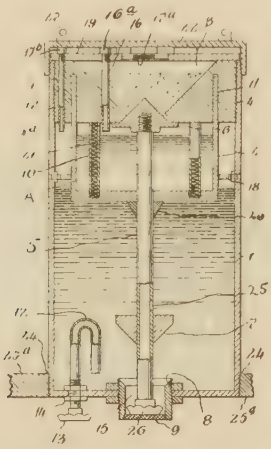
5. A picker-stick check consisting of a pair of vertical pivots and means for attaching them underneath the lay at one side thereof and at a distance apart, and a flexible check strap having its ends pivotally connected to said pivots.

1,417,558. CENTRIFUGAL SEPARATOR. ERIC G. PEARSON, Elizabeth, N. J. Filed Apr. 26, 1921. Serial No. 464,720. 15 Claims. (Cl. 64—48.)



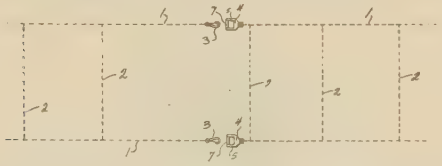
13. In a separator of the class described, a spindle, a bowl provided with a central tube surrounding said spindle and rotated therefrom, the inside diameter of said tube being substantially larger than said spindle, a yielding sleeve surrounding said spindle, a cone adapted to expand said sleeve to cause it to frictionally engage the inner surface of said tube, said cone being provided with a flat bowl-supporting surface upon which the weight of the bowl rests, said yielding sleeve and flat bowl-supporting surface affording means permitting bodily lateral movement of said bowl with respect to said spindle, and means connecting said bowl and spindle for effecting positive rotation of the bowl with the spindle in all of its positions thereon.

1,417,559. FIRE EXTINGUISHER. GEORGE T. PEARSONS, New York, N. Y. Filed Mar. 29, 1915. Serial No. 17,878. 28 Claims. (Cl. 169—27.)



1. A portable sprinkler fire extinguisher comprising in combination a reservoir to contain extinguishing liquid and having a discharge outlet; a gas generator in said reservoir having an outlet leading into the reservoir, said generator having means therein to normally maintain gas generating material in a separated condition, and said means having a part to extend to the exterior of the reservoir and discharge the liquid from the reservoir therethrough; and fusible means with which said extending portion engages to position said part within the reservoir and with the connected means in the generator in position to maintain the gas generating materials in a separated condition, and the fusing of said fusible means permitting said means to move and the gas generating materials to mix in the generator.

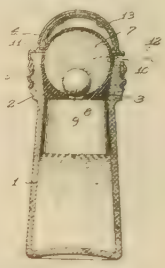
1,417,560. ANTISKIDDING DEVICE. WILLIAM H. PENDLETON, Washington, D. C. Filed Mar. 18, 1922. Serial No. 544,909. 1 Claim. (Cl. 152—14.)



An anti-skidding device comprising flexible side members, cross members connecting the same and adapted to extend over the tread of a wheel, a securing member carried by an end of each of the side members, an eye member carried by the opposite end portion of each of the side members, said eye member having side arms of a length and spaced apart a distance to permit the ready insertion through the eye member of the securing member at the opposite end of the side member through the eye member, and a roller carried by the outer portion of the eye member and interposed between the outer extremities of the side arms, the end cross member adjacent the securing members being positioned a material distance inwardly of the securing members, the end cross members adjacent the eye member being in close proximity thereto.

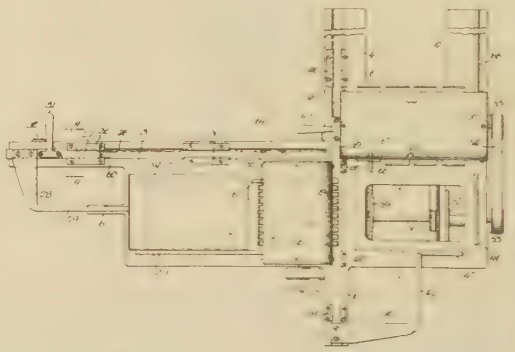
1,417,561. CONTAINER FOR STERILE LIQUIDS. GUSTAF A. PERSSON, Mount Clemens, Mich., assignor to The Persson Laboratories, Mount Clemens, Mich., a Corporation of Michigan. Filed Nov. 5, 1921. Serial No. 513,214. 5 Claims. (Cl. 215—47.)

1. A device for dispensing sterile liquids comprising a container, a stopper for the container consisting of a material adapted to permit the introduction therethrough of a hypodermic needle, and a cap for said stopper having



an antiseptic lining therein in contact with said stopper when the cap is in closed position.

1,417,562. CUTTING MACHINE. FRANK M. PETERS and WARREN H. HUNGERFORD, Chicago, Ill., assignors to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1920. Serial No. 348,908. 7 Claims. (Cl. 146—12.)



1. In a device of the class described, the combination of a frame having two spaced sets of cutting devices, a holder for material to be operated on, and independently operable propelling means for moving the holder through each set of cutters.

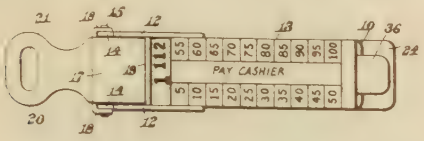
1,417,563. HINGE STRUCTURE. EDWARD H. PHIPPS, Cincinnati, Ohio. Filed Sept. 25, 1919. Serial No. 326,166. 2 Claims. (Cl. 16—11.)

1. A device of the class described comprising two sections, similar marginal portions of the sections being provided with knuckles adapted to intermesh when the sections are closed one with respect to the other, pintles insertable through the knuckles from opposite sides, and means for locking said pintles in working position.

1,417,564. CHECK HOLDER AND PUNCH. THOMAS R. F. POTTER, Brooklyn, N. Y. Filed May 11, 1921. Serial No. 468,793. 15 Claims. (Cl. 164—119.)

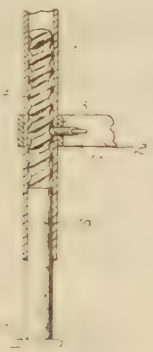
1. In a device of the class described, the combination of a rigid support for a pad of checks; a member movable relatively to said support and having an opening therein; and an immovable punch secured to said support

and always positioned in said opening in all positions of said movable member, said punch having shearing edges



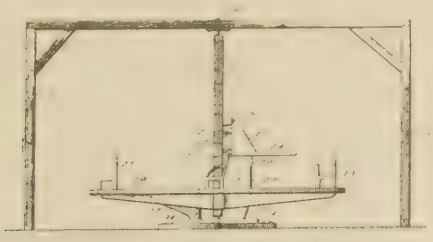
normally above said movable member, but adapted to coact with the edges of said opening when said member is moved toward said support.

1,417,565. MOTORMAN'S STOOL. JAMES S. RALPH, Sullivan, Mo. Filed Sept. 8, 1921. Serial No. 499,263. 1 Claim. (Cl. 155—88.)



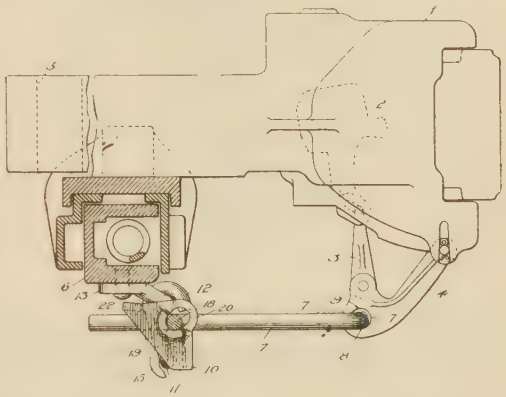
A stool comprising a seat, a supporting frame therefor, and a plurality of springs interposed between said seat and supporting frame, said frame comprising a plurality of tubular legs, a disc secured to the upper ends of the legs, an extension screw positioned in the lower end of each of said legs and independently operable to adjust the length of the leg, a thumb screw traversing each leg and adapted to cooperate with the threads of the extension screw to secure the same in place or to effect a slight adjustment of the extension screw on turning thereof after loosening the thumb screw.

1,417,566. AMUSEMENT DEVICE. JOSEPH MONTGOMERY REALING, Daytona, Fla. Filed June 29, 1921. Serial No. 481,267. 5 Claims. (Cl. 46—27.)



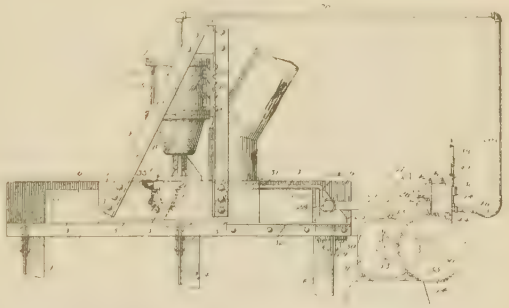
2. An amusement device of the character described comprising in combination a vertical shaft, means for rotatably supporting said shaft, a turntable carried by said shaft, a seat supported upon said turntable, a lever arm pivoted at its one end to said shaft and adapted to be swung radially of the shaft by an occupant of the seat, a bar having its one end pivotally connected to said lever arm and its free end pointed, said bar depending from the lever arm, and a track disposed beneath the turntable, said track being of relatively soft material and with which the pointed end of the bar is adapted to engage whereby said bar will serve as a stop for swinging movement of the lever arm in one direction and thereby permit the propelling of the shaft and turntable by the occupant of the seat upon oscillating said lever arm.

1,417,567. UNCOUPLING MECHANISM. WILLIAM J. REGAN, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1921. Serial No. 505,684. 11 Claims. (Cl. 213—59.)



1. In an uncoupling mechanism, the combination with a car coupler and its lock, of means for moving said lock to unlocked position, said means involving a rotatable member operatively connected to said lock and extending rearwardly therefrom, means supportingly engaging and adapted to actuate said rotatable member, and swinging means pivotally connected to said actuating means below said rotatable member.

1,417,568. MOLDING MACHINE. THOMAS A. REYNOLDS, Crafton, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1921. Serial No. 455,023. 14 Claims. (Cl. 22—42.)

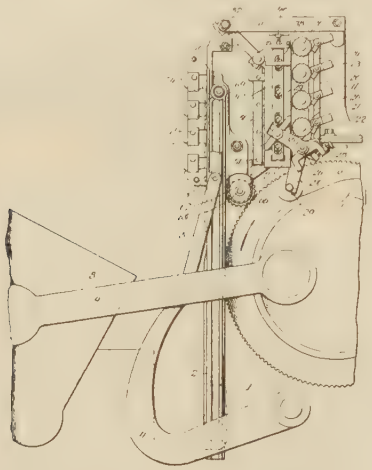


1. In a molding machine, the combination with mold box supporting means, of a series of mold boxes slidably supported on said means, reciprocating means adapted to engage successive mold boxes to effect an intermittent shifting thereof upon said supporting means, stationary means for supplying sand to successive mold boxes, means movable with said reciprocating means for controlling the supply of sand from said sand supplying means, and means for pressing the sand in successive mold boxes.

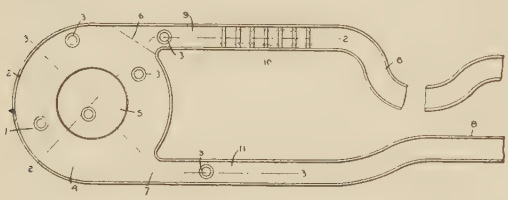
1,417,569. MULTICOLOR-PRINTING PRESS. CHARLES A. RICHARDS, Chicago, Ill., and MABEL M. RIESTER, Buffalo, N. Y. Filed Sept. 4, 1917. Serial No. 189,440. 14 Claims. (Cl. 101—194.)

1. A multi-color printing press having a plurality of sets of ink fountains each set containing a plurality of

individual fountains, a plurality of sets of printing forms corresponding to the number and arrangement of fountains, an ink distributing system individual to each set of fountains, and selecting means for selectively causing the transfer of ink from said systems to said forms.



1,417,570. AMUSEMENT DEVICE. HERBERT N. RIDGWAY, Winthrop, Mass. Filed Feb. 11, 1920. Serial No. 357,873. 8 Claims. (Cl. 46—27.)

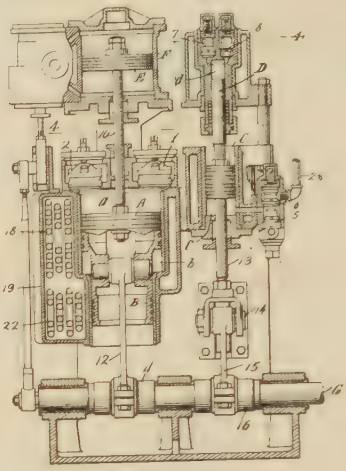


3. In an amusement device, the combination with an enclosure having a car-exit opening, of a plurality of cars within said enclosure, each adapted to travel in any direction, means within the enclosure constructed to act on any car which may occupy a predetermined portion of the enclosure to positively propel said car in an indeterminate direction whereby there is always a possibility that any car may be propelled through said exit opening, and means to receive a car thus propelled through the opening and conduct it away from the opening.

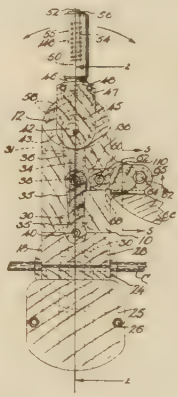
1,417,571. AIR COMPRESSOR. MICHAEL RIESNER, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, a Corporation of Virginia. Filed Apr. 13, 1920. Serial No. 373,611. 9 Claims. (Cl. 230—32.)

1. In an air compressor, the combination with a two-throw crank shaft, of a differential piston and chambers forming the first and second stages of the compressor, a steam cylinder arranged above and having its steam piston connected directly to said differential piston, and one or more cylinders and pistons forming a higher stage or stages of the compressor arranged at the side of the steam cylinder and differential piston and connected to the crank shaft by a single crank.

8. In an air compressor, the combination with a differential piston and chambers forming the first and second stages of the compressor, of a cooling chamber forming an extension of the jacket space of the cylinder and cooling coils for the first and second stages arranged one above the other in said chambers, one or more cylinders and pistons forming a higher stage or stages mounted on the crank shaft in line with the differential piston, a cooling chamber extending vertically along the higher pressure cylinder or cylinders, and a cooling coil or coils for the higher stage or stages in said cooling chamber.

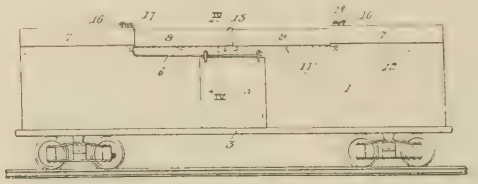


1,417,572. AERIAL TRAMWAY GRIP. EDWARD H. SACKETT, Arvada, Colo. Filed Mar. 10, 1921. Serial No. 451,320. 4 Claims. (Cl. 104—218.)



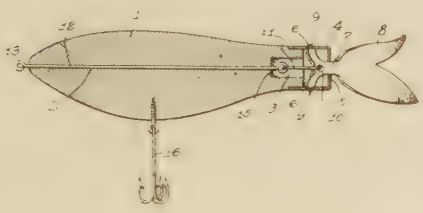
1. An aerial tramway grip comprising a block, a pair of cable-engaging jaws on said block, one of said jaws being movable on the block, a toggle connected at one end with the movable block, and means to move the toggle to move the block, the other end of the toggle being pivoted on an adjustable pin whereby the clamping position of the movable jaw may be adjusted.

1,417,573. ROOF CONSTRUCTION FOR FREIGHT CARS. PAUL SALATA, Natrona, Pa. Filed Sept. 22, 1921. Serial No. 502,354. 5 Claims. (Cl. 105—377.)



1. A freight car comprising a body having fixed end roof sections and central slidable roof sections mounted on the car body and adapted when in open position to underlie the fixed end roof sections.

1,417,574. ARTIFICIAL FISH BAIT. WILLIAM SCHMID, Bronson, Mich. Filed July 14, 1921. Serial No. 484,622. 5 Claims. (Cl. 43—46.)

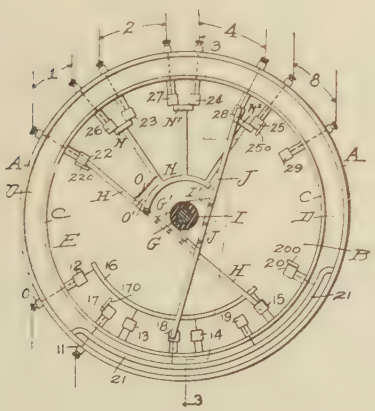


2. An artificial bait having a pivoted tail piece, with a defined lateral movement, and a line member axially of said bait and loosely attached to said tail piece between its plane of pivot and the rear end of said tail piece and adapted for shifting said tail piece.

1,417,575. SLIDE FOR RIBBON WATCH GUARDS. CHARLES H. SHERMAN, North Attleboro, Mass. Filed July 17, 1920. Serial No. 397,023. 1 Claim. (Cl. 63—22.)

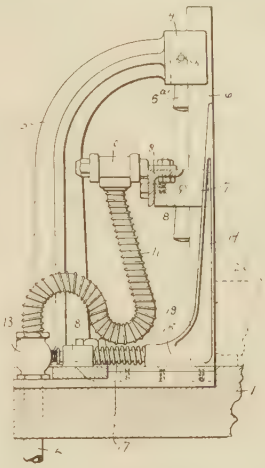
An improved slide for ribbon watch-guards comprising an ornamental panel having slits at its ends forming lateral cross-bars to adapt the ribbon to be passed over said bars through the slits and in back of the panel, one of said cross-bars being provided with a clasp-member extending therefrom and bent around to overlie the back of the panel in spaced relation to the ribbon passing thereacross, said clasp being adapted for insertion under the edge of the wearer's waistcoat or other garment to hold the slide and ribbon flat thereagainst while allowing for the adjustment of the ribbon through the slide.

1,417,576. MULTIPOLAR SWITCH. PAUL SIBLEY, Worcester, Mass. Filed Mar. 26, 1921. Serial No. 455,907. 3 Claims. (Cl. 200—5.)



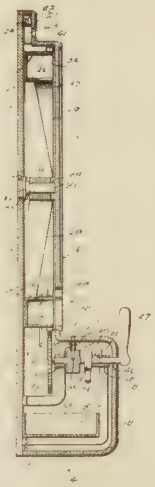
1. An electric switch having two series of contacts arranged in pairs, two distributer, bars co-operating therewith, and a contact piece carried by one of the distributer bars for connecting the contacts of each pair.

1,417,577. CORE-MAKING MACHINE. OLOF SKEPPSTEDT, Moline, Ill. Filed Sept. 13, 1920. Serial No. 409,985. 6 Claims. (Cl. 22—56.)



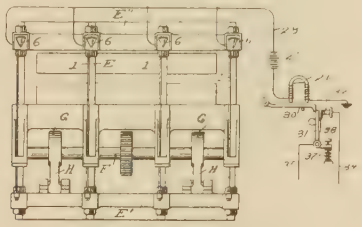
6. A device of the class described, comprising a table; a core-box movably supported on said table; vibratory devices normally inoperative, rigidly supported on said table, and means, whereby a limited lateral movement of said box will cause said vibratory devices to operate.

1,417,578. VENDING MACHINE. GOODWIN B. SMITH, Philadelphia, Pa., assignor to The Junoform Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 16, 1920. Serial No. 431,249. 1 Claim. (Cl. 211—8.)



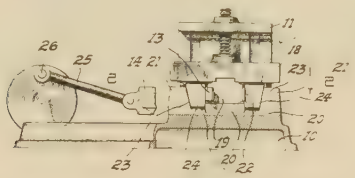
A vending machine of the character described comprising, an upstanding casing provided upon its forward face and in its lower portion with a main opening which is wholly unobstructed and a finger opening at one side of the main opening and in free communication with such main opening, said finger opening being entirely unobstructed, a rotatable carrier held within the casing and embodying an annular set of pockets adapted to receive articles arranged horizontally therein, each pocket having its rear end closed and its forward end open and wholly unobstructed and adapted for movement into registration with the main opening, each pocket being provided upon one side with a finger opening in communication with the interior of the pocket and adapted for registration with the first named finger opening, the finger opening in the pocket being disposed wholly within said casing, and means to turn the carrier.

1,417,579. TENSION INDICATOR FOR DRAWING PRESSES. REUBEN STANLEY SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Apr. 7, 1919. Serial No. 288,084. 21 Claims. (Cl. 192—116.)



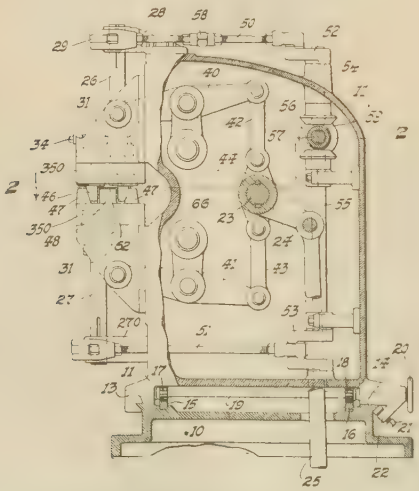
1. The combination with a pressure applying carrier, a driving motor operatively connected to transmit power to the carrier, an indicator rod mounted upon the power receiving end of the carrier, an index gauge mounted upon the working end of the carrier, a pointer in operative relation to the gauge and controlled as to its movement by the indicator rod, and a mechanism controlled by said indicator rod for unclutching the motor.

1,417,580. LAPPING MECHANISM. REUBEN STANLEY SMITH and THORVALD HANSEN, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed July 26, 1920. Serial No. 399,214. 17 Claims. (Cl. 153—25.)



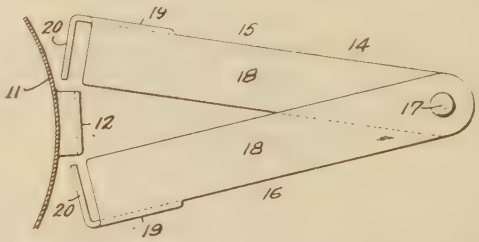
1. A mechanism for bending the projecting ends of a flanged cross bar, comprising means for clamping the bar at the bending line, and means operating upon the said projecting ends to turn the latter about said bending line and into angular positions with relation to the longitudinal axis of the cross bar.

1,417,581. LAPPING PRESS. REUBEN STANLEY SMITH and THORVALD HANSEN, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed July 26, 1920. Serial No. 399,215. 27 Claims. (Cl. 153—16.)



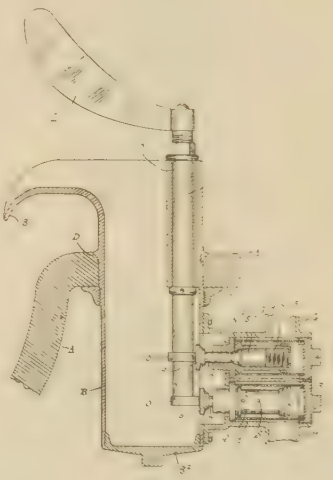
1. A lapping press for bending the projecting ends of the flanges of a channeled bar, including means for supporting the bar, clamping jaws movable toward and from each other to engage the side flanges of a channel bar carried by said support, a pair of rotatable shafts each having a lapping die adapted to bear against the projecting end of one of the flanges, the axis of each shaft being in substantial alignment with the bending line of the said projecting end, and means for simultaneously actuating said shafts to turn the projecting ends of said flanges from their initial planes.

1,417,582. CULINARY VESSEL. THEODORE D. C. SMITH, South Porcupine, Ontario, Canada. Filed Sept. 10, 1921. Serial No. 499,750. 8 Claims. (Cl. 53—7.)



2. In combination with a vessel having an eye thereon a removable handle comprising a pair of pivotally connected arms, and transversely disposed claws on said arms adapted for engagement with the vessel eye and disposed at such distances from the handle pivot that they will assume overlapping relation in closed position of the handle.

1,417,583. LAVATORY FIXTURE. WILLIAM B. STRATTON, Detroit, Mich. Filed Aug. 27, 1921. Serial No. 495,924. 7 Claims. (Cl. 4—24.)

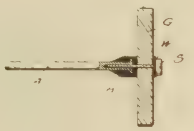


1. The combination with a bowl or other receptacle, of an open top auxiliary receptacle provided with a discharge lip overhanging said first-mentioned receptacle, and means for admitting hot and cold water into the lower portion of said auxiliary receptacle and controlling means operable from the top thereof.

1,417,584. MANDREL FOR ABRASIVE AND POLISHING TOOLS. HERMAN FREDERICK STEMPEL, Jr., Fort Madison, Iowa. Filed Jan. 13, 1921. Serial No. 436,995. 9 Claims. (Cl. 32—13.)

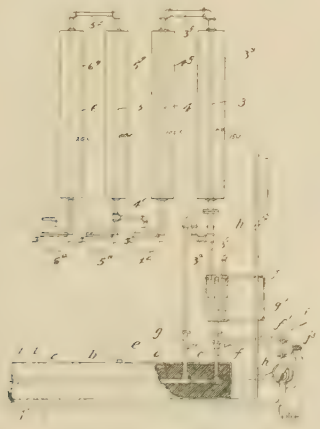
1. A mandrel comprising, in comination, an arbor bored at one of its ends, a head of irregular outline formed

on the bored end of the arbor, a cushioning sleeve embracing the bored end of the arbor and said head, a



clamping screw threadedly fitted within the bore of the arbor, and a resilient washer mounted on the shank of said screw.

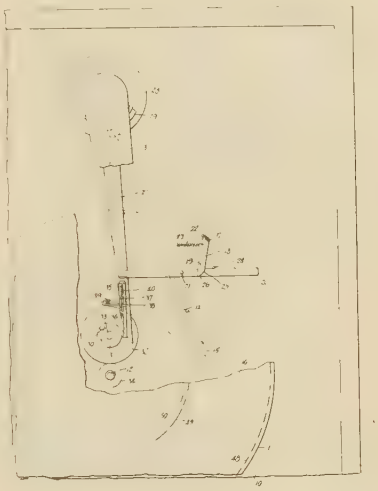
1,417,585. APPARATUS FOR USE IN CONNECTION WITH CHEMICAL AND PHYSICAL OPERATIONS. ALEXANDER THOMAS STUART and GUY NOVERRE MIDDLETON, Toronto, Ontario, Canada, assignors to The Toronto Power Company Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed July 5, 1917, Serial No. 178,702. Renewed Dec. 27, 1920. Serial No. 433,425. 11 Claims. (Cl. 204—31.)



1. An apparatus for use in connection with chemical and physical operations requiring high temperatures and pressures, comprising a closed reaction chamber whose wall is of material having high electrical resistance, an intake and an offtake therefor, electrical conductors establishing a circuit through the wall of the reaction chamber to create the desired reaction temperature, and pressure resisting means surrounding the reaction chamber to support it against internal pressure.

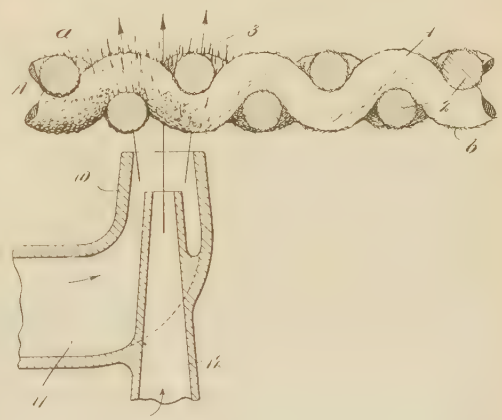
1,417,586. NONSET AUTOMATIC STOP FOR PHONOGRAPHS. GEORGE H. TAGGART, Port Washington, N. Y. Filed Dec. 7, 1920. Serial No. 428,953. 6 Claims. (Cl. 192—116.)

1. In a non-set stop for phonographs, the combination with a rotating member and a reproducing device movable during the normal playing of the record in a predetermined direction over the rotating member, of an automatic brake, means to cause the reproducing device to cooperate with the automatic brake as the end of the record is approached, and a safety device to prevent the premature setting of the brake device, said safety device including a member acted upon by the rotating member aforesaid during the preliminary turns thereof, to cause



the withdrawing of the safety device out of its position to permit subsequently the intended operation of the brake device.

1,417,587. METHOD OF CLOTH FINISHING AND PRODUCT THEREOF. FRANCIS W. TULLY, Chestnut Hill, Mass. Filed Apr. 19, 1920. Serial No. 374,928. 30 Claims. (Cl. 91—68.)

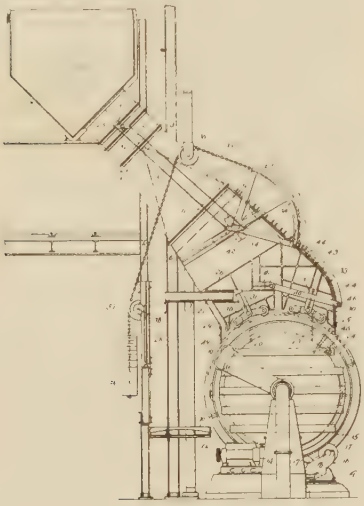


1. The art of treating textile fabrics comprising as a step providing an artificial integument for discrete fibres of the structural yarns of the fabric by evaporation of a sparingly applied limpid solution containing an elastic horny substance and an excess of solvent, and avoiding matting or adhesion of the fibres together.

1,417,588. CONVERTER HOOD. CHARLES VAN AMBURGH, Tacoma, Wash., assignor to American Smelting & Refining Company, a Corporation of New Jersey. Filed July 21, 1917, Serial No. 181,968. Renewed Sept. 26, 1921. Serial No. 503,383. 28 Claims. (Cl. 22—23.)

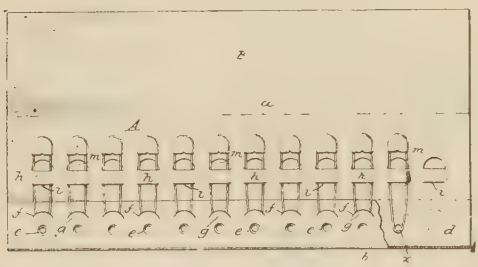
1. In a device of the class described, the combination of a revolvable cylindrical converter shell mounted with its longitudinal axis of rotation horizontally disposed, a curved closure plate having its center of curvature substantially coincident with said axis of rotation and

spaced from the shell, a converter stack projecting laterally from said shell and extending through said plate



and a hood having a lower end engaging said plate and positioned to receive the gases discharged from the shell through the converter stack.

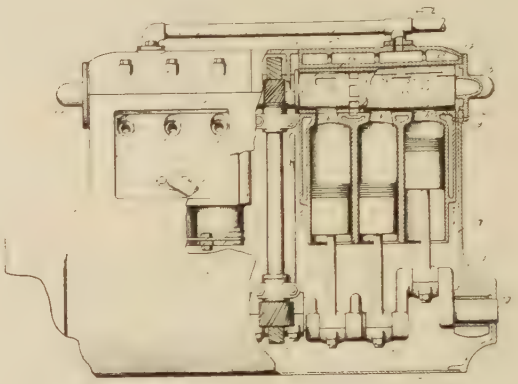
1,417,589. SAFETY-PIN CARD OR PACKAGE. JINDŘICH WALDES, Prague, Bohemia. Filed Aug. 21, 1919. Serial No. 318,946. 3 Claims. (Cl. 206—66.)



1. A holder for safety pins made of flexible material folded to form a body portion and a part turned over upon the body portion to provide a pocket for the coiled ends of the pins, the body portion of the holder being slitted to form a series of loops through which the pins extend and the pocket portion being slitted to receive the coiled portions of the pins.

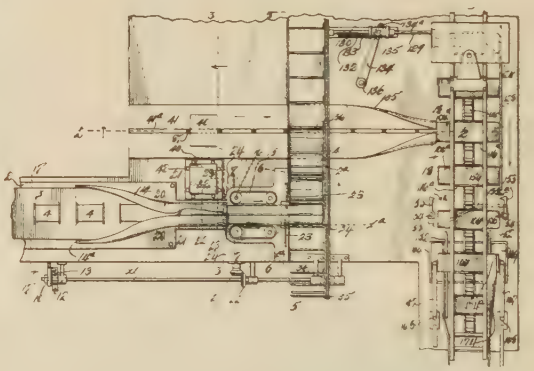
1,417,590. ENGINE VALVE. JOHN R. WARREN and ALFRED BRECHTING, Grand Rapids, Mich., assignors to John R. Warren, Grand Rapids, Mich., Donald J. Campbell, Muskegon Heights, Mich., Charles E. Johnson, Paul R. Beardsley, and Carl P. Damm, all of Muskegon, Mich., trustees. Filed July 3, 1920. Serial No. 393,881. 3 Claims. (Cl. 123—59.)

2. In an engine; a frame; a cylinder longitudinally movable relatively thereto; a rotary-valve casing comprising a portion supported in connection with the frame and another portion supported in connection with the cylinder and having a port communicating with the cylinder; a bushing, between the valve and valve casing, extending over the adjacent parts of said portions of the valve casing and having an opening registering with said port and having a series of axially-extending slits disposed end to end and a second series of axially-extending slits disposed end to end, the slits of one series being staggered relatively to those of the other series and



extending beyond the ends of the slits in said other series; a valve rotatable in said casing and adapted to open and close said port.

1,417,591. MEANS FOR WRAPPING AND PACKING ARTICLES. ERNEST D. ANDERSON, Long Beach, N. Y., assignor to E. D. Anderson, Inc., New York, N. Y., a Corporation of New York. Filed June 24, 1916. Serial No. 105,628. 29 Claims. (Cl. 93—2.)

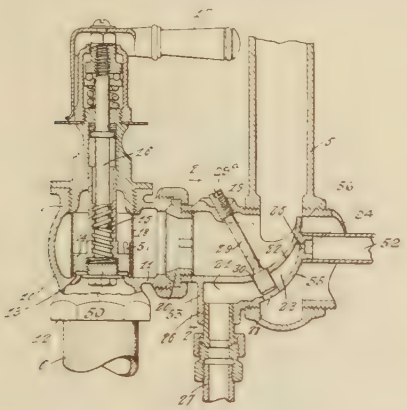


1. An apparatus of the class described comprising means to assemble wrappers and articles together, means to fold the wrappers around the articles after they are assembled, means to sever the wrappers between articles thereon, and means to charge such wrapped articles into cartons.

1,417,592. RADIATOR VALVE. GEORGE H. BUGENHAGEN, Minot, N. Dak. Filed May 13, 1919. Serial No. 296,765. 3 Claims. (Cl. 257—159.)

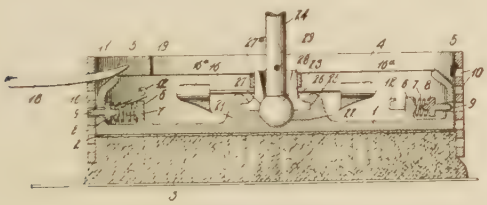
2. In a device of the class described, a tubular connection provided with a retarder, and a trough-shaped conduit for the water of condensation, the conduit being carried by the retarder and the connection being joined at its upper end to the retarder whereby the conduit will be heated by conduction directly from the retarder, the conduit having an outlet, and being provided in its lower

portion with an inlet for the water of condensation; a valve controlling the passage of steam through the con-



nection; and a second valve extended transversely of the connection and the conduit and mounted therein, the said valve controlling the inlet for the water of condensation.

1,417,593. APPARATUS FOR POLISHING PLANE SURFACES. JOHN M. CHRISTINE, Ford City, Pa. Filed Mar. 23, 1921. Serial No. 454,614. 9 Claims. (Cl. 51—195.)



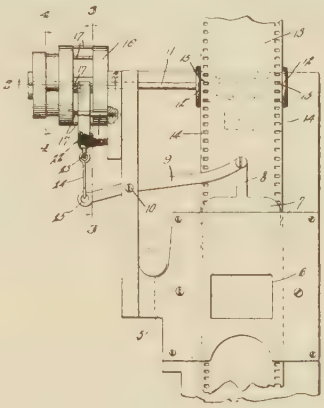
1. In an apparatus for polishing plane surfaces, a plate, a flange rising from the peripheral edge of one side of the plate, a polishing pad attached to the opposite side of the plate, and an adjustable compression member loosely engaging the flange on the plate and bindingly engaging the pad whereby to retain the pad and expose additional portions of the same to compensate for wear.

1,417,594. TOBOGGAN AND SLIDE. EDWARD COE, Battle Creek, Mich. Filed Mar. 20, 1922. Serial No. 545,283. 5 Claims. (Cl. 104—69.)

3. In a device of the class described, a slide embodying rails; and a vehicle having runners traversing the rails, the runners and the rails being provided with spaced ice pockets.

1,417,595. SHUTTER LIFT. HOMER HOLT DANIELS, Oswego, Kans. Filed Sept. 8, 1921. Serial No. 499,247. 1 Claim. (Cl. 88—17.)

In combination with the guide roller and safety shutter of a moving picture apparatus, a shaft for supporting the roller, a wheel including spaced disks, supported on the shaft, rods having connection with the disks, an operating arm associated with the wheel and adapted to be engaged by the rods to move the arm, an actuating arm having connection with the shutter, means for connecting the operating arm and actuating arm, whereby movement of

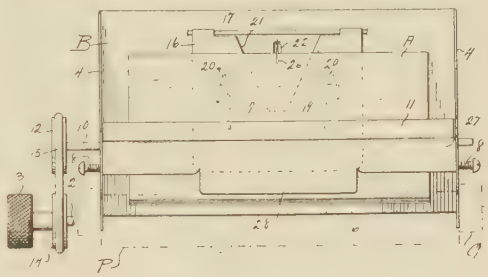


the wheel produces a relative movement of the arm to open or close the shutter, and spring means for moving the wheel in one direction.

1,417,596. INDESTRUCTIBLE GOLD-LEAF CHARACTER AND METHOD FOR PREPARING THE SAME. ANDREW DEVORE, New York, N. Y. Filed Nov. 29, 1920. Serial No. 427,014. 2 Claims. (Cl. 41—37.)

1. The process for the production of an indestructible character which consists in treating a sheet of celluloid with a sizing, then applying gold leaf to the sizing while wet, then giving the sheet a quick bath in hot water, and finally applying a protective coating on top of the gold leaf.

1,417,597. PAPER-FEEDING DEVICE. PAUL A. GALLIEN, Shattuck, Okla. Filed May 23, 1921. Serial No. 471,656. 4 Claims. (Cl. 197—130.)



1. A feeding device of the class described comprising a member adapted to be mounted upon the carriage of a typewriter, a feed roller carried by said member, a follower plate carried by said member and having a marginal portion extending beyond the roller, means for constantly urging said follower plate upwardly and toward the roller, and a penetrating member carried by the first named member and adapted to be disposed through a paper pile superimposed upon the follower plate, the portion of the follower plate remote from the feed roller being provided with a recess, the penetrating member being positioned in a field of the first named member defined by said recess in the follower plate.

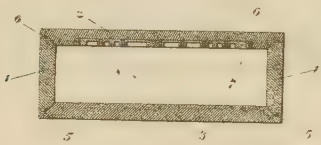
1,417,598. COUPLING OPERATING MECHANISM. ENOCH GEORGE, Jr., Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 18, 1920. Serial No. 417,799. 8 Claims. (Cl. 213—59.)

1. In mechanism of the character indicated, the combination with a laterally movable car coupler, of means

for shifting said coupler laterally, said means involving a lever device, means operatively connecting said lever device and coupler, and a fulcrum for said lever device rigidly mounted on the car, said fulcrum affording a

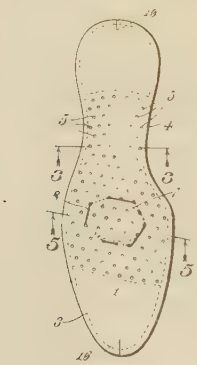
plurality of fulcrum points with any of which said lever device may selectively engage to shift said coupler laterally in either direction, and said lever device and fulcrum normally being in interengaging relation for effecting lateral shifting of said coupler.

1,417,599. MOLD AND METHOD FOR FORMING MONOLITHS. ROBERT F. GRADY, St. Louis, Mo. Filed June 1, 1920. Serial No. 385,617. 5 Claims. (Cl. 25—121.)



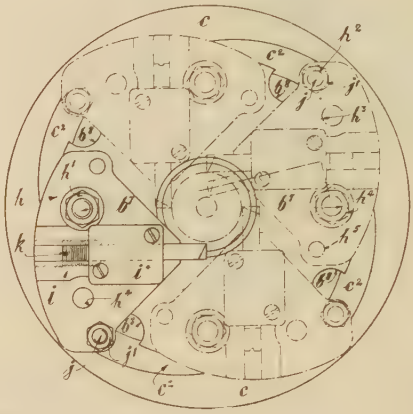
4. A mold, including a wall having a recess in the inner face thereof, solid blocks carrying character forming matrices, and yieldable material for filling said recess and holding said blocks within said recess.

1,417,600. ARCH SUPPORT. LUDWIG GUTMANN, St. Louis, Mo. Filed June 11, 1917. Serial No. 174,017. 8 Claims. (Cl. 36—71.)



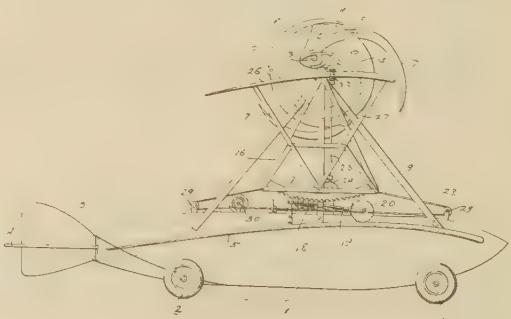
1. An arch support, comprising, an inner sole having an unrestricted pad-receiving surface, a pad adapted for unrestricted, universal adjustment over said surface, and lacing means adapted to secure said pad against shifting.

1,417,601. DIE HEAD OF SCREW-CUTTING MACHINES. CLAUDE WILLIAM HARRIS, Levenshulme, Manchester, England. Filed Apr. 17, 1920. Serial No. 374,775. 3 Claims. (Cl. 10—100.)



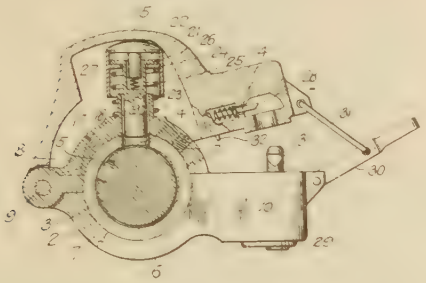
1. A rotary die head suitable for cutting both right and left hand screw threads comprising a hollow spindle, a holder carrier plate rigidly attached to the spindle, a series of die holders each formed with two pivot bearings to right and left of the tool respectively, a stud to connect each die holder to the holder carrier, a slotted cam ring rotatably mounted on the spindle, a projection at the rear of each die holder capable of being attached to one of two positions thereon and means to impart rotary movement to the cam ring, the arrangement being such that each die holder can be swivelled to positions to right and left of a line drawn through the axis of the die head and the pivot of the holder, and each also adapted to hold a die or chaser and allow of such die or chaser being reversed, substantially as herein set forth.

1,417,602. FLYING MACHINE. AUGUST P. HEDBERG, Milford, Mass. Filed June 9, 1919. Serial No. 302,871. 2 Claims. (Cl. 244—13.)



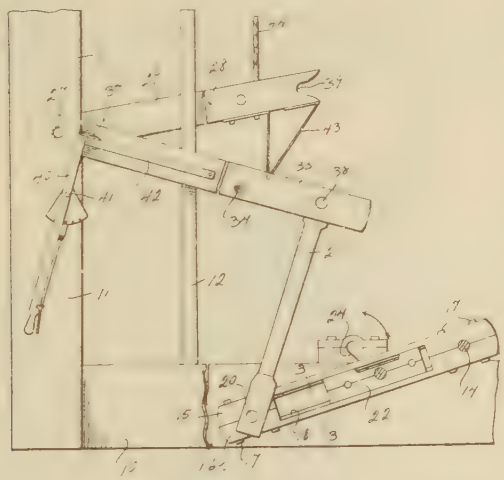
1. In an aeroplane, a body, a superstructure, and a horizontal shaft supported by said body, rotary plates and overlapping curved wings pivoted intermediate their ends adjacent the periphery of said plates, rollers carried by the inner ends of each of said wings, cam tracks for said rollers and means for adjusting said tracks for varying the effective air engaging surfaces of the wings during their revolution.

1,417,603. AUTOMOBILE LOCK. ORVILLE SCOTT HERSHEY, Denver, Colo., assignor to Hershey Manufacturing Company, a Corporation of Colorado. Filed May 24, 1919. Serial No. 299,402. 12 Claims. (Cl. 70—90.)



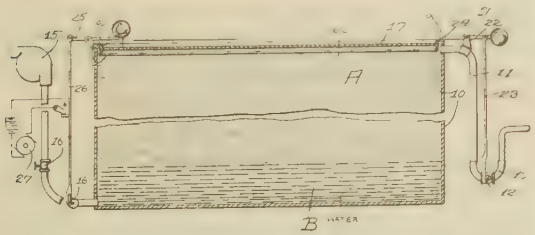
12. A device of the character described comprising a supporting member, a locking bolt thereon, an adjustable member in actuative relation to the locking bolt, and a relatively stationary lock for securing the member in its adjusted position.

1,417,604. COMPOUND WALKING BEAM FOR WELL-DRILLING RIGS. ROBERT W. JAMISON, Mitchell, S. Dak. Filed July 24, 1920. Serial No. 398,667. Renewed Oct. 29, 1921. Serial No. 511,450. 12 Claims. (Cl. 255—11.)



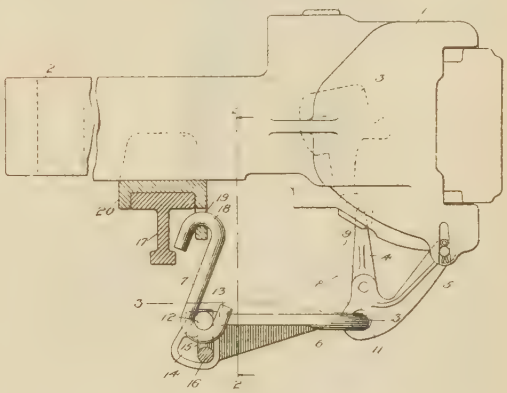
1. A construction of the character described including a constantly reciprocated pitman, a walking beam with which said pitman is adapted to engage at one end, and means for shifting the last named end of the pitman into or out of engagement with the end of the walking beam.

1,417,605. MEANS FOR PREVENTING OIL-TANK FIRES. ROBERT E. JOHNSTON, Congo, W. Va. Filed Nov. 13, 1920. Serial No. 423,919. 3 Claims. (Cl. 220—88.)



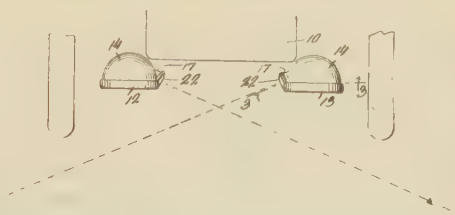
2. The combination with an oil tank, of a disk-like cover having an area slightly less than the area of the oil tank and floating at all times on the oil tank, an oil pipe leading from the upper portion of the tank, a water pipe discharging at the bottom of the tank, valves in the oil pipe and water pipe, means automatically opening the valves in the oil pipe upon an ignition of the oil in the tank, and means for opening the valve in the water inlet pipe including a disk actuated member shifted to a position to open the valve upon a downward movement of the disk.

1,417,606. UNCOUPLING MECHANISM. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1921. Serial No. 505,723. 22 Claims. (Cl. 213—59.)



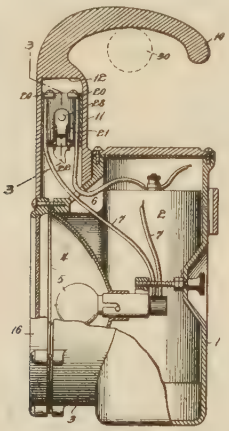
1. In an uncoupling mechanism, the combination with a car coupler, its lock and carrier iron, of means for moving said lock to unlocked position, said means involving a rotatable member operatively connected to said lock and extending rearwardly therefrom, an uncoupling lever, and means for swingingly supporting the rear end of said rotatable member from said carrier iron, said supporting means being adapted to swing lengthwise of the car in response to lengthwise bodily movement of said rotatable member during its unlocking rotation, and said rotatable member being interposed between said uncoupling lever and said supporting means.

1,417,607. HEADLIGHT. FRANKLIN S. KERN, Libertyville, Ill. Filed Oct. 16, 1920. Serial No. 417,368. 1 Claim. (Cl. 240—46.)



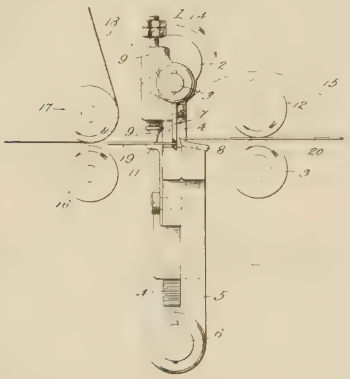
In combination, a support, a pair of headlights mounted on the support in spaced relation to each other, each headlight comprising a main casing, a reflector, a source of light, and a window, and a side lamp comprising a casing formed integral with the casing of the headlight, a source of light, a reflector and a window for the side lamp, the plane of the window and the side lamp being disposed at an angle to the plane of the window of the main lamp and the windows of the side lamps being disposed so as to be adjacent each other and in one of the lower quadrants of the window of the main lamp.

1,417,608. HANDLE FOR LANTERNS. JAMES W. KNOBLOCK, New York, N. Y., assignor to American La France Fire Engine Company, Inc., Elmira, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,152. 2 Claims. (Cl. 240—8.5.)



1. In a portable electric hand lantern, the combination with a casing carrying electric cells and a light bulb, of a rigid handle secured in fixed relation upon the casing and formed with a switch receiving chamber opening into the lantern casing and transverse openings communicating with said chamber, an electric switch mounted in said handle chamber adjacent to said transverse openings, wires extending from said handle chamber into said lantern casing and forming an electric circuit with said switch, cells and bulb, and a push bar switch-operating chamber mounted in said handle openings and operatably connected with said switch.

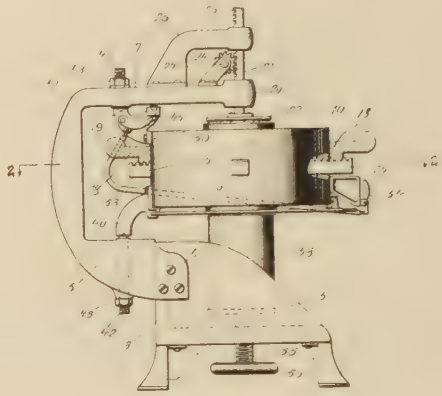
1,417,609. MACHINE FOR APPLYING MOUTHPIECE-FORMING SHEETS TO CIGARETTE-PAPER STRIPS. EWALD KOERNER, Dresden, Germany, assignor to United Cigarette Machine Co., Inc., Lynchburg, Va., a Corporation of Virginia. Filed Oct. 5, 1921. Serial No. 505,681. 10 Claims. (Cl. 131—39.)



1. Apparatus for feeding and applying mouth piece sheets to cigarette paper strips, comprising an upper unit including a cutter and a clamp, a movable feed table, means for imparting to the cutter and clamp movement both longitudinal and transverse to the line of feed, and operative connections between the upper unit and the table for transmitting longitudinal movement from said unit to the table.

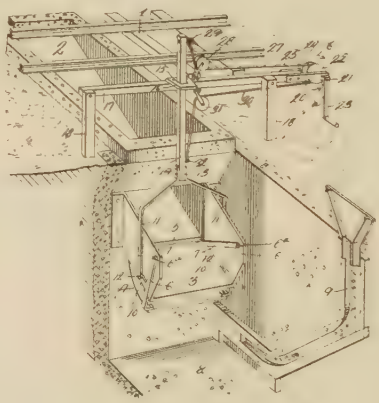
1,417,610. MEAT PRESS AND FILLER. FERDINAND KRUSE, Port Richmond, N. Y. Filed Mar. 17, 1920. Serial No. 366,647. 2 Claims. (Cl. 100—57.)

1. A meat pressing machine, comprising a base, a bracket secured to said base and comprising top and bottom horizontal members united by a vertical member, a forming device having a pair of arms projecting from one side at the top and bottom thereof, bearing elements on the horizontal members of said bracket with which said



arms are pivotally engaged, a plunger head vertically movable in the said top horizontal member, and means removably locking said forming device to said top horizontal member.

1,417,611. CHUTE-GATE-OPERATING MECHANISM. IRWIN D. LANDIS, South Bend, Ind., assignor to Universal Conveyor Co., South Bend, Ind., a Corporation of Indiana. Filed Aug. 22, 1921. Serial No. 494,268. 5 Claims. (Cl. 193—46.)

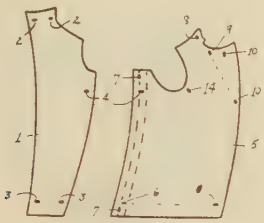


1. The combination with a chute gate having an upwardly extending bar for controlling said gate, said bar being slidably mounted in a guide, of an operating mechanism for moving said bar upwardly and downwardly, said operating mechanism comprising an operating drum spaced from the bar, a cable extending around said operating drum, pulleys adjacent said bar, the ends of said cable extending over said pulleys and connected to the operating bar at points spaced from its guide.

1,417,612. GARMENT PATTERN. JOHN LATIMORE, Utica, N. Y. Filed Mar. 15, 1920. Serial No. 365,759. 6 Claims. (Cl. 33—13.)

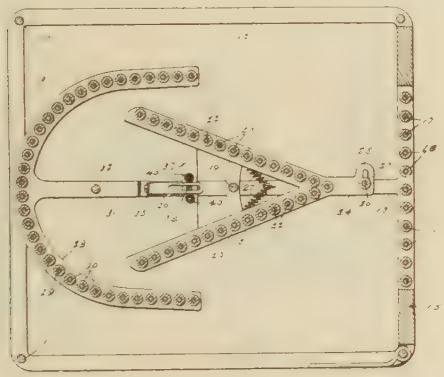
6. In a garment pattern, parts thereof representing the different pieces of a garment, perforations made in said parts within a given distance from the edge thereof, said

perforations or slots being intended for the exposure of the cloth therebelow which is located by a chalk mark, and



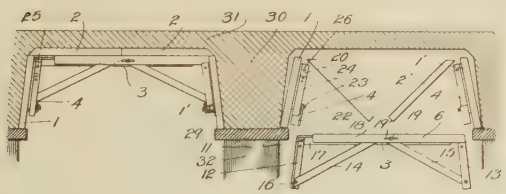
said chalk marks being adapted to indicate the proper places for fitting the pieces of a garment together.

1,417,613. PORTABLE TRENCH. MARGIL LÓPEZ, Alice, Tex. Filed Aug. 7, 1920. Serial No. 402,011. Renewed Apr. 1, 1922. Serial No. 548,797. 8 Claims. (Cl. 89—36.)



1. In a portable trench, a frame having a yieldable front comprising a plurality of gates, a yieldable projectile director member to the rear of the gates, and a yieldable projectile deflector member at the rear of the director member.

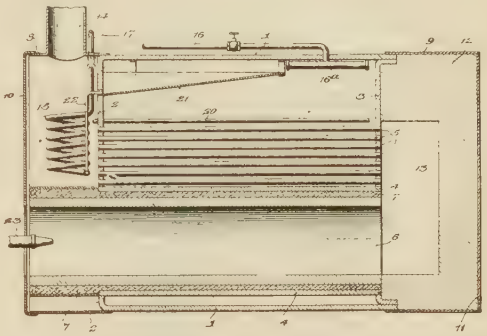
1,417,614. FLOOR-JOIST CONSTRUCTION FORM. ERNEST T. MCABEE, Kansas City, Kans. Filed May 25, 1921. Serial No. 472,487. 8 Claims. (Cl. 25—131.5.)



1. In a dome having side sections and a top section, a longitudinally adjustable truss member for supporting the top section, and a latch mechanism carried by the side sections for supporting the truss member.

1,417,615. HIGH-PRESSURE BOILER FOR TRACTION USE AND OTHER USES. THOMAS J. MCDONALD, Knoxville, Tenn. Filed Dec. 7, 1920. Serial No. 428,906. 10 Claims. (Cl. 122—470.)

1. The combination with a steam boiler and a superheater, of means for automatically supplying to the superheater, when the boiler ceases to generate steam, sufficient water to prevent injury to the superheater when the boiler is again put into operation, the amount of



such water being insufficient to do any injury to an engine connected with the boiler in case it is forced thereinto.

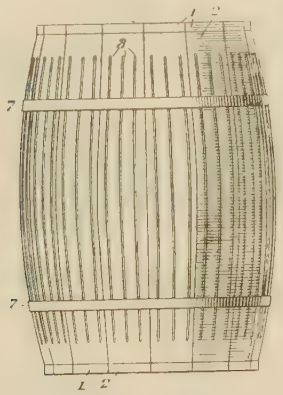
1,417,616. FISHING TOOL. ROBERT V. MCMULLEN, Eureka, Kans., assignor to The Midland Supply Company, Pawhuska, Okla., a Corporation of Oklahoma. Filed Aug. 12, 1920. Serial No. 402,962. 9 Claims. (Cl. 294—102.)

1. A fishing tool comprising a socket having a cylindrical body portion, a shoulder extending around the exterior of said body portion adjacent one end thereof and a bowl adapted to be passed over the opposite end only of the body portion, the interior of said bowl having a shouldered portion of less diameter than the diameter of the shouldered body portion of the socket whereby said shoulder on the socket forms a stop for the bowl, and means on the socket spaced from said socket shoulder for locking the bowl against longitudinal movement on the socket.

1,417,617. SHEET-METAL BARREL. JAMES W. MCNEIL, Newark, N. J. Filed Feb. 2, 1921. Serial No. 441,812. 3 Claims. (Cl. 220—75.)

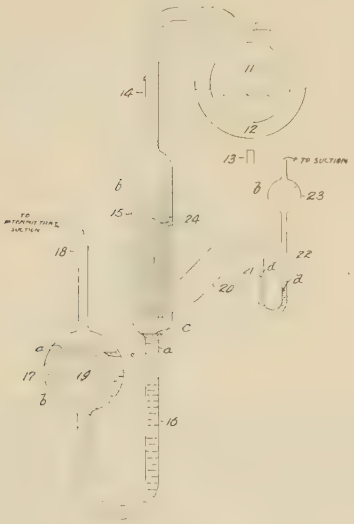
3. A barrel body comprising a plurality of sheet metal staves having chine portions and longitudinally corrugated body portions, the body portion of each stave having one edge bent inwardly and then laterally and outwardly to form a channel flange and its opposite edge bent inwardly to form a flat flange, the flat flange on each stave

being embraced by the channel flange on an adjacent stave and provided with tongues along its inner edge,



the channel flanges having slots therein through which the tongues extend, and said tongues being bent around one web of the channel flanges.

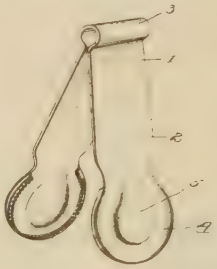
1,417,618. PROCESS OF SEPARATING AQUEOUS AND OTHER VAPORS FROM FLUIDS AND SOLIDS AND FOR PREPARING DILUTE SULPHURIC ACID. OTTO MAASS, Montreal, Quebec, Canada. Filed Apr. 15, 1918. Serial No. 228,733. 7 Claims. (Cl. 127—18.)



1. A process of drying, consisting in causing the vapors evolved from the material to be dried to contact with a desiccating surface, periodically wetting the surface with a vapor absorbing agent, by causing the agent to rise and fall over the desiccating surface, the fall of the agent creating a vacuum to expedite ratification of the vapors under treatment.

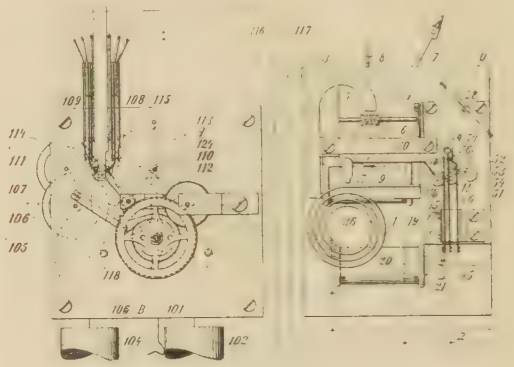
1,417,619. HOLDER FOR STEEL WOOL. HAROLD L. MALE, Brooklyn, N. Y. Filed June 14, 1921. Serial No. 477,582. 7 Claims. (Cl. 294—99.)

1. A holder for steel wool comprising integrally connected arms formed of sheet material, relatively large disc-shaped members carried by said arms, and inwardly extending teeth formed on the periphery of each disc; the



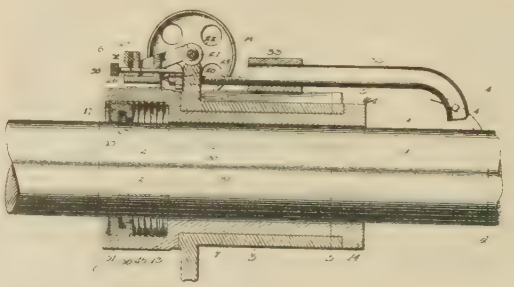
teeth of each disc extending at right angles to the plane of the disc.

1,417,620. ELECTRIC CLOCK. PAUL MANSEL, Charlottenburg, near Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filed Aug. 15, 1918. Serial No. 250,096. 4 Claims. (Cl. 58—38.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an electric clock system in combination, a master clock and a secondary clock electrically connected with each other, means comprising a contact for driving said secondary clock from said master clock, a strike train forming part of said secondary clock and means for automatically keeping said contact closed so as to feed said strike train with current while it is operating.

1,417,621. PORTABLE LOCOMOTIVE-JOURNAL-TURNING MACHINE. CLAUDE E. MARSH, Atlanta, Ga. Filed Nov. 7, 1919. Serial No. 336,348. 7 Claims. (Cl. 82—4.)

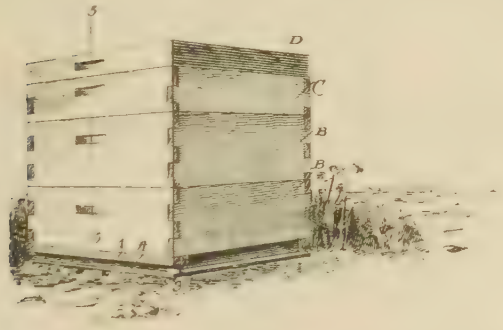


2. A journal turning machine, comprising an arbor provided with abutments and internal threads, normally retracted wedges carried by the arbor, means operating on said threads to simultaneously move all wedges into operative engagement with an axle when actuated in one direction, and a tool-carrying arbor rotatable on the first arbor between said abutments, when the first is stationarily held.

1,417,622. IRONING MACHINE. JOSEPH J. MARX, St. Louis, Mo. Filed May 9, 1921. Serial No. 467,821. 4 Claims. (Cl. 68—9.)

1. In an ironing machine, the combination with a roll for supporting and moving materials to be ironed; of a pad of uniform radial thickness, comprising a layer of felted, resilient metal shavings around the roll; and means for preventing the shavings from creeping or becoming massed when the roll operates.

1,417,623. BEEHIVE. THOMAS KELLEY MASSIE, Hatcher, W. Va. Filed Nov. 25, 1918. Serial No. 264,089. 20 Claims. (Cl. 6—1.)



1. A beehive comprising a relatively fixed bottom-board, a sectional body including a brood-chamber and super arranged to be placed on the bottom-board in either of two positions, and means located inside of the brood-chamber arranged to coact with a portion of the bottom-board to provide a dead air space when the body rests in one position on the bottom-board, and to enable the ventilation of the hive when the body is placed in the other position on the bottom-board.

3. The combination in a beehive, of a bottom-board including side rails, a brood-chamber arranged to be set on the bottom-board in either of two positions, a row of brood-frames supported in the brood-chamber, said brood-frames having heads engaging one another and providing a space at the front and rear, followers at the sides of the row of brood-frames in spaced relationship with the adjacent walls of the brood-chamber and arranged to be dropped inside of the side rails when the brood-chamber is placed on the bottom-board with the brood-frames parallel to the side rails, to provide a space between said followers and side rails for ventilation, a screened rear end piece connecting the side rails, and admitting air to the space at the rear, and an entrance block connecting the side rails at the front admitting air to the space at the front.

8. In a beehive, a pair of brood chambers arranged to be set one upon the other, a plurality of brood-frames of a lesser height than said brood-chambers equal to an exact bee-space, means enabling the hanging of the brood-frames in said chambers, and closure strips arranged to be laid transversely of the brood-frames between the pair of chambers to connect the brood-frames and prevent the bees from gluing the ends.

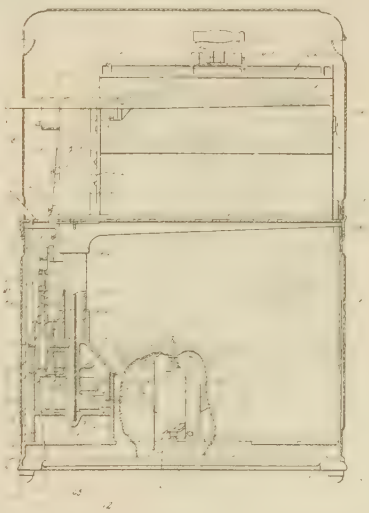
12. In a beehive, a super, a pair of ledges, section holders including end bars, a bottom channel connecting the end bars including relatively deep flanges and a U-shaped portion, said flanges having cut-way ends to rest on the ledges, a removable top channel, the flanges of both channels being adapted to cover portions of the sections held in the holder to keep the edges clean, means providing a support for the bottom channel from the top channel, and end locks carried by the end bars engaging the top channel when the section holder is forced into the super.

17. A beehive, including a bottom board with side rails and end closure strips, and a plurality of brood chambers, each with a pendent brood frame having contacting heads spaced from adjacent chamber walls, and side closure partitions, those of the lowermost brood chamber resting on the closure strips and engaging the partitions of the chamber above, to make continuous walls and a surrounding dead air space.

1,417,624. AUTOMATIC DRIVER. FERRIS A. MIDDLETON, San Francisco, Calif. Filed Oct. 27, 1919. Serial No. 333,677. 2 Claims. (Cl. 188—169.)

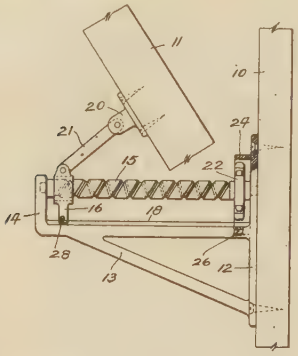
1. In combination with a motor driven vehicle, a longitudinal pole swingable on a detachable pivot extending from the front axle in vertical direction, the rear end of said pole engaging the steering apparatus of said vehicle, the front end adapted to be connected with some power, the pole being divided into a forward and a rearward part, a lever fulcrumed at the front end of the rearward part, one arm of said lever pivotally engaging the back end of the forward part of the pole and a spring extending backwardly from said forward part and rigidly connected to the rearward part of the pole, the other arm of the lever engaging a wire cable, the latter controlling the brake.

1,417,625. IRONING MACHINE. JOHN MIKULASEK, Newton, Iowa. Filed Oct. 27, 1920. Serial No. 419,939. 13 Claims. (Cl. 68—9.)



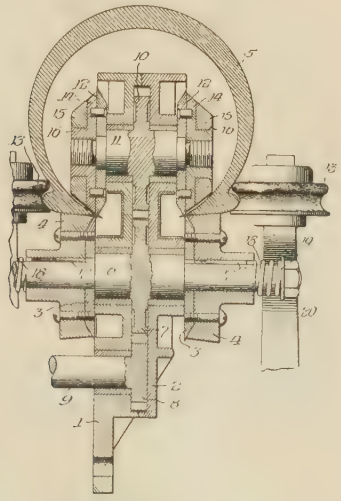
8. In an ironing machine, a rotatable work-supporting roller, a shoe for pressing the work against the roller, a swinging support carrying the shoe and operable to place the same into and out of operative position, a drive shaft having operative connections with the roller and the shoe, and means for breaking the operative connection between the shaft and the shoe without breaking the operative connection between said shaft and the roller.

1,417,626. TRANSOM ATTACHMENT. PETER J. NOLAN, Chester, Pa. Filed Feb. 17, 1921. Serial No. 445,858. 2 Claims. (Cl. 268—17.)



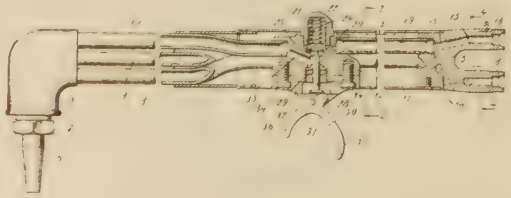
1. In combination a pivotal element, a fixed plate having extended horizontally therefrom a bracket the free end of which terminates in an upwardly extended arm paralleling said plate said bracket being provided with a guide-rail disposed in parallelism therewith, a screw journaled between said arm and plate in a plane above said guide-rail, a toothed wheel fixed to said screw, vertically movable means cooperatively engaging said wheel for operating said screw, a follower cooperative with said screw said follower being provided with a depending guide arm the lower end of which is bifurcated for engaging said guide-rail, an anti-friction roller journalled in the bifurcated portion of said guide arm for travel over said guide-rail and a link pivoted to the follower top and pivotally connected to said pivoted element, the axis of the pivotal connection of said link with said follower being in the same vertical plane with the axis of said anti-friction roller whereby the stress of the operating parts and the weight of the transom is carried by said anti-friction roller thus relieving the screw from stress and weight and rendering the operation of the device more facile.

1,417,627. MACHINE FOR TRIMMING TIRES. EDWARD D. PUTT, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 25, 1920. Serial No. 384,096. 2 Claims. (Cl. 164—61.)



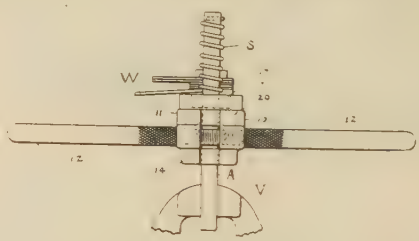
1. In a machine for trimming tire casings, a roller conforming to the heel of the bead, second and third rollers conforming respectively to the inside and outside lower edges of the casing, said second named roller having a freely rotatable tire engaging portion, and a knife at the rear of the last two rollers.

1,417,628. BLOWPIPE. EUGENE L. RAGONNET, Miami, Fla., assignor to Air Reduction Company, Inc., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 436,939. 2 Claims. (Cl. 158—27.4.)



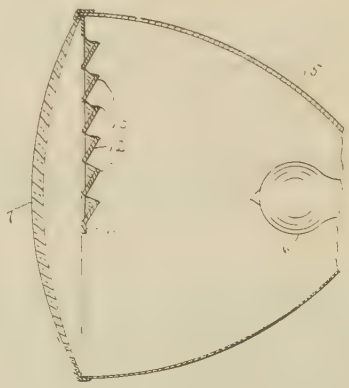
1. In a cutting blowpipe, the combination including a conduit for oxidizing gas to supply the cutting jet and conduits for oxidizing and combustible gases to supply the heating flames, a casing surrounding the rear portions of the conduits and forming a handle of the blowpipe, a block within the handle having a valve chamber, means for delivering oxidizing gas to the valve chamber, a valve within the valve chamber to control the oxidizing gas for the cutting jet, a valve stem projecting through the handle, and a pivoted trigger having a roller contacting with the stem to actuate the valve when the trigger is turned about its pivot, the pivot of the trigger being offset from the axis of the stem whereby the valve is held in open position when the roller passes the axis.

1,417,629. WIRE-COILING DEVICE. FREDERICK M. RAMSDELL, Worcester, Mass. Filed Apr. 15, 1920. Serial No. 374,081. 6 Claims. (Cl. 153—67.)



1. As an article of manufacture, a hand tool for coiling springs comprising an arbor and a work holder rotatable thereto, a flat plate secured to said work holder, and a series of spacing plates adapted to be mounted on said plate in different planes and fixed thereto in two positions, those nearest the flat plate being spaced from the arbor, whereby the coarseness of the coil produced can be changed by the fixing of the necessary number of said spacing plates in operative position.

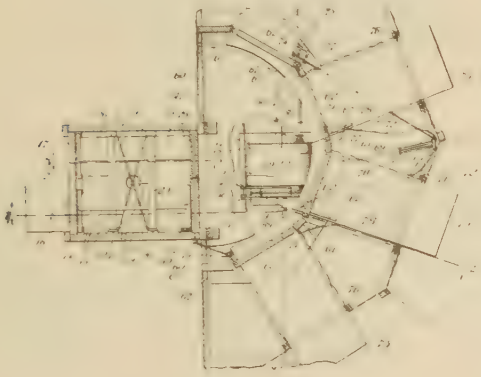
1,417,630. LIGHT DIMMER. HENRY S. ROBERTS, Los Angeles, Calif. Filed Nov. 13, 1919. Serial No. 337,769. 2 Claims. (Cl. 240—48.4.)



1. In a dimmer for headlights, comprising a portion located only in the upper part of the lens, and a de-

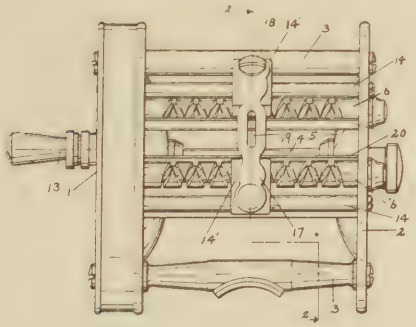
pending portion located in front of the lamp, and substantially horizontally arranged louvers covering substantially the entire surface of both said portions.

1,417,631. PEDIGREE TRAP NEST AND FLOCK CULLER. JAMES L. ROBERTS, Gorin, Mo. Filed Oct. 5, 1920. Serial No. 414,839. 11 Claims. (Cl. 119—47.)



1. A trap nest and flock culler comprising, in combination, a nest box, a nest in said box having an opening in the bottom thereof, an entrance door in said box, a plurality of exit doors in said box, one of said exit doors adapted to normally allow exit but prevent entrance of a hen therethrough, means actuated by the weight of a hen to close said entrance door, means actuated by the pressure of an egg to close said normally open exit door and to open a normally closed exit door.

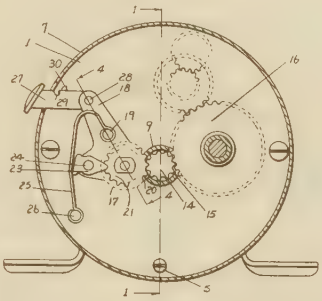
1,417,632. FISHING REEL. SAMUEL G. RUSSELL, Kalamazoo, Mich., assignor to The Shakespeare Company, Kalamazoo, Mich. Filed Apr. 21, 1921. Serial No. 463,321. 7 Claims. (Cl. 242—84.4.)



6. In a fishing reel, the combination of a frame, a spool, a pair of traversing shafts, line guide carriages provided with pawls coacting with said shafts, and a line guide member pivotally mounted on said line guide carriages.

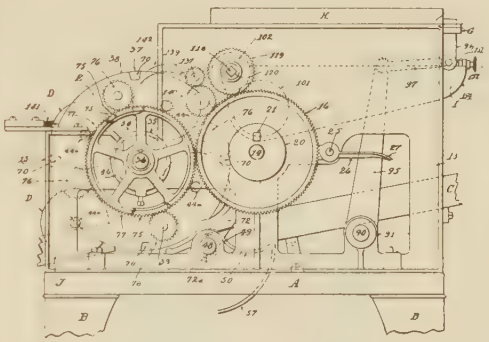
1,417,633. FISHLINE REEL. WILLIAM SCHMID, Bronson, Mich. Original application filed Sept. 5, 1919, Serial No. 321,910. Divided and this application filed Aug. 9, 1920. Serial No. 402,138. 3 Claims. (Cl. 242—84.6.)

1. In a fishing reel, the combination with a frame provided with a head chamber, a spool provided with a pinion disposed in said chamber, driving means for said spool, a click pinion, a driving pinion secured thereto, a support for said click pinion pivotally mounted within said head chamber, said support being adjustable to bring said click driving pinion into and out of mesh with said spool



pinion, a click pivotally mounted on said support to coact with said click pinion, a spring acting on said click and urging said support into operative position, and a latch for holding said support in inoperative position projecting from said head chamber.

1,417,634. LABEL-PASTING MACHINE. AXEL SCHOLIN, Chicago, Ill., assignor to Automatic Wrapping Machine Co. Filed Aug. 11, 1916, Serial No. 114,394. Renewed Nov. 28, 1919. Serial No. 341,268. 33 Claims. (Cl. 216—59.)

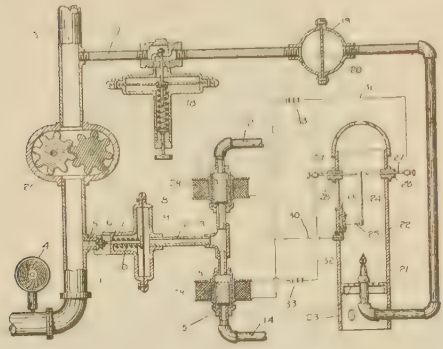


1. In a label pasting machine, the combination, of an intermittently rotating cylinder, a series of rollers rotatably mounted in said cylinder, a frame structure reciprocatingly mounted in said machine, a label box, removably mounted in said frame structure, a paste box, said paste box being located underneath said label box, said paste box being removable independently of said label box, paste supplying rollers rotatably mounted in said paste box, mechanism constructed to intermittently rotate said cylinder, automatically operating means constructed to positively lock said cylinder against rotation during the periods of non rotation thereof, automatically operating means for releasing the cylinder locking means, means for continuously rotating said rollers in said cylinder, and means for rotating the paste rollers in said paste box.

1,417,635. APPARATUS FOR MAINTAINING CONSTANT HEAT VALUE. HARRY F. SMITH, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 11, 1918. Serial No. 221,747. 5 Claims. (Cl. 48—87.)

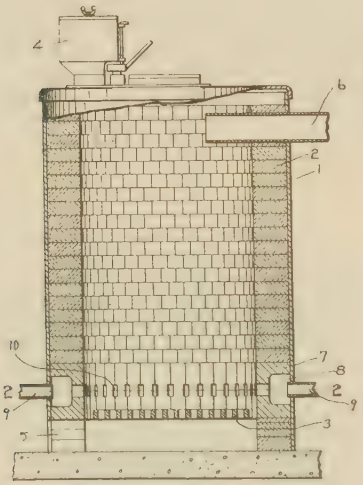
1. In a device for maintaining a substantially constant heat value in a fluid conveying means; the combination

of a valve for admitting a diluent to the fluid within the main; pressure operated means for controlling said valve; electrically operated means for controlling the pressure operating said pressure operated means; means for withdrawing from the main a constant quantity of the diluted



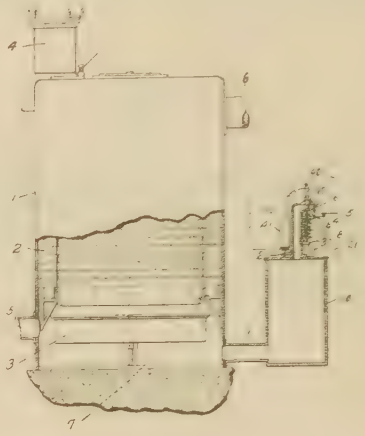
fluid; means for burning such withdrawn fluid, and means responsive to variations in the heat generated by the burnng fluid adapted to actuate the electrically operated means to vary the amount of diluent admitted to accord with variations in the heat generated by the burning fluid.

1,417,636. METHOD OF PREVENTING WALL ACTION. HARRY F. SMITH, Dayton, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed May 24, 1918. Serial No. 236,263. 5 Claims. (Cl. 48—197.)



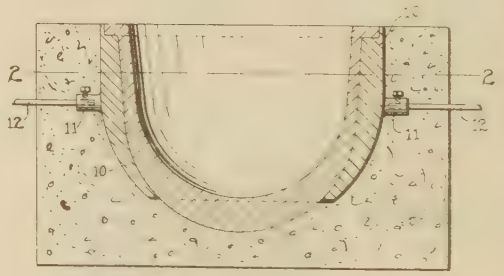
1. The method of generating producer gas, in which a fuel bed of ignited carbonaceous material is maintained within the generating chamber of the producer, which consists in blasting the body portion of the fuel bed within the generator with a fluid adapted to react with the fuel to form a combustible gas, and at the same time passing through the zone of fuel adjacent the wall of the generator sufficient of a fluid which is relatively inactive with respect to the fuel to exclude from such zone substantially all of the relatively active fluid which is being passed through the body of the fuel bed.

1,417,637. METHOD OF FUEL AGITATION. HARRY F. SMITH, Dayton, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 1, 1918. Serial No. 247,877. 4 Claims. (Cl. 48—197.)



1. The method of agitating the fuel bed within a gas producer or the like, which consists in igniting an explosive mixture, and applying the resulting explosive force to the underside of the ash zone of the fuel bed, to lift the fuel bed bodily.

1,417,638. METHOD OF CONTROLLING THE CONDITION OF CASTINGS. OSSA SOWERS, New York, N. Y. Filed Apr. 6, 1921. Serial No. 459,022. 7 Claims. (Cl. 22—211.)

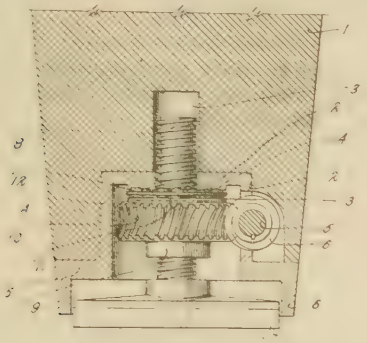


1. The method of treating iron which can be converted into malleable iron which consists in passing an electric current through an iron article, and regulating the current to cause more current to pass through the thicker than the thinner portions and to keep the entire article for a period of several hours at a temperature near the point at which the combined carbon changes to temper and free carbon, whereby the iron is rendered malleable.

1,417,639. TABLE LEVELER. DANIEL L. STERNER, Spokane, Wash. Filed Mar. 19, 1921. Serial No. 453,826. 1 Claim. (Cl. 46—13.)

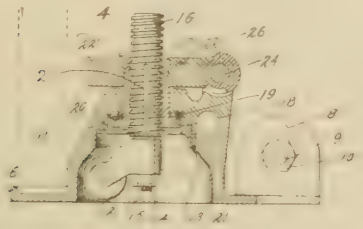
The combination in a leveling device with a housing having an upper perforated head and lower, flanged base plate, of a foot plate within the flanged base plate and a stationary, threaded bolt on said foot plate projected

through the perforated head, a rotary traveling nut on the bolt, an anti-friction bearing between said nut



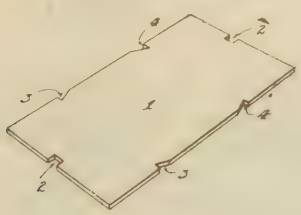
and perforated head, an exterior worm wheel on said nut, a worm shaft journaled in the housing and a worm on said shaft engaging said wheel, for the purpose described.

1,417,640. ADJUSTABLE CASTER. DANIEL L. STERNER, Spokane, Wash. Filed Mar. 19, 1921. Serial No. 453,827. 3 Claims. (Cl. 16—19.)



2. The combination with a base plate having angular retaining flanges and an integral housing, of a rotatable bushing in the housing, an annular flange on the lower end of the bushing and an antifriction bearing between said flange and housing, a screw shaft threaded in said bushing, a retaining plate below the annular flange and having means engaging said shaft to hold it against rotation, a caster on the shaft within the housing, and means for revolving the bushing.

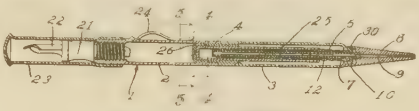
1,417,641. SHINGLE. LEWIS M. STUFFINGS, deceased, late of Peoria, Ill., by Katherine E. Stuffings, administratrix, Peoria, Ill. Filed Mar. 25, 1921. Serial No. 455,635. 6 Claims. (Cl. 108—8.)



2. A shingle having a notch cut therein midway the width thereof at one of its shortest edges, and having a notch in each of its opposite edges nearest the end remote from that having the first named notch.

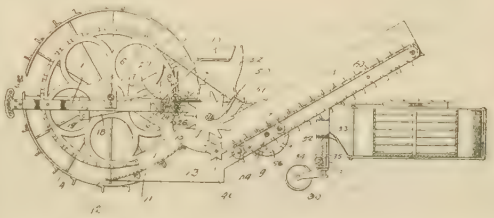
1,417,642. COMBINATION FOUNTAIN PEN AND PENCIL. ALBERT ROMAINE TALLMAN, Nashville, Tenn. Filed Sept. 28, 1921. Serial No. 503,744. 4 Claims. (Cl. 120—10.)

4. In a pencil, a barrel member; a sleeve carried thereby; a tube rotatable in the sleeve; a plunger held for right line movement in the tube and including a part having threaded connection with the sleeve, the plunger comprising a resilient arm cooperating with the tube to hold said part of the plunger in threaded engagement with the sleeve; a second barrel member; and means for



connecting the barrel members detachably, the second barrel member carrying a part cooperating with the resilient arm of the plunger, to bring said part of the plunger into threaded connection with the sleeve, when the plunger is in retracted position.

1,417,643. PLOW. WILBERT L. TRUSSELL, Minneapolis, Minn. Filed July 24, 1919. Serial No. 312,973. 8 Claims. (Cl. 55—51.)



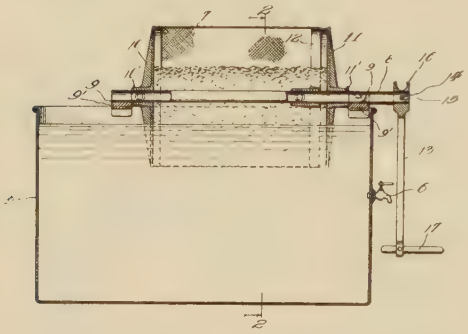
1. In a machine of the class described, the combination with a trough, gathering mechanism at the forward end thereof, conveying mechanism in the rearward portion thereof spaced from said gathering mechanism, a main frame supporting said trough, main wheels connected by an axle journaled in said frame, a main shaft journaled through said trough, and connections between said main shaft and axle; of comminuting mechanism disposed between the shovel and carrier and comprising a lower toothed drum and an upper toothed drum, connections between the shaft of the lower drum and the main shaft, arms pivotally mounted on said shaft and connected by an arch, the front ends of said arms supporting the shaft of said upper drum, a sprocket wheel on this shaft and another on the main shaft, and a chain connecting said sprockets.

1,417,644. CONCRETE-POST MOLD. EDWARD B. TYLER, Wayne City, Ill. Filed June 24, 1920. Serial No. 391,393. 6 Claims. (Cl. 25—121.)

1. A post mold including side and end walls, one end wall having its opposite sides extended and provided with

apertures, a resilient latch carried by one side wall for cooperation with said apertures, and cam means cooperating with the latch for causing the same to move to disengage and engage said apertures.

1,417,645. FURNACE-ASHES WASHER. HOWARD M. WEBSTER, Chicago, Ill. Filed Mar. 10, 1921. Serial No. 451,231. 5 Claims. (Cl. 83—60.)

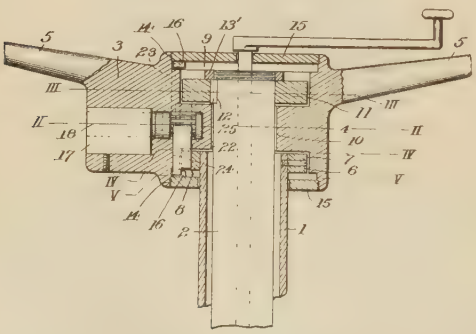


1. Means for washing furnace ashes comprising a water tank, cross bars mounted on the tank, a rotatable shaft supported in bearings on said cross bars and projecting at one end beyond an end of the tank, and a cylindrical screen mounted on the shaft between the cross bars and having heads provided with outwardly projecting hubs to operate in juxtaposition to the bearings whereby to avoid material endwise movement of the screen.

1,417,646. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 21, 1921. Serial No. 463,187. 11 Claims. (Cl. 24—95.)

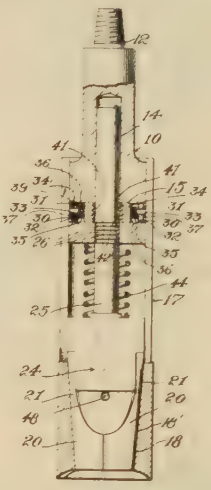
4. A button comprising a body portion, an upstanding member adjacent the upper rim of the body portion, a cap for said body portion, and an anvil within said body portion and firmly held in place between said cap and said upstanding member, said anvil adapted to receive the strains incident to the heading of a fastener within said button.

1,417,647. STEERING-WHEEL LOCK. MILO RITTER WHITE, Washington Township, Elkhart County, Ind. Filed Oct. 24, 1921. Serial No. 510,055. 15 Claims. (Cl. 70—129.)



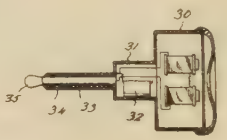
1. In the combination of a steering column, steering post, and steering wheel, lock means carried by said wheel and adapted upon operation thereof to one position to operatively connect said wheel to said post and upon operation thereof to another position to connect said wheel to said column.

1,417,648. SLIP SOCKET. CLARENCE P. WILLIAMS, Syracuse, Ohio. Filed Sept. 16, 1920. Serial No. 410,688. 3 Claims. (Cl. 294—102.)



1. In a device of the class described, a head having longitudinal and transverse bores, a shell connected with the head, tool-engaging devices within the shell, said shell having tapered inner walls for throwing the engaging devices therein to operative position, a stem connected with said tool-engaging devices, an engaging device mounted in the transverse bore of the head to retain the stem, said device last named including a shank portion, a cap threaded into one end of the transverse bore and apertured to receive the shank of the engaging device, the cap being rotatable independently of the shank.

1,417,649. PLUG-IN ATTACHMENT. DELAVERGNE P. WILLIAMS and JOHN F. WILLIAMS, Sandusky, Ohio. Filed May 21, 1921. Serial No. 471,416. 8 Claims. (Cl. 179—100.)

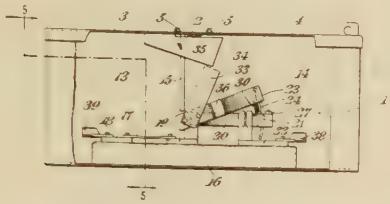


1. The combination with a plug comprising a body portion having a pair of contacts projecting therefrom, of a condenser arranged within said body portion and in electrical circuit with said contacts.

1,417,650. SAFETY SWITCH. FREDERICK O. WINKLEHAUS, New York, N. Y., assignor to Metropolitan Electric Manufacturing Company, a Corporation of New Jersey. Filed Aug. 14, 1919. Serial No. 317,523. 1 Claim. (Cl. 200—73.)

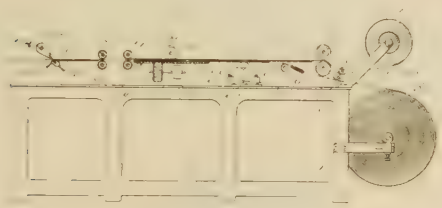
A safety switch comprising a casing, an operating element disposed transversely of the casing and mounted for pivotal movement therein, an arcuate bar carried by said element and having a hook on its upper end and an elongated aperture in its lower depending end, a switch arranged in said casing and having a controlling member mounted to oscillate between open and closed positions about an axis substantially the same as the axis of the element, a lug carried by the switch controlling

member and projecting radially therefrom, said lug passing through the bar and having a neck portion in said elongated aperture, said lug terminating at its free



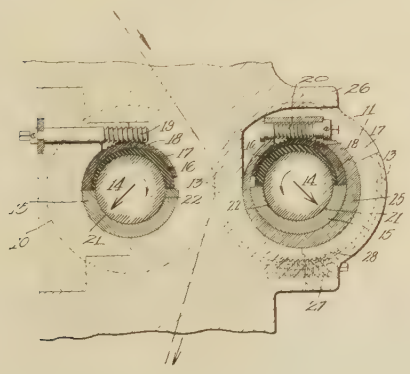
end in a hook, a spring connected between the hook on the lug and the hook on the bar, and means accessible from the exterior of the casing for shifting the operating element to operate the switch to either of its positions.

1,417,651. STRIP-UNITING MACHINE. FREDERICK A. WOEHR, Rochester, N. Y., assignor to George J. Gillies, Rochester, New York. Filed February 4, 1921. Serial No. 442,541. 18 Claims. (Cl. 93—1.)



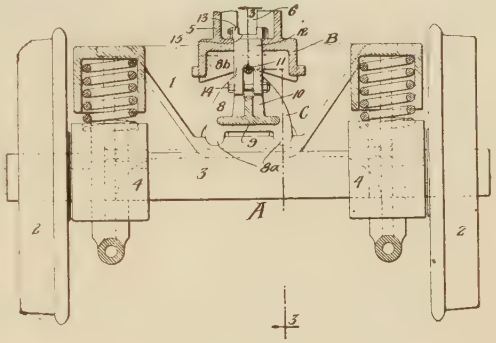
1. A machine of the class described comprising means for feeding two separate strips of material in parallel relation, means for supplying an adhesive to the strips for uniting the edges of the two strips, and mechanism for folding the opposite edges of one of the strips about the edges of and in engagement with the outer face of the other strip during the feeding of the strip.

1,417,652. MEANS FOR PREVENTING VIBRATION OF PRINTING-PRESS CYLINDERS. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 17, 1918. Serial No. 245,344. 15 Claims. (Cl. 101—219.)



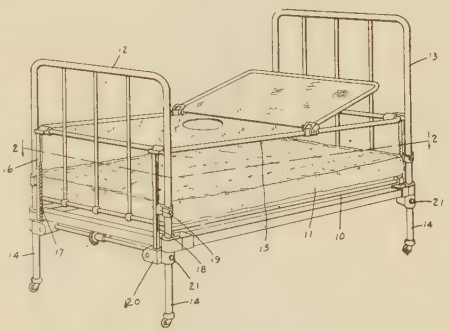
1. In a rotary printing press, the combination with the printing couple, of means for maintaining the centers of the printing couple continuously at the same distance apart to prevent margin guttering, and means for taking up the wear on the bearings of the journals of the cylinders, whereby the guttering will be prevented independently of the wear of the bearings.

1,417,653. RAILWAY TRUCK. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed July 13, 1920. Serial No. 395,907. 9 Claims. (Cl. 105—186.)



1. A lateral motion truck comprising in combination with the truck frame, a bolter, an invested rocker between the frame and the bolster, and means providing a lost motion connection between the boster and the rocker.

1,417,654. ADJUSTABLE BEDSTEAD FOR INVALIDS. CHARLES S. WOODS, Indianapolis, Ind. Filed June 17, 1921. Serial No. 478,255. 3 Claims. (Cl. 5—45.)

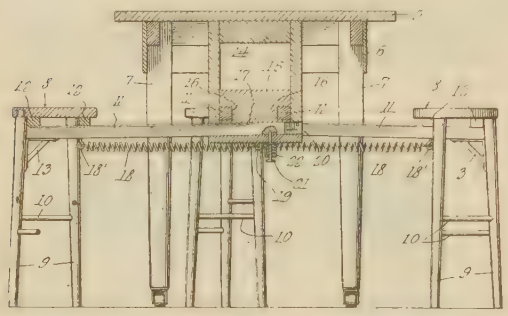


1. The combination with a standard bedstead, a mattress mounted thereon, and a spring construction for supporting said mattress, of an attachment for converting said bed into an invalid bed comprising an invalid bed frame structure adapted to be supported over said mattress, a plurality of standards secured to said frame structure having ratchet teeth thereon, pinions for engaging said teeth, a plurality of shafts for driving said pinions whereby said frame standard may be elevated or lowered with respect to said bedstead, and means for detachably securing said shafts and standards to said bedstead so as to be removable therefrom.

1,417,655. COMBINED TABLE AND CHAIR. JOSEPH ZIELINSKI, East St. Louis, Ill. Filed Nov. 8, 1921. Serial No. 513,762. 3 Claims. (Cl. 45—31.)

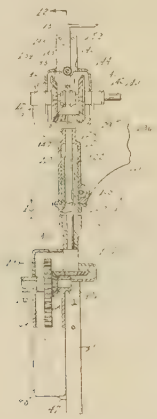
1. The combination with a table having a top and legs depending from the top, of a housing arranged substantially centrally beneath the top and secured thereto, said housing having an inclined opening formed therein, a reciprocatory guide bar arranged at an inclination and slidable within said opening, a chair connected with the

outer end of the reciprocatory bar and adapted to be bodily raised thereby, means to shift the reciprocatory



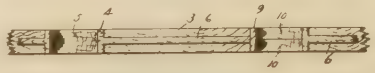
bar inwardly, whereby the chair is automatically elevated out of contact with the floor, and means to lock the bar in the outer position.

1,417,656. PIVOTED WRINGER STRUCTURE FOR WASHING MACHINES. ROBERT J. ANDERSON, Sidney, Ohio. Filed Aug. 22, 1917. Serial No. 187,598. 5 Claims. (Cl. 74—101.)



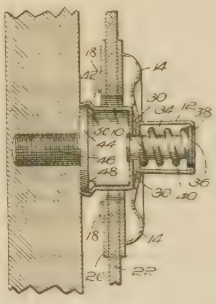
1. In a device of the character described, the combination of a main frame, a column extending upwardly therefrom, said column comprising an upwardly extending journal bushing, a sleeve-bearing about said journal bushing having a central bearing-bore rotating about said journal bushing, the said bearing-bore extending upwardly beyond said journal bushing the upper end of said sleeve-bearing being reduced in cross-section, said reduced portion spaced from the upper end of said journal bushing by a section of said bearing-bore, and a laterally extending wringer-bracket on said sleeve-bearing, the lower end of said sleeve-bearing and said column at the lower end of said journal bushing respectively provided with coacting laterally extending annular flanges having mating bearing faces forming a step-bearing between said sleeve-bearing and said journal bushing, and the upper end of said journal bushing being spaced from the upper end of said bearing bore for locating said upper end of said journal bushing free of end-contact with said sleeve-bearing in said bearing-bore, and a friction-clamp between said sleeve-bearing and said journal bushing to frictionally hold said sleeve-bearing and said journal bushing together.

1,417,657. WING-SPAR CONSTRUCTION FOR AEROPLANES. OSMON THERON BELCHER, Los Angeles, Calif., assignor to Belcher Aerial Manufacturing Company, a Corporation of California. Filed Aug. 9, 1921. Serial No. 490,954. 4 Claims. (Cl. 244—31.)



1. In a wing spar construction for aeroplanes, a cord member comprising a plate, brace seat blocks formed upon the plate and ribs made integral with the plate and the brace seat blocks and extending up between the blocks.

1,417,658. TURNBUTTON FASTENER. DAVID BOURQUE, Amesbury, Mass., assignor to G. W. J. Murphy Company, Amesbury, Mass., a Corporation of Massachusetts. Filed Feb. 16, 1921. Serial No. 445,253. 13 Claims. (Cl. 24—221.)

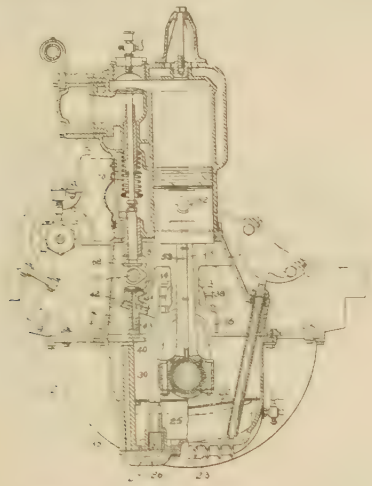


5. A turnbutton fastener comprising, in combination, an eyelet having an oblate opening, rearwardly extending ears at the sides of the opening and cam rises on the face thereof along the longer sides of the opening and comprising also a turnbutton having a body to be embraced by the eyelet having an effective height less than the effective thickness of said eyelet measured between the ends of said ears and the crests of said rises and having a head rotatably mounted on the base by means including a spring exterior to the body and adapted in the locked position of the parts to ride on said rises and be displaced thereby away from the body against the force of the spring.

1,417,659. LUBRICATING DEVICE FOR GAS ENGINES. ROBERT J. BROEGE, Harvey, Ill., assignor to Buda Company, a Corporation of Illinois. Filed May 10, 1918. Serial No. 233,622. 10 Claims. (Cl. 184—6.)

8. The combination with an engine casing having an upper cam-shaft bearing and a lower crank-shaft bearing, of an oil reservoir in said casing, a portion of said casing formed with a by-pass, oil impelling means including an upwardly directed oil conduit leading from the reservoir to said by-pass, an oil conduit substantially horizontally dis-

posed in the casing above the by-pass and having a duct communicating with the crank-shaft bearing, and a pair

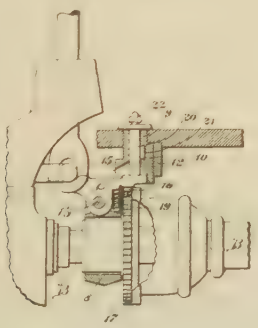


of ducts independently leading from the by-pass to the horizontal conduit and to the cam-shaft bearing.

1,417,660. PLUMBING SYSTEM. FRANK W. CARLSON, Chicago, Ill. Filed Mar. 27, 1919. Serial No. 285,553. 10 Claims. (Cl. 137—75.)

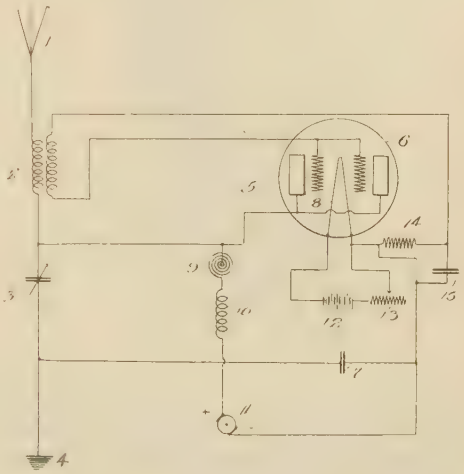
4. A waste pipe of a plumbing system having oppositely disposed openings therein, and a transverse baffle plate in the pipe above said openings to check and break the flow of waste in the pipe.

1,417,661. AUTOMOBILE LOCK. SHERMAN H. DORSEY, St. Louis, Mo., assignor to Traffic Motor Truck Corporation, St. Louis, Mo., a Corporation of New York. Filed Apr. 7, 1919. Serial No. 288,203. 4 Claims. (Cl. 70—80.)



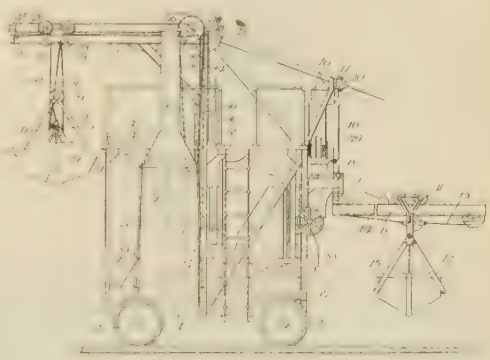
1. In a locking device for an automobile having a drive shaft for the transmission of power to its traction wheels, a rotary locking member driven by said drive shaft so as to turn in response to movements of said shaft and traction wheels, a yieldable dog cooperable with said rotary locking member to prevent rotation of said wheels in only one direction, and a lock whereby said yieldable dog is retained in yielding engagement with said rotary locking member, said yieldable dog being movable independently of said lock to permit movement of the automobile in one direction.

1,417,662. RADIOSIGNALING SYSTEM. LEE DE FOREST, New York, N. Y. Filed June 16, 1917. Serial No. 175,118. 8 Claims. (Cl. 250—36.)



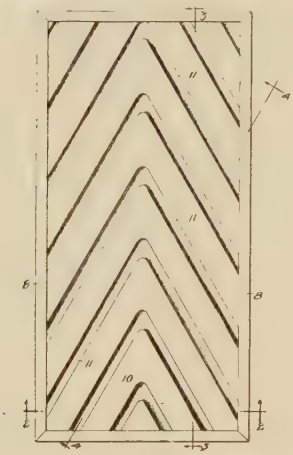
1. The combination with an antenna-earth system including an inductance and a capacity in series, of an evacuated vessel containing a hot and a plurality of cold electrodes, a conductive connection between said hot electrode and one side of said capacity, a conductive connection between one cold electrode and the other side of said capacity, and a circuit between another cold electrode and said hot electrode, inductively associated with said inductance of said antenna-earth system.

1,417,663. PORTABLE MIXING PLANT. JAMES C. FRENCH, Chicago, Ill., assignor to Frederick C. Austin, Chicago, Ill. Filed Mar. 7, 1918. Serial No. 220,897. 9 Claims. (Cl. 214—17.)



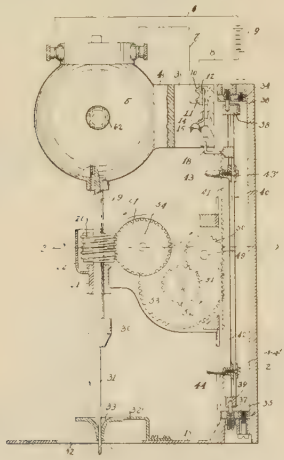
1. In a portable mixing plant for paving streets, the combination of a traveling body having a mixer mounted thereon, means for taking up a load of materials from either side or from a point in rear of the mixing plant and for delivering said materials to the mixer, having three separate and independent instrumentalities for (1) raising the load, (2) moving the load into position over the mixer, and (3) dumping the load, said instrumentalities including a manually operable controller and a separate endless belt operated thereby for moving said means either toward or away from the mixer, and an apparatus for delivering the mixture from the mixer to the street.

1,417,664. PANEL. LESLIE H. GARLINGHOUSE, Aspinwall, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Oct. 13, 1919. Serial No. 330,344. 7 Claims. (Cl. 25—131.)



1. A panel for mold apparatus for concrete work comprising a sheet metal plate provided with reinforcement, such reinforcement being so disposed as to be cut by any straight line drawn through the panel which would cut any two opposite sides.

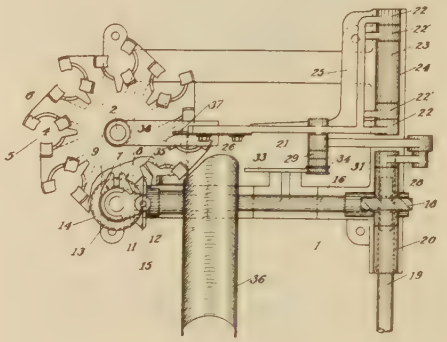
1,417,665. CLOTH DRILL. WALTER GORR, New York, N. Y. Filed Mar. 27, 1920. Serial No. 369,314. 9 Claims. (Cl. 77—32.)



1. A device for drilling cloth or the like comprising a drill, means for rotating the drill, means for rapidly advancing the rotating drill through the cloth or the like, means for automatically rapidly withdrawing the rotating drill therefrom at the end of the advance, means for preventing operation of said means for advancing and for withdrawing while the drill is rotating, and means for manually advancing and withdrawing the rotating drill after operation of said means for advancing and for withdrawing has been prevented.

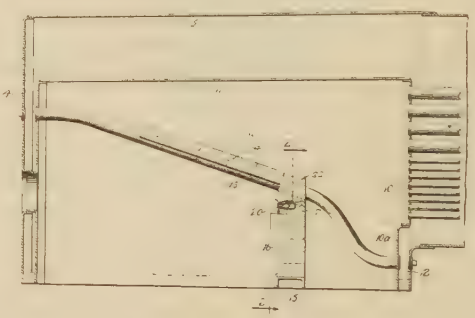
1,417,666. FRUIT-CUTTING APPARATUS. JAMES A. GRAY, San Francisco, Calif. Filed Sept. 12, 1921. Serial No. 500,083. 5 Claims. (Cl. 146—6.)

1. A machine, for annularly cutting fruit containing a hard central stone, for the subsequent halving of the fruit from the stone, comprising a rotatable turret support for the fruit provided with a plurality of fruit receiving pockets, means for cutting the fruit to form a continuous score annularly thereof inwardly from its surface to the stone, means for intermittently rotating



said turret for presenting the fruit contained in succeeding pockets to said cutting means, and means carried by and offset from said cutting means for automatically lifting the cut fruit from its associated pocket during the cutting of the fruit in a succeeding pocket.

1,417,667. LOCOMOTIVE FURNACE CONSTRUCTION. RALEIGH J. HIMMELRIGHT, New York, N. Y., assignor to American Arch Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1919. Serial No. 292,251. 8 Claims. (Cl. 110—76.)

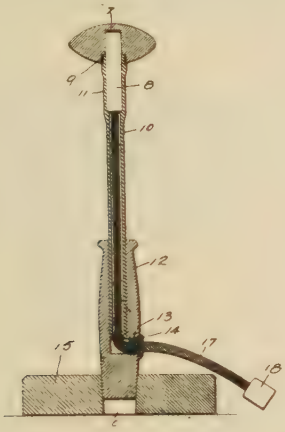


8. A locomotive furnace structure comprising in combination, side water walls, a transverse wall supporting member within the furnace in the lower portion theerof, a plurality of bricks on said member constituting a cross wall, a row of recessed bricks near the upper portion of said wall, an air pipe in said recesses, an air passage through a water wall communicating with the air pipe, and an air discharge opening from said pipe into the furnace.

1,417,668. SHAPING AND IRONING TOOL. FREDERICK E. KERN, St. Louis, Mo. Filed Feb. 14, 1921. Serial No. 444,631. 2 Claims. (Cl. 219—21.)

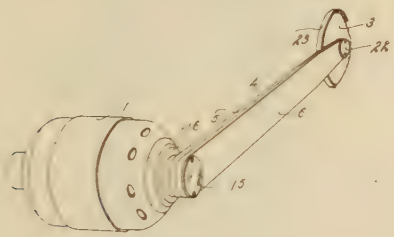
1. A shaping and ironing tool comprising an egg-shaped head, a heating coil located in said head, a detachable supporting rod secured to the head, a handle mounted on

said supporting rod, a plug carried by the handle, conductors passing through the side of the handle connected



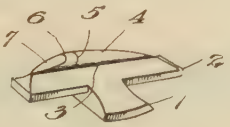
to the plug and the heating coil and a detachable base for holding the tool in an upright position.

1,417,669. SURGICAL SAW. MITCHELL LANGWORTHY, Spokane, Wash. Filed Mar. 5, 1921. Serial No. 449,826. 2 Claims. (Cl. 128—317.)



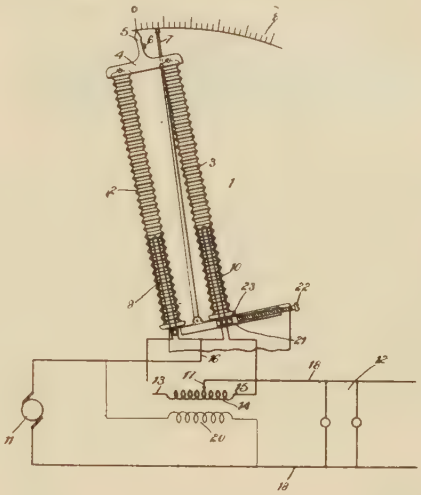
1. The combination with a motor and its shaft and a threaded boss on said motor, of a tubular arm, a nut on said arm for attachment to said boss, a driving wheel on said shaft located in the tubular arm, a driven wheel encased within the free end of said arm and operatively connected with said drive wheel, and a laterally disposed rotary saw operatively connected with said driven wheel.

1,417,670. FRONT SIGHT FOR RIFLES AND REVOLVERS. JOSEPH J. LE FEVER, Newport, Idaho. Filed Mar. 23, 1920. Serial No. 368,166. 1 Claim. (Cl. 33—52.)



A front sight for a fire arm comprising an attaching blade, an integral bead plate arranged at right angles to the blade and having its upper faces merging into a comparatively thin longitudinal web, an enlarged bead of double conical shape above said web having a cut away portion, and a sight piece fixed in said cut away portion and forming an integral part of the bead, said sight piece having an angular sight face at the free end thereof presenting the form of a circle when viewed from the breech end of the fire arm.

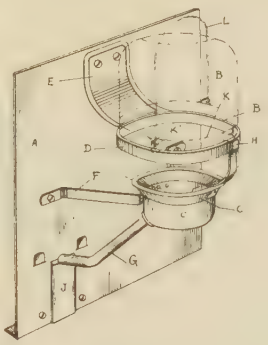
1,417,671. ELECTRICAL MEASURING INSTRUMENT. PAUL M. LINCOLN, Pittsburgh, Pa. Filed Sept. 16, 1918. Serial No. 254,209. 6 Claims. (Cl. 171—308.)



1. A measuring instrument comprising a pointer, a scale, differentially-acting thermal-responsive means for actuating the pointer, and mechanical means for adjusting the pointer to register with the division marks on the scale corresponding to the power being measured, said adjusting means being adapted to cause the pointer to indicate correctly throughout its movement.

2. A measuring instrument comprising two normally parallel pivotally-mounted expansible members, a pointer actuated by the differential expansion of the members and means for adjusting the pivotal point of one of the members.

1,417,672. RESERVOIR FOR OIL STOVES. WALTER C. LINDEMANN, Milwaukee, Wis. Filed Oct. 18, 1920. Serial No. 417,743. 7 Claims. (Cl. 158—46.)

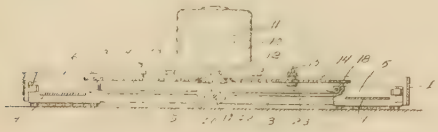


1. In a device for supplying fuel to liquid hydrocarbon stoves, the combination of a frame member, a reservoir comprising a main reservoir with bottom opening and an auxiliary reservoir surrounding said opening, a support secured to said frame member and extending around the main reservoir above the auxiliary reservoir, and a connecting member between said support and auxiliary reservoir having a fixed connection with one and a detachable connection with the other.

1,417,673. FLOOR POLISHER. MACDONALD ELLETT LIPSCOMB, Sweet Springs, Mo. Filed June 13, 1921. Serial No. 477,109. 4 Claims. (Cl. 15—49.)

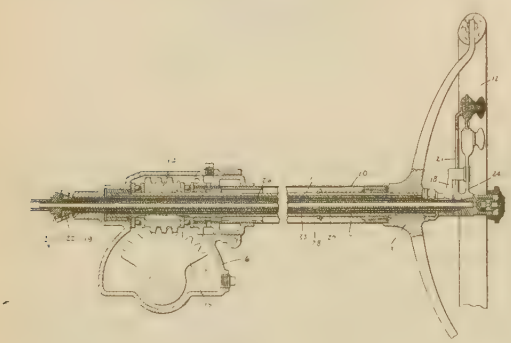
1. A floor polishing device comprising a frame, a brush mounted for reciprocating action in said frame, a motor

carried by said frame, means actuated by the motor for imparting reciprocating action to said brush, an eccentric roller mounted in said frame, and adapted for intermit-



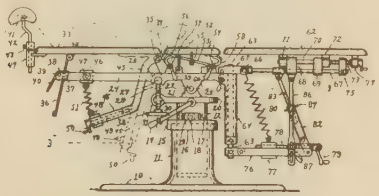
tent engagement with the floor for imparting intermittent travel to the device, and means whereby said roller is actuated from said motor.

1,417,674. ANTIRATTLE DEVICE FOR STEERING DEVICES. JOHN D. LOWE, Indianapolis, Ind., assignor to La Fayette Motors Company, Indianapolis, Ind., a Corporation. Filed Aug. 12, 1921. Serial No. 491,821. 3 Claims. (Cl. 74—39.)



1. A steering column for vehicles having a plurality of telescoping tubes contained therein, and means positioned between the adjacent surfaces of said tubes for preventing the engagement thereof whereby there will be no rattling or vibration set up therein.

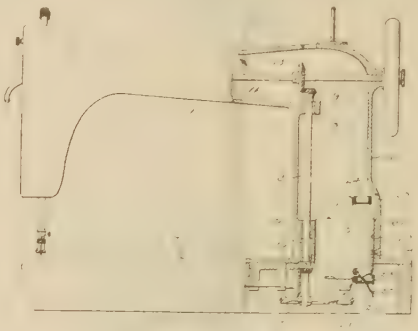
1,417,675. TREATMENT TABLE. JOHN V. MCMANIS, Kirksville, Mo. Filed July 30, 1919. Serial No. 314,278. 9 Claims. (Cl. 128—74.)



1. A treatment table comprising a base, a pedestal vertically adjustable relative to said base, a frame mounted upon and rotatably adjustable upon a substantially horizontal axle relative to said pedestal, means carried by said pedestal and frame to positively adjust said frame rotatably relative to said pedestal, and a plurality of table top sections mounted upon and relatively adjustable upon said frame.

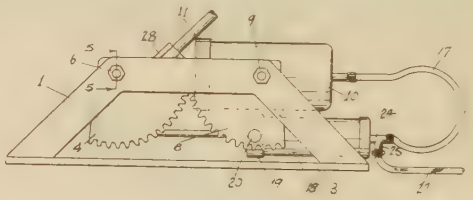
1,417,676. SEWING-MACHINE MOTOR DRIVE. ARTHUR T. MACE, East Cleveland, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 17, 1921. Serial No. 445,884. 12 Claims. (Cl. 112—220.)

1. In a motor driven sewing machine, the combination of needle bar and shuttle actuating members having a vertical drive shaft geared to said actuating members so as to cause them to move at less speed than the drive shaft, a hollow standard having provision for a motor, a motor removably mounted within such standard with its armature shaft substantially parallel with the drive shaft, and driving means connecting the armature shaft with the drive shaft including a sheave mounted on the



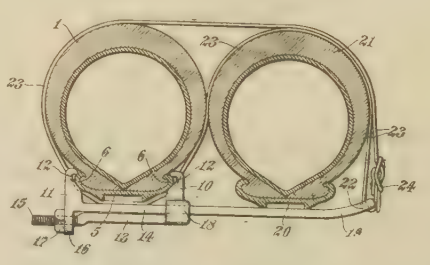
drive shaft projecting beneath the motor and removable whereby said driving means may be removed without disturbing the synchronous operation of the shuttle and needle bar.

1,417,677. COMPRESSION PUMP. FRED L. MANNY and WILLIAM H. KEY, Benton Harbor, Mich. Filed Mar. 28, 1921. Serial No. 456,471. 4 Claims. (Cl. 230—27.)



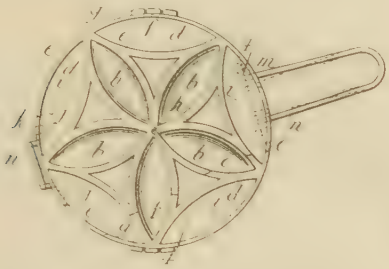
1. In a compound pump structure, a frame with symmetrical sides, pairs of segment gears pivotally disposed within the said frame and meshing with each other arranged to rock through substantially 90°, pump cylinders disposed between one pair of said gears, the larger of which cylinders is trunnioned at the upper edge of said segment gears and the smaller one of which is trunnioned at the lower edge of said gears, pistons and piston rods with bifurcated ends extending from said cylinders to symmetrically opposed cross rods between the opposed gear segments, a handle centrally disposed between the said second gears and pivotally carried on the said cross rods being retained in position by the bifurcated ends of said piston rods, a connection from the main pump cylinder to the intake end of the secondary cylinder containing a suitable check, and a connection from the secondary pump cylinder containing a check to the delivery hose, coacting for the purpose specified.

1,417,678. SPARE-TIRE HOLDER. JACOB MERZ, Chicago, Ill. Filed Oct. 23, 1919. Serial No. 332,831. 7 Claims. (Cl. 224—28.)



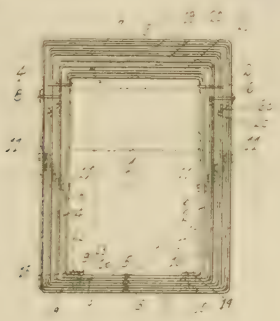
1. A spare tire holder, comprising, a pair of jaws adapted to grip the edges of a rim, and shanks on said jaws adapted to slide on one another.

1,417,679. MEANS FOR USE IN POACHING EGGS. ELLEN SUSAN MUSGRAVE, Amersham Common, England. Filed Nov. 22, 1920. Serial No. 425,879. 5 Claims. (Cl. 53—1.)



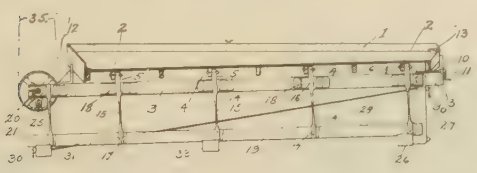
3. An egg poacher comprising a serving member and an egg separating member bodily detachable therefrom and carrying means hingedly and detachably connected to such serving member for the purpose specified.

1,417,680. CAMP STOOL. GUSTAVE NESLAND, Davenport, Iowa. Filed Nov. 16, 1921. Serial No. 515,561. 2 Claims. (Cl. 155—2.)



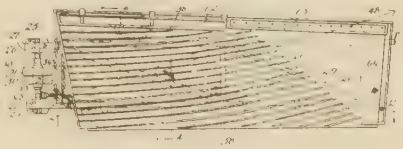
1. In a camp stool composed of two units capable of being folded into the space of a single unit, clasp means having a hexagon axle and spreading points, the clasp mounted within a boxing, the boxing and clasp mounted on a member of a unit of a stool, angulated groove means in the edges of the members of the units of a stool capable of receiving the arms of the clasp, the clasp suited for grasping the members of the stool upon which it is mounted, and other stools within such angulated grooves.

1,417,681. CONCENTRATOR. GUSTAVE A. OVERSTROM, Pasadena, Calif. Filed Nov. 20, 1916. Serial No. 132,387. 4 Claims. (Cl. 83—88.)



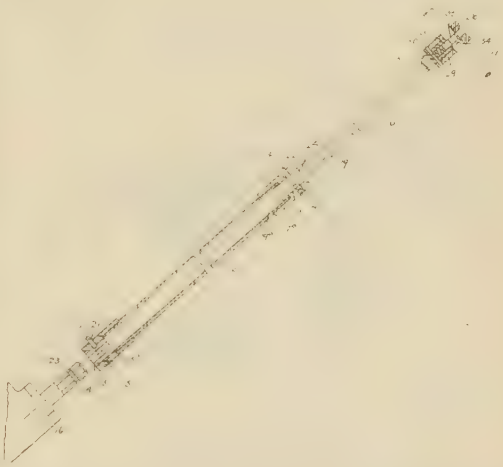
1. The combination, in a concentrator, of a horizontally reciprocating frame, and flexible supports therefor, a concentrating table hingedly mounted upon said frame, a shaft at one end of said frame, and an adjusting device at the other, an unbalanced power driven wheel mounted on said shaft, whereby, when said wheel is rotated, a reciprocating movement will be transmitted to said frame and table.

1,417,682. ORE-CONCENTRATING TABLE. GUSTAVE A. OVERSTROM, Pasadena, Calif. Filed July 17, 1918. Serial No. 245,309. 35 Claims. (Cl. 83—88.)



1. In an ore concentrator, the combination of a table and means for imparting a circular arc motion thereto, the center of the arc described by said table being at one side thereof, but in the vertical plane of the head motion end of said table, and which plane is at right angles to said end.

1,417,683. TELESCOPIC WRENCH. WILLIAM J. PARSONS, Montague, Mass., assignor to Millers Falls Company, Millers Falls, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1921. Serial No. 520,894. 5 Claims. (Cl. 81—177.)

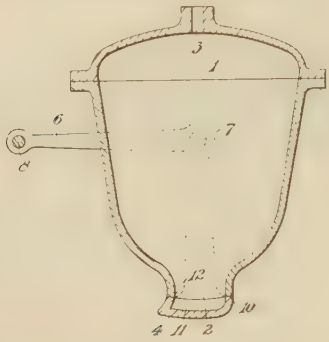


1. A telescopic wrench comprising an elongated inner member composed of a tube, and an inner and an outer sleeve, each sleeve having an enlarged bore portion receiving an end of the tube, and a polygonal bore portion of smaller diameter projecting from the sleeve, the polygonal bore portion of the inner sleeve constituting a wrench socket, and the polygonal bore portion of the outer sleeve constituting a coupling part and a guide; and an outer member composed of a solid rod polygonal in cross section, and slidably engaged with the bore of the outer sleeve to longitudinally extend and contract the wrench, the outer member being provided at its inner end with a stop enlargement, movable freely in the tube portion of the inner member, and adapted to abut against a shoulder on the said outer sleeve, to limit the elongation of the wrench, said stop enlargement being insertible in the tube portion of the inner member before the application of the inner sleeve, and prevented from withdrawal from said tube portion when the inner sleeve is applied.

1,417,684. APPARATUS FOR GATHERING GLASS FROM A MOLTEN MASS. ALFRED CECIL PILKINGTON, Rainhill, and JOSEPH GASKELL, St. Helens, England, assignors to Pilkington Brothers Limited, St. Helens, Lancaster, England, a Company of Great Britain. Filed Mar. 10, 1922. Serial No. 542,640. 6 Claims. (Cl. 49—62.)

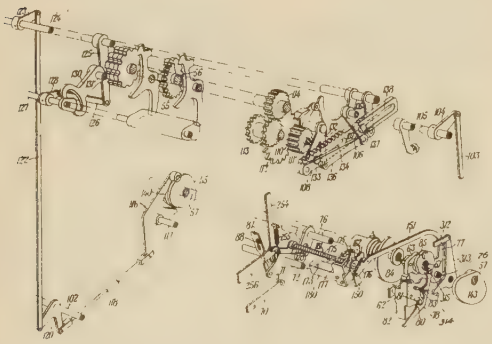
2. In apparatus for gathering glass, of the pipette type, an obturator adapted to contain a small quantity of glass, means operative to slide the said obturator over

the mouth of the pipette to open it, and an inner back edge on the said obturator adapted, on so sliding the



latter, to shear off from the glass in the mouth of the pipette, the small quantity of glass in the obturator.

1,417,685. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY L. PITMAN, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed May 15, 1919. Serial No. 297,274. 55 Claims. (Cl. 235—59.)



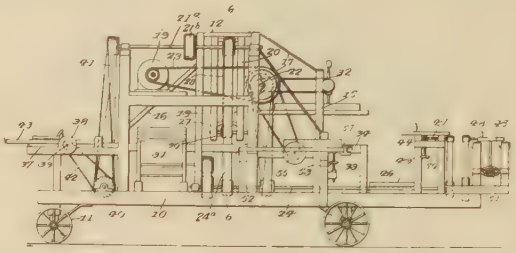
16. The combination of a carriage, numeral keys, computing mechanism, normally held power driving means for said computing mechanism, releasing means for said driving means, said releasing means being under the control of said keys, and means to lock said releasing means and thereby said numeral keys against actuation at predetermined positions in the travel of said carriage.

23. In a combined typewriting and computing machine, the combination of a carriage, numeral keys, computing mechanism, a power drive under the control of said numeral keys and with which said keys may become connected, means to prevent the simultaneous actuaton and connection of two keys with said power drive, and locking means to lock said power drive to prevent the actuation of any one of said keys at punctuation positions in the travel of said carriage.

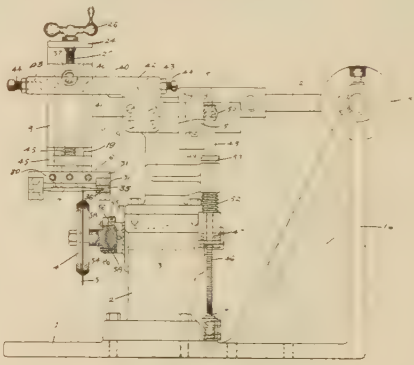
33. The combination of a carriage, numeral keys, computing mechanism, a normally held power drive for said computing mechanism, a release for said power drive under the control of said numeral keys, tabulator keys, a carriage release under the control of said tabulator keys, and means to permit the actuation of only one release at a time.

1,417,686. PORTABLE COMBINATION WOODWORKING MACHINE. JOHN F. POWELL, Monroe, La. Filed Aug. 1, 1921. Serial No. 488,970. 6 Claims. (Cl. 144—1.)

1. A wood working machine having a portable frame embodying a horizontal base, bench high tables supported thereby and a super structure including a motor supporting platform arranged above the plane of the tables, a main drive shaft disposed transversely substantially in the plane of the platform for direct connection with a motor thereon, forwardly and rearwardly extending longitudinal counter-shafts disposed respectively above the plane of the platform and adjacent to the plane of the base and operatively connected with the main shaft, and wood working implements disposed at the ends and sides of the frame and having tool carriers for selective connection respectively with said counter-shaft.

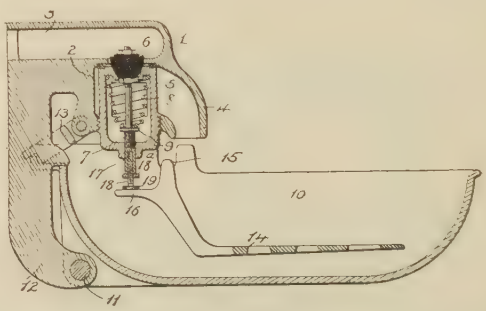


1,417,687. SAW-FILING MACHINE. WILLIAM S. PRITCHARD, Detroit, Mich. Filed Aug. 19, 1920. Serial No. 404,573. 18 Claims. (Cl. 76—35.)



1. The combination with means for holding a saw, of a member reciprocable transversely of the saw and adapted to hold a file for filing the teeth thereof, means for reciprocating said member, means for bodily raising said member during its travel in one direction to disengage the file from the teeth of the saw, and means independent of the saw for indexing the same while said member is in raised position.

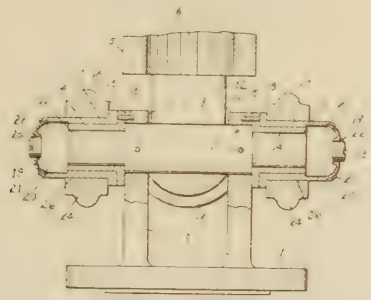
1,417,688. WATERING DEVICE FOR CATTLE. HUGO C. RASSMANN, Beaver Dam, Wis., assignor to F. Rassmann Manufacturing Company, Inc., Beaver Dam, Wis. Filed Feb. 11, 1921. Serial No. 444,183. 3 Claims. (Cl. 119—75.)



1. In a watering device, the combination with a valved fount including a spring-actuated valve, a bowl, and an

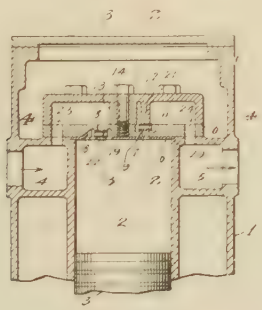
animal-controlled lever normally sustained in operative position by the stem of said spring-actuated valve, of adjusting means for said lever comprising a member having threaded connection with the valve stem and engaged by a part of said animal-controlled lever within the bowl.

1,417,689. UNIVERSAL JOINT. BERT O. RHODES, Kalamazoo, Mich. Filed Nov. 15, 1919. Serial No. 338,265. 5 Claims. (Cl. 64—102.)



5. In a universal joint, the combination of a joint member having a pair of journal pin arms, a journal pin removably secured in said arms with its journals projecting a second joint member having arms provided with integral journals, bushings non-rotatably secured to said journals, an annular coupling member formed of detachably connected sections, one of which is adapted to be slipped upon and to be removed from the arms of the first mentioned joint member when the journal pin is removed, the other being adapted to be slipped over the second mentioned joint member, and bearing members clamped between said coupling member sections.

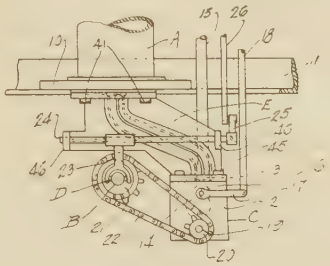
1,417,690. AUTOMATIC PLATE VALVE. MICHAEL RIESNER, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, a Corporation of Virginia. Filed Apr. 13, 1920, Serial No. 373,609. Renewed Mar. 2, 1922. Serial No. 540,613. 18 Claims. (Cl. 251—119.)



1. The combination with a curved valve seat having valve supports at its ends, of a thin, flexible, normally curved plate valve cooperating with said seat to open and close a port therethrough, the ends of the valve normally resting freely on said supports, the valve flexing during this opening and closing movement and its ends being free to permit said flexing.

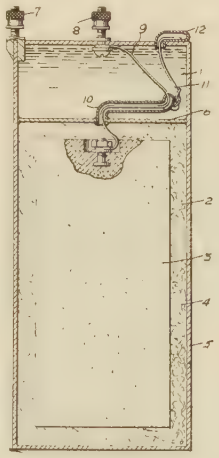
1,417,691. MANIFOLD BRACKET. EDGAR D. ROMANS, St. Paul, Minn., assignor to Grant Waldref, St. Paul, Minn. Filed Nov. 16, 1920. Serial No. 424,418. 4 Claims. (Cl. 138—9.)

1. In combination with a hoist cylinder, a bracket at the lower end of said cylinder and a pump supported by said bracket, said bracket being formed with a duct having an



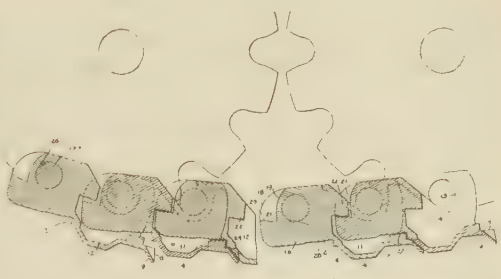
anti-leaking lining therein forming a connection between the cylinder and the pump.

1,417,692. BATTERY. DAVID ROSEN, New York, N. Y. Filed Nov. 13, 1920. Serial No. 423,831. 3 Claims. (Cl. 204—38.)



1. A dry battery casing comprising a plurality of spaced chambers, one of said chambers adapted to contain liquid and the other of said chambers adapted to contain solid material, a diaphragm between said chambers, a valve in said diaphragm, and means for opening the valve when desired to cause the association of the liquid with the solid material.

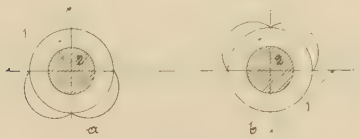
1,417,693. LINK FOR TRACTOR TRACKS. ROBERT L. SAVAGE, San Francisco, Calif. Filed Oct. 16, 1919. Serial No. 331,112. 2 Claims. (Cl. 305—10.)



2. An endless track for tractors comprising a plurality of links joined to one another, each of said links compris-

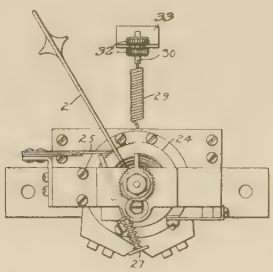
ing a tread portion, upright spaced walls extending longitudinally on the tread portion and having inclined upwardly opening pin receiving slots in the upper edges thereof, a wall extending between and outwardly from certain ends of the first named walls, a pin carried by the last named wall and projecting from opposite sides thereof for engagement in the slots of the next adjacent link and horizontally disposed shoulders formed on opposite ends of said last named wall and adapted for engagement with similar shoulders of adjacent links of the track.

1,417,694. FOUR-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. FIRMIN SMAL, Couthuin, Belgium. Filed Aug. 12, 1921. Serial No. 491,858. 1 Claim. (Cl. 123—53.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



The improvement relating to four-stroke internal combustion engines having valves controlled by a cam shaft and comprising one or more pairs of parallel cylinders each pair working on the one crank, characterized by a valve cam shaft having two sets of cams, each of which may be brought into action at will and separately to operate in such a manner the valves of each pair of cylinders as to produce, upon each corresponding crank, by the first set an alternate explosion in the cylinders of each pair, for every two strokes, and by the second set, a simultaneous explosion in the two cylinders every four strokes, substantially as and for the purpose hereinbefore set forth.

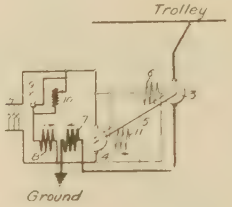
1,417,695. ELECTRICAL MEASURING INSTRUMENT. BENJAMIN H. SMITH, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 28, 1917. Serial No. 183,333. 5 Claims. (Cl. 73—151.)



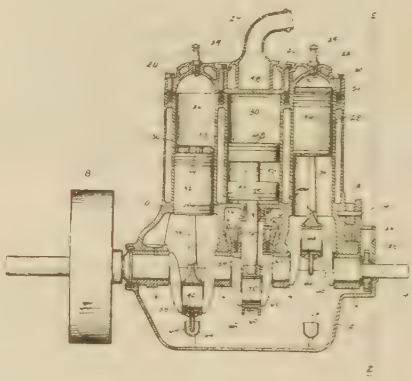
1. A measuring instrument comprising a pivoted indicating member, a yieldable positioning member therefor adjustably secured to the indicating member whereby the indicating member may be angularly adjusted with respect to the positioning member, and means for adjusting the tension of the positioning member.

1,417,696. CAR-LIGHTING SYSTEM. GERALD F. SMITH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1919. Serial No. 302,764. 5 Claims. (Cl. 171—224.)

1. A substantially constant-voltage lighting system comprising a direct-current motor-generator set having a field winding for the motor connected to the generator brushes and having a field winding for the generator connected in series relation with the motor armature, the generator magnetic circuit having a relatively low degree of saturation.



1,417,697. INTERNAL-COMBUSTION ENGINE. FREDRICK A. STANDIFORD, Coldwater, Kans. Filed Jan. 2, 1918. Serial No. 210,065. 2 Claims. (Cl. 123—59.)



1. In an internal combustion engine, a pair of combustion cylinders, a pump cylinder arranged in communication with said combustion cylinders, a crank shaft provided with a pair of oppositely moving pistons operating in said combustion cylinders, said combustion cylinders each having fuel inlet and exhaust ports maintained closed by the corresponding piston and adapted to be uncovered at about the end of the explosion stroke of the piston, said pump cylinder having its opposite ends in communication with said inlet ports respectively, and a double-acting plunger operating within said pump cylinder to deliver fuel charges therefrom alternately through said inlet ports to the combustion cylinders and to expel the exhaust gases therefrom, each of said pistons having its working face formed with deflecting surfaces arranged to deflect the incoming gas toward the opposite end of the corresponding cylinder and the exhaust gases in the direction of the exhaust ports of that cylinder.

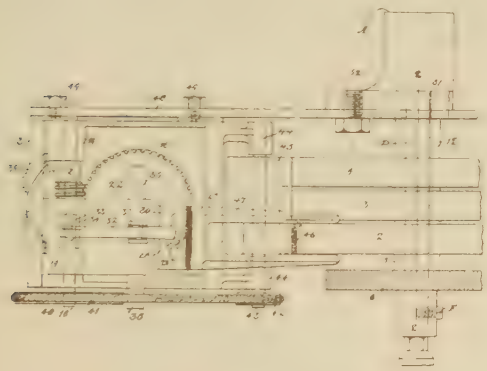
1,417,698. TEMPER SCREW. JOSEPH STROBEL, Tulsa, Okla. Filed July 8, 1920. Serial No. 394,747. 4 Claims. (Cl. 255—15.)

1. The combination with a temper screw, of a split bearing removably carried therein, the opposed faces of said bearing being curved to form an annular socket, a

cross bar adapted for engagement with a walking beam, and a ball formed on said bar engageable with the annular

socket of the bearing to form a universal swivel connection between said parts.

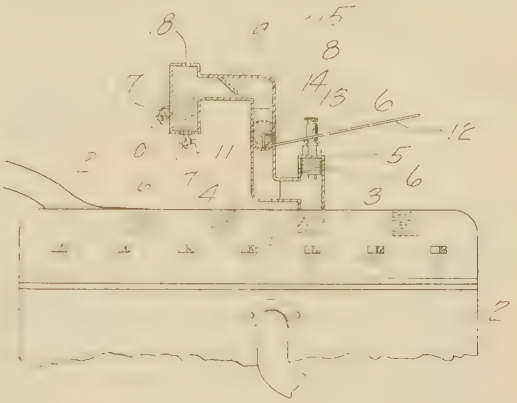
1,417,699. COMBINED REVERSING GEAR AND BELT SHIFTER AND TIGHTENER MECHANISM FOR POWER-DRIVEN MACHINES. WILLIAM HENRY SUMBLING, Toronto, Ontario, Canada, assignor to Sumbling Machinery Company, Limited, Toronto, Ontario, Canada. Filed July 19, 1920. Serial No. 397,212. 8 Claims. (Cl. 74—21.)



1. A reversing-gear comprising the combination of two bars; a suitable frame in which said bars are held against rotation; three pulleys mounted to freely rotate on one of said bars, the central pulley being essentially an idler; a gear-wheel associated with one of the outside pulleys to rotate therewith, and constantly in mesh with a gear-wheel mounted to freely rotate on the other of said bars; a pinion associated with said second-mentioned gear-wheel to be rotated thereby, and a pinion associated with the other outside pulley and designed to be rotated thereby, the said pinions adapted to mesh with a toothed rack for the purpose specified.

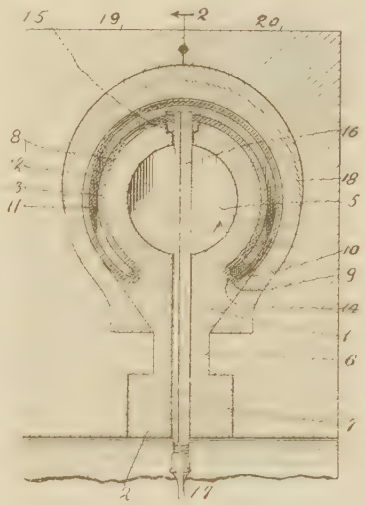
1,417,700. AUTOMOBILE ALARM. STEELE L. THOMPSON, Home, Pa. Filed Aug. 6, 1921. Serial No. 490,409. 1 Claim. (Cl. 116—138.)

In combination with a spark plug socket of an automobile engine of the internal combustion type; an alarm for the automobile, same comprising a pipe plug for seating in the socket, the outer end thereof being adapted to receive a spark plug in ordinary manner, and the said pipe plug having a branch pipe extended from one side; pipe joints extended from the branch pipe; a water well at the end of the connected joints for imparting a siren effect to the alarm, said well having drain cocks and a water port for filling and emptying the well; a rotary valve set in the pipe line and normally held closed; means



extended to the dash for opening said valve; and a vibrating membrane set in the pipe line.

1,417,701. APPARATUS FOR MAKING PNEUMATIC TIRES. ELNO H. TRUMP, Sebring, Ohio, assignor of one-half to John M. Alderfer, Akron, Ohio. Filed Nov. 24, 1917. Serial No. 203,722. 19 Claims. (Cl. 18—45.)



11. A tire building core comprising an annular rigid core conforming in shape to the tire to be built thereon, and an inflatable, elastic, non-metallic sheath positioned around the peripheral portions of said core.

1,417,702. PROCESS OF PRODUCING CYANIDES. FOORD VON BICHOWSKY and JOHN HARTHAN, Glendale, Calif. Filed Oct. 25, 1920. Serial No. 419,458. 4 Claims. (Cl. 23—13.)

1. The production of cyanides of the alkali metals which consists in heating titanium nitrides with a carbide of iron in the absence of free carbon and in the presence of an alkali metal salt.

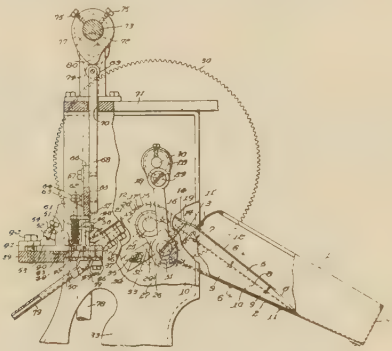
1,417,703. DEVICE FOR INDICATING CURVES. WALTER WAFFENSCHMIDT, Karlsruhe, Germany. Filed Dec. 21, 1921. Serial No. 523,937. 15 Claims. (Cl. 33—144.)

1. A device of the class described, comprising two end members adapted to move along a track, a substantially rectilinear connecting member extending from one of said

end members to the other, an intermediate member likewise adapted to move along the track, means for causing said intermediate member to move together with said end

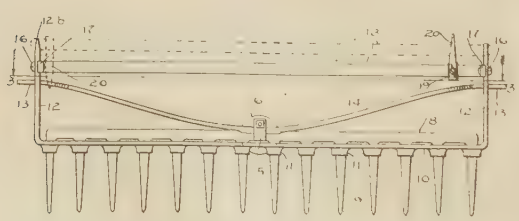
members, and an indicating member movable transversely relatively to said intermediate member and engaging said connecting member.

1,417,704. MULTIPLE STAPLING MACHINE. HARRISON B. WALTER, Philadelphia, Pa., assignor to Fibre Container Company, a Corporation of Pennsylvania. Filed Aug. 19, 1919. Serial No. 318,546. 4 Claims. (Cl. 1—3.)



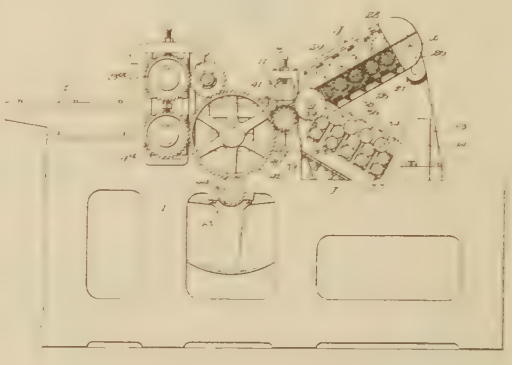
3. In a stapling machine comprising a feeding, driving and clinching means, the combination of staple holding and separating means comprising an angularly reciprocated hopper, a plurality of tapered longitudinal members secured within said hopper and at an inclination to the bottom thereof, said members adapted to receive staples in straddled position upon the reciprocation of said hopper and adapted to guide the same longitudinally thereover, said hopper being provided with openings adjacent said members through which said staple guiding members project and through which said staples are adapted to pass, bridge members connected to said guiding members and adapted to guide staples therefrom to staple receiving and supporting positions, said members provided with lateral overhanging portions, trip members adapted to receive and support said staples and picking-off means adapted to feed a single multiple of said staples from said trip members to said driving and clinching means.

1,417,705. GARDEN MARKER FOR RAKES. EDWARD WELSH, Wausau, Wis. Filed Mar. 28, 1919, Serial No. 285,726. Renewed Jan. 25, 1922. Serial No. 531,824. 2 Claims. (Cl. 97—82.)



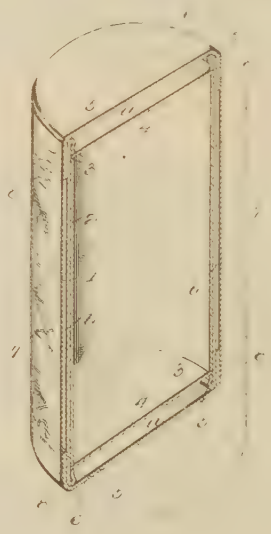
1. The combination with a rake handle and its head of an attachment for marking ground to be seeded, said attachment comprising two arms extending upwardly beyond the rake head, a straight bar connecting said arms and secured slightly away from their ends, and a marking finger slidably secured upon said bar.

1,417,706. METAL-EXPANDING MACHINE. HERBERT E. WHITE, Youngstown, Ohio, assignor to The Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Dec. 11, 1920. Serial No. 430,031. 16 Claims. (Cl. 164—6.6.)



1. A metal expanding machine including a pair of divergent expander jaws, guides at the edges of the jaws having an interlocking engagement with the edge portion of the sheet, and feeding means for advancing the sheet over the guides.

1,417,707. PAPER CONTAINER FOR GREASELIKE SUBSTANCES. WILBUR L. WRIGHT, Fulton, N. Y., assignor to Sealright Co., Inc., Fulton, N. Y., a Corporation of New York. Filed June 20, 1918. Serial No. 240,935. 2 Claims. (Cl. 206—46.)



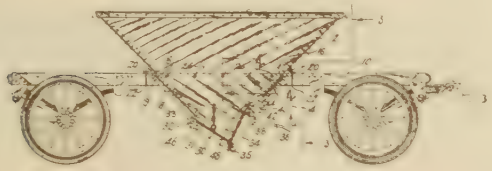
2. A grease package embodying a surrounding exterior label sheet protected by grease barriers from discoloration by seepage of grease from the interior of the package, said package consisting of a paper material can having sealed closures at both ends and projecting end flanges, and slip caps exteriorly fitting both ends of the can and covering said closures so as to cushion the can ends and form grease barriers, substantially as described.

1,417,708. RENDERING PAPER AND PAPER CONTAINERS GREASEPROOF. WILBUR L. WRIGHT, Fulton, N. Y., assignor to Sealright Co., Inc., Fulton, N. Y., a Corporation of New York. Filed July 11, 1918. Serial No. 244,472. 17 Claims. (Cl. 91—68.)

2. A grease-proofing composition containing sugar approximately to the point of saturation and a binder.

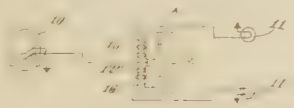
7. Paper material having a coating produced by the application thereto of a composition comprising an adhesive soluble in water and sugar approximately to the point of saturation.

1,417,709. SPREADER FOR ROAD CONSTRUCTION. CHARLES W. YELM, Denver, Colo., assignor of one-half to Maurice G. Kirkpatrick, Denver, Colo. Filed Dec. 16, 1918. Serial No. 267,064. 6 Claims. (Cl. 298—30.)



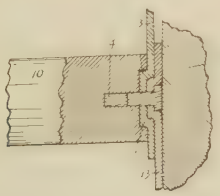
1. In a spreader, the combination with a chassis having wheels, said chassis having side supporting rails, of a hopper upon the chassis positioned between the front and rear wheels and extending above and below and beyond the side rails, said side rails passing through the hopper walls and through the carrying space therewithin and spaced substantially from the side walls of said hopper, the width of the hopper being independent of the width of the chassis, said hopper being carried and supported directly by said side rails.

1,417,710. SYSTEM OF ELECTRICAL DISTRIBUTION. EDWIN C. BALLMAN, St. Louis, Mo., assignor to Valley Electric Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 18, 1916. Serial No. 137,680. 10 Claims. (Cl. 171—242.)



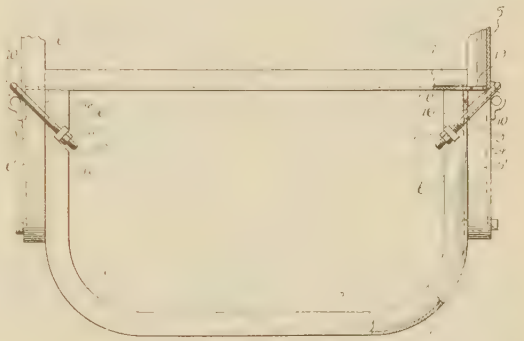
5. In a system of electrical distribution, an alternating current generator, current consuming devices connected in shunt relation and in series with said generator, and a reactance device comprising a plurality of coils, a core for said coils adapted to form part of a plurality of magnetic circuits, and a member adapted to form a return path for a plurality of said magnetic circuits.

1,417,711. RIVETING TOOL. FRANK A. BECKER and ALBERT P. ANDLAUER, Kansas City, Mo. Filed Dec. 27, 1920. Serial No. 433,301. 1 Claim. (Cl. 78—46.)



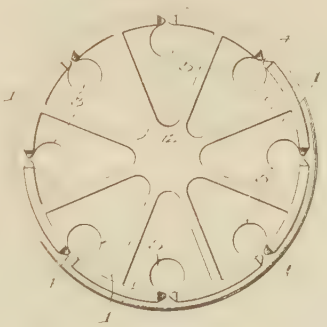
A riveting tool, including a shank, a recess at one end of said shank in diameter equal to or slightly in excess of the diameter of a rivet head plus twice the thickness of a desired assemblage of sheet metal and an inner hole concentric with and connecting to said recess.

1,417,712. BUMPER. WALTER A. BOCKIUS, Wilmette, Ill., assignor to The Beckley-Ralston Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1921. Serial No. 507,890. 13 Claims. (Cl. 293—55.)



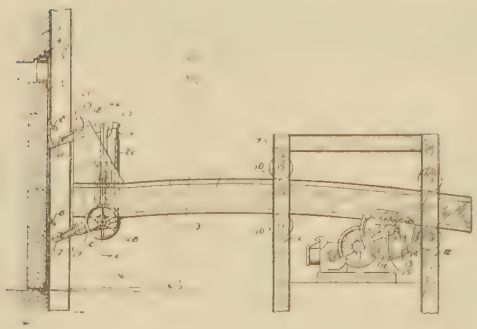
2. The combination with the side beams of a chassis frame of automotive vehicles, inner abutments on said beams and outer abutments thereon, of a bumper structure comprising a bumper bar having parallel supporting limbs engaging against the inner sides of said beams at the front ends thereof and engaging also against said inner abutments, and strap bolts anchored against said outer abutments and receiving said beams and limbs, said strap bolts extending diagonally to exert longitudinal and lateral pull components on said limbs to secure them against said beams and said inner abutments.

1,417,713. BEAD THREADER. WILLIAM W. BOLLS, Washington, D. C. Filed Apr. 2, 1919, Serial No. 287,095. Renewed Oct. 27, 1921. Serial No. 510,946. 9 Claims. (Cl. 223—52.)



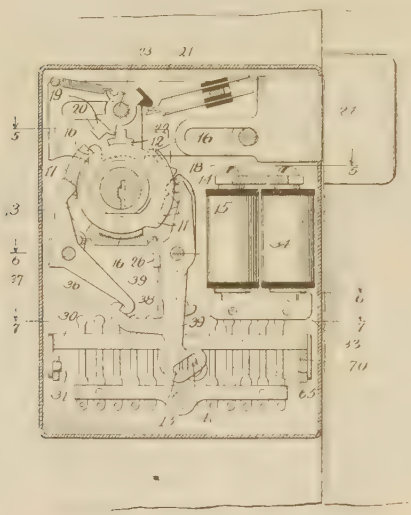
1. In a bead threader, a container having a bead holding compartment and a bead holding well at the outer end thereof communicating therewith and extending below the bottom of the compartment so that beads placed in the compartment will enter the well and be held therein under pressure from the beads in the compartment and a wall forming the outer end of the well and the outer end of the compartment and having a needle receiving slot so that a needle may be thrust laterally across the slot to enter the well.

1,417,714. DOOR-HANDLING MECHANISM. WILLIAM E. BOYER, Cleveland, Ohio, assignor to Samson D. Wright, Cleveland, Ohio. Filed Apr. 5, 1920. Serial No. 371,454. 5 Claims. (Cl. 254—84.)



1. Mechanism for handling the doors of coke ovens, including a beam, means on said beam for engaging the door, and means for guiding said beam bodily through a curved path so as to move one part of the door outwardly at a greater rate of speed than another part thereof.

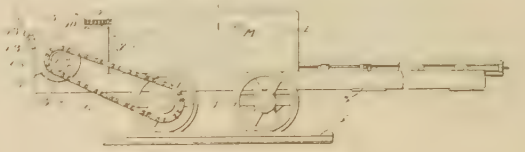
1,417,715. RECORDING LOCK. JAMES W. BRYCE, Binghamton, N. Y., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed June 26, 1920. Serial No. 391,972. 7 Claims. (Cl. 234—1.5.)



1. In a recording lock the combination with keys adapted to operate the same but otherwise having special conformation, of a series of key tumblers or plungers adapted to be moved or set in different permutations and combinations by the insertion of a key, circuits controlled by said plungers and running to a recorder, normally separated contacts in said circuits and means for closing the same controlled by the turning of a key in the lock.

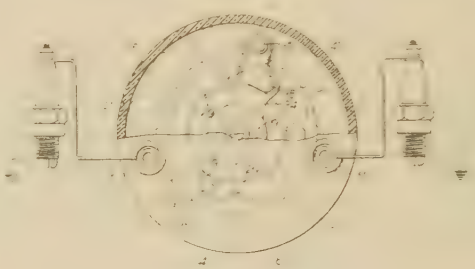
1,417,716. MINING MACHINE. FRANK CARTLIDGE, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 24, 1918. Serial No. 241,723. 16 Claims. (Cl. 105—64.)

1. The combination with a wheeled truck and a mining machine mounted thereon and including a motor, of a hydraulic motor operatively connected with the wheels of said truck, a pump driven by said mining machine motor for supplying liquid to said hydraulic motor, and valve



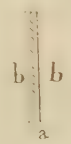
mechanism between said pump and said hydraulic motor for controlling the movements of said truck.

1,417,717. DISTRIBUTOR FOR IGNITION APPARATUS. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 13, 1919. Serial No. 323,570. 7 Claims. (Cl. 123—148.)



1. In a distributor device, the combination with a plurality of contact terminals and two stationary and approximately semi-annular contact plates adapted to be periodically energized, of a two-part rotatable distributor arm having a plurality of brushes on each part, one of the brushes on each part being adapted to engage the contact terminals successively and the other brush on each part being adapted to engage the stationary contact plates successively.

1,417,718. DIAPHRAGM. ARTHUR FREDERICK RICHMOND COTTON, London, England. Filed Feb. 8, 1921. Serial No. 443,331. 7 Claims. (Cl. 181—32.)

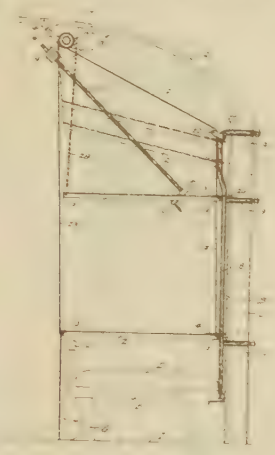


1. A vibratory diaphragm, composed of textile fabric stiffened by impregnation with celluloid by means of a solvent of the latter.

1,417,719. CONVERTIBLE DAY COACH AND SLEEPER. JOHN W. COVINGTON, Salt Lake City, Utah. Filed Aug. 6, 1918. Serial No. 248,593. 5 Claims. (Cl. 105—318.)

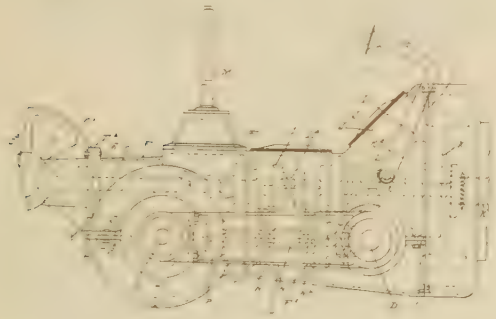
1. The combination with a supporting structure, of a berth mechanism, including vertical supports, a plurality of berth frames, means for slidably connecting the rear

edges thereof to the vertical supports, and a raising and lowering mechanism, for moving the berths simultaneously



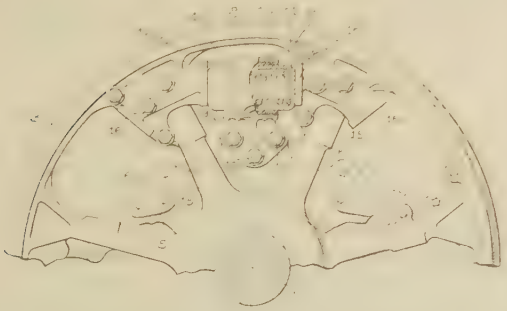
into and out of operative position the movement of the aisle edges being more rapid than the rear edges.

1,417,720. UNIT CONSTRUCTION FOR TRACTORS. GEORGE W. DUNHAM, Detroit, Mich., assignor to Graham Brothers, Evansville, Ind., a Corporation of Indiana. Filed Mar. 8, 1916. Serial No. 82,995. 7 Claims. (Cl. 74—56.)



1. The combination of an engine, a jack-shaft and a transmission there-between including parallel gear shafts, and a two part housing supporting said engine, jack-shaft and transmission, one part of said housing being removable and one of said shafts being removable therewith.

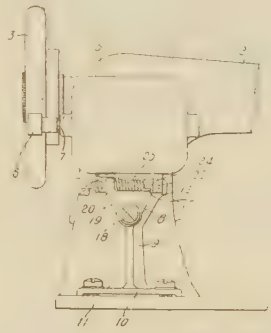
1,417,721. RESILIENT DRIVING CONNECTION. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 25, 1921. Serial No. 510,354. 8 Claims. (Cl. 105—131.)



1. The combination with a driving member and a driven member, of a spring element supported by one of said members and provided with a retaining means that is movable, under abnormal pressure, in the direction of reaction.

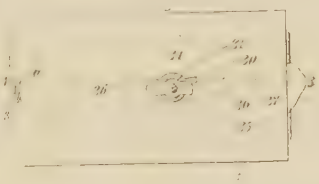
5. The combination with a driving member and a driven member, of a spring element held in operative position on the driving member by a frictionally-held member.

1,417,722. MOUNTING FOR SEWING-MACHINE MOTORS. RALPH EHRENFELD and HAROLD G. CALDWELL, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1919. Serial No. 308,734. 12 Claims. (Cl. 74—26.)



1. In combination with a driven machine comprising a driven wheel, a motor provided with a drive wheel adapted to engage said driven wheel, and a support for said motor comprising means for permitting movement thereof with respect to said driven machine in a plurality of planes disposed at an angle to each other, and means for defining the path of movement of said motor.

1,417,723. SAFETY SWITCH AND FUSE BOX. CHARLES L. EIDLITZ, New York, N. Y., assignor to Metropolitan Electric Manufacturing Company, a Corporation of New Jersey. Filed Aug. 14, 1919. Serial No. 317,515. 4 Claims. (Cl. 200—50.)

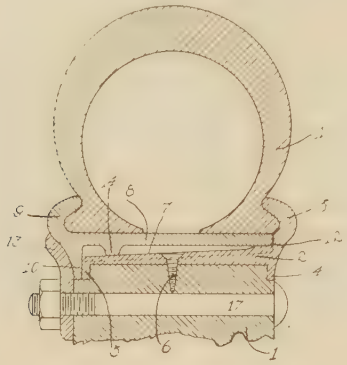


1. In a safety switch and fuse box, the combination of a casing and a cover therefor, a switch within the casing and having an operating member projecting through the cover when the cover is in closed position, the member and opening through which it projects being so shaped as to permit the cover to be opened when the member is in certain positions and prevent it when in all other positions.

1,417,724. SECTIONAL RIM FOR PNEUMATIC TIRES. WILLIAM FLOOD, Detroit, Mich., assignor of one-half to Robert Vickers, Detroit, Mich. Filed May 3, 1919. Serial No. 294,363. 2 Claims. (Cl. 152—21.)

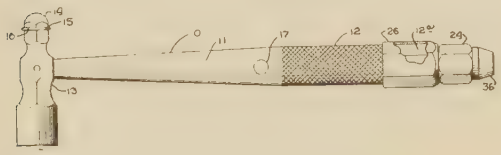
1. The combination with a wheel and an inflatable tire therefor, of a two part rim, one part being in fixed relation with the wheel and the other part being removable and engaging over and supported in spaced relation with the fixed part, said fixed part having a tire engaging flange on one side and the peripheral face thereof being formed at an angle to the axis and sloping away from the flange, the

removable part having a tire engaging flange on the outer side complemental to the flange of the fixed part and the opposite edge seating adjacent the flange of the fixed part,



said removable part having an inner circumferential rib near its flange, said seat and rib maintaining the two rim parts in spaced relation, and detachable means for holding the removable part in position on the said fixed part.

1,417,725. TOOL KIT. GEORGE R. FULLENWIDER, Maple Valley, Wash., assignor of one-half to Olof Olson, Maple Valley, Wash. Filed Dec. 19, 1919. Serial No. 346,007. 15 Claims. (Cl. 7—8.)



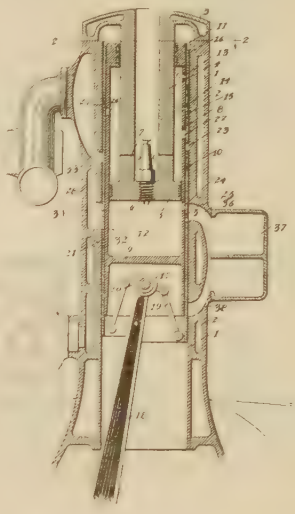
1. A tool kit comprising a body having a hollow handle and a transverse head, and a plurality of associated work-engaging implements adapted for assembly within the handle and selectively upon the head for operative manipulation by the body, and including means for retaining said body and implements against relative rotation when assembled.

1,417,726. MOTOR-DRIVEN HANDSAW. CHARLES M. GEIGER, New York, N. Y., assignor of one-half to Alfred L. Flynn, New York, N. Y. Filed June 23, 1920. Serial No. 390,991. 1 Claim. (Cl. 143—68.)

A portable saw comprising an electric motor having a plate secured thereto at its inner end, gearing on said inner end of said plate operatively connected to the motor shaft, a barrel supported on the outer end of said plate, said barrel formed with a hand guard at its extremity, a plunger operating in said barrel and a pitman connecting said gearing with said plunger for reciprocating the same, and a saw secured to said plunger.

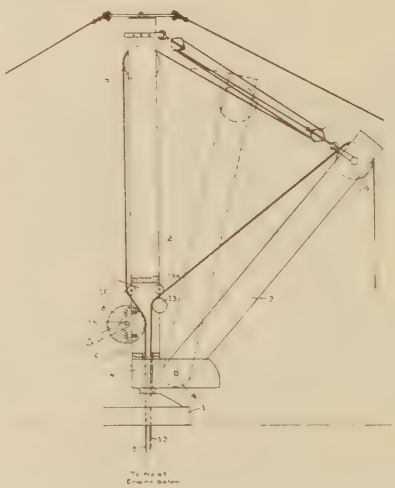
1,417,727. INTERNAL-COMBUSTION ENGINE. GEORGE BALDWIN GERAU, Miami, Fla. Filed Jan. 29, 1920. Serial No. 354,868. 8 Claims. (Cl. 123—65.)

1. An internal combustion engine, comprising a pair of cylinders, with integral connecting and separating webs arranged to define a gas reservoir for each cylinder and including a cylinder intake port leading to each explosion chamber; and a piston in each cylinder one forcing fresh gas on the inward stroke, into the reservoir, cylinder port



and explosion chamber of the other cylinder when that piston nears the extremity of its outward stroke, and vice versa.

1,417,728. GUY DERRICK. JOHN ROBERT GILL, Birmingham, Ala. Filed Dec. 18, 1920. Serial No. 431,688. 6 Claims. (Cl. 212—58.)

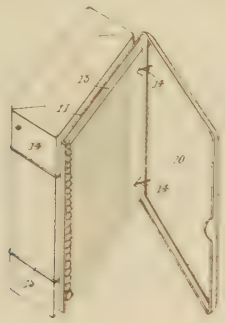


1. The combination with a guy derrick mounted at an elevation above the hoisting engine controlling it, of a hoist cable leading upwardly to the derrick for controlling the derrick boom, and an auxiliary overhauling drum adjacent to the derrick about which said cable is wound and which is operable to relieve the boom of the counter-balancing weight of the cable.

1,417,729. MATCH PACKET OR CARTON. ANDREW W. GRAHAM, Buffalo, N. Y., assignor to City Trust Co. Branch of The Marine Trust Co. of Buffalo, trustee, Buffalo, N. Y. Filed Dec. 8, 1920. Serial No. 429,239. 3 Claims. (Cl. 206—48.)

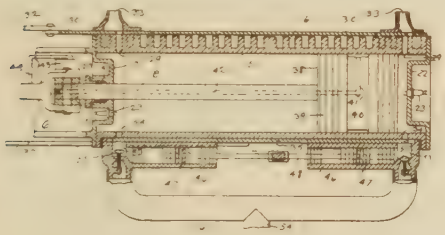
3. In a carton, a body portion formed of a piece of cardboard like material pressed to form a shallow, tray like body, a cover portion formed integrally with the body portion and hingedly connected thereto, and a plurality of elastic strands each having one end connected to the cover adjacent its free edge and the other end passing through

the cover adjacent the body and connected to the body whereby the strands yieldably hold the parts closed and



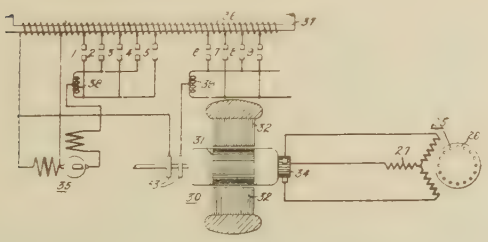
whereby that portion of the strands crossing the cover forms means for attaching the device to a package.

1,417,730. GAS ENGINE. THEODORE W. HAINLINE, Portland, Oreg., assignor of one-half to Robert S. Wittmeier, Denver, Colo. Filed May 11, 1920. Serial No. 380,690. 4 Claims. (Cl. 123—61.)



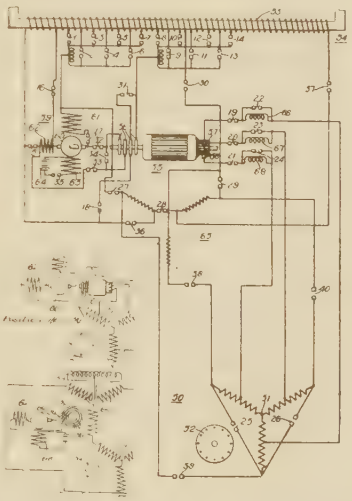
1. In an internal combustion engine, a combustion cylinder, a piston working in the cylinder, the cylinder having an inlet and an exhaust port at each end, firing means at each end of the cylinder, charge compressing means operating to compress and deliver a charge alternately to the opposite ends of the cylinder through the inlet ports, valves controlling the inlet and exhaust ports, and means operating to actuate the said valves in timed relation to the reciprocation of the piston and acting to maintain the exhaust port at either end of the cylinder open and the corresponding inlet port closed during the period of movement of the piston in the direction of the corresponding end of the cylinder and until it has reached approximately the limit of its stroke, to then move the exhaust valve to closed position, and, simultaneously with and during and immediately following the movement of the exhaust valve to closed position, move the inlet valve momentarily to open position.

1,417,731. MEANS FOR AND METHOD OF ACCELERATING INDUCTION MOTORS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 10, 1918. Serial No. 249,335. 11 Claims. (Cl. 172—274.)



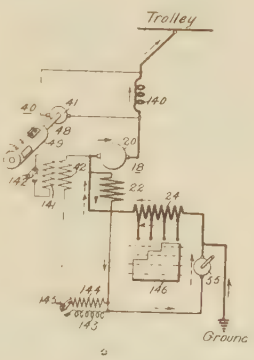
10. The method of accelerating an induction motor from a source of variable frequency and variable voltage which consists in varying first the voltage and then the frequency during each step of the acceleration of said induction motor.

1,417,732. MEANS FOR AND METHOD OF ACCELERATING INDUCTION MOTORS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 10, 1918. Serial No. 249,336. 16 Claims. (Cl. 172—274.)



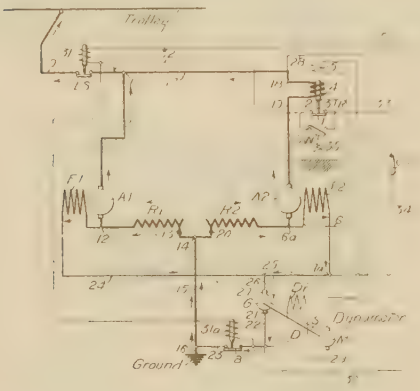
16. The method of accelerating an induction motor associated with a frequency changer which consists in taking steps tending to vary first the voltage and then the frequency of said frequency changer during each step of the acceleration of said induction motor and temporarily inserting a current-limiting device prior to said voltage-varying operation.

1,417,733. SYSTEM OF CONTROL. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1919. Serial No. 295,265. 17 Claims. (Cl. 172—179.)



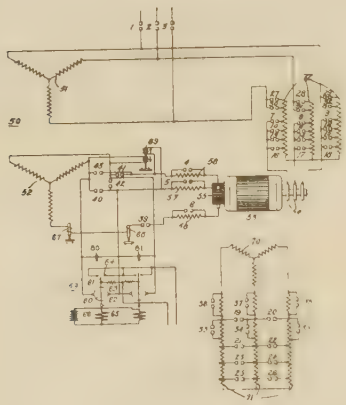
4. In a system of control, the combination with an electric motor having an armature and field-exciting means, of an impedance connected in the armature circuit, a plural-coil transformer having one coil connected in a circuit including said field-exciting means, and a relay device of the motor type for governing the motor operation and having its co-operating windings respectively connected in circuit with another transformer coil across said impedance and connected across said field winding.

1,417,734. SYSTEM OF CONTROL. RUDOLF E. HELLMUND, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1919. Serial No. 308,771. 17 Claims. (Cl. 172—179.)



1. In a system of regenerative control, the combination with a momentum-driven dynamo-electric machine having an armature and a field-magnet winding, of means for opening the regenerative circuit under predetermined operating conditions wherein the ratio of electrical and magnetic losses to machine output exceeds selected limits.

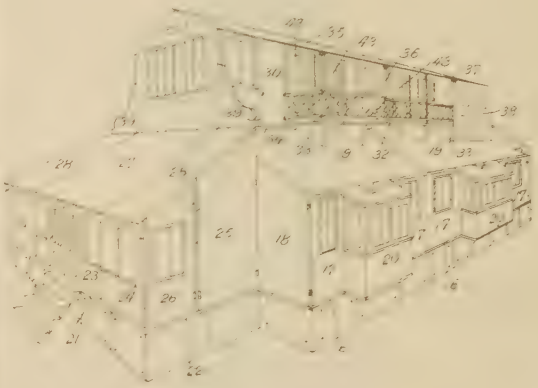
1,417,735. SYSTEM OF SPEED CONTROL FOR INDUCTION MOTORS. RUDOLF E. HELLMUND and HERBERT G. JUNGK, Swissvale, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1918, Serial No. 251,385. Renewed Apr. 13, 1922. Serial No. 552,219. 22 Claims. (Cl. 172—274.)



22. The method of accelerating an induction motor associated with a frequency changer which consists in taking steps tending to vary first the frequency and then the voltage of said frequency changer during each step of the acceleration of said induction motor.

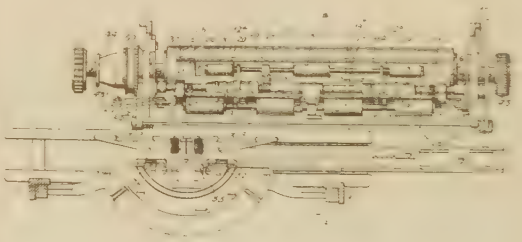
1,417,736. MOVABLE BUNGALOW. EVA CONSTANCE HEYGATE, Tankerton, England. Filed July 5, 1921. Serial No. 482,404. 7 Claims. (Cl. 20—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A movable bungalow consisting of a main floor, wheels supporting the main floor, partitions fixed to the upper side of the main floor, a superstructure capable of sliding over



the partitions, a floor in the superstructure, and partitions hinged to the floor in the superstructure.

1,417,737. TYPEWRITING MACHINE. FREDERIC W. HILLARD, Tottenville, N. Y. Filed Mar. 26, 1921. Serial No. 455,928. 28 Claims. (Cl. 197—127.)

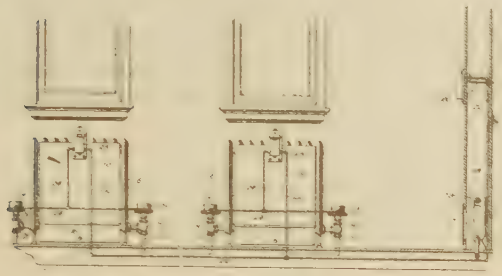


1. In a visible writing typewriter, the combination with the carriage and its platen, of a rear feed roll device, a front feed roll device, and a deflector apron, means for pivoting and controlling the deflector apron wholly independently of said feed roll devices, and means for normally spring-pressing the deflector apron to the platen, said spring pressure means exerting its pressure on the deflector apron to thereby hold it at the platen wholly independently of the position of the feed roll devices.

1,417,738. APPARATUS FOR THERMOSTATIC CONTROL. NELS HOFSTAD, Chicago, Ill., assignor to Johnson Service Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 18, 1921. Serial No. 453,338. 6 Claims. (Cl. 236—37.)

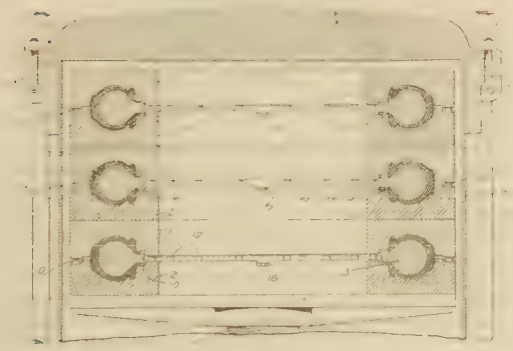
1. The combination with a room to be heated and ventilated, of an air duct leading directly thereto from out of doors; a regulable heating element in said room operative in part to heat air entering through said duct and in part to heat the air in the room by direct radiation; a thermostat responsive to the temperature of the heated air discharging from said duct and connected with said heating element to regulate the same, said thermostat serving to maintain said temperature substantially constant; and a

second thermostat subject to room temperature and operatively connected with said heating element, said second



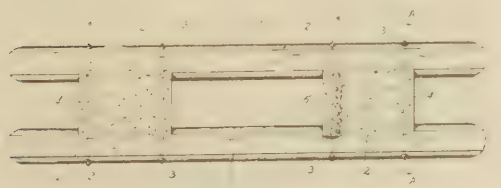
thermostat serving, when room temperature is sub-normal, to increase the heating effect of said element despite any regulative tendency of the first thermostat.

1,417,739. METHOD AND APPARATUS FOR MANUFACTURING TIRES. ERNEST HOPKINSON, New York, N. Y. Filed Apr. 28, 1921. Serial No. 465,125. 16 Claims. (Cl. 18—17.)



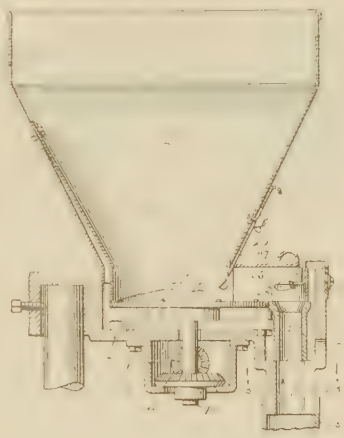
1. That method of curing tire casings in sectional molds, which includes, subjecting the casings to vulcanizing treatment at first with the sections of the molds held separated and thereafter with the sections of the molds closed and exerting a substantial compacting pressure on the casings.

1,417,740. SLED FOR DONKEY ENGINES. GEORGE W. IVES, Milwaukie, Oreg. Filed Aug. 30, 1920. Serial No. 407,051. 3 Claims. (Cl. 280—19.)



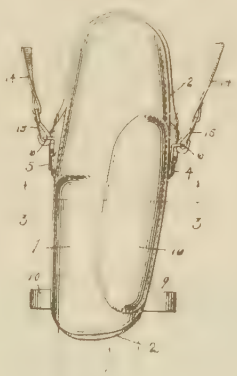
1. A sled for donkey engines, comprising a pair of runners of rough logs hewn on top to a level surface, a reinforced concrete slab cast in place between the runners at each end of the slab, the upper surface of said slab being level with the top of the runners, and bolts extending through the concrete from one side of the runners to the other.

1,417,741. AUTOMATIC FEEDER. ARON JOHNSON, Brooklyn, N. Y. Filed June 12, 1920. Serial No. 388,672. 6 Claims. (Cl. 113—113.)



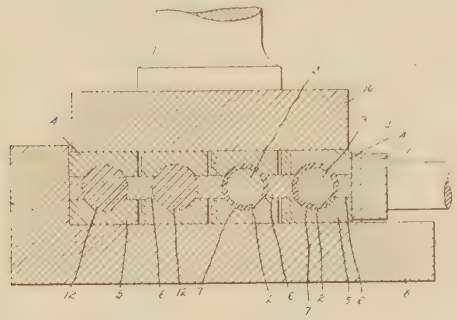
1. Automatic feeding apparatus comprising a frame provided with an outlet, a plate therein, means for rotating said plate, a vibrator plate therein and contiguous the rotary plate provided with an outlet alining with the frame outlet, and means for vibrating said plate.

1,417,742. KNEE BOOT. JAMES D. KELLER, Detroit, Mich. Filed Nov. 9, 1921. Serial No. 513,886. 3 Claims. (Cl. 54—82.)



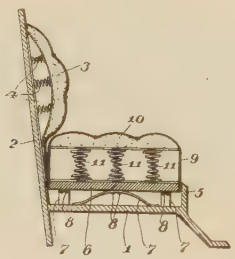
2. A knee boot consisting of a body cushioned portion having means to secure it to the leg of the animal and a resilient pad on the exterior of the boot in the rear of the middle portion thereof, said pad being oblong with rounded ends and with its greatest dimension upright when the boot is in position and tapering from front to rear.

1,417,743. PROCESS AND APPARATUS FOR FORMING LAMINATED RODS AND TUBES. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 8, 1918. Serial No. 257,387. 12 Claims. (Cl. 18—16.)



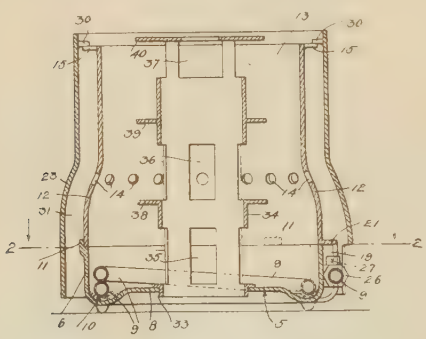
1. A mold for rods, tubes and the like comprising means for partially compressing a body to be molded, and means for limiting such compression, such limiting means being subsequently movable to complete the compression.

1,417,744. VEHICLE SEAT. ARTHUR ATWATER KENT, Ardmore, Pa. Filed Dec. 29, 1920. Serial No. 433,807. 5 Claims. (Cl. 155—50.)



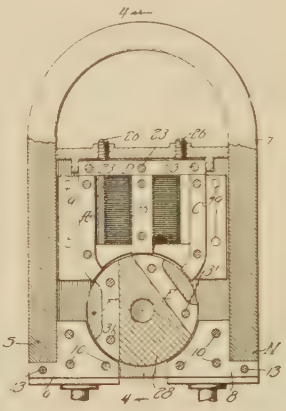
1. Seat structure for moving vehicles comprising a support, an inertia-imparting weight structure spaced therefrom and movable with respect thereto, and resilient means opposing relative movement of said weight structure and said support, whereby movement is retarded and its amplitude restricted.

1,417,745. GAS GENERATOR AND BURNER. JAMES A. KENWORTHY, Los Angeles, Calif. Filed June 6, 1921. Serial No. 475,327. 3 Claims. (Cl. 158—53.)



2. A generator and burner, comprising a sleeve closed at its bottom and open at its top forming a mixing chamber, a generator comprising a coil of pipe disposed in the bottom of said mixing chamber the discharge end of which being adapted to direct the vaporized oil therein at a tangent with the inner surface of the wall of said mixing chamber, the wall of said mixing chamber being provided with an air inlet aperture adjacent the discharge end of said generator, and a centrally disposed air supply tube extending through said mixing chamber provided with a plurality of apertures adapted to admit air into said mixing chamber.

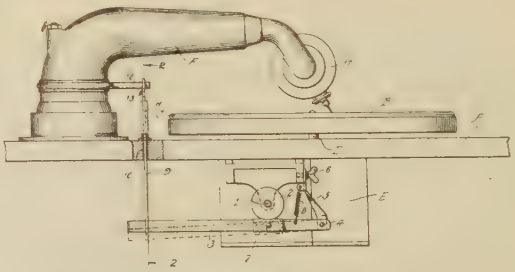
1,417,746. MAGNETO. ARTHUR C. KLECKNER, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Jan. 3, 1921. Serial No. 434,559. 16 Claims. (Cl. 171—209.)



1. In a magneto, a substantially E-shaped core structure, a winding on the middle leg of the core structure, a magnet, and inductor means adapted when in one position to establish a low reluctance path for flux between one of the magnet poles and the wound core leg, and between the other magnet pole and a first one of the unwound core legs, said inductor means adapted when in another position to establish low reluctance paths for flux between the first-mentioned magnet pole, and the second unwound core leg, and between the other magnet pole and the wound core leg.

11. A magneto comprising a magnet, pole pieces for the magnet provided with concave polar faces, a trifurcated core structure, the legs of which are provided with concave extremities concentric with the concave faces of the pole pieces, and a rotor, comprising a pair of inductor elements having extremities adapted to co-operate with the concave faces of the pole pieces and core structure legs.

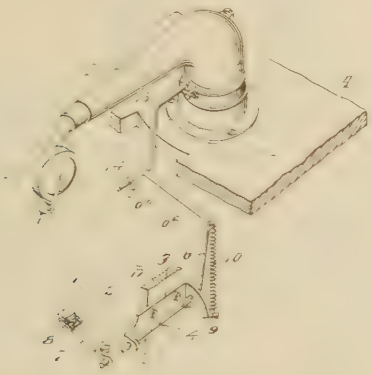
1,417,747. CONTROL MEANS FOR GRAPHOPHONES. EDWIN O. KLEMM, Dayton, Ohio, assignor to Klemm Manufacturing Company, Saginaw, Mich. Filed Dec. 6, 1919. Serial No. 343,106. 14 Claims. (Cl. 192—116.)



1. In graphophone mechanism, the combination with a record carrier, a reproducer arm having a reproducer to

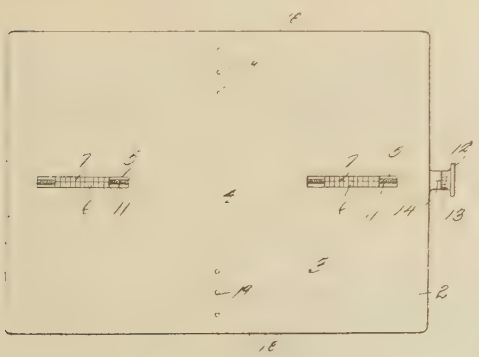
traverse a record upon said carrier, of a stopping device for the carrier, a trip on the arm, and a controlling detent connected with the stopping device, the last two parts being adapted to interlock for adjusting the trip relatively to the arm to predetermine the time when the stopping means shall become effective, and to cooperate to move the detent for retracting the stopping means to permit starting of the carrier for reproduction.

1,417,748. CONTROL MECHANISM FOR GRAPHOPHONES. EDWIN O. KLEMM, Dayton, Ohio, assignor to Klemm Manufacturing Company, Fenton, Mich., a Corporation. Filed Sept. 15, 1920. Serial No. 410,517. 8 Claims. (Cl. 192—116.)



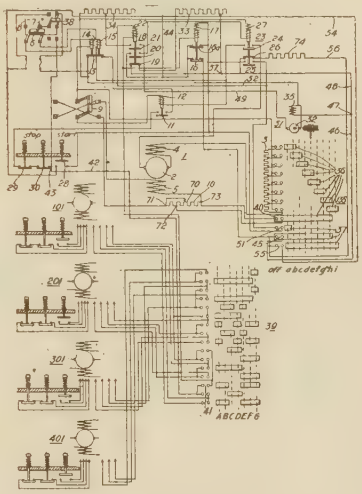
1. Graphophone mechanism comprising in combination, a record carrier and a reproducer to traverse a record on said carrier, driving mechanism for the carrier, stop means for the driving mechanism, including a brake member, an arm carrying the reproducer, a trip on the reproducer arm movable with and independently thereof, and a detent connected with the brake member to control the operativeness thereof, said detent embodying an arm having a portion to engage and cause movement of the trip relatively to the arm, and a second portion to engage the trip and to be restrained from movement by the trip, and spring means to move the detent arm when the restraining influence of the trip is removed therefrom.

1,417,749. NEGATIVE-REGISTERING DEVICE. ALEXANDER T. KOPPE, Chicago, Ill., assignor to Offset Directoplate Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 31, 1921. Serial No. 511,926. 16 Claims. Cl. 101—382.



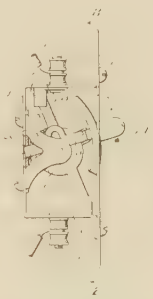
1. A multi-color negative registering device, said device comprising a base, a chase detachably disposed on the base and adapted to receive a negative, means for holding the negative in the chase, and adjustable gage means carried by the base and adapted to cooperate with centering marks on the negative.

1,417,750. MOTOR-CONTROL SYSTEM. EDWIN S. LAMMERS, Jr., Elyria, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1919. Serial No. 300,391. 7 Claims. (Cl. 172—179.)



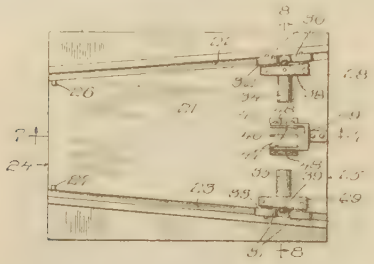
2. The combination with an electric motor, a source of energy therefor, and a controller therefor having a normal position, and normally operable from said position at a predetermined speed, of means for automatically returning said controller to said position at increased speed upon failure of power of said source.

1,417,751. SNAP SWITCH. LUDVIG LARSEN, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,121. 2 Claims. (Cl. 200—68.)



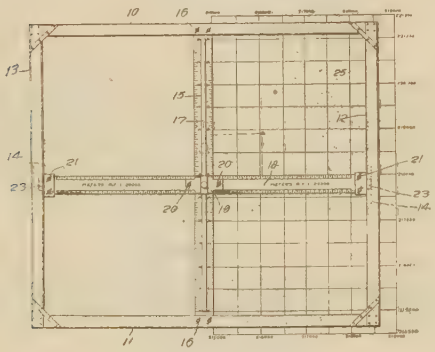
1. A snap switch comprising an insulating casing, a face plate secured thereto and being provided with an opening, a plurality of stationary contacts carried by said insulating casing, a bracket secured to said insulating casing, a switch arm pivotally mounted in said casing and adapted to oscillate in the opening of said face plate, a conducting frame pivotally mounted in said bracket and being provided with slots, said frame having arms adapted to engage said stationary contact plates, a spring stop secured to said bracket and having lugs adapted to enter either of said slots in said conducting frame, a spring carried by said bracket and having its ends engaging said switch arm and said conducting frame, and means carried by said switch arm for releasing said spring stops from the slots in said conducting frame after a predetermined movement of said switch arm, whereby said second named spring gives said conducting frame a quick throw.

1,417,752. METHOD AND MEANS FOR WRAPPING HAIR NETS. JOHN LINDGREN, Chicago, Ill. Filed Mar. 26, 1921. Serial No. 455,776. 20 Claims. (Cl. 93—2.)



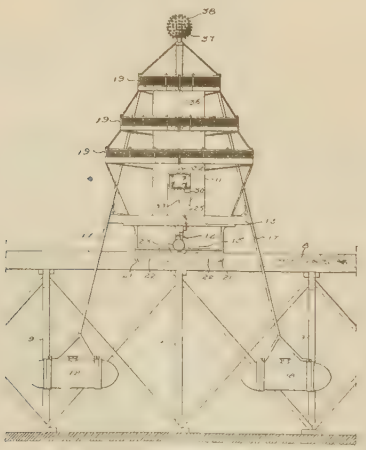
1. The method of wrapping hair-nets, which comprises placing the net upon a sheet of paper or the like, then rolling said sheet with the net inside to a cylindrical shape, and then flatting and folding said cylindrical shape.

1,417,753. PLOTTER. WILLIAM C. LINEAWEAVER, Fort Sill, Okla., assignor of one-half to Worthington Swift, Lawton, Okla. Filed June 4, 1921. Serial No. 475,058. 4 Claims. (Cl. 33—80.)



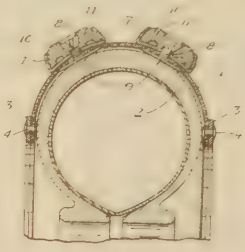
1. A plotter comprising a rigid frame, a bar extending across the frame and rigidly secured to opposite members of the frame, and a rule slidable along and relative to the bar and to the frame sections in parallelism with the bar.

1,417,754. AMUSEMENT DEVICE. SALVATORE LIUNI, Philadelphia, Pa., assignor of one-third to Raymond Koon and one-third to Domenico Caimi, both of Philadelphia, Pa. Filed Sept. 12, 1921. Serial No. 500,118. 9 Claims. (Cl. 104—63.)



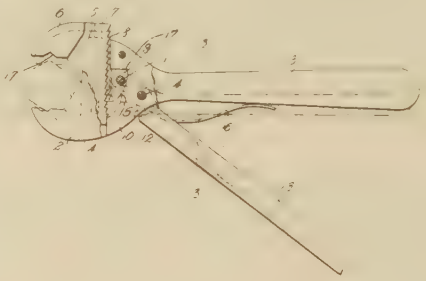
1. A device of the character described including means providing a runway having an undulated upper surface; a carriage having a single ball adapted to run on said surface of the runway; and counter-balancing means for said carriage; substantially as described.

1,417,755. PNEUMATIC-TIRE PROTECTOR. PHILIP LOME, Chicago, Ill. Filed Nov. 9, 1921. Serial No. 513,897. 6 Claims. (Cl. 152—16.)



6. In a device of the character described comprising a tire tread strip; a wear cup disposed on said strip; a washer of larger circumference than said cup disposed therein; a rivet passing through said tread strip and said washer and having its head mushroomed to hold said washer in said cup and said cup to said strip, said cup having inwardly curved edges for compressing said washer to cause it to bulge outwardly, whereby same will continue to bulge outwardly despite wear thereon and on the edges of said cup.

1,417,756. WRENCH. ARTHUR MCDONALD, Vancouver, British Columbia, Canada. Filed Nov. 18, 1921. Serial No. 516,198. 8 Claims. (Cl. 81—87.)



1. An adjustable wrench, comprising in combination, a fixed jaw member having a handle rigid therewith, an adjustable jaw member having a shank endwise movable in a slot formed for it in the rigid member, the edge of which shank further from the jaws has ratchet teeth, the shoulders of which oppose movement of the jaws apart, a pawl adapted to engage the teeth of the jaw shank, a lever pin-connected at one end to the pawl and adjacent such connection pivotally connected to the rigid jaw member, said lever adapted to move against the rigid handle member by which movement the teeth of the pawl are pressed into engagement with those of the jaw shank to retain the movable jaw member in the position to which it has been set.

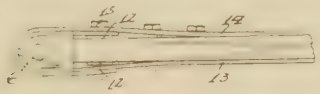
1,417,757. APPARATUS FOR MANUFACTURING CUP PASTRY. WALTER MCLAREN, Chicago, Ill., assignor to Alexander McLaren, Dayton, Ohio. Filed Dec. 31, 1919. Serial No. 348,665. 8 Claims. (Cl. 107—58.)

1. In apparatus of the character stated, a female baking mold having a blind molding cavity and a re-

stricted throat between the molding cavity and the mouth of the mold, a core adapted to enter and partly

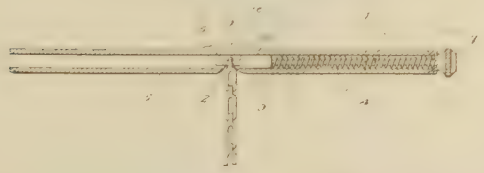
fill the molding cavity and including a neck to fit into said throat to close the mold against the escape of batter while permitting the escape of steam.

1,417,758. GATE-HINGE CONSTRUCTION. ROBERT MCLAUGHLIN, Monmouth, Ill., assignor of one-half to A. G. Patton, Monmouth, Ill. Filed July 29, 1920. Serial No. 399,722. 2 Claims. (Cl. 16—128.)



2. A hinge structure for a farm gate comprising hinge members defining a loop at the rear end of said gate, a bearing block secured in said loop and having a depending leg, said depending leg having a rounded projection adapted to contact the anchoring bolts of the gate to preclude the gate from being raised when in closed position.

1,417,759. FISH STRINGER. THOMAS BRAINARD MCNIECE, Mansfield, Ohio, assignor of one-half to Forest L. Garrison, Cincinnati, Ohio. Filed May 12, 1921. Serial No. 469,030. 1 Claim. (Cl. 224—7.)

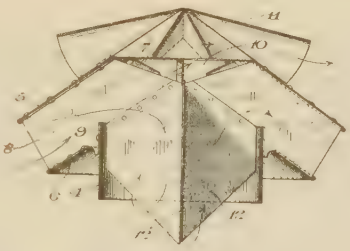


In a fish stringer, the combination with a barrel having an integral thickened intermediate portion provided with a narrow gradually restricted entrance opening, of a spring actuated plunger within said barrel and movable across said opening, and a chain having a terminal link formed from a single length of material bent intermediate its ends whereby to form an attaching eye adapted to be received within said barrel, the end portions of said length of material being enlarged to form shoulders adapted to engage the walls of said gradually reduced entrance opening whereby to position said attaching eye.

1,417,760. AUGER BIT. ELMER T. MCPHERSON, Wallingford, Conn. Filed Jan. 7, 1921. Serial No. 435,627. 3 Claims. (Cl. 145—117.)

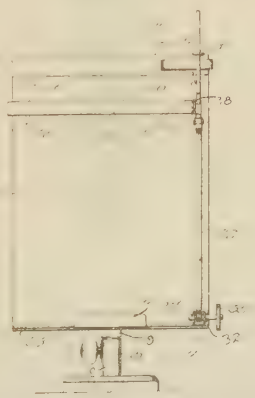
2. A balanced auger bit having its cutting-edge and the smoothing-edge of the spur located substantially in line, and the latter carried downward below the said cutting-edge for balancing the action of the bit.

1,417,761. VENTILATOR AND CHIMNEY CAP. ROBERT T. MERRILL, Milwaukee, Wis., assignor to The Crown Ventilator Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 13, 1921. Serial No. 460,927. 4 Claims. (Cl. 98—4.)



4. In a ventilator and chimney cap, the combination, with a draft tube, a frusto conical deflector provided with a central opening, a second deflector located above said tube and first named deflector and provided with a central opening, and radial ribs connecting the two deflectors and extending toward the axis of the tube, of deflector plates depending into and meeting at the axis of said tube and forming extensions of some of the ribs, said deflector plates having their lower edges inclined from the wall to the axis of said tube.

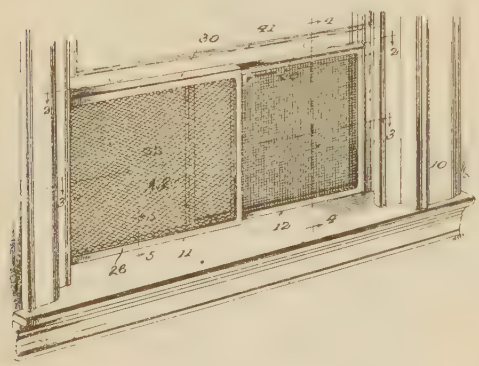
1,417,762. COPYHOLDER. LOUISE A. MOCHEL, Chicago, Ill. Filed May 16, 1919. Serial No. 297,691. 1 Claim. (Cl. 120—33.)



A copy holder comprising a rack having one of its vertical edges bent upon itself, but spaced from the

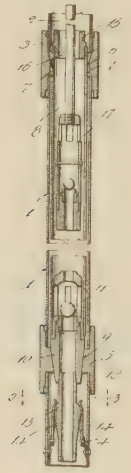
front face of the body portion of the rack to provide a guide channel, a carrier entering said channel and encompassing the bent edge portion to frictionally and adjustably engage the rear face of said rack, a marker integral with said carrier and extending over the front face of said rack and means for vertically adjusting said carrier.

1,417,763. WINDOW SCREEN. CHARLES S. MYERS, Hazleton, Pa. Filed Sept. 9, 1920. Serial No. 409,091. 2 Claims. (Cl. 156—38.)



2. A device of the class described including a pair of slidably connected sections, foraminous bodies secured to said slidably connected sections, and a reinforcing rod extending across one of said sections and having its end portions secured along the sides of the same and extended inwardly and laterally to form stop elements adapted for limiting the movement of the sections with relation to each other.

1,417,764. OIL-WELL PUMP. JOHN H. NICHOLS, Oilfields, Calif. Filed Apr. 7, 1921, Serial No. 459,401. Renewed Feb. 27, 1922. Serial No. 539,752. 4 Claims. (Cl. 103—80.)

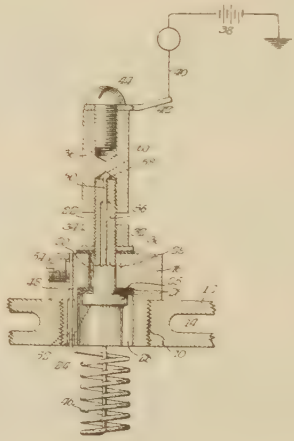


1. In an oil well, a tubing, a sucker rod in the tubing, a plunger carried by the sucker rod, a cylinder and standing valve removably seated in the tubing, an anchoring element carried by and extending beneath the standing valve, resilient means carried by said tubing for engaging said anchoring element to releasably hold the cylinder and standing valve in place, and means carried by the cylinder engageable by the plunger whereby the cylinder and standing valve may be released from the gripping means and drawn out of a well with the sucker rod and valve.

1,417,765. STATION INDICATOR. HERBERT J. PENDRAY, Victoria, British Columbia, Canada. Filed Apr. 17, 1919. Serial No. 290,758. 4 Claims. (Cl. 40—93.)

1. A station indicator comprising a band of flexible material across which the names of the stations are printed in succession, a frame, winding rollers rotatably mounted within said frame, to which rollers the ends of the band are respectively secured so that the band may be wound on either roller off the other, a display roller rotatably mounted intermediate of and parallel to the winding rollers, around the outer side of which display roller the band passes from one winding roller to the other, means applied to the band on the display roller for imposing a frictional grip between that roller and the band, means for rotating the display roller in either direction, whereby the band is withdrawn from one winding roller and delivered to the other, and means directly operated from the display roller for winding the band upon the roller toward which it is delivered.

1,417,766. EXTERNALLY-HEATABLE IGNITION PLUG. ALFRED PETER, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a Corporation of Illinois. Filed June 1, 1920. Serial No. 385,595. 3 Claims. (Cl. 123—145.)

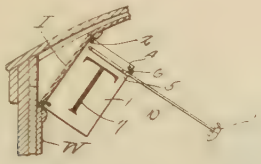


1. An ignition plug having parallel longitudinal passages, and a resistance coil having respective integral end portions straightened and extending in parallelism whereby movement of the coil in one direction will engage said end portions in respective passages and opposite movement of the coil will disengage the end portions from said passages, and means for releasably securing said end portions of the coil in said passages.

1,417,767. VEHICLE SIGN. WILLIAM A. PETERSEN, Excelsior Springs, Mo. Filed Nov. 11, 1919. Serial No. 337,372. 1 Claim. (Cl. 40—138.)

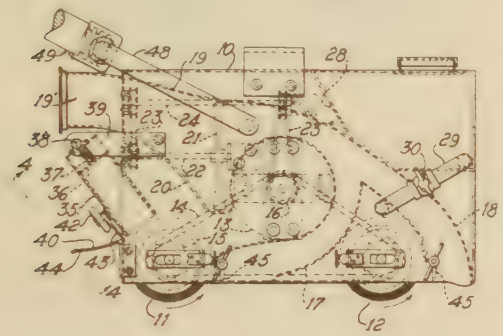
A device of the class described including inclined hinged members mounted for swinging movement and

having a sign on each side thereof, an arm secured to and extending across each hinged member to reinforce the same, said arm extending beyond the free terminal of



the hinged member, a weight carried by the free terminal of the arm, and a rod pivotally connected to the hinged members to cause them to swing about their hinges in unison when put in motion.

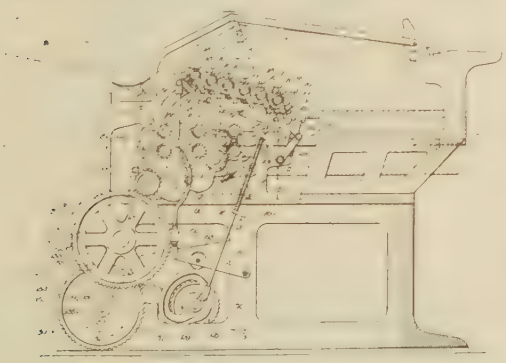
1,417,768. BRUSHING AND POLISHING MACHINE. STEVEN RADIMAK, New York, N. Y. Filed July 20, 1921. Serial No. 486,119. 8 Claims. (Cl. 91—39.)



1. In a device of the class described, a pair of rotary brushes, means for supporting a cake of wax adjacent one of the brushes, and means for delivering a polishing liquid on the other brush.

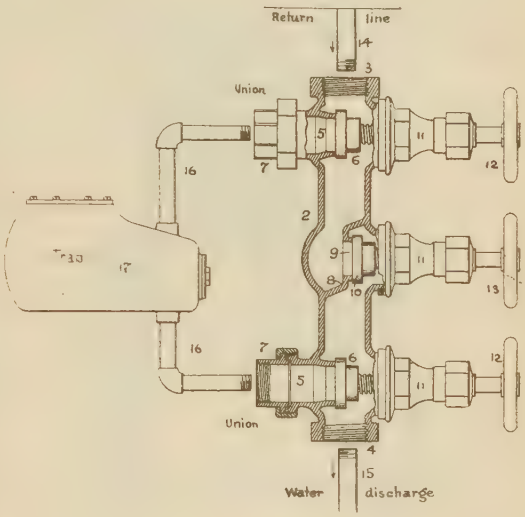
7. In a device of the class described, a rotary cylindrical brush, a guide box for a cake of wax hinged at one side and having its opposite side open and adapted to be swung into or out of registry with the said brush, and a retainer plate curved concentric to the pivot point of the guide box.

1,417,769. MULTICOLOR-PRINTING PRESS. CHARLES A. RICHARDS, Chicago, Ill. Filed May 27, 1921. Serial No. 472,955. 11 Claims. (Cl. 101—187.)



1. A multi-color printing press having a plurality of sets of ink fountains, a platen, a form roller for each set of fountains, intermediate rollers for transferring ink between each set of fountains and a corresponding form roller, a reciprocatory type frame for carrying the forms between the form rollers and the platen, and means for selectively bringing the form rollers into contact with forms on the type frame.

1,417,770. BY-PASS VALVE. FRANK H. SCHAEFER, Camden, N. J. Filed July 8, 1921. Serial No. 483,174. 5 Claims. (Cl. 277—57.)



1. An organized by-pass valve device comprising a body part having a thoroughfare provided at one end with an inlet port and at the other end with an outlet port, and further having the body divided intermediate of its ends by a transverse diaphragm having a by-pass port, said body also having two independent lateral ports one on each side of the by-pass port and respectively opening into the thoroughfare between the by-pass port and the inlet and outlet ports, in communication with a by-pass valve adjustably carried by the body for controlling the by-pass port, and two independent operating valve means also carried by the body and respectively arranged to control the lateral ports to open both lateral ports when the by-pass port is closed.

1,417,771. MEDICINAL COMPOUND AND METHOD OF PRODUCING THE SAME. JAY FRANK SCHAMBERG and GEORGE W. RAIZISS, Philadelphia, Pa., assignors to Dermatological Research Laboratories, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1920. Serial No. 375,433. 3 Claims. (Cl. 167—9.)

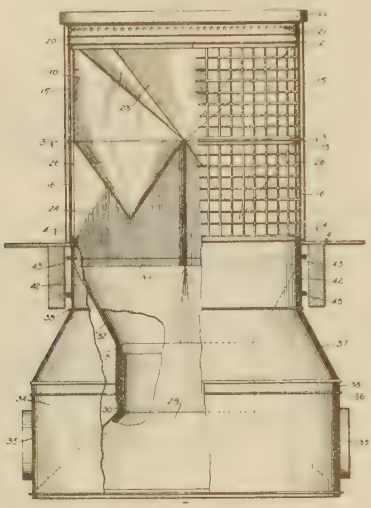
1. The new medicinal product described, which is the reduced derivative of an extract of araroba powder, is minutely crystalline in form, yellow in color, melting at about 190° C., slightly soluble in ether and methyl alcohol, and more soluble in glacial acetic acid, chloroform, benzene and ethyl alcohol.

3. The process described which consists in dissolving the amorphous powder extract of araroba powder in acetic acid, in the presence of tin metal, at a boiling temperature, subjecting the solution to the repeated action of hydrochloric acid at a prolonged boiling temperature, filtering the same, washing the filtrate for the complete removal of acetic acid, and finally cooling the residue for the separating out of the crystalline precipitate.

1,417,772. HEAT-DISTRIBUTING DEVICE. ALBERT G. SCHERER, Chicago, Ill., assignor to The Excelsior Steel Furnace Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 19, 1920. Serial No. 374,892. 4 Claims. (Cl. 98—54.)

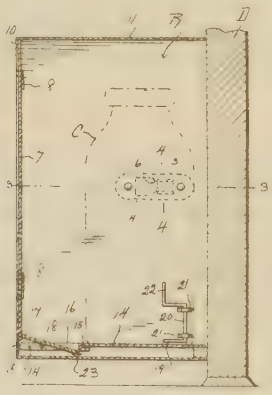
2. A register structure comprising a reticulated wall extending in a plurality of planes, a rear wall member connecting the ends of said reticulated wall, and a conduit located within the walls of said structure the walls of said

conduit converging forwardly from said rear wall member and meeting adjacent the forward portion of said reticu-



lated wall and said conduit walls being flared upwardly and outwardly to meet said reticulated wall in all of its planes and intermediate its top and bottom.

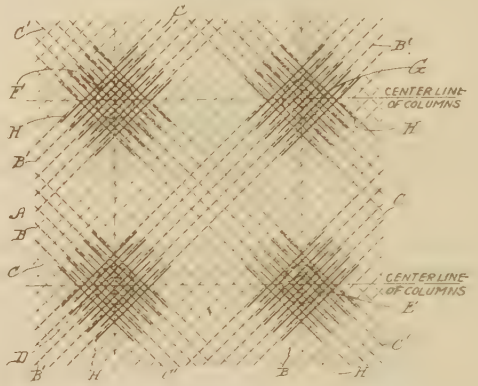
1,417,773. DEPOSIT AND COLLECTION RECEPTACLE. FREDERICK W. SCHULZE, Philadelphia, Pa. Filed July 9, 1921. Serial No. 483,550. 6 Claims. (Cl. 232—42.)



1. A device of the class described including a receptacle provided with an inwardly swinging door, a floor within the receptacle supported for swinging movement, a portion of the floor adjacent the door normally swinging downwardly by gravity, and a latch pivotally supported by said portion of the floor and normally swinging upwardly, said normally depressed portion of the floor swinging upwardly upon imposing weight upon the opposite portion of the floor, said latch holding the door against inward swinging movement when said normally depressed portion of the floor is elevated.

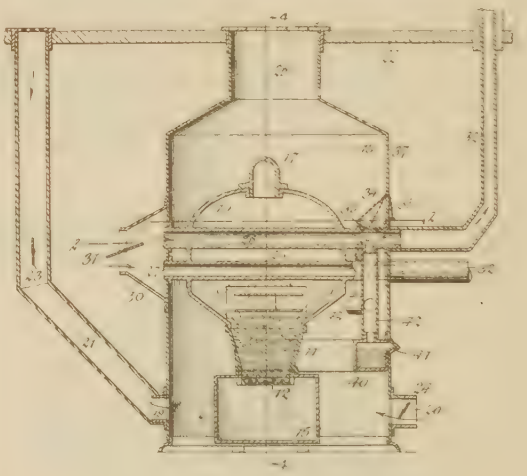
1,417,774. MONOLITHIC FLAT SLAB. KARL R. SCHUSTER, Brooklyn, N. Y. Filed June 1, 1918. Serial No. 237,700. 10 Claims. (Cl. 72—15.)

7. A monolithic flat slab supported solely on columns and initially stiffened by two belt courses of rods extending diagonally to the center lines between the columns and positioned in crossing relation to each other and in the material of the slab below the neutral axis thereof, the aggre-



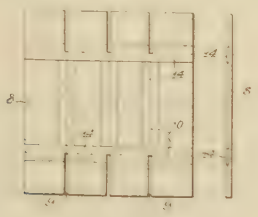
gate area of the rods being increased on the longer diagonal lines between diagonally opposite columns of adjacent pairs of columns.

1,417,775. HOT-AIR FURNACE. DEWEY A. SCOTT, Buffalo, N. Y. Filed Dec. 4, 1920. Serial No. 428,188. 4 Claims. (Cl. 126—109.)



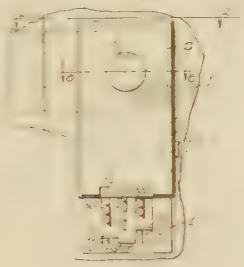
1. A hot air furnace comprising a combustion chamber, an upright main air heating chamber enclosing said combustion chamber and having an air inlet and an air outlet, a supplemental air heating pipe extending horizontally through said combustion chamber, and having an air inlet and a main air outlet outside of said main air heating chamber and also having an auxiliary air outlet whereby said supplemental pipe may be placed in communication with said main air heating chamber, and a movable gate which in one position closes the main air outlet of said supplemental pipe and opens said auxiliary air outlet and in another position closes said auxiliary air outlet and opens said main outlet of the supplemental pipe.

1,417,776. BOX CONSTRUCTION. CARL R. SHAFER, Detroit, Mich. Filed Sept. 27, 1920. Serial No. 413,132. 6 Claims. (Cl. 229—49.)



1. As a new article of manufacture, a container made of a piece of cellular material having an inset reinforcement of similar material.

1,417,777. COMBINATION KEYLESS NIGHT LATCH. JOSEPH SOMORA, Chicago, Ill. Filed July 11, 1921. Serial No. 483,841. 5 Claims. (Cl. 70—60.)



1. In a device of the type described, a casing, a plurality of manually controlled combination plates carried by said casing, said plates having grooves adapted to be alined with each other, a lock plate having a plurality of alined lugs adapted to be received in the grooves when the grooves are alined, a shaft having a pinion rigidly secured thereto, a pair of slidable racks constantly in mesh with said pinion, said racks engaging with said lock plate and preventing the rotation of said shaft, when the lugs in said plate are out of engagement with said grooves, said racks being free to move when said lugs are received in said grooves.

1,417,778. PROCESS OF MAKING FRICTION FACINGS. FREDERICK C. STANLEY, Bridgeport, Conn., assignor to Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 24, 1919. Serial No. 325,911. 20 Claims. (Cl. 91—70.)

3. A process of making a friction facing, consisting in forming a felted unwoven sheet, the major portion of which consists of asbestos fibre, forming friction facings of the desired configuration from said sheet and subjecting them to a plurality of independent saturations and subjecting the facings to a separate baking operation after each saturation.

10. A process of making a friction facing consisting in forming a facing having a substantially incombustible wearing surface and subjecting it to saturation in an oxidizable binder and then baking it in the presence of an oxidizing agent contained in the body of the facing.

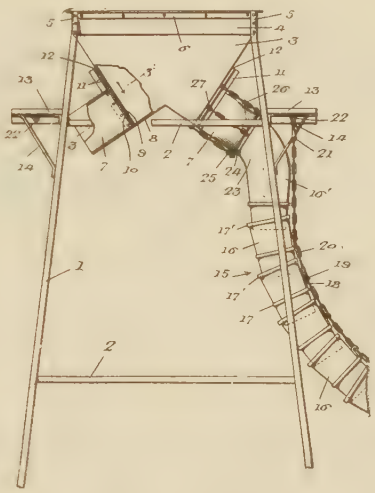
13. The process of making a friction facing composed of unwoven fibrous material having an oxidizing agent incorporated therein, comprising saturating the facing with an oxidizing binder, and in then subjecting the facing to a heat treatment.

20. The process of making friction facings composed of fibrous material, which comprises subjecting the facing to independent saturations in binders containing different relative quantities of binder constituents forming the binder, each bath containing an oil, and in heating the facing after each bath.

1,417,779. FRICTION FACING. FREDERICK C. STANLEY, Bridgeport, Conn., assignor to Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed Sept. 24, 1919, Serial No. 325,915. Divided and this application filed Aug. 23, 1920. Serial No. 405,508. 4 Claims. (Cl. 91—70.)

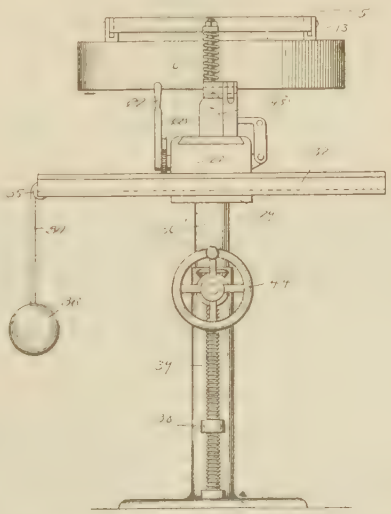
2. A friction facing composed of unwoven sheet asbestos fiber, saturated with a baked sulphurized binder.

1,417,780. LOADING HOPPER AND CHUTE. ALVA L. STEPHENS, Portland, Oreg. Filed Aug. 21, 1919. Serial No. 318,892. 2 Claims. (Cl. 193—4.)



1. A loading apparatus embodying a hopper having an inclined wall with an opening therein, a pair of shims secured to said wall at opposite sides of said opening, angle members secured to the shims, an inclined spout secured at its upper end to said members in communication with said opening, a valve slidable along said wall between said wall and said members and spout and having its edges guided by said members, and a chute connected to and leading downwardly from said spout.

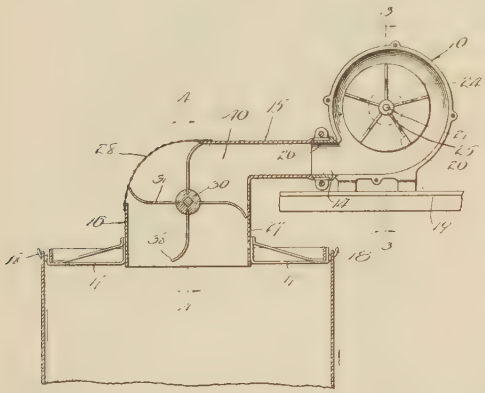
1,417,781. PACKAGE-MARKING MACHINE. ROBERT F. STUART, Kokomo, Ind. Filed June 7, 1920. Serial No. 387,216. 12 Claims. (Cl. 197—1.)



1. In a package imprinting machine, a supporting member, a vertically adjustable platform supported thereby,

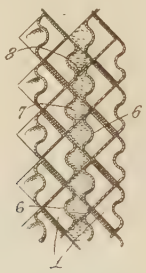
printing means carried by the platform, and laterally overhanging the latter and mounted for bodily movement in two relatively transverse horizontal directions, the printing means being disposed for downward actuation to print upon the upper face of a package disposed laterally of the supporting member.

1,417,782. CONVEYING AND CLEANING MECHANISM FOR COTTON. LOUIS CARROLL STUKENBORG, Chicago, Ill., assignor to Frederick W. Stukenborg, Chicago, Ill. Filed Feb. 10, 1919. Serial No. 276,049. 7 Claims. (Cl. 19—75.)



1. In cotton conveying means, a blower comprising a casing having a central inlet and a tangential outlet, a shaft rotatively mounted in said casing, a plate fixed to said shaft on the sides of the casing remote from the said inlet, and blades carried by said plate and extending towards the inlet opening without obstruction so as to leave spaces between the blades for cotton from said inlet.

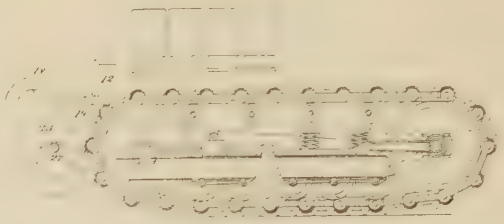
1,417,783. AUTOMOBILE RADIATOR. ROBERT R. SWANEY, Sacramento, Calif. Filed Dec. 26, 1919. Serial No. 347,472. 4 Claims. (Cl. 257—130.)



1. A honey-comb radiator consisting of a plurality of sections, each section comprising vertically disposed rows of square cells positioned to lie with their opposite corners in vertical and horizontal alinement respectively, the cells of each section being fitted in with those of adjacent sections, and continuous water-passages formed between the sections through which a straight vertical line may be drawn.

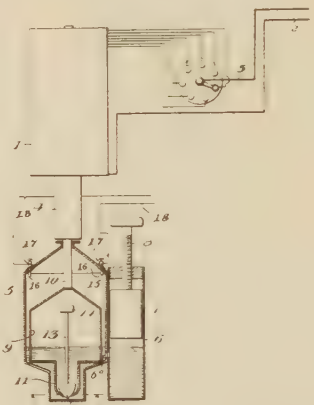
1,417,784. WINDLASS ATTACHMENT FOR TRACTORS. WILLIAM TURNBULL, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Apr. 27, 1917. Serial No. 164,944. 1 Claim. (Cl. 254—166.)

In a tractor, a windlass detachably connected to the front end of the main frame below the same, driving connections for said windlass extending to the motor and including a transverse shaft journaled on the front end



of the main frame, a casing for said transverse shaft, and downwardly extending brackets for the windlass, said casing and brackets being integrally formed.

1,417,785. RELAY. EDOUARD VEDOVELLI, Paris, France. Filed July 16, 1920. Serial No. 396,792. 6 Claims. (Cl. 200—97.)

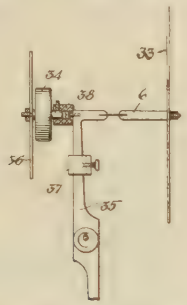


4. A time controller for an electric circuit closer comprising a receptacle filled to a predetermined level with a dense fluid; a vessel mounted in said receptacle for vertical movement and having a passage at its lower end whereby the interior of the vessel communicates with the interior of the receptacle and permitting the flow of the fluid contained in the receptacle to and from the vessel; means for partially closing said opening, said means being effective when the vessel is ascending to reduce the flow of fluid from said vessel to said receptacle and being rendered ineffective when the vessel is descending to permit a rapid descent of the vessel; a tank for the dense fluid adjacent said receptacle and communicating therewith; and a plunger in said tank for forcing said fluid into the receptacle to increase the level thereof in the receptacle.

1,417,786. SOUND-RECEIVING APPARATUS. WILLIAM L. WALKER, New York, N. Y. Filed Nov. 19, 1917. Serial No. 202,680. 10 Claims. (Cl. 179—122.)

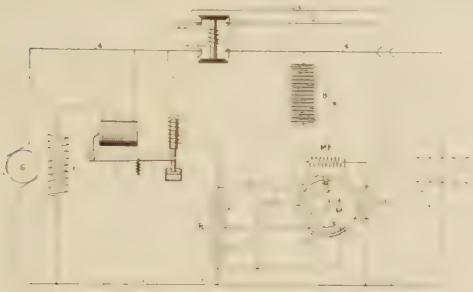
1. In a sound detecting apparatus, a sound receiver, a microphone comprising a cell provided with a diaphragm, cooperative electrodes mounted upon the cell wall and diaphragm respectively, means connecting the diaphragm directly to said sound receiver, means supporting said cell for movement with said receiver, and means for damping the movement of said cell so that when said sound receiver moves slowly both of said electrodes are moved slowly with the sound receiver, but with substantially no relative movement therebetween, and when the

sound receiver moves rapidly the electrode carried by the diaphragm is moved relatively to the other electrode, said



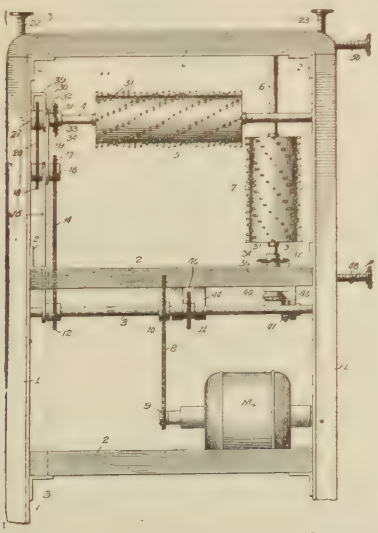
other electrode being restrained from movement by said damping means.

1,417,787. RAILWAY LIGHTING SYSTEM. LEONARD A. WATSON, Port Washington, N. Y., assignor to The Safety Car Heating and Lighting Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 29, 1916. Serial No. 74,999. 20 Claims. (Cl. 171—313.)



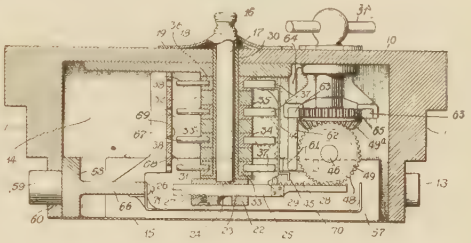
1. In a railway car lighting system, in combination; a variable speed generator; a storage battery connected to be charged thereby; regulating means, responsive to a function of the generator output, operable to maintain the generator voltage constant; and means responsive to the condition of charge of the battery arranged to affect said regulating means to maintain a higher constant generator voltage when the battery has reached a predetermined state of charge.

1,417,788. CLAY-PRODUCT-FACING MACHINE. WILLIAM E. WILSON, Mason City, Iowa. Filed May 1, 1920. Serial No. 378,059. 14 Claims. (Cl. 25—20.)



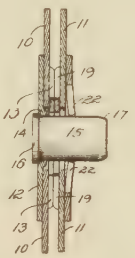
1. In a brick or tile making machine, the combination of a rotatable marking element having means thereon adapted to engage the surface of a moving ribbon or tube of ceramic material, means to cause rotation of said marking element, means for independently moving the ends of said marking element transversely to the direction of its axis and means to permit such movement without disturbing the driving means for the marking element.

1,417,789. COMBINATION LOCK. JAMES M. ZWEIMAN, West New York, N. J. Filed June 22, 1921. Serial No. 479,503. 22 Claims. (Cl. 70—53.)



1. A combination locking device comprising a casing provided with extensible locking bolts, a pair of shafts mounted in said casing, a series of selectors carried by one of said shafts, and means movable transversely of said selectors by the rotation of said other shaft whereby each selector may be engaged and then rotated by said selector shaft to effectuate the movement of said locking bolts.

1,417,790. FASTENER FOR ENVELOPES. LEW ARNTZ, Des Moines, Iowa. Filed Mar. 14, 1921. Serial No. 452,204. 1 Claim. (Cl. 229—78.)

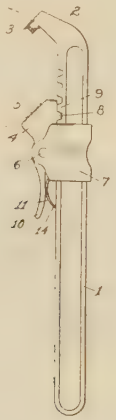


In combination with an envelope or container having a closure flap thereon, a fastener device for preventing the opening of the envelope or container without the mutilation thereof, said device including a plate secured to the back of the envelope or container, said plate having an opening formed therein, an outwardly extending curved flange formed on the edge of said opening, a pin received in said opening having a head thereon, the head on said pin being received on the under side of said plate and resting against the curved flange, a second plate secured to the closure flap of the envelope of the container, said second plate being provided with an opening adapted to receive said pin member when the closure flap is in closed position, means for preventing the opening of said closure flap when once closed, said means comprising resilient fingers formed on said second plate, said fingers being designed to coact with the pin member for preventing movement in one direction as specified.

1,417,791. METHOD OF TREATING PHOTOGRAPHIC DRY PLATES OR FILMS. JOSEPH D. BAGLEY, Springville, Utah. Filed Feb. 7, 1921. Serial No. 443,311. 1 Claim. (Cl. 95—88.)

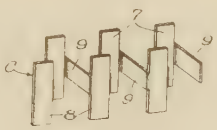
The method of treating photographic dry plates or films consisting in subjecting the dry plates or films to the action of alcohol after exposure and before development and while wet with alcohol subjecting them to the action of a photographic developer.

1,417,792. ADJUSTABLE SPANNER WRENCH. JOHN J. BARTENSTEIN, Cleveland, Ohio, assignor to The Fairmount Tool and Forging Company, a Corporation of Ohio. Filed Oct. 13, 1919. Serial No. 330,279. 1 Claim. (Cl. 81—90.)



In a wrench, the combination of a handle having an inwardly extending pin, a strap, the strap being slidably mounted upon the handle, a block, the block being pivoted to the strap, the block having an inclined face adapted to engage a body to be moved, the handle having teeth, the block having a lug at one side of the pivot adapted to engage said teeth to prevent sliding movement of the block, a lever extending from the block at the other side of the pivot for tilting the block to disengage its lug from said teeth, and a spring fixed in said block and tending to press said lever of the block from said handle for holding said lug in engagement with said teeth, substantially as described.

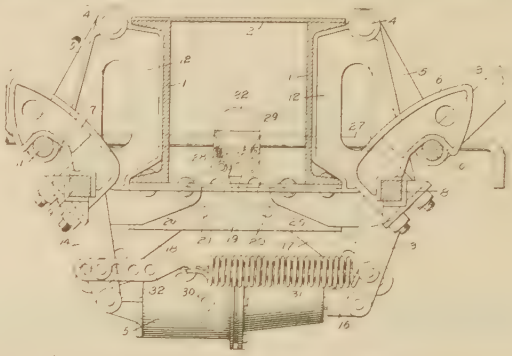
1,417,793. CLIP FOR PLASTER BOARDS AND THE LIKE. HARRY H. BURSON, Chicago, Ill., assignor to Simplex Steel Products Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1920. Serial No. 400,498. 3 Claims. (Cl. 72—118.)



2. A clip of the kind described comprising a body of sheet metal bent in zigzag fashion and adapted to present its edges between the edges of a pair of juxtaposed plaster boards to thereby space them apart a definite distance, a plurality of wings formed integral with the clip body in double courses, one on each side of the two plaster boards, the wings being extended from the clip body in opposite directions to engage with both plaster boards, substantially as described.

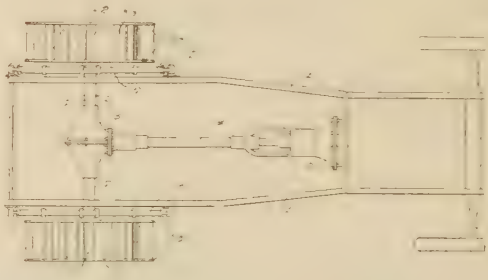
1,417,794. SHAFT-CONTROL DEVICE. CHARLES H. CLARK, Library, and HOWARD L. BEACH, Mount Lebanon, Pa., assignors to Clark Car Company, a Corporation of Pennsylvania. Filed Sept. 9, 1920. Serial No. 409,277. 18 Claims. (Cl. 105—265.)

2. In a shaft locking device for a dump car, a lever fixed on the shaft, a bar having a slotted connection to said lever and provided with a pin and arcuate slot connecting the bar to the car frame, said pin and slot preventing longitudinal movement of said bar when either extremity of said slot is engaged by said pin, and said bar preventing the movement of said lever when one extremity is engaged by



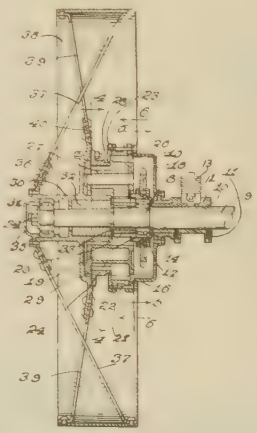
said pin and permitting said movement when its other extremity is so engaged.

1,417,795. DETACHABLE DRIVING WHEEL. ALBERT E. COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed June 14, 1918. Serial No. 240,095. 9 Claims. (Cl. 180—75.)



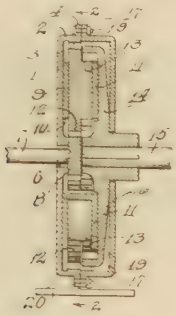
1. The combination with an automobile or truck rear axle sleeve mechanism and a collar rotatably journaled thereon, of a stationary internal gear supported on said sleeve mechanism, and a speed reducing wheel adapted to be removably bolted to said collar to coact with said internal gear to convert the automobile or truck into a tractor.

1,417,796. INTERCHANGEABLE TRUCK AND TRACTOR ATTACHMENT. ALBERT E. COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed June 14, 1918. Serial No. 240,096. 13 Claims. (Cl. 74—7.)



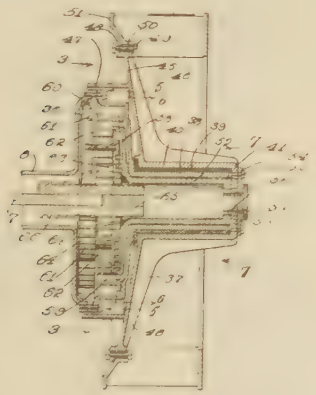
1. A speed reduction device comprising an axle, driving means rotatable thereon, a floating gear disposed around said axle and connected with said driving means, and a speed reduction mechanism driven by said floating gear.

1,417,797. SPEED-CHANGING GEAR. ALBERT E. COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed June 14, 1918. Serial No. 240,097. 8 Claims. (Cl. 74—34.)



1. In a device of the class described, a casing, a stationary internal gear integral therewith, a floating spider within said casing, floating gears within said spider meshing with said stationary internal gear, a movable internal gear meshing with said floating gears, a driven shaft secured to said movable internal gear, and a geared driving shaft connected with said floating gears to rotate the same whereby said driven shaft is rotated at a rate of speed different from that of the driving shaft.

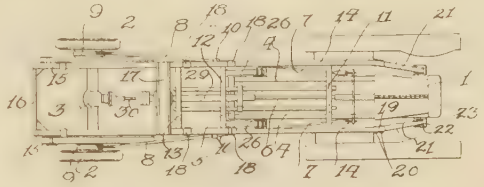
1,417,798. SPEED-CHANGE TRACTOR ATTACHMENT FOR AUTOMOBILES. ALBERT E. COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed June 14, 1918. Serial No. 240,099. 7 Claims. (Cl. 74—59.)



1. A speed change mechanism embracing a driving axle, a speed change wheel, a rack driving cylinder slidably mounted on said axle, means on said rack for connecting the wheel therewith, and pinion means engaged with the rack adapted to slide said rack driving cylinder to move the means thereon into engagement with said speed change wheel, whereby a drive from said axle is changed by said speed change wheel to produce different speed changes depending upon the direction of movement of said rack driving cylinder.

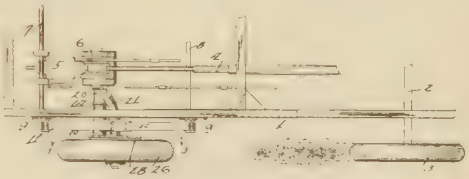
1,417,799. SPRING-MOUNTED TRACTOR ATTACHMENT. ALBERT EUGENE COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed Nov. 10, 1919. Serial No. 336,808. 4 Claims. (Cl. 180—16.)

1. The combination with automobile chassis frame sills, of auxiliary frame sills, a brace member rigidly connecting said auxiliary frame sills, spring mechanisms connecting said chassis frame sills to said auxiliary frame



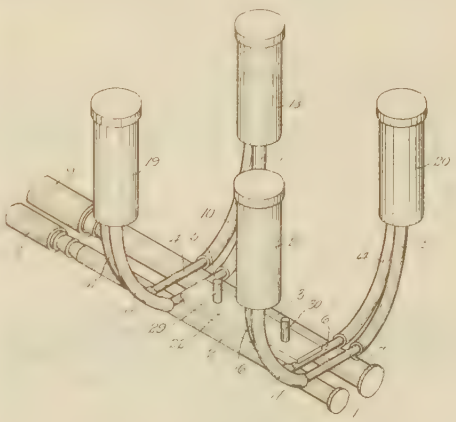
sills, and spring devices connecting said chassis frame sills to said auxiliary frame brace members.

1,417,800. OSCILLATING AXLE MECHANISM. ALBERT EUGENE COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed May 14, 1920. Serial No. 381,345. 10 Claims. (Cl. 180—70.)



1. The combination with a vehicle frame, of a driving axle, a housing therefor rigidly secured on said frame, a bracket journalled on said housing, a shaft supported thereby to oscillate about said housing, a wheel journalled on said shaft, gears connecting said wheel with said axle, a spring adjustably supported on said frame, a member clamped on said spring, and means on said bracket adapted to have roller contact with said member to afford a spring suspension for said frame.

,417,801. COW MILKER. EDITH AMY COOK, Glenomaru, Otago, New Zealand. Filed Apr. 12, 1921. Serial No. 460,679. 3 Claims. (Cl. 31—101.)

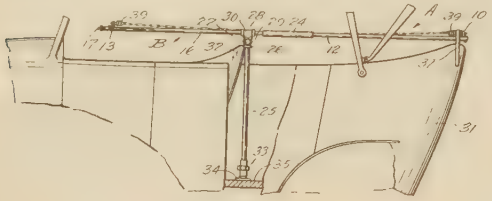


1. In a milking machine having a claw and teat cups connected thereto, the combination with the claw of a weighted piece approximating sixty eight ounces avoirdupois substantially as and for the purposes set forth.

1,417,802. AUTOMOBILE BED. FRED B. COSPER, Seattle, Wash. Filed Aug. 1, 1921. Serial No. 488,786. 5 Claims. (Cl. 5—72.)

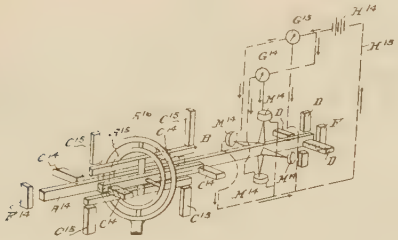
1. In an automobile bed, a supporting stand, a bed frame comprising head and foot sections, resilient means con-

necting said sections in foldable relations with respect to each other, one of said sections being pivotally connected



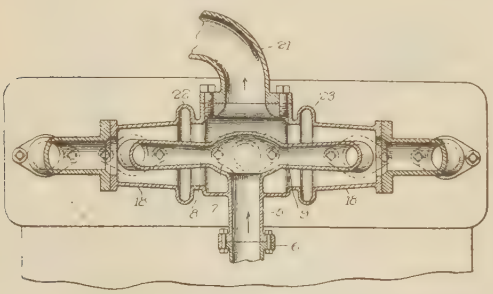
to said stand, and sleeve devices engaging members of both of said sections for releasably securing the frame in its extended position.

1,417,803. MAGNETOMETER FOR MEASURING WEAK MAGNETIC FIELDS. JULIO LOPES VALENTE DA CRUZ, Newcastle-upon-Tyne, England. Filed Apr. 23, 1918. Serial No. 230,353. 4 Claims. (Cl. 177—352.)



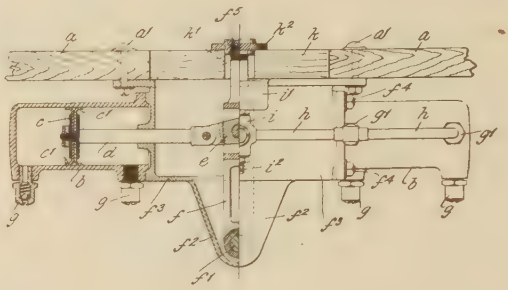
1. In apparatus for detecting and measuring weak magnetic forces, the combination of a magnet, means for rendering the said magnet astatic to earth, oppositely directed abutments against which said magnet will exert variable pressure under the influence of deflecting magnetic force, means for causing an electrical current to pass through said abutments whereby the intensity of the current is subjected to variation corresponding to the variations of pressure on the abutments, and means for giving indication of such current variations.

1,417,804. INTERNAL-COMBUSTION ENGINE. DAVID P. DAVIES, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Oct. 1, 1919. Serial No. 327,803. 3 Claims. (Cl. 123—122.)



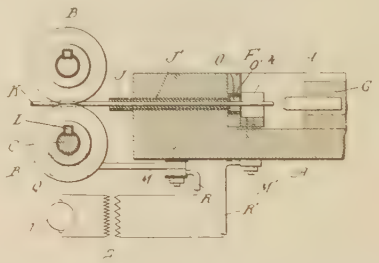
1. The combination, with an internal combustion engine, of a manifold comprising a jacket having channels integrally formed in its walls to permit expansion and contraction thereof, an expansion chamber therein for the reception of a fuel mixture, and Venturi tubes communicating with said chamber and extending laterally from each side thereof, said tubes terminating in curved formation and communicating with said engine.

1,417,805. TIRE PUMP. IFOR LLEWELLYN DAVIES, Blackheath, England. Filed May 19, 1920. Serial No. 382,669. 5 Claims. (Cl. 230—27.)



1. A tire pump comprising cylinders disposed horizontally with their axes in alignment, a piston in each of said cylinders, a piston actuating member common to said cylinders and pistons, a detachable operating element adapted to be applied to said actuating member for manual operation thereof, means for conveying compressed air from each cylinder from opposite sides of the piston therein and a distributing chamber for receiving such compressed air from the cylinders and having an outlet for said air to a tire, in combination with a vehicle foot-board, a movable member in said foot-board adapted to be displaced to permit application of the operating element to the piston actuating member, and means for attaching the pump to said foot-board.

1,417,806. METHOD AND APPARATUS FOR FORMING HEADED ARTICLES. OTTO H. DE LAPOTTERIE, Kent, Ohio, assignor to Townsend Company, New Brighton, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1918, Serial No. 219,841. Renewed Apr. 8, 1921. Serial No. 459,716. 9 Claims. (Cl. 219—3.)

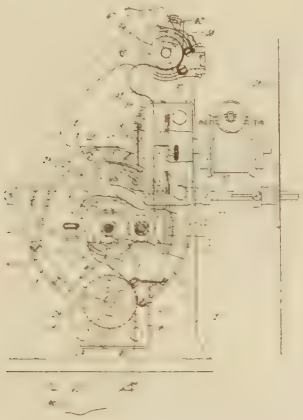


1. In a heading machine, the combination of means for feeding a rod or bar, means for shearing a blank therefrom comprising a movable die, and means for passing an electric current through said rod or bar and said die.

1,417,807. CINEMA AND ANALOGOUS PROJECTION APPARATUS. MARCEL DELUME, Paris, France, assignor to Société d'Exploitation des Brevets Dupuis, Paris, France. Filed Jan. 21, 1919. Serial No. 272,309. 3 Claims. (Cl. 88—17.)

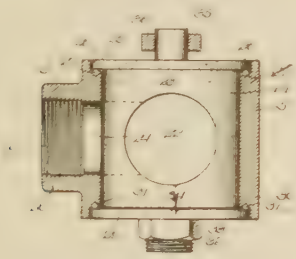
1. A framing mechanism for moving picture machines comprising a driving shaft, a casing adjustable around said shaft, film driving mechanism in said casing adjustable by the adjustment of said casing to adjust the framing, a helical gear on said shaft, an obturator shaft, a

helical gear on the obdurator shaft engaging the first mentioned gear, and means on said casing to adjust the



obturator shaft and its helical gear relatively to the gear on the driving shaft, whereby the obturator and framing adjustments are simultaneously effected.

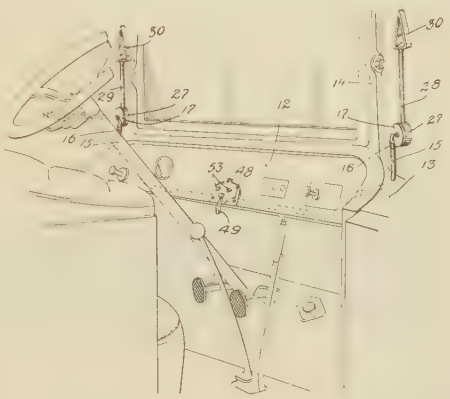
1,417,808. BY-PASS VALVE. CHARLES J. DEWEY, Chicago, Ill. Filed Feb. 26, 1921. Serial No. 447,947. 1 Claim. (Cl. 251—109.)



In a three-way valve, a casing having a straight-away bore and an intermediate, bisecting bore with a transverse bore extending through the point of divergence of the two said bores and with a rabbet surrounding each terminal end of the transverse bore; a three-way valve rotatable in said transverse bore and having a stem extending axially from its axis at one end; a disk overlying a stem at one end and secured to the valve and lying in the adjacent rabbet; another disk overlying the other end of the valve and lying in the other rabbet; a ball race in each rabbet with balls therein in contact with the respective discs; a shim between one disk and the adjacent end of the valve; means to secure the disks to the respective ends of the valves and a handle secured to one of said stems to rotate the valve.

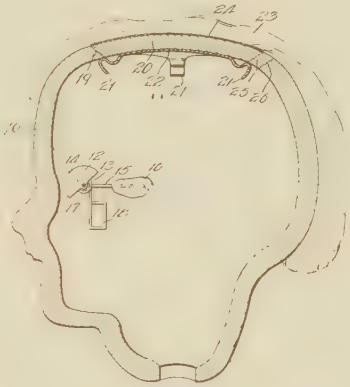
1,417,809. TRAFFIC SIGNAL. ROY D. DOUGLASS, Minneapolis, Minn. Filed Nov. 29, 1920. Serial No. 427,217. 10 Claims. (Cl. 116—54.)

1. The combination with a pivoted arm, of yielding means tending to move said arm into a projected position, a retracting connection extended from said arm, a latch normally active on said connection to hold said arm in a retracted normal position, but movable to release the same, and a manually operated retractor operative on said connection to move the same back to normal position and to again subject the same to said latch, said arm



being connected to its operating connection by a device that will slip under excessive pressure.

1,417,810. DOLL. WILLIAM P. DUN LANY, Chicago, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed May 25, 1918. Serial No. 236,498. 10 Claims. (Cl. 46—40.)

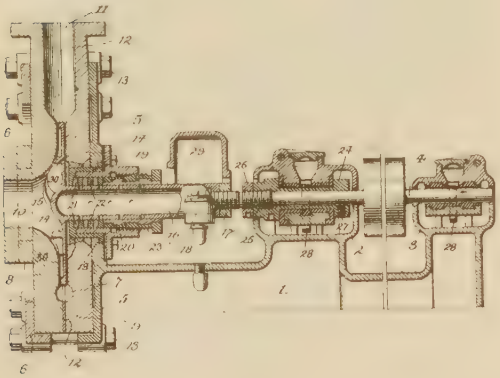


1. A hollow doll head having eyes movably mounted within the head, and having a hole in the upper portion of the head through which the eyes may be mounted or repaired, a substantially flat rigid member closing said hole, disengageable means for securing said member in place, and a wig affixed to the outer side of said member and removable therewith from the main portion of the head.

1,417,811. TOOTHBRUSH. EDWARD R. ELLIOTT, San Francisco, Calif., assignor to Leonard Free, San Francisco, Calif. Filed June 14, 1920. Serial No. 389,763. 1 Claim. (Cl. 15—202.)

A tooth brush comprising a brush portion having reversed arcuate portions; and a handle rotatably connected to the brush portion and arranged to permit end for end rotation of said brush on said handle, said brush and handle having means for normally retaining said brush in fixed position relatively to said handle.

1,417,812. CENTRIFUGAL PUMP. GUY H. ELMORE, Swarthmore, Pa. Filed Aug. 8, 1918. Serial No. 248,912. 5 Claims. (Cl. 253—200.)



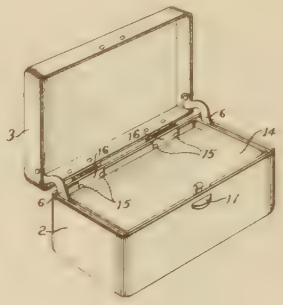
1. A pump of the impeller type, comprising a casing containing a volute chamber; a rotary impeller located within the volute chamber and having a concentric neck or hub projecting from one face; a sleeve encircling the impeller neck, having a radial flange extending inwardly thereto, and held rigidly in position concentric with the axis of the impeller; a stuffing-box encircling the hub or neck of the impeller and extending into the sleeve; an externally threaded stuffing-box gland screwing into the correspondingly threaded open end of the stuffing-box; and alternate yielding and rigid packing rings interposed between the inner flange of the sleeve and the stuffing-box gland, and forming with said gland, stuffing-box and sleeve, a combined bearing and packing gland for the impeller neck or hub.

1,417,813. MUD OR SPLASH GUARD FOR VEHICLES. WILLIAM FAIRCLOUGH, Wigan, England. Filed Feb. 17, 1920. Serial No. 359,268. 2 Claims. (Cl. 280—154.)

1. A mud or splash guard comprising in combination mud guard units or segments reinforced on the underside by strips, lugs projecting downwardly from the underside thereof, arms or strips united at one end to an arm which is fixed to the chassis, a plate spring inserted between the strips to render the said arms or strips self opening, the parts being so arranged that the lugs will take onto and slide along the upper fixed arms, a bolt being provided to compress the said arms and lock the guard in position.

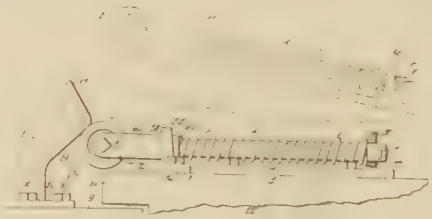
1,417,814. DISPLAY CASE FOR SMALL ARTICLES. NELSON H. FAIRWEATHER, Everett, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Mar. 12, 1921. Serial No. 451,931. 8 Claims. (Cl. 190—16.)

1. A case comprising a body portion and a hinged cover, a shallow receptacle movable upward and downward within the body portion and substantially filling the top of the latter when in its uppermost position, a support for the receptacle movable upward and downward within the body portion and also backward and forward



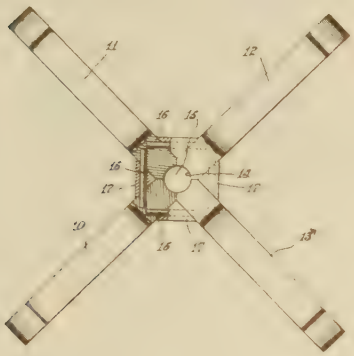
beneath the receptacle, and connections between the cover and the ends of the support for raising and lowering the latter when the cover is opened and closed.

1,417,815. SELF-CLOSING LATCH. MAX W. FISCHER, Portland, Oreg., assignor to Gillen-Cole Co., Incorporated, Portland, Oreg. Filed Oct. 4, 1921. Serial No. 505,428. 1 Claim. (Cl. 292—75.)



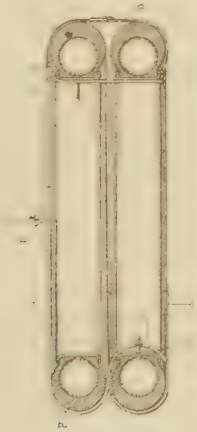
As a new article, a door latch of the character stated comprising a frame adapted for being attached to a door edge, the said frame including a pair of outwardly extending brackets, one at the inner and the other at the outer end of the frame, the inner bracket having an aperture, the bracket at the outer end having an elongated slot, a latch bolt including a shank that slidably engages the apertured bracket and a non-circular bifurcated head that constantly rides within the non-circular slot in the outer bracket, a roller bearing mounted within the bifurcations of the bolt head, a coil spring disposed upon the bolt, one end thereof engaging the inner end of the bolt head, the other end engaging an inner bracket of the latch frame, the said spring tending to normally thrust the bolt, with its roller bearing, beyond the edge of the door to which the latch may be attached, and a latch post, the said post having a base portion to adapt it for attachment to the door frame or jamb, the said post having an outer bearing surface inwardly beveled relatively to the door frame and adapted for being engaged by the latch bearing roller as the door is closed to thereby push the latch bolt back and store tension in the spring, the said post having another bearing surface that is inwardly beveled relatively to the door jamb and whose outer end merges with the inner end of the other beveled surface whereby to receive the bearing roller of the latch bolt and automatically swing the door with the bolt inwardly under tension of the spring to thereby cause the door to close tightly against the door frame or jamb.

1,417,816. CHAIR BASE. THOMAS W. FOOTE, Cleveland, Ohio. Filed July 18, 1921. Serial No. 485,462. 2 Claims. (Cl. 155—138.)



1. A chair base comprising a plurality of legs having their inner ends juxtaposed at an angle to each other leaving spaces between adjacent leg ends, filler blocks in said spaces, and pins passing through the legs and filler blocks to interconnect the same.

1,417,817. TIRE HOLDER. BEECHER FRANK, Cleveland, Ohio. Filed Feb. 19, 1921. Serial No. 446,277. 8 Claims. (Cl. 224—29.)



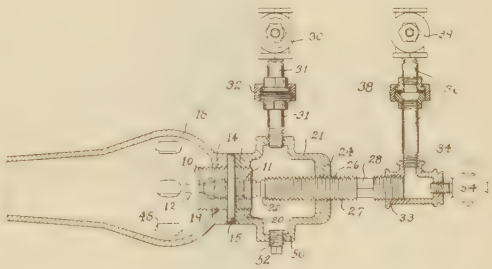
1. A tire holder for extra tires comprising a body member provided at one end portion with reversely directed saddles extending laterally therefrom, one of said saddles being adapted to engage a tire from without and the adjacent saddle being adapted to engage the second tire from within, the opposite end portion of the body member being provided with an extension disposed in the same general direction as the saddles, said extension being adapted to extend through the central opening defined by the applied tires, and a securing means coacting with the second named extension and adapted to extend over the applied tires.

1,417,818. NAIL. WILLIAM K. FROST, Hollywood, Calif. Filed June 7, 1921. Serial No. 475,672. 2 Claims. (Cl. 85—21.)

1. A fastening element comprising a cylindrical shank having a penetrating point formed on one end thereof and an inwardly extending slot extending in from one side thereof toward the penetrating point, and terminating short thereof in substantial alignment with the longitudi-

nal center of the shank, a resilient tongue defined by said slot, and a tapered penetrating point formed on said tongue.

1,417,819. FUEL-OIL BURNER. ALBERT J. FUETTER, Cleveland, Ohio. Filed June 23, 1920. Serial No. 390,993. 3 Claims. (Cl. 158—73.)



1. In a fuel oil burner, a nozzle comprising two coaxial apertured members, means for supplying oil through one of the members and air through the other, a combustion hood on said nozzle and a conduit for supplying air to said nozzle, said nozzle and said combustion chamber being coaxially arranged, said oil supplying member having spiral vanes thereon.

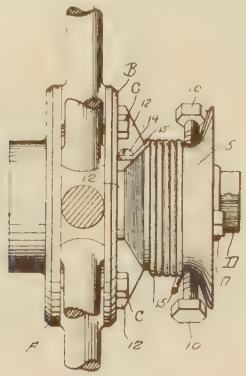
1,417,820. MEANS FOR RENDERING THE ALTERATION OF DOCUMENTS CAPABLE OF DETECTION. VYVIAN EDWIN GOODMAN, Finsbury, London, England, assignor of two-thirds to Waterlow and Sons, Limited, London, England. Filed Aug. 27, 1921. Serial No. 496,146. 2 Claims. (Cl. 91—67.95.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The herein described method of rendering the alteration of documents capable of detection, consisting in coating a black or dark-surfaced paper with an opaque but light-coloured composition sensitive to a chemical eradicator.

1,417,821. AUTOMOBILE WHEEL ATTACHMENT. WALTER H. GREEN, Dardanelle, Ark. Filed May 4, 1921. Serial No. 466,795. 1 Claim. (Cl. 242—95.)

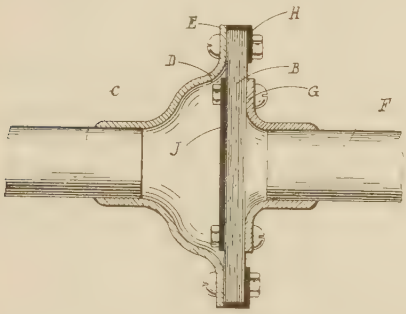
A wheel attachment of the character described comprising a body member having a socket for the reception of a wheel hub, spaced flanges projecting from the ends of the body member, said flanges cooperating with the periphery of the body member to form a pulley, means extending through the periphery at one end of the body member for

securing the body member to an axle, means extending through said end of the body member in angular relation



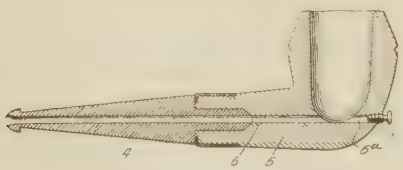
to the first mentioned means for securing said end to the hub of the wheel, and means for connecting the cable to the pulley portion of the body member.

1,417,822. COUPLING FOR CONNECTING SIDE CARS TO MOTOR CYCLES. Walter Ferdinando Grew, Coventry, England, assignor to Thermoid Rubber Company, Trenton, N. J. Filed Dec. 12, 1921. Serial No. 521,841. 3 Claims. (Cl. 208—45.)



1. In a sidecar coupling, the combination of an arm carried by the sidecar, a cup on said arm, a flange to said cup, a bracket on the motor-cycle, a flange on said bracket and a flexible disc attached to both of said flanges, substantially as set forth.

1,417,823. SMOKER'S PIPE. Charles F. Guedel, Indianapolis, Ind., assignor of one-half to Guedel Manufacturing Co., Inc., Portland, Ind., a Corporation of Indiana. Filed Oct. 25, 1920. Serial No. 419,177. 1 Claim. (Cl. 131—12.)

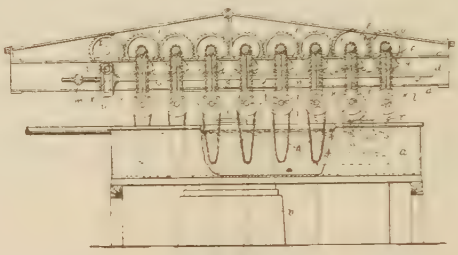


A pipe comprising a body provided with a bowl and a stem having a draft duct therein extending transversely to and having its inner end intersecting and completely open to the bottom of the chamber in the bowl, the body having a transverse opening having its inner end intersecting and completely open to the bottom of said chamber extending through the front thereof and in substantial alignment with the duct in the stem to permit a cleaner to be passed directly and completely through the stem and the bottom of the chamber in the bowl, and removable means for closing said opening.

1,417,824. OUTBOARD BUOY FOR BOATS. Gustave Haack, Madison, Wis. Filed Jan. 3, 1922. Serial No. 526,803. 1 Claim. (Cl. 114—123.)

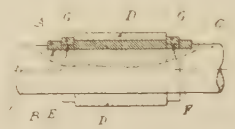
In a device of the kind described, closed metal tubes containing compressed air and extending along both sides of a boat between the water-line and gunnel, said tubes provided with plates extending outward from the ends thereof, a bracket with a plurality of holes secured to the stem of the boat and the forward plates fastened to the bracket by a bolt, brackets secured to both sides of the boat, a plurality of holes through said brackets in which screws are disposed for attaching the plates at the rear ends of the tubes thereto, and means for admitting and retaining compressed air in the tubes.

1,417,825. DYEING MACHINE. Emil S. Halter, Paterson, N. J. Filed Feb. 5, 1921. Serial No. 442,665. 8 Claims. (Cl. 8—10.)



1. A machine for treating skeins in a liquor bath, including, with a vat, a carrier over the vat oscillatory laterally of the pendent skeins, and between limits of movement approximately equidistant from the surface of the bath, and a reel revoluble on the carrier on an approximately horizontal axis and over which the skeins are looped and from which they hang pendent.

1,417,826. KEYING DEVICE FOR SHAFTS. Paul Harivéau, Paris, France. Filed Aug. 2, 1920. Serial No. 400,782. 7 Claims. (Cl. 287—52.)

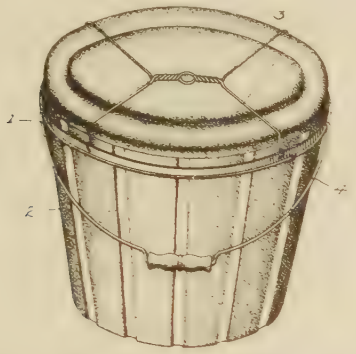


1. A device for keying the hub of a wheel to its shaft and more especially the rotors of centrifugal pumps, a key connecting the hub to the shaft, a recess provided in the key at each end of the hub and a flexible split ring engaged in said recess forming an abutment for the hub.

1,417,827. FASTENING DEVICE FOR SHIPPING-CASE COVERS. Jess B. Hawley, Evanston, Ill., assignor to American Seamless Container Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 11, 1920. Serial No. 364,901. 7 Claims. (Cl. 217—89.)

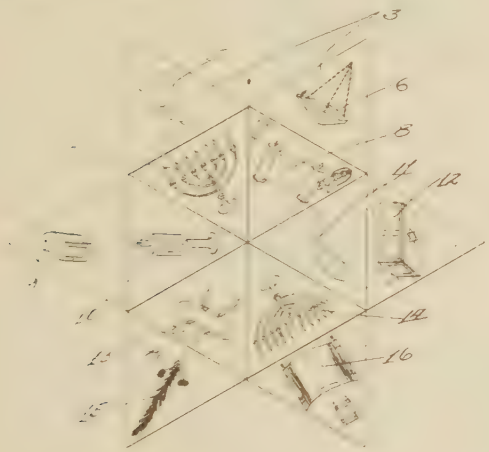
1. In a device of the class described, a hoop, a plurality of wire loops adapted to be twisted together over the out-

side of a pail cover, the free ends of said loops being each passed outwardly through an aperture in the hoop, then



bent upwardly and inwardly, and the free end portion of the loop being bent downwardly along the inside of the hoop.

1,417,828. EDUCATIONAL DEVICE. HERMAN HIRSCH, Chicago, Ill. Filed Feb. 19, 1920. Serial No. 359,988. 1 Claim. (Cl. 46—35.)



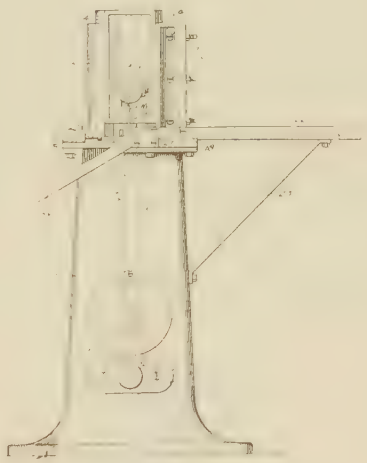
In combination, twelve triangular blocks, a hexagonal block and a hexagonal box, all the sides of all of the blocks being equal, and all the blocks having the same thickness, the interior diagonal of the box being equal to that of the hexagonal block and the depth of the box being three times the thickness of blocks, a symbol on one face of each triangular block and a legend on the opposite face thereof, all of said symbols and legends being different, a picture on one side of said hexagonal block, and a representation on the cover of the box of the star-shaped figure that can be formed from the blocks, whereby the twelve triangular blocks may be formed into two hexagons and positioned on the hexagonal block to fit in the box and whereby a six-pointed star may be formed either from the twelve triangular blocks or from six of them and the hexagonal block.

1,417,829. FURNACE. HENRY JOHNSON, Winston-Salem, N. C., assignor to The Southern Iron & Steel Corporation, a Corporation of North Carolina. Filed June 28, 1920. Serial No. 392,454. 1 Claim. (Cl. 110—73.)

A furnace for curing tobacco comprising in one portable structure made of metal, an exterior longitudinal wall, an interior longitudinal wall, and transverse end walls together forming an enclosed air chamber, the chamber formed by the inner wall and end walls having near one end a fire bridge extending upwardly from the bottom of the furnace and spaced from the rear end wall to form a secondary chamber, a grate supported on the fire bridge and the front end wall, an exit flue located near the bottom of said secondary chamber, damper controlled

air flues extending from the front end of the furnace through the air chamber and opening into said secondary chamber in proximity to said exit flue, and doors opening into the spaces above and below the grate.

1,417,830. CUTTING MACHINE. FRANK M. JOSLIN, Amsterdam, N. Y., assignor to Inman Manufacturing Company, Inc., Amsterdam, N. Y., a Corporation of New York. Filed Mar. 29, 1920. Serial No. 369,485. 3 Claims. (Cl. 164—47.)



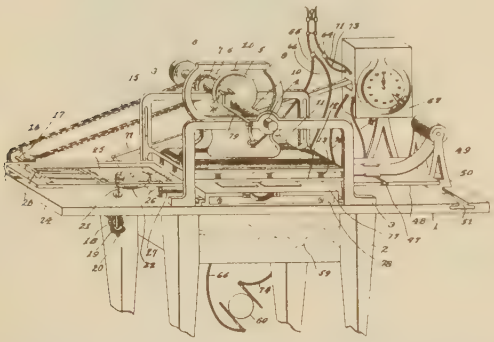
1. A machine of the class described comprising a frame having a vertically arranged guide way, a cutter carrier slidably mounted in said guide way, said carrier having a hollow boss extending laterally therefrom beyond said frame, a rib arranged beneath said boss at right angles to the front face of the carrier and integrally connected with said boss and with said carrier, a cutter secured to the lower edge of said rib and arranged substantially in a vertical plane passing through the axis of said boss, a reciprocating member arranged at the rear of said carrier for operating the same, and means mounted in said boss and engaging said reciprocating member.

1,417,831. PROCESS FOR OBTAINING IN SOLUBLE STATE SOME OF THE CONSTITUENTS OF COMPLEX ROCKS. FÉLIX JOURDAN, Rome, Italy. Filed Dec. 22, 1920. Serial No. 432,614. 2 Claims. (Cl. 23—22.)

1. Process of obtaining in soluble state some of the constituents of complex potassic rocks containing also salts of iron, aluminum, calcium and magnesium, which

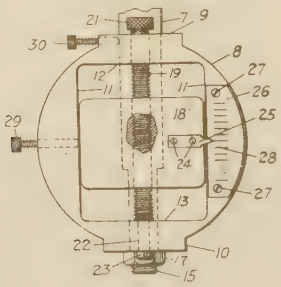
consists in attacking said rocks with hydrochloric acid, using a temperature of 300° to 600° C., and recovering the hydrochloric acid.

1,417,832. PHOTOPRINTING MACHINE. CHARLES KESSES, New York, N. Y. Filed Oct. 27, 1920. Serial No. 419,927. 4 Claims. (Cl. 95—75.)



1. An intermittently operating motor operated photo printing machine, including an exposure regulating device, lamps for making the prints, circuits for supplying current to the operating motor and the lamps, said circuits being controlled by said exposure regulating device, means for holding a negative, a feeding mechanism for feeding a strip of sheet material, said feeding mechanism including a carrier connected to the motor for intermittent reciprocation, a gripping device on said carrier to grip the paper when the carrier moves from the negative, a stationary gripping device to grip the paper when the carrier moves toward the negative and means to lift the paper from the negative while it is being advanced by the carrier.

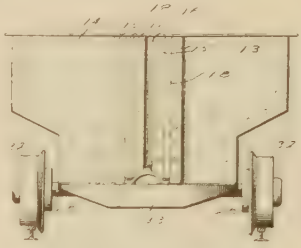
1,417,833. PENDULUM BALL FOR AUTOMATIC SCALES. LAWRENCE H. KENNEDY, Dayton, Ohio. Filed Feb. 14, 1921. Serial No. 444,882. 3 Claims. (Cl. 265—61.)



1. A pendulum ball for automatic scales, comprising a casting having a hollow interior portion rectangular in cross section, and adjustable means slidable through said interior portion along its major axis for the purpose specified.

1,417,834. MINING CAR. WILLIAM KIRCHMAN, Van Buren, Ark., assignor to The Engineering Works, Van Buren, Ark., a Corporation of Arkansas. Filed Apr. 19, 1921, Serial No. 462,632. Renewed Apr. 18, 1922. Serial No. 555,234. 3 Claims. (Cl. 105—364.)

1. An end section for a car body of the class described, comprising a pair of side panels each carrying an end panel and the outer lower corner of each end panel being cut away to accommodate the car wheels, and connecting



means between the end panels adapted to permit the distance therebetween to be increased or decreased.

1,417,835. PROCESS OF MAKING EMULSION. LESTER KIRSCHBRAUN, Evanston, Ill. Filed Feb. 1, 1919. Serial No. 274,497. 6 Claims. (Cl. 134—1.)

6. A process of making an emulsion, consisting in first forming a bulk supply by making an aqueous mixture of water and colloidal clay, adding a waterproof adhesive binder, thoroughly mixing these ingredients into an emulsion in which the binder forms the internal phase and the emulsifying agent and water the external phase, feeding additional water and colloidal clay, and also separately feeding the binder to said bulk supply and agitating the bulk supply while forming the emulsion.

1,417,836. WATERPROOF BOARD AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Chicago, Ill. Filed May 28, 1920. Serial No. 384,902. 5 Claims. (Cl. 154—45.9.)

1. A wall board composition consisting of a plurality of relatively thin saturated felted fibrous plies, the opposed surfaces thereof being adhesively united with a rigid cementitious substance and comminuted reinforcing particles coating said plies, a coating and granular facing on an exposed surface of said composition.

1,417,837. PROCESS OF MAKING WATERPROOF COMPOSITION. LESTER KIRSCHBRAUN, Evanston, Ill. Filed July 15, 1920. Serial No. 396,413. 6 Claims. (Cl. 106—31.)

1. A stock consisting of bitumen in a discrete form in an aqueous vehicle and containing an oxidizing agent.

1,417,838. COLORED BITUMINOUS COMPOSITION AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Evanston, Ill. Filed Mar. 16, 1918. Serial No. 222,938. Renewed Oct. 28, 1921. Serial No. 511,098. 5 Claims. (Cl. 106—33.)

1. A prepared bituminous product consisting essentially of a solid body being the residue remaining from the steam distillation of wax tailings, said body being yellowish brown in color and pitchy and having a conchoidal fracture when cold.

1,417,839. WATERPROOF PRODUCT. LESTER KIRSCHBRAUN, Evanston, Ill. Filed Feb. 1, 1919. Serial No. 274,499. Renewed Oct. 28, 1921. Serial No. 511,100. 3 Claims. (Cl. 154—40.)

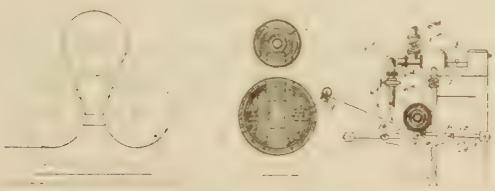
1. A process of making a mottled waterproof sheet, consisting in making a colored emulsified bituminous

matrix, mixing this matrix with a fibre of a different color than the matrix, forming this mixture into a sheet and causing an uneven surface distribution of the binder so that the color of the matrix and the binder respectively predominate in different areas of the surface of the sheet.

1,417,840. PROCESS OF TREATING SATURATED FIBROUS COMPOSITIONS. LESTER KIRSCHBRAUN, Evanston, Ill. Filed Sept. 10, 1919, Serial No. 322,990. Renewed Oct. 28, 1921. Serial No. 511,102. 2 Claims. (Cl. 92—21.)

1. The process of recovering for reuse, the fibrous and bituminous constituents of waste saturated felt consisting in mechanically disintegrating the fibres with their contained bitumen in the presence of a heated emulsifying agent.

1,417,841. PROCESS OF SATURATING FELT. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Nov. 21, 1919, Serial No. 339,691. Renewed Nov. 7, 1921. Serial No. 513,586. 3 Claims. (Cl. 91—68.)

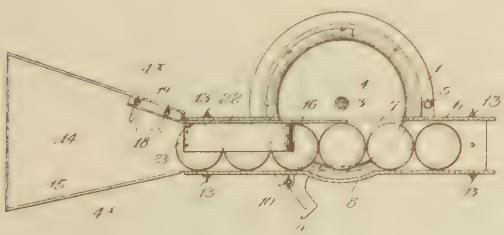


2. A process of saturating felt, consisting in applying a hot bituminous saturant in liquid form to the one face of the hot dry sheet, at or adjacent the point where it is being wound up.

1,417,842. COMPOSITION FOR PAINT. HAMPTON CHARLES KISHPAUGH, Annandale, Minn. Filed Feb. 27, 1922. Serial No. 539,713. 1 Claim. (Cl. 134—46.)

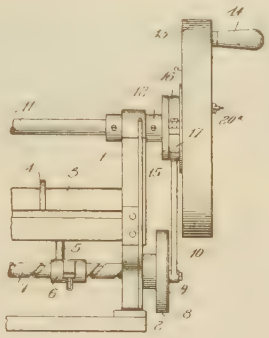
A paint composition of calcium carbonate one hundred (100) parts, calcium oxide five (5) to twenty-five (25) parts, pigment enough to produce the desired color, compounded by thoroughly mixing and grinding these ingredients in the stated proportions.

1,417,843. SLICING MACHINE. WALTER CHANDLER KNAPP, Rochester, N. Y., assignor to Liberty Bread Slicer Inc., Rochester, N. Y., a Corporation of New York. Filed May 5, 1920. Serial No. 378,943. 5 Claims. (Cl. 146—12.)



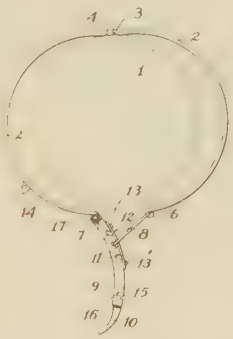
1. In a slicing machine, the combination of a knife, a chute for directing the material to be sliced to the knife, and a plate pivoted in the chute and extending forwardly and downwardly over the knife to engage the material to be cut as it is fed into engagement with the knife.

1,417,844. SLICING MACHINE. WALTER CHANDLER KNAPP, Rochester, N. Y., assignor to Liberty Bread Slicer Inc., Rochester, N. Y., a Corporation of New York. Filed June 5, 1920. Serial No. 386,742. 4 Claims. (Cl. 146—12.)



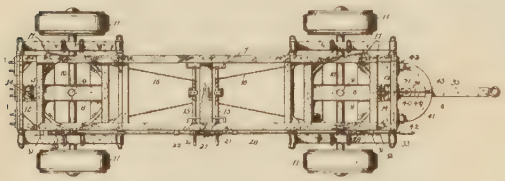
1. In a slicing machine, the combination of a frame, a chute for the material to be sliced mounted in said frame, a pusher in said chute, a worm rotatably mounted in said frame, means operatively connecting said worm with said pusher, a knife shaft revolubly mounted in said frame, a wheel on said shaft, a collar eccentrically pivoted to said wheel and adjustable relatively to the shaft to vary the thickness of the slice, and means operatively connecting said collar with said worm.

1,417,845. CASK COVER. ANDREW LEESEKAMP, Anamosa, Iowa. Filed Aug. 30, 1921. Serial No. 496,990. 1 Claim. (Cl. 217—89.)



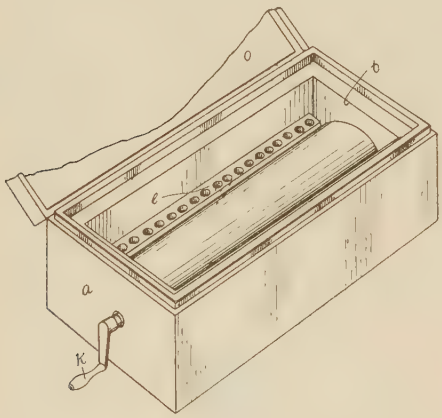
In a device of the class described, the combination of a springy, split, ring-like body provided intermediate its end with an outwardly-extending portion, a strap hinge on said outwardly-extending portion, said body having its ends formed into loops, an elongated link mounted in one of said loops, a curved lever-handle pivotally mounted in the other loop, an apertured lug formed upon the body contiguous to said loop with the lever-handle, said lever-handle provided with a plurality of sockets in its inner edge, said sockets extending inwardly toward the inner end of the lever-handle, said elongated link positioned in one of said sockets, a curved plate positioned over said sockets and extending through the elongated link and bearing against the lever-handle, bolts extending through said plate and into said lever-handle detachably securing the plate to said lever-handle, said lever handle provided with a slot receiving said lug, and fastening means extending through the slotted portion of the lever-handle and a lug fixedly holding the lever-handle in a closed position upon the ring-like body, substantially as shown and described.

1,417,846. TRAILER. SAMUEL E. LIEDABRAND, Springfield, Ill. Filed July 19, 1920. Serial No. 397,526. 8 Claims. (Cl. 280—91.)



1. In steering mechanism of the character set forth, the combination with a vehicle frame, of front and rear sets of wheels pivotally mounted thereon, two transverse shafts mounted on said frame, connecting means between each shaft and one of said sets of wheels, a single actuating member, and means for connecting the actuating member to either shaft at will to turn either set of wheels independently of the other.

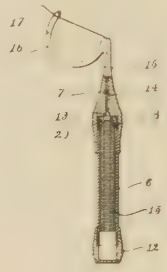
1,417,847. MEANS FOR MAKING ICE CREAM. JOHN MCAULIFFE LONG, Manchester, England. Filed July 9, 1921. Serial No. 483,640. 3 Claims. (Cl. 257—98.)



3. In a freezing machine, a vessel for holding the substance to be frozen having a curved trough-shaped lower part, a revoluble cylinder for holding the freezing substance journaled in the said chamber and arranged with its periphery adjacent to one side of the upper part of the said curved lower part, an angular space being formed between the cylinder and the remainder of the curved lower part, and a perforated scraper secured in the upper part of the said angular space so that the substance to be treated is caused to be propelled around and around in the chamber and caused to pass through the perforation of the scraper into the space above the scraper and cylinder.

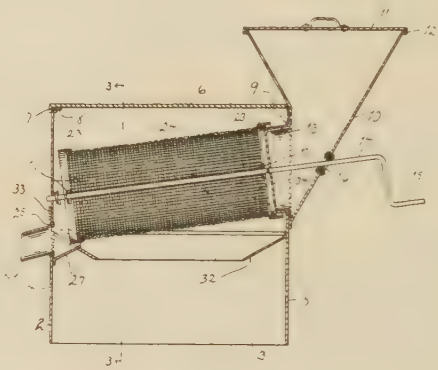
1,417,848. DENTAL TOOL. FREDERICK L. MACDONALD, Waltham, Mass., assignor to Flostik Company, Waltham, Mass., a Corporation. Filed Mar. 12, 1921. Serial No. 451,683. 8 Claims. (Cl. 132—92.)

5. A dental floss tool having, in combination, a hollow body, a head withdrawably connected to said body having a straight floss-way therethrough, said floss-way having a cone-shaped inner end, and a floss-bobbin in said body comprising a spindle having an upper end shaped



complementally to said cone-shaped end of the floss-way and adapted to be seated therein when the head and body are in closed relation.

1,417,849. DUSTLESS ASH SIFTER. JOHN MAIERS, Philadelphia, Pa. Filed May 21, 1918. Serial No. 235,854. 2 Claims. (Cl. 83—60.)

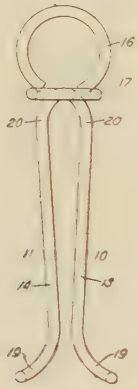


1. An ash sifter comprising a housing provided with a hopper at one end, an outlet spout at the opposite end and a doorway in one of its sides normally closed by a gravity slide door, baffle plates secured to the side and end walls of the housing intermediate the top and bottom thereof, a guide shelf located entirely within the housing and secured to the end wall of the housing having the outlet spout, said guide shelf passing through one of the baffle plates and being approximately semi-circular in shape and a rotary sieve journalled within the housing above the baffle plates and having one end overlying the guide shelf the upper ends of said guide shelf projecting above the longitudinal center of said sieve, as shown.

1,417,850. CLOTHESPIN. JOSEPH B. MARSHALL, Westport, Conn., assignor to Shilepsky and Marshall, Westport, Conn., a Copartnership consisting of Nathan Shilepsky and Joseph B. Marshall. Filed July 14, 1921. Serial No. 484,675. 2 Claims. (Cl. 24—139.)

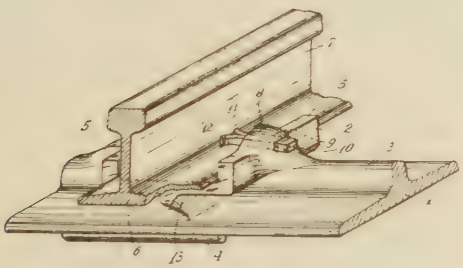
1. A clothes pin consisting of a single length of wire bent to provide jaws, each of said jaws comprising a pair of arms having connection at their lower ends, one of said jaws having an arm constituting an end portion of said length of wire and an arm connecting with one of the arms

of the other jaw, there being a bend between said connecting arms, and said other jaw having an arm terminating



in a loop, said loop freely encircling said bend and the upper end of that arm constituting the end portion of said length of wire.

1,417,851. RAIL TIE. JACOB V. MAYHEW, Pittsburgh, Pa. Filed Mar. 22, 1922. Serial No. 545,711. 3 Claims. (Cl. 238—69.)

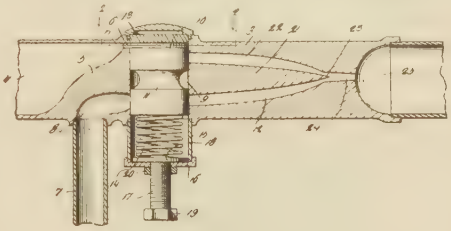


1. In a tie for rails, the combination of a tie-member, rail-chairs formed integrally therewith and having guide-flanges for said rails, and wedges for securing the rails upon said chairs; said wedges being positioned in the flanges of said chairs and inclined a lesser amount than the slope of the rail-flanges engaged by them.

1,417,852. WATCH FOB. THOMAS F. MULLEN, Stafford Springs, Conn. Filed Jan. 26, 1921. Serial No. 439,966. 1 Claim. (Cl. 62—21.)

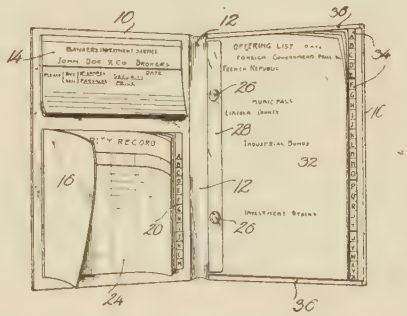
A watch-fob comprising a supporting loop, a strip of textile fabric passed through the loop, for suspension thereby, the ends of the strip being overlapped, and a snap fastener for detachably connecting the overlapped ends of the strip one section of the snap fastener being connected with one end portion of the strip and the other section thereof being connected with the other end portion of the strip, the strip covering the snap fastener from the front and rear of the fob when the latter is in suspended relation.

1,417,853. INJECTOR FOR STEAM ENGINES. CHARLES A. NASH, Seattle, Wash. Filed Dec. 10, 1920. Serial No. 429,687. 3 Claims. (Cl. 162—1.)



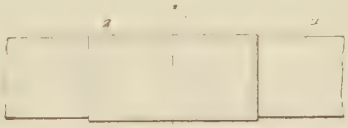
1. An injector for steam boilers including an injecting pipe having steam and water inlets, a valve in the path of said inlets, said valve being automatically opened by the influx of steam to permit simultaneous passage of steam and water through said pipe.

1,417,854. SECURITIES SALES OUTFIT. JAMES QUIGG NEWTON, Denver, Colo. Filed Oct. 1, 1920. Serial No. 413,968. 4 Claims. (Cl. 281—31.)



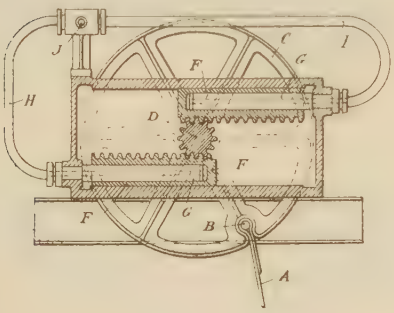
1. A securities selling outfit comprising a folder having two swingingly connected members, means on one member for positively engaging and retaining sheets, loose descriptive sheets positioned between the engaged sheets, and upstanding flanges on edges of said member to assist in retaining the loose sheets between the engaged sheets.

1,417,855. BELT BUCKLE. CINCO S. ODA, Boston, Mass., assignor of one-half to Peter N. Fisher, Boston, Mass. Filed Mar. 19, 1921. Serial No. 453,597. 1 Claim. (Cl. 24—73.)



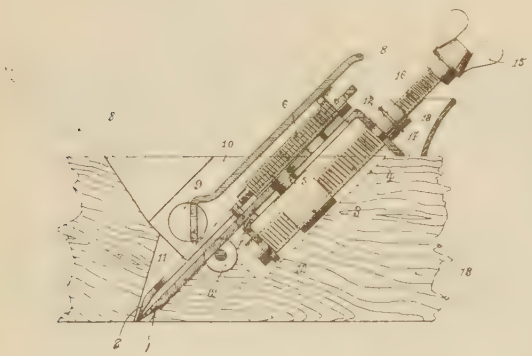
In combination with a belt, a buckle thereon having a transversely arranged bridge piece at its rear, spaced from its front part, said bridge piece having a vertically arranged slot in its upper part having an enlarged upper end which extends into the upper side of the buckle, and a stud adapted to be connected with the trousers for engaging the slot for preventing the buckle and belt from moving upwardly upon the trousers.

1,417,856. HYDRAULIC WINDLASS FOR DROP-STAMPING MACHINES. JEAN ALBERT PERONY, St.-Ouen, France, assignor to Societe d'Outillage Mecanique et d'Usinage d'Artillerie, St.-Ouen, Seine, France, a Limited Joint-Stock Company of France. Filed Nov. 2, 1920. Serial No. 421,351. 18 Claims. (Cl. 78—30.)



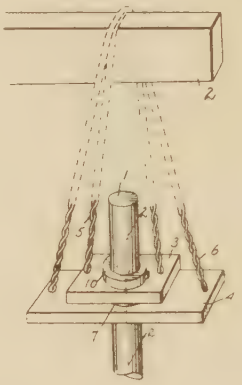
1. In a lifting windlass for drop-stamping machines, the combination with a shaft provided with a pinion and carrying a drum to which is attached a flexible connection with the tup, of a motor comprising a driven member provided with a rack engaging said pinion, and controllable means for regulating the operation of the motor to raise the tup, said controllable means being operable to free the motor and permit dropping of the tup.

1,417,857. HAND PLANE. STEPHEN PFEIFFER, St. Pilt, Neubau Station, Ribeauville Circle, Upper Alsace, France, assignor to Charles Koller and Charles Freysz, both of Strasburg, Alsace, France. Filed June 28, 1920. Serial No. 392,493. 3 Claims. (Cl. 145—11.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



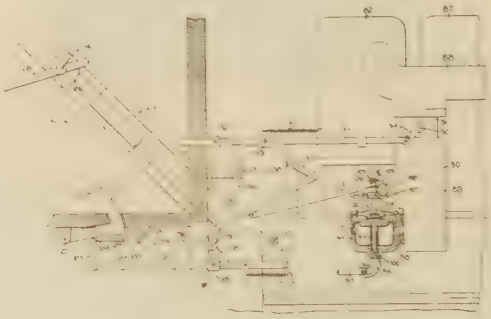
1. A plane in which the iron sliding over a rigid metal guide is clamped in position by means of a lever and can receive displacements in the direction of its longitudinal axis, the plane being characterized by the fact that besides the upper and lower wings at right angles, which serve as a support for the screw that displaces the blade longitudinally, the guide is provided with lateral wings or cheeks for the mounting of the tightening lever, while underneath the nipple of the nut which serves to displace the iron longitudinally and which also serves as a point of articulation for the transverse displacement of the iron a transverse bolt is mounted in such a way as to be able to rotate and at the same time to move transversely to the longitudinal axis of the plane, and this bolt, in moving, acts directly on the iron and displaces it transversely.

1,417,858. MECHANISM FOR TURNING PUMP RODS AND THE LIKE. EDWARD W. PIETZSCHKE, Redondo Beach, Calif. Filed Feb. 2, 1922. Serial No. 533,734. 11 Claims. (Cl. 74—14.)



1. The combination with a member adapted to be rotated, of twisted strand supporting means therefor connected to said member at opposite sides of its axis of rotation, and means for tensioning said supporting means to cause relative twisting of the same and rotation of said member.

1,417,859. METHOD AND APPARATUS FOR OBTAINING WORK IN INTERNAL-COMBUSTION ENGINES. JOSEPH G. PROSSER, Chicago, Ill., assignor to Prosser Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 8, 1917. Serial No. 153,430. 15 Claims. (Cl. 123—108.)

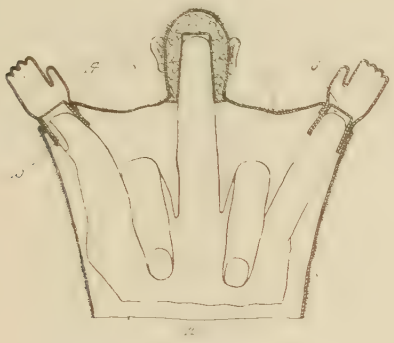


1. In an internal combustion engine, means for controlling the work performed by regulating the quantity of mixture admitted to the cylinder, means for controlling the amount of work performed by regulating the quality of mixture admitted to the cylinder, and means for rendering either of said controlling means effective as desired, and means positioned for operation by the foot of the operator for effecting the regulation of whichever controlling means is in action.

1,417,860. TOY. HANNAH REICH, Chicago, Ill. Filed Dec. 11, 1919. Serial No. 344,109. 2 Claims. (Cl. 46—40.)

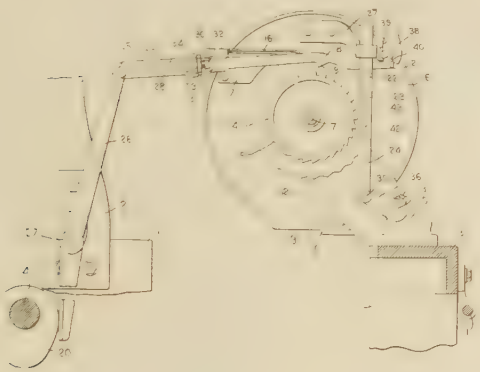
1. A toy in the form of a mitten adapted to be placed over the hand and having head and body portions constructed in imitation of an animate object and having hand or paw members attached to said body portions and movable relative thereto, said head having a receptacle for the insertion of one finger, said hand or paw members,

respectively, being formed so as to provide therein receptacles for the insertion of two other fingers, or one other finger and the thumb, said receptacles being of such shape and formed of such material as to take a frictional grip on



the fingers or on the fingers and thumb, as the case may be, which grip is maintained during manipulations of said head portion and said hand or paw members relative to each other and to said body portion, for the purpose specified.

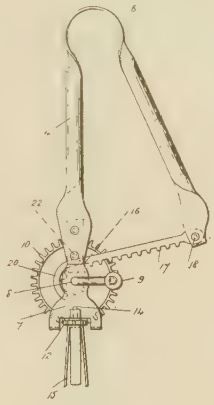
1,417,861. BATTERY FEED FOR AUTOMATIC FILLING-REPLENISHING LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 13, 1920. Serial No. 409,836. 9 Claims. (Cl. 139—85.)



1. An automatic filling replenishing loom comprising a rotary battery or hopper for the fresh filling carriers, a transfer mechanism for effecting transfer of the filling carriers therefrom, a ratchet wheel on the rotary battery or hopper, a constantly rotating cam shaft and a cam thereon, a pawl for cooperation with the ratchet actuated by the cam and normally out of engagement with the ratchet and means controlled by the transfer mechanism for effecting engagement of the pawl with the ratchet.

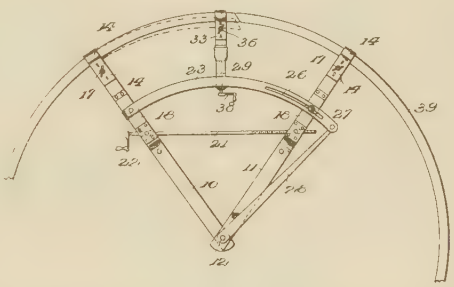
1,417,862. DRIVING MECHANISM. CHARLES C. SCHMAND, Grays River, Wash. Filed Sept. 6, 1921. Serial No. 498,611. 3 Claims. (Cl. 74—27.)

1. A driving mechanism, comprising a handle formed of two finger bars having their upper ends connected by a spring, a frame secured to one finger bar, a crank-shaft journaled in the said frame and provided with a crank-handle, a driving wheel and a toothed pinion secured side by side on the crankshaft, and a toothed rack pivoted to the other finger bar and adapted to engage with the said pinion, the said rack having a smooth hooked portion at its free end which bears on the toothed pinion when the rack is out of gear with it, the said driving



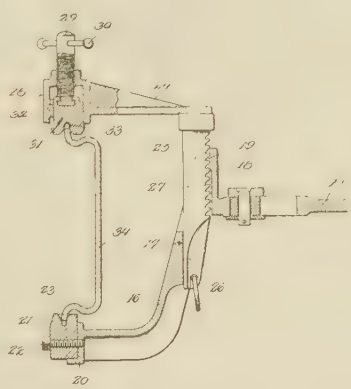
wheel being operated by the movement of either hand singly or by both hands simultaneously at will.

1,417,863. RIM TOOL. GEORGE V. SEARS, Bingham Canyon, Utah. Filed Feb. 18, 1919. Serial No. 277,788. 5 Claims. (Cl. 157—1.)



1. A rim tool including coacting pivotally connected arms, rim engaging means carried thereby, a cross arm fixed upon one of said pivoted arms and having slidable connection with the other, rim engaging means carried by said cross arm and adjustably shiftable radially with respect to the axis of said pivoted arms, and means for adjustably swinging the pivoted arms.

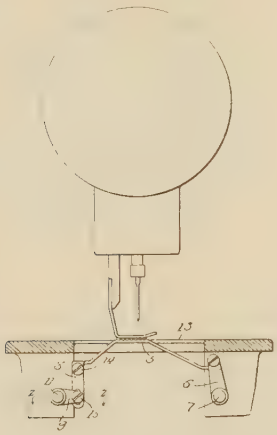
1,417,864. RIM CLAMP. GEORGE V. SEARS, Salt Lake City, Utah. Filed Sept. 14, 1920. Serial No. 410,180. 2 Claims. (Cl. 157—1.)



1. A rim engaging clamp including a fixed jaw, a coacting movable jaw loosely connected with the fixed jaw

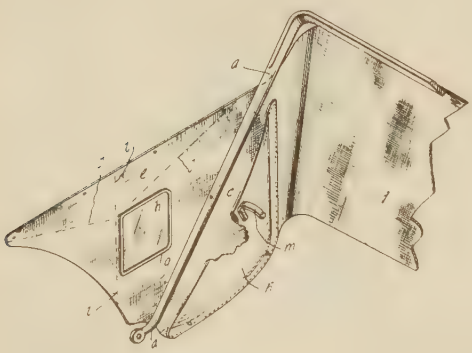
but adjustable with respect thereto, and rim engaging means carried by the jaws and provided with straight rim edge receiving slots having convex walls.

1,417,865. ELEVATION ADJUSTMENT FOR SEWING-MACHINE FEED. ALBERT D. SMITH, Detroit, Mich. Filed July 30, 1918. Serial No. 247,426. 2 Claims. (Cl. 112—215.)



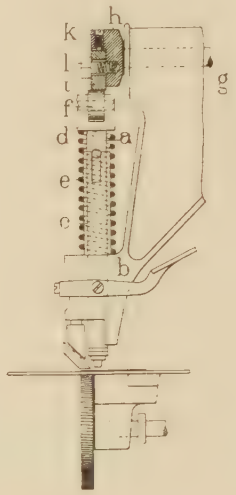
2. In a sewing machine feed mechanism, the combination of an elevation rock-shaft, a feed-motion rock shaft, a feed member, a crank arm fixed to the feed-motion rock-shaft and pivotally connected directly to the feed member, a crank arm fixed to the elevation rock-shaft, and a link pivotally connected at its ends directly to the elevation crank arm and to the feed member, the pivotal connection between the link and said crank arm comprising a pivot bolt adjustably secured in a slot in said member and pivoted in said crank arm, whereby the distance between the pivotal connections of said link may be varied for directly varying the elevation of the feed member.

1,417,866. GYPSY OR SIDE CURTAIN FOR AUTOMOBILE OR SIDE TOPS. SIDNEY G. SPURLING, Portland, Oreg. Filed Oct. 5, 1921. Serial No. 505,669. 5 Claims. (Cl. 296—138.)



1. In a vehicle top, comprising front and back top-bows and top cover, the combination of, triangular gypsy curtains constituting the side enclosures of the top and secured to the back top-bow, each gypsy curtain being provided with a triangular extension piece, means for fastening the top of each extension piece to the bottom edge of the cover of the vehicle top, and a pocket provided on the interior of the main part of each gypsy curtain, into which to insert the extension piece, the latter being adapted to be folded together into a form permitting its insertion in said pocket.

1,417,867. PUNCHING MACHINE. LÜDWIG STREIBEL, Karlsruhe, Germany, assignor of two-thirds to Adam Ehresmann and Oscar Maier, both of Karlsruhe, Germany. Filed Jan. 18, 1922. Serial No. 530,154. 2 Claims. (Cl. 164—106.)



1. In a punching machine in combination, a machine frame, a punch-holder vertically movable in said machine frame, a driving shaft rotatably mounted in said machine frame, a circular disk mounted on said shaft, a spring pressing said punch-holder upwards against the periphery of said disk, a cam being radially adjustable in said disk so as to project more or less over the periphery thereof, which cam on the rotation of said shaft presses down said punch-holder against the action of said spring, and means for adjusting said cam and for fixing the same in its position.

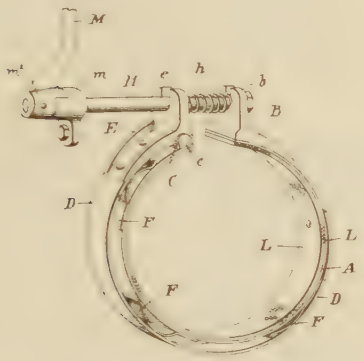
1,417,868. DEVICE FOR MANIPULATING COTTER PINS. DANIEL R. TANNER, Le Grande, Oreg. Filed May 28, 1921. Serial No. 473,380. 3 Claims. (Cl. 81—3.)

1. Pliers for manipulating a cotter-pin having coacting jaws, and one of said jaws having a tapered prong for insertion through the eye of pins of various sizes, and the remaining jaw being cut away to permit said prong to pass such jaw, the cut-away jaw having a portion for engagement with the loop end of the cotter-pin on that side opposite the side through which the prong projects to effect tight insertion of said prong when said jaws are closed.

1,417,869. PROCESS OF DYEING. HANS TOEPFER, New York, N. Y., assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 4, 1921. Serial No. 489,849. 2 Claims. (Cl. 8—5.)

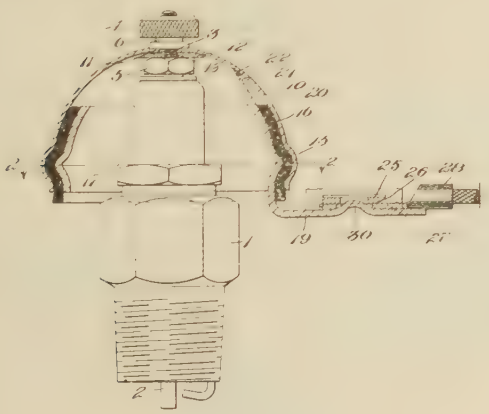
1. In the art of dyeing animal fibres, the process comprising using cobalt salts in conjunction with azo dyestuffs derived from nitro-ortho-amidophenols.

1,417,870. TRANSMISSION BAND FOR AUTOMOBILES. ALGER S. VOIGHT, Joliet, Ill. Filed June 20, 1921. Serial No. 478,842. 2 Claims. (Cl. 188—249.)



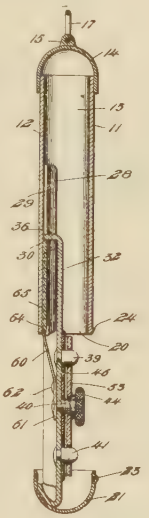
2. A transmission band for automobiles, comprising an inner band extending substantially around a drum, and which carries a shoe at one end and a guide at the other end, an outer band of slightly less length detachably connected at one end to the inner band and carrying at its other end a shoe that fits in said guide, springs interposed between the two bands at intervals and carried by the inner band, and means engaging the shoes for applying pressure to the inner band through said springs.

1,417,871. ATTACHMENT FOR SPARK PLUGS. ERNEST F. WACKWITZ, Arlington Heights, Mass. Filed June 1, 1920. Serial No. 385,399. 4 Claims. (Cl. 123—148.)



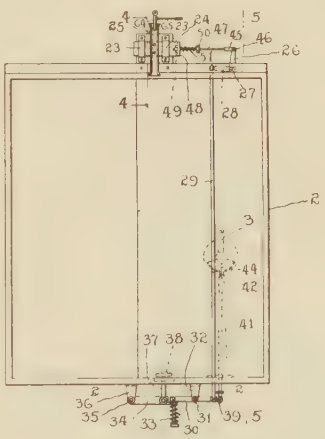
1. In a device of the character described in combination, a hood of electrical conductivity attachable at its upper extremity over the top of a spark plug, a metal connector for a lead, an insulating member between the hood and connector, and means forming an auxiliary gap between said connector and said hood.

1,417,872. BLADE PENDANT. DAVID M. WALL, Providence, R. I. Filed Aug. 11, 1921. Serial No. 491,631. 4 Claims. (Cl. 30—10.)



4. In a blade pendant, a casing provided with an open end, a cap detachably mounted on the casing over the open end, internal guide flanges carried by the casing, a slide engaging the flanges and fast to the cap, a resilient arm fast to the slide, a shoulder on the end of the arm, and a blade detachably mounted on the slide.

1,417,873. ELEVATOR. JACOB M. WHALBE, New York, N. Y. Filed Feb. 12, 1921. Serial No. 444,475. 13 Claims. (Cl. 187—49.)

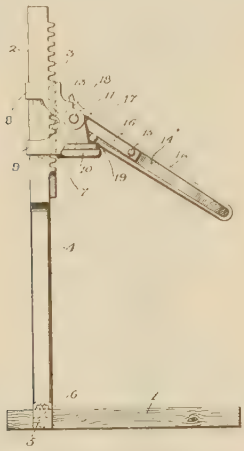


5. The combination with an elevator, including a shaft having landings, a door for each landing, a car operable in said shaft, a gate for said car, and a control for said car, of means to lock said door when closed, means to lock said gate when closed, locking means for said control, means operable only when the car is at a landing for the release of the locking means respectively for said door and gate, and means operable by said release means to apply said control locking means.

1,417,874. BOTTLE-CAPPING MACHINE. GEORGE E. WHITNEY, Bridgeport, Conn. Filed Sept. 6, 1921. Serial No. 498,710. 10 Claims. (Cl. 226—84.)

1. In a device of the class described, a bottle support, a bar positioned perpendicularly relative to said support,

a die slidable on said bar toward and from said support, means actuable to move said die, and means normally limiting the movement of said actuating means to pro-



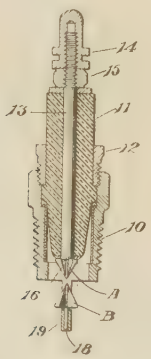
duce a movement of said die of definite amplitude, actuable to permit an abnormal movement thereof in which the position of said normal path of die movement may be adjusted on said bar.

1,417,875. ANTHRAQUINONE DERIVATIVES AND PROCESS OF MAKING SAME. KARL WILKE, Hochst-on-the-Main, Germany, assignor to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed July 2, 1921. Serial No. 482,259. 4 Claims. (Cl. 260—44.)

3. As new products, the bodies of the general formula:

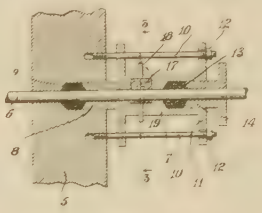
wherein "R" stands for an unsubstituted or in any way substituted anthraquinone residue and R_1 for hydrogen or an alkyl residue.

1,417,876. SPARK PLUG. FRANK M. WOOD, Sacramento, Calif. Filed Jan. 12, 1921. Serial No. 436,652. 3 Claims. (Cl. 123—169.)



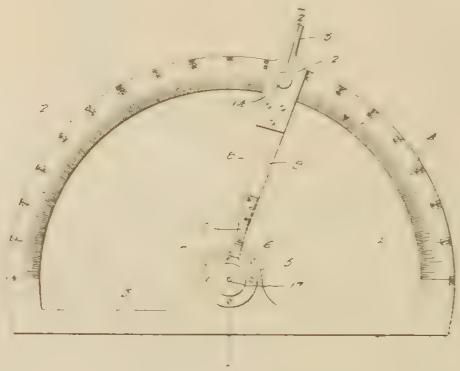
1. A spark plug comprising a mounting sleeve, a core, and a pair of pyramid shaped spark points, secured to the sleeve and core, respectively, with their apexes forming a spark gap, the sides of said spark points, being longitudinally serrated.

1,417,877. ROD PACKING. ARTHUR WRIGHT, Montclair, N. J. Filed Apr. 16, 1919. Serial No. 290,563. 4 Claims. (Cl. 286—1.)



4. The process of preventing leakage along a rod, consisting in introducing a liquid containing solids of suspension into a chamber in the rear of the packing, which is to prevent the said leakage, and causing the said liquid to filter through said packing and the said solids to filter out and prevent further leakage.

1,417,878. SLIDE PROTRACTOR. ROY ABARE, Chazy, N. Y. Filed Apr. 18, 1921. Serial No. 462,165. 1 Claim. (Cl. 33—75.)

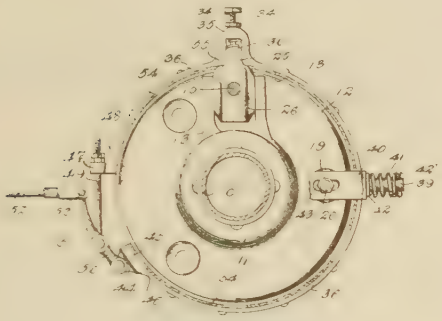


A device of the class described comprising a frame including an arc-shaped scale carrying part and a straight part connecting the ends of the arc-shaped part, said straight part having an inwardly extending centrally arranged enlargement, a stepped socket member secured to said enlargement, a ruler having one end provided with an opening and shaped to engage the socket member, a bolt passing through said opening into the socket member for pivotally securing the ruler to the frame, said ruler and arc-shaped part having overlapping portions, the ruler having its other end passing over and extending beyond the arc-shaped part, a thumb bolt carried by said other end and engaging the arc-shaped part and a handle formed on said extending part.

1,417,879. DENTAL CLASP. HUGO ADERER, East Orange, N. J., assignor to J. F. Jelenko & Co., New York, N. Y., a Firm composed of Jesse F. Jelenko and Hugo Aderer. Filed Nov. 8, 1921. Serial No. 513,698. 6 Claims. (Cl. 32—10.)

1. A dental clasp comprising fingers, said fingers having slits therein whereby the position of the fingers on a tooth may be adjusted.

1,417,880. ATTACHABLE BAND BRAKE. HENRY ALTERGOTT, Sheboygan, Wis. Filed Oct. 1, 1920. Serial No. 414,004. 2 Claims. (Cl. 188—77.)



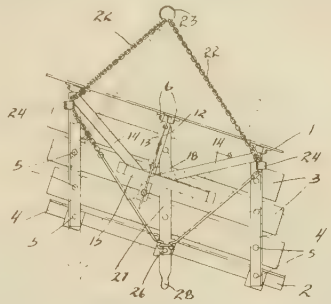
1. The combination with an element fixed with respect to an axle of a perch element attachable thereto and having a lateral arm for disposition adjacent a brake drum, a band element mounted for limited vertical movement on said arm, means yieldingly supporting the band normally above its operative position, a mounting engaged with the band at a distance from said perch element including means constructed for movement of the band toward and away from a circumscribed drum and for longitudinal movement of the band on the said mounting and resilient means directly but yieldingly opposing movement of the band toward the drum at said mounting.

1,417,881. METAL HEEL. FRANK H. ANTHOS, Boston, Mass., assignor of one-eighth to Demetrius George Carzis, Cambridge, Mass., one-eighth to James Carzis, one-eighth to John G. Carzis, and one-eighth to George Picradis, all of Lynn, Mass. Filed July 30, 1920. Serial No. 400,168. 1 Claim. (Cl. 36—40.)

In a heel, the combination with a hollow heel body having a flaring upper end, of a skeleton attaching plate having a peripheral portion adapted to rest against and be secured to the heel seat of a shoe, a central hub portion situated below the peripheral portion and located within the hollow heel body, and curved arms connecting the hub portion and peripheral portion, said arms lying against and having a shape to fit the contour of the inner wall of the flaring end of the heel body, said body having ribs on its inner face which engage the side edges of the arms and retain the heel body and attaching plate in proper relative position, and a screw extending through the heel body and screw-threaded into the hub.

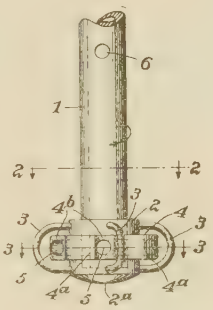
1,417,882. ROAD DRAG. GEORGE G. BAYNE, Bushnell, Ill. Filed Jan. 12, 1920. Serial No. 350,958. 6 Claims. (Cl. 37—5.)

1. In a drag, a front plane, deck members, a rear plane and longitudinal members pivotally connected to the front and rear planes and deck members, a pair of chains, a ring connecting the front ends of the chains together,



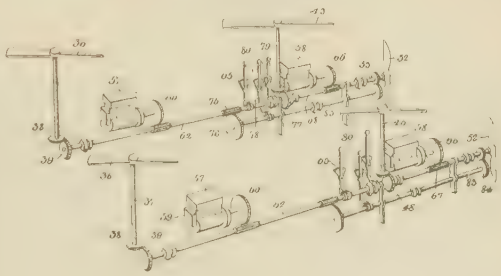
means for connecting the rear ends of the chains to a point adjacent the mid-point of the rear plane, and guide rings for the chains secured to said longitudinal members.

1,417,883. AERATING AND MIXING DEVICE. HENRY SAYLORD BEERS, New York, N. Y., assignor, by mesne assignments, to Air-O-Mix Incorporated. Filed Oct. 3, 1921. Serial No. 505,090. 2 Claims. (Cl. 259—96.)



1. An aerating and mixing device comprising a hollow spindle having its interior designed for atmospheric communication and having at the lower end projecting portions with inclined faces provided with air escape openings and loops cooperating with said openings.

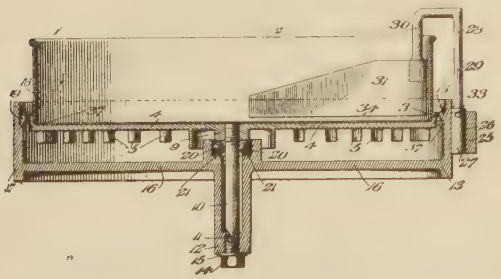
1,417,884. AEROPLANE. ALCIDE J. BERNIER, Washington, D. C. Filed Mar. 20, 1922. Serial No. 545,081. 7 Claims. (Cl. 244—15.)



6. In an aeroplane, a pair of connected fuselages, transverse sustaining planes carried by the fuselages, rear lifting propellers carried by the fuselages, forward lifting propellers carried by the fuselages, forward and rear engines carried by each fuselage, means whereby the rear engine may be connected and disconnected with and from the corresponding rear propeller, separate means whereby the forward engine may be connected and disconnected with and from the forward propeller, a tractor propeller carried by the fuselage, means whereby the

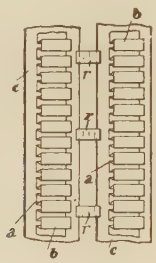
forward and rear engines may be directly connected and disconnected and the forward engine connected and disconnected with the tractor propeller, and means whereby the rear engine may be connected and disconnected with and from the tractor propeller.

1,417,885. PIGMENT-STIRRING PAN. CHARLES P. BOSSERT, Milwaukee, Wis., assignor to Pfister & Vogel Leather Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 16, 1921. Serial No. 470,047. 7 Claims. (Cl. 259—88.)



1. In a device of the character stated, an outer casing having an inlet for the motive fluid, a rotary table mounted in said casing and having buckets annularly arranged on the bottom thereof and adapted to receive the impact of the incoming fluid through said inlet, a pigment containing pan open at its top and supported on said table and a stationary blade located within said pan and mounted upon said casing.

1,417,886. MULTICELLULAR ARRANGEMENT FOR THE RAISING OF LIQUIDS. GEORGES ALBERT CARUELLE, Paris, France. Filed Oct. 16, 1919. Serial No. 331,253. 5 Claims. (Cl. 103—6.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

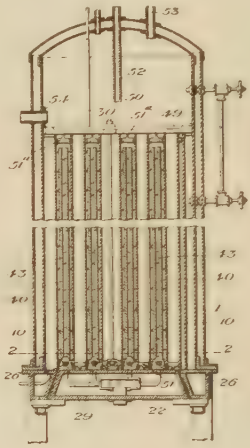


2. A band continuous throughout and formed of flexible material folded back upon itself in the sense of its width to constitute a series of cells of practically wedge shape, superposed upon each other and separated by a thin wall offering but slight resistance to the lateral air, said band adapted to be used alone or fixed flat or edgewise on a support as a flat endless belt or chain so that the band can by plunging with its part in the liquid, fill the cells by simple immersion, retain the liquid by capillary action during the ascent and empty by centrifugal action and its weight.

1,417,887. MANUFACTURE OF POTASSIUM SULPHATE AND HYDROCHLORIC ACID. PAUL COMMENT, Mulhouse, Alsace, France, assignor to Société Fabriques de Produits Chimiques de Thann et de Mulhouse, Mulhouse, Alsace, France. Filed Nov. 4, 1920. Serial No. 421,778. 4 Claims. (Cl. 23—1.)

1. A process for making potassium sulphate and hydrochloric acid, which process consists in mixing finely pulverized potassium chloride with sulphuric acid in such proportions that the moist mixture remains as pulverulent as possible, and heating the mixture in a direct-flame furnace, so that the mixture is first desiccated then heated at about 300° C. and finally heated at about 700° C.–800° C.

1,417,888. HEAT RETAINER FOR WATER HEATERS. MAJOR E. DEARING, Salt Lake City, Utah. Filed Nov. 8, 1918. Serial No. 261,742. 7 Claims. (Cl. 110—97.)

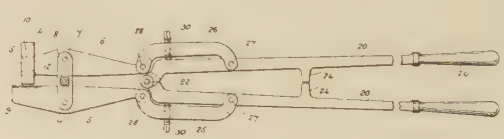


1. In a heater, the combination with an upright sealed hollow heating element, of means for venting the upper end of said sealed hollow heating element, a hollow heat retainer wholly contained within said hollow heating element, and means for supplying heat to the interior of said hollow heat retainer.

1,417,889. PROCESS OF TREATING FIBROUS MATERIALS. DAVID E. DE LAPE, Los Angeles, Calif. Filed Jan. 27, 1917, Serial No. 145,028. Renewed Mar. 8, 1922. Serial No. 542,166. 2 Claims. (Cl. 92—10.)

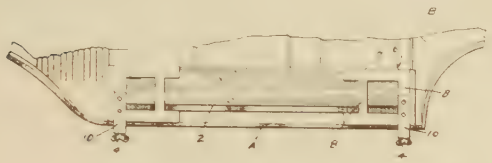
1. A process for treating fibrous material consisting in passing the material between rollers, scraping, brushing, and combing materials subjecting the material to the action of an aqueous solution, consisting of not less than 500 parts of a fluid vehicle such as water, not more than 5 parts of an active reagent or saponifying compound such as caustic soda and not more than 10 parts of a compound containing an oily substance and a substantial percentage of resin, and then pressing material after being removed from the aqueous solution, brushing the same and bleaching.

1,417,890. TOOL FOR BENDING SPRINGS. WILLIAM DANIEL DOONAN, Butte, Mont. Filed Dec. 9, 1921. Serial No. 521,152. 3 Claims. (Cl. 81—15.)



1. A bending tool, comprising two pivoted levers one of which has a straight longitudinal end portion which forms one bending jaw, and a block arranged crosswise of the said jaw and secured to the corresponding end portion of the other lever and provided with a concave bending surface which projects laterally on each side of the said jaw.

1,417,891. FOLDING CAMP TABLE. BENJAMIN B. DUDLEY, Visalia, Calif. Filed June 27, 1921. Serial No. 480,832. 3 Claims. (Cl. 45—116.)



1. In a folding table and in combination with a pair of non-collapsible stools, a plurality of board sections hinged together with the two side sections adapted to fold lengthwise of the intermediate section to provide an open ended box like structure, said noncollapsible stools adapted to be layed on their side and fixed to the running board of an automobile with the legs of the stools presented toward each other and adapted to receive the table when folded and with the seats of the stools providing end closures for the box like structure, said intermediate board section having mounted on its underside two sets of legs adapted to be collapsed and nested upon the surface of the intermediate board section when the table is folded, but capable of overlying both of the side board sections when the table is set up, whereby the legs and their mountings may maintain all of the board sections in substantially the same plane to provide a table surface with the legs supporting the same.

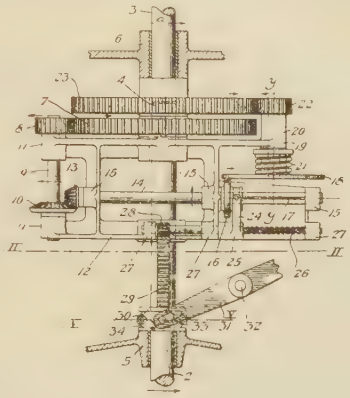
1,417,892. OUTAGE GAUGE. CHARLES F. EHRENTRAUT, Pittsburgh, Pa. Filed June 26, 1918. Serial No. 241,941. Renewed Oct. 31, 1921. Serial No. 511,845. 13 Claims. (Cl. 73—82.)

2. An outage gauge having a thermometer, a float having a level-indicating device, and means for simultaneously locking the float and for registering the thermometer reading.

1,417,893. EDIBLE PRODUCT AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed Dec. 16, 1918. Serial No. 266,933. 3 Claims. (Cl. 99—13.)

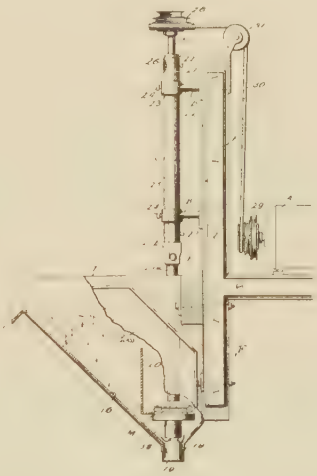
3. A composition comprising medicinal petroleum oil, hydrogenated oil, butyric glyceride and water, said composition having a consistency from that of butter fat to that of lard.

1,417,894. POWER TRANSMISSION AND MECHANISM THEREFOR. HANS ENARD, Pittsburgh, Pa. Filed July 21, 1921. Serial No. 486,350. 6 Claims. (Cl. 74—26.)



1. Power transmitting mechanism comprising a driving gear, a driven gear in axial alinement therewith, oppositely arranged balancing pinions in mesh with each of said gears respectively, and gearing embodying variable transmitting mechanism connecting said pinions.

1,417,895. FLOTATION APPARATUS. ARTHUR W. FAHRENWALD, Moscow, Idaho. Filed May 11, 1920. Serial No. 380,494. 8 Claims. (Cl. 261—87.)

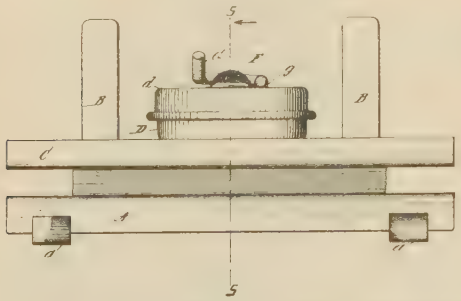


1. A flotation apparatus comprising, a tank, an impeller within the tank comprising spaced plates, a disc between the plates, blades secured to the opposite sides of the disc, means for rotating said disc, and means for supplying ore pulp to one side of the disc and air to the opposite side, for the purpose described.

1,417,896. ELECTRODEPOSITION OF METALS UPON IRON AND ALLOYS OF IRON. ROBERT JOSEPH FLETCHER, London, England, assignor to The Fletcher Electro Salvage Company, Limited, London, England, a British Company. Filed Jan. 17, 1921. Serial No. 437,943. 4 Claims. (Cl. 204—1.)

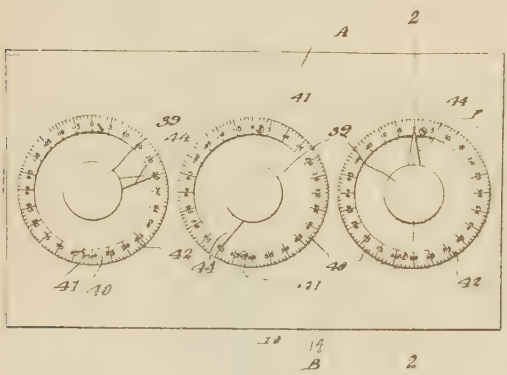
1. A process for the cleansing of the surface of iron or iron alloy prior to the electro-deposition of metals upon such surface, which consists in subjecting the said surface to an electrolytic cleansing treatment by immersing it in an acid bath containing a salt of copper and passing current through the acid bath and the body to be cleansed the said body forming an anode.

1,417,897. ENVELOPE-SEALING DEVICE. EDWARD H. FOOTE, Somerville, Mass., assignor to Standard Envelope Sealer Manufacturing Company, Everett, Mass., a Corporation of Massachusetts. Filed June 16, 1920. Serial No. 389,477. 2 Claims. (Cl. 120—6.)



2. In a device of the character specified, the combination of a base plate provided with a downwardly turned front edge, a sealing plate superimposed upon said base plate and provided with an upwardly turned front edge and a pair of slots located near its rear edge, a pair of posts mounted on said base plate and extending through said slots and a moistener mounted upon said sealing plate.

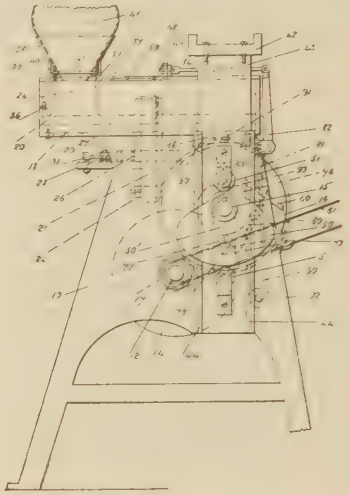
1,417,898. COMBINATION ELECTRIC SWITCH. ALLEN JASPER GARDENHOUR, Waynesboro, Pa. Filed Nov. 15, 1919. Serial No. 338,177. 2 Claims. (Cl. 200—43.)



1. A combination electric lock switch for association with the ignition circuit of an internal combustion engine of a motor vehicle comprising an elongated casing, one of the walls of the casing having a plurality of longitudinally aligned bearing openings formed therein, operating shafts rotatably mounted in the openings, cooperating indicating means carried by the shafts and the mentioned wall of the casing, an insulating disc carried by each shaft for movement therewith, a plurality of pairs of longitudinally aligned contact posts arranged in the casing, means electrically connecting the outer posts of the outer pairs of contact posts with the line wires of the circuit, means electrically connecting the inner posts of the outer pairs of posts to the adjacent posts of the inner pair of posts, substantially U-shaped bridge pieces carried by the inner faces of the insulating discs, and upwardly extending resilient contact springs carried by the pairs of posts arranged to frictionally engage the inner faces of the discs and to contact with the terminals of the U-shaped bridge pieces when the discs have been moved to a predetermined position in relation to the posts.

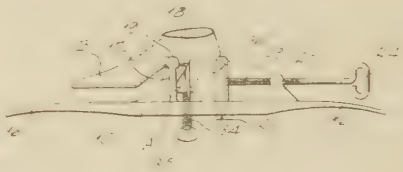
1,417,899. TOBACCO PRESS. LAWRENCE B. GRASBERGER, Richmond, Va. Filed July 15, 1920. Serial No. 396,491. 14 Claims. (Cl. 131—14.)

8. In a press, a stationary press table provided with a discharge opening, a rotary press platen resting on the press table and provided with press chambers which register with the discharge opening, a discharge plunger engaging with the press chambers and discharge opening, a guide arranged horizontally below the press table, a frame working in the said guide, a slidable spring-pressed



oil pan carried by the frame, an oiling roller which transfers oil from the oil pan to the bottom of the discharge plunger, a scraper carried by the said frame and adapted to scrape the bottom of the plunger, and means for reciprocating the said frame at intervals.

1,417,900. REPAIR OUTFIT FOR SHOEMAKERS. FLORYAN GROCHAL, Easthampton, and JOHN OTREBA, Amherst, Mass. Filed Apr. 11, 1921. Serial No. 460,265. 2 Claims. (Cl. 12—125.)



1. In a shoe repairing device for cobblers, the combination with a saddle plate having curved end portions engageable upon the knees of the operator, of a fixed abutment on the saddle plate suited to support the shank and sides of a shoe, an interchangeable clamp slidably engaged with said saddle shaped to engage the heel of a shoe, manually operated means for impelling the clamp and shoe toward the fixed abutment, and means for adjustably supporting the heel of the shoe independently of said clamp.

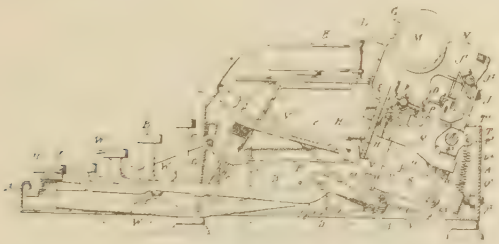
1,417,901. AGRICULTURAL TOOL. GUY L. HEMBREE, Boise, Idaho. Filed June 10, 1921. Serial No. 476,381. 3 Claims. (Cl. 294—49.)

1. A device of the class described comprising a handle, a ferrule receiving the forward portion of the handle, a head of disk shaped formation connected to the forward end of said ferrule and having a pair of spaced forwardly directed fingers gradually tapered toward their

free ends, and a fork having a back piece about which said fingers are snugly bent, said fingers lying closely in

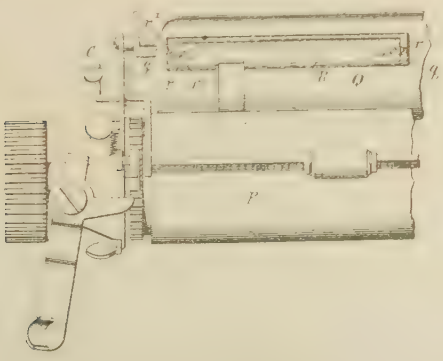
contact with said back piece and on opposite sides of the intermediate tine of the fork.

1,417,902. TYPEWRITING MACHINE. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,161. 29 Claims. (Cl. 197—60.)



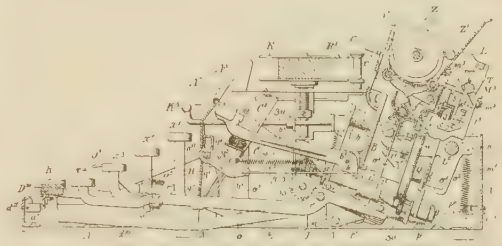
1. In a typewriting machine the combination of a carriage support movable for case printing, a rigid abutment, and an arm extending from the carriage support to the rigid abutment and permanently engaged with said abutment but movable thereon.

1,417,903. MARGIN SCALE FOR TYPEWRITING MACHINES. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,162. 6 Claims. (Cl. 197—63.)



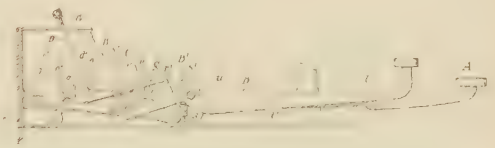
1. A paper table for typewriting machines carrying a guide rod at its lower end, and a depressed portion in its upper surface entirely below its upper edge, a scale mounted for adjustment in said depressed portion, and a paper guide supported by the rod, said guide cooperating with the scale and adjustable endwise thereof.

1,417,904. TYPEWRITING MACHINE. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,164. 24 Claims. (Cl. 197—22.)



8. In a typewriting machine, a keyboard having a plurality of banks of keys, a platen, a platen carriage, a shift frame having a track on which said carriage is mounted to travel, all of said parts being inclined rearwardly from the vertical, a type segment similarly inclined, type bars pivoted at their rear ends and inclined forwardly and upwardly, a front rest for said type bars holding them in a fan shape, parallel links supporting the shift frame, and means engaging one of said links for shifting the frame in an oblique direction upwardly and rearwardly.

1,417,905. BACK-SPACE MECHANISM FOR TYPEWRITING MACHINES. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,165. 6 Claims. (Cl. 197—91.)

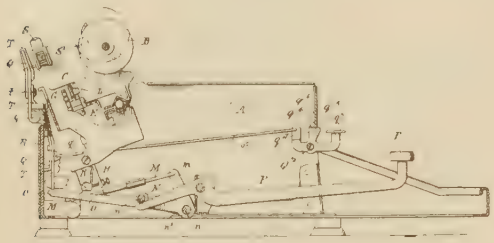


1. In a typewriting machine, a carriage, escapement mechanism therefor, a frame supporting said escapement mechanism, a back space lever, a slide carried by said escapement frame, connection between the back space lever and the slide, a pawl carried by the slide and adapted to engage an element of the escapement mechanism, and a rigid tooth on the slide also engaging the same element of the escapement mechanism to prevent overthrow.

1,417,906. LINE-LOCK MECHANISM AND MARGIN-RELEASE MECHANISM FOR TYPEWRITING MACHINES. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,167. 11 Claims. (Cl. 197—112.)

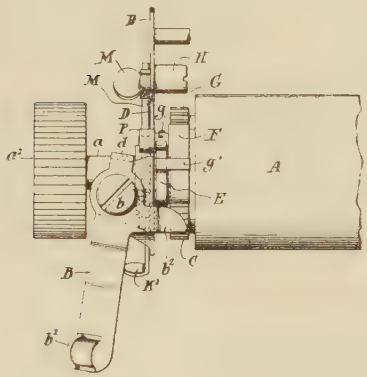
1. In a typewriting machine, pivoted key levers, a carriage, escapement mechanism therefor, a universal bar pivotally mounted in rear of the pivots of the key levers

for operating the escapement mechanism and which is provided with a rearwardly extending, vertically moving



line lock arm, and a line lock lever engaged by the carriage and operating upon the line lock arm of the universal bar.

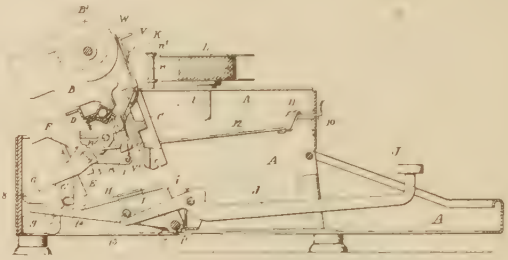
1,417,907. LINE-SPACING MECHANISM FOR TYPEWRITING MACHINES. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,169. 2 Claims. (Cl. 197—114.)



1. In a typewriting machine, a platen, a frame in which it is mounted, a ratchet wheel secured to the platen, a pawl adapted to engage the wheel, a lever adapted to move about the axis of the platen, a lever for swinging said lever to cause the pawl to engage the ratchet and turn the platen, an adjustable stop for limiting the rearward movement of the pawl, a pin on the pawl, and a lever having an arm adapted to engage the pin to hold the pawl in proper position to engage the desired tooth of the ratchet wheel.

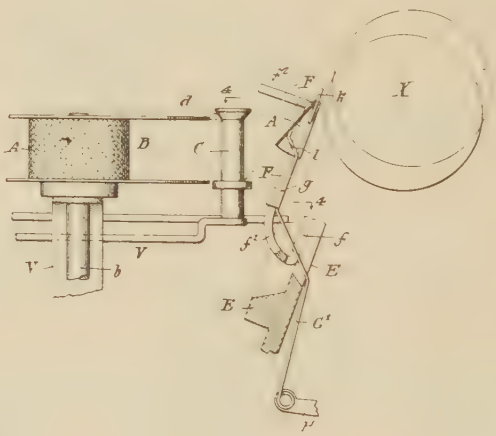
1,417,908. RIBBON OPERATING AND GUIDING MECHANISM FOR TYPEWRITING MACHINES. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,170. 4 Claims. (Cl. 197—151.)

3. In a typewriting machine, a platen, ribbon spools revolving in a horizontal plane below the line of print, fixed guide rollers for the ribbon provided with coned upper ends, each guide roller located behind its spool and slightly inward from the center thereof, and an inclined



vertically reciprocating vibrator adjacent the platen to which the ribbon passed in an upward path from the rollers.

1,417,909. RIBBON GUIDE FOR TYPEWRITING MACHINES. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,171. 8 Claims. (Cl. 197—170.)

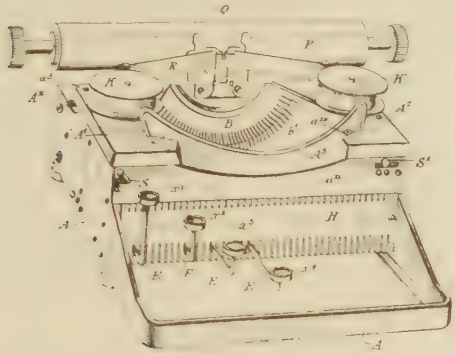


1. A vibrator for typewriting machines having a body portion, ribbon-guiding portions for the upper portion of the ribbon, and separate ribbon-guiding portions for the lower portion of the ribbon arranged in transverse vertical planes outside the upper ribbon-guiding portions and extending forwardly therefrom.

1,417,910. TYPEWRITING MACHINE. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921, Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,172. 17 Claims. (Cl. 197—186.)

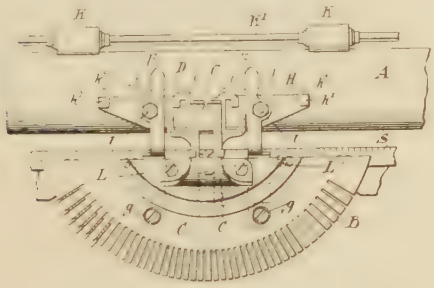
1. A typewriting machine in which the platen is obliquely arranged and is provided with mechanism for moving it obliquely for case printing and in which the key-levers and type-bars are arranged substantially hori-

zontally with dust-sheds horizontally arranged and covering the front part of the machine, the ribbon spools



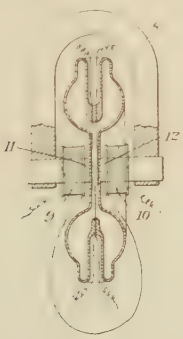
being horizontally arranged below the line of print and above the dust sheds, which are connected by an interposed bridge-piece.

1,417,911. SCALE FOR TYPEWRITING MACHINES. EDWARD BERNARD HESS and LEWIS CARY MYERS, Brooklyn, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y. Original application filed Jan. 13, 1921. Serial No. 436,924. Divided and this application filed May 27, 1921. Serial No. 473,173. 6 Claims. (Cl. 197—194.)



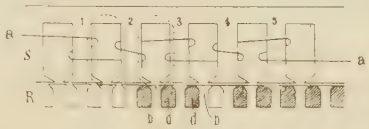
1. A scale for typewriting machines having a central opening and carrying on each side of the opening a plurality of projections adapted to bear on the card, envelope or paper with which it engages, and a bracket to which the scale is secured and which is rigidly attached to the shift frame.

1,417,912. VACUUM ELECTRIC APPARATUS. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed June 24, 1916. Serial No. 105,545. 16 Claims. (Cl. 250—27.)



1. In an electric apparatus, a container having wall portions terminating in parallel flat surfaces, an electric circuit traversing the space between said surfaces, and means applied to said parallel surfaces for controlling the reactions in said container.

1,417,913. APPARATUS FOR GENERATING HIGH-FREQUENCY ELECTRIC CURRENTS. ALEXANDER HEYLAND, Brussels, Belgium. Filed July 28, 1914. Serial No. 853,766. 4 Claims. (Cl. 171—252.)



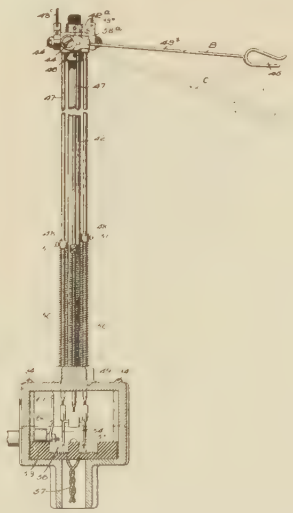
1. An electrical machine comprising in combination a relatively movable field and armature, said field having a plurality of poles, and said armature having its iron surface in the form of segments, said segments being adapted to individually and successively magnetically bridge the pole tips of opposite polarity, and means forming a short circuit around each of said segments.

2. An electrical machine comprising in combination a pole system and an armature system, said armature system presenting a surface in the form of a plurality of segments, each of said segments being adapted to successively magnetically bridge the pole tips of opposite polarity when the centre of the surface of the individual segment is midway between the poles which are bridged thereby, and means forming a short circuit around each of said segments.

3. An electrical apparatus comprising in combination a pole system and an armature system, said armature system presenting a surface in the form of a plurality of segments, and connected conducting metal intermediate said segments, said segments being adapted individually to magnetically bridge the pole tips of opposite polarity.

4. An electrical apparatus comprising in combination a pole system, and an armature system consisting of suitable magnetic pieces, said pieces being surrounded by connected electrically conducting metal and being adapted individually to bridge the pole tips of opposite polarity.

1,417,914. ELECTRICAL STOP MOTION FOR KNITTING MACHINES. EDSON S. HINELINE, Providence, R. I., assignor to Hineline Engineering Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Jan. 11, 1922. Serial No. 528,358. 38 Claims. (Cl. 66—7.)



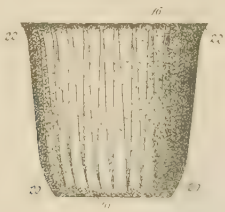
2. An electrical stop motion for textile mechanism having in combination, shipper mechanism, an electromagnetic circuit and an armature, a contact, a rod having an up and down movement and having at its lower end portion a contact to engage the first mentioned contact,

and a lever at the upper end portion of and connected to said rod, and having an open end out of which the yarn may slip upon the occurrence of undue tension, the construction and arrangement of the said parts being such that electrical contact is made prior to yarn slippage and without putting appreciable strain upon the yarn.

1,417,915. DOLL. ADDIE H. HORNSBY, Omaha, Nebr. Filed July 29, 1920. Serial No. 399,690. 4 Claims. (Cl. 46—46.)

1. A toy made from blank material having a body portion and an incision adjacent to the same to define a head portion, and a garment portion foldable intermediate the body portion and head portion substantially along the line of the shoulders and over the body portion.

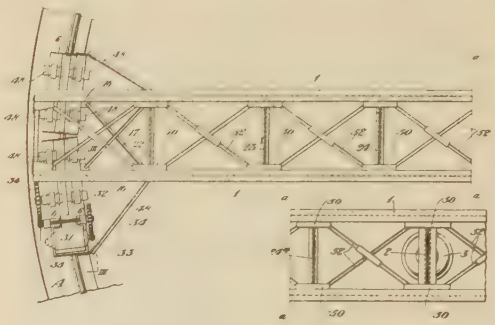
1,417,916. DRINKING VESSEL AND PROCESS OF MAKING SAME. HENRY A. HOUSE, Bridgeport, Conn., assignor to Public Service Cup Co., Brooklyn, N. Y., a Corporation of New York. Original application filed Apr. 20, 1911, Serial No. 622,293. Divided and this application filed Feb. 28, 1922. Serial No. 539,822. 5 Claims. (Cl. 229—3.1.)



5. A drinking cup, consisting of a paper base having a cup shape, the cells of which are throughout the entire paper base filled with paraffin congealed from melted paraffin applied to the cup shaped paper base before the latter has lost the heat of its creation.

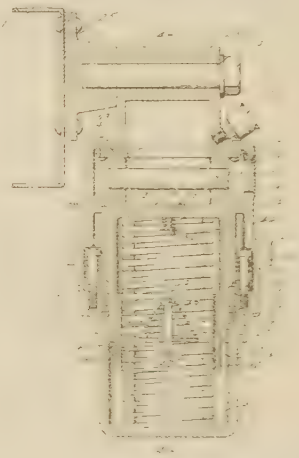
1,417,917. CONTINUOUS-GIRDER TURNTABLE. OTIS E. HOVEY, New York, N. Y. Filed Nov. 26, 1921. Serial No. 517,867. 9 Claims. (Cl. 104—35.)

3. A continuous girder turntable comprising a pair of continuous girders, at least three non-yielding supports for each of said girders, suitable horizontal and vertical supporting members arranged to support said girders, wheeled truck members mounted on each end of said girders, an extended cantilever end on said trucks, a motor



mounted on said cantilever and a suitable gearing connecting said motor and the driving wheel of the truck.

1,417,918. SHOCK-ABSORBER MECHANISM. GEORGE H. IRWIN, Chicago, Ill. Filed June 13, 1919. Serial No. 303,914. 4 Claims. (Cl. 267—8.)

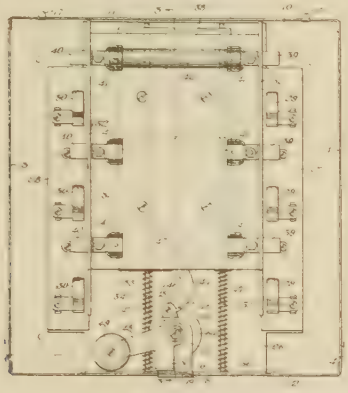


1. A shock absorber device comprising a cylinder member, a main piston member reciprocable within said cylinder member, a floating piston member reciprocable within said main piston member, a light compression spring between said floating piston member and the upper wall of said main piston member, a heavier compression spring between said floating piston member and the bottom of said cylinder member, fluid in said cylinder member, a check valve in said floating piston member, said check valve permitting free downward movement of said floating piston structure, but retarding the upward movement thereof, means for permitting the outflow of air from said main piston member when said member is shifted downwardly, and means for retarding the inflow of air when said piston rises, whereby to retard the upward movement thereof.

1,417,919. PROCESS OF OBTAINING POTASSIUM FROM NATURAL POTASSIUM COMPOUNDS. DANIEL D. JACKSON, Brooklyn, N. Y. Filed June 29, 1920. Serial No. 392,733. 12 Claims. (Cl. 23—22.)

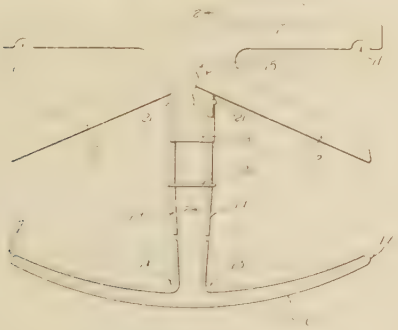
1. The process of obtaining potassium salts from mixtures containing a natural potassium compound which consists in mixing together the said material with lime and a haloid salt, and heating the mixture at temperatures below the clinkering temperature range of the mixture but high enough to give a vapor pressure of potassium halide which will cause its rapid volatilization.

1,417,920. SERVICE SWITCH. JOHN A. JESSEN, Winthrop, Mass., assignor to The Palmer Electric & Manufacturing Company, Boston, Mass., a Corporation of Maine. Filed Nov. 6, 1917. Serial No. 200,591. 9 Claims. (Cl. 200—50.)



1. A closed metallic case having a slidable door, stationary line contacts in the case, a carrier in the case having movable contacts for engaging and disengaging the line contacts, a rock shaft, operative connections between said shaft and said carrier, a cam on said shaft, and an associated member on said door, whereby the door is locked shut when the carrier is in closed position, and the carrier is locked in open position when the door is open.

1,417,921. WARDROBE HANGER. RAY SCOTT KITCHINGMAN, Racine, Wis. Filed Dec. 27, 1921. Serial No. 525,008. 3 Claims. (Cl. 211—13.)



1. The combination of a coat hanger, a one-piece dress hanger, a flat socket member having apertures therein downwardly directed from said coat hanger and having surfaces substantially continuous with the surfaces of the coat hanger, and a pair of resilient members received within said socket member and having their ends projecting through said apertures, said resilient members supporting said one-piece dress hanger, the sides of said socket member contacting with said resilient members throughout a considerable length thereof, to prevent lateral movement of said resilient members with respect to said socket member, said resilient members being movable towards each other on the exertion of force thereon by the hand whereby said resilient members may readily be positioned in and secured to said socket members.

1,417,922. DEVICE FOR ADJUSTING THE RECOIL LENGTH OF FLUID BRAKES FOR GUN CARRIAGES. NORBERT KOCH, Essen-Rellinghausen, Germany, assignor, by mesne assignments, to The Alien Property Custodian. Filed Feb. 3, 1915. Serial No. 5,900. 5 Claims. (Cl. 89—43.)

1. A device for adjusting the recoil length in fluid recoil brakes, having a piston and a part cooperating with the piston, said part being provided with a primary helical groove and a secondary helical groove, and said piston with a primary aperture and a secondary aperture corresponding, respectively, to said primary and secondary grooves; said primary groove and aperture operating during all recoil lengths, and said secondary groove and aperture being of less cross sectional area than the aforesaid primary groove and aperture, and being out of operation during the shortest recoil.
